FUTURE IN CONNECTION

THE CABLE CONCEPT OF THE FUTURE

- ▶ With our newly developed Future in Connection range, we are focusing not only on quality and technology, but also on recyclable packaging.
- ▶ It is structured on the basis of our existing, tried-and-tested range of high-quality products with their own design. New products from on-trend topics, such as 8K or USB-C, have also been integrated to match.
- ▶ Our range covers products for screens, sound, external communication (antenna / SAT, network), tooling, power, as well as power supply units and adapters / hubs. On-trend topics such as 8K or USB-C are no longer being allocated strictly to one area of use, but rather are part of the audio/video/antenna range, as well as in multimedia, since these worlds are becoming increasingly networked. The result is a portfolio of almost 600 articles that place the emphasis on the application that is also reflected in its own colour guidance system.

The range structure

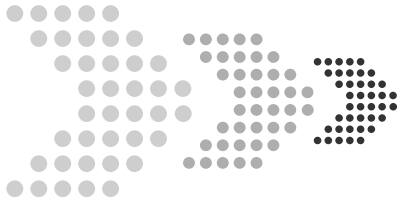

The range has been divided up into three different product lines. Entry, Essential Line and Prime Line: these various product lines have different quality features and guarantee promises, allowing a clear distinction to be made between them.

The result: the perfect blend of top-sellers and professional articles on the sales wall. Consumers quickly and easily get the ideal solution for almost every problem relating to cables and adapters.

In the future, there will be no more distinction according to the star system. Instead, distinctions should be made based on "real" criteria. With the old star system, it was not immediately obvious to consumers why a 3-star product costs more than a 2-star product. "Real" criteria make a higher price immediately understandable for consumers.

FUTURE IN CONNECTION

GLOSSARY

▶ What is Thunderbolt?

Thunderbolt is a high-performance interface. The connection to the system bus is very direct, which enables particularly low latencies. At 40 Gbit/s, Thunderbolt 3 is twice as fast as Thunderbolt 2 and four times as fast as Thunderbolt 1. Thunderbolt 4 is already available on the market.

▶ Which plug types use Thunderbolt?

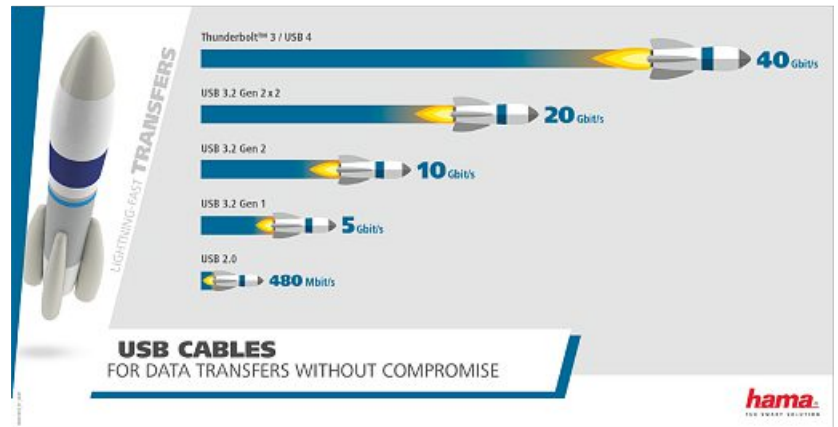

With Thunderbolt 3, different connectors were introduced: while Thunderbolt 1 or 2 worked with mini display port format connectors, Thunderbolt 3 uses USB-C format connectors.

▶ Is a USB-C cable automatically a Thunderbolt cable?

Although USB-C connectors are used, a USB-C cable is not a Thunderbolt cable. Thunderbolt cables can be recognised by the lightning symbol on the connector. The same applies to Thunderbolt 3 ports: not every USB-C port (as found on many newer notebooks) is a Thunderbolt port. Only if it is marked with a lightning symbol can the port also support Thunderbolt. Conversely, every Thunderbolt 3 port also supports the USB 3.1 protocol.

➤ USB plug types

USB Type A

The USB-A connector is the best known of the USB connectors. It has a rectangular shape and is used to connect most peripherals used today, especially mice and keyboards, to a computer. Characteristic of this connection is that it can only be plugged in in one orientation despite its symmetrical external shape. It is compatible with all USB standards, from USB 1.0 to the latest.

USB Type B

USB B is the peripheral-side connection of USB 2.0 and thus the counterpart to USB A. These interfaces are being used on almost all printers, scanners and multifunction printers etc. This makes the USB A-B cable still the most commonly used USB cable in the computer sector.

Mini-USB

This design was developed for small electrical devices such as MP3 players and digital cameras and supports USB 2.0. They have gradually been replaced by micro-USB connectors, which support faster data transfer and higher power consumption in the case of power supplies. This interface is often found on MP3 players or digital cameras.

Micro-USB

Micro-USB is a small connector that is similar in appearance to mini-USB, but has an even more compact design. Micro-USB, on the other hand, is the common standard for older smartphones. These connections can work in both directions, making it possible, for example, to transfer data while the mobile phone is charging.

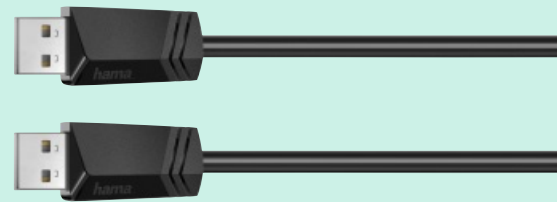

USB micro Type B with USB 3.1 Gen1 (or 3.0)

This type of connector is mainly found on mobile devices (e.g. external hard drives or card readers) with USB 3.0. Visually, the USB 3.0 Micro B is reminiscent of an extended micro-USB plug, which is basically what it is.

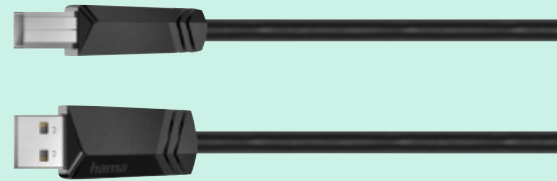

USB-C

USB-C is the latest generation of USB ports and is considered future-proof. The design is extremely flat and symmetrical, so there is no longer a top and bottom (twist-proof). 4K video signals can be transmitted just as quickly as data. This single port supports multiple protocols, including USB 1.1 to USB 3.2 Gen 2x2, DisplayPort, HDMI (via alt modes) and Thunderbolt 3. Wide compatibility makes USB-C extremely versatile, offering enough power (up to 100W) to charge laptops and other end devices

➤ Why are some USB ports colour-coded?

The colour of the USB plug indicates which USB version it is.

- White: USB 1.0
- Black: USB 2.0
- Blue: USB 3.0

Note, however, that the colour codes are not always uniform, as their use is left to the manufacturers.

Devices don't always speak the same language - Adapters and hubs provide the solution and transport signals over even different interfaces.

HIGHLIGHT

200106 | 12-in-1 USB-C Docking Station with Notebook Stand

- Super speed data transfer rates of up to 5 Gbps
- USB-C socket supports USB Power Delivery (USB PD) and therefore allows charging via a USB-C power supply unit
- For perfect, high-resolution ultra-HD cinema quality with 4096x2160 (4K) pixels
- With MST (Multi-Stream Transport), you can connect two additional monitors to a notebook, for example, and use all three screens at the same time with different content
- Gigabit Ethernet data transfer at up to 1 Gbit/s
- SD and micro-SD card reader supports memory cards up to 2 TB
- High-quality and sturdy aluminium housing with a sophisticated finish
- Large socket distance allows problem-free connection even of wide plugs
- Flexible materials guarantee optimum kink protection and prevent cable breakage
- High-quality materials and workmanship guarantee excellent transmission quality
- Angled configuration allows convenient position and comfortable working at the desk or on the move
- Collapsible notebook stand for space-saving working or transport
- Rubberised feet for a secure stand without slipping
- Plug & Play, no manual software / driver installation required
- Compatible with Thunderbolt-3/4 (lightning symbol)
- Power supply via USB

COMPUTER NETWORK

EXTERNAL COMMUNICATION

Whenever a signal comes from outside, it must first travel through an antenna or network cable to its intended receiver. Depending on the application, different requirements apply, which Future in Connection covers with a variety of cables.

HIGHLIGHT

**Network cable:
here, the transfer rate counts**

	Frequency	Transfer Rate
CAT 8/G	2.000 MHz	40 Gbit/s
CAT 6A/EA	500 MHz	10 Gbit/s
CAT 6	250 MHz	1 Gbit/s
CAT 5E	100 MHz	1 Gbit/s

**Antenna cable:
shielding makes all the difference**

Shielding	Screening rate
4-way shielding	120 dB
3-way shielding	100 dB
2-way shielding	90 dB

Network Cable, CAT 8, 40 Gbit/s, S/FTP Shielded, Halogen-free, 0.50 m

- For connecting PCs, notebooks, TVs, gaming consoles and routers, switches, hubs or wall sockets, for transmitting digital Internet, network data and signals
- Gigabit Ethernet data transfer at up to 40 Gbit/s
- Halogen-free cables (LSZH) are flame-retardant and release no corrosive or toxic gases and hardly any smoke in the event of a fire - providing more safety
- Gold-plated plug with low contact resistance for secure signal transmission
- Double shielding for good reduction of electromagnetic interference
- Slimline plug is especially ideal for mobile and flat devices or when space is limited
- Flexible materials guarantee optimum kink protection and prevent cable breakage
- High-quality materials and workmanship guarantee excellent transmission quality
- Twisted wire pairs with an outer sheath made from robust PVC material minimise interference
- Suitable and tested for Gigabit Ethernet (10/100/1000/40000 Mbit/s)

* **WQHD** (Wide Quad High Definition) WQHD corresponds to four times the resolution of 720p HD (HD Ready). This is where the word Quad comes from in the name. Accordingly, this standard has a resolution of 2,560 x 1,440 pixels and a ratio between length and width of 16:9. WQHD therefore sits between Full HD and 4K resolution and is commonly used in PC monitors measuring between 27 and 32 inches.

USB hard disk housing for 2.5" SSD and HDD hard disks

Productline	Essential Line
Material	Plastic Material
Model	SATA
Size	2.5"
Power Supply	USB Connection

- Super speed data transfer rates of up to 5 Gbps
- LED function indicator gives information about the device status
- Detachable USB cable for connection to a PC / notebook
- Flexible materials guarantee optimum kink protection and prevent cable breakage
- High-quality materials and workmanship guarantee excellent transmission quality
- Ideal for mobile use of an internal SSD/HDD hard disk on an external USB port
- Suitable and tested for SATA (Serial-ATA) interfaces with SATA III (3.0), SATA II (2.0) and SATA I (1.0)
- Plug & Play, no manual software / driver installation required
- For the installation of hard disks with a height of max. 9.50 mm
- Compatible with Thunderbolt 3/4 (lightning symbol)
- Power supply via USB
- 2 in 1: USB-A plug + USB-C adapter

FUTURE IN CONNECTION **GLOSSARY**

➤ **What does UHD mean?**

UHD stands for Ultra-High-Definition and is a collective term for 4K and 8K resolutions. The term is used in the TV industry to indicate when a device has a higher resolution than Full HD. A distinction is made between UHD-1 (4K resolution) and UHD-2 (8K resolution).

HDMI 8K and 4K differences

8K is the successor to 4K and has a resolution of 7,680 x 4,320 pixels. 8K therefore has 4 times more pixels than 4K with 3,840 x 2,160 pixels. The transfer of 8K data is very complex, so that only HDMI version 2.1 offers sufficient bandwidth (up to 48 Gbit/s) and enables transmission in 8K at a refresh rate of 60 Hz.

Full HD

1080 pixels

4K Ultra HD

2160 pixels

8K / Full Ultra HD

4320 pixels

8K in everyday life

8K-capable devices are still very costly at the moment. Media content is also rather rare at the moment. However, the Xbox Series X and the PlayStation 5 are already compatible with 8K and support 8K streaming.

HDMI cable shielding

The shielding of an HDMI cable is highly relevant. Poorly shielded HDMI cables can cause the signal to be affected by external sources of interference (e.g. power line). In the worst case, this results in a total loss of the image or visible artefacts on the screen in the form of white pixels.

HDMI cable with optical signal transmission

Optical fibre cables, often referred to as "glass fibre cables", allow very long distances of up to 100 metres to be bridged by means of optical-digital signal transmission.

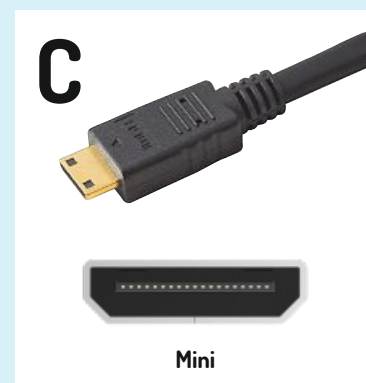

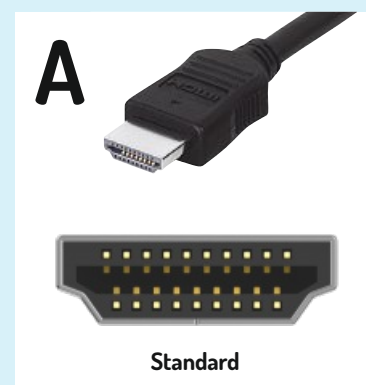

Antenna cable shielding dimensions

Good shielding against interfering signals is important so that the mobile phone, for example, does not cause the picture to flicker. The shielding has a significant influence on the transmission behaviour. As a rule, the shielding is only specified by the manufacturer in the form of a number (dB). The higher the dB value, the better the antenna cable is shielded and the higher the quality. Multiple shielding is necessary especially for longer cable lengths.

Connector types for HDMI cables

There are five different types of HDMI connector: A, B, C, D and E. Plug type A is almost always required, especially for home entertainment equipment. The other connector types are used for notebooks, tablets or in the automotive industry. There are also cables with straight plugs (180°) and with angled plugs:

- 90° (cable outlet downwards)
- 270° (cable outlet upwards)

- With connection identifier on the plugs (source - display)

HDMI™ IN PERFECTION - CERTIFIED QUALITY FROM HAMA

- Ultra High Speed HDMI™ cables from Hama meet all specified parameters 100%:
- Certified performance
- Tested quality
- Ingenious features
- Attractive design

THE CERTIFICATE

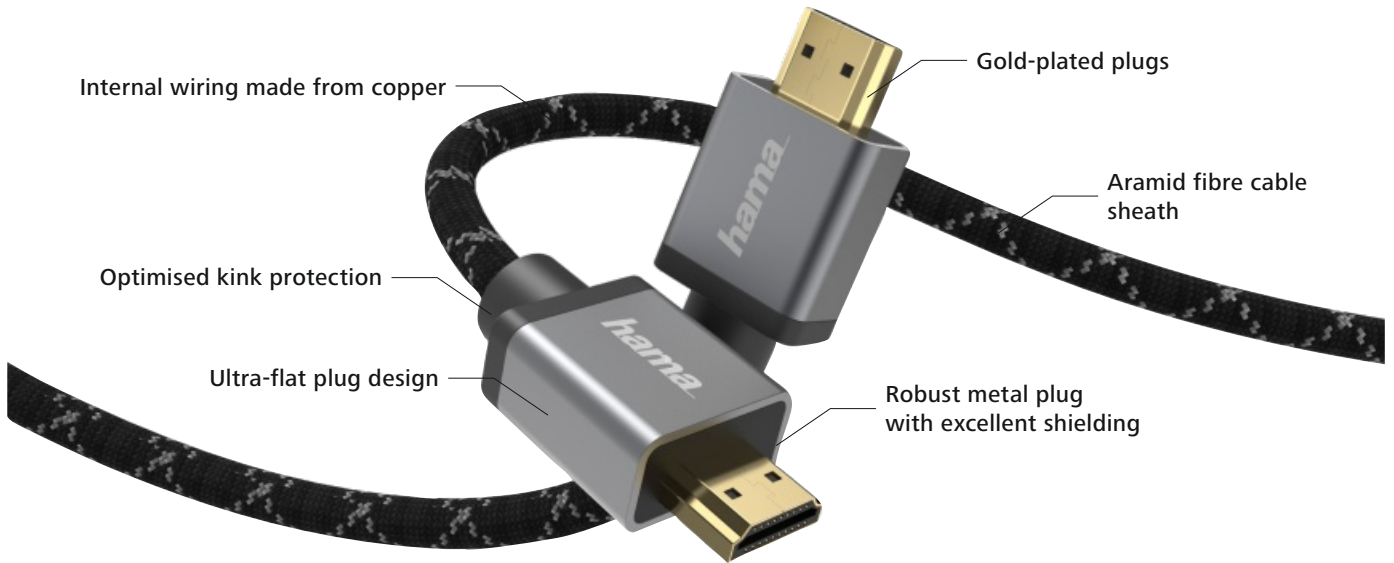

The Ultra High Speed certification ensures that all features of HDMI 2.1 are supported, such as uncompressed 8K@60Hz, 4K@120Hz, a data transfer rate of up to 48 Gbit/s, eARC or dynamic HDR. High-contrast and colour-intensive image transmission is guaranteed. This certification, comprising a QR code and hologram, must be visible on the packaging. This certification can even be scanned and a certified cable verified with the help of the HDMI Cable Certification app.

THE INSPECTION PROCESS

Hama quality assurance checks the cables regularly with a special inspection device. The cables also have to be submitted to an independent test centre certified by the HDMI Forum. Features tested there include the electromagnetic interference, in order to reduce the interference of, for example, WAN networks, Bluetooth devices or mobile phones.

THE CABLE

THE CONCEPT

The certified Ultra High Speed HDMI™ cables are part of the comprehensive "Future in Connection" cable concept and round off the range of HDMI™ cables.

THE PACKAGING

Apart from the Ultra High Speed certification, the most important product features are also immediately visible, which reduces the need to give advice. The sustainable box packaging without magnets is FSC certified.

Summary

Ultra High Speed HDMI™ cables from Hama are inspected multiple times and independently for their quality and function. This certification puts them ahead of other manufacturers who may advertise the features, but are unable to present the certification. A clear sales advantage for us!
