 - (ii) there is insufficient scientifically accredited information available within Australia concerning the species to which the application relates to enable the Director to be satisfied that the introduction of the fish would not create a risk of harm to indigenous fish, or other living resources, of the waters to which the Act applies.
- (2) The Director may require a person who makes an application to be determined in accordance with subregulation (1)(b) to provide a certificate from a person who is, in the Director's opinion, appropriately qualified to give the certificate, certifying that the species of fish to which the application relates is not likely to create a risk of harm to indigenous fish, or other living resources, of the waters to which the Act applies.

8—Release of certain fish into natural waters

For the purposes of section 50(2) of the Act, fish of the families and species specified in Schedule 5 are fish are prescribed.

23—Powers of fisheries officer in relation to fish suffering from prescribed notifiable disease

- (1) If a fisheries officer reasonably suspects that fish kept in waters to which the Act applies are suffering from a prescribed notifiable disease, the officer may examine the fish and may enter land and exercise such other powers as are reasonably necessary for that purpose.
- (2) If the fisheries officer is, on examination of the fish, satisfied that all or some of them are suffering from a prescribed notifiable disease, the fisheries officer may take, or direct the person keeping the fish to take, such measures for the treatment or destruction of fish (or both), as the fisheries officer considers necessary to eliminate the disease.
- (3) A fisheries officer may take measures for the treatment or destruction of fish under subregulation (2) either immediately or in the event of non-compliance with a direction given by the officer under that subregulation.
