Abstract

In this scientific work will be presented partial data of four year scientific researcher work (2013, 2014, 2015, 2016), a phase which coincides with different phases of vegetation. This study has been done for the first time, especially about the Flora of Sharr Mountain. The study is concentrated in 20 station in the Sharr Mountain. The accumulation of the scientific material was conducted from early spring until late autumn, by preparing herbarium, accompanied by data for site-collection, date, biotope etc. During this study a rich material has been collected, of about 640 copies. From the previous floristic analysis so far, it results that the Flora of the Sharr Mountain is rich in types. The selected material consists of 58 families, 167 genders and 388 species.

Introduction:-

The subalpine zone in Sharr Mountain - stretching from 1700 - 2100 m (rare 2200 m.) above sea level. There we can find pine forests or molika (*Pinus peuce*) a spruce (*Pinus abies*) and pines (*Pinus mugo*) and communities of *Bruckenthalia spiculifolia*, *Vaccinium myrtillus*, etc.

Sub alpine and alpine communities - stretching above the upper forest belt from 1600-2770 m., where climatic conditions are harsh (long winters, short summers and short vegetation period). Here are developed different communities in quite heterogeneous substrate (acidic soil, limestone substrate, mountain brooks, rocky substrate, etc.).

In Sharr Mountain are developed other types of vegetation community, such as the clearing of forest communities, ruderale communities, violated surfaces communities, communities of shrubs, etc.

Sharr Mountain is one of the most important Balkan and European centers and of most qualitative endemism including relicts, endemo and endemic relicts and types. In the Sharr Mountain there are around 200 taconic, endemic and sub-endemic plants, (species, sub-species and varieties), steno-endemic orofits (mountain species). These species are of tertian age and rarely from glacial. Such species require special care: *Silene schmuckeri*, *Dianthus scardicus*, *Bornmullera dieckii*, *Draba korabensis*, *Sedum flexuosum*, *Potentilla doerfleri*, *Crocus scardicus* and *Oxytropis korabensis*.

Tertian orofits (mountainous species of tertian age). Most of them are steno-endemic and sub-endemic species: *Pinus peuce*, *Pinus heldreichii*, *Silene Waldsteinii*, *Silene lerchenfeldiana*, *Silene asterias*, *Ptilotrichum rupestre*,

Shievereckia doerfleri, Iberis sempervirens, Hesperis Dinarica, Saxifraga Androsaceae, Saxifraga glabella, Potentilla montenegrina, Anthyllus aurea, Acer heldreichii, Rhamnus pumilla, Viola Grisebachiana, Heacleum orphanidis, Soldanella dimonie, Veronica satureioides, Tozzia alpia, Ramonda serbica and Ramonda nathaliae, Nerthecium scardicum, Lilium albanicum, Gymnadenia frywaldsiana, Rhododendron ferrugineum and Linaria alpina.

Glacial species with arctic alpine spreading (forms from the ice age). They are very rare in the Balkan Peninsula: *Selaginella Selaginoides, Diphasium alpinum, Cryptogramma crispa, Salix herbaceae, Salix reticulata, Rumex nivalis, Silene rupestris, Rhodiola rosea, Saxifraga bryoides, Saxifraga androsaceae, Geum reptans, Epilobium anagallidifolium, Loiseleuria procumbens, Veronica alpina, Veronica aphylla, Pedicularis oederi, Erigeron uniflorus, Saussurea alpina, Carex foetida* [1].

Material and methods:-

Geographical position of Sharr Mountain:-

The geographical position of the massif of Shara is suitable and represents a sample of a mountain massif with clear morphoplastic differentiation. This mountain massif lies in the northwestern part of the Republic of Macedonia and is part of Polog region, ie it constitutes the western part [map. no. 1].

Location of the Sharr Mountain in R. Macedonian [Map no. 1].

The main elements of its geographical position are as follows: it is part of the Sharron-Pind mountain system, respectively it belongs to Dinarids; It is exposed to climatic influences of the Adriatic Sea and the Aegean Sea; located in the central part of the Balkan Peninsula.

The Sharr Mountain represents the largest mountain massif in Macedonia and lies in the geographical coordinates: between $42^{\circ}41'43''$ and $42^{\circ}16'34''$ geographical north latitude and between $20^{\circ}34'51''$ and $21^{\circ}16'00''$.

Unlike other mountains of the Balkan Peninsula that are stretched in northwest-southeast, Sharr has massive stretch in northeast-southwest. This mountain massif lies in the length of 80 km and a width of 10-20 km [2].

Geological aspects of the researched region

From the geological aspect (Менковић, 1978), in the creation of the mountains of the Sharr region, are schist rocks, but there is also limestone and magmatic rocks.

The magmatic rocks in the Sharr Mountain contain chrome, while in Bistra it contains iron. From non-metals there is a big surface of gypsum and qualitative marble surfaces near the town of Gostivar.

From the geological content aspect, dominate the Paleozoic plates mainly with a big quantity of lime and dolomite. The Bistra Mountain from the geological aspect consists of old Paleozoic rocks, with glacial relief as well, especially the circles [3].

Climate conditions:-

According to the geographic position (Rodić, 1987), the Republic of Macedonia is located in the Southern Europe with a meridian 41 and 42 passing through it in the northern geographic width, which means that it is closer to the Ecuador than Northern Pole. The geographic width affects directly in the intensity and extension of solar radiation

and this is lowered from south to north. The solar radiation extension and intensity is affected by the nearness sea as well.

From this point of view, the territory of the Republic of Macedonia even though it doesn't have direct cruise in the sea, is under the influence of side seas, because from the Aegean Sea in the south it is about 60 km far away (airline), and from the Adriatic Sea in west around 80 km. Generally it has Mediterranean mild climate. However, the influence of the Mediterranean climate does not enter in its depth, due to the high mountains in the west and south.

From the West there can be seen the influence of the Atlantic Ocean, although it is located very far. From there western winds blow bringing lots of air humidity during the whole year, and during the spring and autumn months, they bring rain. In the researched area, according to Lazarevski (Lazarevski, 2002) there are three main climate types:

Mountainous climate it is characteristic for mountains above 1000 m altitude. It has long and cold winters with snow and short and chilly summers. Here, the spring is colder than autumn. This climate is more present than the others, because the majority of the researched part of the region has high mountain terrains [4].

Results of the study:-

In publications of domestic and foreign authors the number of taxa described in Flora of Sharr reaches at 590 taxa while in this scientific research the total number of plant species reaches up to 650, of which 381 taxa are found in the alpine and subalpine zone. Species of the family Compositae and class Monocotiledona that are in flora of Sharr Mountain are not addressed by domestic and foreign researchers and so during this scientific research total number of species in flora Sharr Mountain reaches up to 650. These data provide evidence for a rich flora of the massif of Sarr.

By analyzing and comparing our current material with what is known to date for Sharr Mountain is observed pronounced similarity and large number of endemic plants.

The family of plants with larger number of taxa in the flora of Sharr Mountain is: Ranunculaceae, Caryophyllaceae, Cruciferae, Rosaceae, Leguminosae, Umbelliferae.

During the scientific research within the flora of Sharr Mountain were found about 20 plant species which belongs to monocotyledonae (seeds contain only one embryonic leaf, or cotyledon) and the material collected so far in Flora of Sharr Mountain noted significant number of mokotiledone plants, which belongs to 8 families, 16 genders. A significant number of monocotyledons species, are important for further studies in the Sharr Mountain vegetation.

Tax treated hierarchy:-

The following is a summarized ranking taxonomic [species of subalpine zone 1700- 2100 m rarely 2,200 m. and alpine zone of 2770 m.] which is followed in this study, and which is based on the nomenclature of Hill et al. (2006). Next to each species it is given the type of substrate and the altitude at which certain species is collected [6,7,8,9].

69. *Monotropa* L. 147. *Monotropa hypopitys* L., Sp. Pl. [1000-2000 m.].

25. Empetraceae

70. *Empetrum* L. 148. *Empetrum nigrum* L., Sp. Pl. [area alpine and subalpine.].

26. Primulaceae,

71. *Primula* L. 149. *Primula elatior* (L.) Hill, Veg. Syst. [Sharr mountain 1.700-2.700 m.]; 150. *Primula veris* L. Sp. Pl. [2.400 m.]; 151. *Primula halleri* Gmelin, Onomat. Bot. Compl. [Sharr mountain 1.600-2.700 m.]; 152. *Primula minima* L., Sp. Pl.

72. *Androsaceae* L. 153. *Androsacea hedraeantha* Griseb., Spic. Fl. Rumel. [Nëpër barishte deri 2700 m.]. 154. *Androsaceae villosa* L. Sp. Pl. [1800-2700 m.];

73. *Soldanella* L. 155. *Soldanelia pindicola* Hausskn., Mittel. Georg. Ges. Jena. [mbi 1.500 m.]; 156. *Soldanelia macedonica* Meyer F. K. [mbi 1.700 m.].

27. Tiliaceae

74. *Tilia* L. 157. *Tilia platyphyllos* Scop., Fl. Carn. [Luboten, Leshnica, deri 1.650 m.].

28. Malvaceae

75. *Malva* L. 158. *Malva moschata* [deri 2000 m.]; 159. *Malva neglecta* [deri 2.200 m.]

29. Euphorbiaceae

76. *Euphorbia* L. 160. *Euphorbia stricta* L. [to 2.000 m. Cerepasina]; 161. *Euphorbia cyparissias* L., Sp. Pl. [to 2.200m.]; 162. *Euphorbia epithymoides* [Ellak, Leshnica].

30. Thymelaceae

77. *Daphne* L. 164. *Daphne mezereum* L. [1200.2300 m.]; 165. *Daphne oleoides* L., [1200-2000 m.]

31. Rosaceae

78. *Aruncus* Adans. 166. *Aruncus vulgaris* Rafin., *Sylva Tellur.* [for 1.000-1.700 m.]

79. *Rubus* L. 167. *Rubus idaeus* L., Sp. Pl. [1200-2000 m.]

80. *Rosa* L. 168. *Rosa canina* L. [Sharr Mountain]; 169. *Rosa glauca* Pourret. [1200-2000 m.]; 170. *Rosa pindulina* L., Sp., Pl. [1200-2000 m.]; 171. *Rosa dumalis* Sharr mountain]; 172. *Rosa corymbifera* Borkh., Vers. Forstbot Beschr. Holzart.[Sharr mountain]; 173. *Rosa tomentosa* Sm., Fl. Brit.[300-2300 m.]; 174. *Rosa villosa* L. 1000-1.600 m.]; 175. *Rosa orientalis* Dupont ex Ser. In., DC., Prodr. [1.500-2000 m.];

81. *Sanguisorba* L. 176. *Sanguisorba officinalis* L. [1200-2500 m.]; 177. *Sanguisorba minor* L., Sp. Pl. [to 2000 m.]

82. *Dryas* L. 178. *Dryas octopetala* [1700-2500 m.]

83. *Geum* L. 179. *Geum reptans* [to 2750 m.]; 180. *Geum urbanum* [1600 m.]; 181. *Geum montanum* L. [to 2760 m.]; 182. *Geum rivale* L.[1500-2400 m.]; 183. *Geum coccineum* L. [1000-2300 m.]

84. *Potentilla* L. 184. *Potentilla argentea* L.[2000 m.]; 185. *Potentilla inclinata* Vill., Hist. Pl. Dauph. [to 2000 m.]; 186. *Potentilla astracanica* Jacq., Misc. Austr. Bot. [1.600 m.]; 187. *Potentilla pedata* Nestler, Monogr. Potent. [to 2.000 m.]; 188. *Potentilla obscura* Wild., Sp. Pl. Ed. [to 2200 m.]; 189. *Potentilla sulphurea* Lam., Fr. Ed. [1.800 m.]; 190. *Potentilla balcanica* Wolf Micevski [to 2.200 m.]; 191. *Potentilla aurea* L. [1.600-2.700 m.]; 192. *Potentilla speciose* Willd., Sp. Pl. [1400-2100 m.]

85. *Fragaria* L. 193. *Fragaria vesca* [to 2000 m.]; 194. *Fragaria moschata* L. [Sharr Mountain].

86. *Alchemilla* L. 195. *Alchemilla acutata* Buser, Algem. Bot. Zeit. [2.450 m.]; 196. *Alchemilla bulgarica* Rothm. Feddes Repet [2.370 m.]; 197. *Alchemilla flabellate* Buser, Not. Alchim [-2.500 m. Kobilica, Luboten]; 198. *Alchemilla glaucescens* Wallr., Linnaea [1.950 m. Luboten]; 199. *Alchemilla pirinica* Pawl., Bull. Int. Acad. Polon. [2.662 m.Rudoka, Cerepassina, Luboten, Leshnica]; 200. *Alchemilla serbica* (Fritsch) Pawl., Acta Bot. Pol.[to 2.120 m. Cerepassina]; 201. *Alchemilla acutiloba* Opiz, Fl. Bohm [2.120 m. Gajre, Jellak, Cerepassina]; 202. *Alchemilla crinita* Buser, Scrin. Fl. Select. Magnier [to 2.320 m. Cerepassina, Kobilica]; 203. *Alchemilla gracilis* Opiz, Fl. Bohm [to 1.890 m. Gajre, Kodra e diellit (Popova Sapka)]; 204. *Alchemilla heterophylla* Rothm., Feddes Repert. [to 2.520 m. Leshnica, Cerepassina]; 205. *Alchemilla monticolla* Opiz, Fl. Bohm[to 2.560 m. Plloça-Sharr mountain]; 206. *Alchemilla xanthochlora* Rothm., Feddes Repert. [to 2.330 m.]; 207. *Alchemilla connivens* Buser, Bull. Herb. Boiss. [Majen e Lubotenit 2.300 m.]; 208. *Alchemilla effuse* Buser Alchim Walais [to 2000 m.]; 209. *Alchemilla reniformis* Buser Alchim Walais [to 2.400 m.]; 210. *Alchemilla heterotricha* Roth; Feddes Repert. [to 2.200 m. Kobilica, Luboten]; 211. *Alchemilla fissa* Gunther & Schumnel, Sched. Cend. Siles. Exsicc. [to 2200 m. Luboten].

87. *Pyrus* L. 212. *Pyrus pyraster* Burgsd., Anleit Holzart. [to 1.600 m Sharr mountain].

88. *Malus* Miller 213. *Malus sylvestris* Miller, Gard. Dict. Ed [to 1.600 m.]

89. *Sorbus* L. 214. *Sorbus semipinnata* (Roth. Hedlund, Monogr.Gatt. Sorbus [1200-1850 m. Cerepassina, Leshnica]; 215. *Sorbus chamaemespilla* L. [area subalpine, Sharr mountain].

90. *Amelanchier* Medicus 216. *Amelanchier ovalis* Medicus [2.100 m. Sharr mountain].

91. *Cotoneaster* Medicus 217. *Cotoneaster integerrimus* Medicus [to 2.200 m.Sharr mountain]. 218. *Cotoneaster nebrodensis* (Guss.) [to 2000 m. Sharr mountain].

92. *Crataegus* L. 219. *Crataegus sericeus* Dzhekov [1.000-1.600m.].

93. *Prunus* L. 220. *Prunus cerasifera* Ehrh., Beitr. Naturk. [to 1.750 m.]. 221. *Prunus cocomilia* Ten., Flnap [Luboten to 1.750 m.]; 222. *Prunus avium* L. [1.800 m.].

32. Grossulariaceae

94. *Ribes* L. 223. *Ribes uva-crispa* [1.200-1.800 m.]

33. Crassulaceae

95. *Sempervivum* L. 224. *Sempervivum thompsonianum* Wale, Quart. Bull. Alp. Gard. Soc. [2.100-2.200 m.]; 225. *Sempervivum kosaninii* Praeger Inst. Univ. Beograd [Sharr mountain]; 226. *Sempervivum marmoreum* Griseb. Spicil. Fl. Rumel. [Sharr mountain].

96. *Sedum* L. 227. *Sedum acre* L. [2.300 m.]. 228. *Sedum sartorianum* Boiss., Diagn. Pl. Or. Nov. [alpike, subalpine, to 1.800 m.]; 229. *Sedum alpestre* Wild., Prosp. Pl. Dauph. [Sharr mountain]; 230. *Sedum erythraeum* Griseb. Spicil. Fl. Rumel[2.000 m.]; 231. *Sedum flexuosum* Wettst. [Sharr mountain]; 232. *Sedum album* L. [to 2.300 m.]; 233. *Sedum dasyphyllum* L [to 2.500 m.]; 234. *Sedum magelense* Ten., Prodr. Fl. Nap. [1.000-2.500 m.];

235. *Sedum atratum* L. [2.500 m.]; 236. *Sedum annuum* L. [2.500 m. Sharr Mountain]; 237. *Sedum hispanicum* L. [1.800 m.]

34. Saxifragaceae

97. *Saxifraga* L. 238. *Saxifraga rotundifolia* L., Sp. Pl. [to 2.700 m.]; 239. *Saxifraga bryoides* L., Sp. Pl. [2.200-2.600 m.]; 240. *Saxifraga tridactylites* L., Sp. Pl. [to 1.700 m.]; 241. *Saxifraga adscendens* L., Sp. Pl. [area alpine]; 242. *Saxifraga aizoides* L., Sp. Pl. [Luboten]; 243. *Saxifraga glabella* Bertol., Gior. Arcan. Sci. [Sharr mountain]; 244. *Saxifraga pedemontana* Al., Fl. Peden [Sharr Mountain, Maja e zezë (Crn Vrv) Sharr mountain]; 245. *Saxifraga androsaceae* L., Sp. Pl. [Sharr mountain 1.700-2.500 m.]; 246. *Saxifraga bulbifera* 1700 m.]; 247. *Saxifraga exarata* Wild., Prosp. Pl. Dauph [Sharr mountain, alpines area]; 248. *Saxifraga bulbifera* L. Sp. Pl. [to 1.700-1.800 m.]; 249. *Saxifrage opposipifolia* L., Sp. Pl. [alpines area]; 250. *Saxifraga marginata* Sternb., Revis. Saxifr. Su. Pl [alpinus and subalpinus area]; 251. *Saxifraga scardica* Griseb. Spicil. Fl. Rumel [Sharr mountain]. 252. *Saxifraga paniculata* Miller [400-2.700 m.];

98. *Chrysosplenium* L. 253. *Chrysosplenium alternifolium* [Sharr Mountain].

35. Leguminosae

99. *Cytisus* L. 254. *Cytisus nigricans* Sp. Pl. [Luboten].

100. *Chamaecytisus* Link. 255. *Chamaecytisus triflorius* (Link) [2.000 m.].

101. *Genista* L. 256. *Genista depressa* M. B., Fl. Taur.-Caucas. [2.700 m. Sharr mountain].

102. *Astragallus* L. 257. *Astragallus depresus* [700-2.400 m. R. M.]; 258. *Astragallus australis* (L.) Lam., Fl. Fr. [2.200-2.650 m.].

103. *Oxytropis* DC. 259. *Oxytropis lapponica* (Wahlenb.) Gay, Flora [Cerepashin, Bargdan, Maja e diellit (Popova Sapka) 2.000-2.7600 m.]; 260. *Oxytropis campestris* (L) DC., Astrag. [1.560-2.400m. Cerepashin, Luboten]; 261. *Oxytropis dinarica* (Murb.) Wettst., Bibl. Bot. [1.700-2.650 m. Kodra e diellit (Popova Sapka), Ellak, Cerepashin, Maja e Diellit]; 262. *Oxytropis halleri* Bunge ex Koch [Maja e Diellit (Maja e Titos)].

104. *Vicia* L. 263. *Vicia icana* Gouan, Fl. Monspl. [to 2.300 m.]; 264. *Vicia sylvatica* L. Sp. Pl. [800-2.000 m., Leshnica]; 265. *Vicia tetrasperma* (L.) Schreb., Spic. [to 1.600 m. Rogaçeva]; 266. *Vicia sepium* L. Sp. Pl. [700-1.750 m.]; 267. *Vicia lathyroides* L. Sp. Pl. [to 1.600 m.];

105. *Lathyrus* L. 268. *Lathyrus laxiflorus* (Desf.) O. Kuntze, Acta Horti Petrop. [to 1.600 m.]; 269. *Lathyrus Nissolia* L., Sp. Pl. [to 1.700 m.];

106. *Trifolium* L., Sp. Pl. 270. *Trifolium repens* L., Sp. Pl. [to alpines area]; 271. *Trifolium pallescens* Schreber in Sturm, Deutschl. Fl. Ab. L, Bd. 4 H. [mbi 2.000 m.]; 272. *Trifolium badium* Schreber in Sturm, Deutschl. Fl. Ab. L, Bd. 4 H. 273. *Trifolium velenovskyi* Vand., Sitz.-Ber. Bohm. Ges. Wiss. (Math.-Nat. Kl.) [1.000-2.000 m. Sh.M.]; 274. *Trifolium noricum* Wulfen, Arch. Bot. (Roemer) [1.650-2.700 m.-endemike]; 275. *Trifolium medium* L., Amoen. Acad. [700-2.100 m. R.M.]; 276. *Trifolium pignantii* Fauche & Chaub. In Bory. Exped. Sci. Moree [to 2.000 m.]; 277. *Trifolium alpestre* L., Sp. Pl. ed. [to 2.000 m.]; 278. *Trifolium ochroleucon* Hudson, Fl. Angl. [to 1.700 m.].

107. *Dorycnium* Miller 279. *Dorycnium herbaceum* Will., Prosp. Pl. Dauph. [Luboten]; 280. *Dorycnium hirsutum* L.

108. *Lotus* L. 281. *Lotus corniculatus* L. var *alpinus* Ser. In Dc., Prodr. [alpinus area-Kodra e diellit (Popova Sapka)].

109. *Anthyllis* L. 282. *Anthyllis aurea* Welden in Host, Fl. Aust. [700-2.000 m. Kodra e Diellit (Popova Sapka) Cerepashina]; 283. *Anthyllis vulneraria* L. SP. Pl. var. *albana* [Kodra e Diellit (Popova Sapka) Cerepashina 2.50-2.650 m.].

110. *Hippocrepis* L. 284. *Hippocrepis comosa* L. SP. Pl. [2.200 m. Sharr Mountain].

111. *Onobrychis* Miller 285. *Onobrychis montana* Dc.in Lam. Et Dc., Fl. Fr. ed. subsp. *scardica* (Griseb) Ball, Feddes repert.[Sharr Mountain].

36. Onagraceae

112. *Circea* L. 286. *Circea lutetiana* L. SP. Pl. [2.000 m. Luboten].

113. *Epilobium* L. 287. *Epilobium angustifolium* L. SP. Pl. [Rocky grounds; waste areas; mountain paths; forest edges and cuttings]; 288. *Epilobium parviflorum* Scrb., Spicil, Fl. Lips. [Sharr Mountain-Vejce]; 289. *Epilobium montanum* L., Sp. Pl. [Sharr Mountain]; 290. *Epilobium collinum* Gmelin, Fl. Bad. [Sharr Mountain]; 291. *Epilobium lanceolatum* Sebastini & Mauri, Fl. Rom. [Sharr Mountain to 1.600 m.]; 292. *Epilobium obscurum* Schreber, Spic. [Sharr Mountain-Luboten].

37. Aceraceae

114. *Acer* L. 293. *Acer platanoides* L. SP. Pl. [Mali Sharr-Luboten, Leshnica]; 294. *Acer campestre* L. SP. Pl.; 295. *Acer pseudoplatanus* L. SP. Pl. [900.-1.700 m.Tetova-Lisec]; 296. *Acer heldreichii* Orph. In Boiss.; Diagn. Pl. Orient. [1.400-2.000 m. Leshnica, Kodra e Dielli, Lisec]; 297. *Acer obtusatum* Waldst. & Kit. In Wild., Sp. Pl. [600-

1.300 (1700 m.)]; 298. *Acer hyrcanum* Fischer & C. A. Meyer, Ind. Sem. Hort. Petrop. [to 1.600 m.]; 299. *Acer monspessulanum* L. SP. Pl. [Tetova-Lisec].

38. Linaceae

115. Linum. 300. *Linum perenne* L. SP. Pl. subsp. *extraaxillare* [to 1.800 m.]; 301. *Linum catharticum* L. SP. Pl. [to 2.200 m.].

39. Oxalidaceae

299. *Oxalis acetosalla* L. SP. Pl. [Sharr mountain].

40. Geraniaceae

116. Geranium L. 302. *Geranium macrorrhizum* L. SP. Pl. [Sharr Mountain]; 303. *Geranium cinereum* Cav., Monad. Class. Diss. Dec. subsp. *subcaulescens* [for 1.200-2.700 m.]; 304. *Geranium sylvaticum* L. SP. Pl. [to 2.100 m. Sharr mountain]; 305. *Geranium reflexum* L., Mantissa Alt. [Sharr mountain 1.800 m.]; 306. *Geranium aristatum* Freyn & Sint., Bull. Herb. Boiss [1.000-2.650 m. Sharr Mountain]; 307. *Geranium pyrenaiicum* Burm. Fil., Spec. Bot. Geran. [to 2.200 m. Sharr Mountain]; 308. *Geranium molle* L. SP. Pl. [Sharr Mountain]; 309. *Geranium robertianum* L. SP. Pl. [2.000 m. Sh.M.].

41. Polygalaceae

117. Polygala L. 310. *Polygala major* Jack., Fl. Austr. [2.000 m. Rogacheva, Sharr Mountain]; 311. *Polygala comosa* Schkuhr, Handb. [1.800 m. Kodra e Diellit, Luboten-1.800 m.]; 312. *Polygala vulgaris* L. SP. Pl. [Sharr mountain, to 2.500 m.]; 313. *Polygala alpestris* Reichenb., Ic. Bt Pl. Crit [to 2.000 m.].

42. Umbelliferae

118. Sanicula L. 314. *Sanicula europaea* L., Sp. Pl. [to 1.800 m.].

119. Astrantia L. 315. *Astrantia major* L., Sp. Pl. [Kodra e Diellit-Leshnica].

120. Chaerophyllum L. 316. *Chaerophyllum hirsutum* L., Sp. Pl. [Sharr Mountain]; 317. *Chaerophyllum aureum* L. L., Sp. Pl. [Sharr Mountain-Luboten, to 2.000 m.].

121. Huetia Boiss 318. *Huetia Cynapioides* (Guss.) P.W.Wall, Feddes Repert. [to 2.000 m.].

122. Pimpinella L. 319. *Pimpinella major* (L.) Hudson, Fl. Angl. [900-1.700 m.]; 320. *Pimpinella saxifraga* L., Sp. Pl. [1.400-2.200 m. Sharr Mountain-Luboten].

123. Aegopodium L. 321. *Aegopodium sp.* L., Sp. Pl. [to 1.800 (2.000 m.)];

124. Seseli L. 322. *Seseli peucedanoides* (Bieb.) Kos.-Pol., Bull. Soc. Nat. Moscou, Nova ser. [to 2.200 m.].

125. Athamanta L. 323. *Athamanta haynaldi* Borb. & Uechtr. Bot. Zeitschr. [to 2.000 m.].

126. Meum Miller 324. *Meum athamanticum* Jack., Fl. Austr. [1.500-2.500 m.].

127. Bupleurum L. 325. *Bupleurum ranunculoides* L., Sp. Pl. [Sharr Mountain-Luboten]; 326. *Bupleurum falcatum* L., Sp. Pl. [to 2.100 m.].

128. Trinia Hoffm. 327. *Trinia glauca* (L.) Dumort., Fl. Belg. subsp. *carniolica* [Cerepashina, Ellak, Luboten, Maja e Diellit, Kodra e Diellit]; 328. *Trinia dalechampii* (Ten.) Janchen, Oster. Bot. Zeitschr. [Sharr Mountain-Luboten].

129. Carum L. 329. *Carum multiflorum* (Sm) Boiss., Fl. Or. [to 2.000 m.];

130. Cnidium Cusson 330. *Cnidium silaifolium* (Jack.) Simonkai, Enum. Fl. Transs. [to 1.700 m.].

131. Peucedanum L. 331. *Peucedanum oligophyllum* (Griseb.) Vandas, Magyar Bot. Lapok [Sharr Mountain, 1.500 m.]; 332. *Peucedanum aegopodioides* (Boiss.) Vandas, Sitz. Ber. Bohm. Ges. Wiss. (Math.- Nat. Kl.). [Luboten].

132. Pastinaca L. 333. *Pastinaca sativa* L., Sp. Pl. subsp. *urens* [Lisec].

133. Heracleum L. 334. *Heracleum sphondylium* L., L., Sp. Pl. subsp. *pyrenaicum* (Lam.) Bonnier & Layens, Fl. Fr. [Luboten].

43. Celastraceae

134. Evonymus L. 335. *Evonymus latifolius* (L.) Miller, Gard. Dict. [Sharr Mountain, Leshnica, Luboten].

44. Rhamnaceae

135. Rhamnus L. 336. *Rhamnus alpine* L., L., Sp. Pl. subsp. *fallax* (Boiss.,) Maire & Petitmenegin, Bull. Soc. Sci. Nancy [Sharr Mountain]; 337. *Rhamnus pumila* Turra, Giorn. Ital. Sci. Agric. Arti Commerc [Lisec, Kodra e Diellit, Cerepashin, Ellak, Leshnica].

45. Santalaceae

136. Thesium L. 338. *Thesium parnassi* A. DC., Prodr. [Cerepashina, Bargdan, Leshnica, Luboten,]; 339. *Thesium alpinum* L., Sp. Pl. [1.600-2.000 m., Sharr Mountain-Kodra e Diellit, Ellak, Leshnica].

46. Caprifoliaceae

137. Knautia L. 340. *Knautia arvensis* [Sharr Mountain].

138. Sambucus L. 341. *Sambucus nigra* L. [Sharr Mountain]; 342. *Sambucus ebulus* L. [Sharr Mountain]; 343. *Sambucus racemose* [deciduous and coniferous forests; shrubby areas, in ravines- Ellak, tre ujëra (Tri vodi) 1400-1900 m.].

47. Gentianaceae

139. Centaurium Hill 344. *Centaurium erythraea* Rafn, Danm. Holst. [Sharr Mountain-Luboten].

Conclusion:-

In editions of domestic and foreign authors, it is said that there are about 2000 species in the flora of Sharr Mountain.

The current partial processing of collected materials consists of 590 species, belonging to 216 genus and 63 families. These data testify a rich flora of the massif of Sharr.

By analyzing and comparing our current material with what is known to date for Macedonia, it is noticed a significant similarity and high numbers of endemic plants.

Wide Areal have family species in all heights of Shara: Ranunculaceae, Caryophyllaceae, Crucifer, Rosaceae, Leguminosae, Umbelliferae.

Also it is noted the used literature that there is no data on family "plants and plants Composite, Monocotyledonae" and a large number of families with a smaller number of plants.

Further elaboration of material of flora in Shara in the study will fill the number of species prevalent in flora in the Shara.
