Virtual Reality trainers

With the Tacx Virtual Reality trainers cycling becomes a celebration. They offer unlimited entertainment and make an indoor training a real pleasure. What is so attractive about these VR trainers is that not only is the race displayed on the monitor of your PC, but true-to-life signals are transmitted to your bike. On a climb you will feel the gradient through the rear wheel and downhill it is just as if you had wings. There are four types of Virtual Reality trainers, with different brake systems. The Genius Multiplayer and the Genius are the brand new top models of the Tacx collection. The Fortius Multiplayer has been popular for many years now. And the new Flow Multiplayer makes VR training accessible to everyone. All VR trainers use the advanced Tacx Trainer software 3.0. The Multiplayer trainers include a manoeuvrable steering frame and a license for web racing.

Powerback

The motor brake of the Genius and the Fortius features the Powerback system. This system converts the heat that is generated in the brake and released during the ride, into electricity that is then fed back into the power grid. This means that you are generating your own electricity. When you ride on the Genius, your PC shows the exact amount of energy that is fed back into the power grid.

► www.tacxvr.com

Play the leading role in your own race and ride the Tour of Flanders at home like a real pro.

Tacx Trainer software 3.0

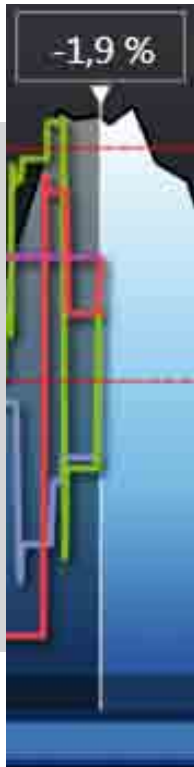

Join the world of Tacx and become addicted to indoor cycling. With the Tacx Trainer software 3.0 you integrate your VR trainer and your computer and transform them into a team with unlimited possibilities. New worlds unfold before you on your monitor and turn cycling at home into a spectacular event – that always will be continued. With the Real Life Video films, for example, you can bring the world's most famous hills and mountains to life on your computer and immediately climb them. Even though the Madonna del Ghisallo and the Cauberg are almost a thousand kilometres apart, you can still conquer both of these legendary climbs the same evening at home. Or train together with Tom Boonen and his Quick Step team in Spain.

You see before you what would actually be seen and the equipment simulates all the elements that make the tour a real-life experience. Going uphill the resistance increases, easing off as you go downhill. Using the control panels on the handlebar you can constantly check your performances, like heart rate, power, speed and pedaling frequency. It's even better than during a real run. And anyone who has planned a run like that, can prepare himself thoroughly by already exploring the tough sections in advance.

Virtual Reality, one big adventure

The Tacx Trainer software 3.0 has much more to offer. The five different Virtual Reality terrains guarantee hours of cycling fun. Ride on a real cycle track, test your bike handling skills on the mountain bike, conquer hairpin bends and stay cool during James Bond-like descents. Tacx's virtual riders move realistically with a superb pedaling style. They rise from the saddle, shift gear, sprint – and celebrate.

Join the world of Tacx and be enchanted.

Real Life Video & Catalyst

Training with the pros

System requirements: Processor P4, Dual core 2.5 Ghz, **Minimum memory** 2GB DDRIII, **Free disk space**, 2 GB,
Recommended: **Graphics card** DirectX9 compatible 3D card with 512 MB of memory (Not shared memory) Nvidia or Ati,
Minimum Resolution 1024 x 720, **Sound card** DirectSound compatible, **Various** 1 Free USB port, DVD player,
Operating System Windows XP SP3, Vista SP2 or Windows 7. www.tacxvr.com

Virtual Reality

Five animated terrains for mountain bikes, race and track bikes with virtual 3D riders. Climbing, descending, ski-jumps, tunnels and sensationally sharp turns: there is something for everyone.

Films for VR trainers

Choice of many films of legendary stages and cycling classics (optional). The Tour of Flanders, the Amstel Gold Race and the Tour de France climbs all come to life on your screen.

Real Life Training

With gps everything is possible. The combination of geographical data and 3D maps makes it possible to relive your outdoor training ride completely at home. Lifelike, but without the disadvantages of outdoor cycling. No rain, no cold.

Catalyst

Professional training programs and fitness tests for a scientific analysis. Train on heart rate, power, speed or cadence. Follow your development and become a better rider step by step.

Multiplayer

Compete on the internet against real opponents, wherever in the world they are. Log in on the server and join a race, or organize one yourself. License available through www.tacxvr.com

Multiplayer

New

Genius Multiplayer T2000

The Genius Multiplayer, Tacx's new top model, is unique. The combination of the sturdy frame and the advanced Tacx Trainer software 3.0 makes riding through the virtual worlds a lifelike experience. The Genius Multiplayer has a wireless motor brake with a computer-driven flywheel that generates high power at low speeds. This makes climbing of hills and mountains even more realistic. The communication between brake, interface and PC is wireless; the trainer itself has to be plugged into an electric point. The trainer works with ANT technology and can therefore be combined with power or cadence meters or other ANT applications. The Genius Multiplayer includes the new BlackTrack steering frame. *Available autumn 2011.*

- Including 1 year Multiplayer license

Accessories

Accessories

BlackTrack T2420

This stylish new steering frame is very user-friendly and compact. The front wheel is put into a turnable plate and doesn't have to be removed from the bicycle. This makes the steering feel better. Thanks to ANT the communication with the PC is wireless. The trainer frame has to be connected to two brackets on the last plate. The steering frame is length adjustable. Rubber at the bottom side prevents the rider from moving and muffles noise.

Foldable

The BlackTrack steering frame is foldable into a small package and can therefore be stored easily. It fits perfectly into a trainer bag, together with the trainer!

New

Genius T2020

The Genius has the same features as the Genius Multiplayer. It includes the Skyliner front wheel support, but comes without Multiplayer license. These items can be bought separately. The Genius also makes a perfect combination with the BlackTrack steering frame, which makes cycling in the VR world even more adventurous. Another innovative accessory is the ANT Cadence sensor. This measures the cadence and shows you through the software whether or not you are using equal force left and right during cycling.

Available autumn 2011.

Accessories

New

Fortius Multiplayer T1930

The Fortius Multiplayer has been a very popular VR trainer for many years now. The powerful motor brake simulates climbs and descents. When you are climbing you experience almost the same resistance as if you were outside and when you are descending you do not have to pedal, because the motor will drive your wheel. The modern interface is an oval ring containing the keys. The Fortius Multiplayer includes the Tacx Trainer software 3.0 and the VR steering frame. Entertainment is guaranteed with this high tech trainer that challenges you to break your boundaries and push yourself to your limits.

- Including 1 year Multiplayer license

Accessories

Flow Multiplayer T2220

The Flow Multiplayer makes VR training accessible to everyone. Thanks to its excellent value for money this new trainer has it all to become a popular VR trainer. The Flow Multiplayer has an electromagnetic brake. This brake is less powerful than the motor brake – the wheel is not driven – but still guarantees a very realistic cycling experience. The Flow Multiplayer is connected to the PC with a USB cable and includes the Tacx Trainer software 3.0 and the VR steering frame. www.tacxflow.com

- Including 1 year Multiplayer license

Cycling classics

Mountain stages

Citytrips

Training with the pros

Cycletours

Films & software

Tacx has already published many different films for the Tacx trainers and there are more to come. The films are divided into five categories: cycling classics, mountain stages, training with the pros, Cycletours and Citytrips. New is the Climbs Collection, that contains a selection of the world's most famous climbs. You control the speed of the Tacx films with your cycling pace. Cycling uphill in the film, the resistance that the brake offers corresponds with the actual gradient of the climb. An efficient way to improve your fitness and your cycling technique. All films contain gps data that is being displayed on 3D maps.

Tacx Video Player

This free program, that can be downloaded from the Tacx website, makes the complete collection of Tacx films compatible with a Tacx cycletrainer, ergotrainer and fitnessbikes from other brands. During cycling a bar chart in the film shows you in which position you best climb or descend. You can change position manually through the resistance lever on the handlebar or the handlebar computer.

VR Games

Arcade I is a DVD with games for the VR trainers with steering frame. It works like the well-known Nintendo games. The big advantage is that during playing you also train and improve your fitness. The focus is on agility, steering concentration and responsiveness.

VR software

The Tacx Trainer software 4.0 is brand new. This DVD with ultramodern software is available separately and contains seven completely new VR terrains with spectacular gameplay.

► www.tacxvr.com

Multiplayer

Multiplayer enables you to race real-time against real opponents anywhere in the world. Famous mountains can be climbed live with different persons at the same moment. Take up the challenge and lose yourself in one of these interactive contests on one square metre. You can link up with contacts through the Tacx website.

Web racing

In order to take part in web racing you need a license. When buying the Genius, Fortius and Flow Multiplayer trainers you are entitled to one year's license. For the other trainers there is a four-week trial period.

Tacx Trainer software 4.0 T1990.04

Enjoy the overwhelming Tacx Trainer software 4.0 and enter virtual worlds which are even more real than real. This ultramodern software is unique thanks to its spectacular gameplay.

The new VR terrains are:

- Montagna, mountainous terrain in Italy
- Valeggio, sloping terrain in Italy
- Valeggio criterium, race
- Velodrome, cycling track with race atmosphere
- Velodrome, cycling track with Six-Day atmosphere
- Mountainbike, superb nature experience in America
- US Metropolitan criterium, race in America

Realistic gameplay

In the new VR terrains you can enjoy lifelike interaction with riders, cars and other elements in the virtual worlds. You battle against intelligent opponents with a very realistic way of riding; they can jump away and challenge you, for example. You never know what is going to happen – just like in a real race. This makes the experience even more realistic.

Cycling on the velodrome becomes an addictive game. Not only can you ride a derny race, but also a points race, a drop-out race, a pursuit and even a team pursuit. All elements are present to organize your own Six-Days.

The new VR riders (m/w) all move very naturally. You can choose from the most modern bicycles and outfits. Through the Tacx VR site you can also design your own outfits. The world on your screen and the real world, you can't tell them apart anymore. *Available winter 2011*

New

Ride yourself fit for the adventures of tomorrow.
The Mont Ventoux is already challenging you.

Ergotrainers

The Tacx ergotrainers enable demanding cyclists to train with scientific precision at the highest level. Not only to improve their fitness, but also to ride themselves into shape at home for their important races and tours of the season. Tacx offers you three ergotrainers. The Bushido is completely wireless and a technical tour de force with many possibilities; step by step you can complete preset training programs. Tacx's newest high tech ergotrainer is the Vortex, the wireless variant of the Flow that has been popular for many years now. All ergotrainers have a handlebar computer that, during training, shows all the relevant information regarding power (Watt), speed, heart rate and pedaling frequency.

Ergotrainer + Upgrade PC = Virtual Reality trainer

The great advantage of the ergotrainer is that you can also turn it into a Virtual Reality trainer. With the Upgrade PC package you can upgrade your Bushido, Vortex or Flow to a VR trainer with unlimited possibilities, while at the same time you keep a stand-alone ergotrainer.

- ▶ www.tacxbushido.com
- ▶ www.tacxvortex.com
- ▶ www.tacxflow.com

The choice of the pros

Bushido T1980

This is the favourite machine of all the professionals who only want the best of the best. The Bushido is the world's first completely wireless ergotrainer. You do not need to plug it in, you can train wherever you want, inside and outside. The Bushido has a powerful brake system with a flywheel that is fully incorporated in the housing. The menus are arranged to enable you to start at once. The graphic display of the handlebar computer shows all the relevant information (power, heart rate, pedaling frequency, speed, time, etc). The ergotrainer can also be combined with external power meters from other brands, if they also work with the wireless ANT technology. The Bushido includes the Skyliner front wheel support, that also functions as a carrier. www.tacxbushido.com

Accessories

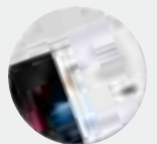

Accessories

Upgrade PC Bushido T1990

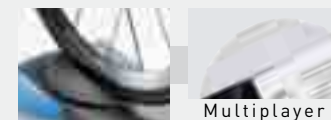

The Upgrade PC for the Bushido and the Vortex contains the Tacx Trainer software 3.0 and a ANT USB stick, with which the handlebar computer can be connected to the PC wirelessly. The ergotrainer then has the same possibilities as the Tacx Virtual Reality trainers. At the same time the display of the ergotrainer shows the training information. It is also possible to send the scores that have been achieved stand-alone, to the PC in order to analyze them afterwards. For more information about the software, please check out page 10.

Multiplayer

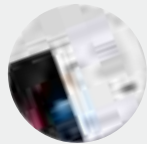

Accessories

Upgrade PC Vortex T1990

A stand-alone ergotrainer that also has all the features and possibilities of the Tacx Virtual Reality trainers? Make it possible with the Upgrade PC Bushido/Vortex. With this package you can connect the ergotrainer to the PC. In combination with the upgrade you can then also use the BlackTrack steering frame and use all the films for VR trainers. For more information about the software, please check out page 10.

► www.tacxvr.com

Accessories Upgrade PC

Multiplayer

Vortex T1960

The Vortex, Tacx's newest high tech ergotrainer, is the perfect option for enthusiastic cyclists who want to prepare themselves at home for the big tours or races that they have planned. Easy to use and to install, everybody can start at once. This sturdy trainer features a white Satori frame and a handlebar computer that makes all relevant training data visible at a glance. Unlike the Bushido, the Vortex does not have a memory; you set programs for slope, power or heart rate manually while training. The electric brake is wireless, which means that there is no wire running between the brake and the handlebar computer. A cadence sensor is no longer needed either, although power is. The Vortex includes the Skyliner front wheel support. www.tacxvortex.com

Accessories

Upgrade PC

New

Flow T2220

The Flow, one of Tacx's most popular trainers, has been restyled. This entry-level ergotrainer with a frame that rebounds slightly while you ride is excellent value for money and very easy to use for everyone. Heart rate, power, speed and pedaling frequency are being measured and visualized on the display of the handlebar computer. These four training parameters are the most important tools that will help you towards focused and efficient work-out routines and optimum performance. During training you can adapt the program for power or slope resistance. The electromagnetic brake is managed through the handlebar computer. The Flow includes the Skyliner front wheel support. www.tacxflow.com

Accessories

Upgrade PC

Accessories

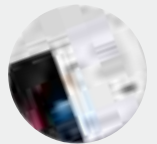

Upgrade PC Flow T1925

With this package the Flow can be upgraded to a Virtual Reality trainer. This Upgrade PC contains a VR interface that replaces the handlebar computer of the Flow and the Tacx Trainer software 3.0, with a license for real-time racing through the internet. This way you can enjoy all the VR features and still keep your stand-alone ergotrainer. For more information about the software, please check out page 10.

- Including 1 year Multiplayer license

Cycletrainers

Tacx has become a household name for cyclists all over the world. Riding their Tacx trainer is the perfect way to train very specific and improve their power and fitness. When the weather is bad or during the cold winter months 'the Tacx' is always there, so that they can keep on training.

The best pro riders cannot live without their Tacx cycletrainer either. They use it during the warming-up for races and time-trials. The Booster, the new top model, and the trusted Satori are the super powerful cycletrainers of the professional teams of Rabobank, Vacansoleil-DCM, Quick Step, Omega Pharma-Lotto, Saxo Bank-Sungard, Leopard-Trek, RadioShack and Astana. For less demanding cyclists the Sirius and the three Cycletrack trainers are a perfect start. New is the Video Player, a program that can be downloaded from the Tacx website. It makes all Tacx films compatible with the cycletrainers.

The Tacx Booster is the official warming-up trainer at the Olympic Games and the UCI World Championships.

► www.tacxbooster.com

Booster T2500

Give yourself a boost with the Tacx Booster. This new cycletrainer with the sturdy look creates pure power. Thanks to the magnetic brake that is even more powerful than the Satori brake, the Booster generates very high power at low speeds. The Booster can be assembled easily and is also safe, because the brake has been built in so that the rider cannot touch the hot flywheel anymore. The Booster is the new number 1 cycletrainer of the pros for their warming-up and training sessions. But of course the Booster is also available to all the other riders that like 'to Tacx'. This is the new leading cycletrainer, for everyone. The Booster includes the Skyliner front wheel support. www.tacxbooster.com

Accessories

New

The choice of the pros

Satori T1856

For many years now the sky-blue Satori has been the trusted warming-up trainer for the pros. The robust Satori frame stands its ground almost anywhere and has been designed to withstand incredible forces. The brake consists of a very powerful neodymium magnet, an extra large steel flywheel and a handlebar resistance lever with 10 levels of resistance. At low pedaling frequencies this trainer can generate very high power. It is for instance possible to generate 400 Watt at the relatively low speed of 27 km/h (17 m/h). This is exactly what you need shortly before the start of your race. The Satori includes the Skyliner front wheel support, that also serves as a carrying brace.

Accessories

Cycletrack

Speedmatic T1810

The Speedmatic is based on the Cycletrack frame. This triangular frame stands stably on any surface. The Speedmatic is equipped with the same brake system as the Sirius, but has a lighter flywheel of 1 kg. Operation of the brake through the 10-position resistance lever is identical.

Speedbraker T1800

Is equipped with the fan braking system. Resistance is generated by air resistance and increases exponentially when you speed up.

Magnetic T1820

Cycletrainer with magnetic brake but without handlebar resistance lever. There is a button on the braking unit that allows you to manually set the resistance. There are seven positions.

Accessories

Sirius T1435

The Sirius is a cycletrainer with an ergonomically shaped frame that rebounds slightly while you ride. The magnetic brake contains two discs, each of which is equipped with six permanent magnets. You can use the 10-position resistance lever on the handlebar to shift the magnets' position inside the brake unit in relation to one another. During your work-out the power increases when you speed up and/or shift to a bigger gear. The Sirius is equipped with a finely balanced steel flywheel of 2 kg to allow for a fluid pedal stroke. The Skyliner front wheel support can be bought as an extra accessory.

Accessories

Don't leave anything to chance and make your training complete. Tacx trainer accessories.

Traineraccessoires

The trainer set-up of the pros is taken care of down to the finest details. A trainer mat to dampen the sound, a sweat cover to protect the bike from moisture and a trainer tyre that has been specially developed for riding on a Tacx trainer; it minimizes overheating, slippage and wear. The pros don't leave anything to chance.

Follow their example and make your work-out complete. There are many accessories available which form a perfect combination in colour and design. From a handy transport bag to an advanced ANT heart rate belt and an Upgrade PC package to change your ergotrainer into a VR trainer, Tacx has it all.

Which accessory fits which trainer?

On the following pages the most important trainer accessories are shown. Every article contains information about the type of trainer with which the product can be used. The colour indicates the trainer type: blue for VR trainers, green for ergotrainers and pink for cycletrainers.

Leave the saddle and
ride like the stars on the
rhythm of the Tacx Galaxia.

Tacx

Rollers

The Galaxia and Antares are Tacx's contribution to the popularity of track racing. Many world champions don't go anywhere without their Tacx rollers. During their warming-up and training sessions they use the rollers to maintain their speed and suppleness, essential tools for a track cyclist. The Tacx rollers have a state of the art design. Thanks to the conical rollers your ride is extra stable, so you can focus even more on your goals in training: improving your fitness and pedal stroke and maintaining your speed.

Riding the Tacx rollers is a relatively easy way to up your track pace and make your muscles more supple. This makes for completely natural movements. You keep pedaling from the hips, just as you would on the road or track. A high pedaling frequency, that is needed for the right feeling in the legs, is also possible. There are cyclists who keep finding it hard to ride without a restraint. They use the support for Antares to secure the bike, without the front wheel, and still cover the mileage in front of them.

The Tacx Antares is the official warming-up trainer at the 2012 Olympic Games.

► www.tacxgalaxia.com

New

Galaxia T1100

These revolutionary new rollers by Tacx move with the rider. He can make sprints, stretch his legs and stand on the pedals without having to be afraid to fall. He can move more freely, because training on the Galaxia approaches the natural feeling of the road. Thanks to the kinetic energy that is created during accelerating, the trainer moves forward. When slowing down, the trainer moves backward again. This invention is so unique that it has been patented by Tacx. www.tacxgalaxia.com

Galaxia schommel

The Galaxia 'swing system' might look a little unsteady at first sight, but it has the opposite effect: thanks to this invention by Tacx the rider can stay on the rollers more easily.

Antares T1000

You can cycle freely on these streamlined rollers and refine your coordination and technique in doing so. The heavy-duty tapered rollers ensure that it is almost impossible to ride off the machine. High concentration on steering is required when riding without a brace; this reinforces your sense of balance. The Antares is – just like the Galaxia – collapsible and measures only 80 cm when collapsed, making it easy to carry. These tough rollers are also ideal for track riders who want to warm up just before their race.

Good material has to be
reliable under all circumstances.
That's why professional cycling
teams choose Tacx.

Bottles & bottle cages

Professional teams and their mechanics choose Tacx. For a reason: because good material has to be reliable under all circumstances. During the cycling season the bikes of all the Tacx Pro Teams contain the Tao and Uma, Tacx's top bottle cages. The Tao carbon is used by the pro riders in the tough mountain stages. The Tacx Pro Teams also use the Shiva team bottles. These sturdy water bottles are manufactured in the nature-friendly Bio-Bottle version.

Bottle Promotions

A Tacx water bottle printed with a custom design is available in a minimum quantity of 500. This is the specialty of Bottle Promotions, which is part of Tacx BV and is well-known for their years of experience, delivering top quality and outstanding service. www.bottlepromotions.com

StarLight Bottle crate T6285

This 'water carrier' fits 8 bottles of 500cc and 750cc. The bottle crates are stackable and can be printed with a custom design.

Shiva Bio

Uma & Uma carbon

Team bottles, Uma

During the cycling season, the top riders of Rabobank, Quick Step, Vacansoleil-DCM, Omega Pharma-Lotto, Saxo Bank-Sungard and Astana all use the Shiva bottle in the Bio-Bottle version. This nature-friendly, biodegradable bottle is a modern necessity for a better environment. Tacx and its riders proudly play a part in this process. Adding a small amount of the material named Bio-batch alters the molecular structure, which makes the material decompose into Biogas and Biomass. These nourish the soil and are entirely absorbed by nature. Light, heat and humidity do not effect the high quality of this product. The Shiva forms a perfect combination with the Uma.

Shiva Team bottles

Source

Tao carbon

Source, Tao

The 'lightweight look' of the Source is accentuated by its transparent colours. This water bottle has a pull lid with an asymmetric ring for extra grip. The overall aerodynamic effect is the result of flowing lines. The Source bottle matches the Tao nicely. This bottle cage with a very streamlined design is stamped from aluminium plate, anodized and partially coated in rubber. The carbon version of the Tao weighs just 29 grams and is the pros' favourite when every gram is decisive for victory.

Tao

Tao Light

Shiva, Allure Pro, Uni

The Shiva bottle is not only the team bottle for the Tacx Pro Teams, but is also available in various trendy colours. The StarLight is the new bottle crate by Tacx. It is stackable and includes the eight coloured Shiva bottles. The Allure Pro and Uni bottle cages have a very strong construction, that is being formed by an aluminium frame coated in plastic. The stylish design of the Allure Pro forms a perfect match with the modern bikes, it weighs no more than 66 grams. The Uni is a traditional bottle cage with a weight of 56 grams.

Tools & extra's

Tacx bicycle tools are used on a daily basis by mechanics in the leading racing teams. They choose Tacx on account of its high quality and reliability. Cycle maintenance is not just the preserve of these specialists; anyone can get down to work at home with Tacx tools. There is something for everyone: tools for assembly, for dismantling, for cleaning and tools for use on the road. Also very popular are the Tacx repair stands; for many people an essential help during adjusting or repairing the bicycle. With Tacx's repair stands and bicycle tools, from chain rivet extractors to sprocket removers and from cleaning brushes to cable cutters, everyone can set up his own workshop at home.

In addition to these, Tacx keeps developing unique products. A great newcomer is the Lumos bicycle lighting. These are LED lights that can be put inside the handlebar ends and shine forward and backward. In the dark, in rain or mist, thanks to the Lumos lights every bicycle rider can now see and be seen. A vital invention.

The choice of the pros

Montagestandaards

Spider Team T3050

The Spider Team is the choice of the racing teams. The bicycle can be secured at the front or rear fork. The work surface can be rotated entirely. The plastic support for the bottom bracket has been designed such that the bicycle stays firmly in place during all operations. Suitable for both race and mountain bikes with wheel diameters ranging from 24 to 28 inches.

Cyclestand T3000

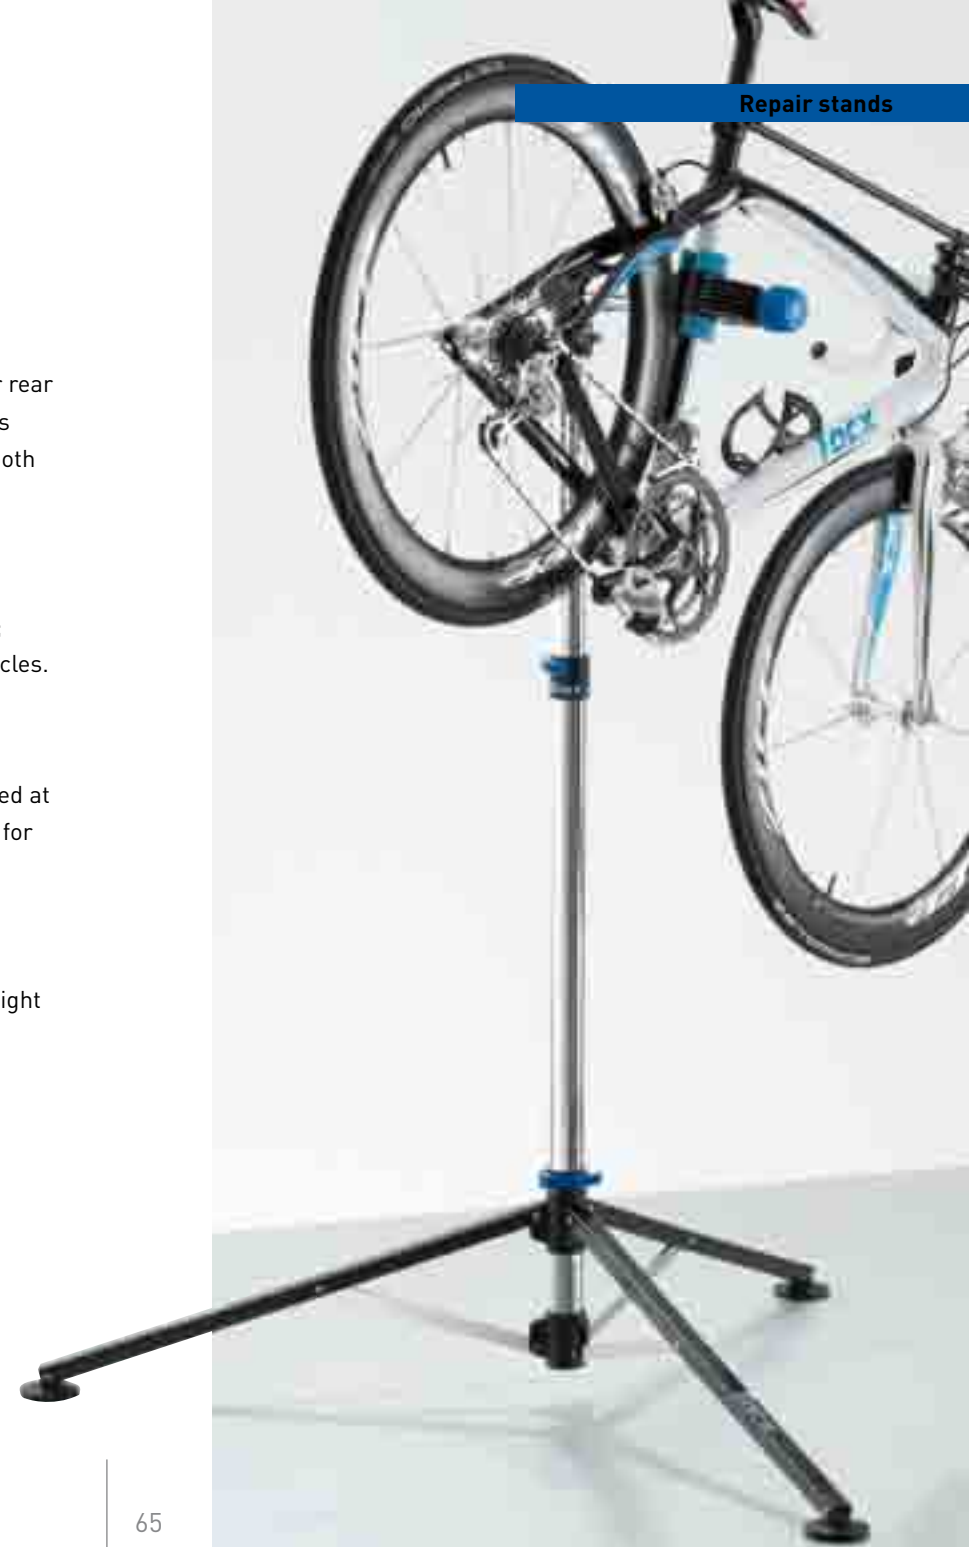

Collapsible repair stand for small and simple repairs. You can tilt the whole bike to the front; this is especially handy when you are working on headset or handlebars. Suitable for all bicycles.

CycleMotion Stand T3075

This is the perfect repair stand for heavy-duty repairs and maintenance. The bicycle is secured at the front or rear fork. Both fork holders can be adjusted in height as well as length. Suitable for both race and mountain bikes with wheel diameters ranging from 24 to 28 inches.

Spider Prof T3025

This is the absolute hit among repair stands. The tripod stands firmly on any surface. The height adjustable stand can be rotated and tilted, which makes working on the bicycle even easier. The stand is suited for almost any bicycle with a frame tube diameter of up to 50 mm.
