

# VIENNA LIFE SCIENCE REPORT 2013/14

# Vision

Life sciences and Vienna – what a success story! The support of the sector has been an absolute key aspect of Vienna for more than ten years, and I am therefore delighted to observe the steadily growing and dynamic life science scene as it also attracts international attention – with fresh ideas and innovative products. Both basic and applied research, as well as the development and production of highly modern medications are showing success.

In figures: aside from numerous young start-ups and small to mid-sized companies, there are also big pharmaceutical corporations and family operations which have been established for many years in Vienna. In 2012, 588 companies which are active in life sciences were counted here. In Vienna, such companies find a support landscape which is tailored to the industry, as well as a closely linked network of academic institutions and research facilities which serve as research partners on the one hand, and training partners for scientific successor generations on the other hand.

With targeted support from the City of Vienna via the ZIT – The Technology Agency of the City of Vienna, the Vienna Business Agency and the Vienna Science and Technology Fund (WWTF), approximately 190 million euros have been invested in life sciences since 1998. Aside from monetary support, the City of Vienna has also intensively supported life sciences by building and expanding life sciences real estate. Together with the Republic of Austria, the City of Vienna established the life science cluster organization LISAvienna specifically for the industry. This organization has now been making efforts for research and development companies in the area for more than ten years.

As a result of these measures and with a clear vision for the future, Vienna will continue to play a key role as an innovative European life science location. We look forward to enjoying continued success!

*Mag.ª Renate Brauner  
Vice-Mayor and Vice-Governor,  
Executive City Councillor of Finance, Economic Affairs  
and Public Utilities*

# Introduction

The second edition of the Vienna Life Science Report aims to depict the continuing development of Vienna as a leading life science location. By building on more than a century of experience in science and medical research, Vienna has advanced to become one of the leading life science hubs in Europe in the past 20 years. This success is based on outstanding research performed by the scientists at the city's universities and research institutions, on the entrepreneurial spirit and innovations developed by dynamic life science start-ups and established companies as well as on the financial and strategic investments made by the City of Vienna and the federal government.

Since the year 1998, the Austrian national funding bank, *austria wirtschaftsservice* (aws), has awarded roughly 206 million euros in grants, loans and guarantees to life science companies in Vienna. ZIT – The Technology Agency of the City of Vienna, the Vienna Science and Technology Fund (WWTF) and the Vienna Business Agency and the City of Vienna have also funded life science projects and infrastructure to the tune of 190 million euros in the same period. The custom-tailored funding and service instruments of these and other funding agencies such as Austrian Research Promotion Agency (FFG) and the university business incubator INiTS, leveraged a multitude of private investments and cooperation with large international enterprises. Moreover, a perfect interaction between universities, research institutes, and industry resulted in a knowledge and technology transfer that has been crucial for successful company developments.

**LISAvienna – Life Science Austria Vienna** has been successfully operating as a life science cluster organization since 2002, providing information and advice for potential start-ups and new arrivals, as well as for life science businesses in general. The five services of LISAvienna include consulting, marketing, qualification, networking and knowledge.

The report provides the latest facts and figures which underscore the significance of the life sciences in Vienna. The survey has been conducted to the internationally accepted OECD and GMDN standards in Austria. This time the survey not only included the dedicated and active manufacturers in the fields of biotechnology, pharma and medical technology but also suppliers, trading and service companies.

In 2012, LISAvienna counted 588 companies, of which 378 were biotech/pharma and medtech companies that were producing or developing products and processes in these fields or that were active as suppliers, service or sales companies. These 378 enterprises employed more than 21,000 people and generated more than 9 billion euros in sales in 2012. Apart from these business activities, academic research is performed by 25 research institutions, which employ over 14,000 people. The survey also provides an insight into the first-rate academic landscape in Vienna. In addition, it includes an extensive company directory to encourage you to discover more about Vienna's scientific and business potential.

We thank all those who contributed to this report and hope you enjoy reading it!

*Johannes Sarx and Peter Halwachs  
LISAvienna Executive Board*

# Overview

# Life Sciences in Vienna at a Glance

## Companies

Vienna has a long tradition of excellent scientific and medical research. The traditions of the Second Vienna Medical School are manifested today in a focus on medical biotechnology centering on anti-infectives, immunology, oncology and diseases of the respiratory system. Another core area is medical technology, in particular electromechanical medical devices and software for medicine, telemedicine and e-health.

A recent study revealed that Vienna is currently home to 378 companies with main activities in the biotech/pharma or medical technology sector according to the OECD and GMDN criteria (see methodology, page 179). In 2012, these companies employed 21,031 people and generated revenues amounting to 9,089 million euros.

Figure 1: Total number of Biotech/Pharma and Medtech companies, employees (head count) and revenues in Vienna (2012).

## Academia

The basis for successful in-house company research often originates in outstanding academic research. In life science research and education, Vienna ranks top in Austria: More than twenty-five research institutions are located in Vienna. Five universities, two applied universities, twelve non-university research institutes and six other organizations perform noteworthy research and teaching activities in the life sciences. With more than 38,290 students in the life

sciences alone, thereof 3,608 graduates, Vienna educates more young scientists than any other city in Austria. Altogether, the 25 research institutions employ 14,289 people in the life sciences. 5,733 publications in international journals are evidence of the excellent research activities.

## Vienna is special

Since the European Union has expanded eastwards, Vienna has reinforced its role as a business, academic and cultural hub for Central and Eastern Europe. With a highly qualified multinational workforce, a superb infrastructure and public service, Vienna is an ideal location for investments in the life sciences as well as for collaborations with researchers at first-rate academic institutions and hospitals.

### Connecting the heart of Europe

Over the past 20 years, Vienna has grown into the political and economic center of

Central Europe. The city is an ideal business location: whether as an east-west interface or as the headquarters for a company's Central and Eastern European (CEE) business activities. Vienna is home to the CEE headquarters of some 200 international corporations. Vienna's international airport offers more nonstop flights to CEE destinations than any other airport. As a Danube port, a major rail hub and with its well-developed road systems and excellent public transport system, Vienna's infrastructure is ideal. It is hardly surprising that Vienna ranks as the top international convention

city according to the International Congress and Convention Association for the seventh time in a row.

Vienna also offers the benefit of highly qualified workers, high productivity levels, a research and technology-friendly environment and the best quality of life in the world. In combination with stable political and economic framework conditions, the city shows its quality as a top economic center. Additionally, numerous international organizations have selected Vienna as their official seat, including institutions of the United Nations (UN), the Organization for Security and Co-operation in Europe (OSCE) and the Organization for Petroleum Exporting Countries (OPEC).

### Welcoming business environment

Companies that settle in Vienna appreciate not only the proximity to the growth markets of the neighboring countries in Eastern Europe, but also the attractive tax system with a low corporate tax of 25% and the option of group taxation. Group taxation reductions allow international groups and companies with Austrian subsidiaries to transfer profits and losses between group subsidiaries and to reduce the overall corporate tax liability to a minimum. In addition to low rates of tax, there are generous deductions and exemptions for investments in research and education. R&D allowances of up to 25% (in special cases up to 35%) are available on research and development expenditures. The Austrian tax system grants a tax premium for research amounting to 10%. For the education and training of employees employers can claim a tax allowance of 20%.

### Outstanding quality of life

Vienna has always been known throughout the world as a city defined by its long history of art and culture. In addition to its numerous cultural offerings, the city is full of inherent natural beauty. Vienna is consist-

*Vienna is renowned for its quality of life ...*

... and its welcoming business environment.

ently ranked at the top of the list in international surveys on quality of life. According to the 2012 Mercer Quality of Living Survey, in which 221 cities were evaluated on the basis of personal safety, political and economic stability, health care, educational and recreational opportunities, Vienna was once again rated as the city with the world's best quality of life.

### Innovative science

As a burgeoning life science center, historical Vienna enjoys an illustrious tradition of scientific and medical research. Names such as Semmelweis, Billroth and Landsteiner have all taken their place in the annals of history. The tradition of the Vienna Medical School has been continued today as a focus on medical biotechnology with a focus on the areas of vaccinations, anti-infectives, immunology, oncology and diseases of the respiratory system. A further focus is on medical technology, particularly in the areas of electromechanical medical technology and software for medicine, telemedicine and e-health. Ahead of Berlin, Munich and Hamburg, Vienna is the city with the highest number of students within German speaking countries. 186,862 students are studying at the nine public universities, three universities of applied sciences and five private universities. Life Sciences represent a strong pillar not only among universities but

also in regards to research activities: More than a fifth of the total student population in Vienna is studying in a life science course of studies and more than 14,000 employees work at 25 Viennese life science research institutes and universities.

### Translating cutting-edge research into thriving businesses

Vienna provides the ideal environment for the translation of novel ideas and technologies into thriving businesses. Indeed, the growing importance of Vienna as a life science cluster is reflected in the numerous innovative start-ups and the establishment of research and development centers by leading global life science companies such as Baxter or Boehringer Ingelheim. In addition to pursuing their sales activities in Central and Eastern Europe from their Vienna base, some of these subsidiaries also operate research and production facilities here. These global players are supplemented by a fast growing number of biotech and medical technology start-ups and a superior research infrastructure.

### Tailored funding and services

Austria, and in particular Vienna, offer a broad range of financial support programs from national and city agencies to support life science companies at all stages of the value chain. In 2012, 68 life science

projects in Vienna were able to attract funding amounting to 29.5 million euros (funding cash value) from the different available funding programs of Austria Wirtschaftsservice (aws), Austrian Research Promotion Agency (FFG), Vienna Business Agency, Vienna Science and Technology (WWTF) and ZIT - Technology Agency of the City of Vienna.

The City of Vienna strongly promotes life sciences with financial incentives and the fostering of networks. These networks as well as state-of-the-art technology hubs facilitate interaction between global players, start-ups, research institutions and educational facilities with the aim of ensuring the fast and effective transfer of technologies between the scientific and the business communities.

Up to 2018, the City of Vienna, together with the Republic of Austria, will be investing 52 million euros into the Campus Vienna Biocenter (CVBC), a cutting-edge shared core facility. The Campus Science Support Facility (CSF) serves the academic institutes and university research centers as well as the vibrant start-up community at the campus. Over a 10-year period, the city will invest another EUR 10 million in the Equipment BOKU Vienna Institute of Bio-Technology-GMBH located at LifeScience Vienna Muthgasse in the 19th district.

In addition to the state-of-the-art infrastructure, customized funding for start-ups and established companies is offered by different agencies.

In Vienna, federal funding is supplemented by different city-related agencies: ZIT – The Technology Agency of the City of Vienna, the Vienna Science and Technology Fund (WWTF), the Vienna Business Agency and the university business incubator INITS. ZIT provides support mainly for small and medium-sized enterprises located in Vienna in the form of grants, technology-specific infrastructure, as well as free services like technology transfer consulting. ZIT's research funding program supports industrial and experimental R&D projects managed by Viennese businesses, where the investment is expected to result directly or indirectly in product, service or process innovations. Cash grants of up to 500,000 euros are awarded for the best R&D projects.

On behalf of the Austrian Federal Ministry of Economy, Family and Youth (BMWFJ), *austria wirtschaftservice* (aws), the Austrian funding bank aims to stimulate the economy through financial support and knowledge transfer. aws provides financial support to high-technology start-ups with its programs 'LISA PreSeed' and 'LISA Seedfinancing'. The PreSeed program provides funding for proof of principle experiments or the development of prototypes before a high-tech business is founded. The maximum amount of this nonrefundable grant is 200,000 euros. Starting up an innovative and internationally competitive high-tech company requires considerable expertise, a lot of courage and sufficient capital. With 'LISA Seedfinancing' aws funds the start-up phase of young high-tech companies with up to 1 million euros, combined with customized advice and support. These funding programs are embedded in a comprehensive life science program, ranging from the life science business plan competition 'Best of Biotech' to

international location marketing under the national brand Life Science Austria (LISA). For later-stage companies, aws offers tailor-made loans, guarantees and equity financing instruments. The business financing by aws is supplemented by the Austrian Science Fund (FWF), which funds basic academic research and the Austrian Research Promotion Agency (FFG), which is in charge of applied research funding.

Representing more than 400,000 member companies, the Austrian Economic Chambers (WKO) and its branch in Vienna (WK Wien) are modern service providers offering fast expert advice on topics from labor laws to customs information. Abroad, the foreign trade promotion organization ADVANTAGE AUSTRIA offers support to Austrian companies interested in export while companies willing to relocate to Austria can get help from the Austrian Business Agency (ABA).

## LISAvienna – Connecting Life Sciences

LISAvienna - Life Science Austria Vienna is the life science cluster organization of the City of Vienna, serving all stakeholders in the areas of biotechnology/pharmaceuticals and medical technology.

As a joint initiative of the Republic of Austria and the City of Vienna, LISAvienna helps to ensure that the economic potential of life sciences is put to good use and turned into marketable products, improved processes and new services. The main focus of its activities is on custom-tailored advice and assistance for innovative enterprises.

LISAvienna is supported by Austria Wirtschaftsservice GmbH (aws) and the ZIT – The Technology Agency of the City of Vienna..

### Services

Whether you are an entrepreneur, an investor or a researcher, LISAvienna can provide you with essential services in Austria's largest life science location:

- › **Consulting:** Contacts and advice on setting up, locating, funding, collaboration, infrastructure and going international
- › **Marketing:** Positioning Vienna as a significant research and business location at international trade fairs and in the media
- › **Qualification:** Seminars on business and legal topics and on entrepreneurial aspects of life sciences
- › **Networking:** Setting up and strengthening contacts in the interest of more fruitful exchanging of ideas and experiences
- › **Knowledge:** Preparing analyses, background papers and studies on the further development of Vienna as a life science location

# Academia

# Academic Hot Spots in Vienna

Vienna is home to five universities, two universities of applied sciences, twelve non-university research institutes and six other organizations performing life science research. This makes the city a globally renowned hot spot for research and teaching activities that attracts more than 38,000 students in life sciences alone. 3,608 students graduated in 2012, thereof 285 PhDs.

The 25 research and teaching institutions covered by the report employ 14,289 people – 7,744 are researchers. With 5,734 life science papers in peer-reviewed journals, the scientific output in life sciences was significant in 2012. 42 life science patents filed and an active patent portfolio of 745 patents prove that Vienna is also a fertile ground for technology transfer.

Figure 3: Location of the academic hot spots within Vienna

### **1 LifeScience Vienna Muthgasse**

LifeScience Vienna Muthgasse is the most recent life science location in Vienna. It bundles university and research institutions such as the University of Natural Resources and Life Sciences (BOKU) or the Austrian Institute of Technology (AIT) with life science companies and organizations offering beneficial synergies. With state-of-the-art infrastructure, LifeScience Vienna Muthgasse accommodates the requirements of different fields of research such as biology, chemistry and physics. The first phase of the spectacular project 'Biotech I' with more than 24,000 m<sup>2</sup> is already in use. The next building, 'Biotech II' will provide 29,000 m<sup>2</sup> of office and lab space, the WHITE SPACE will add another 25,500 m<sup>2</sup> of rental space.

[www.lifescience-vienna.com](http://www.lifescience-vienna.com)

### **2 University of Veterinary Medicine**

The University of Veterinary Medicine, Vienna, is the oldest academic educational and research institution for veterinary medicine in the German-speaking world. It is considered one of the best educational institutions for veterinary medicine in Europe. Its central focus is the protection of human and animal health and the production of healthy food stuff. The animal hospital with its university clinics is an integrated component of the University of Veterinary Medicine, Vienna. Aside from its function as a teaching hospital for students, it also welcomes animal owners: More than 41,500 animals have been treated here in 2012.

[www.vetmeduni.ac.at](http://www.vetmeduni.ac.at)

### **3 Medical University of Vienna**

The Medical University of Vienna is the largest medical education establishment in the German-speaking world and one of Central Europe's biggest medical research organizations, as well as Austria's leading health care services provider through Vienna General Hospital (AKH), the university hospital. The core mission comprises the triple track of research, teaching and patient care. Five research clusters (Allergies/Immunology/Infectious Diseases, Oncology, Neuroscience, Cardiovascular Medicine, Imaging) have been established to pursue clinical research and promote its integration with basic medical research.

[www.meduniwien.ac.at](http://www.meduniwien.ac.at)

### **4 Campus Vienna Biocenter**

The Campus Vienna Biocenter (CVBC) at Neu Marx is one of the leading international biomedical research centers worldwide. With a broad spectrum of research institutions, it is home to a variety of research laboratories, several internationally successful biotech companies, recent start-ups as well as privately and publicly funded services. In addition, teaching is a major activity on the campus. Access to state-of-the-art infrastructure has become an important and decisive element for cutting-edge research. Therefore, the CVBC set up the Campus Science Support Facilities (CSF GmbH), featuring a comprehensive range of new technologies with substantial funding from the Austrian Ministry of Science and Research and the City of Vienna.

[www.viennabiocenter.org](http://www.viennabiocenter.org)

### **5 Vienna University of Technology**

The TU Vienna is among the most successful technical universities in Europe and is Austria's largest technical research and educational institution. The TU Vienna provides expertise in bioanalytics and sensor development, biomechanics, biomedical engineering, chemical technologies, electrodynamics, material sciences and software development. An experienced technology transfer unit forms the professional interface towards industry partners to catalyze partnerships that bring new developments to the market.

[www.tuwien.ac.at](http://www.tuwien.ac.at)

# Spotlight on Research and Teaching

Vienna is home to numerous institutions active in the life sciences. The bandwidth of the institutes' landscape is particularly large. Because commercial activities in biotech and medtech are linked to many different disciplines such as agriculture, biology, chemistry, engineering, material sciences, medicine, pharmaceuticals and veterinary medicine, a very broad and extended life science definition has been applied for the set-up of the sample covered by this report.

## Long traditions and cutting-edge research

25 institutions participated in LISAVienna's 2013 survey (for methodology, see page 178) to gather up-to-date statistics on life science research and teaching in Vienna: Five universities, two universities of applied sciences, twelve non-university research institutes and six other organizations contributed their data and short profiles which are included in the report. By the end of 2012, these institutions employed roughly 14,300

people in the life sciences, more than half of them were researchers. With more than 38,000 students in the life sciences alone, Vienna educates more young scientists than any other city in Austria. 3,608 students graduated in 2012, thereof 1,463 graduates from bachelor courses, 1,860 graduates from master or diploma study programs as well as 285 PhDs.

5,734 life science papers were published in peer-reviewed journals by researchers based in the organizations included in the sample. Furthermore, 42 life science patents were filed last year. In 2012, the total life science budget of the organizations amounted to 686 million euros, of this amount almost 250 million euros came from third-party funding.

Vienna owes its success as one of the most important life science centers in Europe today to its long tradition in scientific and medical research. Names such as Semmel-

weis, Billroth and Landsteiner have all taken their place in the annals of the city's history. The University of Vienna, founded in 1365, is Austria's largest university. The Medical University of Vienna was originally founded in 1365 as a Medical Faculty of the University of Vienna. Since 2004, the MedUni Vienna is an autonomous university.

The University of Veterinary Medicine was founded in 1765 by Empress Maria Theresa as the first veterinary medicine educational establishment in the German-speaking world. In 1815, the Vienna University of Technology (TU Vienna) was established and in 1872 the University of Natural Resources and Life Sciences was founded. Since the 1990s the institutional landscape has diversified immensely.

Nowadays, cutting-edge research is not only performed in well-established universities, but also in research institutions such as the Max F. Perutz Laboratories, the Institute

Table 1: Academic Institutions – Facts & Figures I

of Molecular Pathology (IMP) or institutes operated by the Austrian Academy of Sciences (ÖAW) like the Center of Molecular Medicine (CeMM), the Gregor Mendel Institute of Molecular Plant Biology (GMI) and the Institute of Molecular Biotechnology (IMBA).

#### New types of collaborations

New forms of institutions have emerged to address research questions that concern tangible societal and industrial problems and to allow for new types of collaboration with commercial and societal partners. These include institutes and labs supported by the Christian Doppler Research Association (CDG), the Ludwig Boltzmann Gesellschaft (LBG) and the Karl Landsteiner Association (KLG). Furthermore, technology-focused competence centers like the Austrian Centre of Industrial Biotechnology

(ACIB) and the Center for Virtual Reality and Visualization Research (VRVis) have been set up and complement existing institutions like the Austrian Institute of Technology (AIT) and the Austrian Research Institute for Chemistry and Technology (OFI). Besides, organizations like the Campus Science Support Facilities GmbH (CSF) were established to provide cutting-edge scientific infrastructure and export support.

#### Talent is the key to success

Perfect organizational structures and a top infrastructure are without a doubt crucial for the delivery of excellent research results. However, the people working in these structures are the key to success. Their talent and motivation make the difference. At the end of 2012, almost 14,300 highly educated and motivated people worked in Vienna for the non-profit research institu-

tions which were included in LISAVienna's survey. Women accounted for half this number. These employees are active in a wide variety of professions from medical doctors, clinical researchers, lab researchers, computer specialists and engineers to project managers, financial experts, administrative and public relations experts. Today, the life sciences also attract a large number of students: At Vienna's universities 38,290 students are registered in these courses, of these 3,608 graduated in 2012.

#### Input and output

Despite the controversial discussions on peer review processes, they are still the standard of quality assurance in the academic world. Only publications that have been reviewed by experienced colleagues are published in high impact journals with an international readership. Researchers at

## Vienna's Largest Life Science Institutions

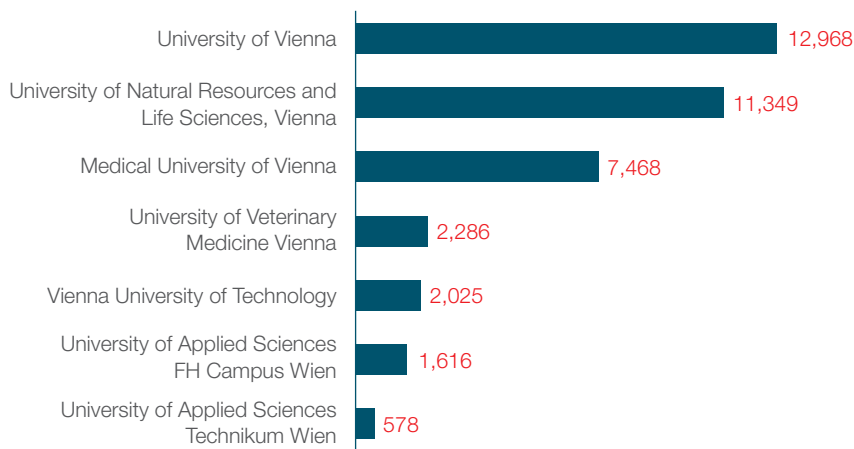

Figure 4: Size of the largest Viennese life science institutions in terms of students

Vienna provides the perfect setting to unite long tradition and cutting-edge research.

the institutions that participated in LISAvienna's survey published 5,734 life science papers in peer-reviewed journals in 2012 – including Cell, Nature or New England Journal of Medicine and Science. Scientific output, of course, also has other dimensions like education of the next generation of researchers but also, for example, the generation of patents for promising new inventions. In 2012, the academic and non-university institutions in the sample filed a total of 42 patent applications. Their active patent portfolio amounts to 745 patents in total.

Clearly, this output requires significant and ongoing public funding – especially as research in the life sciences can be very time-consuming and costly. The 17 institutions that provided LISAvienna with their financial data spent roughly 686 million euros on the life sciences in 2012. Twenty-two organizations in LISAvienna's sample disclosed their third-party funding volumes for the life sciences which amount to 246 million euros in 2012.

### Top research hot spots in Vienna

In recent years, five science and technology centers have emerged at various locations across Vienna where research institutions, hospitals and businesses co-locate. Dynamic start-ups and outstanding academic institutes are concentrated at the Campus Vienna Biocenter, around the Vienna General Hospital, which is one of Europe's largest hospitals, at LifeScience Vienna Muthgasse, on the 15-hectare campus of the University of Veterinary Medicine as well as at the Vienna University of Technology.

# Academic Directory

## Academic Institutes – List of Universities

**BOKU – University of Natural Resources and Life Sciences**

Founded in 1872 as k.k. Hochschule für Bodenkultur

The University of Natural Resources and Life Sciences, Vienna, the Alma Mater Viridis, links the natural sciences, engineering and economics. In this way, BOKU contributes to the protection of living space and quality of life, the management of natural resources and to securing nutrition and health. Biotechnology is one of BOKU's seven main research areas and is concentrated in the VIBT.

Employees, head count (FTE): 2,450 (1,769); 45 (44) % female; 72 (65) % researchers

Articles published: 604 | Third-party funding: EUR 35.79 m | Students: 11,394

Graduates: 1,432, thereof 744 graduates from bachelor, 482 from master and 94 from diploma courses as well as 112 PhD level graduates

**MedUni Vienna – Medical University of Vienna**

Founded in 1365 as the Medical Faculty of the University of Vienna, independent university since 2004

The Medical University of Vienna is one of Europe's medical training and research facilities with the greatest history and tradition. Counting 7,500 students, it is today the largest medical training facility in the German-speaking region. With its 31 university departments, 12 medical-theoretical centres and numerous highly specialised laboratories, it also ranks amongst the most significant cutting-edge research institutions in Europe in the biomedical sector.

Employees, head count (FTE): 5,339 (4,169); 45 (55) % female; 55 (62) % researchers

Articles published in 2012: 1,940 | Patents filed in 2012: 11

Active patent portfolio: 443 patents in 101 patent families

Total budget: EUR 270 m | Third-party funding: EUR 84.51 m | Students: 7,468

Graduates: 827, thereof 761 graduates from diploma studies and 6 from master study programs as well as 60 PhD level graduates

**University of Veterinary Medicine, Vienna (Vetmeduni Vienna)**

Founded in 1765

The University of Veterinary Medicine, Vienna stands for excellent academic education, basic research in veterinary medicine as well as applied and clinical research. The University's main areas of research are of high societal relevance and cover topics such as animal health and preventive veterinary medicine, veterinary public health and food safety. The University of Veterinary Medicine, Vienna conducts basic scientific research in the field of animal welfare and evaluates its relevance to animal husbandry, animal protection and animal ethics.

Employees, head count (FTE): 1,218 (959); 63 (62) % female; 53 (49) % researchers

Articles published in 2012: 425

## University of Vienna

Founded in 1365 as Alma Mater Rudolphina Vindobonensis

The University of Vienna was founded in 1365 and is the oldest university in the German-speaking world and one of the largest in Central Europe. Research and teaching in the life sciences are predominately at the core of three of its 19 faculties and centers – that is the Faculty of Life Sciences, the Center for Molecular Biology and the Faculty of Chemistry. A wide spectrum of scientific subjects ranging from immunology, molecular and organismic biology as well as pharmaceutical and nutritional sciences, biodiversity and biochemistry is covered.

Life sciences at the University of Vienna in 2012

Employees, head count: 1,960; 49 % female

Articles published in 2012: 1,702

Third-party funding: EUR 30.57 m | Students: 12,968

## Vienna University of Technology

Founded in 1815 as Imperial and Royal Polytechnical Institute

The Vienna University of Technology (TU Vienna) is among the most successful technical universities in Europe and is Austria's largest scientific-technical research and educational institution. Research areas cover all classic engineering disciplines; many of them are highly relevant for biotech and medtech industries. TU Vienna for example hosts expertise in bio-analytics and sensor development, biomechanics, biomedical engineering, chemical technologies, electrodynamics, material sciences and software development.

## Academic Institutes – List of Applied Universities

### University of Applied Sciences FH Campus Wien

Founded in 2001

The University of Applied Sciences, FH Campus Wien, cultivates an intensive exchange with research organizations, teaching, healthcare institutions and private industry and is thereby constantly improving the high scientific quality and practical relevance of the courses. FH Campus Wien cooperates in the fields of “applied life sciences” and “health” with the University of Vienna, the University of Natural Resources and Life Sciences Vienna, the University of Veterinary Medicine Vienna and the Medical University of Vienna.

Life sciences at FH Campus Wien in 2012

Employees, head count (FTE): 163 (132); 85 (84) % female | Articles published in 2012: 21

Patents filed in 2012: 1 | Total budget: EUR 0.85 m | Third-party funding: EUR 0.69 m

Students: 1,616, thereof 1,339 bachelor and 277 master students | Graduates: 508, thereof 419 graduates from bachelor (summer term) and 89 graduates from master study courses (winter term)

## University of Applied Sciences Technikum Wien

Founded in 1994

The University of Applied Sciences Technikum Wien is Austria's largest purely technical university of applied sciences. Research at the UAS is currently focused on embedded systems, renewable energy and life science technologies. The research activities in the field of life sciences cover a wide range, from projects in eHealth, tissue engineering, ambient assisted living and ambient assistive technologies to topics such as mechanical ventilation technology, rehabilitation technology, biomechanics and motion analysis.

Life sciences at UAS Technikum Wien in 2012

Employees, head count (FTE): 24 (20); 46 (45) % female | Articles published in 2012: 11

## Academic Institutes – List of Non-University Research Institutes

### ACIB – Austrian Centre of Industrial Biotechnology

Founded in 2010

acib is an international research center in applied biotechnology with locations in Vienna, Tulln, Innsbruck and Graz. We are an international partnership of 10+ universities and 30+ leading companies with more than 20 years of experience in applied industrial research. acib adopts the tools and concepts of nature for new industrial production methods and develops new processes and products with improved ecological and economic efficiency, higher quality and purity and new functionalities for everyday use.

Employees, head count (FTE): 172 (133); 59 (57) % female; 62 (66) % researchers

Articles published in 2012: 54 | Patents filed in 2012: 5

### AIT Austrian Institute of Technology

Founded in 2009

The Austrian Institute of Technology (AIT) is Austria's largest non-university research institute and addresses unmet societal and industrial needs. Two of its five departments place a strategic focus on life sciences: the AIT Health & Environment Department is focused on translational research in the fields of preclinical and clinical diagnostics, prevention as well as the sustainable exploitation of biological resources. The AIT Safety & Security Department is making a significant contribution to the ICT dimension of life sciences. Software for medical telemonitoring, therapy management, movement analysis and brain signal investigation are being developed.

## CCRI – Children's Cancer Research Institute

Founded in 1988

The Children's Cancer Research Institute (CCRI) operated by the St. Anna Kinderkrebsforschung Association is a non-profit research institution that is solely funded by volunteers' donations and competitive research grants. It was founded in 1988 with the overall aim of improving the treatment of malignant childhood diseases. Our comprehensive approach bundles all fields of childhood cancer research within a permanent cycle: basic, translational and clinical research, the improvement of diagnostic and prognostic methods, and immunological therapies. The Unit for Studies and Statistics (S<sup>2</sup>IRP) provides an essential link to research by acting as clinical coordinating centre.

Employees, head count (FTE): 118 (104), 70 (70) % female, 57 (56) % researchers

## CeMM – Research Center for Molecular Medicine

Founded in 2000

CeMM is a young, international, independent and interdisciplinary Research Center in Molecular Medicine, situated on the campus of the Medical University and the General Hospital in the heart of Vienna. "From the clinic to the clinic": driven by medical needs, CeMM integrates basic research and clinical expertise to pursue innovative diagnostic and therapeutic approaches. The work of 13 research groups with about 150 scientists focuses on cancer, inflammation and immune disorders. The goal of CeMM is to assist in preparing the predictive, preventive and personalized medicine of the future, and to be a training and teaching center for a new generation of researchers in molecular medicine. According to a survey from "The Scientist" CeMM is ranked as the best European place to work in Academia 2012.

Employees, head count (FTE): 150 (145), 56 (56) % female, 88 (88) % researchers

Articles published in 2012: 62 | Patents filed in 2012: 3 | Active patent portfolio: 6

## GMI – Gregor Mendel Institute of Molecular Plant Biology

Founded in 2000

The Gregor Mendel Institute (GMI) was founded in 2000 by the Austrian Academy of Sciences (ÖAW) to promote research excellence in molecular plant biology. The GMI is the only international center for basic plant research in Austria. Research at the GMI is curiosity driven and covers many aspects of molecular genetics, including basic mechanisms of epigenetics, population genetics, chromosome biology, developmental biology and stress signal transduction. *Arabidopsis thaliana* is the primary model organism used, although other organisms are also studied. Research is carried out by independent research groups. The focus is on scientific excellence and publication in high-impact journals.

Employees, head count (FTE): 95 (88), 45 (43) % female, 85 (83) % researchers

## IMBA – Institute of Molecular Biotechnology

Founded in 1999

IMBA uses model organisms and cutting-edge functional genomics to investigate fundamental molecular processes and their contribution to disease. In interdisciplinary research groups, IMBA pursues an integrative approach that combines functional screening, cellular RNAi, stem cell and imaging technologies with the knowledge for rapidly generating mouse disease models to examine the role of genes in physiology and pathogenesis. Numerous cooperations with leading academic and industrial partners are an integral part of IMBA's strategy and commitment to delivering outstanding results from its basic research.

Employees, head count (FTE): 179 (171), 53 (54) % female, 63 (64) % researchers

## IMP – Research Institute of Molecular Pathology

Founded in 1985

At the IMP, more than 200 scientists from over 30 countries carry out curiosity-driven, basic research in the molecular life sciences. Their projects are broadly organized into four topic areas: life at the molecular and cellular levels, information processing and storage in neural circuits, mechanisms of organismal development and disease, and interdisciplinary approaches that bring ideas and methods from other fields to bear on biological questions. The common goal in all of these areas is to elucidate the mechanisms and principles that underlie complex biological processes. All research results are published in refereed journals.

Employees, head count (FTE): 265 (255); 48 (47) % female; 69 (69) % researchers

Articles published in 2012: 52 | Patents filed in 2012: 1

Active patent portfolio: 201 patents in 27 families

## IPF – Institut für Pharmaökonomische Forschung

Founded in 2003

The IPF is an independent, non-university research institute, dealing with analyses and strategic research within health economics with the main focus on health economic evaluation like cost-effectiveness-analysis, modeling and health-economic-research. The main focus is centered within the pharmaceutical-, life sciences- as well as diagnostic- and medical devices industry. Economic evaluation is increasingly used to allocate of scarce health resources and to appraise health care programs.

## MFPL – Max F. Perutz Laboratories

Founded in 2005

The Max F. Perutz Laboratories are the research center for molecular biology of the University of Vienna and the Medical University of Vienna. With more than 60 research groups, the MFPL is the largest basic research institute on the Campus Vienna Biocenter. Besides doing research, the institute's second main focus is educating and training the next generation of scientists. The MFPL offer undergraduate studies, an international PhD program, Postdoc training and Junior Group Leader positions.

Articles published in 2012: 145

Total budget: EUR 8.6 m | Third-party funding: EUR 14.46 m

Graduates: 326 graduates thereof 124 graduates from bachelor, 133 graduates from master and diploma studies as well as 69 PhDs (University of Vienna)

## OFI – Austrian Research Institute for Chemistry and Technology

Founded in 1946 as the association "Chemisches Forschungsinstitut der Wirtschaft Österreichs" (CFI)

OFI is one of the largest Austrian service enterprises for applied research. In close collaboration with companies, our research deals with realistic problems and is aimed at the development of new or improved products, methods and services.

Main areas of application-oriented R&D:

- Preclinical studies
- Material development (e.g. biofilm resistant or biocide and nano modified materials, sterilisation compatibility, biocompatibility)
- Packaging and interaction with pharmaceutical products and medical devices (E&L-studies)

## VRVis Center for Virtual Reality and Visualization Research

Founded in 2000

VRVis is Austria's leading research company in the field of visual computing with a research group in medical visualization. Together with the Institute for Computer Graphics at the Vienna University of Technology and the visualization group at the Austrian Academy of Sciences, VRVis forms one of the largest computer graphics research groups in Europe. VRVis is an active partner for research initiatives of the federal government and the City of Vienna. Its higher aim is to strengthen the innovation and competitiveness of Austria.

Employees, head count (FTE): 59 (48), 12 (8) % female, 81 (85) % researchers

Articles published in the life sciences in 2012: 4

Patents filed in the life sciences in 2012: 5

## Academic Institutes – List of Other Institutions

### ABCSCG – Austrian Breast & Colorectal Cancer Study Group

Founded in 1984

In the beginning there was an idea: founded in 1984, the Austrian Breast & Colorectal Cancer Study Group (ABCSCG) initially formulated its objective to effectuate substantial improvements in the treatment of breast and colorectal cancer with highlevel scientific activities. This objective has since been implemented – today, with more than 24.000 patients having participated in ABCSCG trials, the ABCSCG is one of the largest and most successful clinical trial groups in Europe.

### AGES – Austrian Agency for Health and Food Safety

Founded in 2002

The Austrian Agency for Health and Food Safety (AGES) is a government agency and a non-profit research organisation. AGES executes federal state tasks in the areas of agriculture, food and feed safety control, control of infectious diseases, veterinary medicine, radiation protection medical devices and pharmaceuticals.

Focus of research is soil protection, agricultural production potentials (varieties, plant genetic resources, seeds, crop protection and plant health), animal health, detection and epidemiology of food-borne and infectious diseases, nutrition and risk assessment.

Employees, head count (FTE): 1,432 (1,340), 59 (56) % female, 10 (10) % researchers

Articles published in 2012: 35

Total budget: EUR 138.9 m | Third-party funding: EUR 2.9 m

## CDG – Christian Doppler Forschungsgesellschaft

Founded in 1989

The Christian Doppler Research Association promotes the cooperation between science and business. Specifically, this takes place in specially established research units with fixed terms, in which application-orientated basic research is pursued: Christian Doppler Laboratories at universities and non-university research institutions, Josef Ressel Centres at universities of applied sciences. Under the direction of highly qualified scientists, research groups work in close contact with the commercial partners on innovative responses to business-related research issues. 18 CD Labs in Vienna can be assigned to the life sciences. Research topics range from food analysis, flavoring agents and cellulose chemistry to the medical field where allergies, cancer, heart diseases and immunological disorders and also laser technologies for medical purposes for example take center stage.

## CSF – Campus Science Support Facilities GmbH

Founded in 2011

The Campus Science Support Facilities GmbH (CSF) is a publicly funded non-profit organization providing cutting edge research infrastructure for life sciences. CSF services comprise latest technologies and expert support in various fields such as next generation sequencing, advanced light and electron microscopy, structural biology, phenotyping of model organisms and scientific computing. CSF is located at the Vienna Biocenter and is open to academic research institutions and companies.

For more information please check [www.csf.ac.at](http://www.csf.ac.at).

## KLG – Karl Landsteiner Gesellschaft

Founded in 1946 as the association "Chemisches Forschungsinstitut der Wirtschaft Österreichs" (CFI)

The Karl Landsteiner Association is a non-profit research organization. It was founded in 2004, with the aim of accelerating patient-oriented scientific research in Vienna and Lower Austria. It is the largest medical research society in Austria; research is mainly performed at the premises of medical suppliers and is thus close to patients. The society covers a broad range of medical disciplines and results can often be implemented in daily routine with immediate benefits for patients. The Institutes are chaired by highly eminent individuals. Quality assurance is performed by recurrent evaluation of the institutes.

## LBG – Ludwig Boltzmann Gesellschaft

Founded in 1960

The Ludwig Boltzmann Gesellschaft (LBG) is a non-university research organization based in Vienna and is specialised in initiating innovative research topics in collaboration with academic and application oriented partners. The LBG operates research institutes (Ludwig Boltzmann Institutes) in the field of health sciences as well as the humanities. In the area of health sciences the LBG focuses on translational and clinical research in human medicine/life sciences and on its related disciplines within the social sciences. Currently, the LBG consists of 17 research institutes and 5 research clusters with about 380 employees in total.

FACHHOCHSCHULE  
TECHNIKUM WIEN

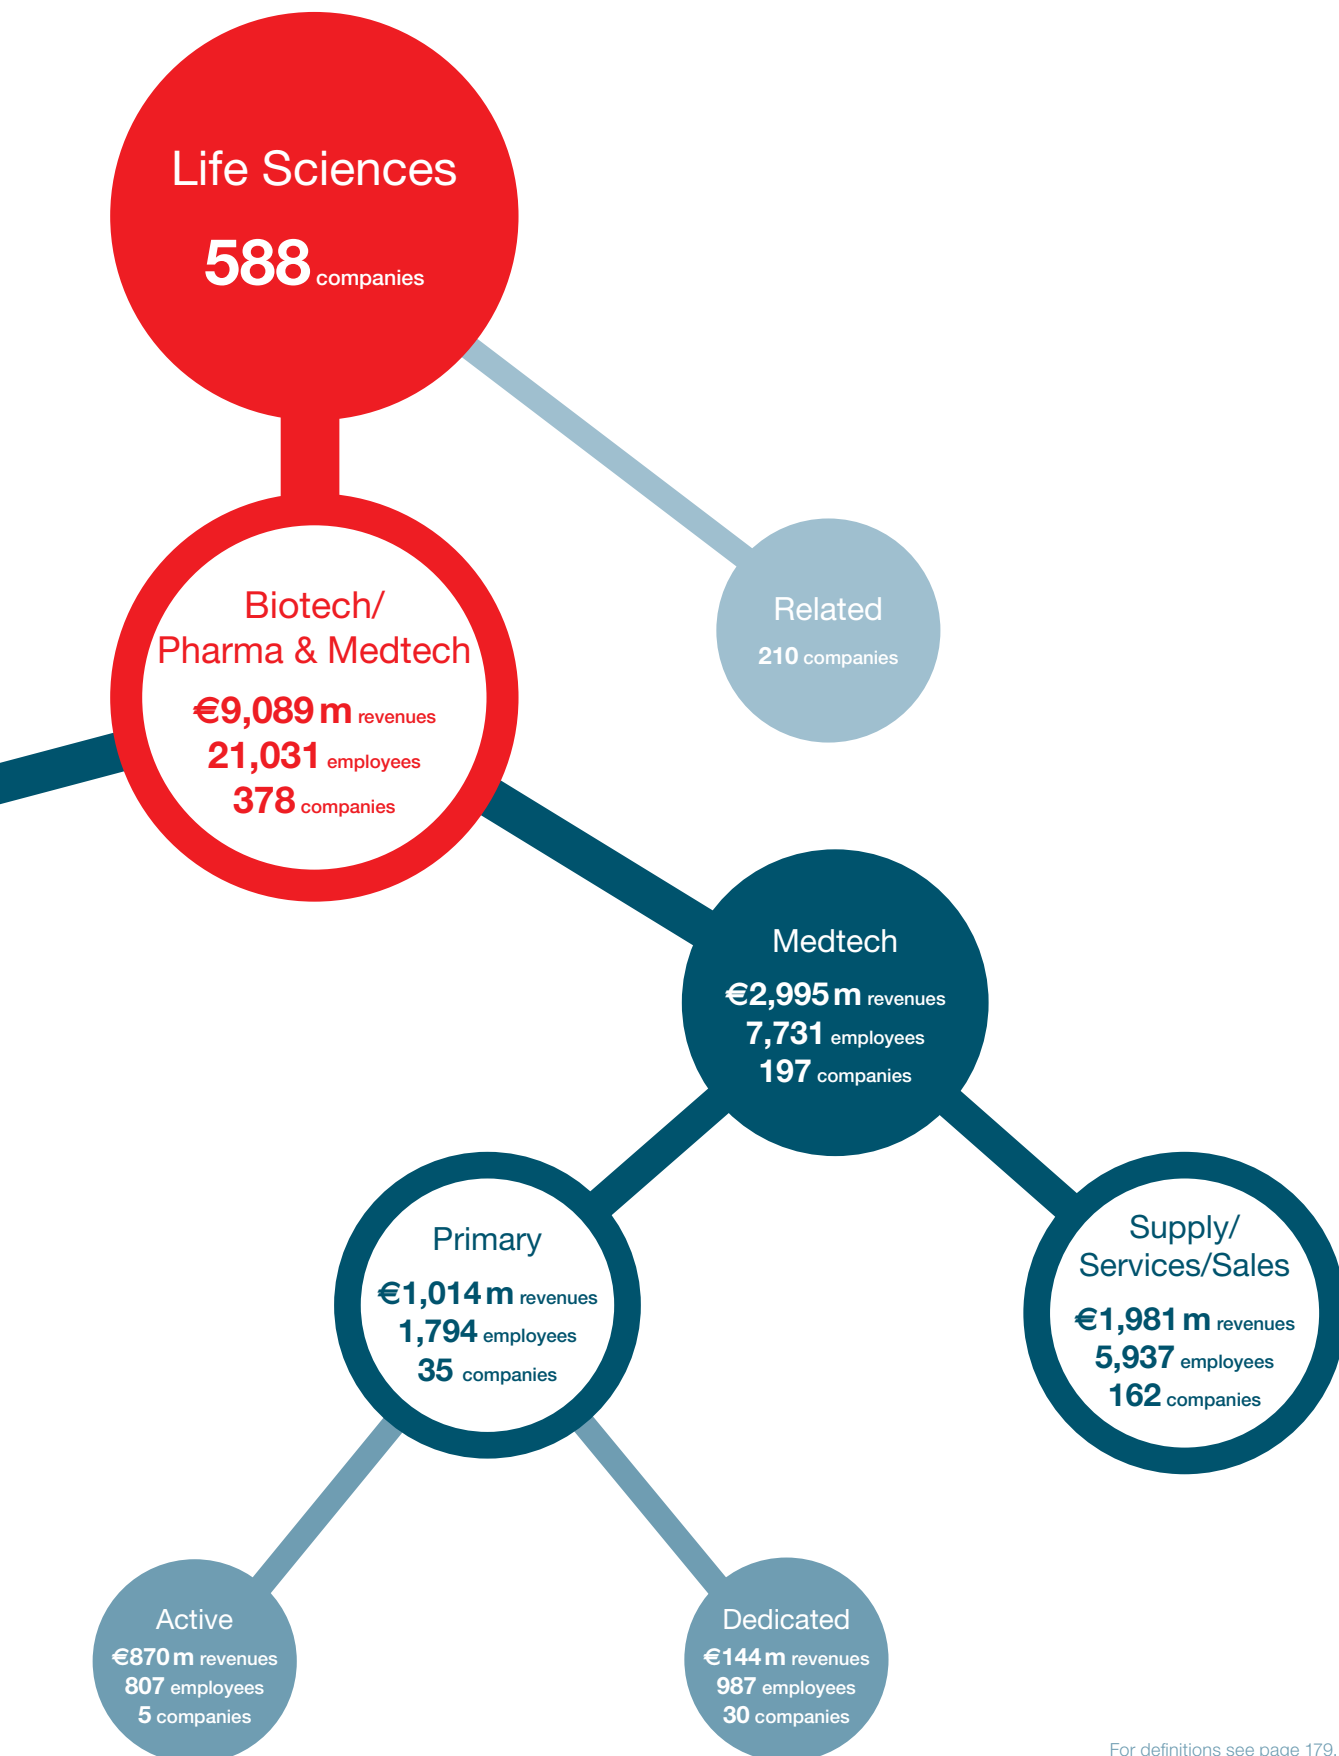

# Industry

# Life Science Companies in Vienna

For definitions see page 179.

# Biotech/Pharma in Vienna – Facts & Figures

Vienna is one of the most important European locations for biotech/pharma. The cosmopolitan hub has been experiencing driving development for the past fifteen years. In 2012, 181 biotech/pharma companies were active in Vienna – 62.8% of all Austrian biotech/pharma firms.

## Austria's driving force

This number not only includes firms with a focus on the research, development and production of biotech/pharma products – the so-called primary biotech/pharma sector – but also enterprises in the associated fields of services, sales and supply (for methodology, see page 179). Altogether, these companies employed 13,300 people, which is more than half of all Austrian employees in the biotech/pharma sector (52.8%). The important role of the Austrian capital is also demonstrated in terms of turnover. In 2012, the companies generated 6,094 million euros in revenues, which is 59% of all Austrian biotech/pharma turnover.

A major part of this is realized by the 83 primary biotech/pharma companies. Together, they achieved revenues amounting to 1.8 billion euros. The primary companies are

also an important employer in Vienna. The primary 83 companies had 8,245 workers on their payroll in 2012. From a countrywide perspective, 52.9% of all Austrian primary biotech/pharma companies and 45.7% of all Austrian primary biotech/pharma employees are located in the capital. These facts underline the important role Vienna plays for the biotech/pharma sector in the country as a whole.

## From Vienna to the world

Vienna is home to a broad range of companies: large and small in size, globally active as well as rooted in the region, with a diversified spectrum of biotech/pharma products and services, relevant in different business areas. The primary sector is divided into two categories of companies: the 'biotechnology active and pharma companies' and the 'dedicated biotech companies'.

The first category includes a total of 33 companies – most of them multi-faceted corporate groups with global operations that also have non-biotechnological business activities. These biotech-active and pharma companies employed 7,442 people and generated a turnover of 1,744 million euros

in 2012. With its cancer research center, pharma corporation Boehringer Ingelheim is one of the biggest employer, in Vienna. For another international company – Baxter International Inc. – the Austrian location is its largest office outside the US and, on a global scale, the major research hub of the Baxter BioScience business unit. Other international pharma companies, such as Eli Lilly and Novartis, also have activities in Vienna, which underlines the Austrian capital's strong attraction. Other companies with traditional roots in the region are also located in Vienna. AOP Orphan, for example, was only founded in 1996 but is now a globally active pharma company with a focus on the treatment of orphan diseases.

The majority of the biotech/pharma companies in Vienna, however, concentrate solely on biotechnology. These 50 'dedicated biotech firms' are mostly small and medium-sized. More than half (56%) has less than ten employees, and a further 40% has up to 50 people on the payroll (see fig. 9, p. 47). In 2012, all dedicated biotech companies together were responsible for the livelihoods of 803 people and achieved 88 million euros in revenues during the same time frame. A

Figure 5: Total share of Vienna's biotech/pharma companies in Austria's biotech/pharma industry in terms of company number, employees and turnover (2012)

Revenues of dedicated biotech companies	EUR 88 m
Revenues of other biotechnology active and pharma companies	EUR 1,744 m
<b>Total revenues of supply/service/sales companies</b>	<b>EUR 4,262 m</b>
Revenues of supply companies	EUR 43.4 m
Revenues of service companies	EUR 47.2 m
Revenues of sales and distribution companies	EUR 4,171 m

sum of 100.3 million euros was spent on research and development – representing an impressive 114% of the revenues earned.

**Epicenter of drug development**

The majority of the dedicated companies in Vienna are especially strong in what is referred to as red or medical biotechnology. Whereas only 3 firms are active in industrial (white) or agricultural (green) biotechnology, a staggering 38 of the 50 firms are developing drugs and diagnostics. They plow through a wide range of indications while doing so (see fig. 10, p. 47 and table 9, p. 184). 32% work in the fields of infectious diseases (e.g. Haplogen GmbH and Hookipa Biotech AG) and cancer respectively, 16% work on diseases of the respiratory system (S-TARget therapeutics GmbH), 8% on diseases of the genitourinary system and 5% on diseases of the blood and immune system, diseases of the circulatory system, endocrine and metabolic diseases, and diseases of the nervous system (Akron Molecules GmbH), respectively. Other individual companies work on disorders relating to the eye and ear, digestive tract (Inoxia Lifesciences GmbH), skin, musculoskeletal system and problems relating to pregnancy and childbirth.

**Financing situation on firm foundations**

Despite the difficult overall macroeconomic situation in the euro area, the financing situation of the dedicated biotech companies has remained stable in recent years. In 2012, the firms received close to 63 million euros from investors. Roughly seven

million euros came from venture capital companies, 15.2 million euros were raised by an increase in capital stock, and private investors and business angels spent a little less than seven million euros. At 10.6 million euros, public subsidies occupied a big slice of the financing pie. Finally, loans taken out in 2012 added up to more than 22 million euros.

In addition, the companies succeeded in establishing some important collaborative relationships in 2012. As a well-established provider of bispecific monoclonal antibodies, F-star was involved in ongoing drug development projects with German corporations Merck Serono and Boehringer Ingelheim. 2012 was also a harbinger of good news for Savira pharmaceuticals GmbH, as the firm signed a partnership with Swiss pharma concern Roche to develop small molecule polymerase inhibitors for the treatment of influenza virus infections. 2012 was also a successful year for Dutalys GmbH. The antibiotic specialist entered a strategic agreement with a top ten pharmaceutical company. Other companies, such as APEIRON Biologics AG and AFFIRiS AG, regularly reported progress in their major collaboration projects started in previous years. All these facts demonstrate continued positive development of the sector and show that the Viennese biotech industry is built on firm foundations.

As the sector is still young – the companies are on average seven years old – there is also a steady flow of new companies to stimulate

**Areas of Activity**

- Health/medicine (incl. animal health)

Figure 7: Areas of activity of Viennese dedicated biotech companies

the scene. 28% of the companies (14) were founded between 2010 and 2012. In 2012 three firms were forced to file for bankruptcy, but the four new entrepreneurial undertakings more than outweigh this loss. Among the most promising start-ups is EveliQure Biotechnologies GmbH, which is developing novel vaccines for the prevention of diarrheal diseases that are highly relevant to travelers and young children living in developing coun-

**Clinical Pipeline**

- Biologics
- Small Molecules

Figure 8: Number of therapeutics under development of Vienna-based dedicated biotech companies

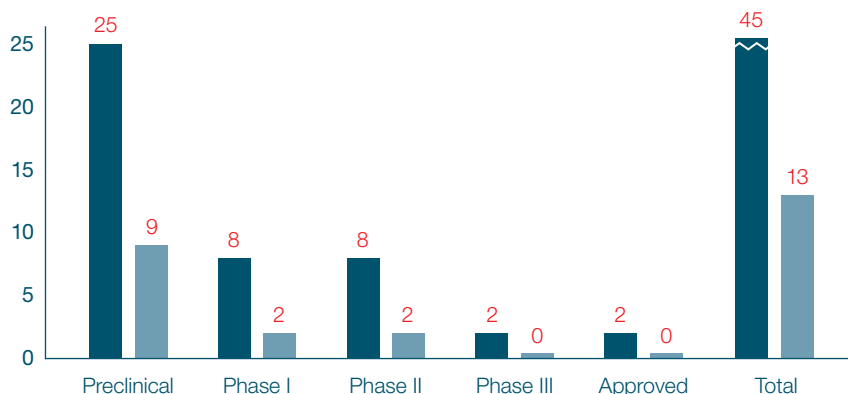

Table 4: Drug candidates of dedicated biotech companies in Phase I–III (in 2012)

Company	Drug candidate	Indication
<b>Phase III</b>		
APEIRON Biologics AG	APN311	Neuroblastoma
Valneva Austria GmbH (former Intercell AG)	IXIARO®	Japanese encephalitis
<b>Phase II</b>		
Activartis Biotech GmbH	AV0113	Glioblastoma multiforme
AFFIRIS AG	AD02	Alzheimer's disease
APEIRON Biologics AG	APN01	Acute respiratory distress syndrome (ARDS)
	APN201	Inflammatory skin conditions
	APN301	Neoplastoma
APEPTICO Forschung und Entwicklung GmbH	AP301	Acute lung injury
Biomay AG	BM32	Grass pollen allergy
Nabriva Therapeutics AG	BC-3781	Bacterial infections
Valneva Austria GmbH (former Intercell AG)	IC43	Pseudomonas aeruginose infections
	IC41	Hepatitis C
<b>Phase I</b>		
AFFIRIS AG	AD01	Alzheimer's disease
	AD03	Alzheimer's disease
	PD01	Parkinson's disease
	ATH03	Atherosclerosis
Life Research Technologies GmbH	PROCURE	Ovarian epithelial cancer
Nabriva Therapeutics AG	BC-7013	Uncomplicated skin and skin structure infections (uSSSI)
PDC Biotech GmbH	PDC31	Primary dysmenorrhea
Valneva Austria GmbH (former Intercell AG)	IC47	Pneumococcal infections
	IC84	Clostridium difficile infection
Zytoprotec GmbH	PD-protec™	Peritoneal dialysis

tries. A third of Viennese dedicated biotech companies (32%) have been founded before 2004. Another important founding wave was between 2007 and 2009 (14 companies).

**Pipeline with good prospects**

Among the 38 dedicated biotech companies concentrating on medical issues the ones developing new drugs are of greatest importance to both patients and investors. Two biopharmaceutical products ‘Made in Vienna’ have been brought onto the market in recent years: one is a common cold nasal spray by Marinomed Biotechnologie GmbH, the other a vaccine against Japanese Encephalitis (JE) by Valneva Austria GmbH (former Intercell AG). Based on these success stories, other companies are also aiming to enter the market with their products. A total of 22 drug candidates are in the pipelines of Vienna-based, dedicated biotech companies. The majority of them is concentrating on biologicals (18). Two candidates have already reached the critical phase III. A total of ten drugs are tested in phase I. In addition, 34 preclinical substances were under scrutiny in 2012, among them compounds from companies like Themis Bioscience GmbH and Tube Pharmaceuticals GmbH.

**Not all about medicine**

There are also some dedicated biotech companies doing business elsewhere: Evercyte

GmbH specializes in drug discovery and drug screening, Vela Laboratories offers in-depth analytical characterization services for proteins in the preclinical and clinical development phase, ViruSure GmbH provides virus and prion safety testing, Lexogen GmbH helps with the setup of mRNA-libraries and emergentec biodevelopment GmbH supports other biotech/pharma firms with the analysis of big data. Added to these, EUCODIS Bioscience GmbH is an enzyme engineering company manufacturing and marketing over 50 well-characterized enzymes worldwide.

**Helping hands to reach patients**

Without the continuous support of suppliers, service providers and sales offices, most of the biotech/pharma companies would not be able to operate successfully. This is especially true for the complex process of taking drugs and diagnostics on the long journey from the bench to the clinic and to patients. In Vienna, 98 service, sales and supply companies are responsible for a wide range of services in the biotech/pharma sector: they had 5,055 employees and a turnover of 4,262 million euros in 2012.

The major part of this was achieved by the 85 sales offices. They had 4,357 workers on their payroll in 2012 and generated a turnover of 4,171 million euros. From an econom-

- > 249
- 100-249
- 50-99
- 10-49
- < 10

Figure 9: Size structure of dedicated biotech companies based on staff

ic point of view, this clearly demonstrates the important role that Austria – and its capital – is playing in the biotech/pharma sales business within Europe. For this reason, almost all globally active pharma companies have chosen to establish sales offices in Vienna.

Added to this are 8 service providers with a total of 526 employees and a turnover of around 47 million euros. The biggest market is associated with the field of supporting clinical research. Viennese firms such as the Assign Group or ABF Pharmaceutical Services GmbH profit from the central geographical location to provide their services to clients all over Europe. A further 5 suppliers employing 172 people and having revenues at about 43 million euros complete the biotech/pharma sector in 2012. The main focus here lies on support services linked to bioprocess plant engineering and construction. One of the pioneers in this field – Vogelbusch – is located in Vienna. Founded back in 1921, the firm builds on the traditionally strong engineering expertise found in Austria.

**Indications**

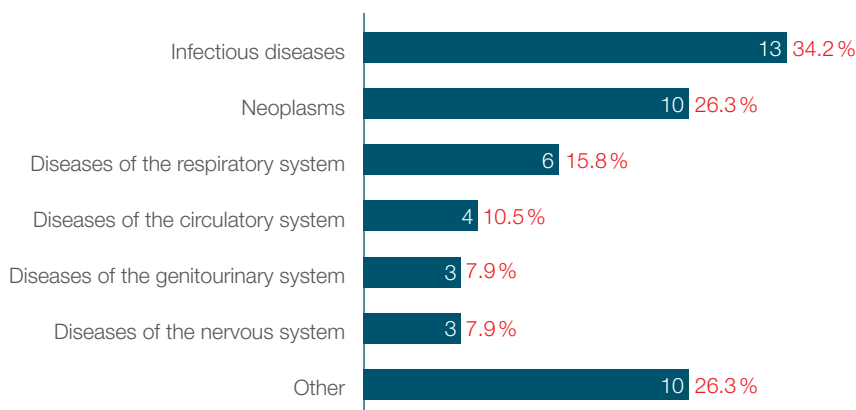

Figure 10: Distribution of indications of Vienna-based dedicated biotech companies active in the field of medical biotechnology

# Medical Technology in Vienna – Facts & Figures

The healthcare industry is one of Austria's largest industries. With regard to its innovation and employment intensity, the sector makes a significant contribution to the sustainable economic success of the whole country. This is due not least to the outstanding hospitals located in the country's capital Vienna, which have both superbly qualified medical staff and first-class technical facilities incorporating state-of-the-art technology. Many medical technology companies rely on a close working relationship with the medical experts in Viennese hospitals. The collaboration with leading practitioners ensures that the development of new medical products is closely aligned with actual market needs.

### Vienna: Austria's medtech hot spot

As a result, Austria, and Vienna in particular, creates not only an attractive market for therapies and diagnostics, but provides an important location for the development and production of several medical devices. In fact, 45% of all Austrian companies in the medtech field have made their headquarters in Vienna. The 197 firms employ more than 7,700 staff – 31% of all Austrian medical technology employees. Back in 2012,

these companies generated just short of 3 billion euros in turnover which corresponds to 41% of the overall revenue in Austrian medical technology.

### Attractive location within the capital

The dynamic heart of the sector is made up of the so-called primary medical technology companies that are directly involved in developing and/or producing medical devices. In 2012, these 35 firms generated more than a billion euros in turnover and offered around 1,800 people the opportunity to earn a living. Together, they make Vienna Austria's powerhouse for medical technology innovations: more than a quarter of Austria's primary medical technology companies have chosen to register their main office in the capital city.

The primary companies are divided into two groups of firms: the 'dedicated medical technology companies' and the 'medical technology active companies'. The first category includes companies with core activities in the medtech sector; the second refers to firms for which medical technology is only one of a number of business units. A total of five 'medical technology active companies'

are located in Vienna, among them firms like Semperit Technische Produkt GmbH (gloves), Photonic Optics (Ophthalmic and optical devices) and Carl Zeiss (micro-imaging). These medical technology active companies had a workforce of 807 staff and generated 870 million euros of turnover in 2012.

Medical devices, as defined by the Global Medical Devices Nomenclature (GMDN), are the main activity of the 30 dedicated medical technology companies resident within the city limits of Vienna. With just under 1,000 staff in 2012, these companies focus exclusively on the research, development and manufacturing of medical devices.

### Two fields of activity dominate

From an economic perspective, Vienna is an important pillar within the Austrian medtech industry. The Viennese dedicated medtech companies sold products and services worth about 144 million euros in 2012. This is a significant increase compared to 2010, when the firms reached a turnover of 116 million euros.

The areas of activity pursued by the dedicated medical technology companies are

Figure 11: Total share of Vienna's medical technology companies in Austria's medical technology industry in terms of company number, employees and turnover (2012)

<b>Total revenues of medtech companies</b>	<b>EUR 2,995 m</b>
Revenues of primary medtech companies	EUR 1,014 m
Revenues of dedicated medtech companies	EUR 144 m
Revenues of other medtech active companies	EUR 870 m
<b>Total revenues of supply/service/sales companies</b>	<b>EUR 1,981 m</b>
Revenues of supply companies	EUR 74 m
Revenues of service companies	EUR 167 m
Revenues of sales and distribution companies	EUR 1,740 m

very varied. The majority (9) of firms are active in the field of electromechanical medical devices; 30% of all dedicated medtech companies in Vienna offer products in this business area, Braincon Handels-GmbH and RELUX Lichtmedizintechnik GmbH are just two of them.

**Significant market: telemedicine and e-health**

The development of specialized software and other products for telemedicine and e-health solutions is the second largest area of activity and features another seven companies. Among them are Medexter Healthcare GmbH, which develops and markets knowledge-based software for supporting clinical decisions, and Tissuegnostics GmbH, which focuses on analysis methods for scientific and clinical use in tissue and cell-based research with innovative and easy-to-handle software. Other firms such as D.A.T.A. Corporation Softwareentwicklungs GmbH and Agfa HealthCare Ges.m.b.H are also significant players in this field.

The manufacturing and distribution of single-use equipment is another important field of activity pursued by Viennese medtech companies. Examples of devices in this category include bandages, blood

collection devices, catheters, and single-use surgical instruments. A total of five companies have business activities in this field. Among them EMCOOLS – Medical Cooling Systems AG, which is developing innovative cooling devices designed to improve survival rates and neurological outcome after acute ischemic events and in various hyperthermic diseases.

The same number of companies develop and produce assistive products for people with disabilities. These devices have become established as really high-tech products in recent years. Otto Bock Healthcare Products GmbH, one of the largest companies active in this field, developed the first completely microprocessor-controlled lower limb prosthesis system in the world. Another Viennese company in the area of prostheses is Pohlig & Tappe GmbH & Co KG. Orthorobot GmbH with products and services in the field of dental technology also belongs in this category.

Three Viennese companies have specialized in providing hospitals with devices to support patient care, such as cleaning agents, disinfectants, portable incinerators, patient beds and many more. Carl Reiner GmbH, with its product portfolio in the area of jet ventilation, is one of them.

**Lively scene of start-ups**

Several Viennese companies have been in business for decades, the average age is 24 years. The sector is also constantly growing as a string of new companies has been established in the last two years. Among them mySugr GmbH, which has developed a mobile phone app to monitor and manage diabetes, as well as VASEMA, a developer of new sensors for determining skin health, were both founded in 2010. Norma Diagnostika GmbH, a specialist for diagnostic products, started its business a year later. Founded in 2012, EMTensor is focused on brain function imaging based on electromagnetic tomography technology.

Mirroring the medtech industry in the whole country, most of the companies residing within the federal capital are small or medium in size. In fact, 18 companies (60%) employ less than 10 staff and a further 9 (30%) have no more than 49 employees on their payroll. Larger companies are rare: one employs 50 to 100 staff, another one less than 249 (see Fig. 14, page 52).

**Attractive to investors**

Viennese dedicated medtech companies are highly innovative and not only interested in marketing existing products and services. Compared to 2010, the expenditure in research and development rose by about 10% from 30 million euros to 33.6 million euros. So it comes as no surprise to learn that they are increasingly attractive to national and international investors. Altogether, 21.3 million euros of external financing flowed into the sector in 2012. This is more than four times the amount that was achieved in 2010 (5 million euros).

Miracor Medical Systems GmbH, specialized in cardiac care, attracted the lion's share. The company collected well above 10 million euros from venture capital investors and also managed to get several million euros of grant money.

**Areas of Activity**

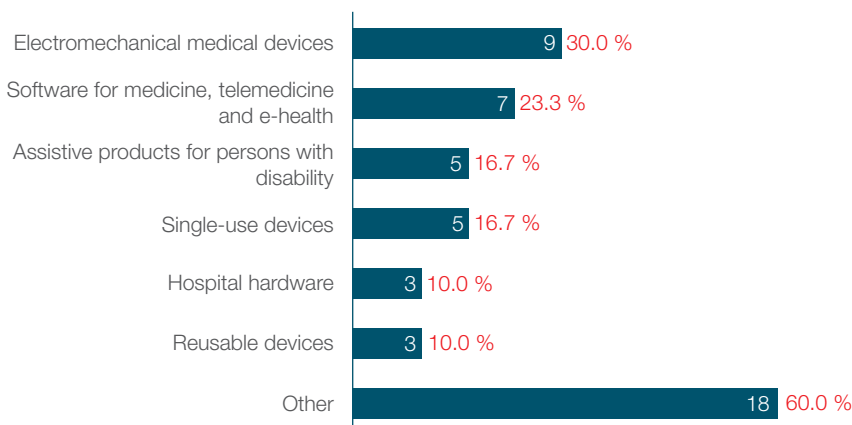

Figure 13: Distribution of main areas of activity of dedicated medical technology companies based on the GMDN categories.

### Home of global players

Vienna is also too important an opportunity for most of the global medtech players to miss (see Table 6). Johnson & Johnson, Siemens Healthcare and GE Healthcare, to name but three, have a local subsidiary which enriches the medtech scene in Vienna and reinforces its international standing.

They are some of the 162 Viennese medical technology companies that operate either as suppliers, service providers or distributors of medical technology products. Together they had about 5,937 employees in 2012. In terms of turnover, they accrued a total sum of about 2 billion euros. The majority of this can be attributed to the sales and distribution firms. In 2012, these 144 companies employed 4,054 people and achieved a turnover of 1,740 million euros.

### Local roots, global activities

Additionally, a total of nine service providers have offices in Vienna, among them a range of globally active companies with local roots such as the computer specialist CogVis

GmbH, which is helping medical technology companies to automatically process, organize and evaluate images, and AME International GmbH. Established in 1995, the Vienna-based company focuses on implementing and operating complex technology projects in the health care sector. With obvious success: its head count has grown continuously in recent years.

### Built on engineering tradition

Supply companies that, among other things, provide support in plant engineering and construction, are another important area within the medtech sector. The nine firms active in this field had a total staff of 520 people and a turnover of 74.4 million euros in 2012.

One of Vienna's players with historic roots in this area is Sumetzberger GmbH. Founded in 1921, the company offers a wide range of services linked to the planning, construction and maintenance of electrical plants.

# Methodology

## Academic Survey

LISAVienna conducted a survey to gather up-to-date statistics on life science research and teaching in Vienna in summer 2013. Because commercial activities in biotech and medtech are linked to many different disciplines such as agriculture, biology, chemistry, engineering, material sciences, medicine, pharmaceuticals and veterinary medicine, a very broad and extended life science definition has been applied for the setup of the sample covered by this report. 26 institutions have been asked to provide the following key figures for life sciences in Vienna:

- Employees: Head count and full-time equivalents (FTE) by December 31, 2012; % female, % researchers
- Articles published in peerreviewed journals in 2012
- Patents filed in 2012 (priority registrations only)
- Active patent portfolio in 2012
- Total budget for life sciences in 2012
- Third-party funds spent on life sciences in 2012
- Number of students in the life sciences in the winter term 2012/2013
- Number of graduates in the life sciences in the winter term 2012/2013, thereof bachelor, master and PhD level graduates as well as graduates from postgraduate courses

25 institutions agreed to participate in the survey and provided data. Most data sets are complete.

The profiles in the academic directory of the report with very few exceptions also include the data provided by these organizations. To improve clarity, data entries that are zero have not been included in the profiles. For confidentiality reasons certain figures are not shown in the report and only included in the statistics. In order to allow for a maximum of transparency, the authors decided to disclose some supplementary information.

As there are no clear boundaries of the life sciences that can be applied to guide the decision regarding what to include and what to omit in this report, LISAVienna acknowledges a certain fuzziness in the figures provided. Please note that due to the mode of surveying inaccuracies can occur such as double-counting of persons with contracts at multiple institutions, students registered at more than one university or double-counting of publications or patents that involve more than one institution in the sample.

Further details on who contributed what for LISAVienna's statistics can be found in the supplement at [www.LISAVienna.at](http://www.LISAVienna.at).

## Company Survey

The life science industry in Vienna is fully diversified with companies active in the field of biotechnology and pharma as well as in medical technology. In addition, there are around two hundred related companies, such as consultants, patent experts, and cluster agencies. For the purposes of this survey, BIOCOM AG focused on the biotech/pharma and medtech field and compiled different questionnaires for each sector.

For biotech/pharma, the survey was based on definitions outlined by the Organisation for Economic Cooperation and Development (OECD) in 2004. Here, the OECD standardized the huge range of existing definitions for the term biotechnology. Since then, all OECD countries have been called upon to carry out surveys on biotechnology following the so-called Framework for Biotechnology Statistics ([www.oecd.org](http://www.oecd.org)). Two different categories of companies have been established based on this definitions: 'dedicated biotechnology companies' and 'other biotechnologically active and pharma companies' (for definitions, see page 180).

There are two challenges when implementing a survey in the medical technology sector: Firstly, the field is extremely diverse in terms of content with the range of products covering everything from latex gloves to CAT scanners. Secondly, due to the high innovation rate, new and above all innovative products are continually being added.

At licensing level, the term 'medical device' applies as specified in EU directive 93/42/EEC. The directive differentiates between medical devices, accessories, in vitro diagnostic medical devices and custom-made devices. The Global Medical Device Nomenclature (GMDN) was introduced in November 2001 to better illustrate the different facets of medical technology in international comparison. GMDN is adjusted on an ongoing basis and currently contains 14 main categories with almost 9,000 terms and over 10,000 synonyms for medical devices (see page 181). The nomenclature was adjusted for the survey. One category (supplementary equipment) was deleted and two new ones were added: 'software for medicine, telemedicine and e-health' and 'others'.

In addition, the sector covering suppliers, service providers, sales and distribution companies was also addressed within the scope of the study. The following definitions have been used for the questionnaire in both the biotechnology and pharma sector and the medical technology sector:

- **Supplier:** manufacturer of products which are directly used in the manufacture of biotech/pharma/medtech products.
- **Service provider:** company with specific services which are necessary for the manufacture of biotech/pharma/medtech products.

- **Sales and distribution company:** company that sells or distributes approved biotech/pharma/medtech products.

Between February and May 2013, a total of 378 companies were contacted and requested to complete the survey. 141 of the companies answered either by questionnaire or by telephone, corresponding to a response rate of 37.3% (for more detailed information see table 7). Based on common statistical practice, the data from the survey was extrapolated up to 100% on the basis of subgroups with structurally comparable companies. As needed, further information such as from annual reports or other publicly available sources has been added.

While selecting companies to participate, extreme care was taken to include all enterprises which are resident in Vienna and which are active in life sciences. Therefore, companies that are majority-owned from outside Austria but have a company office in Vienna were also considered. In surveying the employee figures, number of companies and fields of activity, the survey included only the Vienna location of a company. If an enterprise had more than one location in Vienna, only cumulated figures and data for the company as a whole were considered. The reference date of the survey was 31.12.2012.

**Table 7: Response quote of different types of life science companies**

Total	requested/answered	response quote
Biotech/pharma and medtech companies	378/141	37.3%
Primary biotech/pharma companies	83/53	63.8%
Primary medtech companies	35/19	54.3%
Supply/service/sales companies in both sectors	162/39	24.1%

## Definitions Biotech/Pharma

### › Biotechnology

... is defined as the application of science and technology to living organisms, as well as parts, products and models thereof, to alter living or non-living materials for the production of knowledge, goods, and services.

### › A dedicated biotechnology company

... is defined as a biotechnology active firm whose predominant activity involves the application of biotechnology techniques to produce goods or services and/or the performance of biotechnology R&D.

### › An other biotechnology active and pharma company

... includes all types of companies that may employ biotechnological techniques to produce goods or services, but that also have non-biotechnological business areas. In addition, the category includes all types of pharma firms whatever their business model is (chemically synthesized or biopharmaceutical drugs for human or veterinary use).

### › A primary biotechnology and pharma company

... is either a dedicated biotechnology, an other biotechnology active or pharma company.

*Definition of biotechnology and the type of firms categorized for the use of this study.*

### › Health/Medicine

Development of therapeutics and/or diagnostics for the field of human medicine, drug delivery, human tissue replacement

### › Animal health

As above, for veterinary application

### › Agrobiotechnology

Genetically modified plants, animals or microorganisms, as well as non-genetically modified plants grown using biotechnological procedures, for use in agriculture or forestry

### › Industrial biotechnology

Biotechnological products and processes for the handling of waste or sewage, for chemical synthesis, for the extraction of raw materials and energy etc.

### › Non-specific services

Equipment or reagents based on biotechnological principles, for research or provision of services in this field ("ancillary industry")

*Definition of the fields of activity of dedicated biotechnology companies.*

## Definitions Medical Technology

### › Medical technology

... is defined as the sum of activities related to the development, manufacturing, sale and distribution of medical products or the offer of services as defined through the Global Medical Device Nomenclature (GMDN).

### › A dedicated medical technology company

... is defined as a medical technology company whose predominant activity relates to the development and/or manufacturing of medical products as defined through the Global Medical Device Nomenclature (GMDN).

### › An other medical technology company

... includes all types of companies that may develop and/or manufacture medical products as defined through the Global Medical Device Nomenclature (GMDN), but that also have non-medical technology business areas.

### › A primary medical technology company

... is either a dedicated or an other medical technology company.

*Definition of medical technology and the type of firms categorized for the use of this study.*

**Table 8:** Overview of the fields of activity based on the Global Medical Device Nomenclature (GMDN).

Code	Explanation	Examples
01	Active implantable devices	Cardiac pacemakers, neurostimulators
02	Anesthetic and respiratory devices	Oxygen masks, ventilators for anesthesia, gas supply units
03	Dental devices	Dental equipment, fillings
04	Electromechanical medical devices	ECG, EEG, sonography machines, lasers
05	Hospital hardware	Hospital beds
06	In-vitro diagnostic devices	Pregnancy test, blood sugar tests, genetic tests
07	Non-active implantable devices	Hip and knee joints, arterial stents
08	Ophthalmic and optical devices	Spectacles, contact lenses, ophthalmoscopes
09	Reusable devices	Surgical instruments, endoscopes, blood pressure cuffs,
10	Single-use devices	Syringes, needles, latex gloves, balloon catheters
11	Assistive products for persons with disability	Wheelchairs, walking aids, hearing aids
12	Diagnostic and therapeutic radiation devices	X-ray equipment, CT, radiotherapy equipment
13	Biological-derived devices	Substitute tissue, products of regenerative medicine
14	Software for medicine, telemedicine and e-health	
15	Others	

# **Index**

## Focus of Dedicated Biotech Companies

	Diseases of the blood and the immune system	Diseases of the circulatory system	Diseases of the digestive system	Diseases of the eye and the ear	Diseases of the genitourinary system	Diseases of the musculoskeletal system	Diseases of the nervous system	Diseases of the respiratory system	Diseases of the skin and subcutaneous tissue	Endocrine and metabolic diseases	Infectious diseases	Neoplasms	Pregnancy and childbirth

## Imprint

This report is based on data obtained through the evaluation of a written survey among Austria's life science companies carried out by BIOCOM AG, Berlin in close cooperation with austria wirtschaftsservice and LISAvienna in spring 2013. For more information please refer to page 179. The editorial staff comprises Sandra Wirsching, Dr. Bernd Kaltwaßer, Dr. Martin Laqua (BIOCOM) and Jürgen Fuchs, Peter Halwachs and Johannes Sarx (LISAvienna). The data were collected by Simone Ding (BIOCOM). The layout was designed by Benjamin Röbig (BIOCOM) and CREVO. We thank all companies supporting this survey! The layout, graphics and other contents of this brochure of the Viennese life science cluster are protected by copyright law.

Berlin, October, 2013
