Mexico

Communication of 26.X.2000:

New telephone numbering plan

The *Comisión Federal de Telecomunicaciones, Coordinación General de Asuntos Internacionales*, México, announces that the 1995-2000 programme for the development of the communication and transport sector establishes the need to achieve a higher level of coverage and penetration by the telephone service in order to increase the productivity of the economy as a whole, provide more development opportunities in Mexico and increase the quality and diversity of services, with more affordable prices, for the benefit of a greater number of users.

To meet these objectives, Mexico began in 1996 to liberalize the telecommunication sector by introducing new long-distance telephony operators. With the same aim in mind, the *Comisión Federal de Telecomunicaciones (COFETEL)*, was set up as a decentralized organ of the *Secretaría de Comunicaciones y Transportes*, with the primary mission of regulating and promoting the efficient development of telecommunications in Mexico.

The same year also saw the publication of the Basic Technical Numbering Plan, which establishes the bases for the proper management and use of national numbering through the efficient, fair, equitable and non-discriminatory allocation of the available resources. The adoption of this Plan will therefore enable the country to increase its numbering resources, reorganize the way in which numbers are currently allocated, harmonize criteria for the allocation of long-distance codes and comply with the relevant international recommendations.

The Numbering Plan defines, among other things, the structure to be adopted for geographic and non-geographic numbers, the codes to be used for special services and the prefixes for accessing the long-distance service, as well as the dialling procedures to be used for setting up calls within the national territory.

The *Comisión Federal de Telecomunicaciones*, in the exercise of its powers and responsibilities and aware of the problems that exist in respect of numbering, has resolved to take the necessary steps to ensure that telephone networks comply with the geographic numbering formats laid down in the *Basic Technical Numbering Plan*, in the interests of ensuring the adequacy of the number stock and thereby fostering healthy competition between local and long-distance telephony providers.

In order to adapt existing local numbers to the said format, the local number (subscriber number, ITU-T Recommendation E.164) has been expanded to seven (7) digits throughout the country, except in the cities of Mexico, Guadalajara and Monterrey, where it has been increased to eight (8) digits.

In order to help users adapt to the change, the number expansion is being effected by attaching the last digits of their region identifier (national destination code, ITU-T Recommendation E.164) to the beginning of the local number. This means that the region identifier is now only one digit, i.e. the first digit of the old region identifier, except for the cities of Mexico, Guadalajara and Monterrey, which have no region identifier.

It is important to note that this expansion of the local number does not change the national number, which is formed by the region identifier plus the local number; in other words, the number to be dialled after the long-distance access prefix, or the number to be dialled when calling a Mexican subscriber from another country, remains unchanged.

Once the process of expanding the local number has been completed, the national number will in turn be expanded. To this end, each of Mexico's local service areas will be allocated a new region identification number (area code) that will need to be dialled before the local number, only in the case of national long-distance and incoming international calls.

We therefore advise that, *with effect from 10 November 2001 at 0800 hours UTC*, the numbering structure in Mexico will change. The national number will expand from 8 to 10 digits and will comprise the region identification number (area code) and the local number, as shown below:

<i>Country Code (CC)</i>	<i>Area Code / RIN (National Destination Code - NDC)</i>	<i>Local number (SN - subscriber number)</i>
52	(A B) (*)	X ₁ X ₂ X ₃ X ₄ X ₅ X ₆ X ₇ X ₈
52	(A B C) (**)	X ₁ X ₂ X ₃ X ₄ X ₅ X ₆ X ₇

(*) Two digit area codes for cities with a high telephone density. Mexico City, Guadalajara and Monterrey.

(**) Three digit area codes for other cities and localities of the country.

The *Comisión Federal de Telecomunicaciones* has drawn up a strategy for the national and international dissemination of the relevant details which envisages the establishment of direct contacts with the regulatory bodies and telecommunication companies of those countries from which Mexico receives a significant volume of telephone traffic. The list of new region identification numbers will be periodically sent to those contacts to enable them to keep their information up to date and to avoid the incorrect routing of calls having a final destination within Mexico.

The new region identification numbers are listed below, together with details of the officials responsible for the project, who will be able to provide any further information that may be required. The information in question is being sent for dissemination to administrations and recognized operating agencies so that they can make the necessary changes in a timely fashion.

Myanmar

Communication of 1.XI.2000:

Myanma Posts and Telecommunications (MPT), Yangon, announces that it is planning to change the existing mobile network plan from five digits to seven digits with effect from 5 November 2000. The parallel running of old and new numbers will be possible for six months, from 5 November 2000 until 6 May 2001.

Location of network: Myanmar Mobile Network

Locality	Area code	Old number	New number
Yangon	9	2XXXX 3XXXX	99 2XXXX 80 3XXXX
Mandalay	9	6XXXX 7XXXX	90 6XXXX 69 7XXXX

Netherlands

Communication of 30.X.2000:

KPN, Royal Dutch Telecom, The Hague, announces that the additional number series 65 2XX XXXX will be introduced in the mobile network of the Netherlands (country code 31).

Consequently, the following number series will be available in the Netherlands for mobile telephony from 17 November 2000:

+31 61 0XX XX XX up to and including +31 61 9XX XX XX
+31 62 0XX XX XX up to and including +31 62 9XX XX XX
+31 65 0XX XX XX up to and including +31 65 5XX XX XX

Administrations and recognized operating agencies (ROAs) are requested to provide access to this number series if routing via KPN is applied.

Collect calls to mobile telephone numbers in the Netherlands are not allowed.
