

SUSTAIN^{THE} **FUTURE**

Narteks, a pioneer in yarn production

Narteks, one of Europe's leading yarn manufacturers, produces in Ring and Open End Yarn and Knitted Fabric mills equipped with the latest technology, all of which have Industry 4.0 infrastructure. Narteks increases the competitiveness of its customers with its experience in yarn production, different product types and the ability to respond to every demand.

Yarns produced in Narteks are traceable. With the Narteks sustainability protocol, which minimises the consumption of natural resources in the production journey from cotton to the final product, energy and water savings are achieved and environmental impact is minimised with lower carbon emissions. Narteks produces for the future with its responsible production philosophy.

Our relationship with cotton started in 1950

Cotton farming is a family tradition for us. We were born with cotton and we grow with cotton. That is why we choose the best in cotton, which is the most basic raw material of our mills. We produce special yarns with this vast experience and culture.

In addition to virgin cottons, we use Organic, Regenerated, Supima, Pima, Giza, Good Earth Cotton, U.S. Cotton Trust and BCI certified cottons in our mills.

In order for you to produce more efficiently and more competitively with Narteks yarns. We optimise efficiency and performance with quality control at every stage of production. That's why, we call them as Narteks Performance Yarns.

Philosophy & Culture

Human Value

At every stage of our business model, we adopt a human-oriented approach that values people and produces for people.

Respect for the Environment

We adopt environmentally friendly production to leave a more liveable world for future generations.

Production Excellence

We provide a vision of excellence at every stage of production, from raw material procurement to final product quality control.

Trust and Reputation

Narteks; trust, culture and reputation.

Intellectualism and Innovation

We offer products that increase the competitiveness of our customers with our innovation-oriented production philosophy that is open to all kinds of ideas.

Sustainability from all Perspectives

Sustainability is not a trend issue for us, but a philosophy of life that must be adapted in every moment and area of life.

Contribution to Partners

In all our relations, we care about the development of our partners, value their development and act with the awareness of us.

Yarn of the world is produced here

The reason why we are one of the major cotton yarn producers and exporters in Europe is that we have many years of experience in yarn production, state-of-the-art facilities, wide product range, high production capacity and trusting relationships with all our partners.

Cotton yarn production is the speciality of Narteks. In Narteks, where each product group is produced in different mills in a total area of 140000 m² in two different campuses, 5700 tons of yarn is produced monthly and shipped to the world.

Main Campus

Established on an area of 90000 m², our Main Campus, which includes Compact Combed, Compact Carded, Ring Combed, Ring Carded and Knitted Fabric mills, is located in Kahramanmaraş and has been home to the main activities and all management units of Narteks since 1950.

Türkoğlu Industri 4.0 Campus

We have established Türkiye's most modern Open End spinning mill in Türkoğlu district of Kahramanmaraş. We use Industry 4.0 technological infrastructure at every stage of production in our mill established on an area of 50000 m² and we produce high quality production. This special mill has also become the reference point of the sector with its practices towards sustainability norms.

Social
Benefit

We have become a source of inspiration for the sector with our activities in the field of water and energy efficiency.

By treating the water we use in our facility with the "Zero Loss Principle", we offer some of it for agricultural irrigation in our region, some of it for fire brigade use, and the rest of it is reused in our facility, providing more benefit with the same amount of water.

Products

Open End Yarn

We produce high-quality Open-End yarn in the range of **Ne 4/1 to Ne 60/1** with a monthly capacity of **3600 tons** with cotton, which is our speciality and polyester blends.

We have the opportunity to respond to every demand with varieties such as **OE Yarn, Slub Yarn, Soft Twist, Low Twist, Blended Yarns and Regenerated Yarns**. With our Industry 4.0 technological infrastructure and sustainability practices we use in our mills, we have the most competitive production power of Türkiye in Open End yarn worldwide.

Ring Yarn

We produce **900 tons** of Ring yarn monthly in our
Ring Combed and **Ring Carded** mills.

We produce high quality **Ring Spun, Slub Yarn, Multitwist,**
Multicount, Core Spun, Hard Core, Duo Core,
Soft Twist, Low Twist, Siro Spun and Blended Yarns
in the range of **Ne 4/1 to Ne 80/1** in our Ring Combed
mill and **Ne 4/1 to Ne 40/1** in our Ring Carded mill.

Compact Yarn

We produce **1200 tons** of Compact yarn per month in our Compact Combed and Compact Carded mills.

We produce high quality **Ring Spun, Slub Yarn, Multitwist, Multicount, Soft Twist, Low Twist, Siro Spun and Blended Yarns** in the range of **Ne 4/1 to Ne 120/1** in our Compact Combed mill and **Ne 4/1 to Ne 36/1** in our Compact Carded mills.

Knitted Fabric

In our Main Campus, in addition to yarn production, which is our main field of activity, we produce raw knitted fabrics with varieties such as **3 fleece, 2 fleece, rib, 2x1 rib, single jersey, pique, interlock** with a monthly capacity of **300 tons** for our customers.

Responsible production culture and Narteks

Protecting natural resources, minimising the environmental impact of production, taking all precautions in occupational health and safety, reinforcing corporate culture with ethical management, creating social benefit with social responsibility awareness and unconditional customer satisfaction are the main objectives of our "Responsible Production" approach.

Sustainability is the common denominator of these goals. We lead the sector with our water saving, energy efficiency, waste management and zero carbon target practices. We develop world-class practices in the occupational health and safety of our employees and all our partners and implement the "Code of Conduct" protocol. We act with sustainability norms in all supply chain processes.

A better future is possible

For Narteks, sustainability is not a trend, but a philosophy of life that must be adapted to every moment and aspect of life. We support actions and measures to address climate change, initiatives to create value, practices to eliminate inequalities and activities for resource efficiency.

We invest in renewable energy sources to create positive impact and economic value for the environment and society.

We are aware of the importance of higher performance products. We start this sensitivity from the most basic, from yarn production. Narteks performance yarns are produced with this philosophy. For better quality, more competitive and longer lasting products. For a better future...

Better future better cotton

As one of the most important and strategic products in the world, cotton is used in many fields and has been providing benefits to mankind throughout history. Being the most valuable natural fibre, it is the basic raw material of the textile ecosystem. It has a special importance in Narteks' business model. Our relationship with cotton has been going on since 1950. The basis of our quality lies in the culture and experience passed down from generation to generation.

Within the framework of this vast experience, we especially support activities for sustainable cotton. We participate in globally recognised certification programmes in this field and contribute to sustainability through good cotton practices.

Cotton is life and good cotton is essential for a better future.

☁ SUPIMA GOOD EARTH COTTON

FibreTrace

We need water

If we continue to spend like this, the World may run out of water in the near future. If we do not start saving today, we may not have any water to save tomorrow. In order to save tomorrow's water, we need to start saving now, today.

We treat the water we use in our mills and make it reusable. We offer it to the use of the community living around us for drinking water, agricultural irrigation and possible fire situations.

Solution possible

87% of the world's energy need is obtained from fossil fuels such as coal, oil and natural gas. Due to the uncontrolled use of fossil fuels, many environmental problems such as global warming, climate change and carbon emissions arise.

We need renewable energy sources, especially solar and wind, more than ever. We supply the energy we use in our mills from solar power plants and support green energy to the fullest.

Narteks Container City
that we built after the
Kahramanmaraş earthquakes

We are aware of our responsibility

It is known that there are 690 million people struggling with hunger in the world, yet according to the United Nations Food Waste Index Report, a total of 931 million tons of food is wasted every year.

We try to prevent wastage with the goal of zero waste in our mills and share food waste with our pawed friends. Future generations will need food and water very much. Now is the time for responsibility.

Social benefit is our priority

Hacı Mehmet Narlı Primary and Secondary School

We especially support the education of girls.

In Kahramanmaraş, we completed the construction of Hacı Mehmet Narlı Primary School and Secondary School consisting of 12 classrooms in Çakallı Hasan Ağa District and allocated it to the use of the Ministry of National Education.

Çakallı Hasan Ağa Mosque

In 2023, we undertook the construction of Çakallı Hasan Ağa Mosque, which was destroyed as a result of the earthquakes we experienced, and completed it in the same year and allocated it to the use of our Presidency of Religious Affairs.
