

# Tree Information Sheet

## Common Name

Yellow Bloodwood

## Botanical Name

*Corymbia eximia*

## Origin

Native to central New South Wales

## Description

Attractive evergreen tree with a dense broad canopy and gnarled trunk. It can grow up to 10metres high.

The tree has yellow-brown scaly bark and thick sickle-shaped bluish-grey-green leaves. It produces decorative clusters of large creamy flowers in spring which provide food for nectar feeding birds and insects.

# Tree Information Sheet

## Common Name

Redheart Moit or Limestone Marlock

## Botanical Name

*Eucalyptus decipiens*

## Origin

Found in the wheatbelt, south west and greater southern regions of Western Australia.

## Description

Small evergreen tree with a spreading habit and dense canopy. Within a streetscape environment the tree will generally be smaller and can grow up to 10metres high.

The tree has rough grey bark and heart-shaped juvenile blue-green leaves which mature into glossy grey-green leaves. It produces clusters of white flowers from winter to summer. Mature trees provide habitats for native fauna.

# Tree Information Sheet

## Common Name

Coral Gum

## Botanical Name

*Eucalyptus torquata*

## Origin

Found on shallow rocky inland areas of south west of Western Australia from Coolgardie to Norseman.

## Description

Highly ornamental, small evergreen tree with a spreading canopy. The tree grows between 4metres and 8/10metres high.

The tree has rough flaky grey-black bark and grey-green leaves. The developing flowers are covered by decorative horned red caps. A prolific display of coral red to pink flowers are produced through spring and summer.

# Tree Information Sheet

## Common Name

Water Gum

## Botanical Name

*Tristaniopsis laurina* 'luscious'

## Origin

Found along the east coast of Australia from Brisbane through to Victoria, Australia.

## Description

Highly ornamental small tree with a dense canopy of broad green leaves with copper coloured new growth. Within a streetscape environment the tree will generally be smaller but can grow between 7 to 12meters high.

The tree has port-coloured bark that peels back to reveal mottled cream patches. It produces short clusters of small, yellow, perfumed flowers in summer which provide a food source for nectar feeding birds and insects.

Mature Water Gum.

# Tree Information Sheet

## Common Name

Chinese Pistachio

## Botanical Name

*Pistacia chinensis*

## Origin

Native to central and western China.

## Description

Small to medium sized deciduous tree that can withstand harsh conditions and poor-quality soils. Within a streetscape environment the tree will generally be smaller but can grow to 12 meters high.

The tree has rich green leaves turning to bright orange in autumn with yellow to red flowers in spring.

# Tree Information Sheet

## Common Name

Jacaranda

## Botanical Name

*Jacaranda mimosifolia*

## Origin

Dry areas of South America and Brazil.

## Description

Elegant, medium sized, deciduous tree that develops a rounded and spreading canopy with curved horizontal branches. In ideal conditions the tree can grow up to 12metres high by 15metres wide.

The tree produces an abundance of showy blue to purple, lightly fragrant, trumpet-shaped flowers from late spring through to summer.

# Tree Information Sheet

## Common Name

Willow Myrtle or Peppermint Tree

## Botanical Name

*Agonis flexuosa*

## Origin

Endemic to moist, sandy coastal areas of south west Western Australia.

## Description

Elegant medium evergreen tree with a dense, domed shaped, weeping habitat. Within a streetscape environment the tree can grow up to 10metres high by 10metres wide.

It has fibrous brown bark with long narrow dull-green leaves. Clusters of small, white, five petalled flowers are produced from spring to summer.

# Tree Information Sheet

## Common Name

Yellow Gum

## Botanical Name

*Eucalyptus leucoxylon megalacarpa*

## Origin

Open forests and woodlands throughout Western Victoria, Brisbane Ranges and coastal South Australia.

## Description

Small to medium sized, evergreen tree with a straight trunk and attractive bark. As the tree matures, a rounded, dense canopy is developed. It can grow up to 12metres high and 10metres wide in an urban streetscape.

Showy red to pink flowers are produced in autumn through to winter, which attracts birds and insects. After flowering bell shaped seed capsules are formed.
