FIGURED SPECIMENS IN MISSISSIPPI DEPARTMENT OF ENVIRONMENTAL QUALITY  
OFFICE OF GEOLOGY COLLECTIONS

David T. Dockery III, RPG

**Numbered Localities.** The Mississippi Office of Geology (then the Mississippi Geology Survey) began a listing of numbered localities for fossil collecting in Mississippi in 1977 with the publication of Bulletin 120. That bulletin contained Late Eocene sites in the Jackson Group numbered as MGS (Mississippi Geological Survey) localities 1-15. MGS localities 16-72 of Eocene and Oligocene are were published in 1980 in Bulletin 122; MGS localities 73-118 of Oligocene are were published in 1982 in Bulletin 123 and were repeated along with a complete listing of previous MGS localities in Bulletin 123 published in 1984. MGS localities 119-120 of the Late Oligocene Chickasawhay Limestone were published in the September 1982 issue of Mississippi Geology (v. 3, no. 1, p. 14). Middle Eocene Cook Mountain Formation MGS localities 121-124, Early Eocene Bashi Formation MGS locality 125 and Cretaceous MGS localities 126-133 were published in Bulletin 129 in 1993. A complete listing of MGS localities is in *The Geology of Mississippi* by Dockery and Thompson, 2016, published by the Mississippi Department of Environmental Quality and University Press of Mississippi, on pages 725-734 with the addition of MGS localities 134-175. MGS locality 176 is the Moodys Branch Formation portion of pile borings for the Mississippi History Museum. MGS locality 177 is the Moodys Branch Formation portion of cores taken at the Southeastern Wood Superfund site at Canton, Mississippi.

**MGS Figured Specimens.** Figured specimens housed at in the Department of Environmental Quality Office of Geology collections at the 2525 North West Street office are designated by the abbreviation MGS, an abbreviation of the agency's old name, Mississippi Geological Survey. These are numbered successively as they appear on published plates as follows:

- 1-2** in Givens, C. R., 1979, The gastropod genus *Volutocristata* Gardner and Bowles (Eocene; California, Mexico): A synonym of *Lyrischapa* Aldrich (Eocene; Gulf Coast): Tulane Studies in Geology and Paleontology, v. 15, no. 4, p. 117-127, pl. 1-4.
- 1-634** in Dockery, D. T., III, 1980, The invertebrate macropaleontology of the Clarke County, Mississippi, area: Mississippi Department of Natural Resources, Bureau of Geology Bulletin 122, 387 p., 82 p.
- 635-638** in Robinson, J. E., and D. T. Dockery, 1981, New occurrences of molluscan species in the Moodys Branch Formation at Jackson, Mississippi: Mississippi Geology, v. 1, no. 3, p. 13-15.
- 639-1099** in Dockery, D. T., III, 1982, Lower Oligocene Bivalvia of the Vicksburg Group in Mississippi: Mississippi Department of Natural Resources, Bureau of Geology Bulletin 123, 261 p., 62 pl.
- 1100-1102** in Robinson, J. E., 1983, New and interesting Eocene molluscan species from the Moodys Branch Formation: Mississippi Geology, v. 3, no. 3, p. 9-12, 1 pl.
- 1103-1475** in MacNeil, F. S., and D. T. Dockery III, 1984, Lower Oligocene Gastropoda,

- Scaphopoda, and Cephalopoda of the Vicksburg Group in Mississippi: Mississippi Department of Natural Resources, Bureau of Geology Bulletin 124, 415 p., 72 pl.
- 1476-1479** in Dockery, D. T., III, and R. K. Merrill, 1984, Lower Devonian (Helderbergian) trilobites from the Ross Limestone in Mississippi: *Mississippi Geology*, v. 5, no. 2, p. 11-15.
- 1480-1492** in Swann, C. T, and P. H. Kelley, 1985, Residual color patterns in mollusks from the Gosport Sand (Eocene), Alabama: *Mississippi Geology*, v. 5, no. 3, p. 1-8.
- 1493** in Manning, E., D. T. Dockery III, and J.A. Schiebout, 1985, Preliminary report of a *Metamynodon* skull from the Byram Formation (Lower Oligocene) in Mississippi: *Mississippi Geology*, v. 6, no. 2, p. 1-16.
- 1494-1719** in Dockery, D. T., III, 1993, The streptoneuran gastropods, exclusive of the *Stenoglossa*, of the Coffee Sand (Campanian) of northeastern Mississippi: Mississippi Department of Environmental Quality, Office of Geology, Bulletin 129, 191 pl, 42 pl.
- 1720-1736** in Case, G. R., 1991, Selachians (sharks) from the Tupelo Tongue of the Coffee Sand (Campanian, Upper Cretaceous) in northern Lee County, Mississippi: *Mississippi Geology*, v. 11, no. 3, p. 8.
- 1737-1754** in Dockery, D. T., III, 1993, Bulletin 129, *Ibid*.
- 1793** in Dockery, D. T., III, 1996, Brooding in the Late Cretaceous gastropod *Gyrodes?*: *Mississippi Geology*, v. 17, no. 3, p. 56-58.
- 1803-1904** in Manning, E. M., and D. T. Dockery III, 1992, A guide to the Frankstown vertebrate fossil locality (Upper Cretaceous), Prentiss County, Mississippi: Mississippi Department of Environmental Quality, Office of Geology, Circular 4, 43 p. 12 pl.
- 1941-1969** in Weaver, P. G., D. T. Dockery III, and C. N. Ciampaglio, 2010, A new genus of coleoid cephalopod from the Jackson Group (Late Eocene), Hinds County, Mississippi: *Palaeontographica Beiträge zur Naturgeschichte der Vorzeit, Abteilung A: Paläozoologie – Stratigraphie*, Volume 292, p. 53-63, 1 pl.
- 1970-2475** in Dockery, 2017, Mississippi Department of Environmental Quality, Office of Geology, Surface Geology Division, website, direct links, Fossils. <https://geology.deq.ms.gov/surface/>

Unoccupied or Open numbers, totaling 285 numbers, occur due to blocks of numbers saved but not used for certain publications, numbered figured specimens changed to holotypes and sent to museums, and mistakes in the use of consecutive numbering for figured specimens. Open numbers include:
