SUBJECT: NRC INSPECTION REPORT 50-382/93-14

This refers to the inspection conducted by Messrs. C. J. Paulk and W. M. McNeill, and Ms. P. A. Goldberg of this office and Mr. D. L. Wigginton of the Office of Nuclear Reactor Regulation on April 26 through May 14, 1993. The inspection included a review of activities authorized for your Waterford 3 Steam Electric Station facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress. The results of this inspection are documented on page 1, in the enclosed report.

Two unresolved items were identified. The first concerned the potential for operation outside of design basis because the setpoints for the pressurizer and steam generator code safety valves were found during surveillance testing to be outside the Technical Specifications allowed tolerances (Section 3.3.2). The second concern was reportability of the out-of-specification setpoints (Section 3.3.2).

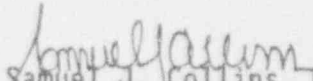

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.
