BOOLEAN SIMPLIFICATION, VEITCH DIAGRAMS

Subcourse Number IT0345

EDITION A

**U.S. ARMY INTELLIGENCE CENTER
FORT HUACHUCA, AZ 85613-6000**

5 Credit Hours

Edition Date: January 1997

SUBCOURSE OVERVIEW

This subcourse is designed to teach you how to simplify Boolean expressions using Veitch diagrams.

Subcourses IT 0342, IT 0343 and IT 0344 are prerequisites for this subcourse.

This lesson replaces SA 0715.

TERMINAL LEARNING OBJECTIVE

ACTION: Simplify Boolean expressions by reducing the expressions to minterm form, plot the resulting expressions in Veitch diagrams, and extract the simplified expressions from the Veitch diagrams.

CONDITION: Given Boolean expressions with up to four variables.

STANDARD: To demonstrate competency of this task, you must achieve a minimum of 70% on the subcourse examination.

LESSON

BOOLEAN SIMPLIFICATION, VEITCH DIAGRAMS

OVERVIEW

LESSON DESCRIPTION:

Upon completion of this lesson, you will be able to simplify Boolean expressions using Veitch diagrams.

TERMINAL LEARNING OBJECTIVE:

ACTION: Simplify Boolean expressions.

CONDITION: Given the information in this lesson.

STANDARD: To demonstrate competency of this task, you must achieve a minimum of 70% on the subcourse examination.

INTRODUCTION

This lesson is designed in the frame format. Throughout the lesson, the pages are normally divided into two sections. The left section is the answer/response section, and the right section is the lesson section. In the left section, the answer for the previous frame (if required) is printed there. In addition to the normal layout, some frames have a detailed explanation and answer, and the answer/response section indicates the pages for the detailed answers.

Veitch Diagrams are an additional tool to simplify Boolean expressions. Some people have a difficult time reducing Boolean expressions using just mathematics, and after using Veitch diagrams, they understand the reduction process more clearly. From the instructional point of view, you may be able to use the Veitch diagram method to help a soldier learn other methods of reducing Boolean expressions.

	<p>1. Veitch diagrams provide a quick-and-easy way for simplifying Boolean expressions. A Veitch diagram is a system of squares on which a given Boolean expression is plotted in order to arrive at the simplest form of the expression.</p> <p>Veitch diagrams are used to _____ Boolean expressions.</p>										
simplify	<p>2. A <u>MINTERM</u> is defined as "the Boolean product of a number of variables." No OR operations are contained in a minterm, but <u>all</u> the given variables must be included.</p> <p>If there are <u>three</u> variables, A, B, and C, the <u>following</u> are three <u>possible</u> minterms: CAB, ABC, ACB. If there are four variables, L, M, N, and X, the following are three <u>possible</u> minterms: $\bar{L}\bar{M}\bar{N}X$, $X\bar{M}\bar{L}\bar{N}$, $\bar{N}\bar{L}\bar{M}X$.</p> <p>If there are <u>five</u> variables, X, Y, Z, P, and D, which of the following are minterms?</p> <table data-bbox="640 1315 1321 1606"> <tr> <td>a. $X+Y+Z+P+D$</td> <td>f. $DPZXY$</td> </tr> <tr> <td>b. $Z\bar{Y}P\bar{X}\bar{D}$</td> <td>g. $X+XYZPD$</td> </tr> <tr> <td>c. $YZ\bar{P}X$</td> <td>h. $XY+D(P+Z)$</td> </tr> <tr> <td>d. $Y\bar{P}+XZ\bar{D}$</td> <td>i. $\bar{Z}\bar{D}\bar{P}\bar{X}Y$</td> </tr> <tr> <td>e. $\bar{X}\bar{Y}Z\bar{P}\bar{D}$</td> <td>j. $\bar{Y}PZDX$</td> </tr> </table>	a. $X+Y+Z+P+D$	f. $DPZXY$	b. $Z\bar{Y}P\bar{X}\bar{D}$	g. $X+XYZPD$	c. $YZ\bar{P}X$	h. $XY+D(P+Z)$	d. $Y\bar{P}+XZ\bar{D}$	i. $\bar{Z}\bar{D}\bar{P}\bar{X}Y$	e. $\bar{X}\bar{Y}Z\bar{P}\bar{D}$	j. $\bar{Y}PZDX$

<p>b.</p> <p>d.</p> <p>e.</p> <p>f.</p> <p>i.</p> <p>j.</p>	<p>9. TEST FRAME</p> <p>State the reason for using Veitch diagrams.</p>
<p>NOTE: To aid the soldier in reaching the objectives of the remainder of this program, a list of the "Basic Laws and Common Identities of Boolean Algebra" is contained on page 1-70. The soldier is encouraged to remove the page and use it, as necessary, to successfully complete the program.</p>	

Veitch diagrams are used to simplify Boolean expressions

10. Any expression can be converted to minterm form by using the following process:

- a. Break or remove the vincula: $J+K=JK; C=C$.
- b. Remove the parentheses: $A(B+C) = AB+AC$.
- c. Simplify within the term: $ABCA=ABC; ABCA=0$.

The basic laws of Boolean algebra (De Morgan's theorem, the idempotent law, the associative law, etc.) are used to complete this process. Do not continue to simplify. After these steps are completed, the expression is in minterm form.

Convert the following expressions to minterm form.

a. $X+Y+AB$

b. $\overline{\overline{J}}G\overline{P}Z+G(J+\overline{P})$

c. $\overline{\overline{R(S+T+U)}}+V+\overline{\overline{RST}}+\overline{\overline{UTV}}$

SOLUTIONS :

a. $\overline{XY+AB}$
 $X+Y +\overline{AB}$
 De Morgan's
 theorem

$\overline{\overline{XY}} + \overline{\overline{AB}}$
 $XY + AB$

b. $\overline{JGPZ+GJ+GP}$
 $\overline{JGPZ} + G(\overline{J+P})$
 Distributive

$\overline{\overline{JGPZ}} + \overline{\overline{GJ+GP}}$
 $JGPZ + GJ+GP$

c. $\overline{\overline{VR+VSTU+RST+UTV}}$
 $R(S+T+UJ)+V +\overline{RST+UTV}$
 De Morgan's Double
 theorem neg.

$\overline{\overline{(R+STU)V}} + \overline{\overline{RST}} + \overline{\overline{UTV}}$
 Distributive
 $\overline{\overline{VR+VSTU}} + \overline{\overline{RST}} + \overline{\overline{UTV}}$
 Double
 neg.
 $\overline{\overline{VR+VSTU}} + \overline{\overline{RST}} + \overline{\overline{UTV}}$

11. Which of the following expressions are in minterm form?

- | | |
|------------------------------------|--|
| a. $\overline{A}(B+\overline{CD})$ | e. $\overline{\overline{ABC}}+\overline{\overline{ACB}}+BC+AC$ |
| b. $\overline{XY}+X\overline{W}$ | f. $\overline{HOT}+\overline{DOG}$ |
| c. $\overline{AB}+\overline{AB}$ | g. $H+\overline{R}+\overline{AY}$ |
| d. $\overline{EAS}+Y$ | h. $S(T+OP)$ |

- b.
c.
e.
f.

12. TEST FRAME
 Which of the following minterms are representing the variables E, F, H, J, and L?

- | | |
|---|---|
| a. $\overline{H}\overline{L}\overline{E}\overline{J}\overline{F}$ | e. $\overline{J}\overline{H}\overline{F}\overline{L}\overline{E}$ |
| b. $\overline{E}\overline{F}\overline{H}\overline{J}\overline{L}$ | f. $\overline{J}+\overline{H}+\overline{L}(E+F)$ |
| c. $(\overline{E}\overline{F}+H)JL$ | g. $\overline{H}\overline{E}\overline{L}\overline{J}\overline{F}$ |
| d. $\overline{H}\overline{J}$ | h. $\overline{J}\overline{E}\overline{L}\overline{F}\overline{H}$ |

- a.-
- b.
- c.
- g.
- h.

13. For a given number of variables, there are a given number of possible minterms. For three variables, there are eight possible minterms. For example, for the variables A, B, and C, the truth table and minterms are shown below.

A	B	C	MINTERM
0	0	0	$\bar{A}\bar{B}\bar{C}$
0	0	1	$\bar{A}\bar{B}C$
0	1	0	$\bar{A}B\bar{C}$
0	1	1	$\bar{A}BC$
1	0	0	$A\bar{B}\bar{C}$
1	0	1	$A\bar{B}C$
1	1	0	$AB\bar{C}$
1	1	1	ABC

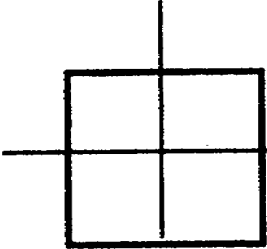

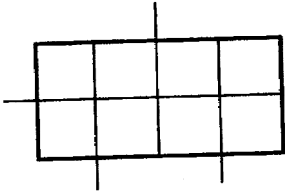

In order to construct a VEITCH diagram, it is necessary to know the number of possible minterms. A Veitch diagrams is a block of squares on which an expression is plotted. A simplified expression is then extracted from the plotted squares. Determine the number of variables in an expression and use this number as a power of two. For example, the expression $JG+JF+JGF+F$ has three variables. J, G, and F. To find how many possible minterms there are for this expression,

use the number of variables (3) as a power of two
(2): $2^3 = 8$ minterms.

- c. $\underline{WXYZ} + P(Q + R)$
- d. $A(B + C + D) + E$

- a. $\underline{\underline{AB}} + XY$ 20. TEST FRAME
- b. $RS + CD + \underline{AB}$
 $+ \underline{EFG} + L$ _____
- c. $\underline{WXYZ} + \underline{PQ} + PR$
- d. $EA + EBCD$
- How many squares must a Veitch diagram contain to plot the following expressions?
- a. $ABC + \underline{ABC} + AB + ABCD + AD$
- b. $T + R + RT + RT$
- c. $C + \underline{AT} + \underline{CAT}$
- d. $XY + YZ + XZ$

- a. 16
- b. 4
- c. 8
- d. 8

21. It is conventional practice to label a Veitch diagram counterclockwise in alphabetical order. The Veitch diagram will be labeled with each variable and the complement of each variable as follows:

Using the conventional practice, label the diagram below for variables D, G, and F.

- a. 1 and 3
- b. 1 and 2
- c. 2 and 4
- d. 3 and 4

24. To plot the expression $A+B$ on a Veitch diagram, start with the first term on the left and mark the squares assigned to the variable (A) of that term as shown below.

Next, on the same diagram, mark the squares assigned to the variable (B) of the second term, as shown below.

Note that one square of variable B had been marked from the plotting of variable A. The expression $A+B$ has been plotted on a four-square Veitch diagram, and the completed diagram is shown below.

Plot the expression $A+B$ on the Veitch diagram below.

25. Plot the expression $R + \bar{T}$.

26. Plot the expression $\bar{L} + A$.

27. Plot the expression $J + \bar{C}$.

<p style="text-align: center;">-</p>	<p>28. Plot <u>the</u> following expressions:</p> <p>a. $A+L$</p> <p>b. $I+S$</p> <p>c. $\overline{P+U}$</p>
<p>a.</p> <p>b.</p> <p>c.</p>	<p>29. On a four-square Veitch diagram a one-variable term such as A, B, \overline{A}, F, etc., occupies two squares. Since a four-square Veitch diagram is used to plot only two-variable expressions (such as $A+\overline{B}$), half of the squares are assigned to each variable; and half, to the complement of the variable. In the expression $X+\overline{Y}$, variable X is assigned _____ squares on a four-square Veitch diagram; variable \overline{Y} is assigned _____ squares.</p>

<p>two two -</p>	<p>30. On a four-square Veitch <u>diagram</u>, a <u>two-__</u> variable term, such as <u>AB</u>, <u>CA</u>, <u>EB</u>, <u>OK</u>, <u>AC</u>, etc., occupies <u>only one square</u>. For <u>example</u>, the expression <u>AB+AB</u> contains <u>two terms</u> (<u>AB</u> and <u>AB</u>). Each term contains <u>two variables</u>; therefore, each two-variable term will occupy <u>only one square</u> on a four-square Veitch diagram.</p> <p>For the expression <u>$\bar{X}Y+XY$</u>, each term contains <u>_____ variables</u>, and each term will occupy <u>_____</u> on a four-square Veitch diagram.</p>
<p>two one square</p>	<p>31. To plot the expression <u>$\bar{A}B+AB$</u> on a Veitch diagram, work <u>only one term at a time</u>. Start with the first term on the left (<u>AB</u>). As stated previously, a two-variable term occupies <u>only one square</u> on a four-square Veitch diagram. To determine the proper square, take each variable of the term (<u>$\bar{A}B$</u>) and determine which square is common to both variables as follows:</p>

	<p>31. (Continued)</p> <p><u>S</u>quare 3 is common to both the A plot and the B plot (it is common to <u>AB</u>). Therefore, the plot for the term <u>AB</u> is square 3, as shown below.</p> <p>To complete the <u>p</u>lot of the expression $AB + \overline{AB}$, the second term (<u>AB</u>) must still be plotted. Plot the second term (<u>AB</u>) in the diagram above.</p>
	<p>32.</p> <p>Which squares above are assigned to the following variables?</p> <p>_____ a. \overline{AR} _____ c. $\overline{\overline{AR}}$ _____ b. AR _____ d. AR</p>
<p>a. 1 b. 3 c. 2 d. 4</p>	<p>33. Plot the expression $RA + \overline{RA}$ on the Veitch diagram below.</p>

	<p>34. On a four-square Veitch diagram, a one-variable term occupies two squares; a two-variable term occupies only one square. On a four-square Veitch diagram, for the expression $A + \bar{B}A$, the A term occupies _____; the BA term occupies _____.</p>
<p>one square</p>	<p>two squares 35. Plot the expression $A + \bar{B}A$.</p>
	<p>36. Plot the expression $\bar{B}A + \bar{B}A$.</p>
	<p>37. Plot the expression $S + \bar{R}S + S + \bar{S}R + R$.</p>
	<p>38. Plot the expression $PQ + \bar{Q}$.</p>

	<p>39. TEST FRAME</p> <p>Plot the <u>f</u>ollowing expressions:</p> <p>a. $AB+B+AB+BA$</p> <p>b. $\overline{\overline{XY}}+\overline{XY}$</p> <p>c. $\overline{\overline{A}}+\overline{LA}$</p>
<p>a.</p> <p>b.</p> <p>c.</p>	<p>40. An expression can be plotted on a Veitch diagram only after the expression has been converted to minterm form and the correct diagram drawn corresponding to the number of possible minterms. For simplicity, the variables in each term should be arranged in alphabetical order. The conventional way to label a Veitch diagram for the three variables A, B, and C is shown below.</p> <p>Half of the total squares are assigned to each variable; and half, to the complement of each variable. Each variable overlaps every other variable and overlaps every complement but its own. A Veitch diagram for three variables contains _____ squares.</p>

eight

41. To plot expression $\bar{A}+B+C$ on a Veitch diagram, work with only one term at a time until all terms have been plotted. First, put an X in the four squares assigned to variable A, as shown below.

On the same diagram, plot the four squares assigned to variable B by placing an X in the four squares, as shown below.

Note that some squares are already plotted because of overlapping.

On the same diagram, plot the four squares that are assigned to the final variable to be plotted, variable \bar{C} , as shown below.

Note again that some squares are already plotted because of overlapping.

Plot the expression $\bar{A}+\bar{B}+C$ on the Veitch diagram below.

	A		\bar{A}
B	X	X	X
\bar{B}	X	X	X
	\bar{C}	C	\bar{C}

42. Plot the expression $X+Y+Z$.

	X		\bar{X}
Y	X	X	X
\bar{Y}	X	X	X
	\bar{Z}	Z	\bar{Z}

43. Plot the expression $L+M+K$.

	K		\bar{K}
L	X	X	X
\bar{L}		X	X
	\bar{M}	M	\bar{M}

44. Plot the expression $A+\bar{A}+B+\bar{B}+C+\bar{C}$.

	A		\bar{A}
B	X	X	X
\bar{B}	X	X	X
	\bar{C}	C	\bar{C}

This plot is equal to 1. When all squares in a Veitch diagram are plotted, the expression is equal to 1.

45. Plot the following expressions:

a. $R+P+Q$

b. $\bar{C}+B+A$

c. $\bar{B}+\bar{A}+C$

a.

	P		\bar{P}	
Q	X		X	X
\bar{Q}	X	X	X	X
	\bar{R}	R	\bar{R}	

46. On an eight-square Veitch diagram, a one-variable term, such as R, S, A, R, P, etc., occupies four squares; a two-variable term, such as $\bar{A}B$, SR, ZP, JD, LM, etc., occupies two squares; a three-variable term, such as ABC, $\bar{X}\bar{Y}Z$, $\bar{L}\bar{A}\bar{B}$, ARC, etc., occupies only one square.

b.

	A		\bar{A}	
B	X	X	X	X
\bar{B}	X	X		X
	\bar{C}	C	\bar{C}	

On an eight-square Veitch diagram for the expression $A+BC+\bar{A}BC$, the A term occupies _____; the BC term occupies _____; and the $\bar{A}BC$ term occupies _____.

c.

	A		\bar{A}	
B		X	X	X
\bar{B}	X	X	X	X
	\bar{C}	C	\bar{C}	

four squares
two squares
one square

47. To plot the expression $RS+RT$ on an eight-square Veitch diagram, work with only one term at a time. Start with the first term on the left (RS). As stated previously, a two-variable term occupies two squares on an eight-square Veitch diagram. To determine the proper squares, take each variable of the term (RS) and determine which squares are common to both variables, as follows:

		R			\bar{R}	
S	1	2	3	4	5	6
\bar{S}	7	8	9	10	11	12
		\bar{T}	T		\bar{T}	

R = squares 1, 2, 5, and 6
S = squares 1, 2, 3, and 4

Squares 1 and 2 are common to both the R plot and the S plot (they are common to RS). Therefore, the plot for the term RS is squares 1 and 2, as shown below.

		R			\bar{R}	
S	X	X				
\bar{S}						
		\bar{T}	T		\bar{T}	

To complete the plot of the expression $RS+RT$, the second term (RT) must still be plotted. Plot the second term (RT) in the diagram above.

	R		\bar{R}	
S	X	X		X
\bar{S}				X
	\bar{T}	T	\bar{T}	

48.

	R		\bar{R}	
S	1	2	3	4
\bar{S}	5	6	7	8
	\bar{T}	T	\bar{T}	

Which squares above are assigned to the following variables?

- | | | | |
|----------|------------------|----------|------------------|
| _____ a. | \underline{RS} | _____ g. | \underline{RT} |
| _____ b. | \underline{RS} | _____ h. | RT |
| _____ c. | \underline{RS} | _____ i. | \underline{ST} |
| _____ d. | RS | _____ j. | ST |
| _____ e. | \underline{RT} | _____ k. | \underline{ST} |
| _____ f. | RT | _____ l. | ST |

- a. 1 and 2
- b. 5 and 6
- c. 3 and 4
- d. 7 and 8
- e. 2 and 6
- f. 1 and 5
- g. 3 and 7
- h. 4 and 8
- i. 2 and 3
- j. 1 and 4
- k. 6 and 7
- l. 5 and 8

49. Plot the expression $\overline{AB} + AC$ on the Veitch diagram below.

	A		\bar{A}
B			X
\bar{B}	X	X	X
	\bar{C}	C	\bar{C}

50. Plot the expression $X + YZ$.

	x		\bar{x}
y	X	X	X
\bar{y}	X	X	
	\bar{z}	z	\bar{z}

51. Plot the following expressions

a. $VW + WU$

b. $EF + GF$

c. $BA + C + AC + B$

a.

	u		\bar{u}	
v		X	X	X
\bar{v}				X
	\bar{w}	w	\bar{w}	

b.

	E		\bar{E}	
F	X		X	X
\bar{F}				
	\bar{G}	G	\bar{G}	

c.

	A		\bar{A}	
B	X	X	X	
\bar{B}	X	X	X	X
	\bar{C}	C	\bar{C}	

52. On an eight-square Veitch diagram, a one-variable term occupies four squares; a two-variable term occupies two squares; a three-variable term occupies only one square. To plot the expression $\bar{D}PQ + DP\bar{Q}$, work with only one term at a time. Start with the first term on the left ($\bar{D}P\bar{Q}$). To determine the proper square, take each variable of the term ($DP\bar{Q}$) and determine which square is common to all three variables, as follows:

	D		\bar{D}	
P	1	2	3	4
\bar{P}	5	6	7	8
	\bar{Q}	Q	\bar{Q}	

D = squares 3, 4, 7, and 8
P = squares 1, 2, 3, and 4
 \bar{Q} = squares 1, 5, 4, and 8

Square 4 is common to all variables of the term $DP\bar{Q}$. Therefore, the plot for the term $DP\bar{Q}$ is square 4, as shown below.

	D		\bar{D}	
P				X
\bar{P}				
	\bar{Q}	Q	\bar{Q}	

To complete the plot of the expression $DPQ + DP\bar{Q}$, the second term (DPQ) must still be plotted. Plot the second term (DPQ) in the diagram above.

	D	\bar{D}	
P			X
\bar{P}			X
	\bar{Q}	Q	\bar{Q}

53.

	D	\bar{D}	
P	1	2	3
\bar{P}	5	6	7
	\bar{Q}	Q	\bar{Q}

Which squares above are assigned to the following variables?

- | | | | |
|--------|-----------------------------|--------|--|
| ___ a. | \overline{DPQ} | ___ e. | $\overline{\overline{DPQ}}$ |
| ___ b. | $\overline{D}\overline{P}Q$ | ___ f. | $\overline{D}\overline{P}\overline{Q}$ |
| ___ c. | $\overline{D}P\overline{Q}$ | ___ g. | $\overline{D}PQ$ |
| ___ d. | $\overline{DP}Q$ | ___ h. | $\overline{DP}Q$ |

- a. 1
- b. 2
- c. 5
- d. 8
- e. 7
- f. 6
- g. 3
- h. 4

54. Plot the expression $\overline{\overline{DPQ}} + \overline{\overline{DPQ}}$.

55. Plot the expression $\overline{\overline{KLM}} + \overline{\overline{KLM}} + \overline{\overline{KLM}} + \overline{\overline{KLM}}$.

	D	\bar{D}	
P	X		X
\bar{P}			
	\bar{Q}	Q	\bar{Q}

	K		\bar{K}	
L			X	X
\bar{L}	X	X		
	\bar{M}	M	\bar{M}	

56. Plot the expression $ABC + \bar{B}C + B$.

	A		\bar{A}	
B	X	X	X	X
\bar{B}		X	X	
	\bar{C}	C	\bar{C}	

57. TEST FRAME

Plot the following expressions:

a. $XYZ + ZYX + ZXY + YZX$

b. $A + \bar{B}C + \bar{A}BC$

c. $\bar{R}ST + R\bar{S}T + R\bar{S}\bar{T}$

a.

b.

c.

58. On an eight-square Veitch diagram, a one-variable term, such as X, Y, B, A, A, R, etc., occupies four squares. For the expression $ABC+AC+\bar{A}$, the term \bar{A} occupies _____.

four squares

59. On an eight-square Veitch diagram, a two-variable term, such as XY, AZ, AQ, TD, WM, etc., occupies two squares. For the expression $ABC+AC+\bar{A}$, the term AC occupies _____.

two squares

60. On an eight-square Veitch diagram, a three-variable term, such as ABC, XZY, TPY, XYZ, etc., occupies only one square. For the expression $ABC+AC+\bar{A}$, the term ABC occupies _____.

<p>one square</p>	<p>61. In a three-variable Veitch diagram (eight squares), how many squares will each of the following terms occupy?</p> <p style="padding-left: 40px;"> \bar{a}. LXY b. Z c. Z d. $\bar{H}J$ e. \underline{UP} f. EYZ </p>

<p>a. 1 b. 2 c. 4</p>	

THIS PAGE LEFT INTENTIONALLY BLANK

63. After an expression has been properly plotted on a Veitch diagram, a simplified expression is easily extracted. Learn to describe the plotted squares with as few terms as possible. First, look for patterns of four plotted squares which describe a one-variable term, as follows:

As indicated by the diagrams above, when the four plotted squares cover all the squares assigned to one variable, the plot can be represented by that one variable. The expression $ABC + \bar{A}BC + AB\bar{C}$ is plotted as follows:

It is evident that the four plotted squares include all the squares assigned to A. Therefore, the expression $ABC + \bar{A}BC + AB\bar{C}$ can be simplified by extracting the term which is common to these four squares--in this case, A.

63. (Continued)

The expression $\overline{B}C + \overline{A}BC + \overline{A}B\overline{C}$ is plotted below.

	A		\overline{A}	
B				
\overline{B}	X	X	X	X
	\overline{C}		C	

- a. The term which is common to the four plotted squares above is _____.
- b. The simplest expression which can be extracted from this Veitch diagram is _____.

- a. \overline{B}
 b. B

64. Extract the simplest expression from each of the Veitch diagrams below.

a.

	R		\overline{R}	
S		X	X	
\overline{S}		X	X	
	\overline{T}		T	

c.

	E		\overline{E}	
G	X	X	X	X
\overline{G}				
	\overline{H}		H	

b.

	X		\overline{X}	
Y	X			X
\overline{Y}	X			X
	\overline{Z}		Z	

d.

	A		\overline{A}	
B	X	X		
\overline{B}	X	X		
	\overline{E}		E	

- a. \bar{I}
- b. Z
- c. G
- d. A

65. When extracting the simplest expression from an eight-square Veitch diagram, if there are no patterns of four plotted squares, look for patterns of two adjacent plotted squares which describe a two-variable term. Some examples are shown below.

65. (Continued)

Extract the simplest expression from each of the Veitch diagrams below.

a.

b.

c.

- a. \overline{PS}
- b. \underline{QZ}
- c. \overline{FM}

66. If there are no patterns of four or two plotted squares, the next thing to look for is single plotted squares. One plotted square represents a three-variable term, as shown below.

a.

This plot represents the three-variable term ABC .

b.

This plot represents the three-variable term JMS .

66. (Continued)

Extract the simplest expression from each of the following Veitch diagrams:

a.

b.

a. $\overline{A}BC$

b. $B\overline{M}$

67. Up to this point, all plotted squares in the Veitch diagrams could be identified with just one term, such as A, GF, LTD, etc. It is often necessary to use more than one term to describe a plot. In these cases, the terms must be joined with OR signs. For example, expression $\overline{A}\overline{B}\overline{C} + \overline{A}BC + ABC + \overline{A}BC$ is plotted on the Veitch diagram below.

These squares represent the term $\overline{A}C$.

These squares represent the term $\overline{A}B$.

To describe the plot above in simplified form, join the two terms ($\overline{A}C$ and $\overline{A}B$) with an OR sign. Expression $\overline{A}\overline{B}\overline{C} + \overline{A}BC + ABC + \overline{A}BC$ is described in simplified form as $\overline{A}C + \overline{A}B$.

67. (Continued)

Describe the following plots in simplified form.

a.

b.

- a. $\overline{GHJ} + \overline{GH}$
- b. $EF + \overline{EF}$

68. To describe the plotted squares in an eight-square Veitch diagram, look for patterns of plotted squares in the following order of preference:

- a. Four plotted squares which describe a _____-variable term.
- b. Two plotted squares which describe a _____-variable term.
- c. One plotted square which describes a _____-variable term.

- a. one
- b. two
- c. three

69. A plot should be described with as few terms as possible. Each term should contain as few variables as possible.

These four squares - represent the term \bar{B} .

On the same Veitch diagram, these four squares represent the term C .

All six plotted squares combined are described as $B+C$.

Notice that the lower corner squares are used twice, allowing two groups of four squares, each described by a one-variable term.

Referring to the top diagram above, this plot could have been described as follows: The shaded area is described as \bar{B} . The two unshaded squares could be described as $\bar{B}\bar{C}$ and $\bar{B}C$ and would result in a plot described as $\bar{B}+\bar{B}C$. One term now contains two variables ($\bar{B}C$). Which of the following expressions is simpler?

- a. $\bar{B}+C$
- b. $B+BC$

a.

70. A plot should be described with as few terms as possible. Each term should contain as few variables as possible. This is accomplished by using one or more squares any number of times in combination with one or more squares not previously used to make groups of 4 or 2 squares.

	A		\bar{A}
B	X		X X
\bar{B}			X
	\bar{C}	C	\bar{C}

In the diagram above, there are no combinations of four potted squares. The plotted square in the upper right-hand corner can be combined with the plotted square directly beneath it to describe $\bar{A}\bar{C}$; it can also be combined with the plotted square immediately to the left to describe $\bar{A}B$; and it can be combined with the plotted square in the upper left-hand corner to describe $B\bar{C}$. The simplest expression describing this plot is

- is
- a. $\bar{A}BC + \bar{A}B + AC$.
 - b. $AB + AC + BC$.
 - c. $ABC + \bar{A}BC + A\bar{B}C + \bar{A}\bar{B}C$.

b.

71. At times, there are two equally simple ways to describe a plot. For example, in the Veitch diagram below, it is evident that there are no groups of four plotted squares. There are, however, three distinct groups of two plotted squares. This plot can be described two different ways as follows:

		A		\bar{A}
B	X	X		X
\bar{B}		X	X	X
	\bar{C}		C	\bar{C}

		A		\bar{A}
B	X	X		X
\bar{B}		X	X	X
	\bar{C}		C	\bar{C}

$$= \overline{AB} + \overline{BC} + \overline{AC} = AB + \overline{B}\overline{C} + AC$$

		A		\bar{A}
B	X	X		X
\bar{B}		X	X	X
	\bar{C}		C	\bar{C}

$$= \overline{AB} + \overline{BC} + \overline{AC} = \overline{A}\overline{B} + \overline{B}\overline{C} + AC$$

Either of the expressions above is correct. The number of terms and the variables are comparable; therefore, the two expressions are equally simple. Extract a simplified expression from the Veitch diagram below.

		P		\bar{P}
Q	X		X	X
\bar{Q}	X	X	X	
	\bar{R}		R	\bar{R}

$$\overline{\overline{P}}\overline{\overline{R}}+\overline{\overline{Q}}\overline{\overline{R}}+\overline{\overline{P}}\overline{\overline{Q}}$$

_ or _

$$\overline{\overline{Q}}\overline{\overline{R}}+\overline{\overline{P}}\overline{\overline{Q}}+\overline{\overline{P}}\overline{\overline{R}}$$

72. TEST FRAME

Extract the simplest expression from each of the Veitch diagrams below.

a.

	F	\overline{F}	
J	X	X	X
\overline{J}	X	X	
	\overline{M}	M	\overline{M}

b.

	P	\overline{P}	
V	X		X
\overline{V}		X	X
	\overline{Z}	Z	\overline{Z}

a. $\overline{\overline{F}}\overline{\overline{M}}+\overline{\overline{F}}\overline{\overline{J}}+\overline{\overline{J}}\overline{\overline{M}}$

_ or _

$\overline{\overline{F}}\overline{\overline{M}}+\overline{\overline{F}}\overline{\overline{J}}+\overline{\overline{J}}\overline{\overline{M}}$

b. $\overline{\overline{P}}\overline{\overline{Z}}+\overline{\overline{V}}\overline{\overline{Z}}+\overline{\overline{P}}\overline{\overline{V}}$

73. Simplify the following expressions, using the Veitch diagrams.

a. $\overline{\overline{F}}\overline{\overline{H}}+\overline{\overline{F}}\overline{\overline{G}}\overline{\overline{H}}+\overline{\overline{F}}\overline{\overline{G}}\overline{\overline{H}}+\overline{\overline{F}}\overline{\overline{G}}+\overline{\overline{F}}\overline{\overline{G}}\overline{\overline{H}}$

b. $\overline{\overline{B}}\overline{\overline{C}}\overline{\overline{D}}+\overline{\overline{B}}\overline{\overline{C}}\overline{\overline{D}}+\overline{\overline{B}}\overline{\overline{C}}\overline{\overline{D}}+\overline{\overline{B}}\overline{\overline{C}}\overline{\overline{D}}+\overline{\overline{B}}\overline{\overline{C}}\overline{\overline{D}}+\overline{\overline{B}}\overline{\overline{C}}\overline{\overline{D}}$

- a. $H + \overline{F}$
 b. $BC + \overline{BC} + BD$
 or
 $\overline{BC} + BC + CD$

(Solutions on page 1-62.)

74. TEST FRAME

Convert the following expressions to minterm form and simplify.

a. $C(AB + \overline{A}B) + ABC + A(BC + CA)$

b. $D + E + F + D(E\overline{F} + \overline{E}F) + DEF + E(D\overline{F} + \overline{D}F)$

- a. $\overline{A}B + BC + \overline{A}BC$
 b. $DE + EF + DF$
 or
 $EF + DF + DE$

(Solutions on pages 1-63 and 1-64.)

75. How many squares are there in a Veitch diagram for four variables?

16 (2^4)

76. As shown below, a Veitch diagram for four variables, A, B, C, and D, is labeled in the conventional manner (alphabetically, counterclockwise).

Half of the squares are assigned to each variable; and half, to the complement of each variable. In a four-variable Veitch diagram, how many squares are assigned to a one-variable term, such as \bar{B} ?

Eight.

77. Plot the following expressions:

a. $A+B+C+D$

b. $\bar{J}+K+L+M$

a.

	A		\bar{A}		
	X	X	X	X	\bar{D}
B	X	X	X	X	D
	X		X	X	
\bar{B}	X	X	X	X	\bar{D}
	\bar{C}	C	\bar{C}		

b.

	J		\bar{J}		
	X	X	X		\bar{M}
K	X	X	X	X	M
	X	X	X	X	
\bar{K}	X	X	X	X	\bar{M}
	\bar{L}	L	\bar{L}		

78. In a four-variable Veitch diagram, each one-variable term occupies eight squares. A two-variable term, such as AC , which occupies four squares, is plotted below.

	A		\bar{A}		
			X		\bar{D}
B			X		D
			X		
\bar{B}			X		\bar{D}
	\bar{C}	C	\bar{C}		

A two-variable term occupies _____ squares in a four-variable Veitch diagram.

four

79. Plot the following expressions:

a. $QT+RT+RS$

b. $\overline{JK} + \overline{L} + \overline{JM} + \overline{KL}$

a.

b.

80. A two-variable term, such as \overline{CD} , which occupies four squares, is plotted below.

Notice that only the four corner squares are plotted. Although these four corner squares may not appear to be common, they are, in fact, common to variables \overline{CD} and, in this case, represent the two-variable term \overline{CD} .

Plot the following expression:

$$TZ + AB + \overline{AB}$$

81. In a four-variable Veitch diagram, a one-variable term occupies eight squares; a two-variable term occupies four squares; a three-variable term occupies two squares. A three-variable term, such as $\bar{A}BC$, is plotted below.

In a four-variable Veitch diagram, a three-variable term occupies _____ squares.

two

82. Plot the following expressions: _ _ _

a. $ACF + CFH + AF + AH$

b. $DE + DFG + G + DEF$

83. TEST FRAME

In a four-variable Veitch diagram, a four-variable term occupies only one square. For example, the term $\bar{A}BCD$ is plotted on the Veitch diagram below.

In a four-variable Veitch diagram,

- a one-variable term occupies _____ square/s.
- a two-variable term occupies _____ square/s.
- a three-variable term occupies _____ square/s.
- a four-variable term occupies _____ square/s.

- a. eight
- b. four
- c. two
- d. one

84. TEST FRAME

Plot the following four-variable expressions:

a. $ABCD + \overline{A}BCD + ABC\overline{D}$

b. $\overline{N}P\overline{S} + \overline{N}PST + P + NS$

85. It is more difficult to see patterns of plotted squares on a 16-square Veitch diagram than it is on an eight-square diagram. Look for patterns which are formed by adjacent squares or by squares at opposite ends of rows. Some examples are shown below.

These eight squares are adjacent and common only to variable D.

These eight squares are at opposite ends of rows and common only to variable D.

These four squares are adjacent and common only to variables $\bar{A}\bar{B}$.

85. (Continued)

d.

These four squares are at opposite ends of rows and are common only to variables $\bar{A}D$.

e.

These two squares are adjacent and common only to variables $\bar{A}B\bar{C}$.

f.

These two squares are at opposite ends of rows and common only to variables BCD .

g.

These four squares are at opposite ends of rows and common only to variables $\bar{C}D$.

85. (Continued)

Describe the following plots:

- a. \underline{A}
- b. \underline{CE}
- c. \underline{EFG}
- d. \underline{GH}

86. The same methods of extracting a simplified expression are applied to a 16-square Veitch diagram as for an eight-square diagram. To extract the simplified expression, describe the plot with as few terms and as few variables as possible. Look for patterns of plotted squares in the following order of preference:

- a. Eight plotted squares which describe a one-variable term.
- b. Four plotted squares which describe a two-variable term.
- c. Two plotted squares which describe a three-variable term.
- d. One plotted square which describes a four-variable term.

86. (Continued)

Describe the following plots as simply as possible.

a.

	A	\bar{A}		\bar{D}
B	X	X		D
\bar{B}	X	X		D
	\bar{C}	C	\bar{C}	

b.

	R	\bar{R}		\bar{V}
S	X	X		V
\bar{S}				\bar{V}
	\bar{T}	T	\bar{T}	

c.

	P	\bar{P}		\bar{S}
Q			X	S
\bar{Q}			X	\bar{S}
	\bar{R}	R	\bar{R}	

d.

	W	\bar{W}		\bar{Z}
X	X			Z
\bar{X}		X		\bar{Z}
	\bar{Y}	Y	\bar{Y}	

e.

	E	\bar{E}		\bar{H}
F		X	X	H
\bar{F}		X	X	\bar{H}
	\bar{G}	G	\bar{G}	

f.

	K	\bar{K}		\bar{N}
L	X	X	X	N
\bar{L}		X	X	\bar{N}
	\bar{M}	M	\bar{M}	

- a. C _
- b. RSV
- c. PR _ _ _
- d. WXYZ+WXYZ
- e. GH _
- f. K+LM

(Solutions on pages 1-65 and 1-66.)

87. Look for patterns of plotted squares and extract the simplest expressions from the following plots. Describe each plot with as few terms and as few variables as possible.

a.

b.

- a. WX+TVWX
- b. BDE+BEH
+DEH+BEH

(Solutions on page 1-67.)

88. TEST FRAME
Extract the simplest expression from each of the Veitch diagrams below.

a.

b.

<p>a. $\overline{R+S}$</p> <p>b. $B+AD+ADF$</p> <p>(Solution on page 1-68.)</p>	<p>89. To simplify a four-variable expression, using the Veitch-diagram method, the expression <u>must be</u> in minterm form (all parentheses removed and all vincula <u>broken</u>). To simplify the expression $(\overline{A}B+\overline{A}C)D+\overline{D}+C+\overline{A}+ABCD$, first convert to minterm form, as shown below.</p> $(\overline{A}B+\overline{A}C)D + \overline{D} + C + \overline{A} + ABCD$ <p>Distributive De Morgan's theorem</p> $ABD + ACD + DCA + ABCD$ <p>Double negative</p> $ABD + ACD + DCA + \overline{A}BCD$ <p>To simplify a four-variable expression, using the Veitch-diagram method, the expression must be in _____.</p>
<p>minterm form</p>	<p>90. TEST FRAME</p> <p>After converting the expression to minterm form, the next step is to draw a Veitch diagram. For the expression $ABD+ACD+DCA+ABCD$, there are four variables; therefore, a 16-square Veitch diagram ($2^4 = 16$) is required. The expression is plotted as follows:</p> <p>Plot only one term at a time until all terms of the expression have been plotted: $ABD+ACD+DCA+ABCD$.</p>

90. (Continued)

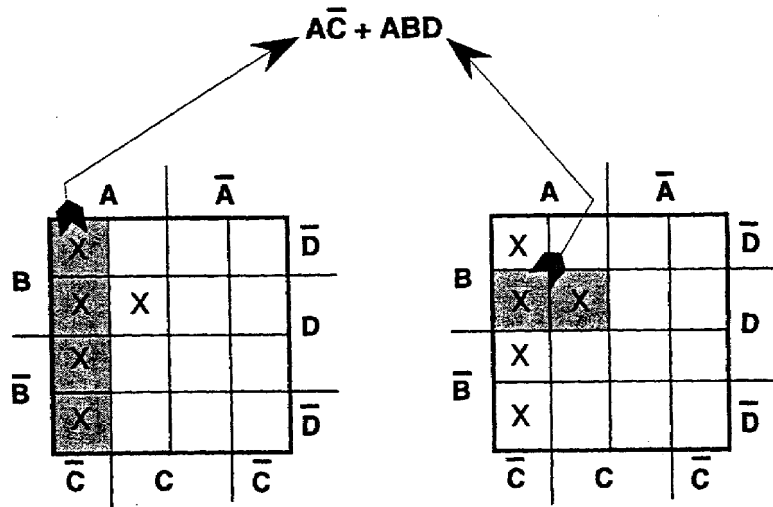

The preceding example was plotted only one term at a time, and each term was plotted in succession until all terms were plotted. The completed plot is shown below.

90. (Continued)

The final step is to extract the simplified expression from the plotted Veitch diagram. Look for patterns of eight, four, two, or one plotted square, in that order.

The simplified expression is $\bar{A}C + ABD$.

-

90. (Continued)

Convert the following four-variable expression to minterm form and simplify, using the Veitch-diagram method.

$$\overline{R}S + \overline{R}STV + \overline{R}ST\overline{V} + S(T\overline{V} + TV) + \overline{R}V + \overline{R}S + \overline{R}STV$$

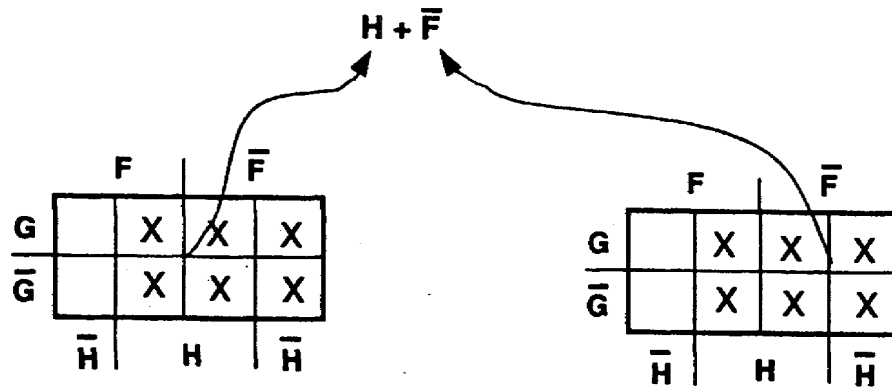

—
R+S+V

Solutions on
page 1-69.

You have completed this program.
Review the objectives on page 1-
34. If you do not completely
understand an objective, turn to
the frame/s indicated by the
number/s in parentheses.

SOLUTIONS TO FRAME 73

SOLUTION TO FRAME 90.

$$\overline{RS} + \overline{RSTV} + \overline{RSTV} + \overline{S}(TV + \overline{TV}) + \overline{RV} + R\overline{S} + \overline{RSTV}$$

↓
Double
negative

↓
Distributive

$$RS + \overline{RSTV} + \overline{RSTV} + \overline{STV} + \overline{STV} + \overline{RV} + R\overline{S} + \overline{RSTV}$$

$$B + \overline{S} + V$$

Simplified expression = $R + \overline{S} + V$

BASIC LAWS AND COMMON IDENTITIES OF BOOLEAN ALGEBRA

1. IDENTITY:	$A = A$	$\bar{A} = \bar{A}$
2. COMMUTATIVE:	$A B = B A$	$A + B = B + A$
3. ASSOCIATIVE:	$A (BC) = A B C$ $A + (B + C) = A + B + C$	
4. IDEMPOTENT:	$A A = A$	$A + A = A$
5. DOUBLE NEGATIVE	$\bar{\bar{A}} = A$	
6. COMPLEMENTARY:	$A \bar{A} = 0$	$A + \bar{A} = 1$
7. INTERSECTION:	$A \bullet 1 = A$	$A \bullet 0 = 0$
8. UNION:	$A + 1 = 1$	$A + 0 = A$
9. DE MORGAN'S THEOREM	$\overline{A B} = \bar{A} + \bar{B}$	$\overline{A + B} = \bar{A} \bar{B}$
10. DISTRIBUTIVE:	$A (B + C) = A B + A C$ $A + (B C) = (A + B) (A + C)$	
11. ABSORPTION:	$A (A + B) = A$	$A + (A B) = A$
12. COMMON + B IDENTITIES:	$A (\bar{A} + B) = A B$ $A + A B = A + B$	$A + \bar{A} B = A + B$
13. DEFINITIONS:	$\bar{0} = 1$	$\bar{1} = 0$

MINTERM: Boolean product of a number of variables (no OR, all variables included).

MINTERM-TYPE: A minterm with one or more variables missing.

MINTERM FORM: Composed entirely of minterms and minterm-type terms connected with ORs, but no parentheses or vincula extended over more than one variable or more than one vinculum over a variable.
