

Important Plant Areas of Saskatchewan

Nominated site name: Athabasca Sand Dunes

General location: south side of Lake Athabasca

Legal land description: n/a

Site coordinates (include source or datum): 59.0851, -108.7394

Size of area (include units): 266,252 hectares

Boundary rationale (attach map indicating boundaries and location): The IPA follows the Provincial Wilderness Area at the north and part of the south boundary. The east, west and southwest boundaries are approximately 10km away from the Provincial Wilderness Area in order to provide a buffer to the dunes there. This boundary encompasses the main dune fields where the majority of core habitat is found for the rare and endemic plants in the area.

Property ownership: Land is mostly included within Athabasca Sand Dunes Provincial Park. A small portion on the eastern side belongs to the Fond Du Lac First Nation.

Other site designations: none

Table 2: Threat information

Given the large number of rare plant species in the area threat information is focused on the endemics, since an in-depth assessment has already been conducted for them (see COSEWIC 2018). The overall threat impact to the area is considered to be low due to its remote location but this could change quickly if human presence increases (COSEWIC 2018). Most threats are not considered likely in the near future.

Threat # (from Appendix A)	Threat	Plant Species of Concern Affected (#s from Table 1 above or “all”)	Level (High, moderate, low, very low, NA)	Comments
3.2	Mines and quarrying	Endemics	negligible	Unlikely to directly impact the endemics, however, if mining in the area increases, the increased presence of people with more roads, suppression of fire, access to dunes, etc. could greatly increase the threats to the dunes.
4.1	Roads	Endemics	negligible	At present, not a concern, but if industrial activity increases, more roads will be built, increasing access to the area.
5.2	Gathering terrestrial plants	Endemics	Negligible	Unlikely given the remoteness of the area.
6.1	Recreational activities	Endemics	negligible	ATV traffic could be damaging but at the present time the area is too inaccessible for recreation.
6.3	Work and other activities	Endemics	negligible	Subsistence hunting occurs in the area but effects on the endemics are negligible.
7.1	Fire and fire suppression	Endemics	negligible	Fire is generally positive as a natural disturbance that mitigates dune stabilization. Fire suppression would be a threat but fires in the area are currently usually left to burn.
8.1	Invasive non-native/alien species	Endemics	negligible	Threat is mostly potential, establishment of non-native species is not yet a problem.
8.2	Problematic native species	Endemics	negligible	This is a threat as it relates to dune stabilization. Stabilization is very slow.

9.5	Air-borne pollutants	Endemics	negligible	Acid deposition from industrial activity may affect individual plants and benefit fast growing species (increasing dune stabilization).
11.1	Habitat shifting and alteration	Endemics	negligible	The area is projected to become warmer and drier which will increase fire frequency. This may actually benefit the endemics by mitigating dune stabilization.
11.2	Drought	Endemics	negligible	May contribute to increased fire frequency, benefitting the endemics. May have a negative effect on any rare species found in dune slacks.

Referencing the criteria, explain why the nominated site deserves recognition as an Important Plant Area (500 words or less):

The Athabasca Sand Dunes meet IPA criteria 1, 2, 3, and 4. The site provides habitat for ten Canadian endemic plant species (five of which are only found in Saskatchewan), as well as 126 other plant (vascular, non-vascular, and lichen/fungi) taxa that are considered rare in Saskatchewan. 71 of those taxa have S-ranks of S1 or S2. Fourteen of these taxa meet the global rarity criterion as outlined in criterion 1. Seven taxa are listed federally as Special Concern. The unique plant taxa in this area are associated with a number of unique communities such as active sand dunes, gravel pavements and the Lake Athabasca shoreline. These communities have not yet been formally described and ranked but likely some of them would likely be rare as well.

The area currently has high ecological integrity. Many potential threats exist (see Table 2), but due to the remote location, significant degradation has not occurred.

Additional unique features: The Athabasca Sand Dunes are the most northerly active sand dune formations in the world. They developed from sand eroding from the Athabasca Sandstone Formation in conjunction with lake shore processes from Lake Athabasca. The site includes parabolic dunes, gravel pavements, dune slacks, braided river channels, bogs, forests and an active lakeshore. The area contains seven major dune areas, plus several smaller ones (COSEWIC 2018).

Animals of conservation concern that have been documented at the site include:

Scientific Name	Common Name	G-rank	N-rank	S-rank	COSEWIC Listing
<i>Aeshna tuberculifera</i>	Black-Tipped Darner	G5	N5B, N5N, N3M	S3S4	
<i>Bombus terricola</i>	Yellow-banded Bumblebee	G3G4	N5	S5	Special Concern
<i>Charadrius melanotos circumcinctus</i>	Piping Plover	G3T3	N3B	S3B	
<i>Chordeiles minor</i>	Common Nighthawk	G5	N4B, N3M	S4B, S4M	
<i>Surnia ulula</i>	Northern Hawk Owl	G5	N5B, N5N, N3M	S3B, S5N	

Plant species list (optional): These are an additional 250 plant taxa documented for the area (not including those found in table 1).

Plant Species (Scientific Name)		
<i>Agrostis scabra</i>	<i>Callitriches palustris</i>	<i>Comandra umbellata</i> ssp. <i>pallida</i>
<i>Agrostis scabra</i> var. <i>scabra</i>	<i>Caltha palustris</i>	<i>Comarum palustre</i>
<i>Alnus incana</i> ssp. <i>rugosa</i>	<i>Calypso bulbosa</i>	<i>Coptis trifolia</i>
<i>Alnus viridis</i>	<i>Campanula rotundifolia</i>	<i>Corallorrhiza trifida</i>
<i>Alnus viridis</i> ssp. <i>crispa</i>	<i>Capsella bursa-pastoris</i>	<i>Corispermum americanum</i> var. <i>americanum</i>
<i>Anaphalis margaritacea</i>	<i>Cardamine pensylvanica</i>	<i>Corispermum hyssopifolium</i>
<i>Andromeda polifolia</i>	<i>Carex abdita</i>	<i>Corispermum nitidum</i>
<i>Antennaria microphylla</i>	<i>Carex aquatilis</i> var. <i>aquatilis</i>	<i>Cornus canadensis</i>
<i>Antennaria neglecta</i>	<i>Carex brunnescens</i>	<i>Corydalis sempervirens</i>
<i>Antennaria rosea</i>	<i>Carex buxbaumii</i>	<i>Cypripedium acaule</i>
<i>Apocynum androsaemifolium</i>	<i>Carex canescens</i>	<i>Cystopteris fragilis</i>
<i>Arabidopsis lyrata</i>	<i>Carex chordorrhiza</i>	<i>Diphasiastrum complanatum</i>
<i>Aralia nudicaulis</i>	<i>Carex deflexa</i>	<i>Diphasiastrum sitchense</i>
<i>Arceuthobium americanum</i>	<i>Carex diandra</i>	<i>Drosera rotundifolia</i>
<i>Arctostaphylos uva-ursi</i>	<i>Carex foenea</i>	<i>Eleocharis acicularis</i>
<i>Artemisia borealis</i> ssp. <i>borealis</i>	<i>Carex lasiocarpa</i>	<i>Eleocharis quinqueflora</i>
<i>Athyrium filix-femina</i>	<i>Carex lenticularis</i> var. <i>lenticularis</i>	<i>Elymus trachycaulus</i>
<i>Barbarea orthoceras</i>	<i>Carex leptalea</i>	<i>Empetrum nigrum</i>
<i>Betula nana</i>	<i>Carex limosa</i>	<i>Epilobium ciliatum</i> ssp. <i>glandulosum</i>
<i>Betula neoalaskana</i>	<i>Carex livida</i>	<i>Epilobium leptophyllum</i>
<i>Betula occidentalis</i>	<i>Carex magellanica</i>	<i>Epilobium palustre</i>
<i>Betula papyrifera</i> var. <i>commutata</i>	<i>Carex magellanica</i> ssp. <i>irrigua</i>	<i>Equisetum arvense</i>
<i>Betula pumila</i> var. <i>glandulifera</i>	<i>Carex oligosperma</i>	<i>Equisetum fluviatile</i>
<i>Betula x sargentii</i>	<i>Carex pauciflora</i>	<i>Equisetum palustre</i>
<i>Betula x utahensis</i>	<i>Carex praticola</i>	<i>Equisetum sylvaticum</i>
<i>Betula x winteri</i>	<i>Carex pseudocyperus</i>	<i>Erigeron acris</i> var. <i>kamtschaticus</i>
<i>Bromus pumpellianus</i>	<i>Carex rostrata</i>	<i>Eriophorum angustifolium</i> ssp. <i>angustifolium</i>
<i>Calamagrostis canadensis</i>	<i>Carex rufina</i>	<i>Eriophorum brachyantherum</i>
<i>Calamagrostis canadensis</i> var. <i>canadensis</i>	<i>Carex tenuiflora</i>	<i>Eriophorum chamissonis</i>
<i>Calamagrostis lapponica</i> var. <i>nearctica</i>	<i>Chamaedaphne calyculata</i>	<i>Eriophorum gracile</i>
<i>Calamagrostis purpurascens</i>	<i>Chamerion angustifolium</i> ssp. <i>angustifolium</i>	<i>Eriophorum vaginatum</i> var. <i>spissum</i>
<i>Calamagrostis stricta</i> ssp. <i>inexpansa</i>	<i>Chenopodium album</i>	<i>Euthamia graminifolia</i>
<i>Calamagrostis stricta</i> ssp. <i>stricta</i>	<i>Chimaphila umbellata</i>	<i>Euthamia graminifolia</i> var. <i>graminifolia</i>
<i>Calla palustris</i>	<i>Chimaphila umbellata</i> ssp. <i>occidentalis</i>	<i>Eutrochium maculatum</i>
	<i>Cicuta bulbifera</i>	
	<i>Cicuta maculata</i> var. <i>angustifolia</i>	
	<i>Cicuta virosa</i>	

<i>Festuca rubra</i> ssp. <i>rubra</i>	<i>Menyanthes trifoliata</i>	<i>Pyrola asarifolia</i>
<i>Festuca saximontana</i>	<i>Moehringia lateriflora</i>	<i>Pyrola chlorantha</i>
<i>Fragaria virginiana</i> ssp. <i>glaucia</i>	<i>Moneses uniflora</i>	<i>Pyrola elliptica</i>
