

Items highlighted in **green** are Knox Horticulture Preferred Plug Series and are priced to be special values

Knox Horticulture uses automation, climate-controlled germination rooms and greenhouses, and RFID-tracked trays to produce our high-quality Plugs from Seed. Our young plants are produced under high light and ideal temperatures, packing the Florida sun into every plant. Sourcing Southern-grown plugs from Knox Horticulture can be a tremendous advantage for more northern greenhouses, especially for Spring production – leading to plants that finish faster, look better on the benches, and sell earlier.

Knox Horticulture Preferred Plug Series (items highlighted in **green**) are our most popular series and those we recommend as best suited for the Southeast. They are priced to be special values and there is **no minimum** required to order any of the varieties in these series.

Abutilon (*Abutilon hybrida*)
