Washington, D. C. 20555

Subject: Docket No. 50-482: Emergency Preparedness Field Exercise Scenario for 2003

NOTE:
This transmittal contains Emergency Preparedness exercise information that should not be released to the Public Document Room before May 30, 2003.

Gentlemen:

Enclosed is the 2003 Wolf Creek Generating Station Emergency Preparedness Field Exercise Scenario which is scheduled for May 21, 2003.

If you have any questions concerning this matter, please contact me at (620) 364-4038, or Mr. Timothy F. East at (620) 364-8831, extension 5054.

Very truly yours,

Karl A. (Tony) Harris

THIS SCENARIO BELONGS TO: _____

This scenario contains experiences in which Drill / Exercise performance opportunities will be formally assessed, excluding notifications associated with PARs >10 miles.

2003 EVALUATED-EXERCISE
03-EVAL-EX

RULES OF CONDUCT

OBJECTIVES

I. The NRC Inspection module, for demonstration during evaluated exercises, includes the following objectives.

A. Demonstrate that personnel who are assigned emergency response responsibilities are adequately trained to perform according to plans and procedures.

B. Provide training for personnel and provide for identification of potential problems in the overall emergency response.

C. The Technical Support Center (TSC), Emergency Operations Facility (EOF) and Public Information Organization will be staffed according to the instructions in the Emergency Planning Procedures.

D. Management of the Control Room, TSC, EOF and Public Information Organization will respond effectively to the emergency. The lead personnel in these facilities will make timely and effective decisions regarding emergency response efforts.

E. The staff in the Control Room, TSC and EOF will assess the emergency conditions to prepare appropriate mitigative priorities, properly classify the events and to recommend offsite protective actions. Protective action recommendations outside of the 10 mile EPZ will not be assessed as an opportunity for the NRC performance indicator. (Each facility may not perform these actions, depending on the timing of turnover of responsibilities between facilities.)

F. Notifications of emergency conditions or protective action will be performed by the Control Room, TSC and the EOF. (**NOTE:** Each facility may **NOT** perform all of these actions, depending on the timing of turnover of responsibilities between facilities.) This will include the use of the Emergency Notification System (ENS) and Health Physics Network (HPN) in contact with onsite controllers.

G. Communications (e.g., phone, fax or radio) between facilities and teams in support of emergency response activities will be demonstrated using primary communication (or backup if appropriate).

H. Good radiological protection practices shall be demonstrated within the Control Room, TSC and the EOF. This shall be reflected, in part, by maintaining radiological exposure to persons staffing the facilities and teams as low as reasonably achievable (ALARA).

I. Rumors identified during the Drill / Exercise will be confirmed or denied as part of the activities of the Information Clearinghouse, Phone Team or the Media Center.

J. Dispatch and coordination of emergency repair and damage control teams will be demonstrated by the Control Room and the TSC. (Each facility may not perform each of these actions depending on the timing of turnover of responsibilities between facilities.)

K. Any radiological release from the plant will be characterized by either the Control Room, TSC or the EOF radiological assessment staff as to its magnitude and offsite impact. (Each facility may not perform each of these actions depending on the timing of turnover of responsibilities between facilities.)

L. Personnel accountability will be maintained within the Control Room, TSC, and EOF.

M. Habitability of the Control Room, TSC and EOF will be periodically assessed.

N. The Public Information Organization will disseminate accurate and timely information either through scheduled news conferences, news statements or Phone Team communication.

O. The TSC and EOF shall demonstrate assistance and support to the Control Room for mitigation of the emergency conditions.

P. Thorough scenario preparation and effective Drill / Exercise control will be demonstrated throughout the Drill / Exercise.

II. The following objectives are specific to this scenario.

A. The TSC WILL be activated.

B. The EOF WILL be activated.

C. Public Information WILL be activated.

D. At the site evacuation, Security shall perform perform walkdowns to ensure all personnnel are notified.

E. The objectives of a semi-annual Health Physics Drill <u>WILL</u> be demonstrated, by obtaining direct measurements, an airborne sample and environmental samples. These samples may include air, water, soil or vegetation. (Each team is not required to collect all samples).

PERIODIC DRILL REQUIREMENTS NOT BEING MET

III. The following objectives are those associated with NRC requirements for periodic inclusion in drills or exercises. They are identified here for tracking and clarification purposes.

A. Site evacuation <u>WILL NOT</u> be performed for accountability.

SEMI-ANN SEC. SWEEP #2								YES												

PLAYER GUIDELINES

A. These guidelines define the extent of play in demonstrating the previously listed generic objectives.

1. For evaluated exercises, participants **WILL NOT** have prior knowledge of the scenario.
2. For training drills:
   a. scenario data will be treated discreetly and knowledge of the scenario will not preclude participation in the drill.
   b. coaching of players is allowed.
3. Personnel will be notified of emergency conditions through methods normally employed in making notifications (e.g., Gaitronics, pager activation or Security). The site evacuation alarm will be activated (when power is available) at ALERT, or higher classifications.
4. The Control Room will be simulated from the plant simulator.
5. For drill purposes, communications to the Control Room should be directed to the Simulator Control Room.
6. Communications involving the Control Room will be duplicated in the simulator, except for the Emergency Notification System (ENS) dedicated line and the State/County radios. A telephone will be used in the simulator for the ENS. If the State or County need to be notified as part of the drill by radio from the Control Room, they will use the radios in the EOF since there are no radios in the simulator.
7. Operational and meteorological initial conditions will be established prior to the start of the drill and will be distributed to those players who would, under actual conditions, be aware of this information.
8. Participation by onsite personnel involved with emergency response shall be carried out to the fullest extent possible without affecting plant operations or plant safety.
   a. Dispatch of teams into the power block will occur as required.
   b. Use of Protective Clothing is not expected to be simulated but will be dictated by environmental conditions the day of the drill. The decision of what to simulate will be made in accordance with AI 14-002, "Heat Stress Management Program", on the morning of the drill.
9. During actual emergency conditions, certain administrative controls may be bypassed (i.e. clearances, fire watches, procedure changes, work packages, radiation work permits, radiological postings, clearance orders, plant modification request, etc.). When performing a walk through, steps such as clearances, need not be demonstrated.
10. For drill purposes, the need for a fire watch shall be determined on a case by case basis.
11. All drill related radio, Gaitronics and telephone transmissions shall begin and end with "This is a drill".
12. **IF** the scenario requires contacting offsite organizations which are not participating, **THEN** they shall be contacted for the purpose of checking communications only.
13. Additional personnel may be called in to supplement the regular ERO staffing.
14. If Potassium Iodide is recommended for use by emergency workers, its actual ingestion will be simulated.
15. If parts or tools are needed from the Warehouse/Tool Shop they will be brought to the check-out counter, confirmed to be the correct tool / part, then returned to the Warehouse/Tool Shop.
16. If entry into hazardous areas is required by the scenario, then drill participants will simulate the entry.
17. The TSC and EOF may discuss plant recovery and reentry activities following termination of the release.
18. Actual off-site siren and tone alert radio activation will be simulated.

B. These guidelines are specific to this scenario.

1. There will be pre-staging of licensee participants in:
   a. The Wolf Creek Generating Station (WCGS) Simulator 30 minutes before the start of the drill.
   b. The Shift Supervisor's Conference Room, for Station Operators personnel only. They should be at the Operations Relief Area 30 minutes before the start of the drill. Their normal dispatch point is from the Control Room. This pre-staging reduces impact to normal Control Room activities and provides a central location for repair teams to be dispatched, prior to activation of the TSC.
   c. Public Information in Topeka (Information Clearinghouse, Media Center, and Phone Team). Team members should be in the State Defense Building (break room, lower level) by 08:30.

DRILL PARTICIPANTS

The following groups will participate as delineated below:

	WILL PARTICIPATE	WILL NOT PARTICIPATE	WILL PARTICIPATE	WILL NOT PARTICIPATE
WOLF CREEK FACILITIES / ORGANIZATIONS	5/21 Team 'B'	5/21 Team 'B'

Coffey County Ambulance		*		

NOTE: At any point, the recipient of an off site notification may request the termination of further notifications.

CONTROLLER ASSIGNMENTS AND INSTRUCTIONS

GENERAL INSTRUCTIONS

A. Controllers should report to their assigned facility no later than 0730.

B. **Controllers will ensure players do not use radios in Area 5 or other designated (posted) areas.**

C. Controllers must comply with instructions from the Drill Lead Controller.

D. Prior to the commencement of drill activities, controllers shall test communications and synchronize watches with the Drill Lead Controller.

E. Controller messages must be approved by the Facility Lead Controller prior to issuance.

F. Special messages and messages designated as contingency must be approved by the Drill Lead Controller prior to issuance.

G. Information for scenario events or data may only be provided when earned by the appropriate players.

H. Scenario information or data must not be provided prior to the time noted on the message or data sheets.

I. Maintain a log of major player actions, scenario-driven activities, alterations in scenario sequence of events, and other pertinent data or information. IF also acting as an evaluator, THEN include a list of deficiencies, weaknesses, improvement items and other observations.

Communications

A. Gaitronics will be operable from the simulator. Channel 5 shall be used for drill communications, and the phrase "This is a drill" MUST be used to distinguish drill play from normal operating traffic.

B. Appropriate channels will be utilized on the 900 mHz radio system.

Drill Lead Controller shall:

A. Provide for the overall management and technical direction of the controller team.

B. Monitor the drill to ensure that the scenario progresses in an orderly and coordinated manner.

C. Coordinate the issuance of drill messages with the other members of the controller team.

D. Approve any changes requiring an alteration in the schedule or sequence of events in the scenario.

Note: Only the Drill Lead Controller may authorize such activities as described below.

E. Temporarily freeze play after simulator failure. The Drill Lead Controller will communicate with all Lead Facility Controllers to ensure that play resumes at the same time, with the appropriate data. The Drill Lead Controller shall determine if further play is simulator or hard-copy driven.

F. The Drill Lead Controller may assemble evaluators, facility lead controllers, and facility lead players to conduct an overall drill critique, the day after the drill. The purpose of such a meeting is to capture timeline information, issues for resolution, owners for these issues, strengths, and determine whether drill objectives were met. A meeting of this type is not normally conducted after training drills.

Facility Lead Controllers shall:

A. Coordinate with the Drill Lead Controller for issuance of drill messages within the assigned facility and recovery from a simulator failure.

B. Monitor data being received and issued from the facility to ensure consistency with the scenario.

C. Maintain a log of major player actions, scenario-driven activities, alterations in scenario sequence of events, and other pertinent data or information. IF also acting as an evaluator, THEN include a list of deficiencies, weaknesses, improvement items and other observations.

D. Supervise the facility support controllers.

E. Collect all logs and paperwork generated by facility support controllers and players.

F. Ensure that all controllers, evaluators and players are prepared to attend a player's critique immediately following the drill. A critique shall be held in each facility. Facility Leads shall request that the players spend approximately 15 - 30 minutes after the drill to identify and assign drill improvement issues, strengths, weaknesses and important timeline information.

G. Conduct a facility controllers critique after the player's critique. Important timeline information should be captured in this critique. The facility lead controller will collect issues and assign ownership of those issues.

H. Participate in the drill critique. The facility lead controller should bring issues and owners of these issues to the overall drill critique. Important timeline information should also be brought to this meeting. If there is no overall drill critique, the facility lead controllers shall forward an electronic summary of their performance report(s), and hard copies of all drill generated forms.

PUBLIC INFORMATION CONTROLLERS

Phone Team Controllers

A. Call 1-800-354-3831 (Topeka) to ask the phone team questions. Prepare questions in advance, or develop questions during the play using scenario information, information you receive from the phone team, or from statements made during news conferences.

B. Should challenge the phone team to ensure that they understand:
   1. How individuals with special needs would be identified and addressed during an evacuation.
   2. How school being in session would effect the need to evacuate a subzone
   3. How questions regarding employee injuries would be handled
   4. Sheltering requirements for people in subzones encouraged to "Shelter in place."

Media Controllers

A. Do not use detailed job-specific knowledge to ask questions or form assessments of the news conference. If you know that an answer provided is obviously incorrect or misleading, you need to note this in your log.

B. As a member of the media you have deadlines to meet and require a great deal of information in a timely manner. Be sure to portray this sense of urgency during news conferences. If you're not receiving information needed to write your story or complete your newscast, let that be known. Ask questions. Be as polite as you perceive media would be in this situation--some are very polite, others considerably, but be aggressive enough to get what you need to complete your job.

C. When you are not in a news conference or writing a story, try to find other information by pressing the Media Liaison and calling the phone team with questions. You may start to call 1-800-354-3831 once the Topeka Phone Team is activated.

---

[1] Classifications and Protective Actions should be determined within 15 minutes of initiating event identification (i.e. receipt of data on equipment status, completion of offsite dose assessment). The ERO may not always classify an event exactly the way the scenario specifies. This could be due to conservative decision-making, Emergency Manager judgment call, or a simulator driven scenario that has the potential for multiple 'forks'. Situations can arise in which assessment of classification opportunities is subjective due to deviation from the expected scenario path. In such cases, evaluators should document the rationale supporting their decision. Evaluators must determine if the classification was appropriate to the event as presented to the participants and in accordance with the approved emergency plan and implementing procedures.

Protective Action Recommendations (PAR) **(See Scenario Timeline, Page 18)**

Accountability

Completed within 30 minutes? (Y / N): _____ Maintained? (Y / N): _____

Communication

Number of times "Timeout" was used: _____ Failed to use "3-way communication: _____
Failed to Communicate data within facility: _____ Failed to Communicate data outside facility: _____

Consider: Timeliness and accuracy of data communicated. Communication to appropriate organizations.

Command and Control

Priorities are established? (Y / N) _____ Posted? (Y / N) _____
Number of facility briefings: _____ Number of briefings where "Priorities" are reviewed: _____
Number of management meetings: _____ 50.54(x) invoked? (Y / N) _____

Consider: Quality of briefings, Evaluation of data and priorities, Ability to delegate.

Number of Teams Dispatch

Search and Rescue: _____ Maintenance Repair: _____ Medical: _____ Survey: _____
Number of Individuals or Teams Dispatched (not originating from TSC/EOF): _____

Consider: Quality of team formation, briefing and team tracking.

Radiological Protection

Number of staff potentially overexposed: _____ Number of failures to maintain doses ALARA: _____

Consider: Deviations from normal Radiological practices, Timeliness of dose assessments, Assumptions made for dose assessments, Plume tracking success.

Public Information

No. of Approved News Statements: _____ No. of Rumors Identified: _____
No. of News Statements without an error: _____ No. of Rumors Answered in News Statements: _____

PHONE TEAM CONTROLLER FORM

Date _____ **Time Call Placed** _____ **Sequence #**_____

Evaluator:	**Representing: Citizen Media Other**
Phone # Called:	**Phone Team Member:**

Question:

Response:

OBSERVATIONS

Is the answer received accurate to the best of your knowledge?	YES	NO
If No - Comment:		
Is the person answering your questions courteous and helpful?	YES	NO
If No - Comment:		
Does the phone team member seem concerned about you?	YES	NO
Are the answers you get provided in a timely manner?	YES	NO
If No - Comment:		
If the phone team doesn't know an answer to a particular question, do they get back with you on it?	YES	NO
Do they speculate or give you their opinion of what they "think" may be happening or about to happen?	YES	NO
If Yes - Comment:		
If you call to ask a question relating to a rumor, do you get a timely response to the validity of the rumor?	YES	NO
If No - Comment:		
If you ask the same question of several phone team members or spokespersons at virtually the same time, do you receive virtually the same answer?	YES	NO
If No - Comment:		
Have you identified the phone team members' strengths and weaknesses on the Performance Report?	YES	NO
Other Comment(s):		

SCENARIO

Operational events will be conducted as written. Other events may vary from those written according to the actions of the players.

NARRATIVE SUMMARY

This sequence results in a release of radioactive materials, ensuring that conditions shall require an evacuation of down wind sectors.

INITIAL CONDITIONS

Initial conditions establish the plant is operating at 100% of full power, late in core life. Electrical demand in the area is heavy. 'A' Service Water pump is out of service for repair. Flux mapping is in progress. Per AP 19B-001, "FAILED FUEL ACTION PLAN", we are in Action Level 3. Current levels have been greater than FRI 4 for two days, and levels are continuing to increase. Because of this, the initial containment atmosphere has an elevated concentration of radioactivity. Therefore, the containment area radiation monitors have elevated readings. There is a management meeting scheduled for 1600 to discuss shutting down in order to perform a fuel inspection.

The Fuel Building Rollup door is stuck, fully open. The transfer canal is empty. HEV8585, Recycle Evaporator Feed Filter to Fuel Transfer Canal, is tagged out. Valve has been removed from the piping for repair on a bench.

Towards the end of refuel 12, workers above the area of the transfer tube had dropped material which landed on the transfer tube. There had been some trouble reinstalling the flange, but it was eventually installed. The subsequent inspection did not identify any faults.

SEQUENCE OF EVENTS

At 0800 the Radwaste Building truck bay area radiation monitor alarms (SDRE-07), reading in excess of 240 mR / Hr., then the Control Room is notified of a resin spill in the Radwaste Building. This results in the declaration of an ALERT.

At 0900 transformer XSL31 fails, causing 'B' & 'C' Service Water pumps to fail due to a loss of power, which leads to a reactor trip.

At 0915, transformer XNB01 suffers an internal fault, causing XNB01 to isolate. 'A' diesel generator starts and loads, but after several minutes it stops when its fuel strainer becomes clogged (~0920).

At 0930, PA00201 fails open. The component cooling water to regenerative heat removal isolation valve (EGHV102) fails closed, ensuring that there is no available core cooling after ECCS suction transfers to the containment sumps.

At 1000 an incore thimble tube fails, which, causes the reactor coolant system to begin losing inventory into containment. The initial leak rate is approximately 480 gpm. This results in the declaration of a Site Area Emergency.

At 1030, an accident involving a gasoline transport tanker occurs on Highway 75, beneath the bridge where I-35 crosses over. This forces a temporary closure of both highways.

At 1200 the integrity of the transfer tube fails. The RCS leak rate increases to 10,000 gpm. With the Fuel Building rollup door stuck open, there is an unfiltered release path to the public. This will require an evacuation of down wind populations out to 10 miles. This results in the declaration of a General Emergency.

There is no mitigation that will terminate the release until the plant is cooled to below 212 °F.

Environmental samples shall be collected and transported to the EOF.

The drill will be terminated at approximately 1400.

TIMELINE

TIME		CLASSIFICATION[2]	EVENT
0730	(H-00:30)		Initial conditions are provided to the Shift Manager.
0800	(H+00:00)		Drill activities begin.
0800	(H+00:00)	ALERT[3]	Resin spill in Radwaste Building. • SDRE reading > 240 mR / Hr
0900	(H+01:00)		XSL31 fails. • Reactor trip • B & C Service Water Pumps fail
0915	(H+01:15)		XNB01 fails
0920	(H+01:20)		'A' Diesel Generator fails
0930	(H+01:30)		PA00201 Fails • EGHV0102 fails closed.
1000	(H+02:00)	SAE[4]	Loss of reactor coolant boundary • SIS – Emergency boration begins
1030	(H+02:30)		Accident at Hwy 75 & 35 interferes with evacuation route
1200	(H+04:00)	GE[5]	Release radioactive materials to the public • Transfer tube boundary fails
1220	(H+04:20)		RCS activity begins to seriously trend upward • CHARMS also begins to seriously trend upward
~1330	(H+05:30)		Offsite teams collect environmental samples.
1400	(H+06:00)		Exercise is terminated.
1600	(H+08:00)		Critique completed.

[2] Times noted for emergency classification are based on the initiation of the causal event and do not reflect time required for event diagnosis. The actual time of classification could vary significantly. The ERO may not always classify an event exactly the way the scenario specifies. Situations can arise in which assessment of classification opportunities is subjective due to deviation from the expected scenario path. The actual subzones which are recommended to be evacuated could be significantly different, depending upon the assumptions used.

[3] An ALERT should be declared per the WCGS Emergency Plan due to the EAL-1, Radiological Effluent Release chart.
Sequence:
1-RER-1 No
1-RER-5 Yes, SDRE-07 reading in excess of 240 mR/Hr
1-RER-3 No
ALERT Alert

[4] It is expected that a Site Area Emergency will be declared when the loss of reactor coolant begins.
Sequence:
3-LRCB-1 Yes, Leak > 25 gpm
3-LRCB-2 Yes, Leak > 1 CCP, CTMT rad monitors offscale
3-LRCB-3 Yes, GTRE 59 / 60 >250 R/Hr
3-LRCB-4 No.
3-LRCB-8 No.
SAE

[5] It is expected that a General Emergency will be declared when the CHARMs EXCEEDS 2,500 R / Hr..
Sequence:
3-LRCB-1 Yes, Leak > 25 gpm
3-LRCB-2 Yes, Leak > 1 CCP, CTMT rad monitors offscale
3-LRCB-3 Yes, GTRE 59 / 60 >250 R/Hr
3-LRCB-4 No.
3-LRCB-8 Yes, GTRE 59 / 60 >2500 R/Hr
GENERAL EMERGENCY

Other Phone Numbers

Computer Operator Extension 5696

In order to make the multi-line phone work for the ENS or HPN control cells, the following directions should be used:

1. When a call comes into your incoming line (5206 for ENS, and 5209 for HPN), pick up the phone then push the button next to the appropriate number (There should be a flashing arrow in the LCD next to the button).
2. Answer the first caller, get his extension, then call him back from the correct outgoing line (5204 for ENS, and 5208 for HPN).
3. When the next person calls:
   a. push hold once
   b. push the button next to your incoming number
   c. get the caller's extension
   d. push your outgoing number (this will disconnect the incoming line)
   e. push conference once
   f. call the second caller
   g. push conference again - everyone should still be on the line.

You can repeat this as often as necessary to connect as many callers as you receive (it should not exceed 3 but could be less).

[6] Phone numbers normally expected to be used for drill purposes are in bold.

MESSAGE No: 1.
TYPE: Drill

THIS IS A DRILL

DO NOT initiate actions affecting normal plant operations.

TO: Facility Controllers

FROM: Facility Lead

TIME: 0730

NOTE:

During an evaluated exercise, Controllers shall limit player contact to only those occasions where appropriately earned data is being provided.

Coaching is not allowed during response activities associated with the NRC Performance Indicators or during an NRC evaluated exercise

MESSAGE:

DO:

Communicate throughout the controller organization. Over communicate!! You can't communicate too much. Communications are essential to effective drill control.

For Evaluated Exercises, indoctrinate the NRC and FEMA evaluators to the conditions of the scenario.

Ensure that the scenario drill sequence (i.e., time-line) is coordinated with the Simulator and with Facility Lead Controllers.

Monitor the data being received and released from the facility to ensure consistency with the scenario and inform the Drill Lead Controller of any discrepancies.

Any out-of sequence or unanticipated Controller intervention must be authorized.

Identify and resolve potential problems which might adversely affect the progress of the drill or exercise.

Coordinate with the Drill Lead Controller on the issuance of drill messages.

Ensure all message and mini-scenario assignments are clearly understood prior to commencing drill activities.

Consider actions that might be necessary in order to complete a smooth transition to using the paper data, if simulator fails.

If the level of energy within the facility begins to fade, discuss this observation with the facility manager so they can take command and

get the team motivated again. The intended outcome is to:

keep the drill moving and to keep people thinking and performing.

provide the Manager a chance to demonstrate command and control.

ensure that everyone demonstrates good 'gamesmanship.

Be attentive to player activities being particularly mindful of conditions and actions associated with classification, protective actions and notifications.

Be creative, the scenario cannot contain every detail. Be willing to fill the void. However, if you provide additional information, make sure that that information gets passed along to your facility lead controller. (For example, if there has been a steam line rupture, it would be acceptable to include information indicating that insulation has blown throughout the area)

Watch for snags. Your main function is to make sure that the drill proceeds in accordance with how the timeline describes the sequence of events. Players are allowed some freedom of play, but when player response deviates from how the sequence was predicted, then a decision will need to be made weather or not to intercede.

During drills, coach when necessary. Do not let learning opportunities escape.

Ask questions when you do not understand.

Use the Human Error Prevention Tools.

Be aware of nuclear and personnel safety and intervene if necessary.

Behave in a professional manner.

Maintain comprehensive logs of major activities, paying particular attention to activities associated with risk significant issues.

Coach during the critique to refocus upon the Critique Guideline and to encourage improved presentation.

Ensure that a facility critique is conducted and facilitated by the facility lead player. Call a "TIME-OUT" if the critique does not establish or maintain the appropriate self-critical perspective. Consider giving a short break to allow for refocus.

Provide the opportunity to players to self-identify their own performance errors, but be ready to provide the information if necessary without hesitancy. Do so in a forthright manner.

Collect all logs and paperwork generated by controllers in facility.

Ensure inventories are initiated and completed by players.

Perform a walk-through of the facility and ensure that all equipment is returned to normal status.

Note: Do not turn the equipment off yourself. Ensure the appropriate players are notified to do this. This is a performance issue that should be documented.

DO NOT:

Make up data to fill a void, do not make up conditions outside of the scenario guidelines. (Using the example of the steam line rupture, it would be inappropriate to indicate that a near by electrical panel shows signs of being shorted out.)

Hold conversations about observed player actions or upcoming scenario events with other controllers, when within earshot of a player.

Allow observers to become involved in play or the response processes

Fail to communicate with the controller organization. If you didn't ask the question or provide the information, then you did not do your job.

During the Evaluated Exercise

KEEP THE SCENARIO CONFIDENTIAL!

DO NOT COACH NRC EVALUATED ACTIVITIES EITHER VERBALLY or WITH BODY LANGUAGE.

Note of exception to our usual exercise practices: FEMA has an different viewpoint than the NRC regarding errors made during exercise performance. The NRC does not allow coaching during an evaluated exercise. FEMA's evaluation criteria provides for the opportunity of on-the-spot-correction. FEMA views an uncorrected error as a missed learning opportunity. If you are controlling in a FEMA evaluation area involving Non-Wolf Creek emergency response personnel and identify a problem, approach the FEMA evaluator, state that you recognize a problem and ask if on-the-spot correction and re-demonstration will be allowed. If it is an area evaluated by both FEMA and the NRC, it is not clear-cut. In this latter instance, you may discuss the situation with both agencies' evaluators.

THIS IS A DRILL

MESSAGE No: 2.
TYPE: DRILL

THIS IS A DRILL

DO NOT initiate actions affecting normal plant operations.

TO: Shift Manager

FROM: CR Lead

TIME: 0730

NOTE:

1. DO NOT pass this message without the consent of the Drill Lead Controller.

2. Ensure that all control room personnel are aware of the control cell phone numbers to be used during this drill. These phone numbers are located on page 21.

MESSAGE: Brief the Shift Manager on the initial conditions on pages 18 through 32 of this scenario.

Meteorological

It is partly cloudy with winds out of the East. There is a possibility for rain later in the day.

Ensure the Chemistry Technician is aware of the initial conditions on pages 18 and 32 of this scenario.

THIS IS A DRILL

MESSAGE No: 3.
TYPE: DRILL

THIS IS A DRILL

DO NOT initiate actions affecting normal plant operations.

TO: Plant Population

FROM: Drill Lead

TIME: 0745

NOTE: Dial 7920, *22

MESSAGE: Attention in the plant, attention in the plant.

An E-Plan drill is to be conducted today which shall end about 1400.
Please reserve Gai-tronics line 5 for drill communications.

Attention in the plant, attention in the plant.

THIS IS A DRILL

Mini Scenario - 1
(0900) Auxiliary Transformer XSL31 (1SL006E) Fails

SCENARIO OVERVIEW:

A line-to-ground fault occurs inside the "C" phase bushing on the 13.8KV side of transformer XSL31. Site personnel in the area notify the Control Room that they can see smoke coming from the transformer. The ground fault causes circuit breaker 13-20 (1SL003E1320) to trip.

INDICATIONS IN THE CONTROL ROOM:

Computer Points:
- SLD009AF (SLU109AF), "TRANSFORMER SL31", status changes from 1 to 0.
- SLD010AB (SLE110AB), "4.16 KV BUS SL31 VOLTAGE", status changes from 1 to 0.
- SLD010AD (SLU110AD), "4.16 KV BUS SL31", status changes from 1 to 0.

Alarms:
- SLUA1010A, "SL31 BUS TROUBLE", comes in on window D010.

Indications:
- None.

OBSERVATIONS: (To be provided time coincident to examining the referenced location)

Local Alarms:
- None.

Visual Cues:
- There are soot and burn marks around the cover of the high voltage compartment on the north side of the transformer.

FIELD OBSERVATIONS:

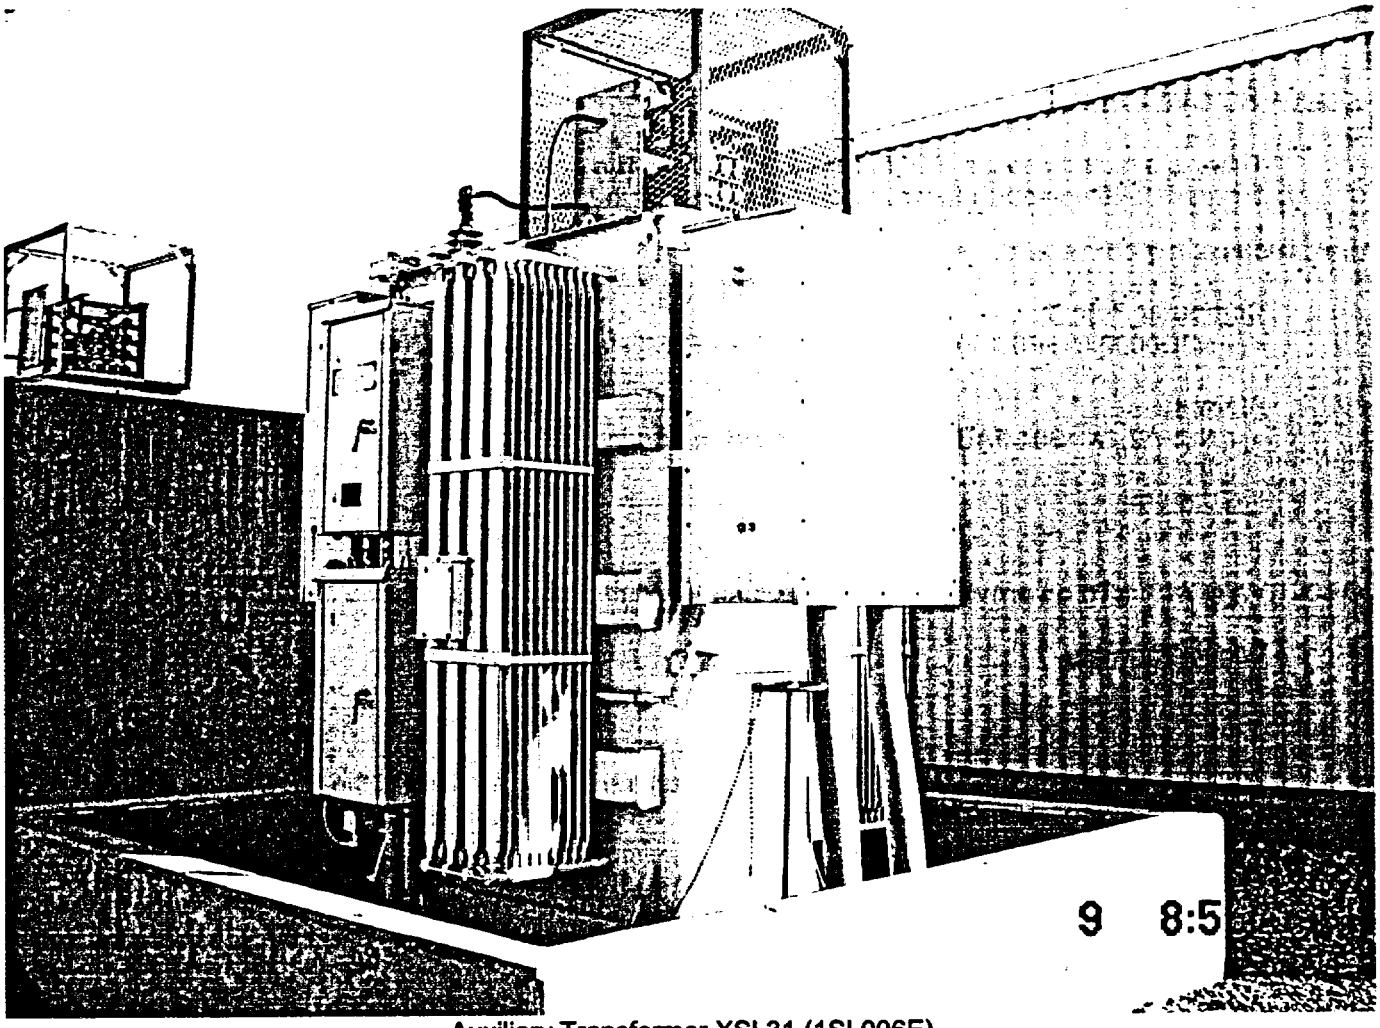
- Breaker Cubicle 1SL003E1320 (Bus SL3, Cubicle 1): The target on the "C" phase, 250/251 relay is set.
- Breaker Cubicle 1SL003E1320 (Bus SL3, Cubicle 1): 286 lockout relay, the mechanical target on the escutcheon plate assembly indicates yellow.
- Breaker Cubicle 1SL003E1320 (Bus SL3, Cubicle 1): Red light is off, Green light is on, Blue light is off.

POSSIBLE REPAIR STRATEGIES:

- Inspection of the transformer reveals the "C" phase high voltage bushing is damaged and burned. The bushing must be replaced.
- The transformer must be inspected and tested to determine whether it incurred any other damage.
- The inspections, tests and bushing replacement will take more than one day. Transformer XSL31 will be out of service for the remainder of the drill.

CONTINGENCIES:

- If attempts are made to energize bus SL31 (1SL009E) by closing breaker 4-18 (1SL010E418), they will be unsuccessful. Breaker 4-18 fails to close due to an open circuit in the 152X spring release coil.



Auxiliary Transformer XSL31 (1SL006E)

NOTE: This equipment should not be returned to service until the Simulator Control Booth Operator has been contacted at extension 5112 or via gaitronics.

col

Mini Scenario – 2
(0915) ESF Transformer XNB01 Internal Fault

SCENARIO OVERVIEW:

There is a fault inside the ESF transformer XNB01. The cause is unknown. The switchyard circuit breaker 13-48 immediately trips following the XNB01 internal fault.

INDICATIONS IN THE CONTROL ROOM:

Computer Points:
- NBD0002 (NBP0002), "XNB01 FAULT PRESS", status changes from 0 to 1.

Alarms:
- NBPA2, "XNB01 FAULT PRESS", comes in on window C019.

Indications:
- None.

OBSERVATIONS: (To be provided time coincident to examining the referenced location)

Local Alarms:
- None.

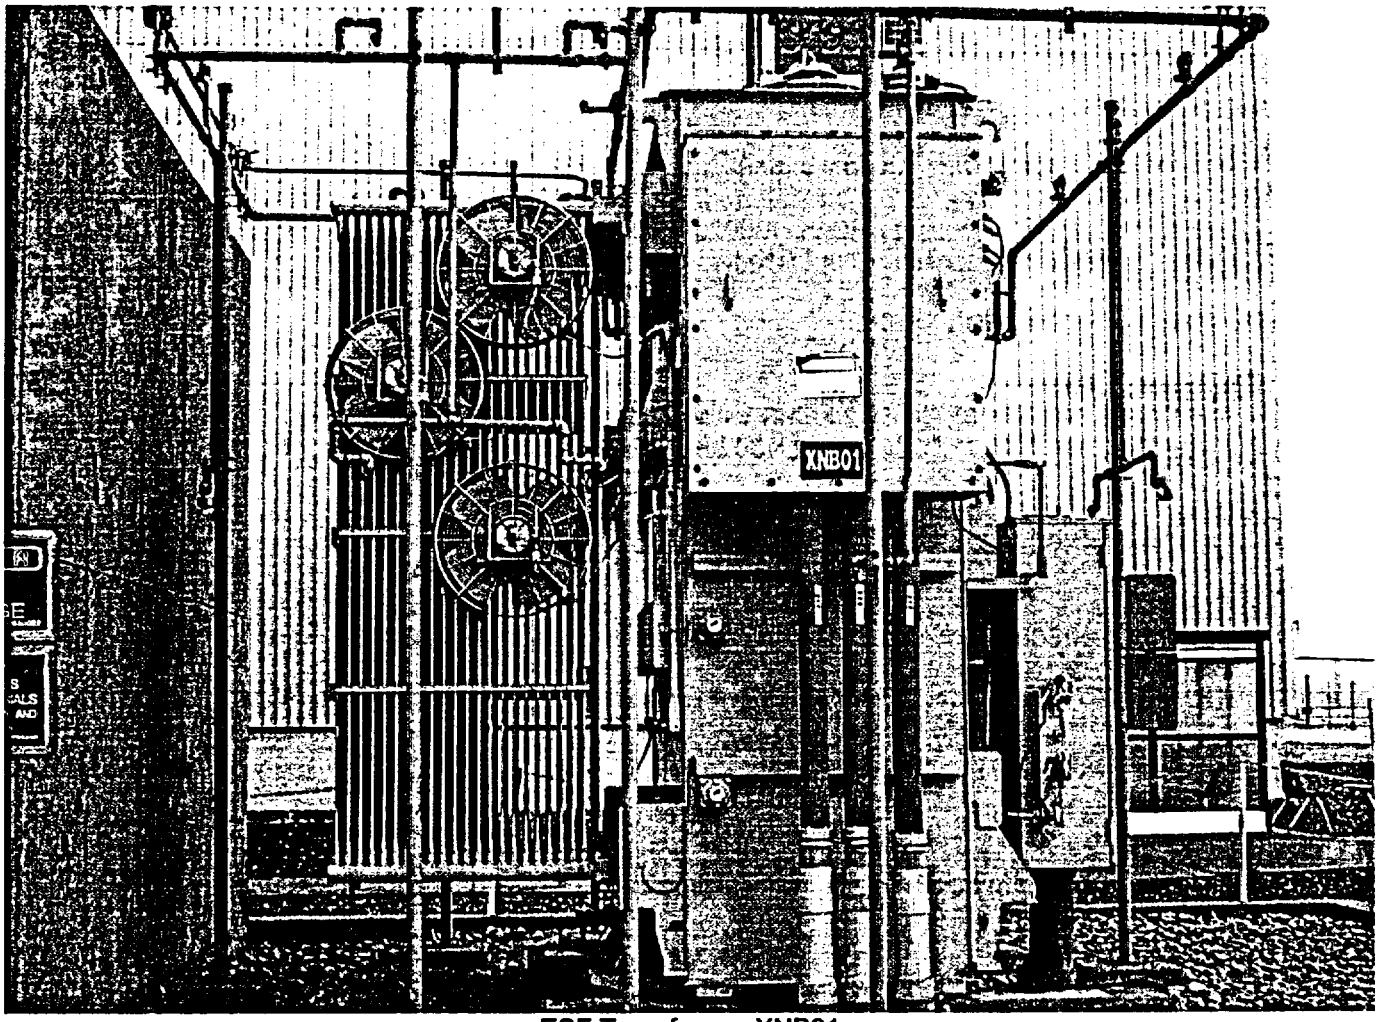
Visual Cues
- There is soot and oil visible around the pressure relief device on top of the transformer.
- The yellow operation indicator pin is visible in the pressure relief device on top of the transformer.

FIELD OBSERVATIONS:

- The annunciator located inside the terminal box on the transformer indicates that the pressure relief device (63PR) has been actuated.

POSSIBLE REPAIR STRATEGIES:

- The internal damage is severe and will require the transformer to be sent off site to be rebuilt. The transformer will be out of service for the balance of the drill.



ESF Transformer XNB01

NOTE: This equipment should not be returned to service until the Simulator Control Booth Operator has been contacted at extension 5112 or via gaitronics.

Mini Scenario - 3
(0930) 13.8 KV Circuit Breaker PA00201 Fails

SCENARIO OVERVIEW:

Circuit breaker PA00201 trips due to a short-circuited current transformer on the B phase in the breaker cubicle. The short-circuited current transformer causes the 250-251/T2 over-current relay for the B phase to pickup, the 286-1/T2 lockout relay in NB00209 picks up and breaker PA00201 trips. Circuit breaker PA00201 cannot be re-closed until the failed current transformer is replaced.

INDICATIONS IN THE CONTROL ROOM:

Computer Points:
- NBD0006 (NBQ0006), "XNB02 XFMR", status changes from 1 to 0.
- NBE0012 (NBQ0012), "ESF XFMR NB02 BKR PA0201", status changes from 1 to 0.

Alarms:
- NBQA6, "XNB02 XFMR LOCKOUT", comes in on window A022.

Indications:
- Switch NBHIS0001 (located on RL016): Red light is off, Green light is on, Amber light is on.

OBSERVATIONS: (To be provided time coincident to examining the referenced location)

Local Alarms:
- None.

Visual Cues
- There is an odor of burned electrical insulation around switchgear cubicle PA00201.

FIELD OBSERVATIONS:

- On the door of the PA00201 switchgear cubicle, the target is set on the 250-251/T2 over-current relay for the B phase.

POSSIBLE REPAIR STRATEGIES:

- Troubleshooting reveals that the B phase current transformer, for the 250-251/T2 over-current relay in PA00201, is short-circuited. The failed current transformer must be replaced.

NOTE: This equipment should not be returned to service until the Simulator Control Booth Operator has been contacted at extension 5112 or via gaitronics.

Mini Scenario - 4
'A' D/G Fuel Strainer Failure

SCENARIO OVERVIEW:

After the 0915 event, the 'A' diesel generator starts and loads, but shuts down after running for ~ 5 minutes. The shut down was caused by lack of fuel reaching the Emergency D/G. Investigation revealed that the Differential Pressure PDIH0010A across the fuel strainer KJBS0001A indicated very high, indicating a blockage.

INDICATIONS IN THE CONTROL ROOM:

Computer Points:
- KJP0010 D/G Fuel Oil Strainer Diff Pressure

Alarms:
- KJPDAH0010 Amber light located on local panel KJ121 is on.

Indications:
- KJPDI0010 shows more than 5 PSID.

OBSERVATIONS: (To be provided time coincident to examining the referenced location)

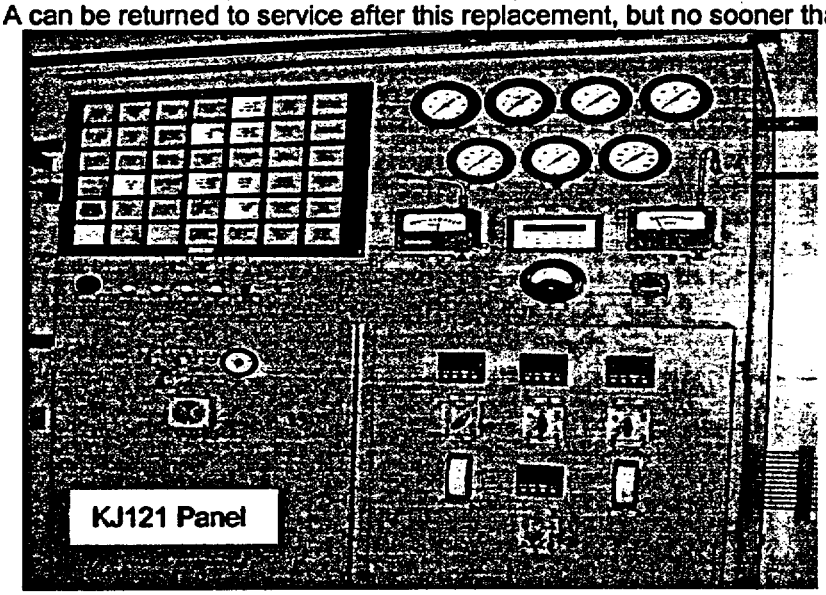
Local Alarms:
- None.

Visual Cues
- The Scenario will allow the EDG A to be returned to service after the Fuel Strainer blockage is corrected.

FIELD OBSERVATIONS:
- Differential Pressure across the strainer indicated very high (DP > 5 PSID).
- The strainers removed had debris and sludge buildup causing blockage.

POSSIBLE REPAIR STRATEGIES:

- Remove the strainers and replace them as necessary. The replacement takes about 15 minutes. The EDG A can be returned to service after this replacement, but no sooner than 1000.



NOTE: This equipment should not be returned to service until the Simulator Control Booth Operator has been contacted at extension 5112 or via Gaitronics.

Mini Scenario - 5
(At 1200)Fuel Building Roll-up Door Failure

SCENARIO OVERVIEW:

The Fuel Building Rollup Door was opened to allow a truck to enter. The operator's attempt to close the door fails. Initial investigation revealed that the rollup door motor bearings had failed. Any attempt to close the door will fail since the motor bearings and the guide was damaged. The door could not be lowered manually. The crew tried to remove the truck out of the Fuel Building; however, the truck breaks down in the doorway making it impossible to block the door with any temporary means (plastic curtains). This incident will allow the unfiltered release path to outside/ public.

INDICATIONS IN THE CONTROL ROOM:

Computer Points:
- None

Alarms:
- None

Indications:
- None

OBSERVATIONS: (To be provided time coincident to examining the referenced location)

Local Alarms:
- None.

Visual Cues
- None

FIELD OBSERVATIONS:

- The Rollup door is stuck open and it cannot be closed
- The truck is in the door way and employees had to leave due to high radiation in the area.

POSSIBLE REPAIR STRATEGIES:

- Pull the truck out and try to close the door manually, however, they cannot get near the door since the radiation levels are very high. Therefore, every effort will fail to close the door and the door will remain open during the entire drill period.

NOTE: This equipment should not be returned to service until the Simulator Control Booth Operator has been contacted at extension 5112 or via gaitronics.

Mini Scenario - 6

Public Information Rumors & Phone Team Rumor Tracking Log

(Check with Lead Public Information Controller before starting phone calls.)

Location:_____ **Controller:** _____ **Date:** _____ **Information Disseminated By:**

	Rumor / Issue / Concern	First Call	Time Ident.	Time Resolved	Ph Team (Time)	# of News Statement	News Conf.
1	My brother called and said they found a bunch of dead birds at the environmental education center near the plant. Was this because of the radiation from the plant?	~1020					
2	We heard on the scanner that there was an accident at the plant. They say it's because the fuel rods punched a hole in the reactor building.	~1045					
3	I heard on TV that What's happening at Wolf Creek is just like what happened to Chernobyl and all of Coffey County is going to have to be evacuated forever.	~1115					
4	What are all these Army guys doing in town? I saw a bunch of soldiers at the Jump Start station. Are they going to Wolf Creek?	~1145					
5	I was over at The Diner this morning and folks were talking about the problems at the plant. They say that the plant's security is on strike and no one is protecting the plant.	~1230					
6	I heard on the TV that Senator Brownback is coming to the plant to tour the damage. How can he get in when the whole county has been evacuated?	~1255					

Sample questions from the public (These are examples of questions. Prepare questions in advance, or make up questions as the drill progresses.)

⇒ My alert radio keeps going off but there is only static. What's going on out there? Why won't my radio work right?

⇒ A man came to my house selling cleaning products, rubber gloves and some kind of salt pills. He said I need them to clean up the contamination from the accident and if I don't take the pills my hair will fall out and my skin will wrinkle. Should I buy this stuff or will the plant provide it to me? If he won't take a check, who will cash one for me so I can pay him?

⇒ I hear sirens outside. Is this another test?

⇒ We run a goat diary in southwest Coffey County. Is the situation going to affect our herd or milk production? What should I do about feed for the goats? This is my livelihood. I have two kids to put through college!

⇒ If I'm told to evacuate, who's going to pay for food and clothing if we aren't given time to pack properly?

⇒ My son is on a school trip at the Coffey County Museum in Burlington. I don't know how to contact him. Can you help?

Sample questions from the Media

⇒ "This is the *Kansas City Star*. We want to interview your new CEO about this event. What time can we do this interview and photo shoot? We also want to take pictures of the damaged equipment."

⇒ "This is KWCH—We understand the Project on Government Oversight (POGO) published a survey of Security guards at US nuclear power plants. The survey reports security forces are under-manned, under-trained, under-equipped, under paid and unsure of themselves. Were your security guards part of this survey? How do they feel about what's being reported about them Is it true that Wolf Creek's Security force has not been tested by the NRC since 1998?

Phone Team Member Evaluation Guidelines / Observations to consider: What image does the phone team member provide? The projected image should be that Wolf Creek is safe, responsible, organized, concerned about its employees and the public.

- Does the responding person seem concerned about you, your questions and providing accurate information in a timely manner?
- Is the answer received accurate?
- Is the person answering your questions courteous and helpful?
- If the respondent can't answer a question, do they call back or do they speculate on what they "think" may, or is about, to happen?
- If you call to ask a question relating to a rumor, do you get a timely response to the validity of the rumor?
- When several phone team members or POIs are asked the same question of at about the same time, do you receive the same answer?

What do you feel are the phone team members' strengths and weaknesses?

SCENARIO DATA
PLANT DATA

RADIATION

In-plant survey map data is provided on the following pages. Data is provided, as appropriate, for each floor level of the auxiliary, fuel and diesel generator and turbine buildings. Scenario data IS NOT provided if readings are to be used as found in the plant. If a map is provided, the data is designated by a letter and corresponds to zones, as marked on the map. Radiation data is provided in the units indicated.

Radiation levels indicated with a '<' sign indicate areas where readings will generally be below the lower level of detectability for instruments used in determining radiation levels.

Area radiation monitors are designated on the maps as the monitor number preceded by an "SD". The data for these monitors is provided on page **151**, titled 'AREA RADIATION MONITORS (ARAD2)'.

All radiation levels in the following buildings are as indicated by actual meter readings:

- **RADWASTE BUILDING**
- **CONTAINMENT**

2000' RADWASTE - TRUCK BAY

NOTE: 1. Affected subzones are based on the constructed sequence of this scenario. MAP - 250 or 06-006 Att. A

2. Green reflects the additional zones affected by a 4 Hr. release, a value often used to assume time to cooldown / terminate the release. Other assumptions may result in a variance in affected subzones.
3. The zones in red indicates that additional subzones which EPP 06-006 Attachment A identifies as being affected.

NOTE: 1. Affected subzones are based on the constructed sequence of this scenario.

2. Green reflects the additional zones affected by a 4 Hr. release, a value often used to assume time to cooldown / terminate the release. Other assumptions may result in a variance in affected subzones.
3. The zones in red indicates that additional subzones which EPP 06-006 Attachment A identifies as being affected.

NOTE: 1. Affected subzones are based on the constructed sequence of this scenario.

2. Green reflects the additional zones affected by a 4 Hr. release, a value often used to assume time to cooldown / terminate the release. Other assumptions may result in a variance in affected subzones.
3. The zones in red indicates that additional subzones which EPP 06-006 Attachment A identifies as being affected.

EDCP (per Scenario / 4Hr)

CTR	W1
CCL	SW-2
JRR	W-2
SW1	

BACKGROUND = 40 CPM

- FIELD TEAM DATA
- CALCULATED RESULTS

NOTE: 1. Affected subzones are based on the constructed sequence of this scenario.

2. Green reflects the additional zones affected by a 4 Hr. release, a value often used to assume time to cooldown / terminate the release. Other assumptions may result in a variance in affected subzones.
3. The zones in red indicates that additional subzones which EPP 06-006 Attachment A identifies as being affected.
