Some people might think after making bikes for many years, a company would get stale and settled in its ways, unable to stay in touch with the needs of today's bike rider.

The three newest members of our product group, who were just entering grade school when Kona started making bikes in 1988, would vehemently disagree with that when it comes to Kona. As they know, obsessing over bikes, in the company of other like-minded souls, has been the cornerstone of our company since day one.

Twenty-five years after our first bike, the knowledge and experience of our long-term product managers, frame builders and factories go hand in hand with the fresh creative charge that sparks our company. While we are constantly adopting new materials, designs and technology, we continue to believe a machine as complex as the modern bicycle can still be reduced to the simple question, does it work?

When it comes down to it, an eagerness to ride what's new needs to be combined with the importance of what's going to work. Not just for many rides, but many years. A hot new bicycle might make a magazine cover, but if it's unable to stand up to the rigors of today's discerning rider, it's nothing more than old news. Kona is all about combining creativity and ultimate performance.

At its core, we believe that a bike needs to be perfectly balanced, incredibly reliable, ridiculously fun, and at the top of the performance charts. From our World Cup race bikes to our kids' bikes, every single model needs to be a seamless interaction between the rider and the path before them.

For us, that drive is never going to change. More than anything, we want every Kona bike to fill your days with the same satisfaction and joy we get from making them. That's the Long Sweet Ride

**-THE KONA CREW**

# FAQs

## WHAT IS KONA'S ADDRESS?

**World Headquarters - USA**  
Kona USA  
2455 Salashan  
Ferndale, Washington 98248

**Canadian Distribution**  
The Bicycle Group  
381 Railway Street  
Vancouver, BC V6A 1A4

**Kona Europe**  
14 bis rue honore Labande  
98000 Monaco

**Kona Distribution**  
Chemin du Lac 1  
1290 Versoix  
Switzerland

## I WANT TO RACE FOR KONA. WHERE DO I SEND MY RESUME?

**Mail (not fax or e-mail) to:**  
Chris Newell  
Kona USA  
2455 Salashan  
Ferndale, Washington  
98248

**In Canada:**  
Trevor Porter  
The Bicycle Group  
381 Railway Street  
Vancouver, BC V6A 1A4

**In Europe:**  
Ben Gaby  
ben@konaworld.com

**For all other countries contact your Kona distributor.**

## I'D LIKE TO WORK FOR KONA, WHERE DO I SEND MY RESUME?

**USA:**  
Joe Shlabotnik  
Kona USA  
2455 Salashan  
Ferndale, Washington 98248

**Canada:**  
Richard Wadd  
The Bicycle Group  
381 Railway Street  
Vancouver, BC V6A 1A4

**Europe:**  
Meriem Maher  
Kona Europe  
14 bis rue honore Labande  
98000 Monaco

## WHERE IS MY NEAREST AUTHORIZED KONA DEALER?

You can locate your nearest Kona Dealer all over the world here <http://www.konaworld.com/dealers.htm>  
For all other countries contact your national distributor.

## ARE SPECS, PRICES & GEOMETRY OF YOUR BIKES ONLINE?

These can be located by navigating the BIKES menu on the front page of [www.konaworld.com](http://www.konaworld.com) or directly by visiting <http://www.konaworld.com/bikes.htm>

## I HAVE A GENERAL QUESTION, WHO DO I SEND IT TO?

Joe@konaworld.com will make sure that your question is answered by the most knowledgeable person.

## I HAVE A TECHNICAL QUESTION, WHO DO I SEND IT TO?

Send questions to [tech@konaworld.com](mailto:tech@konaworld.com). We have a group of product and warranty persons that will take care of your problem.

See Kona owner's forums for more info: <http://forums.konaworld.com/>

## I HAVE A WARRANTY QUESTION, WHO DO I SEND IT TO?

USA: [warranty-usa@konaworld.com](mailto:warranty-usa@konaworld.com)  
Canada: [warranty-canada@konaworld.com](mailto:warranty-canada@konaworld.com)  
Europe: [highlander@konaworld.com](mailto:highlander@konaworld.com)

## I WOULD LIKE TO REQUEST PRODUCT PHOTOS, LOGO ART, ACTION PHOTOS OR ADVERTISING MATERIALS, HOW CAN I ACCESS THESE?

Please visit [www.konart.net](http://www.konart.net) with your login and password *KonaLSR2K13* (case sensitive) to view all product photos, logo art, action photos and advertising materials. You can email requests to [eddy@konaworld.com](mailto:eddy@konaworld.com)

## HOW DO I REGISTER THE WARRANTY?

Each and every Kona bike comes with an owner's manual in the small parts kit. Located on the inside cover of the manual is a warranty card. You can fill out and mail in warranty cards to the above listed Kona addresses, but we prefer you register online at <http://www.konaworld.com/warranty.htm>

## WHO OWNS KONA AND WHERE DO YOU MAKE YOUR BIKES?

Kona is 50% US and 50% Canadian owned. It is an independent company; no one owns us and we don't own anything else. We design all of our bikes from the ground up and visit the factories that make our frames and components and assemble our bikes in Taiwan every month while they are being produced. Bikes these days are a virtual United Nations (we have parts on our bikes made in Canada, China, France, Italy, Japan, Malaysia, USA) so it is almost impossible to get even half the parts on a bike from one country now. It is great to support your home country but the most important thing for Kona is to make the best bikes we can because our bikes are ridden by serious riders all around the world who expect nothing short of perfection.

Since we produced our first mountain bikes 25 years ago, Kona has partnered with the finest frame-building and material manufacturers in the world. It's why our name is synonymous with longevity, durability, performance and value. For 2013, we feature some of the most technologically advanced bicycle frame materials in the world: the simple elegance of Kona Cromoly steel, the speed and agility of Kona Carbon Race, Kona Scandium 6069 Aluminum alloy and our everlasting 7005 Aluminum. At Kona, we pride ourselves on using the right materials for the right applications, going to great lengths to ensure your bike is built with The Long Sweet Ride in mind.

### KONA CROMOLY

For 2013, you'll find the simplicity, strength, comfort, resilience and playfulness of Kona Cromoly interspersed throughout our road- and mountain-bike platforms. Very few materials offer as much shock absorption, durability and supple-ride characteristics as steel. We've never strayed from cycling's original material and have worked tirelessly to adapt, refine and innovate Cromoly framesets as rider demands continue to evolve.

### KONA 7005/6061 ALUMINUM

Kona 7005 and 6061 Aluminum alloys are used extensively throughout our fleet of mountain and asphalt bicycles. A tough, durable, affordable, light alloy, both Kona 7005 and 6061 deliver fantastic, reliable performance that lasts for thousands of rides. It is, by far, the ultimate aluminum tubing on the market today. Much of our 7005/6061 tubing is butted and/or formed, meaning the tubing's wall thickness can be increased or decreased, as well as shaped, allowing us to fine-tune a particular frame's strength and ride characteristics depending on its intended application.

### KONA RACE LIGHT 7005/6061 ALUMINUM

Kona Race Light 7005/6061 is a lighter, more performance-oriented fabrication of our 7005/6061 Aluminum tubing. Designed to meet Kona's discerning race specifications, Race Light 7005/6061 uses custom butting to create thicker tubes at weld areas and important parts of the frame, providing incredible strength and torsional integrity to the feel of the ride. We remove wall thickness in other parts of the frameset to lighten up the bike, providing the perfect balance between quickness and stiffness. The emphasis here is on performance, lightness and speed built the Kona way.

### KONA RACE LIGHT 6069 ALUMINUM

At Kona, we are always refining materials to achieve the best mix of ride performance for certain applications. With Kona Race Light 6069 tubing, which mixes trace elements into the alloy, we are actually able to make framesets that are lighter and stiffer than Scandium 7005. Not quite as light and stiff as Scandium 6069, but significantly more affordable, Kona Race Light 6069 Aluminum allows our designers to make the tubing thinner while maintaining the preferred ride characteristics, stiffness and strength for a desired riding application—in this case, medium-travel all-mountain bikes, like our new Process.

### KONA SCANDIUM 6069 BUTTED

Known to be one of the strongest alloys in the world, Kona Scandium 6069 is featured in many of our high-end bike models, from dual-suspension mountain bikes through to some of our top-ranking asphalt rides. Scandium is a rare earth metal and potent grain refiner that, when added to aluminum alloy, elevates the strength and durability of the material by 50 per cent. Scandium aligns the grains of the alloy, making the metal less susceptible to failure. Scandium alloys are twice as strong as 6061 or 7005 Aluminum, which means our product team uses much less material. Because of a Scandium alloy's strength, it can be butted thinly enough so the aluminum gives a more compliant feel that's similar to steel but without weight. In more specific terms, we're shaving weight off our aluminum frames by 10 to 15 per cent, without sacrificing strength and durability.

Introduced to our line in 2012, new Kona Scandium 6069 comes with yield strengths that are about 40 per cent higher than previous scandium alloys. The result is the strongest-per-weight aluminum alloy ever made. Because of its fibrous or fine-grained structure, Scandium 6069 alloy reveals a unique combination of high strength and toughness, good corrosion resistance and excellent fatigue strength.

Introduced to our line in 2012, new Kona Scandium 6069 comes with yield strengths that are about 40 per cent higher than previous scandium alloys. The result is the strongest-per-weight aluminum alloy ever made. Because of its fibrous or fine-grained structure, Scandium 6069 alloy reveals a unique combination of high strength and toughness, good corrosion resistance and excellent fatigue strength.

### KONA CARBON RACE

To create our growing fleet of Kona Carbon Race bikes, Kona has partnered with some of the most reputable carbon manufacturers in the world. Our design team works intimately with our production facilities to ensure desired ride characteristics, durability demands and weight stipulations are met to the highest standards possible. Kona Carbon Race bikes are featherlight, super fast, and tough as all hell.

### STEP 1: APPLICATION

At Kona we are very selective when choosing carbon fiber for specific bicycle frames. Each riding discipline requires a different balance of weight, strength, frame damping, stiffness, compliancy and durability. With over 25 years experience making bikes for every known cycling discipline, the first step in the design phase is ensuring how carbon fiber can be optimized for its intended use.

### STEP 2: DESIGNING AND ENGINEERING THE KONA RIDE

For the good guys and girls in the Kona Product Development and Sales Teams, it's imperative that key elements of the Kona Ride manifest in our carbon bikes. Efficiency, agility, comfort, and overall strength are all key considerations when we begin to work on the design of a carbon frame. Of course, we aim to leverage all the inherent properties of the material, but it's crucial that it still feels, rides and lasts like a Kona.

### STEP 3: MATERIALS & FABRICATION

**THE WEAVE:** Kona Carbon Race bikes use TORAY fibers, what we have determined to be the most technologically advanced in the industry—this is the same carbon weave used throughout most Formula 1 racing cars. Our carbon weave also features NANO TECH, a process that injects carbon nano cups into the weave matrix, bringing more strength, stiffness and impact resistance to the finished product. The results are frames with industry leading weight, stiffness and durability. Our entire structure is always built with unidirectional prepreg carbon fiber underneath a frame finish that is either UD or 3K.

**THE FRAME:** Kona Carbon Race frames are always built with a MONOCOQUE main triangle. While a tube-to-tube process similar to welding is cheaper to build, we choose only to use the monocoque process as it alone allows for continuous fibers where the tubes join, creating a much stronger and lighter structure. Our production process also eliminates as much bonded-in aluminum inserts as possible. While we bond in thread inserts for durability, you won't find us taking short cuts with aluminum inserts for bottom brackets, headtubes, front derailleur mounts, or seat tubes. When we do put alloy into the frame we take very specific steps on their surface treatment and have special jigs for each step to ensure proper alignment.

Another thing you won't find inside our frames is foam. Laying up the carbon around foam mandrels is another trick that makes bikes cheaper and easier to build, but leaves the rider dragging around a bunch of heavy foam. Kona Carbon Race frames are only molded with internal air bags, which are removed after the molding process. This means our carbon frames are made from only the best ingredients: carbon fiber and epoxy.

### STEP 4: TESTING

During the prototyping process, our frames are tested for weeks at a time on veritable bike torture machines that push our designs through tens of thousands of cycles. What we learn from this directly translates into making strong frames, while eliminating unnecessary material. Kona Team athletes—experts when it comes to pushing the limits of our bicycles in real world scenarios—are the next in line when it comes to testing our prototype Kona Carbon Race bikes. Even after the tests rigs and pro rider testing, our product team continues to abuse the same prototypes day-in and day-out to make sure we are building the best Kona Carbon Race frames we possibly can.

## THE KONA RIDE: 2013 GEOMETRY, DESIGN AND TECHNOLOGY FEATURES

At Kona, we spend long hours focused on the little details that make up the perfect ride: from our revolutionary Magic Link to our World-Championship-winning Walking Beam 4-Bar Linkage rear suspension. From rider fit to cornering performance and every nuance in between, the Kona Ride has long been a definitive element of what makes our company unique. We design bikes that are playful and fun. Our bikes inspire confidence, balance, performance and comfort, and they ultimately get the most out of you, the engine, the bike's most important component. horizontal toptubes.

### COMPACT REAR TRIANGLE

Short chainstays and seatstays provide a perfect balance of stability and power transfer when out of the saddle and pedalling hard. Shorter seatstays also have less deflection during braking and accelerate faster than longer stays. The shorter rear triangle also helps the bike to negotiate tight-twisting sections of trail. Our new Entourage short-travel downhill bike is a good example of an incredibly compact rear triangle. Our goal was to create a bike that was easy to jump and trick, and could also corner aggressively. With seatstays measuring just 415mm, we've created one of the most nimble short travel DH bikes in the industry.

### HYDROFORMED TUBING

Hydroforming is a tube-shaping technology that uses high-pressure liquid to form the shape of a tube and align its grain structure. Quite simply, the technology delivers a sound structure and ride performance like no other tubing in the world. The process results in a seamless, continuous, aligned piece of metal, right down to the fiber structure itself.

Hydroformed tubing is especially advantageous at weld points where tubes can be flared to increase weld areas, adding strength without adding weight in the form of extra gussets. The result is a strong, flawless frame with great lateral stability, durability and responsiveness. Not to mention, it looks real sharp too.

### SUPERPLASTIC FORMED TUBING

Superplastic Forming (SPF) uses high temperatures to shape aluminum tubing when the tube structure is in its most "plastic" and formable state. SPF creates better tube shapes that cannot be produced using traditional forming techniques. Whereas shape designs can be applied to between 20 and 30 per cent of the tube using hydroforming, SPF means 90 per cent of the tube can be shaped, resulting in more optimized shapes and less weight. SPF tubes are the perfect alternative to the infinitely more expensive carbon fiber, and they are comparable in weight and performance, without the accompanying disadvantages. SPF tubes are also recyclable.

### INTERNAL HEADSET

By having the headset bearing located inside the headtube (called zero stack), rather than the top and bottom, we are able to achieve a number of advantages when it comes to front-end stiffness, durability and overall riding performance. The major benefit of an internal headset is the extra layer of protection it provides the bearings against the elements. Additionally, the bearings are commonly available angular contact bearings, which are easily and inexpensively replaced. An internal headset also reduces stack height, so the height of the stem and bars are more adjustable, giving the rider the best fit possible.

### TAPERED HEADTUBE

For 2013, you'll find a large majority of Kona bicycles featuring zero stack and tapered headtubes. From cyclocross to cross-country, 29ers right through to longer-travel dual-suspension models, like our Entourage and Operator, a tapered headtube provides more support at the intersection of the toptube and downtube, greatly improving stability and overall performance.

Aside from improving the aesthetic due to its cleaner lines and smooth transition between the fork crown and the headset cover, tapered headtubes also offer a more solid interface between forks with tapered steertubes and the bicycle frame itself. More girth at the bottom of the headtube better distributes shock force, prolonging the bearing life of the headset itself. The inherent strength of its triangular design also means a stronger steering position and improved balance, giving the rider more control in rough terrain. A zero stack, tapered headtube also puts strength where the load is going—into the lower headset cup—maximizing bearing durability where it's needed.

### TUBELESS COMPATIBLE RIMS

A number of 2013 Kona models feature the benefits of tubeless compatible rims. Tubeless rims allow for tires with more puncture resistance, better tire grip on the trail, lower rolling resistance and weight savings over traditional tube + tire systems. For 2013, you'll find tubeless compatible rims on most of our XC race and trail bikes, as well as our carbon fiber Major Jake, Red Zone and Zone Two.

### 142 x 12 REAR AXLES

A 142 x 12mm rear axle provides two major advantages to the Kona rider: the 12mm diameter of the rear axle provides the rear hub and frame with a stiff interface, while the 142mm outer diameter of the hub allows the wheel to be quickly and properly positioned in the frame before the rear axle is inserted. The definition of all-mountain: DH stiffness with the speed and ease of XC.

## 2013 DESIGN HIGHLIGHTS

### CLEAN CABLE ROUTING

Throughout Kona's 2013 range, you'll find many subtle changes to cable routing. Some are now internal, while others have been rerouted to improve performance and tidy aesthetics. Small changes you may not even notice, but rest assured the changes are maintenance free and not fashion driven.

### DROPPER POSTS

At Kona we love dropper posts. LOVE them. And we think that you will too. For 2013, we have included dropper posts on six models: Process, Process DL, Satori, Cadabra and Abra Cadabra. We are using the lightweight and über-tech RockShox Reverb Stealth seat post and the cost-effective, cable-activated Crank Brothers Kronolog seat post. Both posts use a handlebar-mounted lever with cables that attach to the static portion of the seat post, so you don't have to worry about excess cable flopping around when you descend. Bikes like the Honzo, Taro and Tanuki do not come equipped with dropper posts but have cable routing to allow for after-market upgrades.

## KONA MAGIC LINK – INTUITIVE ADAPTABILITY

With the ability to change geometry, travel length and suspension performance based entirely on rider and trail input, Kona's patented Magic Link Active Geometry is one of the most intuitive and adaptable rear-travel suspension platforms ever invented. New for 2013, we introduce G3 Magic Link: lighter, smoother and more adjustable.

By using both a main air shock and a newly developed Magic Link Air Shock, the suspension platform is able to deliver relatively quick, linear, cross-country-oriented suspension that's ideally suited for climbing. Additionally, without flicking a switch or making any external adjustments, our suspension can seamlessly change into longer, more progressive travel to take on big hits and technical terrain. Here's how:

**CLIMBING:** Effective pedal pressure keeps the Magic Link's auxiliary shock from engaging, so the rider is only using the main shock. This results in good pedaling efficiency by enabling comfortable geometry and quicker, more linear suspension characteristics. Everything you need for good power transfer.

**CROSS-COUNTRY:** Tire drag, faster corners and bigger bumps cause the Magic Link's Air Shock to move deeper into its travel. Chainstays elongate, the saddle and bottom bracket lower, and the headtube slackens, amounting to an agile, confident riding position, with increased wheel traction and plusher travel.

**DESCENTS:** When the main shock and the auxiliary shock fully engage, Magic Link lets the bike's geometry slacken considerably, enabling the rider to position themselves further behind the bike, with a lower center of gravity and extended rear triangle for increased stability. Rear wheel travel also increases to 160mm, and the rear shock becomes more progressive to avoid bottoming out.

**VARIABLE SPRING RATE:** One of Magic Link's more unique characteristics is its use of two shocks. The result is a highly adaptable variable spring rate that enables the bike's rear suspension to be quick and short on the climb, and slower and more plush during the descent. Two shocks working together also allows the rear wheel to pop over big, sharp bumps with virtually no resistance. Because the main shock becomes more progressive as the link engages, it won't blow through the travel or bottom out. It's important to remember the auxiliary shock is in a constant state of flux depending on pedal (rider) and trail (terrain) input.

## G3 MAGIC LINK & MAGIC LINK AIR SHOCK

New for 2013, we've replaced the standard coil auxiliary shock with our new Magic Link Air Shock. The most notable features of the new shock are weight savings, rebound adjustability, and ease of preload (spring rate) adjustability. If you thought Magic Link was the ride of your life, new G3 will blow your mind.

## CLEANER, STIFFER, SMOOTHER LINKAGE

To the linkage, we've added new cartridge bearings that are more durable and lighter, while incorporating a better trunnion attachment system, greatly increasing the overall stiffness of the linkage itself.

## SEXIER, STIFFER, MORE CLEARANCE

The new G3 Magic Link-equipped Cadabra and Abra Cadabra feature a new tubeset that is noticeably stiffer and sexier. The rear chainstays are slightly longer, resulting in huge gains in mud clearance. Thanks to a seatstay bridge that is now in double shear, the lateral stiffness to the entire rear triangle is greatly increased.

## SLACKER, LOWER, LIGHTER

Based on feedback from our Enduro team, we've slackened the headtube to 67 degrees (one degree slacker than 2012) and lowered the bottom bracket by 10mm. The new Magic Link nest is nearly 100 grams lighter, slimmer and more compact. The result is a bike that's more confident on descents and quicker on the ups.

## KONA WALKING BEAM 4-BAR LINKAGE

Since Kona first introduced the Walking Beam 4-Bar Linkage platform in 1996, we've been refining and honing the most functional, durable and performance-oriented dual-suspension platform ever invented. You'll find versions of Kona's Walking Beam 4-Bar Linkage on everything from the Hei Hei XC race bike, to our Supreme Operator, the Entourage, and on one of the best-performing, entry-level dual-suspension bikes ever made, the Tanuki.

**FUNCTION AND DURABILITY:** Anytime you have a pivot in anything, there is side-to-side movement, or tolerance. It's what allows the pivot to move freely. When you have pivots that are close together, the side-to-side movement in those pivots becomes amplified, what's called tolerance stacking. Kona's 4-Bar system keeps pivots as far away from each other as possible, minimizing the negative effects of tolerance stacking. Ultimately, it equates to a stiffer rear end, as well as a significant decrease in bearing and bushing wear.

**PURE SHOCK MOVEMENT:** Another benefit of our 4-Bar system is minimized side load on the rear shock. If you have proximate pivot points and/or the shock positioned so that it is exposed to lateral forces, you have side load on the shock. Side load causes resistance, which can negatively impact suspension performance.

**SHOCK LONGEVITY:** With our 4-Bar system, the rear shock is protected from side-to-side forces. Side load is one of the main causes of premature seal failures. As a result, we have a very low rate of shock problems, as well as an exceptionally responsive feel to the rear suspension.

**INCREDIBLE TUNE-ABILITY:** By using 4-Bar, our designers are able to incorporate a huge range of suspension characteristics into our dual-suspension mountain bikes. Simply by changing the shock's positioning and configuration, we're able to make either an efficient climber or a wicked descender. For example, on our XC bikes, we can take an inherently progressive air shock and make the suspension more linear, allowing the rider to benefit from all of the bike's travel. For downhill bikes, like our Operator and Entourage, an inherently linear coil shock can be set up to be more progressive for big hits. When it comes to range of application, 4-Bar is the ultimate rear-suspension platform.

**PLUSH FACTOR:** With pivots, bearings and the shock itself well supported and protected from linear side load, Kona's Walking Beam 4-Bar Linkage system delivers that extraordinarily plush, smooth feel we all crave as mountain bikers. Whether it's taking the edge of a technical XC race course, the burl out of a backcountry all-day epic, or leveling out the brake bumps at your local bike park, Kona's Walking Beam 4-Bar Linkage delivers that sweet feel. Ride in, ride out.

## KONA SWING LINK

First introduced on our Satori in 2012, and featured on the Satori and Kitsune for 2013, it is important to note that Kona's new Swing Link suspension setup represents no functional difference from our traditional Walking Beam 4-Bar Linkage. Both configurations are single-pivot rocker-actuated suspension designs. We refer to our traditional design as a Walking Beam and the Satori as Swing Link, but this only describes the manner in which the rocker is configured, not how the suspension functions, which is the same between them.

We changed the configuration of the Satori's rocker to increase standover and optimize the leverage rate for 29inch all-mountain riding in a way that we could not have done with our traditional Walking Beam configuration.

**Round Seatpost:** Allows for more adjustability.

**Internal Cable Routing:** Specific to DI2 electronic Dura-Ace and Ultegra drivetrains.

**Carbon Fiber Cockpit:** Featuring Easton aeroshape bar for long-ride comfort.

**Gran Fondo / Endurance-Inspired Geometry:** We worked closely with legendary road bicycle manufacturer Dedacciai of Campagnola, Italy, to create a custom-designed monocoque carbon road bike that's comfort oriented but still nimble and agile. Compared to modern race geometry, our angles are slightly more relaxed, with ideal chainstay length and a longer headtube—a touch of classic road geometry for a ride that's stable in descents and rough roads, yet still fast as hell.

**28c Tire Clearance:** Our proprietary Kona Carbon Race monocoque frame comes with 28c tire clearance, a design feature for riders who want wider tires with better traction, shock absorption, and durability for rough roads or winter training.

**Tubeless Wheelset:** Results in a better quality ride feel, with more air volume for increased pinch flat and puncture protection, the ability to run lower tire pressure for better surface contact, and a laterally stiffer rim with the same given overall weight. The Red Zone comes with standard tires and tubes, but the wheelset gives the consumer the ability to use a true UST road tire of their choosing.

**Hidden Fender Eyelets:** Mount real fenders securely and without hassle.

**Custom Kona/Dedacciai Designed Monocoque Fork:** Features slight curve for a non-jarring, smooth, compliant ride.

**SRAM Red Group:** Spec'd with SRAM's industry-leading RED road group: incredibly lightweight, flawless shifting, 50-34 gearing, ergonomic advantage and cool aesthetic.

**Purpose Built:** With a target frame weight of sub 1000 grams, we set out to create a lightweight bike featuring the very best and most advanced materials available that wouldn't be too brittle or delicate. The Red Zone is not limited to the confines of glass-top black asphalt—it's tough enough to go down the dirt road.

**Press Fit 30 BB Shell:** Stiffer, stronger, lighter 30mm-diameter spindle.

## RED ZONE

We pride ourselves on making specific bicycles for specific purposes. With the growth of Gran Fondo and endurance road riding, we decided it was time to design a road bike that seriously considered the ride requirements of this burgeoning discipline. Longer rides necessitate more comfortable geometry, while year-long training means fender and 28c wheelset compatibility. Take a look at all the unique features of the Red Zone, Kona's first custom-designed, from-the-pavement-up road ripper. See page 75 for more.

**Purpose Built:** Our intent with the Rove is a bicycle that can cover a wide range of terrain. It's comfortable racing cross in the fall, commuting during the week, and carrying you on epic journeys over the weekend, regardless of pavement or dirt.

**Kona Cromoly Frameset:** The Rove chassis is constructed using Tig-welded steel, with a matching straight-blade steel fork that results in a rugged bike with a smooth ride quality—classic aesthetic with a few modern updates.

**Front and Rear Disc Brakes:** Hayes V-Series mechanical disc brakes with 140mm rotors for great stopping power regardless of conditions.

ROVE

At Kona, we love building specific bikes for specific purposes. We see a cool niche, and we pool our collective creativity to come up with the perfect ride. Our all-new Rove is just that. Designed to be the ultimate cyclocross/gravel-grinding/commuting machine, the Kona Cromoly drop-bar Rove pulls in the utilitarian attributes from our best commuter models, spices it with the efficient and comfortable geometry of our long cyclocross heritage, and dashes it with the awesome compliancy and durability of steel tubing. Outfitted with large tire clearance, eyelets for racks, and disc brakes for great stopping power, the Rove will deliver you come dirt, gravel or asphalt for as many Long Sweet Rides as you dare imagine. See page 85 for more.

# SUPREME OPERATOR

**Raceface Cockpit:** New Atlas FR handlebar, Atlas direct-mount stem and custom seatpost.

**Anodized Frame:** Kona 7005 DH Butted frame with anodizing increases frame durability and finish, and reduces the overall frame weight. We estimate a 112 per cent increase in sex appeal.

**Rockshox Boxxer World Cup Fork:** The day-in and day-out barometer of lightweight, performance-orientated front suspension.

**New Maxxis High Roller 2 Tires:** Featuring EXO casing for lightweight flat protection that provides unparalleled grip and feel.

**Mavic/Shimano Wheelset:** Balancing the best-rolling stock from Shimano and Mavic with badass black spokes.

**Oversized Pivot and Axle Assembly:** Oversized pivots keep your suspension smooth and supple under heavy side load. Oversized bearings protect your long-term suspension performance from the pressure washer.

**Third Generation Shimano Saint Group:** Shimano's new m820 Saint group, developed under their "Pure Gravity" design philosophy, which incorporates a clear focus on downhill and speed, features components like refined braking, new Saint Shadow Plus rear derailleur with new chain control and silencing technologies, and light, durable Hollowtech II crankset.

**New Integrated Chainstay Protector:** Designed to be light, quiet, durable, it protects both the driveside stay and chain from wear.

## SUPREME OPERATOR

In the two years since we launched our Supreme Operator, this bike has become cherished and loved by riders all over the world. We kept it simple, focusing our efforts on high-performance characteristics that last. What sets the Supreme Operator apart is its ability to take a carefully tuned, rising-rate leverage curve, ideal for fast, technical, big-hit riding, and combine it with features like low standover, oversized pivot axles and bearings, and a tough-but-light shot-peened and anodized Kona 7005 DH Butted frame. Tricked out with Shimano's new 2013 Saint groupo and RockShox Boxxer World Cup fork, the Supreme Operator is a gravity weapon for the ages. See page 34 for more.

# ● ENTOURAGE DL

**Raceface Cockpit:** New Atlas FR handlebar, Atlas direct-mount stem and custom seatpost.

**Anodized Frame:** Kona 7005 DH Butted frame with anodizing increases frame durability and finish, and reduces the overall frame weight. We estimate a 112 per cent increase in sex appeal.

**Rockshox Lyric DH Solo Air Fork:** The lightest, best-performing single crown 170mm DH fork on the market.

**New Maxxis High Roller 2 Tires:** Featuring EXO casing for lightweight flat protection that provides unparalleled grip and feel.

**Badass Wheelset:** Mavic EX823 rims are light, fast, durable and come with stealth black spokes.

**Oversized Pivot and Axle Assembly:** Oversized pivots keep your suspension smooth and supple under heavy side load. Oversized bearings protect your long-term suspension performance from the pressure washer.

**Shimano Zee Group:** Positioned as Saint's younger brother, Shimano's all-new Zee Group hits the perfect balance between price point and gravity performance. With a Shadow RD+ rear derailleur, ceramic 4-piston caliper disc brakes, and solid crank arm upgraded with hollow axle, Zee is lightweight, smooth, quiet and top-notch tough.

**New Integrated Chainstay Protector:** Designed to be light, quiet, durable, it protects both the driveside stay and chain from wear.

## ENTOURAGE DL

Introduced in 2012, the Entourage DL comes with a host of refinements for 2013, making it the most fun short-travel DH bike currently on the market. The 170mm travel Entourage DL is the Operator on a diet. Designed to be quicker, faster and more maneuverable than a standard 200mm DH rig, this bike is all about ramping the rad quotient to the next level. It's the bike freeride superstar Graham Agassiz used to huck massive backflips, style downside tailwhips and spin lofty 360s in Anthill Films' Strength in Numbers. With super-short 415mm chainstays and geometry specifically designed to broaden your gravity horizons, this year's Entourage DL sees new improvements from an anodized finish and Shimano's new Zee Group. See page 35 for more.

# ● PROCESS DL

**Stiff Frame:** Built using light, stiff and durable Kona 6069 Aluminum, the Process features a low toptube with a seat-tube gusset for added stiffness and strength.

**Pivot Performance:** The Process only uses bearing pivots, supplying excellent suspension performance under load and durability in wet conditions.

**Ideal Leverage Ratio:** Our designers worked hard for a leverage rate that wouldn't require a specially valved shock. An "easy" leverage rate curve means the shock isn't working as hard, translating into better shock performance.

**Direct Mount FD:** Mounting the front derailleur directly to the chainstay allows for optimum shifting with 150mm of rear travel. Sagged at 22.5%, 32%, even static the front derailleur is always in line with the chain providing crisp shifts.

**Clean Chainstay Design:** An integrated chainstay and internal driveside cable routing.

**AM Drivetrain:** 10-speed drivetrain, 11-36 cassette, 26-39 chainring. A bash ring mated with a SRAM X-9 Type 2 rear derailleur reduces the need for a chain guide; pedal efficiency with DH performance is the definition of all-mountain.

**Raceface Cockpit:** New 50mm Atlas stem, 785mm Atlas bar.

**Dropper Post Cable Routing:** For both standard dropper posts and a Reverb Stealth.

**Anodized Frame:** Kona 6069 Aluminum frame with anodizing increases frame durability and finish, as well as reducing the overall frame weight.

**Lyrik RC2 Fork:** 160mm travel, DH cartridge, same valving as our Entourage, with two-step travel adjust for climbing.

**Tubeless Compatible:** UST compatible high-performance Stans wheelset.

**Avid XO Trail Brakes:** New trail brakes with lightweight lever and powerful four-piston caliper.

**BB Shell:** Shimano press fit with ISCG05 mounts—offers bottom bracket bearings protection from the elements (and your pressure washer) and allows for a wider main pivot. Stiffness and bearing life are also increased.

## PROCESS DL

With our all-new Process DL, we have created a lightweight, efficient pedaling platform with geometry and frame features that inspire confidence while descending. Basically, the Tits Magee of all-mountain/enduro trail bikes. Versatility is the key word here—a bike with a host of subtle but innovative design cues makes the Process DL one of the most ridiculously fun bicycles we've ever made. See page 40 for more.

**Rockshox Reverb Stealth Remote Adjust Seatpost**

**Fox Float Suspension:** The very best in suspension technology, FOX CTD Adjust rear damper, and FOX 34 FLOAT CTD FIT fork.

**New G3 Magic Link:** New cartridge bearings and an improved attachment system greatly increase the overall plushness and stiffness of the linkage itself. The new G3 Magic Link nest is also smaller and nearly 100 grams lighter, half the weight of G2 Magic.

**New Magic Link Air Shock:** Increased weight savings, rebound adjustability, and ease of preload (spring rate) adjustability.

**Raceface Turbine Bar and Stem:** The ultimate in performance.

**New Frame Features:** Slacker, 67-degree headtube angle, 10mm lower bottom bracket, new chainstay tubing and bridge with increased tire/mud clearance, double shear pivots for added stiffness, as well as an integrated chainstay protector and internal rear derailleur cable routing.

**New Kona Scandium 6069 Frameset:** Kona Scandium 6069 Aluminum is the ultimate in lightweight aluminum, with new tubeset designs for increased frame stiffness and strength.

**Shimano XT Brakes:** 180mm front rotor, 160mm rear, top-drawer stopping power.

## ABRA CADABRA

Equipped with new G3 Magic Link, the completely redesigned 2013 Abra Cadabra represents the next step in one of the world's most revolutionary all-mountain bikes. G3 Magic is highlighted by a new Auxiliary Air Shock that allows for exacting control of rebound and preload. At the same time, we shaved considerable weight in a redesigned G3 nest, as well as improvements to the linkage system that allows for a smoother and stiffer ride feel. But we didn't stop there: based on feedback from our Kona Team enduro athletes Karim Amour, Alex Stock and Matthew Slaven, we made the bike slacker, lower and lighter overall. Built using Kona 6069 Scandium tubing, the Abra Cadabra is the ultimate all-mountain trail ride. See page 42 for more.

# HEI HEI SUPREME

**Ideal Leverage Rate Curve:** 100mm of custom Kona XC rear suspension for incredible balance of power transfer and plushness.

**Excellent Tire Clearance:** Seat tube configuration, seatstay tubing and bridge allow ample room for up to a 2.2" rear tire.

**New Shimano Press Fit BB92:** More lateral stiffness and increased bottom bracket durability.

**142x12 Rear Axle:** Increased rear-end stiffness and ease of wheel removal.

**SRAM XO:** Light and performance-oriented SRAM XO components with Type 2 rear derailleur for proper chain tension.

**Shorter Chainstay:** 440mm chainstays allow for lively and lightning-quick handling and power transfer. A direct-mount front derailleur keeps the front shifting accurate.

**Raceface Turbine Cockpit**

**Refined Cable Routing:** Internal chainstay routing for the rear derailleur, downtube routing for RD, RB, FD and Stealth Reverb.

**Fox Float CTD Adjust BV and Fit:** Premium FOX front and rear 100mm suspension with adjustable damping.

**Easton UST Tubeless EA 90 XC 29er Wheelset**

**New Kona Carbon Race Monocoque Frameset:** Made using the highest grade of carbon and resin materials available, and designed to be light, efficient and incredibly durable.

## HEI HEI SUPREME

Designed in conjunction with our Kona Team XC riders, the all-new 2013 Kona Carbon Race Hei Hei Supreme represents the pinnacle of all we've learned over 25 years of racing mountain bikes. A radical evolution of our Hei Hei XC platform, this big-wheel speedster is all about efficient climbing, powerful acceleration, and agile descending. Features like shorter chainstays, excellent tire clearance, and a perfected leverage rate curve come together on this ultra-light carbon gem. Quite simply, it's the fastest cross-country dual-suspension bike we've ever made. See page 49 for more.

## RAIJIN

We've had a long love affair with titanium, one that we've consummated with our new Raijin, our first ever 29-inch-wheel titanium hardtail. With a long history working with this metal, and some serious expertise in designing unique, industry-leading 29-inch-wheel bikes, we're delivering the new Raijin loaded with cool custom features, on a frame designed by Kona, and manufactured in the USA by Lynskey Performance Designs. Named after the Japanese god of lightning and thunder, the Raijin, which is available as a frameset only, sets out to maximize all the inherent virtues of titanium with geometry ideally suited to fast, efficient, simple and ridiculously fun singletrack riding. See page 59 for more.

# GRAVITY

Never before has the world of down been so diverse: from the steep, rock- and root-infested gnarl of World Cup tracks to perfectly manicured bike parks, backyard jumps or cityscape slopestyle courses, all the way through to adrenaline-stacked big-mountain descents. Gravity riding in 2013 represents a wide range of riders and riding styles, and since we've been in the game right from the start, we understand the need to make specific bikes for specific types. The reliable plushness of the Shimano Saint-equipped Supreme Operator, the redesigned Shred, our paradigm-shifting Entourage and the trick-savvy Shonky are guaranteed. One hundred per cent. We've got a bike to get after it.

2013 / GRAVITY

# OPERATOR ●

“It's one of the best entry level downhill bikes we've ridden. It's simple and effective, and we love it.”  
—Mountain Biking UK Magazine

## OPERATOR

For the money, it is one of the best downhill mountain bikes on the market. Light, quick, really maneuverable and super plush, the Operator is designed specifically for those who need excellent big-travel value. Make no mistake: this is a high-performance downhill bike made to endure the rigors of heavy-duty shuttling, bike-park riding and flat-out downhill racing. It has oversized pivot axles and bearings, bomber Kona 7005 DH frame and components selected to maximize the performance equation. No surprise then, the 2012 Operator was voted to Dirt Magazine's prestigious Top 100.

# SUPREME OPERATOR

“The ride is superbly damped and balanced.”  
—Dirt Magazine, UK

## SUPREME OPERATOR

In the two years since we launched our Supreme Operator, this bike has become cherished and loved by riders all over the world. We kept it simple, focusing our efforts on high-performance characteristics that last. What sets the Supreme Operator apart is its ability to take a carefully tuned, rising-rate leverage curve, ideal for fast, technical, big-hit riding, and combine it with features like low standover, oversized pivot axles and bearings, and a tough-but-light shot-peened and anodized Kona 7005 DH Butted frame. Tricked out with Shimano's new 2013 Saint groupo and RockShox Boxxer World Cup fork, the Supreme Operator is a gravity weapon for the ages. See page 20 for more.

# ENTOURAGE DL

“If you are a rider who visits bike parks, rides many different downhill trails and loves the jumps, then this bike is aimed at you. This is an absolutely fantastic bike.”  
—Dirt Magazine, UK

## ENTOURAGE DL

Introduced in 2012, the Entourage DL comes with a host of refinements for 2013, making it the most fun short-travel DH bike currently on the market. The 170mm travel Entourage DL is the Operator on a diet. Designed to be quicker, faster and more maneuverable than a standard 200mm DH rig, this bike is all about ramping the rad quotient to the next level. It's the bike freeride superstar Graham Agassiz used to huck massive backflips, style downside tailwhips and spin lofty 360s in Anthill Films' Strength in Numbers. With super-short 415mm chainstays and geometry specifically designed to broaden your gravity horizons, this year's Entourage DL sees new improvements from an anodized finish and Shimano's new Zee Group. See page 22 for more.

“Voted Overall Favorite in Bike Magazine’s Bible of Bike Tests.”

## ENTOURAGE

Front and rear travel of 170mm mean the Entourage is a trimmed down Operator. With radically shorter stays for fleet of feet both on the ground and high above it, and a low bottom bracket and slack headtube for stability and confidence at speed, the Entourage is the epitome of fun—our freeride team’s bike of choice for obvious reasons. If a long-travel DH bike is too much cushin’ for your pushin’, and a long-travel trail bike ain’t enough lovin’ for your oven, try this biscuit.

## SHONKY

The perfect hardtail is all about balancing geometry and performance with durability. It has to feel just right, it has to take a beating, and it can't break the bank. Essentially, it needs to be a smashable work of art. Just ask Kona Team Rider Antoine Bizet who stomped the Shonky to win the best trick at Vienna Air King. This year, we add new Taperlock dropouts to the frame, an integrated dropout system that keeps the wheel from sliding forward on hard impacts.

# ● DOWNSIDE

## DOWNSIDE

We take the perfected geometry matrix of the Shonky and give it a Kona Cromoly frame and spec package specifically tailored for all you shredders—and parents of shredders—on a budget. The 2013 Downside features a new integrated Taperlock dropout system that keeps the wheel from sliding forward on hard impacts. Overall, it's a mega-tough, ultra-durable, wicked-performing dirt jumper. Because at Kona, we believe everyone should be free to fly. You're welcome.

# MTB TRAIL / ALL MOUNTAIN

Up fast and down faster. Everything in mountain biking comes to a head in all-mountain and enduro—versatile bicycles purposed to perform at a high level in a huge variety of riding conditions. Designed to be light and quick, able to efficiently climb everything from low-grade fire roads to technical singletrack, our all-mountain/enduro bikes will, in an instant, automatically and intuitively descend with power and authority. We get that. That's why we make a wide array of bikes designed to do just that.

2013 / MTB TRAIL / ALL MOUNTAIN

## PROCESS DL

With our all-new Process DL, we have created a lightweight, efficient pedaling platform with geometry and frame features that inspire confidence while descending. Basically, the Tits Magee of all-mountain/enduro trail bikes. Versatility is the key word here—a bike with a host of subtle but innovative design cues makes the Process DL one of the most ridiculously fun bicycles we've ever made. See page 24 for more.

- RockShox Reverb Stealth dropper seatpost
- SRAM XO 2x10 drivetrain with Type 2 derailleur
- RaceFace Atlas bar and stem
- Maxxis High Roller 2 26x2.4" EXO tires with Stan's Flow EX rims

## PROCESS

Kona's freshly minted all-mountain Process combines a lightweight, efficient pedaling platform with geometry and frame features crafted to inspire forestloads of downward bliss. Our goal was to build the mother of all-mountain/enduro trail bikes, built the Kona way, with versatility imbued in every feature; it's a bike with a host of subtle but innovative design cues that makes it one of the most ridiculously fun bicycles we've ever made.

## SPECIFICATIONS

FRAME MATERIAL	Kona 6069 Aluminum Butted 150mm Travel
SIZES	S, M, L, XL

“A perfect bike for enduro racing or just to be used by someone who wants to have fun going down but without compromise on pedal efficiency.”  
 —allmountainaddict.com, Portugal”

## ABRA CADABRA

Equipped with new G3 Magic Link, the completely redesigned 2013 Abra Cadabra represents the next step in one of the world's most revolutionary all-mountain bikes. G3 Magic is highlighted by a new Auxiliary Air Shock that allows for exacting control of rebound and preload. At the same time, we shaved considerable weight in a re-designed G3 nest, as well as improvements to the linkage system that allows for a smoother and stiffer ride feel. But we didn't stop there: based on feedback from our Kona Team enduro athletes Karim Amour, Alex Stock and Matthew Slaven, we made the bike slacker, lower and lighter overall. Built using Kona 6069 Scandium tubing, the Abra Cadabra is the ultimate all-mountain trail ride. See page 26 for more.

## CADABRA

Known as one of the most intuitively adaptable trail bikes ever made, the Cadabra is the ultimate blend of efficient climbing and powerful descending. Featuring our new G3 Magic Link, which features an entirely redesigned rear triangle that's lighter, stiffer, with better tire clearance, a new Magic Air Auxiliary shock, and geometry that's slacker and lower, this is our fastest, stiffest and plushiest Magic bike to date. Developed in conjunction with Kona Team Enduro athletes Karim Amour, Matt Slaven and Alex Stock, the 2013 Kona Scandium 6069 Cadabra is the ultimate all-mountain destroyer.

“Sporting 130mm of rear travel, plus short chainstays and a slack head tube angle, the Satori will take you places you never thought you could take a 29er.”  
 —DirtRag Magazine, USA

## SATORI

It was one of our most popular bikes in 2012, winning the masses over with its ability to climb like an XC bike and then bust up the down like a DH rig. Satori means “enlightenment” in Buddhism, and with 140mm (front) and 130mm (rear) of plush, efficient travel, quick and nimble geometry, and all the benefits of 29-inch wheels, the Satori has all the features of an all-mountain rig: 142x12 rear axle, tapered headtube, ISCG 05 tabs, direct-mount front derailleur and dropper seatpost. Yes, nirvana is pretty sweet.

## KITSUNE

A totally new model for 2013, the Kitsune has the Swing Link rear suspension configuration introduced on our Satori and brings to life a 130mm (front) and 120mm (rear) travel, 26-inch wheel all-mountain bike specifically designed to fit even the smallest riders. With great standover height, this bike's rear travel platform is efficient while climbing and plush when descending. Add geometry focused on rider confidence and great handling, and the Kitsune, which means “fox” in Japanese, is sure to outsmart the world's most devious terrain.

“It's often the small dogs that have the biggest balls, fearing little and never backing away from a fight no matter how big the challenge. With the Tanuki, it's a similar story... In action it packs a surprising punch.”  
—MBR magazine, UK

## TANUKI DL

Named after a mythical Japanese raccoon dog that symbolizes everything radical in the world, our 130mm, 26-inch wheel all-mountain Tanuki DL is intended for cyclists requiring both excellent value and unparalleled performance in a dual-suspension trail bike. Tough enough to ride down technical singletrack and fast enough to race your buddies on the ups, the Tanuki DL's great standover, masterfully crafted Kona Race Light 6069 Aluminum frame, and quality component selection constitutes a bike for the ages.

## TANUKI

Twenty-five years ago, we set out with one guiding principle: create bikes that are fun, durable and affordable. The Tanuki perfectly embodies that ethic, constituting the ultimate entry-level, dual-suspension bike. Featuring 130mm of travel designed to hit the sweet spot between efficient climbing and confident descending, and a beautifully crafted Kona Race Light 6069 Aluminum frame that will last a lifetime, not to mention an excellent component selection for the money, the Tanuki is converting regular riders into avid cyclists on a daily basis. Because that's just what mythical Japanese raccoon dogs do.

- 3x9 Shimano Deore/Acera drivetrain and Avid Elixir 1 brakes
- WTB Volt Sport Saddle and Maxxis Ardent 26x2.25" tires
- Improved cable routing and integrated chainstay protector

You like to go fast on bikes. So do we. Our XC team, our staff, and even our founders do. It's all that push-yourself-to-the-edge kind of stuff that inspires us to make bikes that get the most out of finely tuned human motors. Our XC race bikes are born from that ethic: week-long stage races, 24-hour solo sufferfests, lung-cracking crits, World Cups, National Championships and backyard kill-your-buddy-or-die-trying challenges. It's in our heritage and our blood. We pass that commitment onto you with bikes like our all-new carbon fiber Hei Hei Supreme and the lightning quick King Kahuna.

## 2013 / MOUNTAIN BIKE / XC RACE LIGHT

### HEI HEI SUPREME

Designed in conjunction with our Kona Team XC riders, the all-new 2013 Kona Carbon Race Hei Hei Supreme represents the pinnacle of all we've learned over 25 years of racing mountain bikes. A radical evolution of our Hei Hei XC platform, this big-wheel speedster is all about efficient climbing, powerful acceleration, and agile descending. Features like shorter chainstays, excellent tire clearance, and a perfected leverage rate curve come together on this ultra-light carbon gem. Quite simply, it's the fastest cross-country dual-suspension bike we've ever made. See page 28 for more.

## HEI HEI DL

Our staple 29-inch wheel, 100mm XC race bike sees some new refinements for 2013. Designed specifically for elite racers and all-round hammerheads, with race-proven geometry and incredibly light Scandium 6069 tubing, the Hei Hei Deluxe represents our desire to make race-ready bikes at smile-inducing prices. New for 2013, we've completely redesigned the rear triangle with improved tire clearance, increased stiffness, shorter (440mm) chainstays, with a chainstay direct-mount front derailleur, and refined cable routing. This is exactly the same frame Kona Team riders Barry Wicks and Kris Sneddon used to win the BC Bike Race three years running.

## HEI HEI

Built with perfectly refined geometry and precisely tuned suspension, the Hei Hei features the incredible lightweight, strong and smooth riding characteristics of a Kona Scandium 6069 Aluminum frameset outfitted with a component package that doesn't break the bank. New for 2013, we've completely redesigned the rear triangle with improved tire clearance, increased stiffness, shorter (440mm) chainstays, with a chainstay direct-mount front derailleur, and refined cable routing. This is exactly the same frame Kona Team riders Barry Wicks and Kris Sneddon used to win both the TransRockies and the BC Bike Race.

## KING KAHUNA

Our 29-inch wheel monocoque carbon fiber trail ninja is all you'll need to ignite XC race courses the world over. Tough enough and stiff enough to tackle super-technical singletrack, light enough and quick enough to break the backs of your competitors, the King Kahuna has features like 142x12 rear axle, UST tubeless wheelset, and race-heritage born geometry that combine for one of the most lightning-quick carbon fiber bikes on the market. This is the rig that carried Cory Wallace to 24 Hours of the Old Pueblo solo division victory in 2012.

## BIG KAHUNA

We've drawn upon all of our 25 years making bikes to craft this 29-inch-wheel gem that's born to race. With geometry specifically purposed for cross-country racing, the Big Kahuna features all of the high-performance benefits of a Kona Scandium 6069 frameset—lighter, faster and marvelously responsive. The 2013 Big Kahuna comes with a stiff 142x12 rear axle, tapered HT and direct-mount front derailleur.

## KULA WATT TEAM

For those who still love the speed and agility of a 26-inch-wheel XC race bike, we offer the Kula Watt as a frame-only option. The monocoque carbon fiber frame blends race-bred geometry with ridiculously stiff construction, top-notch durability, all in a featherweight package that's ready for anything from weekend singletrack romps to World Cup racecourses.

## KULA

Our legendary race-bred Kula geometry—well-known for its agility, speed, comfort and durability—returns adorned with all the high-performance amenities of Kona Scandium 6069 Aluminum, one of the most technologically advanced alloys in the world. Designed, spec'd and priced specifically for up-and-coming amateur racers, or for those who just like to go fast, this 26-inch-wheel beauty combines light weight with strength and trail sensitivity for the perfect blend of speed and fun.

# MTB TRAIL 29" HARDTAIL

The 29-inch-wheel hardtail is the ultimate blend of simplicity and performance. Incredibly responsive, easy to maintain, this is as pure and elegant a bicycle as you'll ever own. But in order to maximize its potential—to push the limits of its function and intended use—takes years of refining and expertise. Our design team has spent countless hours refining, tweaking, testing, and experimenting when it comes to our House of the Big Wheel bikes. With a decade of experience and a diverse range of offerings—everything from the all-mountain Honzo to the affordable Splice—it's safe to say we know how to design amazing 29-inch hardtails for every niche.

## 2013 / MTB TRAIL: 29" HARDTAIL

### HONZO

Introduced in 2012, the refined 2013 Honzo sees a host of frame and component changes, furthering its legacy as an aggressive all-mountain Kona Cromoly hardtail. Retaining its slack 68-degree headtube angle, low bottom bracket and super-short chainstays, this year's Honzo features a lower top tube for increased standover and a new 142x12 rear axle for increased lateral stability. We kept the amazing Revelation RL Solo Air tapered fork up front and added 760mm handlebars, custom FSA Comet cranks, 10-speed drivetrain, RockShox Maxle rear axle and tubeless compatible rims. All the wares you need to lay waste technical singletrack.

- RockShox Revelation RL Solo Air tapered 120mm travel fork
- 142x12 sliding dropouts with RockShox Maxle
- 10-speed SRAM drivetrain and Avid Elixir 5 brakes
- WTB tubeless compatible rims
- Custom FSA Comet cranks

“The bike is so stable, very secure and doesn't stumble on obstacles; it's made to go anywhere. Dare we say, a perfect compromise.”  
 –Velo Vert Magazine, France”

## TARO

An entirely new model for 2013, the Taro is a Kona 6061 Aluminum version of the Kona Cromoly Honzo. The bike features all of the great design cues of the Honzo frame: short chainstays, slack 68-degree, tapered headtube, and great standover. Designed with a focus on technical, hard, aggressive riding, the Taro also features a similar spec package as the Honzo, one focused on getting the most out of gnarl-steeped trails, without draining those precious coffers.

## RAIJIN

We've had a long love affair with titanium, one that we've consummated with our new Raijin, our first ever 29-inch-wheel titanium hardtail. With a long history working with this metal, and some serious expertise in designing unique, industry-leading 29-inch-wheel bikes, we're delivering the new Raijin loaded with cool custom features, on a frame designed by Kona, and manufactured in the USA by Lynskey Performance Designs. Named after the Japanese god of lightning and thunder, the Raijin, which is available as a frameset only, sets out to maximize all the inherent virtues of titanium with geometry ideally suited to fast, efficient, simple and ridiculously fun singletrack riding. See page 30 for more.

“We'll go out on a limb here and state that the Unit delivers the best pedaling platform of any bike we have ridden this year.”  
 —Mountain Bike Action, USA”

UNIT

At Kona, we love making custom, niche-oriented, incredibly specific bikes for real riders riding real trails in a very real world. It's not about turning out the widget; it's about making faultless bicycles. The Unit is all that: a fully rigid, raw steel finish, Kona Cromoly singlespeed with geometry handed down from the gods.

## KAHUNA DL

We've drawn upon all of our 25 years making bikes to craft this 29-inch-wheel gem. Specifically purposed for cross-country riding and light duty XC racing, the Kahuna DL features all of the high-performance benefits of a Kona 6069 Aluminum Butted frameset—light, fast and marvelously responsive. Featuring the efficiency and confidence of 29-inch wheels, the Kahuna DL shares the same geometry as our race-ready Big Kahuna and carbon-fiber King Kahuna XC Race bikes.

## KAHUNA

Made with light, durable and smooth riding Kona 7005 Aluminum tubing, the Kahuna shares the same geometry as our race-ready Big Kahuna and carbon-fiber King Kahuna XC Race bikes. That means it's fast. Featuring the efficiency and confidence of 29-inch wheels, this trail-eating hardtail is designed specifically for those looking to add a dash of velocity to their wilderness wanderings, at a price that screams value.

# MOHALA

## MOHALA

First introduced in 2012, Kona's female-specific 29-inch-wheel hard-tail mountain bike is specifically designed for recreational cyclists looking to get out onto the trail with confidence and style. Featuring incredibly low standover for a confident riding position and geometry best suited for riders who need stability, traction and great ride efficiency, as well as grips and saddle tailored to the female rider, the Kona Mohala lets you shine forth on everything from technical singletrack to blazing backroads.

# MAHUNA

## MAHUNA

If you're searching for a great bike at a great price, a ride sturdy enough to take you into the world's great wild spaces one day and for a cruise down Main Street the next, then the Kona Mahuna is all you. With sweet rolling 29-inch wheels, a light and sturdy Kona 7005 Aluminum frame and excellent components, the Mahuna is all about big, wide smiles for a really long time.

# ● SPLICE

## SPLICE

The name really does say it all: take the diversity and confidence of a mountain bike frame and outfit it with lighter, more efficient components best suited for commuting. The result is a bike that really can do it all, from singletrack to sidewalks and everything in between, the Splice is real smooth riding at real good value.

# MTB TRAIL

# 26"

We built our very first mountain bike 25 years ago, and we've been on the Long Sweet Ride ever since. What's made it so much fun is the constant itch we have—one that needs continual scratching. You see, when we made our first 26-inch mountain bike, we thought it was pretty close to perfect. And while we think that every year, by the time the next year rolls around, we've got a host of new ideas: refinements, tweaks, innovations, and advancements that continually roll our bikes down the path of progression. 2013 represents our best efforts when it comes to scratching that proverbial itch. Classic 26-inch wheel hardtails insatiably scrutinized to satiate our ultimate motivator: fun.

## 2013 / MTB TRAIL: 26" HARDTAIL

# HARDTAIL

“On the trail it's magic...  
brilliance improved.”  
—Bicycle Buyer UK”

## CINDER CONE

Kona's 25-year-old family tree weaves itself back to the Cinder Cone, one of our longest running bikes. And while the bike has changed dramatically over the years, it's geometry honed, it's features perfected, it's always been about one thing: manufacturing smiles. Plan on having this bike for a good chunk of your life. We certainly designed it that way.

## SPECIFICATIONS

FRAME MATERIAL	Kona Scandium 69
SIZES	14", 16", 17", 18", 19", 20", 22"
FORK	RockShox Recon Silver TK 100mm

## BLAST

For the money, there might not be a more value-added, ready-to-rumble mountain bike on the planet. Exquisitely crafted, with Kona Scandium 69 butted frameset that balances performance, comfort, and durability, with components selected to last, the Blast just might be one of our more aptly named models. So good the Blast frame comes with a lifetime warranty.

## FIRE MOUNTAIN

A virtue of being one of our longest running mountain bike models is the added benefit of evolution. The longer it's been in the line-up, the more scrutiny it's subjected to. The result is a recreationally-oriented, entry-level 26-inch wheel mountain bike that gives you as much bang for the buck as we could possibly muster. With a feature-loaded Kona 7005 Aluminum frame that comes with a lifetime warranty, and selection of quality components, we're quite sure many mountains will feel your fire.

## TIKA

Designed for women new to mountain biking, the Tika is all about inspiring confidence, enabling freedom, and getting them excited about cycling. Using geometry specifically tailored to the female body, with low standover for a confident body position and short chainstays for efficient power transfer, joined with female-specific grips and saddle, the Tika is the perfect blend of performance, comfort and fun... at an incredible price.

LANA'I

For the money, it's one of the best mountain bikes you can buy. This is the ultimate entry-level bike, with all the benefits that come with a bike company that has been making 26-inch wheel hardtail mountain bikes for 25 years. A frame that comes with a lifetime warranty, joined with components that will keep you riding for years to come, jump on board a Lana'i and never look back. The world of adventure and exploration wants you to join in the fun. This is your ticket.

SHRED

A long-time Kona classic gets a new frame for 2013. The Shred is designed to do it all, and do it tough. What can best be described as half dirt jumper, half trail ripper, and 100 per cent mountain bike, the Shred's updated frame has round tubes for a clean and classic look. Of course, the new frame design serves a functional purpose too, most notably a better strength-to-weight ratio. Go deep with confidence good friends. Shred forever.

The year 2013 marks the dawn of a new era at Kona, our very first from-the-ground-up design in a carbon endurance frame, featured on the Red Zone and Zone Two. It's designed to be comfortable over long rides, but still super quick, lightweight and efficient. With carefully thought-out features, like hidden fender eyelets and 28c wheel clearance, the Zone series represents our commitment to crafting innovative bikes for specific riding applications. Backing up these two new bikes, our other models reflect our differentiated approach to road: from the worldly Sutra to the downtown chic Paddy Wagon, the well-priced carbon Zing Supreme to the all-weather Honky Tonk, at Kona, we do road right.

2013 / ROAD

RED ZONE

We pride ourselves on making specific bicycles for specific purposes. With the growth of Gran Fondo and endurance road riding, we decided it was time to design a road bike that seriously considered the ride requirements of this burgeoning discipline. Longer rides necessitate more comfortable geometry, while year-long training means fender and 28c wheelset compatibility. Take a look at all the unique features of the Red Zone, Kona's first custom-designed, from-the-pavement-up road ripper. See page 16 for more.

## ZONE TWO

With the growth of GranFondo and endurance road riding, we decided it was time to design a road bike that seriously considered the ride requirements of this burgeoning discipline. Longer rides necessitate more comfortable geometry, while year-long training necessitates 28c wheelset compatibility. Highlighted by a custom-designed sub 1000-gram monocoque frame and fork that's light and speedy, but not delicate or brittle, the Zone Two comes loaded with a host of innovative features, like a press fit BB30 bottom bracket, compact 50-34 gearing, hidden fender eyelets and a tubeless wheelset. The new Zone Two: tough enough to ride every road surface, comfortable enough to ride forever, and always fast.

- Sub 1000-gram Shimano Di2 ready frame with the highest grade carbon material, resin & construction
- Kona Zone full carbon fork
- Fender and 28c tire clearance with hidden fender eyelets
- Shimano Ultegra drivetrain and Ultegra tubeless wheelset
- FSA carbon cockpit and BB386 EVO carbon crankset

“The Zing Supreme is technically well constructed. It's classic, truly good.”  
—Fiets magazine, Netherlands”

## ZING SUPREME

Our custom carbon, road-ripping Zing Supreme is highlighted by a light, stiff and durable monocoque frame and fork, with tapered headtube and integrated headset, as well as Kona custom-designed spines on the chainstays and the seatstays for a more vertically compliant rear triangle that still effectively reduces side-to-side deflection. The result is a comfortable, confident, classic road-angle racing bike designed to excel at everything from Cat 2 crits to long and arduous GranFondos. It's all at a price that makes carbon decidedly doable.

# HONKY TONK

“ The Honky Tonk is a refreshing punk alternative in the (overly) conservative world of road bikes.   
 —Velo de Route ”

# PADDY WAGON

“ The bike tracks beautifully, you can really chuck it around corners.   
 —Road.cc, United Kingdom ”

## HONKY TONK

We have a lot of commuters who work at Kona, employees who brave the elements from summer straight through fall, winter and spring. They endure everything from snow to incessant rain, long distances, dark hours and heavy loads. We built the Honky Tonk specifically for riders like them. The result is a well-thought-out Kona Cromoly road frame that's comfortable, light and smooth, with components and features specific to cycling in the rain, like long-reach calipers for excellent big-tire and fender clearance.

## PADDY WAGON

We would never sacrifice performance for style. It's against our nature. That being said, when the forces of a great riding bicycle merge with the discerning critique of cool, you've got a winner: a bike that meets all the rigors of the road head on, thanks to a perfected Kona Cromoly frame highlighted by aggressive but comfortable geometry and city-savvy features like a flip-flop rear hub. The Paddy Wagon gets the job done, because that's how we do it downtown.

# ● SUTRA

“Kona’s take on the touring bike mixes old-world charm with new-world vigour and a cheeky name. You can’t help but blush in front of this American beauty.”  
 —Cycling Active magazine, United Kingdom

## SUTRA

It’s the ultimate touring bike. Featuring a Kona Cromoly frame designed to deliver both comfort and performance for many thousands of miles, the Sutra comes loaded with all the tools needed for the Long Sweet Ride: fenders, racks and components to fit the bill. Defined literally, “sutra” means a thread or line that holds things together. Rest assured our version will do the same for you, no matter how far you may roam.

Having been in the cyclocross game for over a decade, we understand the essence of what makes a great cross bike. Just like the people who flock to the discipline, 'cross is all about commitment, camaraderie, diversity and, well, being hard core. How does that translate into bikes? Speed, dependability, performance, comfort, and style all come to mind. From the Major Jake, which has won 14 National titles, including Kona Team rider Helen Wyman’s five consecutive UK National Championships, to our new Rove, designed to blast through everything from gravel trails and cobblestone streets, at Kona we make 'cross bikes with the Long Sweet Ride in mind.

**2013 / CYCLOCROSS**

# MAJOR JAKE

## MAJOR JAKE

Our top-of-the-line, get-on-the-podium, go-faster-than-the-speed-limit cyclocross champion: Major Jake features a super-light, incredibly stiff monocoque carbon fiber frame and full carbon fork imbued with Kona's perfected 'cross geometry. We use a special nanopowder resin technology that creates an incredibly strong and lightweight carbon frame that cannot be surpassed. It's also loaded with features like BB30, excellent tire clearance, and Avid Shorty Ultimate brakes. The Major Jake is one of the best-performing cyclocross bikes on the cyclocross race circuit. Just ask UK National Champion Helen Wyman, currently ranked fourth in the world for women's cyclocross.

# JAKE THE SNAKE

## JAKE THE SNAKE

Race, commute, train, then do it again. Please, be our guest, our Jake the Snake does it all extremely well, at a price that only amplifies the smile quotient. We constantly hear stories of people's love affairs with their Jake the Snakes, everything from winning amateur cyclocross races to battling through down-town snow. Because we're constantly evolving, we've found a way to improve the JTS's chainstay shape, effectively increasing power transfer even more, propelling you to the podium, or to work, on time. Fender eyelets for year-round riders and a wicked Kona Orange paint job top off our most versatile ride.

JAKE

Featuring the same race-bred geometry as our World Cup-level Major Jake, the Jake is regularly cited as one of world's more able bicycles. A sweet riding Kona Race Light 7005 Aluminum frame comes with a new rear triangle highlighted by a more compliant seatstay and stiffer chainstay shape, design improvements focused on giving the bike a more universal purpose. Also new for 2013, the Jake comes with Tektro Lyra 140mm rotor disc brakes for great stopping power no matter how crappy the conditions.

ROVE

At Kona, we love building specific bikes for specific purposes. We see a cool niche, and we pool our collective creativity to come up with the perfect ride. Our all-new Rove is just that. Designed to be the ultimate cyclocross/gravel-grinding/commuting machine, the Kona Cromoly drop-bar Rove pulls in the utilitarian attributes from our best commuter models, spices it with the efficient and comfortable geometry of our long cyclocross heritage, and dashes it with the awesome compliancy and durability of steel tubing. Outfitted with large tire clearance, eyelets for racks, and disc brakes for great stopping power, the Rove will deliver you come dirt, gravel or asphalt for as many Long Sweet Rides as you dare imagine. See page 18 for more.

## DR DEW

It's our top-drawer commuter bike, designed to get you between A and B efficiently, confidently and with boulevard-wide smiles along the way. Featuring our newly redesigned Dew Kona 6061 Aluminum frame that's both comfortable and quick, this year the Dr. Dew features a sweet-shifting SRAM Via Centro urban 2x10 drivetrain, quick-stopping Avid hydraulic disc brakes, and a sporty selection of reliable, high-performance components hand-picked specifically for the dedicated downtown cyclist.

- SRAM Via Centro Urban 2x10 drivetrain
- Freedom Aon saddle by WTB Aon
- Avid Elixir 3 hydraulic disc brakes
- Velo Ergo grips

It's no surprise urban cycling is becoming more popular every year. As communities begin to allocate more resources to bicycle transportation, the masses are finally realizing their day-to-day travels can be made more efficient via the engine inside, with huge physical, social, and environmental health benefits. Of course, we've known this for a good long time, and so we are constantly refining our commuter line to reflect the needs of today's urban cyclist. From first-time bike commuters on a budget to experienced cyclists who like to go fast, and from families with big loads to fashionistas looking to blend efficiency and style, at Kona, we make bikes for the pedaltarian in us all. Rise up!

## 2013 / COMMUTER

“Dr. Good rolls roads with confidence and style.”  
 —The Bicycle Buyer, UK ☺☺

DR GOOD

The 2013 Dr. Good is all about creating an elegantly simple, feature-savvy commuter imbued with long-lasting durability. Featuring a newly styled, efficient and light Kona 7005 Aluminum frame, the Dr. Good is highlighted by a clean and smooth functioning internal Nexus 7-speed rear hub. New for this year, we've added fenders with long tails to keep your feet dry, front porteur-style aluminum rack, and wide platform pedals that provide good tread without cutting your shins.

## DEW

The value-packed Dew is a transportation machine designed specifically for those on a tight budget. Because we know the immense value of transportation freedom, we offer a great commuter bike and at an incredible price. Featuring fast, comfortable and confident geometry, with components designed to stand up to the rigors of daily commuting, the Dew gives the first-time bike commuter the ultimate in safety, stability and security.

UTE

We like to call it the pick-up truck of bikes. Haul your friends, kids, home reno supplies, recycling, dinner for eight, beers for 20, whatever the occasion, duty or chore, the Ute makes it easy thanks to a super-sturdy, long wheel-base frame designed specifically for carrying life's heavier loads. With efficient gearing, fenders, smartly designed waterproof panniers and powerful disc brakes, the Ute is all about moving your life by bike.

# ● ROUNDABOUT ●

“ The Kona Roundabout is a good choice for cyclists who want both style and substance. It offers a smooth ride and is sure to turn heads. — Momentum Magazine, Canada ”

## ROUNDABOUT

Introduced in 2012, our new Mixte-styled Roundabout has been turning heads in hip metropolitan centers from Portland to Barcelona. Featuring a stylish Kona Cromoly frame, the Roundabout is all about simplicity, elegance, and a smooth, efficient ride. This year, it comes with full long-tail fenders to keep your feet dry, and a svelte rear rack that sits low over the rear fender and has a very narrow top deck, perfect for side panniers.

# AFRICABIKE THREE ●

“ All the bike you'll ever need — and then some. —Cycling Active Magazine, UK ”

## AFRICABIKE THREE

It's the flagship of our AfricaBike Program, meaning it's designed to survive the rigors of a rural beating. With the experience of delivering over 4,000 AfricaBikes to sub-Saharan African communities in need of transportation assistance, we know what an affordable, durable, and functional commuter bike needs to be: simple, easy to use, and tough as nails. The AfricaBike Three comes with an internal three-speed rear hub with coaster brake—keeping things sealed and protected—a sturdy, integrated rear rack, basket up front, kickstand, fenders and a step-through aluminum frame that makes it safe, comfortable and fun.

- Includes kickstand, basket, chain cover, Kona bell, integrated lock, steering stabilizer and color-matched fenders
- Proceeds go towards providing free bicycles to charities in Africa

From our XC racers to our downhill trail bombers, even our asphalt and city bikes, you could say all of our bikes are kids bikes. Why? Well, at Kona, we believe bikes have one real purpose: fun. And since kids are all about fun, you could say our entire line of 2013 bicycles is made for kids. Some kids are just smaller than others. Really, that's our mindset when we design our smaller-person bikes. Because if they're not having fun—boatloads of it—then we don't have a leg to stand on.

**2013 / KIDS'**

## STINKY 24

Because kids are real people too, we make one of the best dual-suspension downhill bikes on the market, specifically tailored for 8- to 12-year-old boys and girls tasked with chasing big kids down technical singletrack, bike parks and anything else with a dash of burl. Featuring 100mm of front and rear travel, on a light, durable Kona 7005 Aluminum frame, the Stinky 24 is the perfect bike for kids who aren't afraid to have tons of fun.

## SHRED 24

One of our most famous bikes gets a new frame for 2013, one that matches the clean styling of our big-kid bikes. Because we know how tough kids are on bikes in the years leading up to double digits, we worked hard to ensure the balance of fun and durability hits the sweetspot with the 2013 Shred 24. Whether it's a school commuter or a first time dirt jumper, kids will be smiling for years to come because this bike is tough enough to last generations.

- New Tektro HDC-300 hydraulic brakes with short reach levers

## SHRED 20

It's designed to be your kids' first real bike. Sure, you could go down to the big box store and save some money, but your kids deserve a real bike. Disc brakes for great stopping power, wide bars for better steering and a nice light frame so little legs can go as fast as they desire, this bike is just like the bigger Shreds; it can handle heavy-duty riding and punishment. Do your kid a favor, start them off with a sweet bike made by real cyclists. They'll love you for it.

KULA 24

Very few bicycle companies in the world make a bike like the Kula 24. Designed to be a light and quick cross-country mountain bike that's well spec'd, with a full complement of gears for everything from steep climbs to big-ring fire roads, the Kula 24 is built to be durable and a great value. At Kona, we feel strongly about giving emerging cyclists the tools they need to have fun—and excel.

HULA

The Hula is the go-everywhere kids cross-country mountain bike, perfect for ages eight through to twelve. It has triple chainrings, low standover clearance so it's easy to get on and off, and kid-sized components that work, along with soft front suspension, comfortable seat, snappy brakes and reliable shifters. And of course, Kona Kids' style means fun and freedom come in two different colors.

## JAKE 24

Infused with race-ready geometry and spec, with a lightweight aluminum frame and fork, STI shifters for small hands and smaller 24-inch wheels for kids anywhere from 7 to 12 years old, depending on their size, the Jake 24 is made specifically for the budding cross racer or road cyclist. Its stability and versatility on everything from smooth dirt and gravel paths to long stretches of asphalt shows our commitment to up-and-coming young cyclists.
