

Respiration in marine pelagic copepods: a global-bathymetric model

Tsutomu Ikeda*, Fumikazu Sano, Atsushi Yamaguchi

Plankton Laboratory, Graduate School of Fisheries Sciences, Hokkaido University, Minato-cho, Hakodate 041-8611, Japan

*Email: tom@pop.fish.hokudai.ac.jp

Marine Ecology Progress Series 339:215–219 (2007)

Appendix 1. Copepodid stage/sex (M: male; F: female), respiration rate, body mass (dry mass [DM], N or C), experimental (= habitat) temperature, depth of occurrence and ambient oxygen concentration (full saturation = 1.00) of copepods. Source of data: 1–157, Ikeda et al. (2006) (a datum of *Euaugaptilus parabullifer* C6F from 2500 m was omitted as an outlier); 158–188, T. Ikeda (unpubl.); 189–231, Ikeda et al. (2001); 232, Ikeda et al. (2004) (S3 data); 233–253, F. Sano & T. Ikeda (unpubl.)
