Notes

12. Instructions for contributors. *Corybas confusus* & C. “Trotters”.
13. *Acanthus sinclairii* by Cheryl Dawson. *C. iridescent* Matt Ward.
14. *C. iridescent* and *C. cheesemanii* by Cheryl Dawson.
15. *Corybas* hybrid by Matt Ward.
16. *Pterostylis “pulchragalea”* by Robbie Graham and Mike Lusk.
17. *Corybas aff. Trilobus* by Mike Lusk.

The column: Eric Scanlen

19. *Caladenia* “green stem” historical.

Have a look through your archived orchid photographs and see if you too can find shots you took of an unusual plant that now turns out to be one of the newly described species.

Orchids in 3D: Eric Scanlen

Corybas sanctigeorgianus

The type locality: Ian St George

Thelymitra xdentata from the Puffer track, Kaitoke.

In 1968, tidying up the orchid taxonomy in preparation for *Flora II*, Lucy Moore described *Thelymitra dentata*. [1]

***Thelymitra dentata* L. B. Moore sp. nov. (Fig. 1)**

Folium lineare, plus minusve canaliculatum, crassum. Inflorescentia pauciflora. Perianthium purpurascens, lineis saturioribus striatum. Sepala petalaque lata, labellum oblongum vel obovatum. Columnae brachia basin versus applanata et plus minusve canaliculata, margine lobis, dentibus vel fimbriis instructa, apicem versus ciliis numerosissimis lutescentibus demum ferrugineis ornata; lobus post antheram ascendens, plus minusve cucullatus, antheram obtegens, rubescens, marginem versus subtuberculatus, luteus.

TYPUS: CHR 168063, Puffer Track, Kaitoke, Wellington. L. B. Moore, I. M. Morice, 13 Dec 1965.

Plant at flower c. 15-40 cm tall. Leaf 10-20 mm wide, shallowly channelled, thick. Inflorescence few-flowered. Perianth c. 15 mm long, pinkish to very pale lavender or blue with strong blue stripes, especially on petals. Sepals and petals subsimilar, broad, slightly obovate. Label-lum more oblong-obovate. Column-arms thickened about the nerve, flanged towards the base with delicate pinkish lobes, teeth or fimbriae that sometimes extend down the front margin of the column-wing; the arms bent inwards so that the two globose bunches of crowded cilia meet just above the anther-tip; cilia at first pale yellow, turning brown with age, in old flowers standing more erect; post-anther lobe taller than anther and more or less hooded over it, usually dark red and more or less tuberculate towards the yellowish margin.

DISTRIBUTION: NZ North and South Islands, on clay and peaty soils. Plants have been found only in small numbers but specimens from widely scattered localities are remarkably uniform. Fl.: Nov-Jan.

Moore listed representative specimens, including one collected by AP Druce from the Puffer track in 1964; Inangahua, Lake Brunner, Kaikohe. She added,

The denticulate margin of the flanged column-arm (to which the specific epithet refers) distinguishes *T. dentata* from all other New Zealand species with tall post-anther lobes except *T. pulchella* Hook.f. in which the yellow cilia do not form close globose masses, and the column is less inclined to be hooded. The striped perianth gives a strong superficial resemblance to *T. pulchella*.

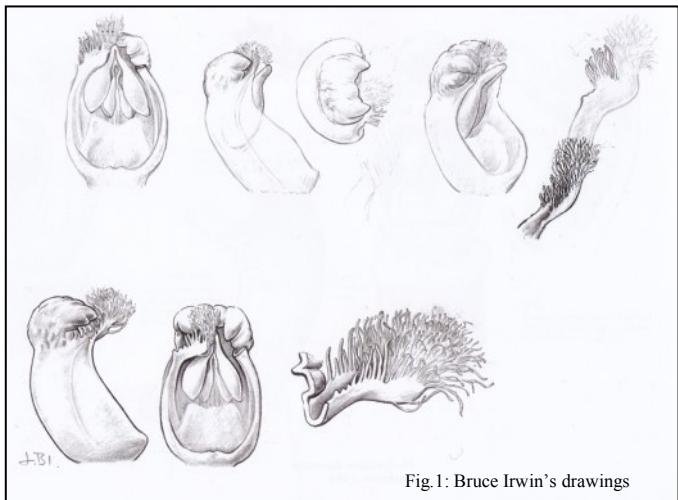

Fig. 1: Bruce Irwin's drawings

Druce's notes indicate he suspected this was a hybrid between *T. pulchella* and *T. pauciflora*.

Doug McCrae thought it was a hybrid between *T. pulchella* and *T. longifolia* and determined to try to remake the hybrid artificially. He and Brian Molloy reported the successful hand pollination of a northern insect-dependant *T. aff. longifolia* using pollen from the northern insect-dependant *T. pulchella sensu* Cheeseman [2]. Seed from the cross was sown in December 1986 and the seedlings deflasked and grown on in 1989. The flowers (**Fig.2**) produced by these F1 crosses closely resembled those of naturally growing *T. dentata*, confirming it is a hybrid, *Theleymitra X dentata* (**Fig.3**). The pollen morphology of this "rare taxon" strongly suggests it is sterile.

They went on to make a backcross between the F1 hybrid and *T. pulchella*, producing a vigorous but sterile plant, and remarking, "The occurrence of such backcrosses in nature is unknown, but is probably unlikely."

Moore wrote, "Column-arms thickened about the nerve, flanged towards the base with delicate pinkish lobes, teeth or fimbriae that

Fig.2: Doug McCrae & Brian Molloy's artificial reconstruction of *Theleymitra X dentata*.

sometimes extend down the front margin of the column-wing; the arms bent inwards so

that the two globose bunches of crowded cilia meet just above the anther-tip; cilia at first pale yellow, turning brown with age, in old flowers standing more erect; post-anther lobe taller than anther and more or less hooded over it, usually dark red and more or less tuberculate towards the yellowish margin." (My emphases).

Eponymous orchids

Wallburga Zeller (1946 –) & *Corybas walliae*

By Val Smith

Born in Burgriesbach in Bavaria, Germany, on 22 August 1946, Wallburga (Walli) Zeller, née Zech, was the daughter of Anton Zech (1889–1959) and Kreszens Zech, née Körner, (1909–1992). She was the only child of Anton Zech's second marriage, and was named after her godmother.

She grew up on a small 5-hectare farm and has fond memories of long Sunday walks with her father through the forests and meadows. His sudden death changed the living conditions of the family and thirteen-year-old Walburga and her mother had to run the family farm alone. They worked in the fields growing potatoes, corn, and grain, and tended five cows and ten to twelve pigs. These chores, coupled with the delicate health of her mother, were very time consuming, and Walli quit school when she was fourteen. At the age of fifteen, she took a position assisting the local veterinarian with work on various farms, and housekeeping.

At eighteen years old, she moved back to her mother and worked in a toy factory. As a young woman she was actively involved in Kolping, a Catholic group. She was also part of the local theatre group; she loved acting and performed in several plays. In February 1971 at a Fasching (carnival) event she met her future husband Fritz Zeller. After their marriage, as well as taking care of their five children, she took over the administrative tasks of her husband's family stonemasonry business. A keen gardener, she liked spending time outdoors, maintaining a large vegetable garden, cultivating berry bushes, fruit trees and flowers. She

also enjoyed travelling, and visited Italy, Greece, Syria, Jordan, Spain, and Egypt – her highlight was sailing along the River Nile!

Now (2016), after her second battle against cancer, she spends her time knitting, helping with the business customer service and taking care of her husband.

Meanwhile Walli's son Andreas Zeller came to Victoria University of Wellington, New Zealand, as a PhD student in 2008, and graduated Doctor of Philosophy (Chemistry) in 2014. Te Papa botanist Carlos Lehnebach had received a grant to study spider orchids, and invited Andreas to conduct the scent analyses in the project Carlos was leading. For Andreas it was an opportunity to combine his knowledge of chemistry with his lifetime interest in the natural world. However, he became so fascinated by the New Zealand orchids and their biology that his involvement extended beyond the chemistry, and he participated in field trips, pollination and taxonomy studies.

An unexpected result of the team's research was the discovery that what was previously considered one species of orchid is actually more than five, and although the scientists had to use genetic data to differentiate among the species, fungus gnats appeared to do it based on smell. *Corybas walliae*, one of five new spider orchid species described in their 2016 paper, “is named after Walli (Walburga) Zeller, mother of the second author of [the] article”. Andreas wished his mother could have come to New Zealand, but unfortunately her state of health prevented it. Naming the orchid after Walli was a way of giving her a connection with Aotearoa New Zealand.

Corybas walliae

(*Corybas*: Greek *korys* ‘helmet’, from the shape of the flower). Previously included with *Corybas trilobus*, this spider orchid was first described in 2016. It is a seasonal orchid, 13–34 mm tall at flowering in October to mid-November. The solitary leaf is heart-shaped, the flower mostly pale green or yellowish, occasionally with a few

blotches of pink on the upper parts. Montane to subalpine, *Corybas walliae* is found in leaf litter under southern beech or kamahi forest, or growing in mossy seepages or gravelly soils between 600 and 1150 m. The species is endemic and fairly common in the North and South Islands of New Zealand.

Dendrobium pygmaeum Sm. in Rees. Cyclo. (Rees) 11: n.27 (1808).

Bulbophyllum ichthyostomum Colenso. Trans. & Proc. New Zealand Inst. 26: 319 (1894).

Ichthyostomum pygmaeum (Sm.) D.L.Jones, M.A.Clem. & Molloy. Orchadian 13(11): 499 (2002).

Bulbophyllum tuberculatum Colenso. Trans. & Proc. New Zealand Inst. 16: 336 (1884).

Adelopetalum tuberculatum (Colenso) D.L.Jones, M.A.Clem. & Molloy. Orchadian 13(11): 498 (2002).

Bulbophyllum exiguum as meant by Buchanan. Trans. & Proc. New Zealand Inst. 16: 397 (1884), is not that of F.Muell. (1861).

Caladenia R.Br. (1810). Prodr. Fl. Nov. Holland. 323 (1810).

Caladenia alata R.Br. Prodr. Fl. Nov. Holland.: 324 (1810).

Caladenia minor Hook.f. var. *exigua* Cheeseman. Man. New Zealand Fl. 688 (1906).

Caladenia exigua Cheeseman. Trans. & Proc. New Zealand Inst. 45: 96 (1913).

Caladenia carnea R.Br. var. *alata* (R.Br.) Domini. Bibliotheca Botanica Heft 85: 549 (1915).

Caladenia carnea R.Br. var. *exigua* (Cheeseman) Rupp. Proc. Linn. Soc. New South Wales 69: 75 (1944).

Caladenia holmesii Rupp. Victoria Naturalist 70: 179 (1954).

Caladenia catenata (Sm.) Druce var. *exigua* (Cheeseman) W.M.Curtis. Stud. Fl. Tasman., 4A: 133 (1979).

Petalochilus alatus (R.Br.) D.L.Jones & M.A.Clem. Orchadian 13 (9): 406 (2001).

Caladenia atradenia D.L.Jones, Molloy & M.A.Clem. Orchadian 12(5): 221 (1997).

Stegostyla atradenia (D.L.Jones, Molloy & M.A.Clem.) D.L.Jones & M.A.Clem. Orchadian 13(9): 414 (2001).

Caladenia iridescentis as meant by Hatch. NZNOG Newsletter 16: 1 (1985), is not that of R.S.Rogers (1920).

Caladenia carnea R.Br. var. *minor* forma *calliniger* Hatch. Trans. Roy. Soc. New Zealand, Bot. 2: 187 (1963).

Caladenia bartlettii (Hatch) D.L.Jones, Molloy & M.A.Clem. Orchadian 12(5): 227 (1997).

Caladenia carnea R.Br. var. *bartlettii* Hatch. Trans. & Proc. Roy. Soc. New Zealand 77: 402 (1949).

Petalochilus bartlettii (Hatch) D.L.Jones & M.A.Clem. Orchadian 13(9): 406 (2001).

Caladenia chlorostyla D.L.Jones, Molloy & M.A.Clem. Orchadian 12(5): 223 fl (1997).

Petalochilus chlorostylus (D.L.Jones, Molloy & M.A.Clem.) D.L.Jones & M.A.Clem. Orchadian 13(9): 406 (2001).

Caladenia catenata as meant by Cooper. Field guide to the NZ native orchids 17 (1984), is not that of Druce (1917).

Arethusa cataracta and *Caladenia alba* are names used for Australian plants once confused with NZ taxa.

Petalochilus calyciformis R.S.Rogers. J. Bot. 62: 66 (1924) and *Petalochilus saccatum* R.S.Rogers. J. Bot. 62: 66, t.571, 4-7 (1924) are treated as aberrant floral (peloric) mutations, probably of this species. A similar taxon has red hairs and later flowering. There is also a larger late flowering plant with (usually) 2-3 fls.

Caladenia fuscata (Rchb.f.) M.A.Clem. & D.L.Jones, Austral. Orchid Res. 1: 25 (1989).

Petalochilus fuscatus (Rchb.f.) D.L.Jones & M.A.Clem., Orchadian 13: 410 (2001).

Caladenia carnea var. *fuscata* Rchb.f., Beitr. Syst. Pflanzenk. 63 (1871).

HB Matthews's *Caladenia "niitaka-rosee"* (see Scanlen E. Matthews & son on orchids. NZNOG Historical Series 2006, 14: 12) may be this or the Tasmanian *C. atrochila* (E. Scanlen, pers. com.)

Caladenia lyallii Hook.f. Fl. Nov.-Zel. 1: 247 (1853).

Stegostyla lyallii (Hook.f.) D.L.Jones & M.A.Clem. Orchadian 13 (9): 413 (2001).

There seem to be a number of taxa currently included in the *S. lyallii* group, including a small form from Nelson Lakes, tagnamed C. "Bacon creek". Some plants appear close to the Australian *Caladenia alpina*.

Caladenia minor Hook.f. Fl. Nov.-Zel. 1: 247, t.56b (1853).

Caladenia carnea var. *pygmaea* (R.S.Rogers) Rupp. Proc. Linn. Soc. New South Wales 69: 74 (1944).

Caladenia carnea R.Br. var. *minor* (Hook.f.) Hatch. Trans. & Proc. Roy. Soc. New Zealand 77: 401 (1949).

Caladenia catenata var. *minor* (Hook.f.) W.M.Curtis. Stud. Fl. Tasman., 4A: 106 (1979).

Petalochilus minor (Hook.f.) D.L.Jones & M.A.Clem. Orchadian 13 (9): 410 (2001).

The identity of *Caladenia minor* is not clear, but it may be a form of *C. chlorostyla*.

Caladenia nothofageti D.L.Jones, Molloy & M.A.Clem. Orchadian 12(5): 226, f.1 (1997).

Petalochilus nothofageti (D.L.Jones, Molloy & M.A.Clem.) Jones & M.A.Clem. Orchadian 13(9): 410 (2001).

Caladenia pusilla W.M.Curtis. Stud. Fl. Tasman., 4A: 133 (1980).

A tiny pink flowered entity with broad oval sepals and petals, an incurved dorsal sepal and a triangular labellar midlobe; grows near Wellington, Tararaki and in Northland.

Caladenia variegata Colenso. Trans. & Proc. New Zealand Inst. 17: 248 (1885).

Petalochilus variegatus (Colenso) D.L.Jones & M.A.Clem. Orchadian 13(9): 410 (2001).

Some flowers have a clear two rows of calli on the labellum, others have extra calli scattered to either side of the two rows.

Caleana R.Br. Prodr. Fl. Nov. Holland.: 329 (1810).

Caleana minor R.Br. Prodr. Fl. Nov. Holland.: 329 (1810).

Paracaleana minor (R.Br.) Blaxell. Contr. New South Wales Natl. Herb. 4: 281 (1972).

Caleya minor (R.Br.) Sweet. Hort. Brit. (Sweet) 385 (1827).

Caleya sullivani F.Muell. Australas. Chem. Druggist 4: 44 (1882).

Caleana nublingii Nicholls. Victoria Naturalist 48: 15 (1931).

Paracaleana sullivani (F.Muell.) Blaxell. Contr. New South Wales Natl. Herb. 4: 281 (1972).

Sullivania minor (R.Br.) D.L.Jones & M.A.Clem. Orchadian 15: 36 (2005).

Calochilus R.Br. Prodr. Fl. Nov. Holland.: 320 (1810)

Calochilus herbaceus Lindl. Gen. & Spec. Orch. Plant.: 45 (1840).

Calochilus campestris as meant by Hatch. Trans. & Proc. Roy. Soc. New Zealand 77: 248 (1949), is not that of R.Br. (1810).

Calochilus paludosus R.Br. Prodr. Fl. Nov. Holland.: 320 (1810).

Calochilus robertsonii Benth. Fl. Austral. 6: 315 (1873).

Calochilus campestris as meant by Fitzg. Austral. Orchids 1(4): t.6 (1878), is not that of R.Br. (1810).

Calochilus campestris as meant by Cheeseman. Man. New Zealand Fl. 686 (1906), is not that of R.Br. (1810).

Chiloglottis R.Br. Prodr. Fl. Nov. Holland.: 323 (1810).

Chiloglottis cornuta Hook.f. Bot. Antarct. Voy., Vol. 1, Fl. Antart.: 69 (1844).

Caladenia cornuta (Hook.f.) Rchb.f. Beitr. Syst. Pflanzenk. 67 (1871).

Simpliglottis cornuta (Hook.f.) Szlach. Polish Bot. J. 46(1): 13 (2001).

The NZ form of *Chiloglottis cornuta* may differ from the Australian; the colour and pattern of labellar calli vary.

Chiloglottis formicifera Fitzg. Austral. Orchids 1(3): (1877).
Myrmecia formicifera (Fitzg.) D.L.Jones & M.A.Clem. Orchadian 15(1): 37 (2005).
Only one record of this vagrant 100 years ago.

Chiloglottis trapeziformis Fitzg. Austral. Orchids 1(3): (1877).
Myrmecia trapeziformis (Fitzg.) D.L.Jones & M.A.Clem. Orchadian 15(1): 37 (2005).

Chiloglottis valida D.L.Jones. Austral. Orchid Res. 2: 43–44, t. 54, plate p.92 (1991).
Simpliglottis valida (D.L.Jones) Szlach. Polish Bot. J. 46(1): 14 (2001).
Chiloglottis gunnii as meant by Molloy. Native orchids of NZ: 9 (1983), is not that of Lindl. (1840).

Corybas Salisb. Parad. Lond. t.83 (1805).

Corybas acuminatus M.A.Clem. & Hatch. New Zealand J. Bot. 23: 491, f.2 (1985).
Nematoceras acuminatum (M.A.Clem. & Hatch) Molloy, D.L.Jones & M.A.Clem. Orchadian 13(10): 449 (2002).
Corysanthes acuminata (M.A.Clem. & Hatch) Szlach. Richardiana 3 (2): 97 (2003).
Corybas rivularis as meant by Cheeseman. Man. New Zealand Fl. 697 (1906), and others (1906–1985), is not Acianthus rivularis of A.Cunn. (1837).

Corybas carsei (Cheeseman) Hatch. Trans. & Proc. Roy. Soc. New Zealand 75: 367 (1945).
Corysanthes carsei Cheeseman. Trans. & Proc. New Zealand Inst. 44: 162 (1912).
Anzybas carsei (Cheeseman) D.L.Jones & M.A.Clem. Orchadian 13 (10): 443 (2002).
Corybas unguiculatus as meant by L.B.Moore. Fl. New Zealand Vol. 2: 116 (1970) is not Corysanthes unguiculatus of F.Br. (1810).

Corybas cheesemanii (Hook.f. ex Kirk) Kuntze. Revis. Gen. Pl. 2: 657 (1891).
Corysanthes cheesemanii Hook.f. ex Kirk. Trans. & Proc. New Zealand Inst. 3: 180 (1871).

Corybas aconitiflorus as meant by Hatch. Trans. & Proc. Roy. Soc. New Zealand 75: 367 (1945), is not that of Salisb. (1807).
Corybas confusus Lehnebach Phytotaxa 270 (1): 9 (2016).
The species tagged C. “roundleaf”. A form on the Chathams identified as C. aff. sulcatus may fall within C. confusus.

Corybas cryptanthus Hatch. Trans. Roy. Soc. New Zealand 83: 577 (1956).
Molloybas cryptanthus (Hatch) D.L.Jones & M.A.Clem. Orchadian 13(10): 448 (2002).
Corybas saphrophyticus as meant by Hatch. Trans. & Proc. Roy. Soc. New Zealand 79: 366, t.71 (1952), is not that of Schltr. (1923).

Corybas dienemum D.L.Jones Fl. Australia 50: 572 (1993).
Corysanthes dienema (D.L.Jones) Szlach
Nematoceras dienenum DL.Jones et al. Orchadian 13(10): 437–468 (2002).

Corybas hatchii Lehnebach. N.Z. Native Orchid Journal 139: 4 (2016).
Corybas macranthus (Hook.f.) Rehb.f. var. longipetalus Hatch.
Trans. & Proc. Roy. Soc. New Zealand 76: 580, t.60(1) (1947).
Nematoceras longipetalum (Hatch) Molloy, D.L.Jones & M.A.Clem. Orchadian 13(10): 449 (2002).
Corybas longipetalus (Hatch) Hatch. NZNOG Journal 47: 6 (1993), is not that of Schltr. (1923).
Corybas “Waiouru” tagname.

Corybas hypogaeus (Colenso) Lehnebach. N.Z. Native Orchid Journal 139: 5 (2016).
Corysanthes hypogaea Colenso. Trans. & Proc. New Zealand Inst. 16: 336 (1884).
Nematoceras hypogaeum (Colenso) Molloy, D.L.Jones & M.A.Clem. Orchadian 13(10): 449 (2002).

Corybas iridescens Irwin & Molloy. New Zealand J. Bot. 34: 1, f1 (1996).
Nematoceras iridescens (Irwin & Molloy) Molloy, D.L.Jones & M.A.Clem. Orchadian 13(10): 449 (2002).
Corysanthes iridescens (Irwin & Molloy) Szlach. Richardiana 3(2): 98 (2003).

Corybas macranthus (Hook.f.) Rehb.f. Beitr. Syst. Pflanzenk. 67 (1871).
Nematoceras macranthum Hook.f. Fl. Nov.-Zel. 1: 250 (1853).
Corysanthes macrantha (Hook.f.) Hook.f. Handb. N. Zeal. Fl. 266 (1864).
There are several entities in the C. macranthus group. Probable hybrids with insect-pollinated members of the C. trilobus group have been reported.

Corybas oblongus (Hook.f.) Rehb.f. Beitr. Syst. Pflanzenk. 67 (1871).
Singularybas oblongus (Hook.f.) Molloy, D.L.Jones & M.A.Clem. Orchadian 13(10): 449 (2002).
Nematoceras oblonga Hook.f. Fl. Nov.-Zel. 1: 250, t.57B (1853).
Corysanthes oblonga (Hook.f.) Hook.f. Handb. N. Zeal. Fl. 266 (1864).
There are two or three taxa included in this complex. One appears to be identical with HB Matthews's Corysanthes “festivals” (see Scanlen E. Matthews & son on orchids. NZNOG Historical Series 2006; 14: 12). A white flowered form (Nelson lakes and subantarctic islands) is more clearly separate.

Corybas obscurus Lehnebach Phytotaxa 270 (1): 11 (2016).
The species tagged C. “darkie”.

Corybas orbiculatus (Colenso) L.B.Moore. Fl. New Zealand Vol. 2: 118 (1970).
Corysanthes orbiculata Colenso. Trans. & Proc. New Zealand Inst. 23: 389 (1891).

Nematoceras orbiculatum (Colenso) Molloy, D.L.Jones & M.A.Clem. Orchadian 13(10): 449 (2002).
Corybas orbiculatus as meant by L.B.Moore. Fl. New Zealand Vol. 2: 118 (1970) and others (1970–1996), is not Corysanthes orbiculata of Colenso (1891) (see Molloy & Irwin. New Zealand J. Bot. 34 (1): 5 [1996]).

Corybas papa Molloy & Irwin. New Zealand J. Bot. 34(1): 5, f1 (1996).
Nematoceras papa (Molloy & Irwin) Molloy, D.L.Jones & M.A.Clem. Orchadian 13(10): 449 (2002).
Corysanthes papa (Molloy & Irwin) Szlach. Richardiana 3(2): 98 (2003).

Corybas papillosum (Colenso) Lehnebach. N.Z. Native Orchid Journal 139: 5 (2016).

Corysanthes papillosa Colenso. Trans. & Proc. New Zealand Inst. 16: 337 (1884).
Nematoceras papillosum (Colenso) Molloy, D.L.Jones & M.A.Clem. Orchadian 13(10): 449 (2002).

Corybas rivularis (A.Cunn.) Rehb.f. Beitr. Syst. Pflanzenk. 67 (1871).
Nematoceras rivularia (A.Cunn.) Hook.f. Fl. Nov.-Zel. 1: 251 (1853).
Acianthus rivularis A.Cunn. Companion Bot. Mag. 2: 376 (1837).

Corysanthes rivularis (A.Cunn.) Hook.f. Handb. N. Zeal. Fl. 266 (1864).
Nematoceras panduratum (Cheeseman) Molloy, D.L.Jones & M.A.Clem. Orchadian 13(10): 449 (2002).
Corysanthes rotundifolia var. pandurata Cheeseman. Man. New Zealand Fl. 366 (1925), is not Nematoceras rotundifolia of Hook.f.

Corysanthes rotundifolia as meant by Cheeseman. Man. New Zealand Fl. 695 (1906), is not Nematoceras rotundifolia of Hook.f (1853).
Corybas orbicularis as meant by L.B.Moore. Fl. New Zealand Vol. 2: 118 (1970) and others (1970–1996), is not Corysanthes orbicularis of Colenso (1891).

The Corybas rivularis complex includes taxa with the tagnames C. “Kaimai”, C. “rest area”, C. “Kaitarakihī”, C. “whiskers” (aka C. “viridis”), C. “Mangahauia”, C. “sphagnum”, C. “Pollok” and C. “Motutangi”.

Corybas rotundifolius (Hook.f.) Rehb.f. Beitr. Syst. Pflanzenk. 67 (1871).
Nematoceras rotundifolia Hook.f. Fl. Nov.-Zel. 1: 251 (1853).
Corysanthes rotundifolia (Hook.f.) Hook.f. Handb. N. Zeal. Fl. 266 (1864).

Corysanthes matthewsii Cheeseman. Trans. & Proc. New Zealand Inst. 31: 351 (1899).
Corybas matthewsii (Cheeseman) Schltr. Repert. Spec. Nov. Regini Veg. 19: 23 (1923).

Anzybas rotundifolius (Cheeseman) D.L.Jones & M.A.Clem. Orchadian 13(10): 443 (2002).
Corybas unguiculatus as meant by Hatch. Trans. & Proc. Roy. Soc. New Zealand 75: 367 (1945), is not Corysanthes unguiculatus of F.Br. (1810).

Corybas sanctigeorgianus Lehnebach Phytotaxa 270 (1): 12 (2016).
The species tagged C. “trisetp”.

Corybas trilobus (Hook.f.) Rehb.f. Beitr. Syst. Pflanzenk. 67 (1871).
Nematoceras trilobum Hook.f. Fl. Nov.-Zel. 1: 250 (1853).
Corysanthes triloba (Hook.f.) Hook.f. Handb. N. Zeal. Fl. 265 (1864).
A number of taxa in the Corybas trilobus group are still of speculative taxonomic status; they include the tiny May to July flowering forms with the tagname C. “pygmy”, C. “Rimutaka”, C. “Craigielea”, C. “tribrine”, C. “tridodd”, C. “Trotters” and others.

Corybas vitreus Lehnebach Phytotaxa 270 (1): 12 (2016).
The species tagged C. “eastern hills”.

Corybas walliae Lehnebach Phytotaxa 270 (1): 13 (2016).

The species tagged C. “triwhite”.

Cryptostylis R.Br. Prodr. Fl. Nov. Holland.: 317 (1810)

Cryptostylis subulata (Labill.) Rchb.f. Beitr. Syst. Pflanzenk. 15 (1871).
Malaxis subulata Labill. Nov. Holl. Pl. 2: 62, t.212 (1806).

Cyrtostylis R.Br. Prodr. Fl. Nov. Holland.: 322 (1810).

Cyrtostylis oblonga Hook.f. Fl. Nov.-Zel. 1: 246 (1853).
Acianthus reniformis var. oblonga (Hook.f.) Rupp & Hatch. Proc. Linn. Soc. New South Wales 70: 59 (1946).

Cyrtostylis rotundifolia Hook.f. Fl. Nov.-Zel. 1: 246 (1853).
Cyrtostylis macrophylla Hook.f. Fl. Nov.-Zel. 1: 246 (1853).
Caladenia reniformis (R.Br.) Rehb.f. Beitr. Syst. Pflanzenk. 67 (1871).
Cyrtostylis oblonga (Hook.f.) var. rotundifolia (Hook.f.) Cheeseman. Man. New Zealand Fl. 685 (1906).
Acianthus reniformis (R.Br.) Schltr. Engl. Bot. Jähr. 34: 39 (1906).
Acianthus reniformis var. reniformis (Hook.f.) Rupp & Hatch. Proc. Linn. Soc. New South Wales 70: 59 (1946).
Cyrtostylis reniformis as used by many authors until now is not that of R.Br. Prodr. Fl. Nov. Holland.: 322 (1810).

Danhatchia Garay & Christenson. Orchadian 11(10): 469, f.471 (1995)

Danhatchia australis (Hatch) Garay & Christenson. Orchadian 11 (10): 470 (1995).
Yoania australis Hatch. Trans. Roy. Soc. New Zealand, Bot. 2: 185 (1963).

Dendrobium Swartz. Nova Acta Regiae Soc. Sci. Upsal., ser. 2, 6: 82. (1799).

Dendrobium cunninghamii Lindl. Bot. Reg. 21 sub. t.1756 (1835).
Dendrobium biflorum as meant by A.Rich. Essai Fl. Nov. Zel. 221 (1832), is not that of Sw. (1800).
Dendrobium lessonii Colenso. Trans. & Proc. New Zealand Inst. 15: 326 (1883).
Winika cunninghamii (Lindl.) M.A.Clem., D.L.Jones & Molloy. Orchadian 12(5): 214 (1997).

Drymoanthus Nicholls. Victorian Naturalist 59: 173 (1943)

Drymoanthus adversus (Hook.f.) Dockrill. Australasian Sarcanthiae: 32, t.3 (1967).
Sarcocilus adversus Hook.f. Fl. Nov.-Zel. 1: 241 (1853).
Sarcocilus brevicauda Colenso. Trans. & Proc. New Zealand Inst. 14: 332 (1882).

Drymoanthus flavus St George & Molloy. New Zealand J. Bot. 32: 416, f1 (1994).

Earina Lindl. Bot. Reg. sub t.1699 (1834)

Earina aestivalis Cheeseman. Trans. & Proc. New Zealand Inst. 51: 93 (1919).

Earina autumnalis (G.Forst.) Hook.f. Fl. Nov.-Zel. 1: 239 (1853).
Epidendrum autumnale G.Forst. Prodr. 60 (1786).

Earina suaveolens Lindl. Bot. Reg. 29 (1843).
Earina alba Colenso. Trans. & Proc. New Zealand Inst. 18: 267 (1886).

Earina mucronata Lindl. Bot. Reg. 20 sub t.1699 (1834).
Earina quadrilobata Colenso. Trans. & Proc. New Zealand Inst. 15: 325 (1883).

Gastrodia R.Br. Prodr. Fl. Nov. Holland.: 330 (1810)

Gastrodia cooperae Lehnebach & J.R.Rolfe. Phytotaxa 277 (3): 242 (2016). The species tagged G. "long column black".

Gastrodia cunninghamii Hook.f. Fl. Nov.-Zel. 1: 251 (1853).
Gastrodia leucopetala Colenso. Trans. & Proc. New Zealand Inst. 18: 268 (1886).

Gastrodia minor Petrie. Trans. & Proc. New Zealand Inst. 25: 273, t.20, f.5–7 (1893).

Gastrodia molloyi Lehnebach & J.R.Rolfe. Phytotaxa 277 (3): 244 (2016). The species tagged G. "long column".

Gastrodia sesamoidea as meant by Cheeseman. Man. New Zealand Fl. 697 (1906), may not be that of R.Br. (1810).

Genoplesium R.Br. Prodr. Fl. Nov. Holland.: 319 (1810)

Genoplesium nudum (Hook.f.) D.L.Jones & M.A.Clem. Lindleyana 4(3): 144 (1989).

Corunastylis nuda (Hook.f.) D.L.Jones & M.A.Clem. Orchadian 13 (10): 461 (2002).

Prasophyllum nudum Hook.f. Fl. Nov.-Zel. 1: 242 (1853).

Prasophyllum tunicatum Hook.f. Fl. Nov.-Zel. 1: 242 (1853).

Prasophyllum variegatum Colenso. Trans. & Proc. New Zealand Inst. 20: 208 (1888).

Genoplesium pumilum (Hook.f.) D.L.Jones & M.A.Clem. Lindleyana 4(3): 144 (1989).

Corunastylis pumila (Hook.f.) D.L.Jones & M.A.Clem. Orchadian 13(10): 461 (2002).

Prasophyllum pumilum Hook.f. Fl. Nov.-Zel. 1: 242 (1853).

Microtis R.Br. Prodr. Fl. Nov. Holland.: 320 (1810).

Microtis arenaria Lindl. Gen. Sp. Orchid. Pl. t.306 (1840).

Microtis biloba Nicholls. Victoria Naturalist 66: 93, f.O-L (1949).
Microtis papillosa Colenso. Trans. & Proc. New Zealand Inst. 18: 269 (1886). The type has not been found but Colenso's notched labellum suggests *M. arenaria* (which in turn has been included in *M. unifolia* by others).

Microtis oligantha L.B.Moore. New Zealand J. Bot. 6: 473, f1 (1969).

Microtis magnadenia as meant by Hatch. Trans. Roy. Soc. New Zealand, Bot. 2: 185–189 (1963), is not that of R.S.Rogers (1930).

Microtis parviflora R.Br. Prodr. Fl. Nov. Holland.: 321 (1810).

Microtis javanica Rchb.f. Bonplandia 5: 36 (1857).

Microtis benthamiana Rchb.f. Beitr. Syst. Pflanzenk. 24 (1871).

Microtis longifolia Col. Trans. & Proc. New Zealand Inst. 17: 247 (1885).

Microtis porrifolia (Sw.) R.Br. ex Spreng. var. *parviflora* (R.Br.) Rodway. Tasman. Fl. 159 (1903).

Microtis aemula Schltr. Bot. Jahrb. Syst. 39: 37 (1906).
Microtis bipulvinaris Nicholls. Victoria Naturalist 66: 92–94, f.A-F (1949).

Microtis holmesii Nicholls. Victoria Naturalist 66: 93, f.G-I (1949).
Microtis unifolia (G.Forst.) Rchb.f. Beitr. Syst. Pflanzenk. 62 (1871).

Ophrys unifolia G.Forst. Fl. Ins. Austr. 59 (1786).
Epipactis porrifolia Sw. Kongl. Vetensk. Acad. Nyh. Handl. 21: 233 (1800).

Microtis porrifolia (Sw.) R.Br. ex Spreng. Syst. Veg. (ed. 16) [Sprengel] 3: 713 (1826).

Microtis banksii Cunn. Bot. Mag. 62: sub t.3377 (1835).
Microtis frutetorum Schldtl. Linnæa 20: 568 (1847).

Microtis viridis F.Muell. Fragm. (Mueller) 5: 97 (1866).

Microtis longifolia Colenso. Trans. & Proc. New Zealand Inst. 17: 247 (1885). This is an autumn flowering form and may be distinct.
Microtis pulchella as meant by Lindl. Gen. Sp. Orchid. Pl. 395 (1840), is not that of R.Br. (1810).

Orthoceras R.Br. Prodr. Fl. Nov. Holland.: 316 (1810)

Orthoceras novae-zealandiae (A.Rich.) M.A.Clem., D.L.Jones & Molloy. Austral. Orchid Res., 1: 100 (1989).

Diuris novae-zealandiae A.Rich. Essai Fl. Nov. Zel. 163 t.25, f1 (1832).
Orthoceras solandri Lindl. Gen. Sp. Orchid. Pl. 512 (1840).

Orthoceras rubrum Colenso. Trans. & Proc. New Zealand Inst. 18: 273 (1886).

Orthoceras caput-serpentis Colenso. Trans. & Proc. New Zealand Inst. 22: 490 (1890).

Orthoceras strictum R.Br. forma *viride* Hatch. Trans. Roy. Soc. N.Z. Bot. 2: 195 (1963).

Orthoceras strictum R.Br. Prodr. Fl. Nov. Holland.: 317 (1810).

Prasophyllum R.Br. Prodr. Fl. Nov. Holland.: 317 (1810)

Prasophyllum colensoi Hook.f. Fl. Nov.-Zel. 1: 241 (1853).

Prasophyllum pauciflorum Colenso. Trans. & Proc. New Zealand Inst. 18: 273 (1886).

Prasophyllum rogersii as meant by Hatch. Trans. & Proc. Roy. Soc. New Zealand 76: 290 (1946), is not that of R.S.Rogers & Rees (1921).

Probably a number of taxa, including Irwin's P. "A" and P. "B" (NZNOG Journal 79: 9–10 [2001]).

Prasophyllum hectorii (Buchanan) Molloy, D.L.Jones &

M.A.Clem. Orchadian 15: 41 (2005).

Gastrodia hectorii Buchanan. Trans. & Proc. New Zealand Inst. 19: 214 (1886).

Prasophyllum patens as meant by Cheeseman. Man. New Zealand Fl. (1906), is not that of R.Br. (1810).

Prasophyllum Suttonii as meant by Hatch. Trans. & Proc. Roy. Soc. New Zealand 76: 291 (1946), is not that of Rupp (1928).

Pterostylis R.Br. Prodr. Fl. Nov. Holland.: 326 (1810).

Pterostylis agathicola D.L.Jones, Molloy & M.A.Clem. Orchadian 12(6): 266 (1997).

Pterostylis graminea (Hook.f.) var. rubricaulis H.B.Matthews ex Cheeseman. Man. New Zealand Fl. 351 (1925).

Pterostylis montana (Hatch) var. rubricaulis (Cheeseman) Hatch. Trans. & Proc. Roy. Soc. New Zealand 77: 240, plate 23 (1949).

Pterostylis allobula (Hatch) L.B.Moore. New Zealand J. Bot. 6: 486, f.3 (1969).

Pterostylis trullifolia as meant by Cheeseman. Man. New Zealand Fl. (1906), is not that of Hatch.

Pterostylis trullifolia Hook.f. var. allobula Hatch. Trans. Roy. Soc. NZ 77: 244, t.30, f.3E-H (1949).

Diplodium allobulum (Hatch) D.L.Jones, Molloy & M.A.Clem. Austral. Orchid Res. 4: 70 (2002).

Pterostylis alveata Garnet. Victoria Naturalist 59: 91 (1939).

Diplodium alveatum (Garnet) D.L.Jones & M.A.Clem. Austral. Orchid Res. 4: 70 (2002).

Pterostylis areolata Petrie. Trans. & Proc. New Zealand Inst. 50: 210 (1918).

Pterostylis auriculata Colenso. Trans. & Proc. New Zealand Inst. 22: 489 (1890).

Pterostylis australis Hook.f. Fl. Nov.-Zel. 1: 248 (1853).

Pterostylis brumalis L.B.Moore. New Zealand J. Bot. 6: 485, f.3 (1969). Pterostylis trullifolia Hook.f. var. rubella Hatch. Trans. & Proc. Roy. Soc. New Zealand 77: 244 (1949). Diplodium brumale (L.B.Moore) D.L.Jones, Molloy & M.A.Clem. Austral. Orchid Res. 4: 70 (2002).

Pterostylis banksii A.Cunn. Companion Bot. Mag. 2: 376 (1837).

Pterostylis cardiotigoma D.Cooper. New Zealand J. Bot. 21: 97, f.1,2 (1983).

Pterostylis cernua D.L.Jones, Molloy & M.A.Clem. Orchadian 12 (6): 267, f.2 (1997).

Pterostylis emarginata Colenso. Trans. & Proc. New Zealand Inst. 15: 328 (1883).

Structurally similar to P. banksii but consistently smaller and with a consistently notched labellum tip.

Pterostylis foliata Hook.f. Fl. Nov.-Zel. 1: 249 (1853).

Pterostylis vereena R.S.Rogers. Trans. & Proc. Roy. Soc. South Australia 38: 360-361, f.18(2) (1914).

Pterostylis gracilis Nicholls. Victoria Naturalist 43: 324-326 (1927).

Pterostylis graminea Hook.f. Fl. Nov.-Zel. 1: 248 (1853).

There are several taxa in the P. graminea complex, including tagname P. "sphagnum" and P. "peninsula".

Pterostylis humilis R.S.Rogers. Trans. & Proc. Roy. Soc. South Australia 46: 151 (1922).

Pterostylis irlsoniana Hatch. Trans. & Proc. Roy. Soc. New Zealand 78: 104, t.18 (1950).

Pterostylis irwinii D.L.Jones, Molloy & M.A.Clem. Orchadian 12 (6): 269 (1997).

Pterostylis micromega Hook.f. Fl. Nov.-Zel. 1: 248 (1853).

Pterostylis polyphylla Colenso. Trans. & Proc. New Zealand Inst. 22: 489 (1890).

Pterostylis furcata Lindl. var. micromega Hatch. Trans. Roy. Soc. New Zealand 80: 326 (1953).

Pterostylis montana Hatch. Trans. & Proc. Roy. Soc. New Zealand 77: 239, t.22 (1949).

Pterostylis nutans R.Br. Prodr. Fl. Nov. Holland.: 327 (1810).

Pterostylis matthewsii Cheeseman. Trans. & Proc. New Zealand Inst. 47: 46 (1915).

Pterostylis oliveri Petrie. Trans. & Proc. New Zealand Inst. 26: 270 (1894).

Pterostylis paludosa D.L.Jones, Molloy & M.A.Clem. Orchadian 12(6): 271 (1997).

Pterostylis furcata Lindl. var. linearis Hatch. Trans. & Proc. Roy. Soc. NZ 77: 243, plate 29, 2 (1949).

Pterostylis patens Colenso. Trans. & Proc. New Zealand Inst. 18: 270 (1886).

Pterostylis banksii Hook.f. var. patens (Colenso) Hatch. Trans. & Proc. Roy. Soc. New Zealand 75: 370 (1945).

Pterostylis porrecta D.L.Jones, Molloy & M.A.Clem. Orchadian 12 (6): 272 (1997).

Pterostylis puberula Hook.f. Fl. Nov.-Zel. 1: 249 (1853).

Linguella puberula (Hook.f.) D.L.Jones, M.A.Clem. & Molloy. Austral. Orchid Res. 4: 75 (2002).

Pterostylis nana as meant by Hatch. Trans. & Proc. Roy. Soc. New Zealand 77: 237 (1949), is not that of R.Br. (1810).

Pterostylis silvicultrix (F.Muell.) Molloy, D.L.Jones & M.A.Clem. Austral. Orchid Res. 4: 66 (2002).

Pterostylis banksii var. silvicultrix F.Muell. Veg. Clath. Is. 51 (1864).

Pterostylis speciosa Colenso. Trans. & Proc. New Zealand Inst. 22: 488 (1890).

This name is apt for N.I.s. plants resembling P. australis.

Pterostylis subtilis Colenso. Trans. & Proc. New Zealand Inst. 28: 611 (1896).

This name is apt for large-flowered Ruahine & Tararua plants.

Pterostylis tanyopoda D.L.Jones, Molloy & M.A.Clem. Orchadian 12(6): 273 (1997).

Hymenochilus tanyopodus (D.L.Jones, Molloy & M.A.Clem.) D.L.Jones, M.A.Clem. & Molloy. Austral. Orchid Res. 4: 74 (2002).

Pterostylis cycnocephala as meant by L.B.Moore. Fl. New Zealand Vol. 2: 135 (1970) and others (1970-1997), is not that of Fitz (1876).

Pterostylis tasmanica D.L.Jones. Muelleria 8(2): 177 (1994).

Plumatichilos tasmanicum (D.L.Jones) Szlach. Polish Bot. J. 46(1): 23 (2001).

Pterostylis squamata as meant by Hook.f. Fl. Nov.-Zel. 1: 249 (1853), is not that of R.Br. (1810).

Pterostylis barbata as meant by Cheeseman. Man. New Zealand Fl. 683 (1906), is not that of Lindl. (1840).

Pterostylis plumosa as meant by Cooper. Field guide to NZ native orchids 51 (1981), is not that of Cady (1969).

There may be a second unnamed NZ entity.

Pterostylis tristis Colenso. Trans. & Proc. New Zealand Inst. 18: 271 (1886).

Hymenochilus tristis (Colenso) D.L.Jones, M.A.Clem. & Molloy. Austral. Orchid Res. 4: 74 (2002).

Pterostylis mutica as meant by Cheeseman. Trans. & Proc. New Zealand Inst. 15: 300 (1883), is not that of R.Br. (1810).

Pterostylis trullifolia Hook.f. Fl. Nov.-Zel. 1: 249 (1853).

Pterostylis rubella Colenso. Trans. & Proc. New Zealand Inst. 18: 271 (1886).

Pterostylis trullifolia Hook.f. var. gracilis Cheeseman. Trans. & Proc. New Zealand Inst. 47: 271 (1915).

Diplodium trullifolium (Hook.f.) D.L.Jones, Molloy & M.A.Clem. Austral. Orchid Res. 4: 72 (2002).

Pterostylis venosa Colenso. Trans. & Proc. New Zealand Inst. 28: 610 (1896).

Pterostylis trifolia Colenso. Trans. & Proc. New Zealand Inst. 31: 281 (1899).

Pterostylis confertifolia Allan. Trans. & Proc. New Zealand Inst. 56: 32 (1926).

Hymenochilus venosa (Colenso) D.L.Jones, M.A.Clem. & Molloy. Austral. Orchid Res. 4: 74 (2002).

Spiranthes Rich. De Orchid. Eur. 20, 28, 36 (1817)

Spiranthes novae-zelandiae Hook.f. Fl. Nov.-Zel. 1: 243 (1853).

Spiranthes australis as meant by Hook.f. Handb. N. Zeal. Fl. 272 (1864), is not that of Lindl. (1824).

Spiranthes sinensis as meant by Rupp & Hatch. Proc. Linn. Soc. New South Wales 70: 58 (1946), is not that of Ames (1908).

Spiranthes lancea as meant by Hatch. Trans. Roy. Soc. New Zealand 82: 614 (1954), is not that of Backer, Bakh.f. & Steenis (1950). Spiranthes alticola D.Jones has been applied to Kew specimens from New Zealand (wrongly we think).

The names Neottia sinensis and Spiranthes sinensis var. australis (R.Br.) H.Hara & Kitam. Acta Phytotax. Geobot. 36 (1-3): 93 (1985) have been used for Spiranthes australis in Australia.

Spiranthes "Motutangi": tagname for endangered Far North taxon.

Taeniophyllum Blume, Bijdr. Fl. Ned. Ind.: 355 (1825)

Taeniophyllum norfolkianum D.L.Jones, B.Gray & M.A.Clem. in Jones et al., 15: 157 (2006)

Thelymitra J.R.Forst. & G.Forst. Char. Gen. Pl. 97 t.49 (1776)

Thelymitra aemula Cheeseman. Trans. & Proc. New Zealand Inst. 51: 94 (1919).

Thelymitra brevifolia Jeanes. Muellera 19: 19-79 (2004).

Thelymitra carnea R.Br. Prodr. Fl. Nov. Holland.: 314 (1810).

Thelymitra imberbis Hook.f. Fl. Nov.-Zel. 1: 244 (1853). A colour form only.

Thelymitra carnea R.Br. var. imberbis (Hook.f.) Rupp & Hatch. Proc. Linn. Soc. New South Wales 70: 59 (1946).

Thelymitra colensoi Hook.f. Handb. N. Zeal. Fl. 271 (1864)

Thelymitra intermedia Berggr. Minneskr. Fisiog. Sallsk. Lund 8: 21 f (1878) may be a synonym.

Thelymitra longifolia J.R.Forst. & G.Forst. var. *stenopetala* Hatch. Trans. & Proc. Roy. Soc. New Zealand 79: 396, plate 80 F–H (1952).

Thelymitra longifolia J.R.Forst. & G.Forst. var. *intermedia* Hatch. Trans. & Proc. Roy. Soc. New Zealand 79: 396, plate 80 J (1952).

Thelymitra cyanea (Lindl.) Benth. Fl. Austral. 6: 323 (1873).

Macdonaldia cyanea Lindl. Bot. Reg. 25 (1840).

Thelymitra uniflora Hook.f. Bot. Antarct. Voy., Vol. 1, Fl. Antarct.: 70 (1844).

Thelymitra venosa as meant by Cheeseman. Man. New Zealand Fl. 671 (1906), is not that of R.Br. (1810).

Thelymitra venosa R.Br. var. *typica* Hatch Trans. & Proc. Roy. Soc. New Zealand 79: 390, plate 77 A–C (1952).

Thelymitra venosa R.Br. var. *cedricsmithii* Hatch Trans. & Proc. Roy. Soc. New Zealand 79: 390, plate 77 D–E (1952).

Thelymitra venosa R.Br. var. *cyanea* Hatch. Trans. & Proc. Roy. Soc. New Zealand 79: 391, plate 77 F–H (1952).

Thelymitra X dentata: a sterile hybrid of *T. longifolia* X *T. pulchella*.

Thelymitra dentata L.B.Moore. New Zealand J. Bot. 6: 478, f2 (1969).

Thelymitra formosa Colenso. Trans. & Proc. New Zealand Inst. 16: 338 (1884).

Thelymitra circumsepta as meant by Hatch. NZNOG Journal 65: 8 (1997), is not that of Fitzg. (1878).

Thelymitra hatchii L.B.Moore. New Zealand J. Bot. 6: 477, f2 (1969).

Thelymitra pachyphylla as meant by Hatch. Trans. & Proc. Roy. Soc. New Zealand 79: 394, plate 79 D–H (1952), is not that of Cheeseman (1906).

Thelymitra concinna Colenso. Trans. & Proc. New Zealand Inst. 20: 207 (1888) appears to be the pink-ciliated form of *T. hatchii*, and if so has precedence.

Thelymitra ixoides Swartz. Kongl. Vetensk. Acad. Nya Handl. 21: 253, t.3, fl. (1800).

Thelymitra ixoides var. *typica* (Hook.f.) Rupp & Hatch. Proc. Linn. Soc. New South Wales 70: 59 (1945).

This may not be the same as the Australian plant.

Thelymitra longifolia J.R.Forst. & G.Forst. Char. Gen. Pl. 98 t.49 (1776).

Serapias regularis Banks & Sol. ex G.Forst. Prodr. 59 (1776).

Thelymitra forsteri Sw. Kongl. Vetensk. Acad. Nya Handl. 21: 228 (1800).

Thelymitra memorialis Colenso. Trans. & Proc. New Zealand Inst. 17: 249 (1885).

Thelymitra alba Colenso. Trans. & Proc. New Zealand Inst. 18: 272 (1886).

Thelymitra cornuta Colenso. Trans. & Proc. New Zealand Inst. 20: 206 (1888).

Thelymitra longifolia J.R.Forst. & G.Forst. var. *alba* (Colenso) Cheeseman. Man. New Zealand Fl. 339 (1925).

Thelymitra longifolia J.R.Forst. & G.Forst. var. *forsteri* Hatch. Trans. & Proc. Roy. Soc. New Zealand 79: 396, plate 80 B–E (1952).

Thelymitra aristata as meant by Hatch. Trans. & Proc. Roy. Soc. New Zealand 79: 395, plate 79 M–N, plate 80 A (1952), is not that of Lindl. (1840), and has been tanager T. "tholinigra" by Scanlen.

Thelymitra longifolia group: some undescribed taxa that appear to be insect-pollinated.

Thelymitra malvina M.A.Clem., D.L.Jones & Molloy. Austral. Orchid Res. 1: 141 (1989).

Thelymitra matthewsi Cheeseman. Trans. & Proc. New Zealand Inst. 43: 177 (1911).

Thelymitra nervosa Colenso. Trans. & Proc. New Zealand Inst. 20: 207 (1888).

Thelymitra decora Cheeseman. Man. New Zealand Fl. 1151 (1906). Spotted and unspotted forms grow together.

Thelymitra pauciflora R.Br. Prodri. 314 (1810).

Thelymitra pauciflora sens. strict. is in NZ according to Jeanes (Muelleria 19: 19–79 [2004]); however, there are also a number of other forms in this group.

Thelymitra pulchella (Hook.f.) Fl. Nov.-Zel. 1: 244 (1853).

Thelymitra fimbriata Colenso. Trans. & Proc. New Zealand Inst. 22: 490 (1890).

Thelymitra pachyphylla Cheeseman. Man. New Zealand Fl. 1151 (1906).

Thelymitra caesia Petrie. Trans. & Proc. New Zealand Inst. 51: 107 (1919). *T. pulchella* is a very variable species, yet all of these appear to have features that are relatively stable in some populations.

Thelymitra purpureofusca Colenso. Trans. & Proc. New Zealand Inst. 17: 249 (1885).

Thelymitra sанссilia Irwin ex Hatch. Trans. & Proc. Roy. Soc. New Zealand 79: 397, plate 81 B–E (1952).

Thelymitra tholiformis Molloy & Hatch. New Zealand J. Bot. 28: 111, f.6 (1990).

Thelymitra intermediata as meant by L.B.Moore. Fl. New Zealand Vol. 2: 129 (1970), is not that of Berggren (1878).

Thelymitra "Ahipara": an unnamed taxon from the Far North, may be identical with *T. "darkie"*.

Thelymitra "Comet": a large, late-flowering *Thelymitra* from the Kaweka range. Appears to be sterile, so probably a hybrid.

Thelymitra "darkie": undescribed taxon from the Far North (see McCrae. NZNOG Journal 24: 11; 77: 22 [1987]). May be identical with *T. "Ahipara"*.

Thelymitra "rough leaf": undescribed taxon from the Far North (see McCrae. NZNOG Journal 24: 11; 77: 22 [1987]).

Thelymitra "sansfimbria": plain blue flowers from Far North (see Scanlen. NZNOJ 98: 36 & 102: 39, 45).

Thelymitra "sky": undescribed taxon from the Far North (see Scanlen. NZNOG 70: 30–35, f.6 [1998]).

Thelymitra "tholinigra": (see Scanlen. NZNOJ 85: 10, 15).

Thelymitra "Whakapapa": undescribed taxon from Ruapehu, that may correspond to *T. purpureofusca*, or may be distinct.

Townsonia Cheeseman. Man. New Zealand Fl. 692 (1906).

Townsonia deflexa Cheeseman. Man. New Zealand Fl. 692 (1906). *Townsonia viridis* as meant by Schlr. Repert. Spec. Nov. Regni Veg. 9: 250 (1911), is not *Acianthus viridis* of Hook.f. (1860).

Acianthus viridis as meant by L.B.Moore. Fl. New Zealand Vol. 2: 107 (1970), is not that of Hook.f. (1860).

Waireia D.L.Jones, M.A.Clem. & Molloy. Orchadian 12(6): 282 (1997)

Waireia stenopetala (Hook.f.) D.L.Jones, M.A.Clem. & Molloy. Orchadian 12(6): 282 (1997).

Thelymitra stenopetala (Hook.f.) Bot. Antarct. Voy., Vol. 1, Fl. Antarct.: 69 (1844).

Lyperanthus antarcticus Hook.f. Bot. Antarct. Voy., Vol. 1, Fl. Antarct.: 544 (1847).

Are you worried about what a **species** really is? Does it concern you when you read, “The biological species concept defines a species as members of populations that actually or potentially interbreed in nature, not according to similarity of appearance. Although appearance is helpful in identifying species, it does not define species”? If so you are not alone. https://en.wikipedia.org/wiki/Species_problem is worth a look. Most other sensible people are worried too.

You can read (at <https://mro.massey.ac.nz/handle/10179/4063>) Roger Watkins's PhD thesis on *The biogeography, ecology and endophyte mycorrhiza of the New Zealand Corybas alliance (Orchidaceae): specifically, Nematoceras iridescentes (Irwin et Molloy) Molloy, D.L.Jones & M.A.Clem. (species)*.

Notes etc

The New Zealand Native Orchid Journal

The main aim of the New Zealand Native Orchid Group is informing people about native orchids, so we permit others to copy material published here, provided the source and author are acknowledged. Authors should note this as a condition of acceptance of their work. The *Journal* is published quarterly from February, and deadline for copy is the first of the month beforehand. We like copy to be typed or sent on disk or by email.

Chair: David McConachie, 42 Titiro Moana Rd, Korokoro, Lower Hutt, pleione@orcon.net.nz.

Secretary: Pam Shearer, 7 Ring Terrace, St Marys Bay, Auckland. pam@insidetrack.co.nz.

Treasurer: Judith Tyler, 4 Byrd St, Levin, bandj.tyler@xtra.co.nz.

Books and publications:
Brian Tyler, 4 Byrd St, Levin,
bandj.tyler@xtra.co.nz.

Webmaster: Michael Pratt,
www.nativeorchids.co.nz,
Michael@nativeorchids.co.nz. The website posts journals six months after 1st publication.

Editor: Ian St George, 32 Hawkestone St, Thorndon, Wellington 6011 istge@yahoo.co.nz.

WE MAY NOT SHARE AUTHORS' VIEWS.

Below: *Corybas "Trotters"*, photos Te Wharau, Wairarapa.

▲ *Corybas iridescentis*,
Cambourne, Wellington, 1 August 2017:
photo Matt Ward taken to show the bead
in the throat of the labellum.

◀◀ *Acianthus sinclairii*,
Awapikopiko reserve, Tararua, 22 July
2017: photo Cheryl Dawson.

◀ But in the same week they were well in
fruit at Airlie Rd, Plimmerton—Ed.

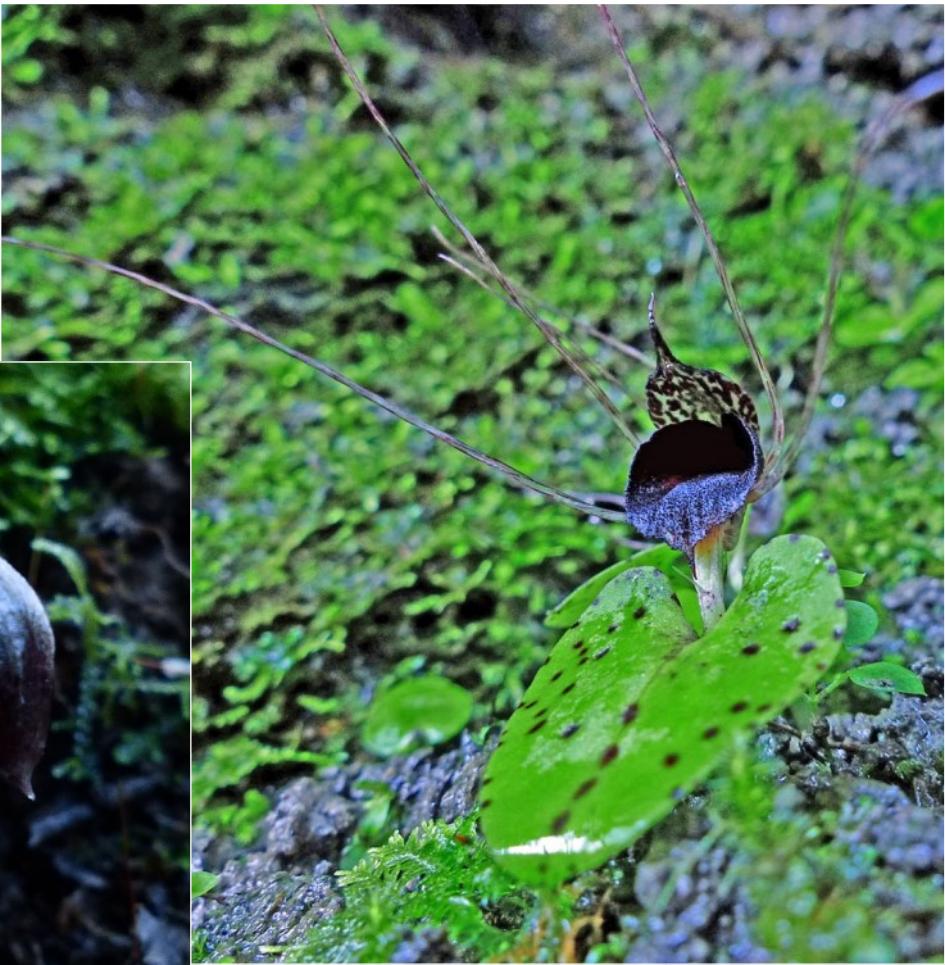

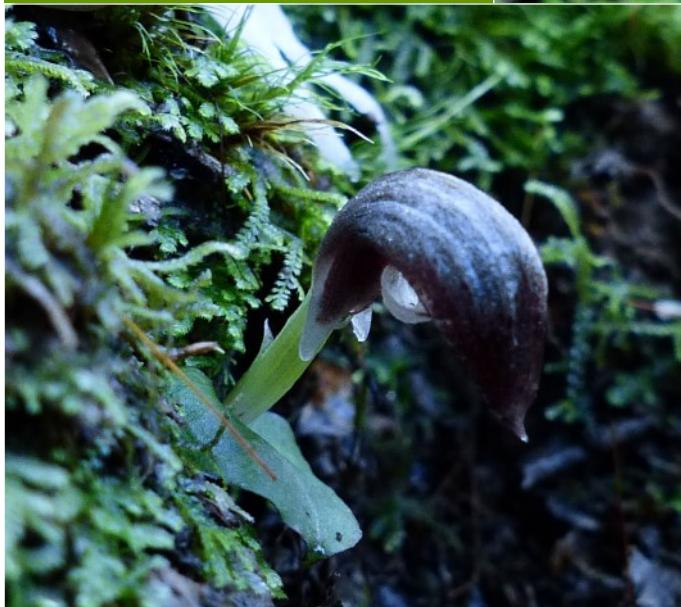

Photographs by Cheryl Dawson.

Corybas iridescens

on the Coppermine track in the western Ruahine foothills on 30 July—early for this species. ►

Corybas cheesemanii

on the Mt Holdsworth track, Tararua on 31 July —late for this species. ▼

Matt Ward posted these photographs from near Wellington on our yahoogroups site. They show *Corybas vitreus* in full flower (1, 2), *C. hatchii* in bud (4) and a hybrid between the two (3, 4). The putative hybrid has features (eg, dorsal sepal and leaf) intermediate between the two species. A similar phenomenon was reported from Lowe's Bush, near Masterton, in NZNOJ 93.

© Robbie Graham Photography

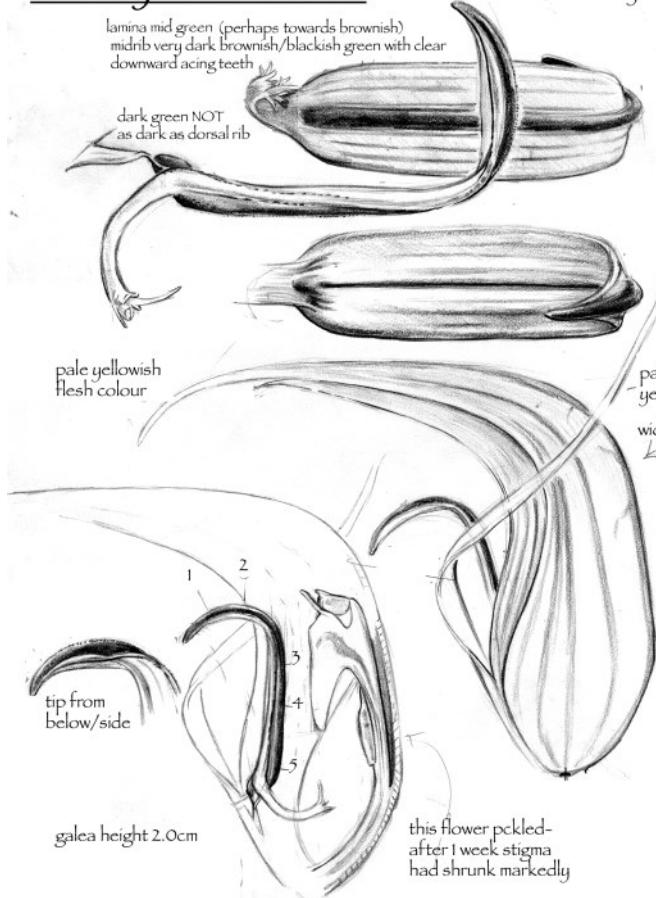

Robbie Graham's (left) and Mike Lusk's (right) photographs of this undescribed *Pterostylis* near Taupo in early September. Robbie had notified the Group of its surprisingly early flowering.

This is similar to the plant tagged *P. "pulchragalea"* by HB Matthews and that drawn by Bruce Irwin (see next page) as *P. aff. montana* "late" because he had seen it at Ruapehu in December 1983.

It is certainly unique, with its labellum bent acutely forward $\frac{2}{3}$ up, and with its labellar midlobe curiously elongated.

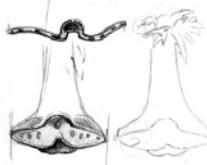

Pterostylis aff. montana "late"

with very long labellum from Ruapehu Dec 1983

from above

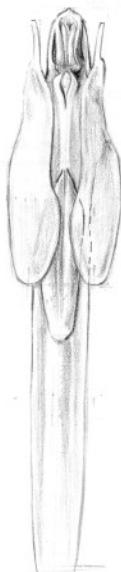

3

NOTE:-
this plant may have been collected just south of Pokaka which is only 5 or 6kms from where *P. "Erua"* was later collected 6 Dec 1991 see drawing 19 Dec 1983

this plant seems to resemble *Pt. "Erua"* 6 Dec 1991
but:- (1) lateral sepals are bent (as is usual) at sinus

(2) labellum almost rectangular with very tapered apex whereas *P. "Erua"* tapers more gently but again has very tapered apex

(3) labellum much more strongly arched at 2/3 height

lateral sepals divided longitudinally

lateral sepals seem much narrower than *P. sp. "X"* probably from Pokaka

seems not typical of *P. sp. aff. montana*
(1) long tapered tip to labellum (2) strongly bent labellum
(3) curved appendage (4) veining of dorsal as in graminea

▲▲ Mike Lusk photographed this *Corybas* aff. *trilobus*, with its curiously short dorsal sepal and rather flared labellum, in the eastern Ruahine foothills on 8 September. Eric Scanlen points out the short dorsal is very similar to that of *Corybas* "triaug" which he found in the Hunua foothills and mentioned in J81:41. ▶

The Column: Eric Scanlen

Caladenia "green stem" historical

Upgrading the Journal's index has rubbed the Column's nose in the chequered history of *Caladenia* "green stem" which seriously needed clarifying. It featured first, noticeably from the earlier mix-ups with *C. carnea* etc. in the June 1996 issue, J59, p19, with the Column's tiny, stuck-on colour photo, (Fig. 1 herein) as *Caladenia* "green column", from the Coromandel Pinnacles, 2 Dec. 1995. That name was in accord with Doug McCrae's original tag, J35:32, which however, also included *C. chlorostyla* and *C. minor*. "Chlorostyla" is Brian Molloy's Latin name for Doug's "green column", but Brian's species, *C. chlorostyla*, although it has the green stem, lacks the red topped trichomes on the outer tepals, and doesn't include either *C. "green stem"* or *C. minor*.

Fig.1. *Caladenia* "green stem" at 160m, 2 Dec. 1995, Coromandel Pinnacles, as depicted minutely in J59:13. Note the atypical white legged disc calli on the foremost twin pairs, plus a stray.

Earlier, on 3 Feb. 1996, Bruce Irwin took Anne Fraser and the Column up the Waitonga Falls Track, on Ruapehu, especially to see a plentiful orchid there, which Bruce didn't identify. It too was *C. "green stem"* Fig. 2, at 1,260m which altitude might explain why it was so late in the season. The Column slipped away

from the others and photographed this specimen in 3-D, which seemed to make Bruce quite uneasy when he found out about it, a few minutes later. Thus this revealing field-trip didn't get published. The diary note has the orchid as Doug's *C. "green column"*, but the slide labels got changed later to *C. minor* then, much later to *C. "green stem"*.

Fig.2. *Caladenia* "green stem" from 1,260m by Waitonga Falls Track, Ruapehu 3 Feb. 1996. Note the sparse red-topped trichomes appearing around the edges of all tepals.

Notably, Bruce found *Caladenia* "green stem" again on 21 January 2001, by the Turoa Road, at the lower end of the Blythe Track, altitude 920m. His detailed drawings and brief description are featured in Journal 79 pps. 6 & 7, but he did not tagname the orchid so it languished there, as "a small Caladenia from Turoa" and just got forgotten!

The Column then featured *C. "green stem"* from Albany Scenic Reserve, altitude 100m, on 21 Nov. 2001, but as "*Petalochilus minor* with a green stem". See Journal 82 p12, with drawing Fig. 1 on p13. This flawed

Caladenia minor ID was maintained for nine years, as in *Colour Field Guide 3*. **Fig. 3** is another view of that *C. green stem* from South arm Lake Manapouri showing the taxon's typical labellum and column. NB Fig. 2 in J82:13, was actually *C. minor* s.s. but was depicted as *Petalochilus chlorostylus* with a "red stem", **Fig. 4**. It was also from Albany Scenic Reserve, 21 Nov. 2001. Such was the confusion at the time about these *Caladenia*, it is no wonder that Bruce wasn't willing to tagname his Turoa specimen, five years earlier, in 1996.

Allan Ducker took up the cudgels in 2009 and at last tagged *C. "green stem"* at Waikumete Cemetery when he came across distinct colonies of both *C. "green stem"* and *C. minor*, at a mere 100m altitude. They were flowering midNovember 2009 & 2010 and showed no obvious hybrids—different pollinators? So we finally began taking *C. "green stem"* as definitely different from *C. minor*.

But some *C. "green stem"* have disc calli with all white legs as in **Fig. 5**, Allan's from Waikumete. It is unusual but has appeared also at Albany, Awhitu, Moutere Hills and Rainbow Mountain so does need hunting out as a potential new form. Typically, *C. "green stem"* has red legged disc calli (as do *C. chlorostyla* & *C. minor*) from Lake Manapouri, Bealey Spur, St Arnaud, Waitonga Falls Track, Coromandel Pinnacles, Waikumete and Albany Scenic Reserve. But beware, all three of these taxa, *C. "green stem"*, *C. minor* and *C. chlorostyla*, can occasionally have pink legged disc calli. Note that marginal calli to the midlobe on *C. "green stem"* can be either yellow or white, due no doubt to variation within the taxon.

Acknowledgements: Many thanks to Allan Ducker and many other NZNOG members, who have provided photos for the above analyses.

Fig.3. *C. "green stem"* at 180m altitude, L. Manapouri, head of South Arm, 21 Jan. 2004. Note typical disc calli with dark red legs and yellow tops, yellow topped marginal calli to midlobe with yellow tip.

Fig. 4. *C. minor* Albany Scenic Reserve, 21 Nov. 2001, the model for drawing, Fig.2. J82:13. Doug McCrae could be excused for lumping them. Note a labellum similar to that on *C. "green stem"* but the stem is red. Also, the outer tepals have many dark red trichomes; close-packed on the dorsal sepal.

Fig.5. *C. "green stem"* from a colony at Waikumete Cemetery, with white legs to the disc calli. This is an unusual variant occurring widely as in the text, but sporadically.
