FOUNDATION

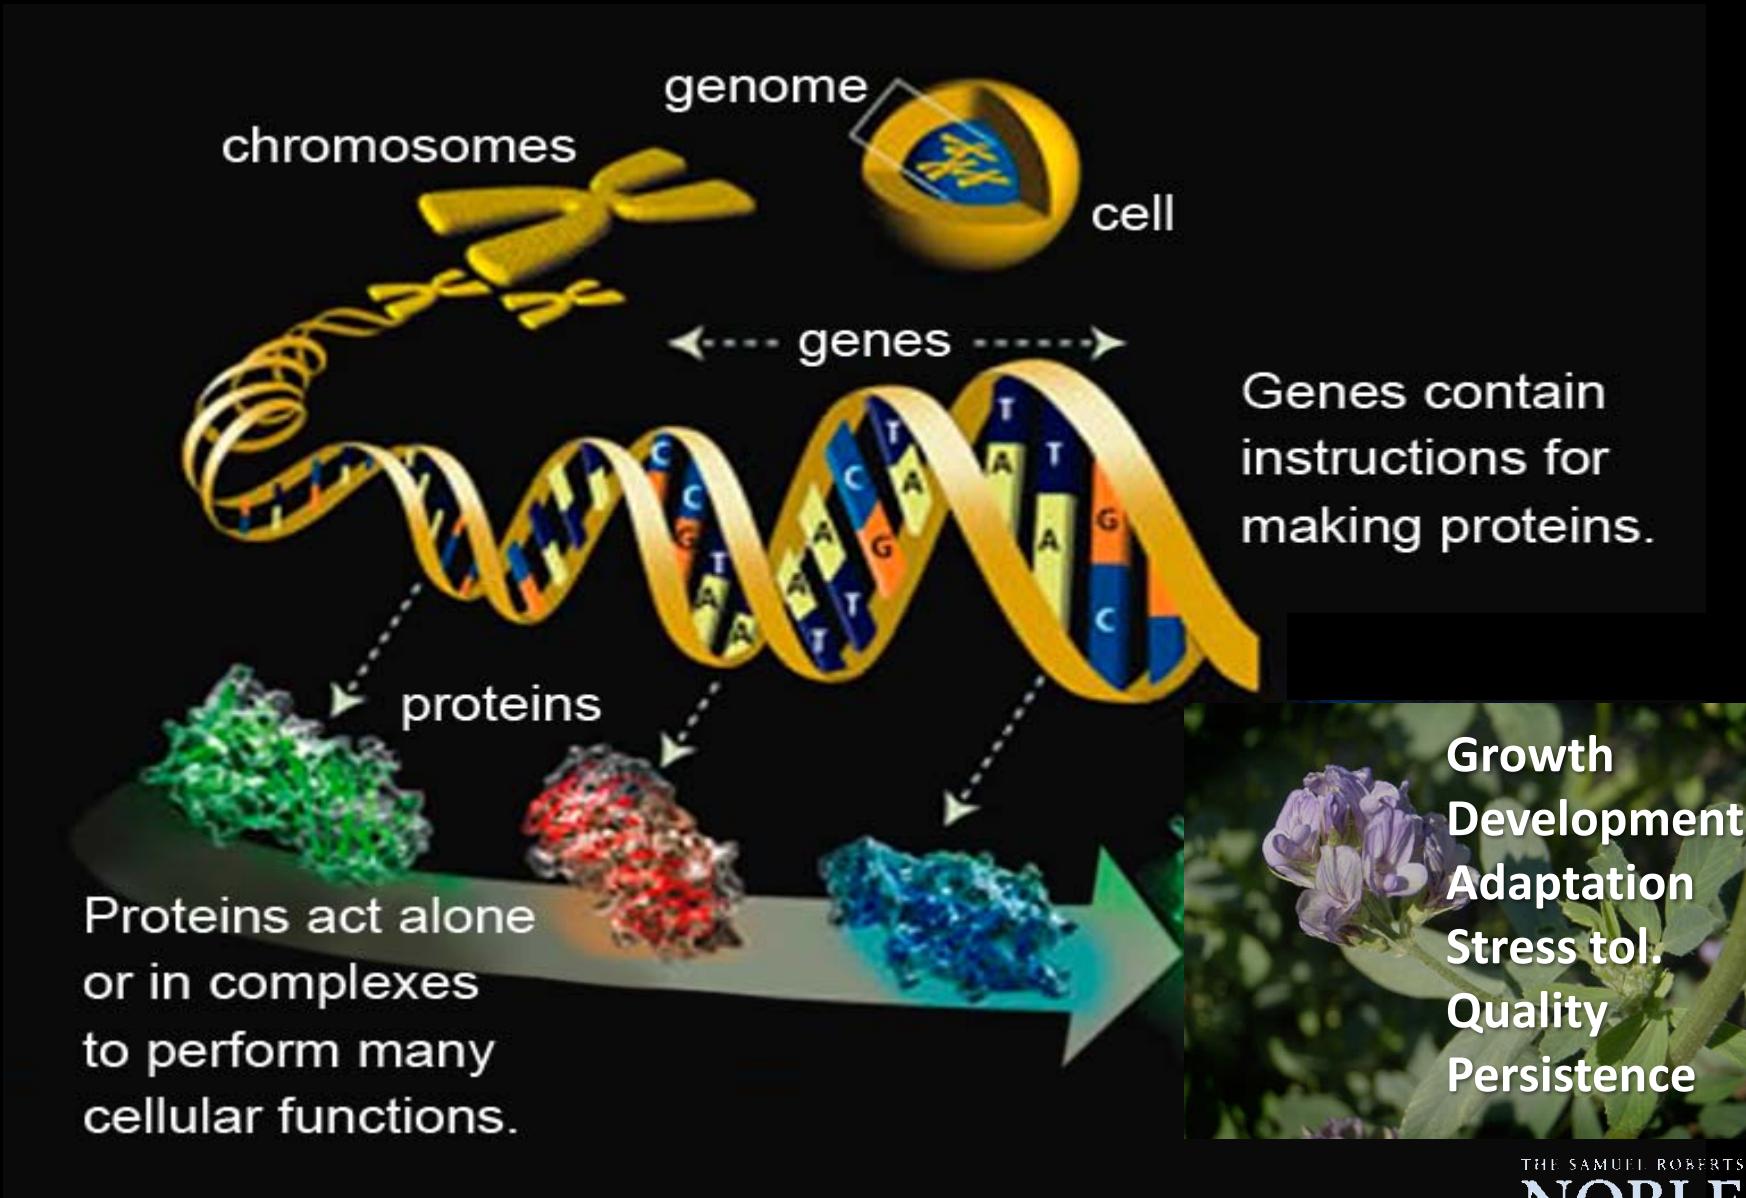

Cultivated Alfalfa at the Diploid Level (CADL)

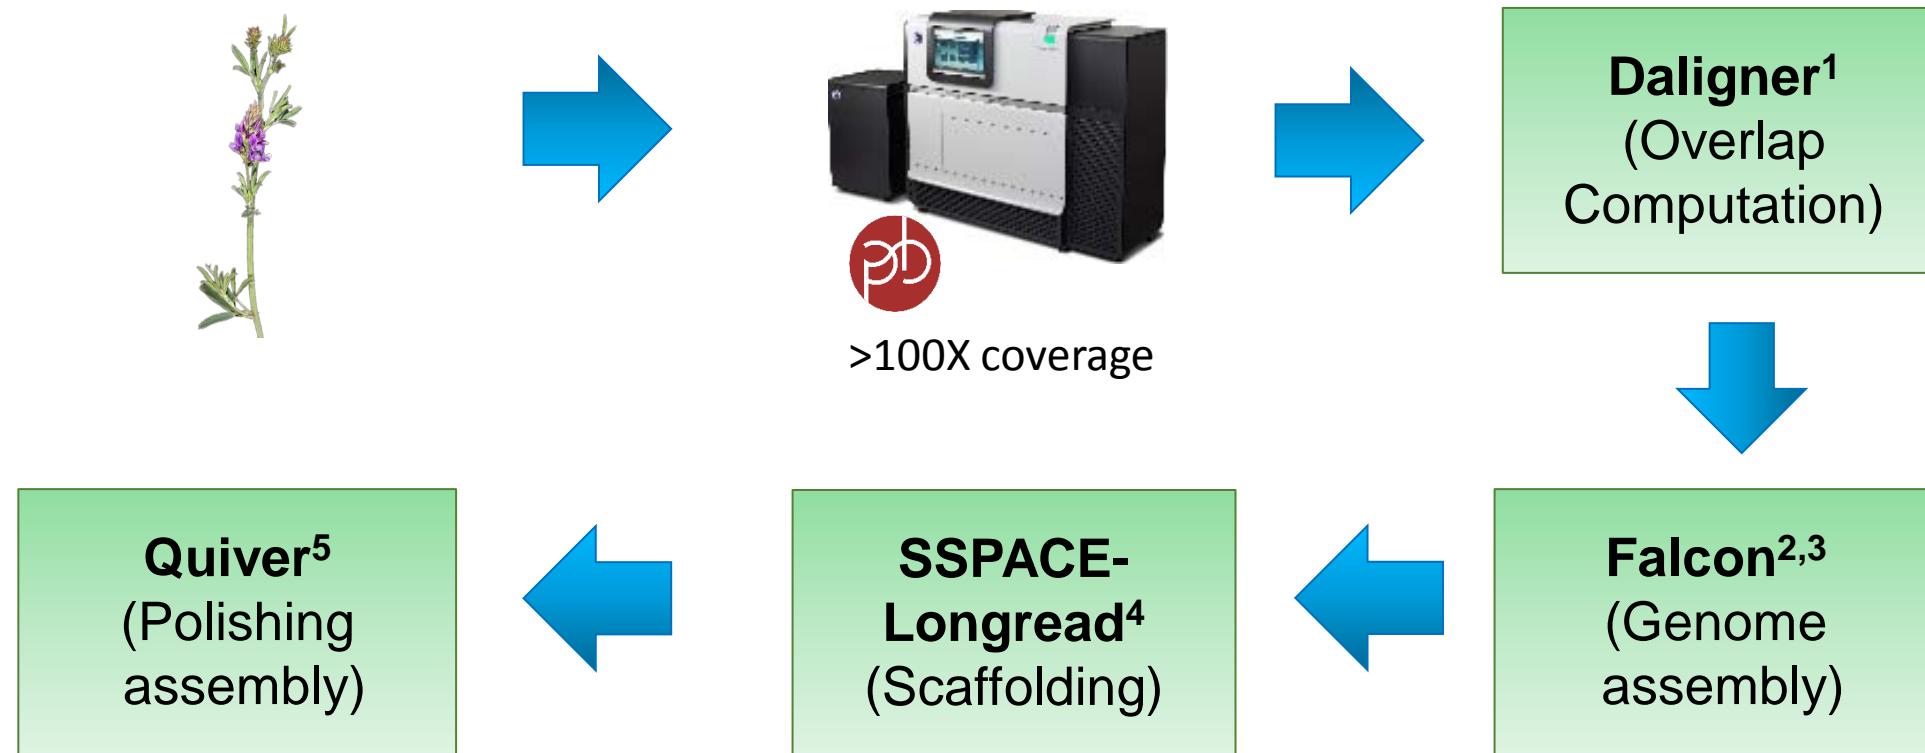

- Population developed by Ted Bingham
- Developed from cultivated tetraploids over 10 years to produce a diploid form
- Used 4x-2x cross method and backcrossing to increase cultivated germplasm background
- Simpler to analyze and assemble the genome than the tetraploid alfalfa grown commercially
- Genotype HM342 sequenced as part of the *M. truncatula* HapMap project

Bingham ET and McCoy TJ. 1979. Cultivated Alfalfa at the Diploid Level: origin, reproductive stability, and yield of seed and forage. *Crop Science* 19: 97-100.

Welcome to the Alfalfa Breeder's Toolbox

[See Poster #25](#)

The Alfalfa Breeder's toolbox aims to provide convenient access to alfalfa genomic, genetic and phenotypic datasets deriving from U.S. and international research. We have embarked on a journey to sequence the alfalfa genome and use scientific knowledge to inform plant improvement strategies. Included are genetic markers for use in molecular breeding approaches to develop enhanced alfalfa cultivars that improve forage based production systems regionally and globally. The alfalfa genomics sequencing efforts and the toolbox are a collaboration between multiple organizations and made possible through support from the Noble Foundation and Industry partners.

Available at the *M. truncatula* HapMap Project

<http://www.medicagohapmap.org/downloads/cadl>

The screenshot shows the CADL Downloads page of the Medicago truncatula HapMap Project. The page has a header with the project name and a navigation menu (Home, Hapmap, Tools, Downloads, Resources, Contact). Below the header is a banner with a yellow flower image. The main content area includes a breadcrumb trail (Home > Downloads > CADL), a section title (CADL Downloads), a detailed description of the data file, and a table listing files with their sizes and dates. Logos for BTI, NCGR, University of Minnesota, and J. Craig Venter Institute are at the bottom, along with funding acknowledgments.

Detailed description of the data file is available from the [readme](#) file (updated 7 June 2016).

We are providing this data pre-publication to facilitate other community research. However, in accordance with the Toronto Agreement, we reserve the right to be the first to publish a genome-wide analysis of the data we have generated. Further, the pre-publication data released here is embargoed for publication except for analyses of individual gene loci or small genomic regions (< 10 kb) for single or multiple accessions. Researchers are encouraged to contact us with queries about referencing or publishing analysis based on pre-publication data obtained via this website.
