1858-9.

Legislative Assembly.

NEW SOUTH WALES.

DR. LEICHHARDT.

(PAPERS RELATIVE TO EXPEDITION IN SEARCH OF.)

Ordered by the Legislative Assembly to be Printed, 7 April, 1859.

A. C. GREGORY, Esq., to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Sydney, 13 December, 1858.

SIR,

I have the honor to transmit maps of the route of the late expedition in search of traces of Dr. Leichhardt and party.

In the construction of these maps the latitudes of sixty-six stations at nearly equal intervals on the line of route have been carefully observed, and thus the latitudes may be confidently relied on. The longitudes have been deduced from compass bearings between the parallels of latitude observed,—the variation of the needle being corrected by frequent amplitudes.

The meteorological observations during the expedition are embodied in the accompanying register of the temperature, &c., omitting the barometric pressure, as the varying heights of the stations of observation render them of no value, besides the determination of elevations by comparison with the recorded readings of the barometer at stations, the elevations of which are known as at Adelaide, Melbourne, Parramatta, and Cape Morcton, and having prepared a diagram of these observations for this purpose, I append it to this register.

Not having yet received the necessary barometrical data from Adelaide for the months of May and June, the diagram section shewing the altitudes of the country on the route of the expedition cannot yet be completed, but will be transmitted at the earliest possible date.

The botanical specimens collected by the expedition having been arranged, and a list prepared by Dr. Mueller, the Government Botanist of Victoria, I transmit the same,—the specimens having been labelled and transferred to the Director of the Botanic Gardens.

The few geological specimens collected have been deposited in the Sydney Museum.

I have, &c.,

A. C. GREGORY.

THE HONORABLE

THE SECRETARY FOR LANDS

AND PUBLIC WORKS,

&c., &c., &c.

The observed readings of the barometer are omitted, as the varying heights of the stations of observation render them only useful for the determination of differences of elevation, and the results are embodied in the diagram section accompanying the maps.

The attached diagram of the comparative variations of the barometer at Adelaide, Melbourne, Parramatta, and Cape Moreton, has been compiled from the official Meteorological Registers kept at the respective places.

The observed temperature at sunrise is invariably the minimum temperature for each day.

A. C. GREGORY.
13th December, 1858.

ENUMERATION OF PLANTS,

COLLECTED BY A. C. GREGORY, ESQ., ALONG AND NEAR COOPER'S RIVER AND ITS
TRIBUTARIES, IN SUB-CENTRAL AUSTRALIA,

BY FERDINAND MUELLER, M.D., PH.D.,
GOV. BOTANIST OF VICTORIA.

CRUCIFERÆ.

BLENNODIA CANESCENS. *R. Br.* in Sturt's Central Australia, vol. II. App. p. 67.

The specimens collected by Mr. Gregory constitute a variety with broad-toothed leaves.

Blennodia lasiocarpa. *Ferd. Mueller* in Transact. Phil. Soc. Vict., vol. I. p. 100.

Like the preceding species, an annual herb.

CAPPARIDEÆ.

CAPPARIS SP.

A climbing, thorny, velvety species, with small oblong leaves; in absence of flowers and fruit not specifically to be defined. Besides *Capparis Mitchellii* no other plant of this order is hitherto found within the boundaries of the Colony of South Australia, whilst in Australia Felix, Tasmania, New Zealand, and at least the southern portion of Western Australia, *Capparideæ* are entirely wanting. The species are extremely variable, and their characteristics, as hitherto given, must in many instances be remodelled.

VIOLARINÆ.

JONIDIUM SP.

The only Australian species with orange flowers; it occurs also throughout the greater part of tropical and eastern sub-tropical Australia.

SAPINDACEÆ.

APOPHYLLUM ANOMALUM. *Ferd. Mueller* in Hooker's Kew Miscell., 1857, p. 307.

Mr. Gregory's specimens are destitute both of flowers and fruits, but seem identical with those of the Brigalow Scrub of East Australia.

ZYGOPHYLLÆ.

ZYGOPHYLLUM BILLARDIERII. *D. C. Prodr.*, I. 705.

A variety with oblong, linear leaves, and remarkably minute flowers, without a full series of intermediate forms, which I accumulated in various parts of Southern Australia. It would be impossible to identify the desert plant with the broad-leaved, large-flowering typical state of this species which ornaments occasionally our sandy and rocky shores. No *Zygophylleæ* has hitherto been found in Australia within the tropic.

PHYTOLACCEÆ.

GYROSTEMON PUNGENS. *Lindl.* in Mitch. Three Exped., II. 121.

This rare plant has been found previously only, and very sparingly, towards the junction of the Murray and Darling Rivers, and on the western base of Flinders' Range. The male flowers are unknown.

MALVACEÆ.

SIDA TUBULOSA. *All. Cunn. ex Hook.* in Mitch. Trop. Australia, 390.

This *Sida* extends, like the following, from Flinders' Range to the eastern tropical interior, and assumes many different forms, which might easily be taken for distinct species.

SIDA DIPLOTRICHA. *Ferd. Mueller* in Linnaea, XXV. 380.

MALVA

MALVA BRACHYSTACHYA. *Ferd. Mueller* in *Linnaea*, XXV. 378.

Throughout the whole of tropical and sub-tropical Australia, as far as 31° S. Possibly to be combined with the American *Malva spicata*, L., since it forms many varieties in leaves indument and number of carpels.

HIBISCUS TRIONUM. *L. sp. pl.*, 981.

The locality from whence Mr. Gregory obtained his specimens,—“bed of dry lagoons on Cooper’s Creek”—seem to be inland the southernmost of this species in Australia. Three other *Hibisci*, including the West Australian *Hibiscus (Fugosia) hakeaefolia*, occur on Spencer’s Gulf and Lake Torrens; none however reaches apparently the latitudes of the Colony of Victoria.

GERANIACEÆ.

ERODIUM CYGNORUM. *Nees* in *Lehm Plant Preiss* I. p. 162.

Almost a universal plant of extra Tropical Australia, although scarcely crossing the circle of Capricorn.

FRANKENIACEÆ.

FRANKENIA PAUCIFLORA. *D. C. Prodr.* I. 350.

F. serpillifolia. *Lindl.* in *Mitch. Trop. Austr.* 305.

F. scabra. *Lindl.* l. c.

F. fruticulosa. *Nees.* in *Lehm pl. Preiss.* I. 249, sec. Alph. D. C., in *Linnaea* XXV. p. 575.

The specimens from Cooper’s River belong to the broad-leaved form of this widely diffused, and, therefore, variable plant.

CARYOPHYLLEÆ.

GLINUS LOTOIDES *Loeffl. iter Hisp.* 145.

Reaches on the Murray River its southern limit.

ONAGREÆ.

JUSSIAEA REPENS. *L. mant.* 381.

Throughout the whole of Tropical and Eastern Australia, as far south as the Murray tributaries and Gipps Land.

LYTHRACEÆ.

AMMANNIA MULTIFLORA. *Roxb. fl Indie* I. 447.

From the Murray River to North and North-west Australia.

LEGUMINOSÆ.

ACACIA SALICINA. *Lindl.* in *Mitch. Three Exp.* II. 20.

ACACIA ANEURA. *Ferd. Mueller*, sec. *Benth.* in *Linnaea* XXVI. p. 627

Spikes about 1’ long, 2½” thick; sepals free, narrow spatulate, fringed, half as long as the smooth 5-cleft corolla. A shrub Mr. Gregory found on stony places, an allied and perhaps undescribed species, forming a tall tree, with curly bark, dark wood, and leaves sometimes fully 10’; but of this, and of another arborescent Acacia, no pods were obtainable, without which the species of this large genus cannot be clearly distinguished.

CASSIA DESOLATA. *Ferd. Mueller* in *Linnaea* XXV. p. 389.

CASSIA EREMOPHILA. *All. Cunn. sec. R. Br.* in *Sturt’s Central Australia*, II App. p. 87.

A variety with long narrow leaflets.

CROTOLARIA EBEMAEA. *Ferd. Mueller.*

Erect; branches terete, without furrows, as well as the flowerstalks thinly grey, tomentose and slightly silky; leaves on long petiols, with one, rarely with three leaflets; lateral leaflets extremely small; terminal one oblong, slightly silky tomentose, whitish grey, without dots; stipules, very small, or obliterated; racemes terminal, with many somewhat remote yellow flowers, pedicels hardly as long as the calyx, but much longer than the linear-lanceolate bracts; bracteoles very small, lanceolate subulate; teeth of the 5-cleft, silky calyx deltoid, lanceolate, almost equal; vexillum, three times longer than

the calyx, but slightly surpassing the length of the keel and wings heartshaped, nearly glabrous, with callous base; keel below as well as the unguis of the vexillum densely ciliated; style, above the middle in front fringed, germen sessile, oblong, silky.

On Cooper's River.—*A. C. Gregory*.

Seemingly a shrubby species.

Leafstalks $\frac{3}{4}$ –1" long grey; terminal leaflets 1–1 $\frac{1}{2}$ " long; 2–4" broad, lateral ones only; 1–1 $\frac{1}{2}$ " long, often absent; calyx, hardly longer than 2"; corolla, $\frac{1}{2}$ " long; wings, ovate; carina, gradually pointed; pod, unknown. It differs from *C. Mitchellii*, in its indument, longer leafstalks, narrower leaflets, smaller stipules, longer flowers, &c., from *C. Sturtii*, in the form of the leaflets, three times smaller flowers, cordate vexillum; from *C. retusa*, in its tomentum, hardly angular branches, neither dotted leaflets nor sessile leaves, and from *C. dissitiflora*, to which it approaches nearest, in its imperfect silk, obliterated lateral leaflets, larger flowers, and perhaps also in its fruit. The occasional development of small lateral leaflets in this remarkable plant, together with the articulation of the petiole, prove sufficiently* that the simple leaves in *Crotolaria* are to be regarded as compound ones reduced to a solitary leaflet. In all the Australian species, amounting to 14, and in those from China, both Indies, and South Africa, which I examined, I observed dimorphous anthers, which seem to offer an essential characteristic of the genus.

PSORALEA PATENS. *Lindl.* in *Mitch. Three Exped.*

P. Australasica. *Schlecht.* *Linnaea*, XX p. 670

P. eriantha. *Benth.* in *Mitch. Trop. Austr.* p. 131.

INDIGOFERA LASIANTHA. *Ferd. Mueller.*

Shrubby grey silky, tomentose; branches, terete without furrows; leaves, with generally 4–5, rarer 2–3 pairs of cuneate, or cordate, obovate *subsessile leaflets*; stipules, subulate recurved; racemes spicate, densely many flowered, somewhat longer than the leaves; bracts, linear-lanceolate; teeth of the 5-cleft calyx lanceolate subulate; *vexillum outward velvety*, nearly three times longer than the calyx; germen cylindrical, densely velutinous, with several ovules.

On Cooper's River.—*A. C. Gregory*.

Leaflets mostly 2 $\frac{1}{2}$ –4" long; their rachis thin, measuring about 1"; stipules 1–2" long; racemes on short peduncles; pedicels at least 1" long; calyx 1 $\frac{1}{2}$ " long, its superior teeth shortest, lowermost the longest; Corolla probably pink, standard cordate, nearly 3" long, wings oblong, spatulate, glabrous, of equal length with the standard and keel; carina outside silky, pod not seen.

As regards the leaves, this species approaches nearly to the Indian *Tenneaphylla* (found also in North Australia), but in other respects it differs widely; *Jacanthocarpa* found in Sir T. Mitchell's first Exped., is identical with *Clidanthera psoraloides*.

SWAINSONA CAMPYLANTHA. *Ferd. Mueller.*

Glabrous stems, long, flaccid; leaflets in 1–3 pairs; stipules small, lanceolate subulate; *leaflets long, lanceolate, linear, acute, subsessile*; racemes, many flowered, on a long angular peduncle; bracts cymbiform considerably shorter than the pedicel, as well the calyxes ciliate; teeth of the calyx deltoid, long, acuminate; corolla purple; vexillum bicallous, *wings twisted* near the auriculate lease callous; style upwards, fringed pod, slightly silky, narrow, elliptical, its stork longer than the calix.

On the Plains along Cooper's River.—*A. C. Gregory*.

Leaflets distant, generally 1–1 $\frac{1}{2}$ " long, 1–2" broad; peduncles triangular, or rarer quadrangular; pedicels about 1 $\frac{1}{2}$ " long; calyx 2" long at the base, with 2 very small linear bracteoles; vexillum 8", broad round kidney shaped, longer than the wings, with a short unguis, wings blunt; carina semiorbicular, blunt, shorter than the wings, above the base on both sides inflated; its unguis 1 $\frac{1}{2}$ " long, pod acute at the bottom and top, 1" long.

SWAINSONA PHACOIDES. *Benth.* in *Mitch. Trop. Austr.*, p. 363.

A variety with fewer and obovate or obcordate cuneate leaflets, and purple flowers.

VIGNA LANCEOLATA. *Benth.* in *Mitch. Trop. Austr.* 350.

MYRTACEÆ.

EUCALYPTUS TERMINALIS. *Ferd. Mueller* in *Proceed. Linn. Soc., London*, 1858.

EUCALYPTUS

EUCALYPTUS MICROTHECA. *Ferd. Mueller.*

Loc. sit. both species are frequent in North Australia, but have not been noticed towards the south coast. The former is the bloodwood tree of Mr. Gregory's journal, the latter the box tree.

CUCUR BITACEÆ.

CUCUMIS JUCUNDA. *Ferd. Mueller* in *Transact. Vict. Inst.*, vol. II., inedit.

C. PUBESCENS. *Mitch Trop. Austr.*, p. non W.

The fruit is edible, being the size of a pigeon egg.

A species very similar in regard to flowers and leaves, but with fruit twice as large and of a bitter taste, accompanies the *C. jucunda* often in North Australia, and exhibits probably the true *C. pubescens* of Willdenow.

LORANTHACEÆ.

LORANTHUS NUTANS. *All. Cunn. sec. Hook.* in *Mitch. Trop. Austr.*, p. 158 non Spring.

L. canus. *Ferd. Mueller* in *Transact. Vict. Inst.* I., p. 128, *Mig. stirp. Nov. Holl.*, p. 11.

With the following, found in many parts of Tropical Australia, and south as far as the Grampians.

The *Loranthus quandang*, *Ldl.* in *Mich. Three Exped.*, seems to be identical with this plant.

LORANTHUS MIRACULOSUS. *Mig.* in *Lehm. pl. Priess. I.*, p. 281.

COMPOSITÆ.

BRACHYCOME. *Sp.*

Probably a new species, but destitute of fruit.

MONENCYANTHES GNAPHALOIDES. *Asa Gray* in *Hook. Kew. Misc. IV*, 229.

Observes as far south as Lake Alexandrina.

SPHAERANTHUS HIRTUS. *W. sp. pl. III*, 2395.

Common in Trop. Australia, but hitherto neither observed within the Territory of South Australia, nor of Australia Felix.

In this species, as well as in *S. glabres*, the male flowers are remarkably tumescent, whilst the female ones hardly become tumid.

SENECIO ODORATUS. *Horn. Hort. Hafn. II*, 809.

Probably the northernmost habitat.

SENECIO GREGORII. *Ferd. Mueller.*

Slightly aruncose, at last smooth; superior leaves linear, acute, entire, or remotely toothed; their base not broadly dilated; peduncles terminal, solitary or twine, considerably longer than the flower heads; provided with one or a few small leaves; involucre bracteos, bell shaped, with a truncate base, shorter than the discal flowers, consisting of about 13 fine nerved scales with unequal ciliate apex; ligules 6-10; achenes glabrous; bristles of the pappus slightly scabrous.

On Cooper's Creek — *A. C. Gregory.*

Only the upper branches of this plant have been collected, exhibiting leaves 1-2' long, and as many lines broad. The involucre measures in length about $\frac{1}{4}$ ". The receptacle is like in most species toothless. Ligules 3-5" long, 1" broad. Ripe fruit is wanting.

CAMPANULACEÆ.

WAHLENBERGIA GRACILIS. *Alph. D. C. Prodr. VII* 433.

GOODENIACEÆ.

GOODENIA GLAUCA. *Ferd. Mueller* in *Transact. Vict. Inst. I.* 40.

Velleja umbellata. *Vries. Gooden.* 76 to 13.

Scaevola umbellata. *Vries.* in *Lemh. pl. Preiss I.* 411.

Throughout almost the whole interior of Australia. *Schlecht Linnæa XXI.* p. 450. Allied to *G. Pinnatifida*, *S. Cycloptera*, *R. Br.* in *Sturt's Central Austr. II.* App. p. 81, which has, however, leafless stems, toothed or pinnatifid radical leaves, an outside glabrous corolla, and black less distinctly reticulated seeds. This occurs from the Darling to Port Lincoln

Lincoln and Port Phillip. *S. Elongata*, *Lab. Nov. Holl. I.* 52 to 75, differs in broader leaves, imperfectly silky flowers, mucronulate anthers, pubescent indusium, a refracted fruit stalk, a higher septum, opaque, wingless, and not distinctly reticulated seeds.

MYOPORINEÆ.

EREMOPHILA LATROBII. *Ferd. Mueller* in Papers of the Royal Soc. of Tasm., 1858 (inedit).

Differs only from the plant collected in Central and Eastern Australia, in a thin velvet-like indument.

Found on the edges of the Desert near the Thomson River.

EREMOPHILA BIGNONIFLORA. *Ferd. Mueller*, l.c.

Stenochilus bignoniæ. *Florus Benth.* in Mitch. Trop. Austr. 386.

Sometimes the leaves are minutely denticulated.

EREMOPHILA MITCHELLII. *Benth.* in Mitch. Trop. Austr. p. 31.

Frequent on the Thomson River.

LABIATÆ.

TEUCRIUM RACEMOSUM. *R. Brown*, *Prodr.* 504.

The collection contains besides the normal form a smooth variety with larger calyces and leaves.

SOLANACEÆ.

DATURA LEICHHARDTII. *Ferd. Mueller*. msc.

On the Thomson River. This species is restricted to the Eastern portion of the Continent.

Nicotiana suaveolens. *Lehm. Nicot.* p. 43.

Solanum esuriale. *Lindl.* in Mitch. Three Exped.

Besides this occur in the collection two other species, but not in a developed state.

ACANTHACEÆ.

DIPTERACANTHUS AUSTRALASICUS. *Ferd. Mueller*.

Perennial, dwarf, erect, turtellous; leaves small, ovate, rarely almost heart-shaped, with a repand undulate margin, gradually tapering into the petiole; bracts petiolate, similar to the leaves, persistent; flowers axillary, solitary, on short peduncles, opposite, not spicate; bracteoles none; calyx deeply five-cleft, with lanceolate, linear, acute lobes; corolla pubescent, nearly three times longer than the bracts, and many times longer than the calyx, from a short, cylindrical tube, widened out into the long obconical faux; anthers blunt; lobes of the stigma unequal; capsule clavate, ellipsoid, as well as the seeds glabrous.—*Cooper's River*, *A. C. Gregory*. Also on the plains along the Dawson and Burdekin Rivers and their tributaries.—*Ferd. Mueller*. Branches slightly angular; leaves generally less than 1' long, the inferior ones often with rather a conspicuous petiole; calyx 2-4" long, hirtellous; bracts $\frac{1}{4}$ - $\frac{1}{2}$ ' long; corolla blue or purple, 8-15" long; stamens deeply enclosed, filaments slightly downy, anthers a little longer than 1" with emarginate base; style somewhat hairy, upwards glabrous; capsule $\frac{1}{2}$ " long, imperfectly two-celled. To be distinguished from *D. bracteatus* (*Ruellia bracteata*, *R. Br.* Endl. iconogr. to 104) by smaller leaves and flowers, a corolla neither glabrous nor forming a long slender tube above the calyx, persistent bracts, blunt deeper-enclosed anthers, and not equal lobes of the stigma.

Dipteracanthus Pumilio, *Nees* in D. C. Prodr., XI. p. 124, appears to me a mere variety of *Ruellia Australis*, *R. Br.*

Since Acanthaceous plants are principally developed in tropical countries, their absence from Australia Felix, New Zealand, Tasmania, and South-west Australia cannot be surprising. But it remains a singular fact in the geography of plants, that in the northern, and particularly in the north-eastern part of Australia, where a warm humid atmosphere prevails, so very few plants of this order should have been discovered compared with the richness of species which ornament the tropical countries of Asia and America.

All the Australian Acanthaceæ hitherto known amount to only 17 species, belonging to the following genera:—*Staurogyne*, *Adenosma*, *Ruellia*, *Dipteracanthus*, *Eranthemum*, *Rostellaria*, *Adhatoda*, *Hygrophila*, *Dicliptera*, *Brochosiphon*, *Hypoestes*, *Nelsonia*, and *Dilivaria*. Both of *Ruellia* and *Rostellaria* it seems Australia possesses but a single species. *Ruellia acaulis* is a remarkable variety with elongate peduncles bracteate at the base,

base, having quite the appearance of a Primrose. It springs luxuriantly up from a perennial root, after bush fires have devastated its territory, and under the same circumstances originate curious varieties of *Petalostigma quaduloculare*, *Hylococcus serirens*, *B. Br. D.*, *Grevillea mimosoides*, (*Morgania floribunda*, *Morgania glabra* and *pubescens*, *R. Br.*) and a host of other plants, which it would be difficult to refer to the original species without observation in the field.

ROSTELLARIA PROCUMBENS. *Nees*. in Wall. Plant. Asiat. var. III. 101.

R. juncea, *media*, and *obtusa*. *Nees*. in D. C. pr. XI. p. 374 and 376.

R. pogonanthera. *Ferd. Mueller* in Linnaea XXV. 431.

JUSTICIA, JUNCEA, MEDIA and ADSCENDENS. *R. Br.* pr. 332.

Occurs as far south as the Flinders' Ranges, and commonly in Australia within the tropics.

PROTEACEÆ.

HAKEA STRICTA. *Ferd. Mueller ex Meisner* in Linnaea XXVI. p. 360.

Leaves, often 2' long; seeds, on the convex side brownish-black, the surrounding wing pale brown-grey.

HAKEA PURPUREA. *Hook.* in Mitch. Trop. Austr. 348.

This beautiful species occurs towards the north-east as far as Newcastle Range, which divides the Rivers of the Carpentaria Gulf from those of the East Coast.

Flowers crimson.

SANTALACEÆ.

SANTALUM LANCEOLATUM. *R. Br. Prodr.* p. 356. *Alpts. D. C. Prodr.* XIV. 682.

Cooper's Creek and the outskirts of Lake Torrens are the southern terminus of this Sandal Tree, which is frequent in the arid parts of tropical Australia; but advances, according to Mr. Gregory, not to the explored parts of Western Australia.

Sir T. Mitchell's *Santalum*, gathered on the Narran, (*Conf. Trop. Austr.* p. 101) doubtfully referred to *S. oblongatum*, is more probably identical with this plant. In his collection I observed *Santalum Preissianum*, *Mign.* (*Fusanus acuminatus*, *R. Br.*)

POLYGONEÆ.

POLYGONUM ELATIUS. *R. Br. Pr.* 419.

POLYGONUM PLEBIUM. *R. Br. Pr.* 420.

P. hermiarioides. *Delile.* Flor. Ægypt. Illustr. p. 13.

P. Roxburghii. *Meisner* in D. C. Prodr. XIV. p. 93.

POLYGONUM CUNNINGHAMI. *Meisn.* in Linnaea XXV. p. 364.

SALSOLACEÆ.

CHEENOPODIUM AURICOMUM. *Lindl.* in Mitch. Trop. Austr. 94.

ATRIPLEX ROSEUM. *L.* sp. pl. 1493.

The *A. semibaccatum*. *R. Br.* is to this closely allied.

ATRIPLEX LEPTOCARPUM. *Ferd. Mueller* in *transact Phil. Inst.* I. p. 74.

Mr. Gregory's specimens constitute a singular variety, with jaggy leafy appendages to the apex of the fruit.

ATRIPLEX INFLATUM. *Ferd. Mueller* l. c.

Enchylaena tomentosa. *R. Br. Pr.* 408.

The collection contains the smooth variety, which is diffused over all Australia, varying like *Rhagodia nutans* with yellow and red flowers.

KOCHIA TOMENTOSA. *Ferd. Mueller, mise.*

Not rare in the desert interior, extending from the Murray tributaries to N. W. Australia.

SALSOLA AUSTRALIS. *R. Br. Prodr.* 411.

S. macrophylla. *R. Br. l. c.*

To be found in all parts of this Continent.

ARTHROENEMUM, *sp.*

From the saline muddy plains of the Thomson.

The specimens are devoid of fruit, but seem to belong to a species observed in North-west Australia, distinct from *A. Australasicum* in ovate spikes.

AMARYLLIDÆ.

CALOSTEMMA LUTEUM. *Sims* in *Bot. Mag.*, t. 2101.

Noticed as far south-west as Lake Torrens.

LILIACEÆ.

CAESIA GLOBANTHA. *Ferd. Mueller* fragm. phytograph Austr. III. 63.

Bulbine Fraseri. *Kunth.* enum IV. 565.

Var. *Comosa* bracteoles as long as the flower, bearing pedicels, tapering into a very long and thin acumen.

It differs from *B. bulbosa* in having the filaments bearded, not merely at the apex, but in the whole length. The root is wanting, and may characterize the species as a new one.

CYPERACEÆ.

ELEOCHARIS GRACILIS. *R. Br.*, pr. 224.

Common all over Australia.

GRAMINEÆ.

AGROSTIS INDICA. *L. Sp.*, 94.

Sporobolus Indicus. *R. Br.*, pr. 170.

Vilfa Indica. *Stend. Glum.*, I. 162.

ARISTIDA STIPOIDES. *R. Br.*, pr. 174.

A. hygrometrica. *R. Br.*, l. c.

A. Arenaria. *Gaud. Freycem.*, itm. 407.

A. contorta. *Ferd. Mueller* in *Transact. Vict. Inst.* I. p. 44.

This grass is generally distributed over the desert parts of Australia, extending from St. Vincent's Gulf and the Murray River to the Gulf of Carpentaria, and Arnheim's Land, and Western Australia. It is as variable as *Poa Brownii*, *P. Australis*, *Pappophorum commune*, *Danthonia penicillata*, and other common Australian grasses. The stipes of the *arista* varies in length between $\frac{1}{2}$ -3', the bristles 1-3 $\frac{1}{2}$; size and color form the only distinction between the species above quoted.

POA BROWNII. *Kunth.* *Gram.*, I. 112.

Panicum gracile. *R. Br.*, pr. 190.

A most variable and by no means rare species, both of tropical and extra-tropical Australia, noticed westward at least as far as St. Vincent's Gulf; leaves often flat.

PANICUM VILLOSUM. *R. Br.*, pr. 192.

Like the two following, diffused from Gipps Land and Spencer's Gulf to North Australia.

PANICUM DECOMPOSITUM. *R. Br.*, pr. 191.

P. laevinode. *Lindl.*, in *Mitch. Three Exp.*, I. 238.

P. laevicaule. *Stendel. Glum.*, I. 82.

PAPPOPHORUM COMMUNE.

P. Nigricans, purpurascens, pallidum, and gracile. *R. Br.*, pr. 185.

P. Virens and P. flavescens. *Lindl.* in *Mitch. Trop. Austr.*, 34 and 360.

I should have hesitated to combine all the above plants under one specific name, had I not for many seasons and in the most distant parts of the country, examined and watched what I consider the only Australian species of this genus, to which in all probability also the Indian *Pappophorum elegans* belongs. I failed entirely to discover any reliable specific distinction between the numerous forms, and feel fully convinced that characters derived from color and indument are of as little absolute value for the distinction of grasses, than of other orders of plants. No class of plants requires more a careful renewed disquisition than grasses, none of our best agrostographs having had the advantage of studying the extraordinary varieties which many of the species produce, by travels through tropical countries.

TOWNSHIPS AT CURRAWONG OR NELLIGEN.

No. 1.

To His Excellency SIR GEO. GIPPS, Governor General of the Colony of New South Wales
and its Dependencies.

Sydney, 25 April, 1840.

SIR,

We, the undersigned, being landholders and residents of the Colony of New South Wales, respectfully request your Excellency will be pleased to direct that the village reserve at Currowan, on the Clyde River, at the head of the navigable part of that river, may be apportioned and put up for public sale.

The site possesses many advantages,—vessels drawing 10 or 12 feet water can discharge there, and a line of road from thence to Braidwood was discovered by Messieurs Kingborne and Green, the particulars of which are communicated to the Colonial Secretary some eight months since.

We, the undersigned, are therefore desirous of purchasing allotments when the same may be put up for sale.

We have, &c.,

H. McLEAN.
JOHN HAWDON.
HENRY CLAY BURNELL.
pp F. W. STOKES.
EDWD LORD.
HUGHES & HOSKING.
WM. HIRST & CO.
WARD STEPHENS.
W. DRAKE & CO.
W. ABERCROMBIE & CO.
JOHN CLARKE.
PAUL & CO.

Blank Cover, 14 May, 1840, from Colonial Secretary to Surveyor General,—
Intimating that His Excellency Sir G. Gipps requests the Surveyor General to report on the
Petition, &c.

No. 2.

THE SURVEYOR GENERAL to THE COLONIAL SECRETARY.

(40-4800. Blank Cover 40-175. 14 May, 1840.)

*REPORT on application of several individuals to open the Reserve on the Clyde for sale in
Town allotments*

(No. 40-53.)

I think that any arrangements for the laying out of the reserve in question at the present moment would be rather premature. I would recommend that the matter should stand over until the success of the Jervis Bay experiment be ascertained.

S. A. PERRY, D.S.G.

1 June, 1840.

No. 3.

THE COLONIAL SECRETARY to THE SURVEYOR GENERAL.

(No. 40-348.)

Colonial Secretary's Office,

Sydney, 9 June, 1840.

SIR,

Referring to your Blank Cover Report of the 1st instant, on an application from certain landholders for the laying out of the village reserve at Currowan, on the Clyde, in which you recommend that the matter should stand over until the success of the Jervis Bay experiment be ascertained, I have the honor to acquaint you that the Governor cannot

cannot agree with you in thinking that this should in any way depend on the Jervis Bay question; and His Excellency is therefore pleased to direct that you will cause the village to be laid out whenever a convenient opportunity of so doing may present itself.

I have, &c.,
(For the Colonial Secretary)

THE SURVEYOR GENERAL.

T. V. HARRINGTON.

No. 4.

THE SURVEYOR GENERAL to MR. SURVEYOR LARMER.

(No. 41-132)

*Surveyor General's Office,
Sydney, 15 April, 1841.*

SIR,

In attention to a letter from the Colonial Secretary, No. 40-348, respecting an application from certain landholders for the laying out of the village reserve of Currowan, on the Clyde, and stating it to be the pleasure of the Governor that it should take place without delay,—

I have to request that you will forward to me a survey of the ground, on the usual scale, and a report on its peculiarities, as early as practicable, in order that a design may be submitted to His Excellency the Governor for approval.

I am, &c.,

ASSISTANT SURVEYOR LARMER.

T. L. MITCHELL.

No. 5.

MR. SURVEYOR LARMER to THE SURVEYOR GENERAL.

Braidwood, 27 July, 1841.

SIR,

I do myself the honor to inform you that I have surveyed the reserve for a village at Currowan, on the Clyde River, near Bateman's Bay, in compliance with your instructions No. 41-132. On the map herewith transmitted,* it will be seen that the flats have been ploughed up and are under cultivation by Captain Oldry, but not yet fenced in or enclosed. The huts shewn on the map were erected by Captain Oldry, and are occupied by that gentleman's superintendent. The land north of the huts is pretty good forest, and contains some pasture; but on the south the ranges are barren and scrubby. The tides flow as high up Currowan Creek as the huts, where a constant and rapid stream of fresh water descends from near the Budawang Range. The track from Bukebowa to Maramarang passes through the Currowan reserve, which is extremely hilly, and passable for pack animals only.

*Not furnished.

In a former letter I stated that I supposed it possible to find a practicable road from the Braidwood country to Currowan; but on my last journey ascertained it to be impassable, even for my pack horses.

I have, &c.,

THE SURVEYOR GENERAL.

JAS. LARMER.

No. 6.

THE SURVEYOR GENERAL to THE COLONIAL SECRETARY.

(No. 44-258.)

*Surveyor General's Office,
Sydney, 10 September, 1844.*

SIR,

In attention to your letter, No. 40-348, of 9th June, by which, in reference to the application of certain landholders for the laying out of the village reserve at Currowan, on the Clyde River, you informed me, by direction of His Excellency the Governor, that I was to cause the village to be laid out whenever a convenient opportunity for so doing might present itself, I have the honor to state, for the information of His Excellency the Governor, that the necessary survey was made in the year 1841, but it did not then appear that there was a sufficient demand to warrant the preparation of a design; recently, however,

in

TOWNSHIPS AT CURRAWONG OR NELLIGEN.

5

in consequence of the increase in the agricultural population of that neighbourhood the applications have been renewed, and I have therefore made a design* for a village, which I ^{*Not furnished.} beg to submit for the approval of His Excellency the Governor and Executive Council.

THE HONORABLE
THE COLONIAL SECRETARY.

I have, &c.,
T. L. MITCHELL.

No. 7.

THE COLONIAL SECRETARY to THE SURVEYOR GENERAL.

(No. 44-343)

*Colonial Secretary's Office,
Sydney, 17 October, 1844.*

SIR,

His Excellency the Governor in Council having been pleased to approve of the plan submitted in your letter of the 10th ultimo, No. 44-258, for the establishment of a village on the River Clyde, to be called "Currowan," I do myself the honor to request that you will furnish two copies of the plan so approved, the one to be deposited in this office, and the other with the nearest Police Bench, which you will be good enough to state.

I am, &c.,
(For the Colonial Secretary,)

THE SURVEYOR GENERAL.

W. ELYARD, JUNR.

No. 8.

THE SURVEYOR GENERAL to THE COLONIAL SECRETARY.

(No. 44-324.)

*Surveyor General's Office,
Sydney, 26 November, 1844.*

SIR,

In attention to your letter, No. 44-343, of 17th October, conveying to me the approval of His Excellency the Governor in Council of the design for a village to be called "Currowan," on the River Clyde, in the County of St. Vincent, and requesting me to furnish two copies of the plan, the one for deposit in your office, and the other for the nearest Bench of Magistrates, which I am to point out,—I have the honor to forward the required copies, and to state that the nearest Police Bench is Broulee.

I have, &c.,
T. L. MITCHELL.

THE HONORABLE
THE COLONIAL SECRETARY.

No. 9.

MR. W. H. GREEN to THE SURVEYOR GENERAL.

(No. 54-15.)

*Nelligen Creek,
1 June, 1854.*

SIR,

In accordance with the instructions (verbal) of the Acting Surveyor General (March 29th) I have made a survey of the proposed site of the village of Nelligen, and I have the honor herewith to enclose a tracing* thereof, on which I have marked in red lines the ^{*Not furnished.} manner in which the streets and lots could be laid out to the best advantage. Only that part has been surveyed which is occupied by the red lines.

I have, &c.,
W. H. GREEN,
Superintendent B. & C. Road.

THE SURVEYOR GENERAL.

SIR,

With reference to your letter of the 12th instant, No. 54-810,—I am directed by His Excellency the Governor General to draw your attention to the notice* in the *Government Gazette* of the 22nd of this month, respecting the village of Nelligen, in the County of St. Vincent.

I have, &c.,

THE SURVEYOR GENERAL.

W. ELYARD.

No. 16.

EXTRACT from the Journal of the late Sir Thomas Mitchell, when inspecting the Braidwood and Clyde River Road, 1855.

" 16 It was evident by Inan's survey that to cross Nelligen Creek was not desirable, and I was happy to discover that the best site for a township was evidently on the left bank of Nelligen Creek, and that the fresh water of this creek could be dammed up at a point where it was sweet, and could be conveyed by a pipe to the best place for a public wharf on the Clyde, at a distance of 120 chains, and to the most eligible sites for buildings.

" 17. At Currawong, the other township, (which we reached by riding five or six miles up the river), there is a fine situation for building, to any extent, with the abundant waters of the Currawong Creek, which is fresh to its junction with the Clyde. It did not appear that the allotments had been injudiciously planned, as at Nelligen township, but that the main street would form a very good termination to the road that must connect it with that from Braidwood."

" T. L. M."

No. 17.

THE SURVEYOR GENERAL to MR. SURVEYOR LARMER.

(No. 55-86.)

*Surveyor General's Office,
Sydney, 22 January, 1855.*

SIR,

William Chatfield having applied to purchase eleven allotments of section No. 1 of the village of Nelligen, I have to request that you will measure and mark out that section in allotments, together with sections 2 and 3 and 4, as shewn on the accompanying tracing* and that you will forward to me a plan and descriptions thereof.

*Not furnished.

I am, &c.,

T. L. MITCHELL, S.G.

MR. LICENSED SURVEYOR LARMER.

No. 18.

MR. SURVEYOR LARMER to THE SURVEYOR GENERAL.

(No. 55-21.)

Braidwood, 29 September, 1855.

SIR,

According to instructions issued in your letter of 22 January, 1855, No 55-86, I beg to transmit a plan* and descriptions of thirty-four (34) allotments in the village of Nelligen—app. to purchase, Wm. Chatfield, of eleven allotments of section No. 1.

*Not furnished.

I have, &c.,

THE SURVEYOR GENERAL.

W. E. LARMER.

No. 19.

EXTRACT from the late Surveyor General's (Sir Thomas L. Mitchell) second Report on the Braidwood and Clyde River Road, forwarded by Lord Audley's letter of February, 1856.

" 4. Whatever may be the defects of Mr. Green's road, the site chosen for the township of Nelligen was, at least, as objectionable as the road, being across a creek at one time subject to inundation, at another dry; and where the water adjacent is salt, it

" was

“ was particularly desirable that a range continuous from the Currawong to the Clyde should
 of furnished: “ be sought in the direction shewn in the accompanying sketches,* as it was likely to
 “ determine a better site for a township on the left bank of Nelligen Creek, where it would
 “ be nearer to fresh water, more clear of swamps, and quite secure from inundation.

“ 5. The course of the Currawong Creek towards the Clyde justified our search for a
 “ continuous spur, and we found one just below the junction of Cabbage-tree Creek,
 “ (Kango ranbar), thus avoiding the nest of deep ravines and high rocky hills so damaging
 “ to the road cleared by Green.

“ 6. Still more fortunate was our discovery of a corresponding ridge tending from
 “ the main feature to the mouth of Nelligen Creek, for by its means I was enabled to make
 “ a line for the road, which presents no steep declivity, and by following which the line
 “ crosses no gully between Currawong Creek and the Clyde.

“ 7. This spur terminates at the left bank of Nelligen Creek, and affords as good a
 “ site for the desired township as could be wished, and of which I annex a separate report,
 “ with a plan, by the officer who ably assisted me on this occasion.

“ 8. From where the line thus marked crosses the main ridge, between Currawong and
 “ Clyde, the distance is only three miles to the township already laid out at the junction of
 “ these rivers, along which main ridge the road would extend directly in prolongation of its
 “ ‘ High Street.’ ”

No. 20.

EXTRACT from Assistant Surveyor Millington's letter, dated January 1st, 1857.

“ The great advantage of this course would be the avoiding altogether the necessity
 “ for vessels entering the Clyde River, at the mouth of which there is an eternally
 “ shifting sand bar, preventing the entrance of vessels of more than twenty-five tons burthen;
 “ whereas, at the point where I propose for the termination of the road at Bateman's Bay,
 “ there is a good sheltered harbour, capable of containing any amount of shipping and of
 “ floating vessels of any size; nor do I conceive that the alteration would involve any very
 “ large extra amount of outlay, whilst the situation would be much better adapted for a
 “ township, and would probably become a place of much greater importance than Nelligen
 “ can ever by any possibility become.

“ In this report I am speaking more from the information derived from old bushmen
 “ and settlers than from personal observation, as I have never been at that portion of the
 “ bay, I have, however, been across the Macleay River, and I know that loaded drays do at
 “ present travel occasionally thence to the point I propose as the termination of the line, and
 “ it moreover appears to me to be a remarkably easy country to form a road through.

“ I have, &c.,

“ COL. GEORGE BARNEY, R.E.,
 “ Surveyor General.”

“ E. J. MILLINGTON.”

No. 21.

MR. SURVEYOR MILLINGTON to THE SURVEYOR GENERAL.

(No. 56-22.)

Sydney, 30 October, 1856.

SIR,

Not furnished.

I beg herewith to furnish you with the *plans of Nelligen and Monga, laid out
 by me on the Clyde River.

At Nelligen I could find no land fit for farming purposes, and had great difficulty in
 finding spots suitable even for town lots. The land there is not well suited for a town,
 though that chosen is as good as any, and, from being the nearest land to the Clyde, where
 fresh water can be obtained, becomes therefore the best.

I have endeavoured to give as many lots as possible a frontage to the Braidwood
 Road, and could connect the sections in no more regular manner than you see, owing to the
 nature of the ground, the ranges being too steep and rocky to be of service, and the valleys
 generally low and marshy.

I had originally intended to lay off at Monga a greater quantity of land, and to have marked also a village and a few farms about half way between the two, but the difficulties I had to contend with, in not being able to keep men without sufficient equipment or means of transport for their rations, obliged me to close my work as quickly as I could.

THE SURVEYOR GENERAL.

I have, &c.,
EDWD. J. MILLINGTON.

No. 22.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.
(No. 83) *Department of Lands and Public Works,
Sydney, 6 February, 1857.*

SIR,

I am directed to inform you that it has been represented that a great demand exists for the sale of allotments in Nelligen, and to request that you will be so good as to state when you will be in a position to offer any for sale.

2. I have at the same time to state that it has been further alleged that no survey has yet been made of this township, although the plan was approved more than two years ago, I have therefore to request the favor of your report on this point.

THE SURVEYOR GENERAL.

I have, &c.,
MICHL. FITZPATRICK.

No. 23.

THE SURVEYOR GENERAL to MR. SURVEYOR MILLINGTON.
(No. 57-177.) *Surveyor General's Office,
Sydney, 17 February, 1857.*

SIR,

A doubt has arisen as to whether the design for the village of Nelligen is either a good or convenient one, and as, should the Clyde Road become the important channel of traffic for the south country, which it is expected it will, the design of the village may become a matter of far more consequence than that of a mere country village, I request that you will be good enough to furnish me with an opinion on the subject, which, from your acquaintance with the ground, it is presumed you will be enabled to afford.

E. J. MILLINGTON, ESQ.,
Assistant Surveyor.

I am, &c.,
GEO. BARNEY.
S. G.

No. 24.

MR. SURVEYOR MILLINGTON to THE SURVEYOR GENERAL.
(No. 57-12.) *Sydney, 23 February, 1859.*

SIR,

In replying to your letter No. 57-177, I beg leave to say that I am at loss to know whether you refer therein to the portion of Nelligen laid out by myself, or that marked by Mr. Larmer at the point; with regard to the former, I beg to refer you to my letter accompanying the plan, and numbered 56-22, in which I have given my reasons at length for the irregularity of my design, nor do I think it can be improved, in consequence of the very untoward nature of the ground. As regards the allotments marked by Mr. Larmer, I conceive the features of the land to be certainly no better adapted for a township, if so well; in fact, I do not think there is a suitable piece of ground anywhere in the neighbourhood. Mr. Larmer's allotments are entirely removed from fresh water, and the ground is even more rough and broken than the other; they are, however, close to the wharf, and may, therefore, be perhaps more suitable for stores, &c., although, as all goods must needs be carted from the wharf to the stores, or *vice versa*, I do not see why the carts might not almost as well carry their burdens one mile as a shorter distance; however, of this you will yourself be the best judge. I may, however, add, that I believe my choice of the site is one which was most approved of by the late Surveyor General.

COL. GEO. BARNEY, R.E.,
Surveyor General.

I have, &c.,
EDWD. J. MILLINGTON.

No. 25.

MR. A. WEBER to THE SURVEYOR GENERAL.

(No. 57-4.)

Braidwood and Clyde Road,

27 March, 1857.

SIR,

I have the honor to inform you that, according to your instructions of 2nd March, I have examined the country from the Gap to Monga, and have convinced myself that no other line of road than that over the Sugar Loaf can be taken.

The range between the Cabbage-tree mountain and Sugar Loaf is so abrupt in its fall towards the coast, that the same can only be ascended by means of one of these mountains. I am fully convinced that no road along the ranges of the Cabbage-tree mountain can be found which would justify the abandonment of all the works and of all the labor expended on the Sugar Loaf, and pray, therefore, for the sake of the interest of the inhabitants of this district, that no ear might be given to new proposals, which only delay the progress of the only practical line of road. At the same time, I beg to impress upon you that the road over the Sugar Loaf when completed as begun, will be by far not so terrible as might be imagined after reading the returned report. The drays will take no less load because they go over the Sugar Loaf, and the road will cost very little to keep in repair, as the material of the same is of such a nature that traffic will make little or no impression upon it for a long time to come. All that is required is to keep the drains and culverts open, and this can be done with very little expense.

2. About the proposed road to Bateman's Bay, I have only to say that the idea of lengthening the 33 miles long road by 10 miles would find no admirers in this district; I neither can understand why, by such a proceeding, no very large extra amount of outlay should be required, especially as the country is not at all so easy to make a road through as imagined. The attempt besides to form a township at the bay would prove a failure, as the land there is of the poorest description.

3. I hope that this report will so far satisfy as to occasion the immediate orders for recommencing the works on the Sugar Loaf, which would be the greatest boon to this district.

I have, &c.,

A. WEBER,

Supt. Braidwood and Clyde Road.

THE SURVEYOR GENERAL.

No. 26.

THE SURVEYOR GENERAL to THE UNDER SECRETARY FOR LANDS AND WORKS.

(No. 57-327.)

*Surveyor General's Office,**Sydney, 4 July, 1857.*

SIR,

In attention to the enclosed minute of the 21st May, I have the honor to return the tracing* of the Braidwood and Clyde River Road, transmitted in my letter of the 30th April last, to which, as required, the deviations in the road proposed by Mr. Assistant Surveyor Millington have, with an explanation, been added, and I may perhaps be permitted to observe that this information should not before have been omitted had I been aware that the Honorable the Secretary for Lands and Public Works required its introduction.

2. I beg to forward, at the same time, a sketch* of the village of Nelligen, shewing the allotments at the Fresh Water Ponds measured by Mr. Millington, as also the allotments which have been measured within the village.

3. These last mentioned allotments were surveyed by Mr. Licensed Surveyor Larmer in September, 1855, the plan of the town having been laid before the Executive Council, and approved of, in August, 1854, on a survey and design made in the month of May previous by Mr. W. H. C. Green, who was at that time in charge of the formation of the road, but who has since resigned and left the Colony.

4. The survey by Mr. Green was not, as will be seen from the sketch, very extensive, but it embraced a section of the portion of the road which passes through Nelligen, shewing that the swamp, in section 3, is barely above high water mark, and that the road, about where it crosses the north side of Ryrie-street, is eighty-two feet above high-water mark. The road, as shewn by Mr. Green, followed the direction pencilled on the plan, while Mr. Larmer's

Larmer's more detailed survey shews that the road crosses Ryrie-street diagonally, as dotted on the sketch. Now, if Mr. Larmer be correct in his representation of the road, it is obvious that to sell allotments by the present design would be to shut up, or divert, the road, and that a more convenient and better design might be adopted by carrying the leading street along the course of the road, and making the remainder of the design subservient to that street. Mr. Millington, however, recommends a slight divergence from Mr. Green's road, by which he crosses the spur, which he makes nearly eighty-five feet on Mr. Green's line, at an elevation of twelve feet less, and as the whole expenditure on Mr. Green's road in this part has consisted merely in clearing, there would appear to be no reason why Mr. Millington's improved line should not be carried out in its place, and the principal street carried along it.

5. It would, therefore, seem that the best line (which apparently is that of Mr. Millington) to the waters of the Clyde River should be determined, which line should form a base for the design of a village, in lieu of that already approved, and further, that there will be no objection to selling some of the allotments near the fresh water, measured by Mr. Millington, should the question of what shall be the termination of the Braidwood and Clyde River Road be determined in favor of Nelligen, or to selling these allotments previously to that determination, with the understanding that the Government does not pledge itself to adhere to the Nelligen termination, should it be proved that a road can, with more advantage to the public, be carried to some other point on the river.

6. While writing on this subject, I may perhaps be allowed to urge attention to the very important question raised by Mr. Millington in his letter of the 1st January last,—“That the Clyde River is not navigable, in consequence of the shifting bar at its mouth, “for vessels of more than twenty-five tons burthen.”

7. The previous correspondence shews the grounds on which it was assumed, when the road was commenced, that the river was navigable for vessels of such a size as to warrant the very large expenditure which has been made on the road, but the fact that (according to Mr. Millington) it is now believed on the spot that twenty-five tons is the maximum size of vessels for which the river is navigable, is a sufficient reason for having this important question set at rest, by the taking of soundings by a competent person on the bar in question; and should the facts be as now stated, the further examination of country between Nelligen and Bateman's Bay, with the view of finding a practicable road from some point on the present line between the Sugar Loaf and Nelligen to deep water, and a secure anchorage in Bateman's Bay.

THE UNDER SECRETARY
FOR LANDS AND PUBLIC WORKS.

I have, &c.,
GEO. BARNEY,
Surveyor General.

No. 27.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 17 July, 1857.*

SIR,

In reference to your letter of the 4th instant, No. 327, enclosing the tracing of the Braidwood and Clyde River Road, which was returned to you for the purpose of having the deviations in the road proposed by Mr. Surveyor Millington added, and also enclosing sketch of the village of Nelligen, shewing the allotments measured at the Fresh Water Ponds by Mr. Millington, as also the allotments which have been measured within the village, I am directed by the Secretary for Lands and Public Works to request that the allotments measured by Mr. Millington at the Fresh Water Ponds may be brought forward for sale, and the design of the village of Nelligen may be altered in accordance with your recommendation, viz., that the line of road proposed by Mr. Millington (which is apparently the best) should form its basis, in lieu of that already approved.

2. I am to inform you that in proclaiming these lands for sale no special reference to Nelligen as a port need be made, but that the allotments may simply be described as being so far from Nelligen, and on the road from that place to Braidwood.

3. In regard to the question raised by Mr. Assistant Surveyor Millington, alluded to in the 6th paragraph of your letter now under reply, as to the Clyde River not being navigable

navigable for vessels of more than twenty-five tons burthen, in consequence of the shifting bar at its mouth, I am directed to inquire whether there is an officer at Braidwood, or elsewhere, in such a position that he could undertake a survey of the bar, and whether a boat can be obtained on the river.

I have, &c.,

THE SURVEYOR GENERAL.

MICHL. FITZPATRICK.

No. 28.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 20 August, 1857.*

SIR,

With reference to my letter of the 17th ultimo, respecting the survey of land at Nelligen and the bar at the mouth of the Clyde River, I am directed to draw your attention thereto, and to request the favor of an early report as to how the matter now stands.

I have, &c.,

THE SURVEYOR GENERAL.

MICHL. FITZPATRICK.

No. 29.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 3 September, 1857.*

SIR,

In reference to your letter of the 20th ultimo, No. 57-157, respecting the alleged demand for the sale of allotments of land at Nelligen, I am instructed to request that you will have the goodness to furnish, for the information of the Secretary for Lands and Public Works, a tracing shewing the position of the town of Nelligen, as approved by the Governor in Council, with reference to the projected roads to the river and fresh water.

2. You will have the goodness at the same time to state whether the town in question has been surveyed and laid out in allotments.

I have, &c.,

THE SURVEYOR GENERAL.

MICHL. FITZPATRICK.

No. 30.

THE SURVEYOR GENERAL to MR. LICENSED SURVEYOR CUTHILL.

(No. 1044.)

*Surveyor General's Office,
Sydney, 10 September, 1857.*

SIR,

I request that you will be good enough to make a careful survey of the site of Nelligen, embracing about half a mile of the River Clyde below the confluence of the Nelligen Creek, and that creek upwards to the allotments measured by Mr. Assistant Surveyor Millington, (of which a tracing is enclosed), and shewing the features between the Nelligen Creek and a distance of 80 chains south of the road to Braidwood.

2. The banks of the river and creek should be shewn with accuracy, also the margin of the swamps adjacent to the river, and all features within the area specified of sufficient importance to form obstructions to the carrying out of streets in the projected village.

3. This survey will be represented on a plan, on which the relative heights of features should be carefully preserved, on a scale of eight chains to the inch.

4. It is intended to cancel the present design for a village, and on the survey now required to make a new design, to be based upon the line of road suggested by Mr. Millington, of which a tracing is also enclosed, and you will therefore suggest such a design, making the sections, so far as the features will permit, 10 chains in length by 5 chains 30 links in depth, which design you will draw on a separate tracing, and on which you will shew any reservations which you would propose, for wharfs, future public buildings, &c.

5. You will also take, with the theodolite, levels along one or two of the main and cross streets which you may propose, and shew them on your plan, and you will also take some soundings on the portion of the Clyde River fronting the proposed village, noting the rise and fall of the tide, and other information which may seem to you to be of value in considering the design.

I have, &c.,

GEO. BARNEY,

MR. LICENSED SURVEYOR CUTHILL.

S. G.

No. 31.

THE SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 26 October, 1857.*

SIR,

Adverting to your blank cover report of the 14th instant, on the letter from Mr. Crown Land Commissioner King, urging sales of land at Monga and Nelligen, and in which you suggest that the lands near Monga, which were offered for sale in May last but not sold, may be withdrawn from selection, for the purpose of being subdivided into portions of smaller area,—I am directed to inform you that there will be no objection to this being done; but that in the measuring of large portions of land, it would be well, I am to add, if you were to give such instructions to the surveyor as would, in the event of their not being sold, and it becoming necessary to subdivide them, as in the present instance, prevent a double survey.

2. With reference to the adjustment of the boundaries of the grant alluded to in your report, upon which it is supposed the town of Nelligen may encroach, I am directed to request that you will instruct Mr. Licensed Surveyor Cuthill to expedite the matter.

I have, &c.,

MICHL. FITZPATRICK.

THE SURVEYOR GENERAL.

No. 32.

THE SURVEYOR GENERAL to E. MANNING, ESQ.

*Surveyor General's Office,
Sydney, 25 March 1858.*

SIR,

The question as to whether Nelligen or Currawan should, on account of the greater natural advantages which it may possess, form the terminus of the road from Braidwood to the Clyde River, and consequently the site for the establishment of a town, being at present under consideration, it is thought that the captains of the steamers which have recently visited the locality may be in a position to afford information which will aid materially in arriving at a decision in the matter.

I have, therefore, the honor to request that you will be so good as to invite those gentlemen to favor me with their opinions as to whether the river between Currawan and Nelligen is of such a depth as to admit of its navigation by vessels of the burden of the "Nora Creina" and "Mimosa," and with such other particulars in regard to either of the two places as they may think proper.

I am, &c.,

GEO. BARNEY.

E. MANNING, Esq.,

Phoenix Wharf.

S. G.

No. 33.

E. MANNING, ESQ., to THE SURVEYOR GENERAL.

Sydney, 1 April, 1858.

SIR,

I have, in consequence of the receipt of your inquiry of the 25th March, elicited from the master of the steamer employed in the Clyde River trade that the features are far more favorable for the formation of a township at Currawan than at Nelligen, the land being better at the former place, while Currawan has an abundance of good water, and

Nelligen has none. The navigation of the river is quite practicable for vessels of light draught of water, such as those that now ply there. The further distance of the (to Currawan from Nelligen) is, I believe, eight miles.

I have, &c.,

THE SURVEYOR GENERAL

E. MANNING.

No. 34.

THE SURVEYOR GENERAL to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

Surveyor General's Office,

Sydney, 8 May, 1858.

SIR,

Mr. Caswill having, on speaking of the comparative advantages possessed by Currawan and Nelligen, neglected what appeared to me to be the most important part of the case, namely, the navigation between the two places, and its practicability by such steamers as those now plying to the Clyde River, I addressed a letter on the subject to Mr. Ede Manning, who in reply has kindly favoured me with the enclosed communication, which shews that the only objection raised by Mr. Mann in his report, herewith, to the selection of Currawan as a termination of the line of road from Braidwood is not, under the altered circumstance of steam communication, a tenable objection. To the statement made in the 14th paragraph of that report, "that Nelligen is the nearest possible point to Bateman's Bay for a dray to get to," I would beg to refer, with regard to the suggestions which have been made, that the road should meet the Clyde River at a point still lower down than Nelligen.

Taking Mr. Caswill's letter in connection with Mr. Mann's report, it seems to me that Currawan is likely to become the principal termination of the road, and of the navigation of the Clyde River, and that it may therefore be desirable to make some alteration in the design of that village, for which it will be necessary to obtain some additional information in reference to suitable wharf sites, &c., from the surveyor of the district.

I have, &c.,

THE UNDER SECRETARY FOR
LANDS AND PUBLIC WORKS.

GEO. BARNEY.

S. G.

No. 35.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

(No. 159.)

Department of Lands and Public Works,

Sydney, 14 May, 1858.

SIR,

In returning to you the enclosures which accompanied your blank cover report of the 8th instant, respecting the best site for the termination of the Braidwood and Clyde River Road, whether at Nelligen or Currawan, in which it is stated that further information is necessary from the surveyor of the district with regard to suitable wharf sites, &c.—I am directed to inform you that you should impress upon the surveyor employed at the Clyde the necessity of this matter being brought to an early settlement, and to observe that towns, both at Nelligen and Currawan, appear to be required.

I have, &c.,

THE SURVEYOR GENERAL.

MICHL. FITZPATRICK.

No. 36.

MR. SURVEYOR CUTHILL to THE SURVEYOR GENERAL.

(No. 58-21.)

Nelligen, 10 June, 1858.

SIR,

As I shall shortly have to take the soundings of the River Clyde, ordered in your letter of the 10th September, 1857, No. 1044, may I beg to be informed whether I am expected to provide a boat for my own convenience in taking the soundings, or whether there is a Government boat unemploy of which I can have the use.

I have, &c.,

THE SURVEYOR GENERAL.

JAMES CUTHILL.

No. 37.

THE SURVEYOR GENERAL to MR. SURVEYOR CUTHILL.

(No. 58-875.)

Surveyor General's Office,
Sydney, 16 June, 1858.

SIR,

In reply to the inquiry contained in your letter of the 10th instant, No. 21, I have to inform you that you should, if practicable, hire a boat, as I am not aware of there being one at the Clyde the property of the Government.

2. It is, I apprehend, necessary that I should inform you that it is desirable that you should permit as little delay as practicable to occur in carrying out the instructions in your hands with regard to Nelligen and Currowan.

I am, &c.,

GEO. BARNEY,

Surveyor General.

MR. LICENSED SURVEYOR CUTHILL.

No. 38.

MR. SURVEYOR CUTHILL to THE SURVEYOR GENERAL.

(No. 58-27.)

Nelligen, 6 July, 1858.

SIR,

I am happy to inform you that, through the kindness of Mr. J. M'Canley, of Currowan, I have been accommodated with the use of a boat to enable me to take the soundings of the Clyde opposite to the township of Currowan; although the soundings are not all yet taken which I consider necessary, I am able to state that there is a sufficient depth of water in front of the township for the proposed wharf. At one part, viz, the south-east corner of the township, there are 7 feet of water at ebb tide within 6 feet of the bank of the river.

I beg to state that I am proceeding as fast as possible with the survey of Nelligen and Currowan, and that the progress made is as much as I could expect, considering the shortness of the days and the inclemency of the weather at this season of the year. The flats at Nelligen are now for the most part under water.

I find that about 100 acres of land have been sold at the South Currowan Township, and fronting the Clyde, and, as I have no tracing of this land, I should feel obliged by your ordering one to be forwarded to me.

I have, &c.,

JAMES CUTHILL.

THE SURVEYOR GENERAL.

No. 39.

THE SURVEYOR GENERAL to MR. SURVEYOR CUTHILL.

(No. 58-1208.)

Surveyor General's Office,
Sydney, 16 August, 1858.

SIR,

In reference to the last paragraph of your letter of the 6th ultimo, No. 27, I have to inform you that I have in this instance instructed Mr. Langley to supply you with the tracing you require, but I must request that you will in future avoid making application to me for tracings, with which you have more than once been told that licensed surveyors are expected to provide themselves.

I am, &c.,

GEO. BARNEY.

Surveyor General.

MR. LICENSED SURVEYOR CUTHILL.

No. 40.

THE SURVEYOR GENERAL to MR. SURVEYOR CUTHILL.

Surveyor General's Office,
Sydney 9 October, 1858.

SIR,

I have to draw your attention to my letter of the 10th day of September, 1857, No. 1044, whereby you were directed to make a re-survey of the village of Nelligen, and to request that you will carry out the instructions above referred to with as little further delay as possible.

I am, &c.,

GEO. BARNEY, S. G.

No. 41.

MR. SURVEYOR CUTHILL to THE SURVEYOR GENERAL.

(No. 45-58.)

Nelligen, 29 October, 1858.

SIR,

In answer to your letter of the 9th instant, I beg to state that I am using every exertion to complete the survey of Nelligen as soon as possible.

Some time since my men all left me but one, allured by the accounts of the new diggings at Rockhampton, so that I could proceed but slowly for some time. I have now, however, succeeded in engaging other laborers, and my work is now progressing as fast as I can push it.

I have, &c.,

THE SURVEYOR GENERAL.

JAMES CUTHILL.

No. 42.

MR. JOHN RIXON to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Nelligen, 16 September, 1858.

SIR,

Having observed some time ago the great inconvenience and discomfort experienced at Nelligen Point by travellers to and from Sydney, from the want of an accommodation house at that place, I ventured to build one on part of the space which I understood to be set apart for a Government Reserve, and as my establishment there is now universally acknowledged to be a public convenience, I beg respectfully that I may be permitted to occupy the ground on which it stands during the pleasure of the Government and no longer; I also request that I may, on giving up possession of the ground, be allowed sufficient time to remove my buildings from their present site.

I beg further to state, that, if considered necessary, I have no objection to pay a fair rent for the ground while in my occupation.

The ground in question may be thus described,—commencing at a point about south-west from the western corner of Mr. Richardson's wharf 1 chain 50 links, and bounded on the north by a line bearing easterly 2 chains; on the east by a line bearing southerly 1 chain; on the south by a line bearing westerly 2 chains; on the west by a line bearing northerly 1 chain to the point of commencement.

I have, &c.,

TO THE HONORABLE JOHN ROBERTSON,
Department of Lands and Public Works.

JOHN RIXON.

[Referred for Report of Surveyor General.]

No. 43.

(Blank Cover. 9 October 1858.)

Mr. Licensed Surveyor Cuthill has been directed to transmit, without delay, his survey of Nelligen, in the absence of which I am not in a position to report on the matter.

GEO. BARNBY,

THE UNDER SECRETARY FOR
LANDS AND PUBLIC WORKS.

Surveyor General.

9 Oct., 1857.

No. 44.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

(No 341.)

*Department of Lands and Public Works,
Sydney, 6 December, 1858.*

SIR,

Referring to your report of the 9th October, No. 508, on the subject of Mr. Rixon's application to be allowed to continue in occupation of certain land at Nelligen, on which he has erected improvements, I am directed to state that this matter is very urgent, and to request, therefore, that you will expedite the report thereon of Mr. Licensed Surveyor Cuthill.

I have, &c.,

THE SURVEYOR GENERAL.

MICHL. FITZPATRICK.

No. 45.

No. 45.

(Blank Cover. 16 Dec., 1858.)

The Under Secretary for Lands and Public Works to the Surveyor General, urging that Mr. Licensed Surveyor Cuthill's report be expedited.

No. 46.

Refer the Surveyor General to the urgent instructions given to him in May last, and request that he will now call upon the licensed surveyor to explain why this work has not been attended to.

The Secretary for Lands and Works has more than once urged this matter on the attention of the Surveyor General, and he retains a strong impression that he long since suggested the propriety of withdrawing the work from Mr. Cuthill, and entrusting it to other hands.

M. F.

B. C. 18 Jany., 1859.

No. 47.

MR. SURVEYOR CUTHILL to THE SURVEYOR GENERAL.

(No. 59-3.)

Nelligen, 25 January, 1859.

SIR,

I beg to forward herewith a plan* of a portion of the township of Nelligen, as ^{*Not furnished.} I found it impossible to finish the large plan now in progress of Nelligen and its environs in so short a time as you demand.

2. The descriptions and levellings of the streets shall be forwarded as fast as they can be written and plotted.

3. The streets shewn on the present map are good, with the exception of Hunter-street, and the sections are laid out as nearly in accordance with the established custom as the nature of the ground will permit.

4. I beg to suggest that several of the allotments on the northern portion of section 12 ought not to be offered for sale before the opening of the new street (Braidwood-street), so as not to impede the present traffic to Braidwood and the interior.

5. I have made Braidwood-street diverge a little to the north, so as to run into Mr. Millington's line (the present road), but I propose producing it in a straight line as far as the bend in the creek, marked broad-arrow B on the accompanying map, retaining the land in front as a reserve for road, &c.

6. I beg to state that I do not perceive any peculiar propriety in the laying out either of Mr. Millington's road, or allotments between the last mentioned point and Nelligen Creek westward. The road would be equally good, and, of course, shorter, if reduced more to a straight line, and the allotments would be improved by being laid out more regularly and parallel to one another.

I have, &c.,

THE SURVEYOR GENERAL,
Sydney.

JAMES CUTHILL,
L. S.

No. 48.

THE SURVEYOR GENERAL to MR. SURVEYOR CUTHILL.

*Surveyor General's Office,**Sydney, 7 February, 1859.*

SIR,

In reference to the survey of Nelligen, transmitted by your letter of the 28th ultimo, No. 3, I have to point out to you that by the second paragraph of my instructions of the 10th Sept., 1857, your design was to be based upon the line of road of which a tracing was sent to you; but in direct contradiction to that direction, you have repeated precisely the faults for which the survey by Mr. Larmer was cancelled, making your main street cross the road diagonally and meet the swamp where it is three chains wide. This

design is, therefore, practically as objectionable as that above referred to, and cannot, therefore, be entertained, neither can the survey be made use of.

2. Independently of this, you have not, as directed, shewn the design on a separate tracing, and while the design was by instruction not even to be placed on the plan, you have taken it upon yourself to mark it all out on the ground, and, of course, to shew it on the plan.

3. Further, although shewing on your plan a line indicating a depth of seven feet at low water, you have shewn no soundings, and have not stated how the position of the line in question was ascertained, neither have you afforded any information respecting the rise and fall of the tide, as directed by the last paragraph of my instructions before referred to.

4. Under these circumstances, and on account of the great inconvenience to which the public has been subjected by your delays, I have considered it desirable that your district should be placed in other hands, and I have, therefore, instructed Mr. Surveyor Rowland to receive from you all the papers relating to Nelligen and Currowan.

5. You will, therefore, hand over to Mr. Rowland the instructions alluded to, and you will transmit, without delay, such other work as you may have already completed.

I am, &c.,

GEO. BARNEY,

Surveyor General.

MR. LICENSED SURVEYOR CUTHILL.

No. 49.

THE SURVEYOR GENERAL to MR. SURVEYOR ROWLAND.

(No. 59-177.)

Surveyor General's Office,

Sydney, 7 February, 1859.

SIR,

I have to request that you will proceed by the steamer which leaves the Phoenix Wharf this day for the Clyde River, and place yourself in communication with Mr. Licensed Surveyor Cuthill, for the purpose of obtaining from him the instructions, plans, &c., the property of the Government, in his hands, having reference to the surveys required at Currowan and Nelligen.

2 On arrival, your first duty will be the re-survey of Nelligen, which you will commence by making a careful examination of the ground occupied by the design prepared by Mr. Cuthill, with a view to arriving at a conclusion whether that design is, as is supposed, so unsuitable as to be useless. It is desirable that you should survey the outline of the Clyde River and Nelligen Creek as far as shewn by Mr. Cuthill, determining the position of the opposite side of the Clyde River; that you should survey the boundaries of the swamps, the creeks or gullies, and the ranges or spurs, as far as Mr. Cuthill has done, and for some distance to the west of Cowper-street, and, of course, also the existing road and tracks; and that you should, if you can obtain means of doing so, take soundings, reduced to ordinary low water level of the river, in front of the town site. Having plotted your survey on a scale of 4 chains to 1 inch, and carefully represented the features—assuming that you think a design based upon the existing road would be an improvement on that of Mr. Cuthill—you will design on your plan, with a soft pencil, lines of street in the town site, taking as a guide the directions in the enclosed printed instructions, and, so far as you may consider it applicable to the features as represented by your survey, the design pencilled on Mr. Cuthill's plan.

This survey and design, with a report embracing any information that may appear valuable in determining the design, it is hoped that you will be able to furnish by the next trip of the steamer from Nelligen.

Having completed this survey, plan, and report, and taken steps to forward them by steamer, you will proceed to Currowan, on the Clyde River, some 5 miles north of Nelligen, where a village was laid out in 1844, but of which a few suburban allotments only have been sold.

It is not improbable that Currowan may become a shipping place as much used as Nelligen, as in the opinion of many persons the road thence to Braidwood, which joins the Nelligen line about 5 miles from the Clyde River, is better naturally than that to Nelligen.

What is required at Currowan is a survey of the features between the south boundary of the reserve and Currowan Creek, with soundings of the river as at Nelligen, and an

amended

amended design, which will provide for convenient shaped allotments bounded by practicable streets in the vicinity of the river, a reserve for a public wharf, and some allotments having river frontage; so far as allotments have been sold the existing design cannot, of course, be altered, but beyond the portion of the design near the river regularity may be sacrificed to securing the most convenient access from the track from Braidwood to the river.

A suggested amendment of this design has been pencilled on the plan of the village, which you may take with you, and this design may afford you some assistance in proposing and drawing a design on your plan, which should be on a scale of 4 chains to 1 inch.

I may add that Mr. Cuthill has been communicated with, and requested to hand over to you the instructions in his hands, with plans and other documents, the property of the Government.

I am, &c.,

GEO. BARNEY,

Surveyor General.

Mr. SURVEYOR ROWLAND.

[Enclosure in No. 49.]

(Circular.)

Surveyor General's Office,
Sydney, December, 1858.

Sir,

The Commissioner for Internal Communication having recommended in his Report on the Main North Road that within three miles of towns a width of ninety feet, and beyond that distance a width of eighty feet should be preserved, in accordance with the provisions of the Act 4, William 4th, No. 2, and measurements for this Department being made in links,—I have to inform you that it has been considered desirable to lay down as a rule, that in the measurement of Crown Lands adjacent to the main roads from Morpeth to Armidale, from Sydney to Wellington, and from the Parramatta Road to Albury, a width of 150 links within three miles of towns, and beyond that distance a width of 125 links, should be preserved.

2. In surveys which you have to make on any of these roads, you will therefore adhere to the above rule, which will not of course influence in any way the application of the principle laid down in my Circular of the 24th day of December, 1857, No. 1634.

I have, &c.,

1858-9.

Legislative Assembly.
NEW SOUTH WALES.

**ENCROACHMENTS UPON HIGH-STREET,
WEST MAITLAND.**

(CORRESPONDENCE BETWEEN MESSRS. GORRICK & SEMPILL AND
THE GOVERNMENT.)

Ordered by the Legislative Assembly to be Printed, 30 March, 1859.

SCHEDULE.

CASE OF I. GORRICK.

No.		PAGE.
1.	Mr. W. Briggs, Crown Land Sales' Agent at Maitland, inquiring whether Mr. Commissioner Thomson has been authorized to proceed against Isaac Gorrick (with one enclosure.) 11 February, 1858	2
2.	Letter from Department of Land and Public Works to Mr. Commissioner Thomson, asking for his Report. 18 February, 1858.. .. .	2
3.	Letter to Mr. Briggs, apprising him of the reference. 18 February, 1858	3
4.	Commissioner Thomson's Report (with tracing.) 25 February, 1858	3
5.	Communication, asking for Surveyor General's Report. 26 February, 1858	3
6.	Report of Surveyor General (with plan.) 29 September, 1858	4
7.	Under Secretary for Lands and Public Works, informing Mr. Commissioner Thomson that the Government would not interfere further. 11 October, 1858	4
8.	Letter from Mr. Briggs, on behalf of Gorrick, complaining of the broad arrow being placed on his cottage, standing on the encroachment. 30 October, 1858	4
9.	Calling for Surveyor General's Report. 2 November, 1858	5
10.	Mr. Briggs informed. 2 November, 1858	5

CASE OF H. C. SEMPILL.

(Furnished by the Surveyor General.)

1.	Mr. Sempill to Colonial Secretary, applying to exchange an allotment near the Bridge, over the Sandy Hollow, West Maitland, for a portion adjoining (one enclosure). 13 January, 1840	5
2.	Colonial Secretary for Surveyor General's Report. 21 January, 1840	6
3.	Deputy Surveyor General's Report. 26 January, 1840	6
4.	Colonial Secretary to Surveyor General, approving conditionally of Sempill's application. (one enclosure.) 4 February, 1840.. .. .	6
5.	Deputy Surveyor General to Mr. Surveyor White, asking for his Report. 14 February, 1840	6
6.	Mr. Surveyor White's Report (with tracing.) 25 February, 1840	6
7.	Deputy Surveyor General's Report to Colonial Secretary. 6 March, 1840	7
8.	Further from same to same. 16 March, 1840	7
9.	Colonial Secretary to Deputy Surveyor General, modifying consent to Mr. Sempill's application. 19 March, 1840	7
10.	Deputy Surveyor General to Mr. Surveyor White thereupon. 27 March, 1840.. .. .	8
11.	Mr. Surveyor White to Surveyor General, in reply. 9 May, 1840	8
12.	Deputy Surveyor General to Colonial Secretary thereupon. 10 July, 1840	8
13.	Colonial Secretary in reply. 25 July, 1840	9
14.	Deputy Surveyor General to Mr. Surveyor White, informing him. 8 August 1840	9

ENCROACHMENTS UPON HIGH STREET, WEST MAITLAND.

CASE OF I. GORRICK.

No. 1.

MR. W. BRIGGS to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Maitland, 11 February, 1858.

SIR,

Mr. Isaac Gorrick, of Maitland, handed me a letter, received from Mr. Thomson, a copy of which I have the honor to enclose, relative to a strip of Government land in front of Blaxland's, Potter McQueen's, Sempill's, and other properties in High-street, West Maitland, near the "Northumberland Hotel," requesting me to ascertain from the Government if Mr. Thomson was authorised to proceed in the matter. George Boyle White, Esq., who, it appears, has been called upon by Mr. Nicholson, of this town, to settle a disputed boundary line between Mr. Nicholson and Mr. Gorrick's properties, which are bounded on the south by this strip of Government land, and on which all the buildings in that locality appear to have been erected, informs me that when he was Commissioner of Crown Lands in this district he was instructed by letter not to interfere with the parties who were encroaching on this land by building, as it was the original intention of the Government that Potter McQueen's, Blaxland's, Sempill's, and the other premises, should be bounded by the High-street.

Waiting your reply,

I have, &c.,

THE HONORABLE THE SECRETARY
FOR LANDS AND PUBLIC WORKS,
Sydney.

WM. BRIGGS,
Agent.

[Enclosure in No. 1.]

*Crown Lands Office,
East Maitland, 4 February, 1858.*

Sir,

It having been reported to me by the attorney of Mr. William Nicholson that you have been guilty of an encroachment upon the Crown lands at the junction of the Oakhampton Road with the High North Road passing through Maitland; thus causing a nuisance and an injury to a serious extent to the adjoining lands belonging to the said William Nicholson:

This is to give you notice that unless the said nuisance or trespass is immediately removed (when the same is reported to the Government, so that an accurate description and survey of the land is made), proceedings will be instituted against you.

I have, &c.,

Isaac Gorrick, Esq.,
West Maitland.

JAMES THOMSON,
Commissioner of Crown Lands.

No. 2.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to MR. COMMISSIONER THOMSON.

*Department of Lands and Public Works,
Sydney, 18 February, 1858.*

SIR,

I am directed by the Secretary for Lands and Public Works to request the favor of your report on the enclosed letter, addressed to this Department by Mr. William Briggs, of Maitland, respecting the steps taken by you in connexion with an encroachment by Mr. James Gorrick on certain Government land in High-street, West Maitland.

I have, &c.,

THE COMMISSIONER OF CROWN LANDS,
Maitland.

MICHL. FITZPATRICK.

No. 3.

No. 3.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to MR. W. BRIGGS.

*Department of Lands and Public Works,
Sydney, 18 February, 1858.*

SIR,

I am directed by the Secretary for Lands and Public Works to inform you that your letter dated the 11th instant, respecting the steps taken by the Commissioner of Crown Lands for the District of Maitland, in connexion with an encroachment by Mr. Isaac Gorrick on certain Government land in High-street, West Maitland, has been referred for the report of that officer, who does not appear to have received or asked for any instructions in the matter.

I have, &c.,

MICHL. FITZPATRICK.

WM. BRIGGS, ESQ.,
Maitland.

No. 4.

MR. COMMISSIONER THOMSON to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

*Crown Lands Office,
East Maitland, 25 February, 1858.*

SIR,

I have the honor to acknowledge the receipt of your letter of the 18th instant, No. 3, with its enclosures, relative to an encroachment made by Mr. Isaac Gorrick—no doubt others are similarly implicated.

The matter of encroachment is of long standing, and will be better exemplified by the enclosed tracing, by which you will observe that the various grants to the Episcopal Church, Sempill, Blaxland, and McQueen, neither of which on the tracing come up to the road, yet all of which are in possession up to the road.

Mr. Briggs in his letter says, that when Mr. White was Commissioner of Crown Lands in this district he was instructed by letter not to interfere with the parties who were encroaching on this land. This is not correct; Mr. White informs me otherwise—that when as a surveyor he had communications with the Government regarding the portion of land in front of Sempill's land, and which was arranged that Mr. Sempill's grant was to come up to the road, it was not so with any of the others, but more particularly a trespass in front of Blaxland's land, as I am distinctly informed by Mr. White, as a Commissioner, in which capacity he seldom acted, although created one many years ago, that when Mr. George Yeomans was about (who was then in possession or charge of Blaxland's land) to erect a butcher's shop upon the small angular piece of land situated on the west side of the Oakhampton Road, that he cautioned Mr. Yeomans that he was trespassing on the Government land, and gave him notice to that effect, and, in order to shew a tracing of this land more accurately, Mr. White promised to leave with me his plan of this portion of Maitland; not having as yet received it, I deferred my communication with you in consequence; however, the encroachment complained of by Mr. Nicholson, who is the sole proprietor of Sempill's land, and who also lately purchased from Mr. Gorrick Blaxland's land, but he, Mr. Gorrick, retained only the small angular portion of Blaxland's land at the west side where it is intersected by the Oakhampton Road, and adjoining which the encroachment on the Crown lands exist, this encroachment he (Mr. Nicholson) considers it interferes with the value of his property, as it allows a shabby temporary building to remain at the extremity of and point of his land, and, as it is an encroachment upon the Crown land, prays it may be removed.

THE HONORABLE THE SECRETARY
FOR LANDS AND PUBLIC WORKS,
Sydney.

I have, &c.,

JAMES THOMSON.

No. 5.

The Surveyor General is requested to report.

Blank Cover.

26 Feb., 1858.

M. F.

No. 6.

SURVEYOR GENERAL'S REPORT:

The plan herewith, by Mr. Licensed Surveyor Maitland, fully illustrates the encroachment on Crown land complained of by Mr. Nicholson. It shews also, however, that Mr. Nicholson has himself several encroachments on Crown land, but which Mr. Maitland states that Mr. Nicholson is prepared to remove.

In reference to Mr. Gorrick's encroachment, it appears to me that, as a matter between that gentleman and Mr. Nicholson, there is no reason for interference by Government; the encroachment by Mr. Gorrick being entirely within the extension, either westerly or at right angles with High-street, of the frontage of his property, and it being in his power to erect just such a shabby temporary building, although of smaller dimensions, on his own property, were the encroachment on Crown land removed.

As a matter between Mr. Gorrick and the public, the encroachment does not appear to be of sufficient importance to render necessary any proceedings for its removal, until the building line of High-street shall have been finally determined by a general survey and alignment of streets in Maitland, which survey has been in contemplation, but has been deferred, pending the introduction of Municipal Institutions.

It may be mentioned that both Blaxland's and Sempill's grants are described as bounded on the south-west by a line bearing, &c., and not by a road or street, and that the Oakhampton Road was reserved passing through the grants.

These are however points which are more deserving of consideration in the alignment of the street than of any use at the present time, and in reference to the present question.

GEO. BARNEY,

Sydney, 11 October, 1858.*

SIR,

In reference to your letter of the 25th of February last, on the subject of Mr. Nicholson's complaint of Mr. Isaac Gorrick's encroachment on certain Crown land at West Maitland, I am directed to inform you that, under a report received from the Surveyor General, it does not appear necessary that the Government should interfere further in this matter.

I have, &c.,

MICHL. FITZPATRICK.

JAMES THOMSON, Esq.,
Commissioner of Crown Lands,
Maitland.

No. 8.

MR. W. BRIGGS to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Maitland, 30 October, 1858.

SIR,

I have the honor to inform you, that some time about July last Mr. D. M. Maitland, Government Surveyor, placed the broad arrow upon ten or twelve properties on the north side of High-street, commencing near the "Northumberland Hotel," extending in an easterly direction. One of the properties so marked is a small house, the property of Mr. Isaac Gorrick of this town, occupied by Samuel Elson, in reference to the ownership of which Mr. Gorrick and Mr. Nicholson have had a serious dispute.

Nothing having transpired since the Government mark was placed there, I am instructed to inquire, on behalf of Mr. Gorrick, what the intention of Government may be with reference thereto.

I have, &c.,

WM. BRIGGS.

THE HONORABLE THE SECRETARY FOR
LANDS AND PUBLIC WORKS.

Sydney.

(No. 58-3065.)

*Department of Lands and Public Works,
Sydney 2 November, 1858.*

SIR,

Your letter under date the 30th ultimo, on the subject mentioned below, has been duly received and referred for the report of the Surveyor General.

2. As soon as the necessary information has been obtained, a further communication will be made to you.

I have, &c.,

MICHL. FITZPATRICK,

Under Secretary.

SUBJECT:—Inquiring as to the intention of the Government in marking with the broad arrow a certain house at Maitland, the property of your client, Mr. J. Gorrick.

W. BRIGGS, Esq.,

Maitland.

CASE OF H. C. SEMPILL.

No. 1.

H. C. SEMPILL, ESQ., to THE COLONIAL SECRETARY.

Darlinghurst, 13 January, 1840.

SIR,

In reference to the annexed sketch of land at West Maitland, I beg leave to solicit the sanction of His Excellency the Governor to an exchange of the strip of land colored red for an equal quantity in value of mine colored blue.

My reason for soliciting this exchange is that the strip of red lies chiefly in a hollow, over which the wooden bridge is erected, and I am in consequence completely shut out from the bridge, and prevented from building, which I would otherwise carry into effect were I permitted to make the exchange requested, which would in no way interfere with the bridge or highway, but, on the contrary, form an excellent public improvement.

The land I offer in exchange I respectfully propose should be made a street or public road leading to the river from the main street, as the inhabitants have no right of access to the river whatever, and now that lands are getting enclosed and built upon such access is most necessary and desirable.

The point of the river where such street or road would terminate has never been known to be without as much water as would float a man-of-war, and the erection by the inhabitants of a simple engine, on the principle of a Spanish "noria," driven by one horse, would not only supply all domestic wants, but keep a whole district in a constant state of irrigation.

I have, &c.,

H. C. SEMPILL.

THE HONORABLE

THE COLONIAL SECRETARY.

Nos. 2 and 3.

H. C. SEMPILL.

Surveyor General (blank cover 26th January, 1840,) to report on his application to be allowed to exchange a portion of his allotment at Maitland, adjoining the bridge, for another adjoining portion 40-414. B. cover No. 40-29, 21 January, 1840.

40-8.

I apprehend there may be some difficulty in reconciling the proposed exchange with the provisions of the Road Act, according to which nothing is allowed to be erected within 30 feet of the centre of the road, but in every other respect the proposal seems advantageous; and as the strip of ground colored red is perfectly useless to the public, except as a part of the road, it may be advisable to ascertain whether there will be sufficient breadth left after alienating the strip, in which case I would recommend a compliance with Mr. Sempill's request.

S. A. PERRY,

D. S. G.

26 January, 1840.

No. 4.

THE COLONIAL SECRETARY to THE SURVEYOR GENERAL.

(No. 40-72.)

*Colonial Secretary's Office,**Sydney, 4 February, 1840.*

SIR,

With reference to your blank cover report of the 26th ultimo, on a letter from Mr. H. C. Sempill, proposing to surrender a portion of his steam engine ground at West Maitland on condition of receiving a like portion adjoining the wooden bridge and main road, I have the honor to inform you, that His Excellency the Governor will have pleasure in acceding to Mr. Sempill's proposal, provided the road be not thereby reduced below its proper width. You will, therefore, have the goodness to report, for His Excellency's information, whether there will be a sufficient breadth of road left after alienating the portion required by Mr. Sempill.

I have, &c.,

E. DEAS THOMSON.

THE SURVEYOR GENERAL.

No. 5.

THE DEPUTY SURVEYOR GENERAL to MR. SURVEYOR WHITE.

(No. 40-54.)

*Surveyor General's Office,**14 February, 1840.*

SIR,

The Governor having expressed his readiness to accede to a proposal made by Mr. Sempill to surrender a portion of his steam engine ground at Maitland, on condition of receiving a like portion adjoining the bridge over the sandy hollow and main road, provided the road be not thereby reduced below its proper width, I have to request that you will report whether there will be sufficient breadth of road left after alienating the portion required by Mr. Sempill.

I am, &c.,

S. A. PERRY,

D. S. G.

G. B. WHITE, Esq.,
Surveyor, Maitland.

No. 6.

MR. SURVEYOR WHITE to THE SURVEYOR GENERAL.

(No. 40-12.)

*Hunter's River,**25 February, 1840.*

SIR,

I do myself the honor to acknowledge the receipt of your letter, No. 40-54, informing me that His Excellency the Governor had expressed his readiness to accede to a proposal made by Mr. Sempill to surrender a portion of his steam engine ground at Maitland on condition of his receiving a like portion adjoining the bridge over the sandy hollow, provided that the high road be not reduced below the proper width thereby, and requesting me to report to you on that subject. In reply, I beg to forward to you a sketch shewing the allotments

allotments near the sandy hollow, also the ground still the property of the Crown; by that plan it will be perceived that there is not more than 99 feet across the road, the width pointed out by the Regulations on that head within 3 miles of a township.

I have, &c.,

G. B. WHITE,

THE SURVEYOR GENERAL.

Surveyor.

No. 7.

THE DEPUTY SURVEYOR GENERAL to THE COLONIAL SECRETARY.

(No. 40-92.)

Surveyor General's Office,

6 March, 1840.

SIR,

With reference to your letter, No. 40-72, signifying that the Governor was ready to accede to a proposal made by Mr. Sempill to surrender a portion of his ground at Maitland, on condition of his receiving a like portion adjoining the bridge over the sandy hollow, provided that the high road be not reduced below the proper breadth thereby,—I have the honor to acquaint you, for his Excellency's information, that the surveyor of the district reports that there is not more than 99 feet across the road, and which is the width prescribed by the Act of Council 2 Gul. IV., No. 12, for roads within three miles of a township.

I have, &c.,

THE HONORABLE

THE COLONIAL SECRETARY.

S. A. PERRY,

Deputy Surveyor General.

No. 8.

THE DEPUTY SURVEYOR GENERAL to THE COLONIAL SECRETARY.

16 March, 1840.

MY DEAR SIR,

In my letter of 6th instant reporting respecting Mr. Sempill's application for a strip of ground along the road at West Maitland, I mentioned 99 feet as the width prescribed by the Act; I find, however, on reference to the Act, that 90 feet is the breadth prescribed, and I would therefore suggest that the Governor's decision may be suspended until the exact distance from the centre of the road to the point at which Mr. Sempill is desirous of coming shall have been ascertained, or that he may be allowed to bring up his buildings to the distance of 45 feet from the centre of the road at the point in question.

THE HONORABLE

E. DEAS THOMSON.

Yours, &c.,

S. A. PERRY.

No. 9.

THE COLONIAL SECRETARY to THE DEPUTY SURVEYOR GENERAL.

(No. 40-171.)

Colonial Secretary's Office,

Sydney, 19 March, 1840.

SIR,

In reference to your letter of the 6th instant, No. 40-92, reporting on the application of Mr. H. C. Sempill to be allowed to exchange a portion of his land at West Maitland for an equal extent along the road near the Wooden Bridge,—

I have the honor to inform you that His Excellency the Governor approves of Mr. Sempill's being allowed to build up to within forty-five feet of the centre of the road, as suggested in your note of 16th instant, of which he has been informed.

I have, therefore, the honor to request that you will cause Mr. Sempill's building line to be properly defined, reporting, for His Excellency's information, what quantity of land will be thus conceded to him.

I have, &c.,

THE DEPUTY SURVEYOR GENERAL.

E. DEAS THOMSON.

No. 10.

No. 10.

THE DEPUTY SURVEYOR GENERAL to MR. SURVEYOR WHITE.

(No. 40-102.)

*Surveyor General's Office,
Sydney, 27 March, 1840.*

SIR,

With reference to your letter of the 25th ultimo, No. 40-12, transmitting a sketch of the ground near the bridged hollow at West Maitland, to shew that by leaving the road ninety-nine feet wide, the proposal made by Mr. Sempill, as mentioned in my letter of the 14th February, 1840, No. 40-54, could not be carried into effect,—I have to acquaint you that, although the road from Maitland to Cockfighter's Bridge was cleared to the width of ninety-nine feet, and proclaimed to be maintained to that width as far as regarded the clearing, yet the liberal construction of the law relating to the erection of buildings or fences upon roads already established admits of buildings being erected at, and not within forty-five feet from the centre of a road if within three miles of a town, and the particular case under notice having been submitted to the Governor, His Excellency has approved of Mr. Sempill's being allowed to build accordingly, and I have therefore to request that you will define Mr. Sempill's building line being forty-five feet from the centre of the present road, and that you will report to me, for His Excellency's information, what quantity of land will be thus conceded to him, for which a like quantity is to be received as a road to the river.

I have, &c.,

G. B. WHITE, Esq.,

S. A. PERRY.

Surveyor.

No. 11.

MR. SURVEYOR WHITE to THE SURVEYOR GENERAL.

(No. 40-27.)

*Hunter's River,
9 May, 1840.*

SIR,

I do myself the honor to acknowledge the receipt of your letter, No. 40-102, referring to mine, No. 40-12, in reply to your communication 40-54, dated 14th February last, on the subject of Mr. Sempill being allowed to exchange a piece of ground at West Maitland, forming a strip to the River Hunter, for a piece of vacant land situated between the west boundary line of his allotment and the high road, and informing me that the building line within three miles of a township is regulated by Act of Council at forty-five feet from the centre of the road.

As there is a difference of opinion between Mr. Sempill and myself in this matter as to the point constituting the centre of the road, I beg to enclose a sketch, on a large scale, exemplifying it, and to draw your attention to the descriptions of the allotments on the south-west side of that road, all described as bounded by it, and to state that small buildings have been erected up to the line defined by me as the south-west side of the road.

By taking Mr. Sempill's view of this matter, twelve feet must be taken from these allotments all along the road side to add to that piece of ground for which that gentleman is to give other land in exchange.

I have, however, pointed out the building line to Mr. Sempill according to his interpretation of the Act of Council on that subject, awaiting your decision whether it is correct or not, and I have to observe that the main street of West Maitland does not exceed seventy feet in width in any part of it

I have, &c.,

THE SURVEYOR GENERAL.

G. B. WHITE,
Surveyor.

No. 12.

THE DEPUTY SURVEYOR GENERAL to THE COLONIAL SECRETARY.

(No. 40-240.)

*Surveyor General's Office,
10 July, 1840.*

SIR,

In your letter of the 19th March last, No. 40-171, in reference to mine of the 6th of the same month, No. 40-92, reporting on the application of Mr. H. C. Sempill to be allowed to exchange a portion of his land at West Maitland for an equal extent along the road

road near the wooden bridge, you inform me that His Excellency the Governor approves of Mr. Sempill's being allowed to build up to within forty-five feet of the centre of the road, and request that I will cause the building line to be properly defined, reporting, for His Excellency's information, the quantity of land thus conceded to him. I have the honor to state that, on the receipt of the above letter, I instructed Mr. White to carry into effect the instructions therein contained, but that he has some difficulty in determining the centre of the road in question, and has, therefore, transmitted to me a sketch illustrative of the view which he takes of the case, in opposition to Mr. Sempill's opinion. Of this plan I transmit a copy, as well as of his report; and as it appears that the point at issue can only be determined by an interpretation of the Act of Council respecting the centre of the road, I await further instructions. The opposite side of the road having been fixed by the measurement of certain allotments, as pointed out by Mr. White, the Road Act fixing ninety feet as the width of roads within three miles of towns, and the road having been left ninety feet wide, I am induced to lean in a measure to Mr. White's view of the case, which will render a compliance with Mr. Sempill's application impracticable, although, as Mr. White observes, the main street in West Maitland does not in any part exceed seventy feet in width.

I have, &c.,
S. A. PERRY,
D. S. G.
THE HONORABLE
THE COLONIAL SECRETARY.

No. 13.

THE COLONIAL SECRETARY to THE SURVEYOR GENERAL.

(No. 40-434.) Colonial Secretary's Office,
Sydney, 25 July, 1840.

SIR,

In reference to your letter of the 10th instant, No 40-240, on the subject of the permission given to Mr. H. C. Sempill to build to within forty-five feet of the centre of the road near the bridge at West Maitland, but in which case a difference of opinion exists between Mr. Sempill and the District Surveyor as to what is to be deemed the centre line,—

I have the honor, by the direction of the Governor, to inform you that the centre of the bridge or platform must be taken to be the centre of the road, and if it be so considered, His Excellency thinks there will be no difficulty in carrying the arrangement with Mr. Sempill into effect, of which he has been apprised.

I am, &c.,
E. DEAS THOMSON.
THE SURVEYOR GENERAL.

No. 14.

THE SURVEYOR GENERAL to MR. SURVEYOR WHITE.

(No. 40-284.) Surveyor General's Office,

VOTES No. 99. FRIDAY, 1 OCTOBER, 1858.

13. Management of the Survey Department—Question of Privilege:—Mr. White, as Chairman, brought up a Second Progress Report from, and laid upon the Table, Minutes of certain Evidence taken before the Select Committee on the Management of the Survey Department, in reference to the Question of Privilege which had arisen out of the Inquiry carried on by the Committee.
Ordered to be printed.

VOTES No. 104. TUESDAY, 19 OCTOBER, 1858.

11. Management of the Survey Department—Question of Privilege:—Mr. White moved, pursuant to notice,—
(1.) That the Progress Report from the Select Committee on the "Management of the Survey Department," laid upon the Table of the House on the 16th ultimo, be now adopted.
(2.) That an Address be presented to His Excellency the Governor General, transmitting a copy of the same.
Question put and passed.
12. Runs occupied under the Orders in Council:—Mr. White moved, pursuant to notice, That there be laid upon the Table of this House, a Return of all the Runs occupied under the Orders in Council of the 9th of March, 1847, distinguishing in columns,—the name of each Run and the district in which situated; the name of the original occupant; the name of the present occupant; the estimated acreage of each Run; the grazing capabilities of each Run; the amount of annual rent payable for each Run; the name of each Run where no official estimate of grazing capabilities has been made; the name of the Commissioner upon whose report the Run has been granted; the date when any tender was received; the date of the Commissioner's Report thereon; and the date of acceptance,—with a view to its being then referred to the Select Committee now sitting on the Management of the Survey Department.
Debate ensued.
Question put and passed.

[Further Proceedings stopped by Prorogation.]

1858-9.

VOTES No. 55. THURSDAY, 24 MARCH, 1859.

8. Management of the Survey Department:—Mr. Jenkins moved, pursuant to amended notice, That the Proceedings of, and the Evidence taken before the Select Committee on "Management of the Survey Department," during last Session, be laid upon the Table.
Question put and passed;—
Whereupon the Clerk of Select Committees presented the same accordingly.
Mr. Jenkins then moved, That the said Proceedings and Evidence be printed.
Question put passed.
Ordered to be printed.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 5 MAY, 1858.

MEMBERS PRESENT:—

Mr. White,		Mr. Hay,
Mr. Forster,		Mr. Robertson,
Mr. Donaldson,		Mr. Scott.

Mr. White was called to the Chair.

The Chairman stated the course of proceedings he was desirous of adopting with respect to the conduct of this inquiry.

Committee deliberated.

Motion made, and *Question*,—"That Col. Barney, R. E., Surveyor General, and A. G. M'Lean, Esquire, Chief Draftsman in the Survey Department, be summoned before the Committee, as witnesses, on Wednesday next"—*agreed to*.

Committee further deliberated.

Motion made (Mr. Hay) and *Question*,—"That the Chairman move in the House, that the following Papers be referred to the Committee, viz:—

- " Return relative to the Survey Department, ordered to be printed 6th December, 1853.
- " Report upon the strength and efficiency of the Survey Department, ordered to be printed 31st October, 1854.
- " Report from Commissioners appointed to inquire into the Surveyor General's Department, ordered to be printed 23rd November, 1855.
- " Report from the Surveyor General on Sale of Lands, ordered to be printed 3rd June, 1856.
- " Correspondence relative to travelling expenses of Mr. Deputy Surveyor General Thompson, ordered to be printed 13th March, 1857."

—*agreed to*.

[Adjourned till Wednesday next, at *Ten o'clock*.]

WEDNESDAY, 12 MAY, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Hay,		Mr. Robertson,
Mr. Forster,		Mr. Donaldson,
	Mr. Aldcorn.	

By direction of the Chairman, Resolution of the House, referring to the Committee on the 6th instant certain papers (5), moved for by the Chairman under a Resolution agreed to by the Committee at their last meeting;—read by the Clerk.

Papers then laid before the Committee.

Col. Barney, R. E., Surveyor General, examined.

[Adjourned till Friday next, at *Eleven o'clock*.]

FRIDAY, 14 MAY, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Aldcorn,		Mr. Robertson,
Mr. George Macleay		Mr. Forster,
	Mr. Piddington.	

Mr. A. G. M'Lean, Chief Draftsman in the Survey Department, examined.
Committee deliberated.

[Adjourned till Tuesday next, at *Eleven o'clock*.]

TUESDAY, 18 MAY, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Piddington,		Mr. Donaldson,
Mr. Moriarty,		Mr. Forster,
	Mr. Hay.	

Mr. W. W. Darko, Surveyor, late in charge of the Surveys in the Clarence and M'Leay River Districts, examined.

[Adjourned till Friday next, at *Eleven o'clock*.]

FRIDAY, 21 MAY, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire, in the Chair.

Mr. Donaldson,		Mr. Moriarty,
Mr. Hay,		Mr. Forster,
Mr. Robertson,		Mr. Piddington,
		Mr. Alcorn.

Committee deliberated.

Mr. *W. W. Darke* further examined.

[Adjourned till Wednesday next, at *Eleven o'clock.*]

WEDNESDAY, 26 MAY, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire, in the Chair.

Mr. Moriarty,		Mr. Alcorn,
		Mr. Forster.

Mr. *John Thompson*, Deputy Surveyor General, examined.

[Adjourned till Friday next, at *Eleven o'clock.*]

FRIDAY, 28 MAY, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire, in the Chair.

Mr. Moriarty,		Mr. Forster,
		Mr. Alcorn.

Mr. *John Thompson* further examined.

[Adjourned till Tuesday next, at *Eleven o'clock.*]

TUESDAY, 1 JUNE, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire, in the Chair.

Mr. Scott,		Mr. Forster,
		Mr. Alcorn.

Mr. *William Shone*, Surveyor in the Illawarra District, examined.

[Adjourned till Friday next, at *Eleven o'clock.*]

FRIDAY, 4 JUNE, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire, in the Chair.

Mr. Forster,		Mr. Piddington,
		Mr. Moriarty.

Mr. *William Shone* further examined.

Mr. *Henry Halloran*, Chief Clerk in the Survey Department, examined.

[Adjourned till Thursday next, at *Eleven o'clock.*]

THURSDAY, 10 JUNE, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire, in the Chair.

Mr. Moriarty,		Mr. Alcorn.
---------------	--	-------------

Mr. *T. Cadell* examined.

[Adjourned till Wednesday next, at *Eleven o'clock.*]

WEDNESDAY,

WEDNESDAY, 16 JUNE, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Forster,		Mr. Moriarty,
Mr. Donaldson,		Mr. Aldcorn,

The Chairman, at the request of the Clerk, brought under the notice of the Committee certain portions of the evidence given by Mr. W. Shone on the 1st instant, which that gentleman was now desirous to have struck out therefrom.

Committee having perused the same, deliberated, and it was *Resolved* :—

“That in the opinion of this Committee, it would be expedient to permit these portions of Mr. Shone’s evidence to be expunged.”

Mr. *Henry Halloran*, further examined.

[Adjourned till to-morrow, at *Eleven o’clock*.]

THURSDAY, 17 JUNE, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Forster,		Mr. Donaldson,
		Mr. Aldcorn.

Mr. *D. R. Gale*, Surveyor, examined.

[Adjourned till Thursday next, at *Eleven o’clock*.]

THURSDAY, 24 JUNE, 1858.

MEMBER PRESENT:—

Mr. Donaldson.

Mr. *F. J. Naylor* was in attendance as a witness, but a quorum of the Committee was not present.

[Adjourned.]

THURSDAY, 22 JULY, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Piddington,		Mr. Forster,
Mr. Aldcorn,		Mr. Robertson.

The Chairman brought under the notice of the Committee the manuscript of the evidence given by Mr. *D. R. Gale* on the 17th ultimo, from which *questions* and answers, Nos. 34, 35, 36, and 37, had been struck out by the witness, when the evidence was in his hands for revision, and desired the opinion of the Committee as to the course to be pursued relative to this matter.

Committee deliberated, and it was *Resolved* :—

“That this Committee, deeming the obliteration by Mr. Gale of these *four questions* and the answers thereto highly irregular, resolve that the same be re-inserted prior to the printing of his evidence.”

Whereupon Motion made (Mr. *Robertson*) and *Question proposed*,—

“That this Committee are nevertheless of opinion that it would be expedient to insert a memorandum at the end of Mr. Gale’s evidence, intimating that the witness had, when correcting the evidence, been desirous to omit these *questions* and answers therefrom.”

Deliberation ensued.

Question put and agreed to.

Mr. *W. R. Davidson*, Surveyor, examined.

[Adjourned till Friday next, at *Eleven o’clock*.]

FRIDAY, 30 JULY, 1858.

MEMBERS PRESENT:—

Mr. White,		Mr. Piddington.
------------	--	-----------------

Mr. *F. J. Naylor* and Mr. *H. Sanderson* were in attendance as witnesses, but a quorum of the Committee was not present.

[Adjourned till Tuesday next, at *Eleven o’clock*.]

TUESDAY,

TUESDAY, 3 AUGUST, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Aldcorn. | Mr. Hay.

The Chairman laid before the Committee,—Letter from H. Halloran, Esq., dated 23rd ultimo, stating that in a Return forming Appendix B to his evidence of the 16th June last, an error appeared in the date of Mr. W. W. Darke's appointment to be an Assistant Surveyor—the date of such appointment, (owing to a clerical error in the Blue Book), having been set down therein 23 October, 1836, in lieu of the correct date, 23 September, 1836—and requesting that the said Return might be amended in this particular point.

Committee deliberated, and it was *Resolved*:—

“That the Clerk of Select Committees do forthwith correct the said Return, as requested in Mr. Halloran's communication.”

Return corrected accordingly.

Mr. Henry Sanderson, C. E., examined.

The Chairman desired the opinion of the Committee as to the advisability of his drawing up and submitting certain questions in writing to Mr. E. L. Burrowes and Mr. L. Gordon, Surveyors at Brisbane and Wellington, respectively, whose evidence was requisite for the purposes of the inquiry, so as to obviate the necessity for incurring the expense of summoning these gentlemen to Sydney for examination.

Committee deliberated, and it was *Resolved*:—

“That it is expedient, in the first instance, that the Chairman should draw up such questions as he may consider desirable to transmit to Mr. Burrowes and Mr. L. Gordon, to be submitted prior to transmission for the consideration and approval of the Committee.”

[Adjourned till Thursday next, at *Eleven o'clock*.]

THURSDAY, 5 AUGUST, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Forster, | Mr. Aldcorn.

Mr. C. F. Gorton, Clerk in the Survey Department, examined.

The Chairman laid before the Committee,—Letter from W. M. Brownrigg, Esquire, excusing his attendance before the Committee, as a witness, for *this day*.

Committee *Resolved*:—

“That W. M. Brownrigg, Esquire, and C. E. Langley, Esquire, be summoned before the Committee, as witnesses, for Wednesday next.”

[Adjourned till Wednesday next, at *Eleven o'clock*.]

WEDNESDAY, 11 AUGUST, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Moriarty, | Mr. Forster,
Mr. Aldcorn.

Mr. W. M. Brownrigg, Surveyor, and Mr. C. E. Langley, C. E., examined.

[Adjourned till Friday next, at *Eleven o'clock*.]

FRIDAY, 13 AUGUST, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Forster, | Mr. Moriarty.

Mr. F. J. Naylor, Clerk in the Crown Lands Branch of the Survey Department, examined.

[Adjourned till Wednesday next, at *Eleven o'clock*.]

WEDNESDAY, 18 AUGUST, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Forster, | Mr. Aldcorn,
Mr. Moriarty.

By direction of the Chairman, Resolution of the House referring to Committee on 11th instant, the “Petition of Mr. J. Ralfe, Licensed Surveyor, Port Macquarie, relating to his claim for services,”—read by the Clerk.

In

In accordance with the summons addressed to each member of the Committee convening a meeting for *this day*,—

The Chairman brought under their consideration a claim made by Mr. W. Shone, Surveyor, for certain expenses incurred by him in attending upon and giving evidence before this Committee, as shewn in the following account, viz. :—

Sydney, 11 June, 1853.

Expenses incurred by Mr. Surveyor Shone in attending and giving evidence before the Committee on the "Management of the Survey Department," from 1st to 11th June, 1858	£11 11 0
Travelling Expenses from and to Illawarra	2 0 0
	£13 11 0

WM. SHONE.

Committee deliberated, and it was *Resolved* :—

- " 1. That the sum of thirteen pounds eleven shillings be paid to Mr. Wm. Shone, " being eleven pounds eleven shillings for expenses incurred by him in " attending and giving evidence before the Committee, from 1st to 11th June, " 1858, and two pounds for travelling expenses from and to Illawarra.
- " 2. That the Chairman do certify to this Resolution of the Committee."

The Chairman then brought under the consideration of the Committee a claim made by Mr. W. R. Davidson, District Surveyor, who was summoned before the Committee, as a witness, on 24th June last, but who was, in consequence of the indisposition of the Chairman, not examined till the 22nd ultimo,—for certain expenses incurred by him in attending upon and giving evidence before the Committee, as shewn in the following account, viz. :—

Sydney, 22 July, 1853.

Expenses incurred by Mr. District Surveyor Davidson in attending and giving evidence before the Committee on the "Management of the Survey Department," from the 28th June to the 22nd July	£25 4 0
Travelling Expenses, and fare up and down from Bathurst	11 0 0
	£36 4 0

W. R. DAVIDSON:

Committee deliberated, and it was *Resolved* :—

- " 1. That the sum of thirty-six pounds four shillings be paid to Mr. W. R. Davidson, being twenty-five pounds four shillings for expenses incurred by " him in attending and giving evidence before the Committee from the 28th " June to 22nd July, 1858, and eleven pounds for travelling expenses from " and to Bathurst.
- " 2. That the Chairman do certify to this Resolution of the Committee."

Mr. F. W. Birmingham, Surveyor, examined.
Colonel Barney, R. E., further examined.

[Adjourned till Friday next, at *Eleven* o'clock.]

FRIDAY, 20 AUGUST, 1858.

MEMBERS PRESENT :—

Mr. White, | Mr. Moriarty.

Mr. J. Thompson and Mr. H. Halloran were in attendance as witnesses, but a quorum of the Committee was not present.

[Adjourned till Tuesday next, at *Eleven* o'clock.]

TUESDAY, 24 AUGUST, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire, in the Chair.

Mr. Moriarty, | Mr. Alcorn.

The Chairman having brought under the notice of the Committee entry 1 in the Votes and Proceedings of the 19th instant, (No. 79), read the same, viz. :—

" Payment of Witnesses before Select Committees :—The Speaker informed the " House, that he had considered it to be his duty to withhold his order for pay- " ment of expenses to two witnesses who had been summoned to give evidence " before, but not to render professional services to the Select Committee on " the Management of the Survey Department, as they must have been, to have " entitled them to the Chairman's Certificate, under the 44th section of the " Standing Orders, which in no way authorises payment of expenses to an " ordinary witness, summoned in the ordinary manner merely to give " evidence, and the bearing of which, in his opinion, it was evident this " Committee had misapprehended."

Committee deliberated.

By direction of the Chairman, section 44 of the Standing Orders read by the Clerk.

Committee considered the wording of the said section, and as to whether it did not convey the impression that it was applicable to the payment of *ordinary* witnesses; and being of opinion that after the ruling of the Speaker in the matter it would be necessary, under any circumstances, to rescind the Resolutions agreed to at their last meeting relative to the payment of Mr. Davidson and Mr. Shone,—

It was *Resolved* :—

“ That in consequence of the ruling of the Speaker as to the bearing of section 44 of the Standing Orders, it is advisable that the two Resolutions relative to the payment to Mr. W. Shone and Mr. W. R. Davidson of certain expenses incurred by them in attending upon the Committee to give evidence, agreed to at the last meeting of the Committee, should be rescinded.”

Committee further deliberated.

Motion made (Mr. *Moriarty*) and *Question*—“ That inasmuch as the Speaker, on the 19th instant, withheld his Order for the payment of the expenses incurred by Mr. William Shone and Mr. W. R. Davidson, in attending and giving evidence before this Committee, on the ground that the 44th section of the Standing Orders in no way authorises payment of expenses to an ordinary witness, summoned in the ordinary manner, merely to give evidence, it is expedient to report to the House, recommending the payment of the sum of £13 11s., by way of compensation to Mr. Shone,—being £11 11s. for expenses incurred by him in attending and giving evidence before the Committee, from 1st to 11th June, 1858, and £2 for travelling expenses from and to Illawarra; and of the sum of £36 4s. to Mr. Davidson,—being £25 4s. for expenses incurred by him in attending and giving evidence before the Committee, from 28th June to 22nd July, 1858, and £11 for travelling expenses from and to Bathurst”—*agreed to*.

Colonel *Barney*, R. E., further examined.

[Adjourned till Friday next, at *Eleven o'clock*.]

FRIDAY, 27 AUGUST, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire, in the Chair.

Mr. Donaldson,

Mr. Moriarty,

Mr. Forster,

Mr. Alcorn.

Mr. *John Thompson* further examined.

The Chairman then laid before the Committee,—Two letters received by him, dated 12th and 23rd August, 1858, from Mr. C. F. Gorton, who was examined before the Committee on the 5th instant, stating that, in consequence of the evidence given by him on that occasion, certain memoranda had passed between him and the Surveyor General, copies of which he enclosed, for the information of the Committee.

Letter of 23rd instant and *memoranda* read, viz. :—

Dear Sir,

My application to the Honorable the Secretary for Lands and Works, begging a re-consideration of my case, having been this day forwarded with a recommendation that I may either be dismissed, or be told to seek an exchange elsewhere, and the queries with their replies relative to my examination by your Committee having also been transmitted, in order to prove my *insubordination*; I beg to enclose a copy of the queries alluded to, as perhaps you will be able thereby to judge of the animosity evinced by Mr. Halloran on account of my having been summoned to give evidence before you.

I have, &c.,

C. F. GORTON.

Survey Department,
23 August, 1858.

Mr. Halloran,

Request Mr. Gorton to reply to the following question :—

Query.

Under what circumstances were you required to give your evidence before the Committee of the Legislative Assembly appointed to inquire into the working of the Survey Department—was it by personal application to the Chairman? and if so, did you obtain permission, either from Mr. Secretary Robertson, or the Head of your Department, to make such application?

G. B.

9 August, 1858.

Reply.

Mr. Halloran,

In a conversation with Mr. White on my own affairs, and amongst others that of my application for promotion to Mr. Secretary Robertson, I was asked whether I had any objection to be examined before the Select Committee.

C. F. GORTON.

9-8-58.

Mr. Darke is requested to reply to the following questions :—

1. Under what circumstances, and for what purpose, did you introduce Mr. Gorton to the Chairman of the Committee on the Survey Department?

At Mr. Gorton's own request—*certainly* for no purpose of mine, direct or indirect. I took no part in the conversation which ensued.

2. Was the introduction made during office hours?

About a quarter past 9, A. M.

3. Did you obtain the sanction of the Head of your Department?

I did not—not feeling conscious of impropriety in omitting to do so—no disrespect was ever thought of.

W. W. DARKE.

17 August, 1858.

Mr.

Mr. Darke is requested to state whether Mr. Gorton informed him for what purpose he requested an introduction to Mr. White.

G. B.

Mr. Gorton came to me, and said that his veracity had been officially impugned, and asked what he should do? I said, "As a gentleman you *must* vindicate yourself." "How can I do so?" "Lay the matter truly before Mr. Robertson." He replied, "That will be too late, as a decision will have been arrived at. Will you introduce me to Mr. White?"

W. W. DARKE.

P. S.—The above questions are in the original in the Surveyor General's handwriting, but no doubt were dictated by Mr. Halloran.

Committee deliberated.

Motion made, and *Question*—"That Colonel Barney and Mr. Halloran be summoned before this Committee, as witnesses, for Wednesday next, for the purpose of being examined relative to the matter complained of in Mr. Gorton's communication"—*agreed to*.

[Adjourned till Wednesday next, at *Eleven o'clock*.]

WEDNESDAY, 1 SEPTEMBER, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Piddington,		Mr. Forster,
Mr. Aldcorn,		Mr. Moriarty.

By direction of the Chairman, Resolution of the House referring to the Committee on 31st ultimo, "a Petition from William Wedge Darke, Assistant Surveyor in the Surveyor General's Department, representing that promotion has been withheld from him after the fulfilment, on his part, of the conditions upon which it had been promised to him, and "praying redress"—read by the Clerk.

Colonel Barney, R. E., then called in.

By direction of the Chairman, Minutes of Proceedings taken at the last meeting of the Committee read by the Clerk.

Colonel Barney, R. E., further examined.

At the close of his examination, Colonel Barney stated that Mr. H. Halloran, in consequence of recent domestic affliction, would be unable to attend before the Committee, as a witness, for *this day*.

Whereupon motion made and *Question*—"That Mr. H. Halloran be now summoned before this Committee, as a witness, for Friday next,"—*agreed to*.

The Chairman then desired the opinion of the Committee as to whether it would be the more expedient course to forthwith make a Progress Report to the House, in the terms of the Resolution agreed to relative to the payment of certain expenses to Mr. W. Shone and Mr. W. R. Davidson, or to insert a paragraph to this effect in their Report at the close of the inquiry.

Committee deliberated, and it was *Resolved*:—

"That inasmuch as it is now proposed to bring this inquiry to a speedy termination, it would be more advisable to insert a paragraph, relative to the payment of expenses to Mr. Shone and Mr. Davidson, in their Report at the close of the inquiry"

[Adjourned till Friday next, at *Eleven o'clock*.]

FRIDAY, 3 SEPTEMBER, 1858.

MEMBERS PRESENT:—

Mr. White,		Mr. Scott.
------------	--	------------

A quorum of the Committee was not present.

[Adjourned till Wednesday next, at *Eleven o'clock*.]

WEDNESDAY, 8 SEPTEMBER, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Moriarty,		Mr. Aldcorn.
---------------	--	--------------

Committee deliberated.

Mr. H. Halloran called in.

By direction of the Chairman, the two letters from Mr. C. F. Gorton, dated 12th and 23rd August, 1858, and the memoranda appended to that of the 12th August, (*vide* "Minutes of Proceedings, 27 August, 1858"), read by the Clerk.

Mr. H. Halloran further examined.

Committee

Committee deliberated, and it was *Resolved* :—

“ That a full meeting of this Committee be convened for Friday next, to
 “ consider the Question of Privilege involved in the notice taken of the
 “ Proceedings of the Committee prior to their Report to the House, as shewn
 “ in Mr. Gorton’s communication of the 12th ultimo, and the copies of
 “ memoranda thereto appended, and by the evidences of the Surveyor General
 “ and Chief Clerk thereupon.”

[Adjourned till Friday next, at *Eleven* o’clock.]

FRIDAY, 10 SEPTEMBER, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire, in the Chair.

Mr. Piddington,
 Mr. Forster,

Mr. Moriarty,
 Mr. Robertson.

Committee met, pursuant to a Resolution agreed to at their last meeting, to consider the Question of Privilege involved in the notice taken by the Surveyor General of certain of their proceedings, prior to their Report to the House.

By direction of the Chairman, Minutes of Proceedings of the Committee on the 27th ultimo, and a portion of the unrevised evidence, *in manuscript*, given by Mr. H. Halloran on the 3rd instant, read by the Clerk.

Committee deliberated.

Motion made (Mr. *Forster*) and *Question proposed* :—

“ That this Committee are of opinion that the following witnesses examined before
 “ them, namely, Mr. C. F. Gorton and Mr. W. W. Darke, have been since
 “ their examination subjected to an improper and irregular interference on
 “ the part of the Surveyor General.”

Deliberation continued.

Question put and agreed to.

Whereupon Motion made (Mr. *Piddington*) and *Question*,—

“ (1.) That the Chairman do prepare a Progress Report for the consideration of
 “ the Committee, embodying the purport of this Resolution.

“ (2.) That after laying such Report on the Table of the House, the Chairman do
 “ give notice that he will move for its adoption, and that an Address be pre-
 “ sented to His Excellency the Governor General, transmitting a copy of the
 “ same.”—

agreed to.

The Chairman brought under the notice of the Committee the manuscript of the evidence given by Mr. John Thompson on the 27th ultimo from which certain portions of the answers to questions 87 and 93 had been struck out by the witness, whilst the evidence was in his hands for revision, and desired the opinion of the Committee as to the course to be adopted with respect to this matter.

By direction of the Chairman, questions and answers 87 and 93, inclusive of those portions struck out by Mr. Thompson, read by the Short-hand Writer.

Committee deliberated, and it was *Resolved* :—

“ That as the portions struck out by Mr. Thompson consist of certain unimportant
 “ statements relating to *his own private* affairs, it is expedient to permit their
 “ omission from his evidence.”

Committee further deliberated.

Mr. Henry Sanderson, who was in attendance as a witness, was then called in and informed by the Chairman, that as the House had not yet referred his Petition to the Committee for their consideration, his examination must necessarily be deferred until such reference had been made.

[Adjourned till Tuesday next, at *Eleven* o’clock.]

TUESDAY, 14 SEPTEMBER, 1858.

MEMBERS PRESENT :—

Mr. White,

Mr. Donaldson.

Mr. Henry Sanderson was in attendance as a witness, but a quorum of the Committee was not present.

[Adjourned till to-morrow, at *Eleven* o’clock.]

WEDNESDAY, 15 SEPTEMBER, 1858.

The meeting of the Committee convened for this day lapsed, in consequence of the adjournment of the House from Tuesday, the 14th, to Thursday, the 16th instant.

THURSDAY,

THURSDAY, 16 SEPTEMBER, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.
Mr. Donaldson, | Mr. Piddington,
Mr. Forster.

The Chairman laid before the Committee a Draft Progress Report, embodying the purport of the Resolution agreed to at their last meeting, on motion of Mr. Forster.

Motion made (Mr. Forster) and Question,—“That this Report be now read,”—*agreed to.*

Report read accordingly.

Committee deliberated, and *verbally* amended the same.

Whereupon Motion made, and Question,—“That this Progress Report, as *verbally* amended, be the Progress Report of the Committee”—*agreed to.*

Chairman requested to report progress to the House.

By direction of the Chairman, Resolution of the House referring to the Committee, on 10th instant, “a Petition from Licensed Surveyor Henry Sanderson, late Assistant Surveyor, Moreton Bay District, complaining of his dismissal from the Public Service, and “praying that his case may be referred to this Committee”—read by the Clerk.

Petition then read.

Mr. Henry Sanderson, C. E., Petitioner, further examined.

[Adjourned.]

FRIDAY, 1 OCTOBER, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.
Mr. Piddington, | Mr. Hay,
Mr. Forster.

The Chairman desired the opinion of the Committee as to the expediency of forthwith reporting to the House the evidence given by Colonel Barney on the 1st, and Mr. Henry Halloran on the 8th ultimo, in reference to the Question of Privilege with respect to which a Progress Report had been laid upon the Table of the House on the 16th ultimo.

Committee deliberated, and it was *Resolved*:—

“1. That it is expedient that the evidence given by Colonel Barney and Mr. Henry Halloran, in reference to the said Question of Privilege, be forthwith reported to the House.”

“2. That for this purpose the Chairman do at once prepare a Second Progress Report for the consideration of the Committee.”

The Chairman laid before the Committee the evidence given by Mr. Henry Sanderson in reference to his Petition, on the 16th ultimo, to which certain Appendices had been attached by the witness when his evidence was sent to him for revision, and requested the decision of the Committee as to the advisability of printing such Appendices therewith.

Committee deliberated, and it was *Resolved*:—

“That in the opinion of this Committee, it is expedient that these Appendices should be printed with Mr. Sanderson’s evidence.”

The Chairman then laid before the Committee the evidence given by Mr. Henry Halloran on the 8th ultimo, and having brought under their notice an *Addendum* attached thereto by the witness, when such evidence was in his hands for revision, desired the opinion of the Committee as to the expediency of printing the said *Addendum* in its entirety.

Addendum then read.

Committee deliberated, and it was *Resolved*:—

“That it is expedient to permit the printing of the first portion only of this *Addendum*,—as far as the words ‘mischievous intention,’ inclusive.”

The Chairman then desired the opinion of the Committee as to the course it would be expedient to pursue for the purpose of obtaining a “Return shewing the number of Runs assessed and remaining to be assessed in each district at the present time,”—which Mr. F. J. Naylor, late a Clerk in the Crown Lands Branch of the Survey Department, had promised to attach—as Appendix A—to the evidence given by him on the 13th August last, but which it now appears he is unable to furnish.

Committee deliberated, and it was *Resolved*:—

“1. That inasmuch as this Return cannot be prepared without considerable clerical labor, and it now appears that Mr. Naylor is unable to supply it, it is advisable to make the following motion in the House:—“That there be laid upon the Table of this House a Return of all the Runs occupied under the Orders in Council of the 9th of March, 1847, distinguishing in columns,—the name of each Run and the district in which situated; the name of the original occupant; the name of the present occupant; the estimated acreage of each Run; the grazing capabilities of each Run; the amount of annual rent payable for each Run; the name of each Run where no official estimate of grazing capabilities has been made; the name of the Commissioner upon whose report the Run has been granted; the date when any tender was received; the date of the Commissioner’s report thereon,

“ and the date of acceptance,—with a view to its being then referred to the Committee.

- “ 2. That it is further expedient that the Clerk of Select Committees should insert a memorandum in Mr. Naylor’s evidence, stating that gentleman’s neglect to supply the said Return.”

The Chairman then laid before the Committee,—Letter from Colonel Barney dated 17th ultimo, returning the evidence given by him on the 24th August last, and brought under their notice the said evidence, in which, when with him for revision, the witness had considerably altered answers to questions 25, 26, 35, 106, 135, and 158, and from which he had struck out questions and answers 44 to 49 inclusive, inserting in lieu thereof a note explanatory of such obliteration.

Letter, questions, and answers altered, and those struck out, together with the explanatory note in reference thereto,—read by the Clerk.

Committee deliberated, and it was *Resolved* :—

- “ 1. That with respect to the questions and answers *struck out* by Colonel Barney from his evidence of the 24th August last—the Committee deeming such obliteration highly irregular,—Resolve,—that the same be re-inserted prior to the printing of such evidence; that the explanatory note made by Colonel Barney in reference thereto be printed in the margin; and that the Clerk of Select Committees do insert a memorandum in the said evidence, to the effect that the witness, in revising the same, desired to omit these questions and answers therefrom.”
- “ 2. That with respect to the questions and answers in the said evidence considerably altered by Colonel Barney, the Committee deem it advisable to allow such alterations.”

The Chairman also laid before the Committee,—Further letter from Colonel Barney, dated 17th, in reply to a communication from the Clerk of the Legislative Assembly of the 15th ultimo, stating his inability to trace any correspondence in reference to the amalgamation of the offices of Surveyor General and Chief Commissioner of Crown Lands, intended to form Appendix B to evidence given by him on the 1st ultimo.

Committee thereupon *Resolved* :—

- “ That as it appears from his communication that Colonel Barney is unable to furnish the letter required to form Appendix B to his evidence of the 1st ultimo, it is expedient to print the said communication in lieu of such Appendix, in order to explain the cause of its omission from his evidence.”

Mr. W. W. Darke examined with reference to his Petition.

Committee deliberated.

Motion made (Mr. Hay) and *Question*,—“ That Colonel Barney be summoned before this Committee, as a witness, for Thursday next, for the purpose of then producing all papers having reference to Mr. W. W. Darke’s promotion in, and proposed retirement from, the Survey Department, together with any report made by the Medical Board in reference to that gentleman’s eyesight”—*agreed to*.

The Chairman then laid before the Committee a Draft Report.

Report read.

Motion made and *Question*—“ That this Report be the Second Progress Report of the Committee”—*agreed to*.

The Chairman requested to report further Progress to the House.

[Adjourned till Thursday next, at Eleven o’clock.]

THURSDAY, 7 OCTOBER, 1858.

MEMBERS PRESENT :—

G. B. White, Esquire in the Chair.

Mr. Forster,

Mr. Piddington.

Committee deliberated in reference to the allegations set forth in Mr. W. W. Darke’s Petition.

Colonel Barney, R.E., further examined, in reference to Mr. Darke’s Petition ;—

And during his examination the witness offering, as Appendices, various documents with reference to the said Petition,—Committee considered as to the expediency of printing the same, and it was *Resolved* :—

- “ That in the opinion of this Committee it is advisable that Colonel Barney should attach only such of these documents to his evidence, as Appendices, as he may consider absolutely requisite to enable the Committee to arrive at an accurate decision respecting the allegations contained in Mr. Darke’s Petition.”

Colonel Barney’s examination concluded.

The Chairman then informed the Committee that he was desirous of being himself examined, prior to the close of the inquiry.

Committee thereupon deliberated, and it was *Resolved* :—

- “ That the examination of the Chairman be entered upon at the next meeting of the Committee.”

[Adjourned till Friday next, 15th instant, at Eleven o’clock.]

FRIDAY,

15

FRIDAY, 15 OCTOBER, 1858.

MEMBERS PRESENT:—

Mr. Hay, | Mr. Forster.

A quorum of the Committee was not present.

[Adjourned till Wednesday next, at *Eleven o'clock.*]

WEDNESDAY, 20 OCTOBER, 1858.

MEMBER PRESENT:—

Mr. White.

A quorum of the Committee was not present.

[Adjourned till Friday next, at *Eleven o'clock.*]

FRIDAY, 22 OCTOBER, 1858.

MEMBERS PRESENT:—

G. B. White, Esquire, in the Chair.

Mr. Piddington, | Mr. Forster,
Mr. Robertson, | Mr. Hay.

The Chairman informed the Committee that he had caused Mr. Rae, the Secretary to the Railway Commissioners, to be summoned before them *this day*, for the purpose of producing certain papers relating to Mr. Licensed Surveyor Henry Sanderson, which Mr. Henry Halloran, in the evidence given by him on the 8th ultimo, (*vide question and answer 36*), had stated that he would supply for the information of the Committee, but which it now appeared, by a letter to the Clerk of the Assembly, dated 6th instant, that he was not in a position to furnish, in consequence, as stated in the said letter, of the papers being in the Railway Department, from whence he was unable to obtain them.

Paragraph in Mr. Halloran's letter of the 6th instant referred to, then read by the Chairman.

Mr. J. Rae, Secretary to the Railway Commissioners, examined;—

And it appearing from the evidence of Mr. Rae that, to the best of his belief, the papers in question have never been in the Railway Department,—

Committee deliberated, and it was *Resolved*:—

“That a communication be forthwith addressed to Mr. Halloran, apprising him of
“Mr. Rae's examination by the Committee this day, and its result, and
“requesting that he will at once cause further search to be made for the
“documents in question, as they are required for the purpose of enabling the
“Committee to come to a satisfactory decision in reference to the allegations
“set forth in Mr. Sanderson's Petition.”

The Chairman then laid before the Committee the evidence given by Mr. W. W. Darke on the 1st instant, in reference to his Petition, to which certain Appendices had been attached by the witness when his evidence was sent to him for revision, and desired the opinion of the Committee as to the expediency of printing the said Appendices therewith.

Committee deliberated, and it was *Resolved*:—

“That, in the opinion of this Committee it is advisable to permit these Appen-
“dices to be printed with Mr. Darke's evidence.”

The Chairman also laid before the Committee certain other documents transmitted by Mr. Darke for their information, bearing upon the allegations of his Petition.

Mr. C. J. Armytage, Clerk in the Survey Department, examined.

The Chairman then informed the Committee that he was desirous that *his own* examination should be postponed until Tuesday next.

[Adjourned till Tuesday next, at *Eleven o'clock.*]

TUESDAY, 26 OCTOBER, 1858.

MEMBER PRESENT:—

Mr. Forster.

A quorum of the Committee was not present.

[Adjourned.]

WEDNESDAY, 10 NOVEMBER, 1858.

MEMBER PRESENT:—

Mr. White.

A quorum of the Committee was not present.

[Adjourned till Friday next, at *Eleven o'clock.*]

FRIDAY,

FRIDAY, 12 NOVEMBER, 1858.

MEMBERS PRESENT:—

Mr. Piddington, | Mr. Aldcorn.

A quorum of the Committee was not present.

[Adjourned.]

[Further Proceedings stopped by Prorogation.]

LIST OF WITNESSES.

[Further Proceedings stopped by Prorogation.]

LIST OF APPENDIX.

<i>(To Evidence given by Mr. W. W. Darke, Surveyor, on 21st May, 1858.)</i>	
APPENDIX A.	
Copy of a letter, dated 10 February, 1856, from Mr. W. W. Darke, Surveyor, to the Chief Clerk in the Survey Department, offering certain suggestions relative to the Survey Service of the Colony	37
<i>(To Evidence given by Mr. John Thompson, Deputy Surveyor General, on 26th May, 1858.)</i>	
APPENDIX A.	
Copy of a letter, dated 31 October, 1828, from the Colonial Secretary to the Surveyor General, setting forth certain arrangements with respect to the Salaries and Allowances of the Officers and other persons employed in the Survey Department, authorised under the Secretary of State's Despatch, dated 31st March, 1828, No. 19	45
APPENDIX B.	
Return of the names of all the Officers of the Professional Branch of the Surveyor General's Department, from the appointment of Sir T. L. Mitchell to the Office of Surveyor General up to the present date, shewing their grades, promotion, &c.	46
<i>(To Evidence given by Mr. Surveyor Shone on 4th June, 1858.)</i>	
APPENDIX A.	
Correspondence relative to certain Engineering Surveys for Railway purposes made by Mr. Shone:—	
No. 1.	
Letter from Surveyor General (Sir T. Mitchell) to Mr. Shone, dated 10th June 1850, enclosing a communication from the Colonial Secretary, stating the satisfaction of His Excellency the Governor and the Executive Council at the able and expeditious manner in which Mr. Shone had conducted the Surveys for a central line of Railway to Goulburn	69
No. 2.	
Further letter from Surveyor General to Mr. Shone, dated 27th September, 1850, expressing great satisfaction at a plan and section of the proposed central line of Railway from Liverpool to the Cataract River, together with a rough section of the line from Liverpool to Wingecarribbee	69
No. 3.	
Letter from Surveyor General to Mr. Shone, dated 3rd March, 1847, expressing satisfaction at the plan and sections of the proposed line of Railway between the Cataract and Nepean Rivers	69
<i>(To Evidence given by Mr. H. Halloran, Chief Clerk, on 4th June, 1858.)</i>	
APPENDIX A.	
Statements shewing the amount annually received by J. Thompson, Esquire, Deputy Surveyor General, as Secretary to the Commissioners of the Court of Claims from 1836 to 1854, inclusive	75
APPENDIX B.	
Copy of a letter from the Colonial Secretary to the Surveyor General, dated 6th May, 1841, directing the removal of Mr. Surveyor Dixon from the service	76
APPENDIX C.	
Extracts from the instructions to the Governor under the King's Sign Manual, dated 17th July, 1825, relative to the division of the Territory of New South Wales into Counties, Parishes, &c., &c., and the disposal of lands	76
<i>(To Evidence given by Mr. H. Halloran on 16th June, 1858.)</i>	
APPENDIX A.	
Return shewing the annual cost of the Drafting and Clerical branches of the Surveyor General's Department, with the number of persons employed in each branch, from 1st January, 1827, to 31st May, 1853	92
APPENDIX B.	
Return of salaried Field Officers employed in the department of the Surveyor General during the period from 1st January, 1827, to 31st May, 1858	93
APPENDIX C.	
Copy of an extract from a letter <i>proposed</i> by H. Halloran, Esquire, to have accompanied and explained a scheme for the subdivision of lands for sale in the Settled Districts	96
APPENDIX D.	
Copy of instructions issued by the Deputy Surveyor General on 9th July, 1853, for marking Crown Land by Government Surveyors, together with copy of a circular from the late S. A. Perry, Esquire, to the Licensed Surveyors, dated 10th April, 1848, on the same subject	98
APPENDIX E.	
Copies of correspondence in March and April, 1837, between the Commissioner of Crown Lands in the New England District, and the Chief Commissioner of Crown Lands relative to the Unassessed Runs in that District:—	
1.—Letter from Commissioner to Chief Commissioner, dated 23rd March, 1837, forwarding a Return of the Unassessed Runs in the New England District	99
2.—Letter from Chief Commissioner to Commissioner, dated 21st April, 1837, in reply, transmitting a list of tenders for New Runs in the New England District	101

	PAGE.
APPENDIX F.	
Copy of a letter from Chief Commissioner to Under Secretary for Lands and Public Works, relative to the remittance of the £10 license fee in the case of the village of "Falconer" ..	101
APPENDIX G.	
Copies of certain memoranda relative to the better amalgamation and operation of the Survey and Crown Lands Offices	102
<i>(To Evidence given by Mr. C. F. Gorton on 5th August, 1858.)</i>	
APPENDIX A.	
Letter from Mr. Gorton to Surveyor General, dated 2nd July, 1858, claiming promotion and increase of salary in the Survey Department	121
APPENDIX B.	
Further letter from Mr. Gorton to the Honorable the Secretary for Lands and Public Works, dated 17th July, 1858, upon the same subject	121
APPENDIX C.	
Memo. from Mr. H. Halloran, Chief Clerk, to Mr. Gorton, dated 9th August, 1857, in reference to the transaction of the duties in his branch of the Survey Department	122
<i>(To Evidence given by Mr. F. J. Naylor on 13th August, 1858.)</i>	
APPENDIX A.	
Copy of a communication from the Surveyor General, dated 13th July, 1855, with reference to certain abuses of the existing system of location in the Northern Districts, and suggesting measures tending to their prevention.. .. .	136
<i>(To Evidence given by Colonel Barney on 18th August, 1858.)</i>	
APPENDIX A.	
No. 1.	
Return of Surveyors employed under the Licensed System from 1840 to the present time ..	148
No. 2.	
Return of Clerks appointed to the Survey Department since the commencement of the Licensing System in 1844	150
<i>(To Evidence given by Colonel Barney, on 24th August, 1858.)</i>	
APPENDIX A.	
No. 1.	
Copy of Blank Cover Memo. from Surveyor General to the Minister for Lands and Works, relative to Mr. James Ralfe's application for gratuity or further employment	150
No. 2.	
Memorandum relative to Mr. Ralfe's Petition to the Legislative Assembly, dated 6th September, 1858	150
APPENDIX B.	
Return shewing the number of Runs remaining to be assessed at the period when the reduction of certain Commissioner's Districts were recommended	160
APPENDIX C.	
Return shewing the number of Runs in the old Licensed Districts entitled to Leases under the Orders in Council, 9th March, 1847	160
<i>(To Evidence given by Mr. John Thompson on 27th August, 1858.)</i>	
APPENDIX A.	
Copy of Instructions prepared by Mr. John Thompson, dated 9th January, 1855, for the direction of Railway Surveyors in surveying for the extension of the Southern Line of Railway ..	166
<i>(To Evidence given by Colonel Barney, dated 1st September, 1858.)</i>	
APPENDIX A.	
No. 1.	
Letter from Surveyor General to Under Secretary for Lands and Public Works, dated 24th April, 1857, forwarding letters from Mr. Gorton, a Clerk in his Department, and advising his removal therefrom	175
No. 2.	
Letter from Under Secretary for Lands and Public Works to Surveyor General, dated 29th April, 1857, in reply	175
No. 3.	
Letter from Mr. Gorton to Surveyor General, dated 26th July, 1858, together with certain Memoranda from the Minister for Lands and Works and Surveyor General thereupon	176
APPENDIX B.	
Letter from Colonel Barney to the Clerk of the Legislative Assembly, dated 17th September, 1858, stating his inability to supply <i>this Appendix</i>	176
<i>(To Evidence given by Mr. H. Halloran on 8th September, 1858.)</i>	
APPENDIX A.	
No. 1.	
Return shewing the Commissioners of Crown Lands appointed from 1837 to 1848. (<i>Colonial Secretary's Department</i>).. .. .	179
No. 2.	
Return shewing the Commissioners of Crown Lands from 1849 to present date. (<i>Chief Commissioner of Crown Lands Department</i> .)	180

	PAGE.
Form of License to occupy Waste Lands of the Crown in New South Wales	181
<i>(To Evidence given by Mr. Henry Sanderson on 16th September, 1858.)</i>	
APPENDIX A.	
Statement made by Mr. Sanderson to supplement his evidence with respect to his removal from the Public Service	183
APPENDIX B.	
Letter from Hugh Hossack, dated 2nd April, 1858, one of the men for whose <i>alleged</i> non-payment Mr. Sanderson was removed from the Public Service	184
APPENDIX C.	
Copy of Agreement made between Mr. Sanderson and the Colonial Agent General, on 7th July, 1855, relative to a free passage to the Colony granted to Mr. Sanderson under the terms of his contract	184
APPENDIX D.	
Copy of Petition addressed by Mr. Sanderson to His Excellency the Governor General on 5th August, 1857	185
APPENDIX E.	
Copy of Statement, dated 8th July, 1857, made by Mr. Sanderson to His Excellency the Governor General and the Executive Council, in reply to certain charges preferred against him by the Surveyor General	186
APPENDIX F.	
Letter from Under Secretary for Lands and Public Works, dated 22nd September, 1857, communicating to Mr. Sanderson the cause of his removal from the Public Service	189
APPENDIX G.	
Copy of Letter from Mr. Sanderson to the Secretary for Lands and Public Works, in reply, dated 10th October, 1857	189
APPENDIX H.	
Abstract and Acquittances of the Allowances of Mr. Sanderson, from 1st to 30th April, 1857, inclusively, with the Certificate of Mr. H. Halloran thereupon that the sum of £30 had been paid to H. Hossack, as wages, <i>at Mr. Sanderson's desire</i>	193
APPENDIX I.	
Letter from Surveyor General to Mr. Sanderson, dated 19th August, 1858, declining to re-employ him	194
APPENDIX J.	
Copy of Memorandum from Mr. Licensed Surveyor Chauncey to Mr. Sanderson, dated 31st August, 1858, stating that the Surveyor General could not sanction Mr. Sanderson's employment by him, in consequence of that gentleman having obtained his re-appointment to the Public Service in opposition to his (the Surveyor General's) wishes	194
<i>(To Evidence given by Mr. W. W. Darke (upon his Petition) on 1st October, 1858.)</i>	
APPENDIX A.	
Letter from Surveyor General to Mr. Darke, dated 19th February, 1857, relative to a change in the arrangement for performing the Field Service of the Survey Department	198
APPENDIX B.	
Letter from Mr. Darke to the Surveyor General, dated 15th March, 1857, in reply	198
APPENDIX C.	
Further Letter from Mr. Darke to the Surveyor General, dated 25th March, 1857, together with a note stating his (Mr. Darke's) inability to furnish the remainder of the correspondence intended to form part of this Appendix	198
APPENDIX D.	
Letter from Mr. Darke to Surveyor General, dated 15th January, 1856, in reference to the promise of promotion made to him by the Governor in 1847, and submitting Extracts from certain Official Communications with respect to his services	199
APPENDIX E.	
Letter from Surveyor General to Mr. Darke, dated 18th February, 1856, in reply, stating the Governor General's inability to accede to his application for promotion, and the inutility of <i>then</i> submitting his pecuniary claim for consideration	200
APPENDIX F.	
Letter from Mr. Darke to the Surveyor General, dated 3rd August, 1857, stating his capability to perform the duties of a District Surveyor, and requesting that his claims may be submitted for the consideration of the Minister for Lands and Public Works	200
APPENDIX G.	
Statement showing the amount of salary actually received by Mr. Darke from January, 1849, to 30th September, 1858, and that which he would be entitled to had promised and progressive promotion ensued	200
APPENDIX H.	
Medical Certificate from Drs. O'Brien and Robertson, dated 5th February, 1856, stating that Mr. Darke's eyesight had been impaired by his occupation as a Surveyor, but that under more favorable conditions of employment he would be able to pursue his profession for a considerable period	201
APPENDIX I.	
Copy of Memo. from Deputy Surveyor General to the Surveyor General, dated 2nd February, 1856, with reference to Mr. Darke's letter of the 15th January, 1856. (<i>Vide Appendix D.</i>)	201

APPENDIX J.		PAGE.
Copy of Memo. from Mr. H. Halloran to Surveyor General, dated 24th January, 1856, with reference to Mr. Darke's letter of 15th January, 1856. (<i>Vide Appendix D.</i>)	201	
<i>(To Evidence given by Colonel Barney on 7th October, 1858, in reference to Mr. W. W. Darke's Petition.)</i>		

APPENDIX A.

No. 1.		
Report from Medical Board, consisting of Drs. O'Brien and Robertson, to the Under Secretary for Lands and Public Works, dated 5th April, 1858, in reference to Mr. Darke's eyesight	204	
No. 2.		
Certificate from Dr. Taylor, dated Port Macquarie, 12th November, 1851, relative to Mr. Darke's eyesight	204	
No. 3.		
Similar Certificate from Dr. C. H. Gabriels, dated Kempsey, Macleay River, 10th September, 1855	201	
No. 4.		
Similar Certificate from Dr. Schrader, dated Port Macquarie, 4th September, 1855	204	

APPENDIX B.

Letter from Surveyor General (Sir T. L. Mitchell) to Colonial Secretary, dated 18th May, 1852, in reference to a Report that Mr. Darke was wasting his time at Port Macquarie	204	
---	-----	--

APPENDIX C.

No. 1.		
Proceedings of the Executive Council on 27th May, 1852, with reference to a letter from the Surveyor General, representing the very slow progress of Mr. Assistant Surveyor Darke in the survey of his District, and suggesting the expediency, if the disorder of his eyes be pronounced incurable, of allowing him to retire from the Service on a pension	205	
No. 2.		
Letter from Mr. Darke to the Surveyor General, dated 11th August, 1852, in reference to his retirement from the Public Service on a Pension, and expressing his desire to complete certain work then on hand prior to such retirement.	205	
No. 3.		
Letter from Mr. Darke to the Surveyor General, dated 10th September, 1855, praying relief from field duty, or a retiring pension for length of service and injury to his eyesight	206	
No. 4.		
Letter from the Surveyor General to the Colonial Secretary, dated 27th September, 1855, relative to Mr. Darke's retirement from the Public Service, or employment in the Office	207	
<i>(To Evidence given by Mr. G. J. Armytage, on 22nd October, 1858.)</i>		

APPENDIX A.

Memoranda,—		
No. 1.		
Respecting Requisitions from Surveyors for various Articles of Equipment, &c.	210	
No. 2.		
Respecting Surveyors' Accounts	210	

{ *Further Proceedings stopped by Prorogation.* }

1858.

Legislative Assembly.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

MANAGEMENT OF THE SURVEY DEPARTMENT.

WEDNESDAY, 12 MAY, 1858.

Present:—

DR. ALDCORN,
MR. DONALDSON,
MR. FORSTER,MR. HAY,
MR. ROBERTSON,
MR. WHITE.

G. B. WHITE, Esq., IN THE CHAIR.

Colonel George Barney, R.E., called in and examined:—

1. *By the Chairman:* You are Surveyor General of the Colony? I am.
2. You succeeded Sir Thomas Mitchell on his death? Yes.
3. You have, I dare say, read the Report of the Commissioners appointed in 1855 to inquire into the Surveyor General's Department? Yes; I have given it very particular attention.
4. You have, of course, gone through the different recommendations made by the Board? Yes.
5. I dare say in most instances you agree with the recommendations of this Report? Yes, generally, the recommendations are mostly correct.
6. I have read them over myself with considerable interest, and I think many of them are quite correct, and should have been adopted, but they have not, I think, been adopted generally? I think most of them have been adopted, as far as circumstances would permit.
7. As far as you have had material to do so? Yes.
8. There is one recommendation which has not been attended to; I refer to that of having a system of salaried surveyors? That has not been my fault. When I first took charge of the department, and these recommendations were entrusted to me for my guidance, I prepared an estimate, in accordance with the recommendation of the Board, in which I provided for a system of salaried surveyors, and the entire abolition of the system of licensed surveyors. That was disapproved, as being excessive, although I considered it was not more than would enable me to do what the Board seemed to consider desirable. This led to a modification of the estimate, and I have been instructed on both points, both as to the licensing and salaried system of surveying. At one time I was instructed to do away with the licensed surveyors; and it was communicated to them that their services would not be required after the expiration of the year 1856.
9. I suppose you are aware that although an individual may be thoroughly up to his business, and be considered a very competent surveyor at home, yet that afterwards, when he comes to this country, he requires one or two years field work before he is able to do the work required of him? Yes; I have experienced that.
10. You do not approve of employing men fresh from England, without giving them a training in the field? Certainly not; I think, however, there are men in this Colony as well qualified for surveying as those generally who come from England.
11. It requires considerable experience even in classing the lands of this country? Decidedly.
12. And on that depends entirely whether the lands laid out are those which are most for the public benefit? Yes.
13. So that the party surveying should be, not only a surveyor, but a judge of different soils? He should be so, decidedly; in fact it is part of the instructions to the surveyors that they shall report on the geological formation and quality of the land surveyed by them.
14. I see here, in paragraph 3 of the Report, the following:—"The system of licensed surveyors should be abolished. We have already stated what we consider to be its faults; and although some of these might perhaps be in some measure remedied, we do not think that the system is capable of being so modified as to render its continuance desirable."

Colonel G.
Barney, R.E.
12 May, 1858.

Colonel G. Barney, R.E. Do you agree with that? I am of opinion, that under a system of contracts licensed surveyors may be made extremely useful.

15. I find that many of the men who come out here have not the slightest idea of the features of a country? It is so. Some of those who have applied to me for licenses, and who have been employed on railway surveys in England, although they have brought the highest testimonials from men of first-rate position and talent, prove not competent for the work out here—it being of so different a character; in fact, before being employed here, they require to go through a series of training.

12 May, 1858.

16. Are you aware that some of the persons sent out here as surveyors were not professional men at all? Quite so.

17. You, I dare say, have experienced the disadvantage of the system adopted here of working by magnet? Yes.

18. It should be done away with? Yes, if possible.

19. You would advise that a meridian line should be established, and that that should be made a line of position to be worked from? Yes, that would be useful, but is a difficult operation.

20. Are you aware what the duties of the Deputy Surveyor General were originally intended to be? No doubt the duty of the Deputy Surveyor General is to be in the field, superintending the working of the different surveyors; he should be always on horseback.

21. When I was in the office—I am now going back many years—it was said that either Mr. Oxley or the Deputy Surveyor General must be in the field, to superintend the work; is it not the fact that, at present, many of the surveys are not made on the field but on paper? I am now bringing into operation the system of district surveyors. They have, some of them, been acting for some time past; one or two of them have been acting extremely well; the others I have not had sufficient reports from to enable me to judge. Mr. Adams, who has charge of the Southern District, is a very capable man, and extremely active.

22. Then there is a responsibility attached to the office now which there never was before—these district surveyors are responsible for the performance of these duties? Yes.

23. The want of responsibility formerly was the cause of the Survey Department being brought into its present state—the work was slurred over in many instances, and in very old surveys, although the marks may remain the lines are run wrongly; this is the case in the Hunter particularly?

24. How do you think the contract system, under the supervision of an active district surveyor, would answer? I think it would answer well. The district surveyors have instructions to get the work done by contract in every practicable case.

25. In the maps of the present day I suppose the features are obliged to be shewn—the lines of ranges, the junctions of rivers, and so on? Yes; but hitherto no progress has been made in the establishment of trigonometrical points or general surveys; the strength of the department has not admitted of it since I have had charge.

26. It never has since you have been in the department admitted of it—there has never been sufficient strength to admit of it? No.

27. You have not been able to admit of establishing trigonometrical points, except to allow your officers to take a round of angles from different points? That has hardly been done; they have been tying work whenever they had an opportunity, but no rounds of angles have been taken—no new points have been fixed.

28. You are aware, perhaps, that I was employed by Sir Thomas Mitchell for the purpose of carrying on the triangulation? Yes.

29. That was never completed? No.

30. Perhaps you are not aware that I hold in my possession from seventy to eighty rounds of angles, extending over the country from Wellington to Ben Lomond? I understood you had some work in your hands, but I did not know exactly what the character of it was.

31. Perhaps you are not aware why it was not completed? No.

32. You are aware that it was a very considerable work to carry on with only some half dozen men—a survey five or six hundred miles in length? Yes.

33. Are you aware that I was called back from the work when it was nearly two-thirds finished, to do the work of an officer who never did his work while he was in the service? I do not know why you were called in; I have not looked into this matter.

34. You are aware that there were instructions from the Secretary of State, so far back as 1828, as to the management of surveys? Yes.

35. Were those instructions ever carried out? Not altogether, I understand.

36. Then officers were induced to join the service under a faith which has been broken? I do not know that; I would say a faith that has been broken. There were difficulties in carrying out the original instructions in a new country. I presume it was a matter of accident rather than a breach of faith.

37. There were grades established in the service, and those grades were not maintained, that is what I mean? I do not know.

38. I think the Despatch is dated September, 1828—I have the Despatch? It is dated either 1822 or 1828.

39. In the Report of the Commissioners it says, "If the measurement of lands for sale were carried on entirely by means of salaried surveyors, under a regular system, and under proper supervision and control, we see no reason for supposing that the proportionate expense incurred would be greater, if so great, as under the contract system."—Is that your opinion? No, certainly not; I think it much more expensive by the salaried system.

40. By Mr. H. H. : You differ from the Commissioners in that respect? Yes.

41. By Mr. Robertson : You say you are of opinion that the salaried system would be more expensive than the contract system. You submitted to me a statement in which you set out the rates per acre under the two different systems—will you be kind enough to tell the

Committee

Committee what those rates were? I have not the papers with me, and I cannot tell without reference.

Colonel G.
Barney, R.E.

12 May, 1858.

42. You will remember that there was very little difference in the rates, but you will bear in mind also, that the staff surveyors had other duties to perform besides surveying lands, such as laying out roads and other public works, that ought not properly to be put to the charge of surveying lands for sale? Yes; in fact no one can know better than the Honorable Chairman that the permanent staff involve the expenditure of money in a variety of ways, where that expenditure would not be incurred under the system of licensed surveyors. For instance, last year, during nearly four months it was so excessively wet that surveyors could not go out to work at all, but at the same time they were all paid, their horses had to be fed, and their equipments to be kept in order. Under the license system that expense would have been avoided.
43. *By Mr. Forster*: Are they not supposed to be employed in draft work during wet weather? Yes; but there is nothing like sufficient employment for them when the weather remains wet for so long a period.
44. *By Mr. Hay*: Licensed surveyors would not be able to do their work at such times? They are paid by scale of fees.
45. Do you not think the scale must be in proportion—that it must be fixed so as not to enable them to remain idle during such periods as these? I have altered the scale lately, taking off the gold allowance
46. Licensed surveyors, in working for Government, will necessarily take into consideration the times when they cannot work, and the scale must be sufficient to make it remunerative to them upon the whole from one year to another? It would depend upon the amount of work; if they are in a district where there is an abundance of work, and an open country, they can make a great deal of money, besides which, they obtain a good deal of private work.
47. You do not see the import of my question. You have stated that greater expense would arise from the employment of salaried than of licensed officers, as the former would be paid during wet weather, although they would be unable to work—would not licensed surveyors also be prevented in the same seasons, and therefore would not the scale be necessarily high in proportion to enable them to make a fair livelihood? That ought to be the case; I believe it is so.
48. Whichever mode you adopt, you must suffer from the inclemency of the seasons? Yes; but you would not have to pay for the same amount of work.
49. Still the licensed surveyor must be paid sufficient, upon the whole, to enable him to sit idle during those seasons? The scale has enabled him to do that; it has been high hitherto, but it has been reduced; twenty-five per cent. of the gold allowance was taken off last year, and this year the gold allowance will be abolished altogether.
50. *By Dr. Aldcorn*: Will it not be that licensed surveyors, or contract surveyors, will work a great deal more when their remuneration depends upon their work—will it not be the same as with all other men who take contract work? No doubt.
51. *By Mr. Robertson*: Do you not find that by employing all sorts of surveyors, you have substantially no one responsible, that they do not remain permanently in the country, and cannot be found when you require them, and that in fact the work performed by them is of a very inferior description—that although it may be comparatively cheaper, it is actually very much dearer? I think generally the work of licensed surveyors is sufficient for the purpose. There are not many complaints of the nature of their work, that is eventually. The work does, indeed, sometimes come into the office incorrect, but it is there checked, and returned when errors are discovered; but, on the whole, when the land comes to sale there are very few errors found, and, in numerous instances, when complaints have been made, they have originated with the purchasers themselves, who have been too careless to ascertain the position of their ground; in some instances they have, perhaps, intentionally taken up the wrong, being better allotments than those purchased.
52. *By the Chairman*: I see in this Report it is recommended that there shall be three classes of surveyors—may I ask who selects these officers? I select them, and submit their names for approval.
53. They are examined beforehand? They are selected from the most efficient officers of the department.
54. Then the arrangement of salaried surveyors has been thrown aside altogether? It has, under particular instructions; for instance, some licensed surveyors have been appointed over the heads of salaried surveyors.
55. You, of course, must be aware that the individual selecting the officers should be thoroughly acquainted with the duties of the office? Decidedly; he cannot make a proper selection unless he is so.
56. With reference to the grades of the service, of course you know that the surveyor stands higher than either the draftsmen or clerks; for instance, in your peculiar service draftsmen are never placed in the position of commissioned officers? No; certainly not.
57. They get higher salaries, and are considered on the staff, I imagine? Yes.
58. The regular promotion of the service goes on only among those officers who do their duty in the field? Yes. I agree with what is stated in this paragraph—"The promotion from class " to class should depend more upon individual industry and skill than on mere length of " service."
59. In the instructions to which I have before referred, it was stated that if an individual did his duty the Surveyor General signed every month an abstract for his salary, which was considered a certificate of character, and, therefore, according to his position in the department his promotion was regulated; that was during the period I was in the department, and when I saw that that was about to be thrown overboard I left the service, my health having suffered much from hard service? It is very hard in some cases, but you must be aware that where a number of gentlemen are employed in a department some may be more competent than others, and some more diligent than others.

Colonel G. Barney, R.E.
12 May, 1858.

60. In fact, a good deal depends upon the Surveyor General himself in this matter, for if an officer do not perform his duty he should be struck off altogether; his efficiency should not be judged of by these extraordinary monthly returns, for I have known an officer who has returned the best monthly returns who for six months has never been out of his house? No doubt the system is open to that abuse.

61. The monthly returns are a great annoyance; in some instances an officer may work hard and do his mile, while in others he may do eight or ten with the greatest ease? I have a great objection to that system, and I have done away with a very objectionable part of it. They were formerly required to state how many hours they had been at work in a day; I have made that a general inquiry, when necessary.

62. Do you think these returns originated with a practical man? No. I do not see the use of them, for I know there is hardly a possibility of checking them.

63. You must be aware that when a surveyor goes out for eight, ten, or twelve months, when he has no family, house, or garden to go to, he is frequently in the field night and day. I have myself been out for nine or ten months, and never seen a white face excepting the faces of my own party? Sometimes a surveyor may be at work in the field twelve or fourteen hours out of the twenty-four, no doubt.

64. These things seem never to have been considered in the position of a surveyor? There is no doubt about its being understood, I think.

65. I see it is recommended here—"The District Surveyor should have an office in some township, conveniently situated, in the district. His duties would consist of the general superintendence of all surveys in his district, the performance of any operations connected with general or topographical surveys, the selection of lands to be surveyed for sale, the laying out of roads and reserves, and the selection of sites for townships, churches, schools, or other public purposes"—Do you believe that to be the proper system? Yes; the district surveyor has been so instructed.

66. If it had been adopted long ago you would have had the service in a very different state from its present one. I believe at this moment you will have to recommence the survey of the Colony entirely? I hope not; but there are undoubtedly errors, which must arise in the survey of a new and difficult country, with insufficient means at disposal, and which may lead to the necessity for a Bill of Indemnity.

67. Do you not consider it necessary that there should be landmarks over the country, and that there should be an Act of Council passed to the effect that every man who had possession given to him by the surveyor should be obliged to put down landmarks. I can find landmarks of my own after thirty years? There are many causes to be assigned for the obliteration of landmarks—fires, and so forth.

68. With regard to landmarks, I find during the last two or three years that surveyors have not been sufficiently careful. You will find many towns laid out in the interior of the country without any landmarks. I went to look at one, not long since, in which I could find the lines I made in 1828, but not the landmarks? If it has not been done, the surveyors have not carried out their instructions.

69. The Deputy Surveyor General might be of use in testing these matters? Yes. The district surveyor likewise will be of use in such cases.

70. When the Deputy Surveyor General was appointed, the population of the Colony consisted of 40,000; now, with an augmented population, it may be necessary to increase the number of supervising officers, as intended by the recommendation of the Board? Yes. There is a paragraph in the Report with reference to the district surveyors, as follows—"He should have the assistance of a draftsman, whose duties would be to plot the surveys made in the district, to perform all necessary clerical duties, and as far as possible to represent the district surveyor in his absence." That has not yet been done.

71. If this were done he could perform twice the field work, besides the plans? It is the intention to carry out this recommendation. In fact, in the Moreton Bay District it has been carried out; there is a draftsman there who acts as draftsman and clerk, but in other places the appointment of district surveyors has been of so late a date that I have not had time to make arrangements for the establishment of offices. In those districts, however, where Crown Land Commissioners have been superseded, of course their quarters and buildings are now available for such purpose, and there will be no difficulty in making necessary arrangements for offices.

72. It would be a great advantage to have draftsmen attached to the surveyors when carrying on a general survey of the country with the future purpose of laying out the lands? Since I have been in charge of the department the time of its officers has been completely occupied in meeting the wants of the public in the survey of land for general sale, as well as under pre-emptive right.

73. Have you attempted the classification of land into agricultural, grazing, and other districts? No, I have not had strength to do that yet.

74. Then the officer employed in the survey of lands for sale has a great deal left to his own judgment as to what lands he shall lay out? He has had, but under the new arrangement that is provided for, by the appointment of district surveyors, who will now be responsible as to that duty; still it would be some time before the district surveyor can be master of his district. His present instructions are first to visit every part of his district, to examine the work done by the licensed surveyors, to examine and test their instruments, and in every way to make himself duly acquainted with the requirements of his district.

75. In every district I should suppose he is instructed to make a meridian line, in order that he may be able to test his instrument, because you are aware that every instrument has its own variation? He has not been so instructed yet; for the first object is to make himself perfectly acquainted with what is going on in his district.

76. He will be instructed to carry on the triangulation if he possibly can? Decidedly.

77. On one point I agree with Sir Thomas Mitchell's evidence on this matter—that triangulation

gulation can be carried on in this country, but not for the purposes of ascertaining scientifically the figure of the earth? That is not contemplated at present.

Colonel G.
Barney, R.E.

78. You have not instruments in the country to do it; and, besides, the nature of the country is in some places so woody that it is difficult to distinguish the various points, and the variation is so great, especially where the country is of a trap or volcanic formation. I therefore think it would be necessary to establish a meridian line, and carry on the triangulation from that meridian line; and I believe that is the only way by which it can be done for many years to come, and that it will be sufficiently accurate for the survey of farms and for local purposes? Yes.

12 May, 1858.

79. I told Sir Thomas Mitchell, years ago, that we should never have the survey of the country properly done without local surveyors? Of course it will depend upon the character of the men employed. The district surveyors are only on probation now, and are subject to removal.

80. There is a very good suggestion here, which I should recommend to be adopted—that the surveyor should plot his work daily; should not every surveyor do that? Yes, while it is fresh in his memory. I do not think the surveyors generally plot the work daily; but it should be done.

81. It is your opinion that there is no necessity for sending in these finished plans, which take up so much of their time? No; to send a rough plan is sufficient.

82. There is an efficient system of field books? Yes.

83. The field books of the staff belong to the department? Yes, as well as those of the licensed surveyors.

84. What is your opinion of the recommendation of the general use of the theodolite? I think the theodolite should be used wherever practicable; but in this country it is not always practicable.

85. It would take too much time, you think. It is the most perfect instrument? Yes.

86. Where large surveys are necessary by the needle through a wooded country such as this, the larger the needle the more accurately it is likely to be surveyed? Yes. The circumferenter is a good instrument if properly handled. A good instrument of large diameter should be used.

87. It is recommended by the Board that the personal supervision of the Surveyor General, or the Deputy Surveyor General, in the field should be constantly exercised? No doubt it ought to be so; but, from the instructions I have received, it is considered the duty of the Surveyor General to remain at head quarters, to control the department; he is not to go into the field. When I first joined the department, I immediately instructed the Deputy Surveyor General to proceed on a certain tour of inspection, which was done; but lately he has not been so employed. The fact is, he is physically incapable of long journeys.

88. You are not aware, perhaps, that, from being physically incompetent to do the duty of the office he was first appointed to—Assistant Surveyor—he was appointed to the office of Chief Draftsman? I was not aware of it. In the office I have found the Deputy Surveyor General very useful. In fact, than the three chief officers of the department at head quarters—Mr. Thompson, Mr. McLean, and Mr. Halloran—it would be impossible to have better men; they have been so long in the department that they are fully conversant with every detail.

89. Has not the general feeling among the field officers of the department been that they have been too much interfered with by parties whom they considered had no business to interfere with them? I have heard that spoken of, but, as far as I am concerned, I think that since I have been Surveyor General very few papers have gone out of the office without my signature, and although papers in the rough come to me, I never pass them away without full consideration, and I consider myself responsible in every way. I know Mr. Galloway wrote to me, under an erroneous impression, complaining of the language made use of, as he assumed, by the Chief Clerk.

90. That is, they have been worried about matters not at all connected with the survey—forage, and different things? Of course it is necessary that questions relating to allowances and such matters must be perfectly understood, in order to the passing of the accounts. At the Audit Office they require constant explanations, and, with the view to do away with the frequent communication upon these subjects, I have suggested for consideration in framing the estimate for this year that all allowances be done away with, and that a fixed scale of pay be adopted, which has, I believe, been approved by the Secretary for Lands and Public Works; it will save a large amount of work in the office, and unpleasant correspondence—correspondence carried on from month to month, and from quarter to quarter. I frequently do not get in the accounts in a state to pass the Audit Office for some months, and gentlemen are kept out of their money for that time; it makes the service very unpopular, and creates unnecessary trouble.

91. You are aware that in military matters an officer having charge of a certain party is not responsible to the Commissariat for what he draws, and the Commissariat Officer has no right to question him on the subject—supposing you, as General, give an order, he receives it and you are responsible? Yes.

92. A clerk in the office here cannot tell whether there is any grass in the district I am surveying, for instance, or how I am to transport my material? Of course not. There has always been great difficulty about forage; there is more correspondence about that than about any other part of the service.

93. I believe that system has worried more officers out of the service than any other? I hope it is now on the point of being done away.

94. Do you think that your officers should have the survey and laying out of all new roads, as they are established in districts, as district surveyors? Yes; I think as district surveyors they should mark out the roads.

95. Then they should have the power of seeing that these lines are kept to? Certainly.

96. For I have observed that many of the lines marked out many years ago are not carried out;

Colonel G. out; officers knowing very little of the features of the country alter them as they please, and these alterations make your maps wrong? If that is done it is wrong, but sometimes alterations become necessary in the line of route, and then the roads must be altered, of course.

Barney, R.E. 12 May, 1858. 97. You are aware that the officer who lays out a road should see that it is properly lined, and made exactly in the place laid down? They should be distinctly marked, or else the neglect may lead to considerable difficulty.

98. When a professional man marks out a road, he looks to the drainage and gradients? Yes.

99. *By Dr. Aldcorn*: Do you not think district surveyors, and surveyors of all kinds who are not trained to road engineering—their profession being quite distinct—often line a road very badly, and that it would be desirable that some of the people in the neighbourhood, say the Bench, or some other parties, should be associated with the surveyor, not to have power over them, but to give advice with regard to the line? I often refer our surveyors to the Bench for information.

100. *By the Chairman*: You would recommend that survey offices should be established in each district, where the district surveyor should give every facility to the public in obtaining full information respecting lands for sale in the district? Yes.

101. It would relieve your office in Sydney? Yes. This is under arrangement now.

102. Surveyors should also conduct railway surveys? That is now superseded. The department has been released from this duty.

103. Do you not think it would be better to have under one supervision all the surveys of the country? There is a good deal of difficulty in it. There is plenty to do in the Survey Department without laying any more upon it. There should be a distinct understanding between the gentlemen who have charge of the railway works and those connected with the Survey Department supplying each other with such information as may be required, and such, in fact, is the case at present.

104. Some considerable trouble has occurred to the Government lately with regard to the office of Commissioner of Crown Lands in the Settled Districts—do you not think that ought always to have been kept in your department? Do you mean with reference to the sale of land?

105. Yes? There has been a good deal of difficulty with the new appointments. It was only yesterday a gentleman brought me two receipts for the same allotments under two different names; it was a serious error, and might have led to great difficulty. No doubt some inconvenience will arise until the Commissioners gain more experience.

106. You are not aware that any trigonometrical base was ever measured on the Liverpool Plains? No. Part of my instructions, as Surveyor General, is that the surveyors should, in the course of their travels, bear this matter in mind, and report upon any positions they might think desirable for bases upon an extensive scale, and that their reports should be accompanied with sketches showing the trigonometrical points within range; and I have received some very good reports, more particularly from Mr. Flyde and Mr. Darke.

107. A base was fixed by Mr. Dixon on Liverpool Plains in 1833 or 1834 for three miles? I understand you can get a base almost to any extent on the plains.

108. Have you anything to suggest to the Committee that you think necessary to the improvement of the service as now conducted as regards field survey? I think it is undergoing a series of improvements. It will doubtless be some considerable time before the merits of the appointment of district surveyors, which is, perhaps, the most important measure lately introduced, can be decided upon. These officers are, however, appointed with the understanding that at the expiration of twelve months they will be subject to removal unless they have carried on their work in a manner satisfactory to the Government; but I must confess that it is probable they may not altogether carry out their duty in the satisfactory manner required. Two or three of them are not young men, and although perfectly competent theoretically, yet they may be found physically incapable of enduring the fatigue to which they will be liable. Now, some of our best men, Mr. Shone for instance, Mr. Gordon, and Mr. Darke, although they perfectly understand their work, and though they would, of course, had they been equal to the fatigue, have been appointed to districts, are not placed in these positions, and junior men are now in employ. Mr. Shone has been under the eyes of a medical board for some time. I wrote him privately to represent to me whether he considered himself physically capable of undertaking the duties of district surveyor, and he replied that he was not. He has now, under the advice of a medical board, obtained six months' leave of absence, with a view to ascertain whether he will then be able to resume his duty. I wrote to Mr. Gordon on the same subject, and he at once stated he was not capable. Mr. Darke has, I think, three or four times submitted medical certificates, to the effect that he was not capable of conducting his work, and applying for a retiring allowance; he however obtained leave to visit Sydney (a few months back), and it was thought necessary to bring his case before a medical board again, who reported that he would be incapable of working in the field subject to constant exposure to the sun. Now, it must be evident that a surveyor cannot work in the field without being exposed to the sun, and this decision therefore amounts to a prohibition from such occupation; while he has been awaiting the result of this medical board he has been employed in Sydney. There were formerly two or three surveyors employed in Sydney, but I have removed two, as unnecessary; but still one surveyor is always required, as questions constantly arise with reference to the measurement of allotments, and subjects connected with the city; and I have kept Mr. Darke, as a very competent man, for the performance of these duties, which do not altogether expose him to the glare of the sun. When not employed at out door work he has been carrying on the plotting of the surveys of the Richmond and Macleay, upon which he was engaged some years since; this duty will yet occupy him for some time.

109. *By Dr. Aldcorn*: Then he is fit for carrying on the duty here? Yes; because he is not always subject to exposure to the sun.

110. Is the district surveyor entirely employed in superintending the survey of lands, or is he also employed in ordinary surveying himself? Occasionally, under certain circumstances, he is employed in surveying. Colonel G. Barney, R.E.
111. *By the Chairman:* I believe you require for the performance of these duties not only persons possessed of skill and ability, but prepared to meet danger, at least I know it was so when I first joined the service. When I first surveyed the Hunter there were some half dozen of men with carbines with me, and we were surrounded by four or five hundred blacks. You require men who are not only competent to do the duties, but who have considerable nerve and power of endurance? Yes. We are at present in a very awkward position with respect to the Commissioner of Crown Lands in Leichhardt, Burnett, and Wide Bay District. Hardly three months elapse without our receiving reports of murders by the aborigines. 12 May, 1853.
112. Within the nineteen counties the service is quite different from what it used to be? It is entirely different.
113. The surveyor is among civilized men? Yes; he has nothing to disturb him, he is sure of provisions, and of everything he requires.
114. I have an opinion that there has been very little inducement to officers to join your service, from the way in which many of the old officers have been treated? It may have had that effect.
115. You have heard that in 1835, or 1836, the salaries were stopped for a year or two, to try experiments with some of the oldest men in the service—I was one of them? I know the result—that you would not work.
116. Was not the effect this, that at this time the Colony was in a state of depression, land was increased in price, men would not buy it, and there was therefore no employment for the officers, who were left to starve? I have no knowledge on the subject.
117. *By Dr. Aldcorn:* All their work is examined by competent parties? Yes.
118. *By the Chairman:* What is the largest salary now given to a district surveyor? A district surveyor at this moment has £500, first class surveyors have £400, and second class £300.
119. As senior surveyor I had £400 when I left the service, and I consider that the work was then twice as difficult and twice as dangerous as now, except in the outskirts? No doubt.
120. Do you not think it would have been better to have placed old surveyors in the Commissioners' Districts? That was one of my first suggestions. I proposed that all Commissioners of Crown Lands should be surveyors. Under the new arrangements six Crown Land Commissioners have been removed from their districts, and in these surveyors will be appointed to act in their stead. That at first sight would apparently create a saving, but in fact it will not, as they will not be able to do so much surveying work.
121. Still I believe every surveyor could make a survey of his district in eighteen months or two years, or even define the boundaries of stations? That would depend upon the district. I would make a remark with reference to this paragraph in the Report—"The importance of a trigonometrical survey of New South Wales is greatly enhanced by the prospect of its being eventually connected with similar operations in the provinces of Victoria, Tasmania, and South Australia." There is a despatch from the Home Government suggesting that this should not be carried on simultaneously, but that, as it would be attended with great expense for each country to have a set of instruments for a trigonometrical survey, they should be handed over from one to the other as they were required. That would have been a good arrangement, but we have all we want for carrying on a trigonometrical survey, though at present the rods are lent to the Victorian Government.
122. I do not think you will for many years carry out a perfect scientific triangulation, although you may carry it out to a certain extent? I brought the matter under the notice of Government, and asked for a sum of £5,000 to commence with. It would occupy a long time, if a base of fifteen or twenty miles long were taken, to do the work properly, but the expenditure of this £5,000 may be extended over two, three, or four years. Certainly the first great point is the measurement of a base on which reliance could be placed.
123. You are aware that the triangulation of England was commenced in 1782? Yes. It appears to me very desirable to make a beginning, and the work might be carried on, without reference to surveys for sale, as a distinct service.
124. The increased magnitude of your office since I first joined the service appears to me surprising? Yes; but we have an immense amount of new work. In the lithographic establishment, which has only lately come into operation, we have lithographed three counties, and a fourth is tolerably well advanced; we have also lithographed the "Herald's" survey of the port, which is a most elaborate work; likewise ninety portions of land for sale in townships, villages, and country lands.
125. You are aware that the section system is very erroneous—I refer to carrying on the measuring of the country in square miles by compass? Yes.
126. I said a little while ago that I thought you would have to make a re-survey of the country—I still think so. In many of the primitive surveys of the Hunter, the surveys were never tested or tied, and, when the backs of the land began to meet, it was found sometimes that they were correct and sometimes they were a quarter of a mile or half a mile apart? I believe that has been the case.
127. I think the parishes will have to be surveyed as they are on the ground, and these errors will have to be thrown into them? No doubt there will be a great many difficulties when the land comes to be closed in.
128. I suggested many years ago that parties should be compelled, under a fine, to put up their landmarks? The establishment of permanent landmarks is a matter of a most important nature; but, at this moment, I have under consideration an arrangement for permanently marking town and country allotments, &c. Mr. Secretary Robertson has the papers before him now.

Colonel G. Barney, R.E. 129. *By Dr. Aldcorn*: What is the plan you propose, and which appears to you the most efficient? The system I now propose is, by marking trees and distinctly marking allotments with pegs to be branded, shewing the Nos. of the sections and allotments, and by rock spitting.

12 May, 1858.

130. I thought you might suggest cast iron pegs? That would be very expensive.

131. They would last for ever? We propose hard-wood pegs, properly marked for each corner allotment, and these, if well driven into the ground, could not be pulled up; to mark the rocks with the broad arrow; and a system of marking upon trees which can be readily understood.

132. *By Mr. Forster*: If I rightly understand the tenor of your evidence, it goes to shew that you do not consider your department so efficient as it might or ought to be? It is not efficient in strength.

133. You consider that its inefficiency arises from want of strength? Chiefly.

134. And partly from defect of system? Yes.

135. Its principal fault, you think, is want of strength? Yes. It depends upon what the country requires; if it could be made known to me what area of land is required to be brought forward for annual sale, of course I should then be able to prepare an estimate that would meet that demand; but if I am to carry on a feature survey—in which I am doing nothing at present—I should require a much more extensive staff.

136. Then, in fact, the difficulty in your mind arises from the enormous extent of country of which you are required to superintend the survey with a staff not sufficient in strength? Yes.

137. Do you consider the defects of the system a minor matter? The system has lately been so much amended that I think it likely to work well.

138. Do you think any difficulty arises from the peculiar circumstances of the Colony rendering it necessary for you to employ incompetent persons? No, I do not.

139. Do you think the staff in general employed under you consists of competent men? Yes.

140. You admit that some defects of system still exist? Yes.

141. Do those defects relate more to the central management or are they connected rather with the management of the work in the field? I think they are connected rather with the superintendence in the field than with the central management. I think the three gentlemen who have the principal charge in Sydney are most efficient—that it would not be possible to have gentlemen more competent for their work.

142. Then the difficulty resolves itself into the difficulty of inspection? That is one difficulty, but that is being overcome. I refer to the system of district surveyors which has just come into operation. These gentlemen have the examination and control not only of the permanent staff but also of the licensed surveyors; their instructions are to see every one of them examine their work, test their instruments, &c.

143. You consider that the great difficulty arises from want of inspection, and this you propose to meet by this district arrangement? Yes; as far as the system has gone it seems to promise success.

144. What is your opinion as to the remuneration to officers in your department,—has it been adequate to the work or in excess? I think it is about a fair remuneration.

145. Do you know of any instances of persons having left the service either from inadequate pay, vexation, or annoyance? In my time Mr. Galloway, who was in charge of the Moreton Bay District, had, I believe, some idea that he had not been properly treated which may have led to his retirement, but he retired under the report of the medical Board.

146. In cases of vacancy, supposing you want surveyors, what is your mode of filling up vacancies—do you find enough surveyors in the Colony? Plenty; at this moment I have twenty-four applicants on my list; they are about to be brought forward for examination.

147. Are these supposed to be competent surveyors? Many of them; but they have yet to be examined.

148. The position for which they are applying is, to a certain extent, an evidence that they are qualified men? They must be surveyors, otherwise they would not submit to examination.

149. You have twenty-four applicants, who all allege themselves to be competent surveyors? Yes; some of them have certificates from highly qualified engineers and surveyors in England.

150. Do you not think that shews the remuneration in the Colony is sufficient? Yes. Most of them are applicants for the office of licensed surveyors, under the impression that they can make a larger amount of income than they could if attached to the salaried staff, and that may be the case in certain parts of the country with certain descriptions of work; but when they take the rough and the smooth together I do not think they will do so. There is also another consideration which induces parties to apply: they think that, having been once appointed licensed surveyors, they obtain a character, and ensure other employment.

151. In fact, they get a sort of certificate from Government as to their competency? Yes; they go through an examination. When these numerous applications came before me, I objected to the examination, as occupying a considerable portion of the time of the principal officers of the department, without the payment by the parties of a fee. It occurred to me that they wanted to pass the examination merely to obtain a Government certificate, that they might procure private work. That was overruled, and I was instructed to have them all examined.

152. Do you not think it would be a good plan to charge a fee for the examination? When I received the order I suggested that each person on examination should be charged a fee of ten guineas. That proposal has gone before the Law Officers, to ascertain whether it can legally be done.

153. Has it been the practice to employ young men who have not at first been competent, and to train them? That was one of the suggestions of the Governor General, in his proposal for the establishment of a Board of Works. I have spoken to many of the surveyors on the subject, and they have authority to take pupils if they please, and occasionally, but not

not frequently, they have done so. I have had offers from young gentlemen who have come to this country, and expended all their means, to take the appointment of chainmen. These parties have a certain knowledge of surveying, but are not competent to do the duty of surveyors, and they take the office of chainmen with the understanding that if they exhibit sufficient knowledge of their work, and obtain recommendations from the officers under whom they serve, they will have a fair chance of being brought forward.

Colonel G.
Barney, R.E.
12 May, 1938.

154. Considering the competition you have shewn to exist for the office, would it be unreasonable that persons taken in to the service to learn the profession should be charged a premium in the first instance? I do not think it at all objectionable; but that would rest with the surveyors. I think it desirable that every facility should be afforded to young men wishing to become possessed of a knowledge of surveying.

155. With reference to the promotion, to which the Chairman has alluded, you think you should not be favorable to a system of that kind? I do not think there should be regular promotion by seniority, but I think talent and industry should have the preference.

156. In particular with reference to this department, but as to all branches of the public service, may it not be the case that a man may be an excellent public servant up to a certain point, yet be incapable of filling a higher office? Quite so. In my office I have given the gentlemen to understand that promotion in cases of vacancy will depend, not upon seniority, but upon capability and diligence.

157. You would, I presume, allow the principle of seniority to apply to a certain extent; supposing there were an equality of industry and ability you would give the preference to the senior officer? Yes, to that extent I would.

158. You would not carry out this system of promotion from one grade to another beyond that point? No.

159. With regard to the Clarence River, are there any records in your office of contract surveys having been performed to a considerable extent in that district? Yes; I think to the extent of between three and four hundred thousand acres.

160. Can you state, in round numbers, the amount of expense to which the public has been put by those surveys? £2,393 for the Clarence.

161. Has any benefit been derived from these surveys? No, none whatever.

162. Are you aware whether the marks that were made upon the trees, or which were supposed to be made at the time, are to be seen at all? I understand most of them are not to be seen.

163. Is it your opinion that these surveys were actually useless in every way—that they were in fact a fraud? No, I should not say they were a fraud; they were done under the instructions of Government.

164. Was there not something wrong in the mode of doing them? They were done upon too large a scale for sale, and many of them, I believe, could not be disposed of, as they were not in reserves.

165. But if the surveys were properly carried out, would not some of the lines serve as bases for present operations? No doubt there are some marks which would be of use.

166. You think they may be of some use, but not correspondent with the expense? Yes. It was the opinion that the land would sell at the time.

167. You think the objection to the survey is that it was premature? Yes. There is now a great demand for land upon the Clarence, and I suggested last year that it was advisable to give the parties holding the land three months notice that their leases would be discontinued. I expect that will be done this year, so that by the beginning of next year, or before that time, much of this land may be divided into farms of fifty or one hundred acres, or into smaller portions, for sale.

168. Do you think these old surveys will be of any use? Yes; we shall be able to identify some of the marks.

169. Have you any information at all as to why these surveys were performed—were they well done at the time? I believe so.

170. You have heard of the principle of free selection? Yes.

171. Do you think if that had been acted upon in former days they might have been made of use? Yes, for it was good land.

172. In fact, I presume, the greater part of the country is occupied under squatting leases that were held in those days? Yes; there are 200,000 acres on the Macleay in the same position as that of the Clarence.

173. If selection had been allowed in early days, a great part of this country might have been located long ago? Yes, because it is good land.

174. The surveyors were directed to survey the best agricultural land they could select? Yes.

175. Has there been any surveying carried on in the Port Curtis District? Yes. Mr. McCabe was employed during 1854-5 & 6.

176. There has been a township surveyed, has there not? Yes; Mr. McCabe laid out the township.

177. Can you give any idea of the amount the survey of Gladstone and of the country around has cost? Yes—£3,573.

178. With regard to another local matter—you are aware that in the district of Queanbeyan the surveyor has been dismissed? He has not been dismissed, but I have not given him any work for some time, for the work he sent in was very incorrect, and the reports I received from gentlemen in the neighbourhood were very unsatisfactory.

179. I wish to know whether the district can safely be left without a surveyor? If work require to be done, and it is made known to me, a surveyor will be appointed.

180. *By Dr. Aldcorn:* With regard to the comparative expense of contract surveying and salaried surveying, your opinion is that contract surveying would be cheaper? Yes; in fact, we are just trying that experiment; there is a contract going on in the Southern District, under Mr. Adams, which I think will test that point; but all the district surveyors are instructed to get their work done in every case where they can under contract.

FRIDAY, 14 MAY, 1858.

Present:—

MR. WHITE,		MR. FORSTER,
MR. ALDCORN,		MR. PIDDINGTON,
	MR. ROBERTSON.	

G. B. WHITE, ESQ., IN THE CHAIR.

Alexander Grant McLean, Esq., Chief Draftsman of the Survey Department, called in and examined:—

- A. G. McLean, Esq.
14 May, 1858.
1. *By the Chairman*: Have you read the Report of the Commissioners appointed to inquire into the Survey Department? I have.
 2. You gave evidence in the matter? Yes.
 3. The questions numbered from 683 to 842 were answered by you? Yes.
 4. I shall not find it necessary perhaps to examine you upon any questions that may have been answered here, but merely ask you some questions to supplement your evidence. You have no further means, at the present time, of examining the work the officers send in than you had at that time? We have no further means, but we employ those means more fully. We refer, in every instance, to the original surveys of the adjacent lands, if there be original surveys.
 5. You remember when the system was first adopted of employing licensed surveyors? Yes.
 6. You were in the service then? Yes.
 7. By whom were these licensed surveyors first appointed? I cannot say from memory. I recollect who were among the first, but I do not recollect who appointed them.
 8. I believe the system originated during Sir Thomas Mitchell's absence from the department? I am under that impression.
 9. I think, when he returned to the country, after being absent for some time, he disapproved of the system? I think he did. I remember his preparing an estimate under which all surveyors were to be salaried officers.
 10. Who examined as to their competency before they were appointed? I do not think those originally appointed were examined. Mr. Nicholson —
 11. Mr. Nicholson had been in the department before, and was one of the officers sent out from England? Yes; and Mr. Mann, I think, was one of those originally appointed. I do not recollect hearing of their being examined.
 12. Do you not think the appointment of these gentlemen at that time was a great injustice to old officers who had been long in the service? As some of the appointments were more profitable than those of the salaried officers, I think the old officers ought to have had the refusal of them.
 13. Some of them, I think, made three times the amount of the salaries of the oldest officers—Mr. Mann, for instance? Mr. Mann is a solitary instance. I dare say he received three times the salary, or perhaps more; but out of that his expenses had to be paid, and I am aware that he employed assistants, who, of course, received remuneration from him.
 14. Do you not think the old surveyors, who were sent by the Government I may almost say to the vanishing line of civilization, doing the work they did, could have made considerably more than their salaries under the arrangement then made for the payment of the licensed surveyors? Far more, with the same amount of industry.
 15. These licensed surveyors never have had the difficulties to contend with that the officers carrying on the surveys in unknown country must have fallen in with? Yes; they had no dangers to encounter, and no inconvenience, except what they chose to subject themselves to for the sake of economy.
 16. The whole arrangement of the maps and plans is under your control, I see you state here? Yes; it was not distinctly so then.
 17. You were assisted by Mr. Adams, I think? At that time there was a draftsman senior to me in the department, and although I had not the control I had the management.
 18. Do you not think it would be a great advantage and saving if the officers of that branch of the service were attached one or two to each district surveyor, or in their respective districts, with a smaller establishment at head quarters? I do not think that that would be practically advantageous, and for this reason—that the districts are so extensive that a district surveyor can scarcely be said to have head quarters, if he really travels and inspects so much, as he ought to do.
 19. But I mean that he should have an office in his district occupied by the draftsman always, the work of the surveyor in the field being sent to him to compile and put together, and then from there sent to head quarters, to be put into the maps for the information of people in Sydney? Some districts—indeed most of them—are so extensive, that before the time the plan could arrive at the head quarters from a remote part of the district, it might be very near Sydney. The course of post from any portion of the Colony to Sydney involves so little delay, that I consider it advisable that all plans should be sent direct to the Sydney office, where the best means for checking their accuracy exist, in the previous surveys and in a competent staff of draftsmen, and where the proclamations for sale must be prepared and published, and the original surveys recorded and preserved.
 20. Do you not think the districts might be arranged in such a way as to obviate the delay? Not without a far larger number of district surveyors.
 21. Of course I contemplate the employment of an increased staff in the country districts. Do you not think that a great deal of the time of the surveyors has been lost, for many years, by their being obliged to make such plans as they send to the head office? I think some of the plans may have been unnecessarily highly finished, but still I attach great value to

to

- to the plan of the ground made by the surveyor himself. I think it likely to be a better representation of the country than anything plotted from his field-book by any one else.
22. Without being highly finished a map may be very correct. I have seen some very incorrect that were very beautiful to look at? Of course I should not desire that surveyors should devote more time to their maps than is necessary to make them correct and clear. Still, I have known many of the most industrious surveyors—such men as Townsend—who, in addition to large surveys, have made very highly finished maps, and who were second to none in the amount of field work performed.
23. Are you aware that in l'École Polytechnique they do not require any maps to be sent in, except rough lineal maps—they will not receive any; there must be upon the map, not merely a line, but the measurement of the line, in figures, so that there can be no mistake—do you not think that would be a great improvement here? We have the length of lines in figures upon all plans sent in by surveyors, and not only of boundary lines, but tabular statements of the chain traverse along rivers, roads, &c.
24. In answer to question 714, in the evidence given by you before the Commissioners, you say—"Some of the more industrious of surveyors have sent in plans of their surveys in the "squattling districts on three different scales, being two inches to a mile, two miles to an inch, and eight miles to an inch"? Yes.
25. Do you not think he would have been much better employed in making surveys of the country, if a draftsman had been employed in doing the work that he appears to have done here—would it not have been a saving of time? Certainly. I think a map on the largest scale mentioned would have been sufficient; there would, however, have been an advantage in the surveyor compiling and sending in a map on the smallest scale also; but the medium scale I think unnecessary. In the small scale plan he might have reconciled differences or discrepancies in the reduction of his surveys in such a way as to produce a more accurate general map than could be done by a draftsman who would be comparatively ignorant of the probable positions of the errors, and might therefore distort in his compilation the most accurate portions of the survey to make them fit in with the least accurate.
26. Mr. Burnett, I believe, carried on triangulation to the northward; was it in connexion with Dixon's triangulation? Yes.
27. He calculated all his triangles? Yes.
28. Mr. Dixon did too? I am not aware.
29. You are aware that triangulation is a work that requires considerable time? Undoubtedly; and if done hurriedly, it is a waste of time.
30. Unless it can be properly done, it is not worth while attempting it at all? It had better not be done at all, because the errors accumulate.
31. They can be only checked by a base of verification? Only by a base of verification.
32. However, you are aware that if there be three points at any time well established and fixed, as long as they exist they will prove that the corner or angle of a farm is correct, by measuring the angles at the corner subtended by lines joining these three points? Yes.
33. You have never been in the field yourself? No; I have done a little amateur surveying, but I have never been in the field.
34. Are you of opinion that every officer coming into our service just now should serve a time in your branch of the department? I think it would be advantageous to any officer coming in to do so.
35. You have no record of Dixon's triangulation? We have plans, but I have never seen any calculation, or field-book, or record of his measurements. It is very possible there may be records, but I have not seen them.
36. You, of course, have the field-books of many officers, but there is no regular system of field-books? No uniform system of field-books.
37. There ought to be, ought there not? I should think there ought.
38. There ought to be a system of field-books arranged in such a way that you or any officer of your department might plot from it? I think I could plot from any field-book, but from some more quickly than others. I think there ought to be a uniform system for each species of work, one for feature surveys, and one for farm and allotment surveys.
39. The licensed surveyors have not been employed in carrying on feature surveys at all? Scarcely ever. They have been occasionally employed in surveying roads.
40. It requires a man understanding his profession well to carry on a feature survey? The work is so extensive that the total error becomes greater than in farm surveys.
41. That was the reason why the old staff of surveyors were sent away to extend the colonial boundaries? Undoubtedly. There were no men in the Colony then, at all events, so well qualified for the duty.
42. You are sufficiently acquainted with a surveyor's duty to know that these monthly returns are of but little use? The old monthly return I always considered highly objectionable; and I have frequently stated my opinion to the Surveyor General and Deputy Surveyor General.
43. Have you any idea with whom these returns originated? I am under the impression they originated with Sir George Gipps.
44. They were adopted before his time? Then my impression is inaccurate. I do not know much of what took place in the department so far back. I do not think you will see anything objectionable in the present form; it merely requires such information as it is necessary the head of the department should receive.
45. Then nothing has been done in the way of carrying on the triangulation, or taking rounds of angles, since Sir Thomas Mitchell's day? Nothing whatever. I have never seen a round of angles that have been taken since then.
46. Mr. Dixon, when he carried on the triangulation, did not send in a round of angles on a diagram at all? Not that I am aware of. That was before I joined the department.
47. Is the system of section lines continued over any portion of country yet? I think I may

A. G. M'Lean,
Esq.
14 May, 1858.

- A.G. McLean, may say it is wholly discontinued, both section lines on the ground and imaginary section lines on paper.
Esq.
- 14 May, 1858.
48. Do you not think it would be an advantage to your department to have an enlarged system of parish surveys, shewing the errors of the old surveys? I think it would involve an amount of labor scarcely called for by the necessity of the case.
49. You have heard frequent disputes about old marks and section lines which were supposed to be continuous, but were really not so? Yes.
50. Do you not think a system of landmarks should be adopted? Do you mean large landmarks?
51. That individuals buying land from the Crown should be bound to establish landmarks within a certain time? I think that system would interfere very much with the sale of land, seeing how much is bought in proportion to what is occupied, and seeing that the old marks made by the surveyors twenty or thirty years ago are recognizable. I do not think if the system of marking were perfect such a rule or regulation would be necessary.
52. The old landmarks made twenty or thirty years ago are still there, while the landmarks under the licensed system are not to be found at all? I can fully believe that to be the case in many instances.
53. It is quite possible for an officer getting a tracing to mark a town upon the map without having seen the ground at all? Quite possible; I could do it myself.
54. Then the value of these surveys, in a great measure, depends upon the character and honesty of the individual employed? Hitherto the Government have been almost wholly dependent upon the character of the individual; the only check has been what I mentioned in my former evidence.
55. There is no supervision to see whether the work is done correctly or not? Nor whether it is done at all.
56. Are you aware that this was originally intended to be the duty of the Deputy Surveyor General, and that that office was created for the purpose? I am not aware; it was established so long before my time; but I was under the impression the intention was that one of the superior officers should be at head quarters, and to have either the Surveyor General or the Deputy Surveyor General always in the field.
57. Did you ever see the system of grades of the service, as arranged in a despatch of the Secretary of State in, I think, September, 1828? I am not aware that I ever saw it, but I believe it to have been the same as that in existence when I entered the department in 1843.
58. It has lately been altered, I believe? It has.
59. Have you ever heard any complaints from the officers in the service, that no faith was kept with regard to that arrangement? I have heard of the existence of these complaints, but I have not heard the complaints themselves.
60. If officers have been induced to accept employment under the Government by certain promises, and with certain arrangements as to the future, do you think they are likely to do their duty honestly and straightforwardly if faith is broken with them? It would to a certain extent be a moral release from the obligation to perform their duty faithfully.
61. You are getting up separate maps—county maps—I believe? We are publishing them.
62. How many have you already prepared? We have published three; they are maps of the Hunter River Districts principally. They were published first partly because they are important, and partly because the maps have been recently compiled, and are more accurate than the old ones. We are now publishing the County of Bathurst, which is a very important county.
63. What counties are published? Durham, Northumberland, and Brisbane.
64. It was no advantage to the department here that its head should have been so often away from the Colony? I should think not; a department so extensive as ours requires to have the head always present, to keep it in good working order.
65. Do you attribute much of its present disarrangement to its direction changing hands so frequently? I attribute it rather to the uncertainty as to the system to be pursued, whether the salaried or the licensed system.
66. Then there is no definite system? There is no definite system; the present Surveyor General has attempted to keep licensed surveyors in the settled districts, and salaried surveyors in squattling districts, because a number of the duties which have to be performed in the latter are of a character which the licensed surveyor's scale will scarcely meet, and in passing special charges by time occupied, Government is liable to be imposed upon.
67. Do you think if, in the first instance, surveyors had been sent as Commissioners of Crown Lands, there would have been the confusion in the boundaries of squattages which exists in the present day? Certainly not; I only wonder that, under existing circumstances, so little confusion has been apparent or has been discovered.
68. Had that plan been adopted, one officer instead of two could have done the duty? Yes, to a great extent; in fact, in one case—where Mr. Roderick Mitchell, who was a surveyor, was appointed Commissioner—we obtained a map of what was then an unknown country, with a reasonably accurate delineation of the features.
69. You have no classification of lands made by surveyors as to their fitness for agricultural or grazing purposes? No, but agricultural lands are almost the only lands intended to be measured; I do not mean to say that in fact they are the only lands measured.
70. Then the licensed surveyor is left to survey what land he pleases? The licensed surveyor has a discretion, though not an unlimited discretion.
71. Are you aware whether there is a large quantity subdivided but not applied for? There is a large quantity measured and not sold, and we know that a large quantity which is measured is not applied for, but it is measured to meet future demand.
72. *By Mr. Aldcorn*: What is the amount? I cannot say from memory, but it has been stated in a Return laid before the Assembly.

73. *By the Chairman* : Are there many deeds remaining in your department yet untaken by the parties? I scarcely know that officially, but I believe somewhere about ten thousand.

A. G. McLean,
Esq.
14 May, 1858.

74. Do you not think it would be a good system, that when the parties paid their money they should be obliged to take their deeds? The deeds could not be prepared at once; there is some inevitable delay in recording and checking the returns of sales on which the deeds are prepared.

75. Then the time for payment might be lengthened? The result of such an arrangement would be, that as some parties after having paid their deposits decline to complete their purchases, and as the deeds would be filled up with these parties names, the land would have to be legally surrendered to the Government.

76. Might not the deeds be delivered within three months of the payment of the whole of the purchase money? I believe the deeds could often be delivered within three months, but purchasers frequently will not take them.

77. Do you not think the present system of preparing the deeds could be greatly simplified—that instead of having to pass through three offices, all that is necessary might be done in one? The preparation of deeds has been much simplified lately, and is not now, in my opinion, susceptible of much improvement.

78. Do you approve of the system of Local Land Offices, as at first conducted? I thought when Land Offices were first established they were too much distributed—that it would have been better to have had larger offices and a smaller number; for instance, that there might have been offices at Maitland, Brisbane, Ipswich, Bathurst, Goulburn, Yass, Albury—say some twenty places. It is obvious that the expenditure incurred in the remuneration of sixty or seventy Commissioners, or land agents, for the devotion of a portion of their time to the public service, would, if divided among twenty, have remunerated that number for the devotion of the whole of their time to the duty, and would have commanded the services of old surveyors and others specially qualified for the duty; and the offices would thus have been better conducted, the plans and records kept in a more complete state, and the public better served. The agent might have held sales at different places within one or two days' journey of his head quarters.

79. Do you not think they might be left to the district surveyors? We have now some seventy offices, and a staff of seventy surveyors would be necessary.

80. There need not be so many as that? I think there would be a considerable outcry if the number of these officers was now reduced, because people have been in the habit of going to the nearest Police Office to obtain the information they have required with reference to land, and they would be very dissatisfied if they had now to go to an office at a much greater distance, even if the more distant offices were better conducted, and information more easily obtained.

81. There has been some inconvenience and loss to the Government from the appointment of some of these officers? I believe there have been some defalcations in the accounts of some of the land agents.

82. Parties have sometimes been employed who knew nothing of the duties required of them? I do not think their qualifications were looked to at all in the first appointments. They were generally persons who had previously been employed in almost nominal positions as Commissioners of Crown Lands, and who received, I think, a guinea a day, when employed in the removal of trespassers from Crown Lands, and duties of that character. Many of these gentlemen had no knowledge of official routine, and their appointment resulted, in some cases, in great delays and difficulty, and in some losses to the Government.

83. When surveyors were appointed Commissioners of Crown Lands, that was expected to form part of their duty, and they were paid nothing extra for it? I do not think surveyors were generally Commissioners of Crown Lands. The surveyor in Sydney was a Commissioner of Crown Lands, for he had occasionally to remove trespassers, and perform other trifling duties. The appointment was at all events confined to a few of the senior surveyors.

84. *By Mr. Forster* : If I understand the tenor of your remarks, they go to the effect that you do not consider your department quite so efficient as it might be? No; I do not think it so efficient as it might be generally; it is unsettled, and nothing unsettled can be thoroughly efficient.

85. You, of course, suggested some improvements in your evidence before the Board; is there anything that has occurred since that evidence was given which would lead you to suggest any additional improvement—any improvement which would render the department more efficient? I am strongly of opinion that if the system of licensed surveyors should be carried on at all, it should be confined to the Settled Districts, and perhaps some peculiar portions of the Unsettled Districts where there is a large extent of land required to be measured; and I think that when employed beyond the Settled Districts they should be so, not on the licensed surveyor's scale, but wholly under special contracts.

86. Then you think the defect arises from the mode in which the licensed surveyors are employed, or from their being too generally employed? I think from the department being in an unsettled state—from its not being known whether the licensed surveyors are to be employed, or whether the system is to be done away with. They have received two or three notices that they would not be employed, and it is not likely men of ability will remain in a service where they feel they are liable at any moment to be dismissed.

87. Then you think the way in which licensed surveyors have been treated is one reason of the deficiency of the department? The uncertainty.

88. You would suggest that they should be employed in a more limited, but more certain manner? In a more certain manner. I think their employment is a convenience in some portions of the Settled Districts—where private practice in surveying occupies a portion of the surveyor's time, and he is on the spot to make any surveys which the Government may require, at a rate which is less costly to the public than were a salaried officer to be sent to the locality.

- A. G. McLean, Esq.
14 May, 1858.
89. Do you think the defects of the department, which you acknowledge, are rather defects of system, or defects in detail; do you think the general system is pretty good? I think the general system, if effectively carried out, of measuring and marking is sufficient for the requirements of the public.
90. You consider that the defects generally are of management more than of system? Of detail more than of the general system.
91. You think no grand system of improvement could be adopted as regards the central arrangement of the department—the general supervision? I do not think any great improvement can be made over what is now in progress—that is, the appointment of district surveyors.
92. You consider that a decided improvement? Yes. I think they should hardly be called district surveyors, they are rather inspecting surveyors.
93. In fact they will be employed to test the work that will be performed by the licensed surveyors? Yes.
94. Then, in fact, the evils of which complaints have been made have arisen from want of local supervision or inspection? Of local inspection, to test the work.
95. This evil will be remedied by the new system it is intended to carry out? To a very great extent; but I think the district surveyors are too few; there are only four in the whole Colony.
96. You would suggest a larger number? Yes.
97. *By the Chairman*: They, in fact, do the duty the Deputy Surveyor General was intended to do? Yes; but the Colony is now five times as large as when the Deputy Surveyor General was appointed.
98. *By Mr. Forster*: Have you any reason to suppose any great amount of inefficiency has arisen from the incapacity of the officers employed—of course one cannot expect any system to be perfect—but I mean has there been any large amount of incapacity? I do not think it requires for the mere measurement of a farm any great capacity, and I think the persons who have been employed have had sufficient capacity for the particular duty performed, if they had been under proper inspection.
99. When I speak of qualification, I mean more than you; I mean a person who is not only competent as a surveyor but who is morally competent—determined to do his work—who is a good officer as well as a good surveyor? I am afraid a large number are more determined to get money than to do their work.
100. Then, from the want of inspection, you infer that the work has not been done as it ought to have been done, by a very large number? By a large number.
101. You think that arises rather from their neglect of duty than from their incompetence? Yes; from a desire to get over their work.
102. Do you consider that the remuneration given to the officers of the department, both in its clerical and field branches, has been generally adequate? I think, in the first place, that the remuneration given to licensed surveyors has been adequate, as an industrious man, in almost any instance, has been able to make a fair or good living.
103. Has there been any difficulty in getting licensed surveyors when they have been required? Not lately; there was for some time a standing advertisement for them in the *Government Gazette*.
104. Of late applications have been numerous? I believe the Surveyor General has at present twenty-four applicants on his list.
105. Do you not infer from that that the remuneration is adequate? Yes; but whether the applicants suppose that there is no probability of their obtaining salaried appointments I am not aware; they do, however, apply for licensed surveyorships.
106. Do you think it possible to enhance the efficiency of the department, without a greater expenditure, as a general rule? I do not think, if the work which the department performs is properly performed, the expense is greater than it ought to be.
107. You do not imagine there will be any probability of the cost of the department being reduced, if its efficiency should be increased? Not without impairing its efficiency. In fact, in my own branch of the department, (the drawing branch,) I believe the expenditure might be increased, with advantage to the public; for the information we possess, and which has been collected at great expense—the work of the survey staff of the department—is not, I am aware, so immediately and conveniently available to the public as it ought to be, and might be, I think, if the drawing branch were increased in number; and if we had more room the public might derive great advantage from it. Now these county maps I believe give satisfaction to the public, and it would be desirable to publish the whole of the counties within the Settled Districts (twenty in number) in a short space of time; but I do not see any probability, under existing circumstances, of their being published at the rate of more than three or four in a year.
108. I think you stated that, in your opinion, monthly returns were highly objectionable—what is your reason for that opinion? I think those under the old form went too much into detail. An officer was required to afford information to the head of his department which, if I had been in the field, I should not have liked to have given; as, for instance, how many hours he was employed daily in the field, and how many hours in his office or tent.
109. You mean that they were too inquisitorial? Yes; and this petty information so crowded the journal that it was difficult to derive the general information as to the progress of survey, which the head of the department really required.
110. What is your opinion of the contract system, as distinguished from the licensed survey system; there is some difference between the two; the contract system was, I believe, in operation on the Clarence? I believe the contract system on the Clarence proved a mistake.
111. Does your objection go to the contract system, or to the bad selection of land? To the premature selection. I think the system should be employed at the discretion of the head of the department and district surveyors.

112. You think it might be available in certain cases? In certain cases; I am aware it is made available now by the district surveyors. He says, "Here is a block I want to have surveyed, and is a design for your guidance, making the average area so many acres—for what per centage of the licensed surveyor's scale will you survey this?" The surveyor being a licensed and qualified person makes an offer, and the work is given to him, at the discretion of the district surveyor. A. G. M'Lean,
Esq.
14 May, 1858.
113. In saying that the survey of the Clarence was premature, or was a mistake, do you mean to say that it was utterly useless altogether? No; it was useful so far as it gave us a general or feature survey of the country subdivided. The surveyors, in their plans and reports, gave us the rivers, creeks, ranges, and so forth. This has done away with the necessity for a preliminary survey.
114. It has given you a basis for future operations? It is not all reliable as a basis.
115. Can you use these surveys as a verification? If they are not to be relied upon, they are of no use for that purpose.
116. Then of what use are they? They give us information as to the course and breadth of creeks and rivers, crossing-places of rivers, tributaries, and so forth; but as surveys of land for sale they are useless—not entirely from inaccuracy, for some of them are known to be accurate, but because the areas measured, particularly of portions on the river bank, which are the most valuable, are of too large areas to be sold under existing laws even if such large areas were in demand, or if it were desirable to sell them.
117. They have given you a little information, and have cost more than that information is worth? Yes.
118. That you consider has been a dead loss to the country? I think the expenditure of one-fourth of what the contract surveyors were paid might have produced all that is of any use in these surveys. The survey on the south side of the Clarence was done by the Messrs. Wilson, and has been proved to be in places very inaccurate. This, on the north side, done by Mr. Burrows, has been found to be accurate. We tried to subdivide his measurements, but found that we could not in this way make a design so suitable to the land, or to the views of intending purchasers, as by throwing them overboard altogether.
119. You consider Mr. Burrows did his work well? Yes.
120. There were two gentlemen employed on the south side—were the surveys of both inaccurate? Recent surveys have not extended far enough to enable me to say. At the Macleay River, where a large quantity of land was surveyed by contract, the survey is I believe accurate, but on that point Mr. Darke will be able to speak.
121. You stated that you had a great objection to the large number of Local Land Offices—what is your objection? I did not say a great objection. I said that when the Land Offices were first established, I thought we were going too far; we jumped at once from selling the land in Sydney alone to selling it in some sixty different places. I think if there had been some twenty Land Offices these would have been sufficient; and twenty really efficient men could have been obtained for this office, at the cost of these sixty who are not efficient.
122. In fact, the large number leads to increased expense, which is not quite compensated by any advantage derived? I thought not at the time, but I doubt whether the public now would like to have a reduction of a supposed convenience, even if the more distant offices were better managed.
123. You would not propose any alteration now the thing is done? No; I think not without further trial. The district surveyors have now authority and instruction to inspect them; and this may result in their being better conducted.
124. You state that complaints are constantly made against these offices—? I do not think I said complaints were made. I was asked whether the appointment of these men had not led to losses, and I said there were some defalcations. When they were first appointed they were not particularly qualified, but from having held this nominal position of Crown Land Commissioners they were appointed.
125. Do you think, from the general demand for land in this country, it is possible for any survey department, however constituted, to satisfy the public altogether? I think it is possible to satisfy the general public. I think they are now satisfied. There are very few places where there is a real demand.
126. *By Mr. Piddington*: Is there any system adopted in the Surveyor General's Office for examining or checking the work performed by licensed surveyors? I stated in my evidence before the Board the checks on the accuracy—
127. I am now speaking with reference to the fact, as to whether the work has really been performed? There has been no inspection of the ground too see whether the work has actually been performed; but new work is generally in connection with some old survey, and, although a surveyor by obtaining an old survey might imagine a plan without going on the ground at all, still I believe they have gone upon the ground, except perhaps in a few cases of measurement of town allotments; and then by examining and comparing the old with the new surveys, we can in some degree ascertain their accuracy.
128. From what you have now said, it appears that no actual system of inspection has been adopted? There has not been any.
129. Is there now? There is now; the district surveyors now inspect.
130. Is it the practice of the licensed surveyors to send in an account to the Surveyor General's Office for the work performed? Immediately on transmitting the survey, the licensed surveyor sends an account, and the system is immediately on receipt to allow a per centage—seventy-five per cent.—and to withhold the remainder till the survey base has been checked,—so far as it can be in the office.
131. Are the licensed surveyors paid seventy-five per cent. immediately on the receipt of the accounts? Yes, on their making application.
132. You know of no instance of delay? I have known some formerly; the establishment of this practice of paying seventy-five per cent. is recent.

A. G. M'Lean, Esq. 133. How long has the practice of paying seventy-five per cent. been established? I should think not more than five months. Previously, if a surveyor applied for fifty per cent. or so upon the amount, it was given to him; but there was no rule with reference to the matter, and the surveyors were not informed that it would be done.

14 May, 1858.

134. They were not entitled to demand it by virtue of any rules existing in the office that a particular amount would be payable on the account, or that the account in full would be paid? We never paid the account in full till after the survey had been made use of.

135. How long do you think generally elapsed between the time when the licensed surveyor sent in his bill and when the account for work done by him, or said to have been done by him, was paid? It would be very difficult to make an average; but there have been great delays in consequence of the carelessness or inaccuracy on the part of the surveyor himself, in order that he might explain discrepancies or correct inaccuracies we have discovered, and the delay occasioned by the return of plans operated not only against himself, but against the surveyor whose plans were accurate, but the examination and checking of which was deferred while the inaccurate survey was in hand.

136. Then you are not aware of any unreasonable delay in the payment of any licensed surveyor? I think there have been what has appeared to them unreasonable delays.

137. I am speaking of your knowledge whether there has been unreasonable delay in the payment of licensed surveyors? I think there has been sometimes, occasioned by the pressure of other work.

138. That appears to be a contradictory answer. I am speaking of unreasonable delay in the payment of a person employed by the Government. The causes may be one thing—they may be inevitable—I do not wish to inquire into them. I merely wish to know whether you are aware of any unreasonable delay having occurred in the payment of licensed surveyors? It can scarcely be called unreasonable, for there was a reason for it. The department was pressed for some work more immediately required, which delayed the checking of these surveyors' plans.

139. How long a delay, speaking from your recollection, do you think has ever occurred between the presentment of a bill and the payment of it? Of a bill, the survey for which the surveyor has not at all had to blame himself, I dare say bills have been unpaid for four to six months.

140. Are licensed surveyors a class of men generally well off? Certainly not.

141. Then do you not think the delay of four or five months would be likely to be very inconvenient to a person not well off? Undoubtedly it would, and that is the reason I have urged, and latterly what I have proposed has been adopted—the payment of a certain per centage, as large a per centage as it would be safe to pay an officer before his work had been examined.

142. Do you not think the establishment of that rule will tend to introduce a better class of surveyors into the department? I am not aware of any surveyor leaving in consequence of delays in the payment of their accounts.

143. What led then to the establishment of the rule that seventy-five per cent. should be paid? The frequent applications made to me, that Mr. So-and-so's surveys might be posted, as he wanted his money very much. When these applications were made, I used to recommend the payment of a certain amount, and it occurred to me that it would be much better to make a practice of it than to wait for these applications.

144. As a general rule, do you not think this great irregularity on the part of the Government in the payment of licensed surveyors, who you say are generally needy persons, is likely to drive out of the service qualified and competent men? I am aware it might have that tendency, but I am not aware of any case where such a result has happened.

145. What is the acreage price paid for the survey of land? It entirely depends upon the area. The average expense throughout the Colony could be calculated.

146. You have no idea of the average expense of all the lands surveyed in the year 1857 by licensed surveyors? I have an idea; I think it must have been somewhere between two shillings and sixpence and three shillings an acre; but that could be given accurately.

147. *By the Chairman:* With whom did the table of fees originate—with any practical man? This is an amended table. I do not know with whom the first originated.

148. I see it is signed by Mr. Thompson? It is amended by Mr. Thompson.

149. *By Mr. Robertson:* In replying to Mr. Piddington a little while ago, you seemed to be unacquainted with the cost per acre under the license system of surveys? Yes.

150. Are you aware that there was prepared for myself, in the Survey Office, a statement of the cost under each system per acre? Yes; I am aware that Colonel Barney had one prepared recently.

151. Colonel Barney, when here the other day, promised that a copy of that should be sent by you—did he not give you one? No; I think he mentioned, when here, that the information was in existence and would be furnished.

152. My object in asking the question was, that I desire to know whether that statement will give a fair indication of the cost. It appears to me that it does not give a fair indication of the relative cost of the two systems, because the staff surveyors are employed for other duties, such as marking roads, and many other things connected with the department that the licensed surveyors are not employed upon; and, therefore, the acreage charge calculated as if the whole of their time were employed in farm surveying, scarcely indicates the precise cost? Certainly, I think you can hardly take the cost as it appears there to be a fair estimate of the relative cost of the two systems.

153. Then you think that paper, which may be considered an appendix to Colonel Barney's evidence, will be unfair to the staff system? Yes, it will be so, undoubtedly; besides the peculiar employment on which the staff surveyors are employed, it should be taken into consideration that they are almost wholly employed in remote districts, where time is very much taken up by travelling, while the licensed surveyors are in the Settled Districts, where there is much less time occupied in moving about.

154. Have you had reason to suppose, in your experience, that the work is not nearly so efficiently performed by the licensed or contract surveyors as by the staff surveyors? I think there is a considerable balance of advantage in favor of the staff surveyors; but I know the work of many surveyors that have been upon the staff is not to be relied upon, while the work of many licensed surveyors is to be relied upon—still, on the whole, I believe that the work of the staff surveyors is more to be relied upon.
155. In reorganising a system of large surveys, is there not more probability of securing efficient men by a system which would give us some control over the officers, and keep them within reach, than under the licensing system, whereby persons merely take the position of surveyor, it may be for a year or two, and then leave the Colony? I am an advocate of the staff system myself; I think the whole of the department should be on the staff; still I think it would require good management to prevent it from being more expensive.
156. I believe you have had in the office a great number of complaints of insufficient marking—in fact persons have sometimes taken up wrong lots of land in consequence? In very few cases the wrong land has been taken up. I have heard complaints of insufficient marking out of doors, not officially.
157. Are you aware that in the Executive Council, lately, we have been obliged to make provision for the exchange of lands? Those cases that have been before the Executive Council lately are very old cases—one of them was near Berrima, at Mandemar—another on the Wollombi Brook, and both old surveys by salaried officers.
158. Are you not aware that the towns of Wingen and Murulla are absolutely not to be found? I have been told so.
159. Was that ever the case under the staff system? Not under the staff system with which I am acquainted.
160. I believe you are aware that within the last few months the attention of the Surveyor General has been called to the system of marking, and that a new system has been devised and approved? Yes.
161. Will that be an improvement do you think? It will be not only an improvement upon the system that is ordered now, but an immense improvement upon the system I believe to be in existence now. I believe the system actually in existence very insufficient—that even surveyors have difficulty in finding boundary lines in some places, and of course non-professional men must have greater difficulty.
162. Has there not been some correspondence in which the surveyor of the northern road complains of his inability to find his way through these towns, in consequence of insufficient marking? Yes.
163. Then, if a gentleman sufficiently educated to be a road surveyor shall not be able to find his way through the towns on the roads, of course you consider there is very little hope of the general public finding their allotments? That is very clear.
164. I suppose you are aware that the license system has been the means of facilitating the survey of the country, and that a great number of new surveyors have been licensed lately? Yes.
165. Do you not think it desirable—even supposing a large number of surveyors may be employed on the staff system—to continue the issue of these licenses, as certificates of ability to the surveyor, in order that, in the country districts, or where there is not a staff surveyor, they may be called upon at any time by the Government or the Surveyor General with some degree of safety;—I mean, that even supposing we abolish the employment generally of the licensed surveyors, and increase largely our staff system, it would still be desirable to continue the system of giving licenses, as certificates of ability to make surveys? I think it would certainly be advantageous to the public; but I am afraid that if we only employ the licensed surveyors occasionally we shall have some difficulty in finding them when we want them.
166. Still, assuming that we have a sufficient number of staff surveyors, it would at least be no harm to license these persons, and from these licensed surveyors the staff surveyors might be appointed as required? I think it would be an advantage to have them; but if the present licensed surveying system were done away with, I think the licensed surveyors should be employed under contracts made with the staff surveyors.
167. Do you not think it would be desirable to the public still to examine gentlemen who might desire it, and to issue licenses, without charge or fee, as certificates that these gentlemen understand their business? I think that if the Government does not require these gentlemen for its own or the public convenience, and if they still desire to pass an examination, not for the public employment but for their own advantage, they should be subjected to a very rigid examination by a larger Board than now examines them.
168. Do you think it of less consequence to examine them for the public service than if they were going into private business? I think when they are examined for the public service the Surveyor General ascertains what their capabilities are, and does not give them employment beyond their capabilities, while in giving a surveyor a Government certificate of capability, by which the public may be induced to employ him, he should be known to be qualified for the performance of any description of surveyor's duty.
169. Have you seen the new estimate for the Survey Department, prepared by myself—I mean with reference to the allowances? No, I cannot say I have; I have seen the paper, but I have not read it.
170. May I ask have you been in the field? Never.
171. Is there not a very considerable amount of correspondence between the staff surveyors and your office, having reference to their forage, horses, instruments—all their allowances, in fact; and between the Surveyor General and the Commissioners of Crown Lands also? I am quite aware there is a large amount of correspondence, and a great deal of delay, owing to that correspondence, which arises in consequence of the necessity for obtaining vouchers and authorities for their expenditure in these matters.

- A. G. M'Lean, Esq.
 24 May, 1858.
172. Then, I presume, it must be the case that a very considerable portion of the surveyors' time must be taken up in conducting this correspondence, irrespective of the delay you speak of arising from the want of the authorities? Yes, and not only that, but their minds are occupied by these matters, to the detriment of their usefulness in the field; and I know they are irritated very much by the trouble these matters occasion them.
173. Your office, I believe, is found to be burdened with communications of this kind, and a large number of clerks are kept up for the purpose of answering them? I cannot say from my own knowledge whether that is so; it does not come within my branch of the department.
174. I want to know your opinion with reference to the plan I have endeavored to carry out—whether you see any objection to making them reasonable money allowances, leaving the surveyors to provide their own staff, horses, forage, and every thing of that sort, and insisting upon their being properly supplied with whatever they may require for service, thus getting rid of this correspondence? I think the result would be a very great advantage to the service. The only difficulty I see is, that in various parts of the country an uniform money allowance would represent such different amounts of facility for carrying on the work.
175. Of course no system can be perfect; but I presume you allude more to farming produce than anything else? Yes.
176. May we not establish a general system for the whole country, and make special allowances for special cases; or fix the rates according to the circumstances of the respective districts, so as to avoid correspondence on these matters? Yes, I think it desirable there should be differences, which might well be based upon the rates of contracts in the different districts.
177. For instance, there was a case in which it was represented by a Commissioner of Crown Lands that two saddles were wanted in a country district, and I think there were no less than forty-eight or fifty separate acts of different officers at different times before these two saddles were sent away from Sydney. It would surely be a better plan to allow the Commissioners of Crown Lands to find their own saddles? Undoubtedly.
178. By making them a sufficient money allowance? Yes.
179. You have spoken in doubt whether the licensed surveyors go upon the ground at all when they measure the lands; now, are you not aware, that however faulty the system may be, there can be no doubt that is the case? I think in every case they go upon the land, except perhaps in a few cases of town allotments.
180. Are you not aware that in all these cases there are people in the neighbourhood, and that it would scarcely be possible for the fault to be any greater, on the part of the surveyor, than the insufficiency or want of durability in the marking;—are you not aware that some part of the public generally visit the surveyor's camp and observe what allotments have been marked out? In many cases no doubt they do.
181. I think you have said you are somewhat acquainted with the system of correspondence between the Office of Lands and Works and the Survey Office? Yes.
182. Are you of opinion that any inconvenience has arisen from the change in that respect of sending blank covers, as authorized by myself, instead of those long letters we used to receive? I think the work has been shortened and facilitated by it.
183. You can now as readily ascertain the state of any matter as when there was so much correspondence? Quite as readily, or even more readily, because there are fewer papers to wade through.
184. I should like to have your opinion upon one more point with reference to this blank cover system. I would like you to say whether, in your opinion, we might not improve even what we are doing now—which is, I conceive, only an approach to the right direction—by having, what I would call, minute covers, that is to say, a sheet of paper into which the other papers should be placed, ruled so as to suit the matter in hand, and on the receipt of the first letter writing upon this minute paper the date of receipt, the number of the letter, the subject, and briefly the contents of the letter; and then the nature of the reply, in a few words, and from time to time the action taken upon the matter, if pursued any further; putting down also in what office or offices any papers with respect to it might be found; and stating when the papers were forwarded from one office to another. Thus, if a letter came to you, you would put on this minute cover whatever you had to state, and forward it to the Office of Lands and Works; and that would always be an indication of where it was and where the matter stopped. You are aware that in many cases of considerable importance there is some little difficulty in saying where the papers are; but by the adoption of this system you could see where the delay originated, and you would have all the letters within the cover, which would contain a synopsis of the matter, and would direct you to each letter by its number, and enable you to refer to any one directly, so as to grapple with the matter. Would not that plan immensely facilitate the work of the Under Secretary and the Minister? Yes; I think some such system must be adopted.
185. Do you not think we could get rid of many clerks if we were to adopt some system of that kind, whereby we could cut down the enormous amount of correspondence? Certainly the clerical labors would be reduced, there can be no doubt of that.
186. I suppose you are aware that the clerical labors in the Survey Department have been so reduced that it can dispense with four or five clerks? I hear that is the case.
187. You think that could be done? I can scarcely say; but I do not see any objection if the clerical duties can be sufficiently reduced by the plan proposed.
188. You see, that while we would cut down the amount of labor we would provide for the proper performance of the work as well as it is done now—I mean, that we would keep the whole thing clear for action, without such an amount of elaborate communication from one office to another? You would not keep a record of what appeared upon the sheet?
189. That sheet should be the record? That would save the record of the blank cover, because, although the blank cover makes the papers less voluminous, the record of the blank cover itself is kept as a separate record.

190. It would be desirable, no doubt, to keep a record in the office where such and such papers were? That is kept now in the Record Department, in the indices to letters received.
191. You are disposed to think, then, that there may be great improvement in that way, and that the business may be as efficiently conducted as it is now with much less clerical labor? A. G. McLean,
Esq.
14 May, 1858.
192. I suppose you are aware, from experience in the office, that the mere appearance of a heap of papers three or four inches thick rather checks the inclination to take up a case, unless one is very hungry for work? I have had plenty of experience of that.
193. And if it was in smaller bulk, though the work might be as much, there would be more inducement to grapple with it? Yes, and the minute paper would be a great assistance to the memory.
194. *By Mr. Aldcorn:* Have you formed any idea as to the relative merits of the two systems of license and contract in regard to expense and the quality of the work done? I think the license system is cheaper, but not so much cheaper as the tabular statement would lead you to suppose.
195. I take it that the salaried surveyor has other work to do? Yes.
196. Do you not think that it would be better to keep the salaried surveyors at their own proper work, and to have men whose sole duty it should be to line roads—proper road engineers. I have seen in the country things of this kind so outrageously wrong, so totally unlike an engineering work, as to prove that it is an error to employ the salaried surveyors to do such work at all? There are many cases in which we have a salaried surveyor on the ground as competent as an engineer to lay out a road; and when this happens at a long distance from Sydney, it is more economical to employ him than to send an engineer perhaps two hundred miles to do the work.
197. *By the Chairman:* Men well accustomed to feature surveying ought to be employed to lay out roads? Yes; a man well acquainted with the country would be better able to select a good line than an engineer sent from Sydney, and ignorant of it.
198. *By Mr. Aldcorn:* Are you aware that in America, after a long trial, they have gone back to the contract system, and found it so much cheaper that they have no staff at all except the supervising staff? Yes. When we have a sufficient amount of consecutive work, then I would bring in the contract system.
199. Do you not think, as a general principle, that when men are working to make a livelihood they work more? Yes.
200. Are you aware that in New Zealand they are carrying on the surveys by contract? Yes; I am aware of that. The circumstances of this Colony are peculiar. The measurements are generally so scattered and desultory that a contract could not well be made, and hence the existing licensed surveyors' scale or perpetual contract. It is admitted that in contract surveying supervision and inspection are necessary, and it is obvious that there is a limit to the extent of country within which one officer can supervise and inspect the work of others. Now, if within that limit the extent of survey which may be required is only sufficient to afford employment to one or two surveyors, (as is the case in portions of this Colony,) it follows that it is, beyond a doubt, more economical to employ in the duty one or two salaried officers who may be relied upon, and whose work will not require inspection, than to employ licensed or contract surveyors, and a salaried officer to inspect them.
201. Do you think that by giving the district surveyors large districts, and having one land office, as you suggest would be necessary to get quit of this expense, they would have nearly enough work to supervise the measurement of the contract surveyors? No doubt the districts are so large now that the district surveyor cannot effectually supervise.
202. With regard to land offices, do you think that one land office for each large district might be made to answer, by sending the plans, or copies of plans, of the land surveyed to each district to the present land offices, where it would not increase the expense, because the Clerks of Petty Sessions would do the work? The present course is to supply the information from the Survey Office.
203. Then your opinion is, that there would not be much gained by having the plans made at the land offices? They would have to come here for proclamation in the *Gazette*.
204. *By the Chairman:* Have you any further suggestion to make to the Committee with reference to this matter? In reference to the recommendation of the Commissioners, that the theodolite should be used instead of the circumferenter, I may say that the circumferenter has not been superseded by the use of the theodolite, and I do not think it is likely to be so; but I think it desirable that some decision should be come to upon that point.
205. *By Mr. Aldcorn:* You said you thought compelling parties who have purchased lands to keep up the landmarks would seriously interfere with the sale of land—in what way do you think it would do so? It would be an obligation on every man who purchased to go to a certain expense.
206. Do you not think it is absolutely necessary, for you find everywhere in the country districts disputes about the marks? I think these disputes might be done away by a more thorough system of marking, but it would be rather more expensive. We have marks thirty or forty years old which are still discoverable.
207. That is to say, that in the earlier stage of the Colony the marks were more effective, but they do not serve the purpose now? There is no question of that; but it is a mere matter of pounds, shillings, and pence to revert to the old system of marking, or a still more perfect and intelligible one, and I think that could be done with far less expense or loss to the revenue than would be occasioned by hampering the sale of land by requiring purchasers to go to the cost of keeping up the marks; besides that, individuals would frequently, either from ignorance or self interest, put the marks out of their proper places.
208. You think the Government should adopt some permanent system of landmarks, by placing stones, or something of the kind, wherever land is surveyed? Yes; such a system has recently been approved of.

A. G. McLean, 209. *By the Chairman*: Do you insist upon every officer sending in the variation upon every plan? No; it ought to be done; but it is not so very important in plans of small farms as in extensive feature surveys, where I consider it to be essential. When I say that I do not consider it to be so essential in plans of small farms, I mean that so far as the variation affects such measurements, a periodical record, the result of observation by the district surveyor in different portions of his district, would be a more useful and more reliable record than the insertion of the result attained by each surveyor in each measurement of small farms.

Esq.
14 May, 1858.

TUESDAY, 18 MAY, 1858.

Present:—

MR. DONALDSON,
MR. FORSTER,
MR. HAY,

MR. MORIARTY,
MR. PIDDINGTON,
MR. WHITE.

G. B. WHITE, Esq., IN THE CHAIR.

William Wedge Darke, Esq., called in and examined:—

- W. W. Darke, Esq.
18 May, 1858.
1. *By the Chairman*: You are an officer of the Survey Department? Yes.
 2. How many years have you been in the service? I have been a surveyor altogether nearly thirty years—twenty-four in this department; I have been the senior since you left the department.
 3. Yet you are termed an Assistant Surveyor? Yes.
 4. Did you ever hear of any instructions from the Secretary of State as to the grades of officers of the service? Yes; it was understood by us all that there was such a document.
 5. You have never seen these instructions yourself? No; but I remember to have seen a record or reference to them.
 6. You know that the department was to consist of the Surveyor General, the Deputy Surveyor General, Surveyors, Assistant Surveyors, Draftsmen, and Clerks; and that those were the positions in which they were to take rank, according to the instructions I allude to? Yes, at rates of pay fixed, I believe, by the Secretary of State.
 7. You have been twenty-four years in this branch of the service? In the Survey Department of New South Wales.
 8. And you were some years in the Survey Department at Van Diemen's Land? It was at Van Diemen's Land that I acquired a knowledge of my profession. I was not a paid officer there, but I assisted my instructor in his public duties.
 9. How is it that you are, in your present position, only styled Assistant Surveyor? Because, I believe I may say, I have been out of sight. I have been in the remote districts, and therefore, I think, overlooked. If Sir Thomas Mitchell had lived, or while living had always been at the head of his department, I think I should have been promoted above my present grade.
 10. Will you state, for the information of the Committee, the different districts in which you have been employed, and, as nearly as possible, the times you have been employed in those districts—a sort of historical statement? Although I was recognized by Major Mitchell as a surveyor, I entered as a clerk, with a view of working my way up. I did office duty for two years as draftsman in the Survey Department; I was then promoted, and volunteered to go to Port Phillip, to assist in making the necessary surveys there. I was at Port Phillip six or seven years; I was then brought up to Sydney, and had charge of the Sydney and Illawarra districts, I think three years; then I was sent from here, rather unexpectedly, and ordered to take charge of the Macleay, Clarence, and Richmond districts; the district thus assigned to me contains about thirty thousand square miles; from there I have just returned, and have been reinstated in my old Sydney and suburban duties.
 11. You have not been constantly in one district, but have been removed to almost every district in the Colony? I have performed duty in several districts, I cannot say to almost every district.
 12. By the despatch I have referred to from the Secretary of State, you ought to be Senior Surveyor? I ought, as far as I believe in the *intention* of any such document.
 13. During the time you have been in the service the department has been variously controlled by different heads, during Sir Thomas Mitchell's frequent absences from the Colony? Yes.
 14. The duties then fell into the hands of first one party and then another? Yes.
 15. Did you ever see any change occur towards the field officers of the service during the time that these changes took place, in the conduct of the correspondence and field details, and other circumstances connected with the service? I can only speak of my own experience; I observed during Sir Thomas Mitchell's absences, while the duties were performed by any other officer, that the general tone of the letters was not what I considered it ought to be.
 16. What was the general supposition of the officers of the service—for I dare say you have had considerable conversation with them upon the subject—as to where these different orders originated. Had you not an idea that these orders originated from an inferior branch of the service? I might have had such an idea, but I should be sorry to say I was perfectly justified in thinking so. I fancied I could tell, from the diction or tone of a letter, who had drafted it, but I could hardly offer a distinct opinion. With regard to conversing with other officers, we were so detached that we had not much opportunity of meeting together; and there was a great anxiety to rise in the service, which to some extent prevented our exchanging opinions.

17. Is it not your opinion that a man, to be able to report upon the works and duties of a W. W. Darke, surveyor, should be a surveyor himself? Undoubtedly.
18. He should understand his work? Yes.
19. Have you not heard that draftsmen and others were censors and valuers of the works of surveyors? I know that the work of surveyors must be submitted to draftsmen, and they are in a position to detect any obvious error, and, when they do so, to bring it under notice.
20. Have you heard of them making remarks upon the works of different officers in the field? In private conversation I have heard comparisons as to the relative qualifications of different gentlemen.
21. You have never been employed on the license system, have you? It was offered to me while I was at Port Phillip, to take a contract as an experiment, and I did so, keeping my rank and position in the department. I took a contract for three years.
22. You had no salary during that time? No.
23. Was that the time the experiment was tried in the department generally? From 1839 to 1842, to the best of my recollection.
24. From 1844 to 1846, I think? I may be wrong, but I think my dates are more nearly correct.
25. That was before the circumstance to which I refer? I think the system was commenced in the Port Phillip District.
26. You have been a good deal employed in feature surveys? Yes, very considerably.
27. A very great portion of the dividing range between the eastern and western waters has been surveyed by you? Yes.
28. You found it a very rough country? Yes.
29. Having tested the duties both of a licensed surveyor and of a surveyor on the staff, which duty do you consider to be the heaviest or hardest? To get a living at the rate of payment a contract surveyor then received, he must expose himself very much. I would sooner be a paid officer than accept duty at the prices paid then.
30. At the rate in the present table? I would rather now be a licensed surveyor as a permanency, in a good district, if paid under that table, than retain my present appointment.
31. With good increase? Yes.
32. Do you think there has been sufficient supervision over the survey service by men competent to supervise works of that description? No; but I ascribe that to the circumstance of many districts having but one surveyor; therefore, he would have to supervise his own work.
33. Have you ever been visited by the Deputy Surveyor General during the whole time of your employment? No; but I am aware of other officers having been visited by the Deputy Surveyor General.
34. Are you aware that the office of Deputy Surveyor General was instituted for the purpose of supervising, controlling, and arranging the duties of all the officers in the field? I should consider that to be the proper definition of the duties of that officer—subject, of course, to the general direction of the head of the department.
35. You must have heard, having been so long in the service, that that was the intention at first? I never was pointedly told so; but I always conceived that was his line of duty.
36. What has the office of Deputy Surveyor General ever been since you have been in the service? Confined to indoor duty, as far as I believe or know, excepting on some occasions of special duty.
37. We have had two principal draftsmen instead of one? Only one at a time.
38. The Deputy Surveyor General, instead of being in the field, was in the office? I can hardly say that, because I do not know for what line of duty he was appointed; the duty he has performed he may have been appointed to perform.
39. You have been a great deal employed in feature surveys,—will you tell me what proportion of your time was occupied in making or plotting the plans. Suppose you were in the field a month, how much of that time was occupied in tent work and office correspondence? More than half; and then if it came on to rain or to blow we could do nothing, and were obliged to roll up our papers. On the average it took up more than half the time. In measuring town allotments particularly, the week's work involves writing two hundred and fifty pages of foolscap.
40. Were there not many experiments as to the means of transport, equipment, and forage allowance, to try in which way it could be done cheapest? There have been several means tried, but I never was consulted.
41. You mean to say the officers most concerned in these matters were never consulted? I never was.
42. But you were obliged to find the means of survey, as you were instructed to find them by the Surveyor General, out of your own pocket? At one time when on contract duty we found everything; previously our field equipment was supplied, on requisition, by the Government, but some time after that, when on *fixed pay*, a money allowance has been given.
43. It did not matter what district you went into, you were obliged to find the equipment at your own expense? Yes, when on contract duty, but since that they have given a money allowance in lieu.
44. You did not find instruments, rations, and forage, but you found everything necessary for the transport of the equipment from one point to another? Yes, everything, under the latter regulation; under the former system we found rations, forage, and instruments.
45. Did not the correspondence upon that subject take up a considerable portion of your time? No, I cannot say it did.
46. Were you never impeded in the performance of your duties by any circumstances of this description? Often.
47. Were you ever, during long periods, left without equipment, or without rations? I have often been without them, simply from the fact of the country being too rugged to take them with me.

18 May, 1853.

- W. W. Darke, Esq. 48. That depended upon your own arrangements? Yes.
49. Were you ever in a position where rations were to be sent out to you and they were not? I scarcely ever had them sent to me.
- 18 May, 1855. 50. That occupied a considerable portion of time? No. I made an arrangement with the contractor; I gave him my vouchers, and he gave me cash; and I bought whatever I wanted wherever I have gone.
51. You might have found a contractor that would not do it? I never have; they get a certain profit, without risk or trouble. When I have been stationed in town, or near town, I have sometimes drawn rations in kind from the contractors, but not often.
52. What is your opinion as to the license system generally, as compared with the staff system—which do you consider the most advantageous to the country? I think, now that the Colony has become so extended, that a combination of both is necessary. I think there should be paid officers to have the surveillance of the subordinates in the districts; that is the system now about to be carried out I believe.
53. Do you consider you are entitled to be a district surveyor? Yes.
54. You are not one? I am not.
55. Do you think many of these men have been appointed district surveyors without having had sufficient experience in the Colony? I should be very sorry to offer an opinion; I can speak of my own position, but not of others.
56. Has there, since you have been in the service, been anything like a system of survey carried on? There has only been one system; the same that was in use when I joined the service is in use now.
57. There has been no change since the recommendation of the Board, which sat in 1855? Not that I am aware of.
58. You are still going on with the old system? I have had some instructions with reference to corner tree marks, but I do not remember any fundamental change having been made.
59. Do you not think the system would be much better if officers were appointed to certain districts, with a staff of officers under them to carry on the duties, which would necessarily reduce the establishment in Sydney? I do. I consider the Surveyor General ought to have a deputy in each district, who should select lands for sale, and see that the junior assistant officers do their duty properly.
60. You think the surveying of lands, lines of railway, and roads generally, should be under the control of an officer of that description? I cannot speak as to railroads; but lines of ordinary roads, and the other duties of the department in his district, should be under his management, subject of course to the approval of the Surveyor General.
61. If an officer of that description were placed in every district, he would require to be a man who thoroughly understood his profession? Yes.
62. You have met many men that have come from England as professional surveyors—men understanding the theory of their duty—who, when placed in the field, have required some field experience before they were able to do their duties in this Colony? Yes; I have had a gentleman, brought out under engagement with a salary, placed in my tent to learn his business, and I have been expected to meet suggestions to take others.
63. Some years ago, I believe, the Surveyor General insisted upon every officer taking some of these men out? I was requested to do so, and at first I construed it as a sort of command; I had then no objection, but afterwards I shewed no wish to meet such an arrangement, finding it both expensive and disagreeable.
64. The expense fell upon yourself? Yes. I know of other surveyors having had gentlemen with them to teach.
65. Have you never heard of officers having been sent out to survey that were never surveyors at all—who had been appointed from home, but had never seen an instrument? One such instance came under my immediate knowledge.
66. In what year did you join the service? In 1834.
67. You consider that an individual, to have the control and management of a survey department, should be a surveyor, and should understand his duty? Yes.
68. A draftsman is not always a surveyor? Not always; but I think he ought to be, in theory at least.
69. A surveyor should be a draftsman? A surveyor *must* be a draftsman.
70. In commencing the duties of a surveyor, the first thing you are taught, as a portion of the profession, is to learn to copy plans? Yes.
71. A draftsman is not considered in the light of a surveyor at all until he has served a certain time under a professional man? I should not consider a draftsman thoroughly qualified unless he knew the theory of the profession, and has had field experience.
72. Do you know in what position the draftsmen of the Royal Engineers stand in relation to officers of that service? Not in the least.
73. You are aware, I dare say, that there is a considerable difference in the profession of a war engineer, or royal engineer, and that of a civil engineer? Yes.
74. Do you know by whom the greatest works in England have been carried out? Chiefly by civil engineers, I believe.
75. Even the Government works, such as the breakwater at Plymouth? Yes.
76. The professions then are entirely different—one is for war purposes, and the other for the development of a country and opening its resources? I think a royal engineer should be able to act as a civil engineer, but a civil engineer is not necessarily qualified to carry on warlike operations.
77. A man may be able to understand the theory of the profession very well, but not be able to carry it out? Yes, undoubtedly. I may understand navigation, but I could not command a ship.
78. You have read the names of the Commissioners appointed to inquire into the Surveyor General's Department? Yes.
- 79.

79. Two Royal Engineers and a Professor of Mathematics? Yes.
80. Do you not think it would have been an advantage to have had a practical man among them? I think so, really.
81. Have you used the theodolite much in making a general survey of the features of ranges? 18 May, 1858. Yes.
82. What instrument would you prefer using? The circumferenter, when local circumstances permitted.
83. You think it is the only practical one? It is possible to do so with the theodolite, but it is too costly, too tedious, for the general survey, and liable to accumulative error.
84. All instruments are liable to error? The errors arising from the incautious or inaccurate use of a theodolite are more accumulative.
85. Have you found much difficulty, on volcanic summits, with the circumferenter? Yes; but I always prepared for it.
86. When upon the higher summits you found it necessary to take angles occasionally? Yes.
87. And by taking these angles and carrying on a traverse chaining, you could detect whether any error had occurred with regard to the needle? When I suspected local attraction, I took the proper precaution to detect it immediately, and to correct it.
88. Have you found any magnetic effect in the rocks of the Colony? Yes.
89. You found they had a polarity—that if you swung a cambric needle they would attract and repel as a magnet? I could not say that, but I found a great variation of the needle in passing trap dykes or over volcanic ground. I have found small particles of magnetic iron ore, of the size of a pea, to affect the needle on being brought into proximity.
90. Have you ever tried the theodolite in taking angles—say a point is ten, fifteen, or twenty miles off, in taking your angle from the magnetic meridian have you ever found a difference of perhaps fifteen or twenty-five degrees in taking the back angle? I have seen, in New South Wales, five or six degrees of local variation, and in Van Diemen's Land thirty or forty. The needle was absolutely useless in such cases.
91. Without going into any thing like the expensive system pursued at home, do you think a system of triangulation could be carried on here, such as Sir Thomas Mitchell spoke of, with advantage to the country? I do not see what would be the advantage of it, unless it were done on so expensive a scale as to be almost impracticable.
92. You know that the triangulation of Great Britain commenced in 1784, and is not yet completed? I have heard so.
93. You are aware that if I wish to fix any point so as to verify it hereafter, if there are three fixed points, say hills, and I take the angles of those three points, I fix the point? Yes. If it ever comes to pass that I am in such a place I take the angles; but it seldom occurs—the trees are too thick.
94. Then very great advantage might accrue to the Government by having efficient surveyors to lay out the different counties and lands for sale? Yes. To point out to their subordinates which lands are marketable, and desirable to be surveyed and mapped for sale, and to see that they do it properly and faithfully, not leaving it to the judgment of the licensed surveyors to select the land themselves, excepting under their express approval.
95. Has there been any supervision of the licensed surveyors? I do not know; there has been no licensed surveyor in my districts during my service in them.
96. Do you know of an officer in the service having come out as religious instructor on board a prison-ship, and having received an appointment as surveyor as soon as he came out? No; a naval schoolmaster, I believe, came out.
97. You are aware that the Board recommended that the system of license survey should be done away altogether? Yes.
98. It is not done away with yet? It is not.
99. Promotion from class to class was also recommended by them—in fact, it was the recommendation of the Secretary of State thirty years ago—but it has never been carried out fairly, or no faith has been kept? In my case it has not been carried out; faith has not been kept.
100. Officers joined the service expecting promotion? I never would have joined it except for that distinct promise, clearly expressed. I should mention, perhaps, in explanation, that after having been two years in office (twenty-two years ago) I was appointed to the Bank of Australasia by Mr. Kinneer, and I, consequently, sent in my resignation to the Survey Department. I was sent for, pressed to remain, and was offered promotion, both immediate and prospective, and that was too dazzling an offer to refuse. I was foolish enough to stay, and promoted to my present grade, but have not been promoted since, according to seniority and special promise.
101. Then no system of promotion appears to have been carried on? Not in my case.
102. There are district surveyors, surveyors, and assistant surveyors—who had the appointment of them? I cannot tell.
103. Were you not aware that when Sir Thomas Mitchell was in the country the weight of the department, or, at least, the control of the department, fell chiefly upon the Chief Draftsman, and when the Deputy Surveyor General was nominally at the head of the service it fell into the hands of the Principal Clerk? I am not in a position to answer that question; my letters were always signed by the Deputy Surveyor General, or, in his absence, by the Chief Draftsman for him.
104. Official letters are sometimes signed without reading? I have been so little at head quarters that I cannot say.
105. You are of opinion then that each district surveyor should have his draftsmen and clerks? Yes.
106. Is it your opinion that the expensive establishment of draftsmen and clerks now in Sydney should not be kept up? I am not in a position to judge of that; I do not know the amount of necessity there may be for them.

W. W. Darke,
Esq.

W. W. Darke, Esq. 107. Is it not within your knowledge that the office branch has been much increased? That is obvious.

108. Much more increased than necessity would dictate? I am not in a position to speak of the necessity; I can only speak of the numerical increase.

109. If there were district surveyors of the description this Board has recommended, do you imagine it would be necessary to have a Deputy Surveyor General to move about the country? I consider such officers ought to exercise the functions of deputies to the Surveyor General.

110. Have you ever been employed in laying out roads? Yes.

111. Are you aware whether those roads have been adhered to or not? The road that I know most about, I think, is not in use now to the extent originally contemplated.

112. Have you known roads upon which considerable amounts have been expended—£5,000 or £6,000—such as the Peat's Ferry Road—to be left unfinished? I know of one such road between Illawarra and Sydney, but I cannot speak without reference to records as to the approximate amount of expenditure.

113. You believe that the system that was adopted by Sir Thomas Mitchell was as available as any system could be with the instruments in his possession at the time it was carried out? He could not have done what was necessary for the Colony by any other means, both as regards territorial arrangements and individual requirements.

114. You are aware that the expenses of this department were very considerable,—that there have been within the last twenty-five years nearly three-quarters of a million? No; I have not had the means of judging. I have not looked to the statistics of the matter at all.

115. You have never attempted any astronomical observations, have you? I have not had the proper instruments, but I have, since I have been in Sydney, been assisting in a few. I think, however, surveyors should be expected to make them, and be provided with necessary instruments.

116. Do you not think it will be necessary, in order to make an accurate survey of the country, to commence afresh? I think each surveyor ought to fix points astronomically in his district; that would enable present surveys to be connected with a very great degree of accuracy.

117. Have you ever been in any district where the section line system has been attempted to be carried out? Yes.

118. Have you ever attempted to tie any old sections together, brought from another district? Yes.

119. Have you frequently seen on a navigable river, like the Hunter for instance, sections that ought to be together from ten chains and upwards out? Yes.

120. That has originated in the surveyors, in the first instance, never tying their surveys? I can trace the existence of discrepancies to two or three causes. On the river I have just left there was one surveyor on the south side, and another on the north. The surveyor on the south side marked all on his side with eighty-one chains, on the supposition of a road, while the gentleman on the other side made all his sections of eighty chains, so that, of course, the section lines do not tally; but so long as that discrepancy is recorded it will not form any difficulty of constructing general maps approximately correct.

121. Do you not find that the chain stretches to the extent sometimes of two or three links if not measured to correct it? I frequently correct mine; when it is not properly seasoned, once a week is sufficient. It stretches for the first week or two and then it comes to its bearings. Ordinary care will prevent any error from that cause.

122. Errors originating in these ways have caused considerable dispute, have they not, with regard to the boundaries of land? None have come under my knowledge. I have been so much employed in remote districts that I have not had much experience in the more densely populated parts of the Colony.

123. You have not had much employment in laying out farms? Only in remote districts.

124. Do you not consider that the office correspondence of the surveyors might be very much diminished? The clerical duties of the surveyor might be very much diminished, but I do not know that the correspondence could be materially reduced.

125. If you have letters you must answer them? Yes.

126. How many official letters do you number in a year? On general survey and routine duty, I think about fifty; at head-quarters correspondence has lately been found unnecessary, from the more extended adoption of blank cover reports.

127. Some of these have considerable enclosures? They are in general transmitting work or enclosing some report.

128. You send in a description of all the land you measure? Yes.

129. Then, if you have three hundred allotments to lay out in a town, you have to send in three hundred descriptions? Yes.

130. Could not these duties be performed by a draftsman? Yes. I think the descriptions should be prepared in the office.

131. You have already said you would recommend that the license system and the other system should be continued—do you not think it would be better that large blocks of land should be surveyed by contract, under the supervision of district surveyors? The contractors should be licensed surveyors. When I say licensed surveyors, I mean surveyors holding diplomas certifying to their competency; and I think the district surveyors might see that they got their work done as reasonably as they possibly could on the spot. I do not think the Government ought to be bound by a fixed scale, though it might be used as a guide to the district surveyors.

132. In some districts the rates are too large, in others it is much too small? Yes.

133. In some instances a man may do his fourteen miles a day with the greatest ease, while in other cases he cannot do one? Yes.

134. Therefore you think it quite impossible, unless the country is known to the party, for any one to value a surveyor's work? Yes.

135. Have you ever felt the monthly returns to be an annoyance? Yes, very great.
136. Do you think they are of any advantage to the office at all in the way of giving information to the head of the department, or to the public? It might have been thought they were, but I consider that they conveyed no representation of the duty really performed.
137. Do you think they ever originated with a practical man at all? All I know is that Sir Thomas Mitchell told me he disapproved of them, and that, perhaps, encouraged me to be rather rebellious; in fact I would not send them in at all.
138. *By Mr. Moriarty*: Do they not occupy a great deal of time? Not if they are done day by day; but sometimes a surveyor is tired at the close of the day—cold, wet, hungry, and miserable—and cannot attend to them, and at length, from procrastination, the task becomes difficult. Another objection to them was this—that they used to go before the Governor General, who would draw comparisons between different surveyors without knowing the reasons for the disparity in the quantity of the work performed; for instance, he might see that one officer had done fourteen miles a day, while another had, perhaps, done only forty or fifty chains.
139. Was the Surveyor General not obliged to correct them and append them to the *Gazettes*? I do not think the Surveyor General possessed sufficient local knowledge. I feel sure Sir Thomas Mitchell did so; but in his absence the officer whose duty it would be to report upon these journals I do not think had sufficient knowledge.
140. On the subject of the remuneration to licensed surveyors, do you think it would be well if the remuneration were dependent upon the prices realised for the lands sold? I cannot see how that would be practicable, because the land must be surveyed, and the surveyor paid, before the land can be offered for sale.
141. But the payments might be made periodically? I think the licensed surveyors would look for a fixed price and certain periods of payment.
142. Still there might be a minimum price? It is a point to which I have not given consideration, and I am, therefore, not prepared to offer an opinion upon it.
143. Would it not be an inducement to a surveyor to select first the land most likely to be sold? I think the selection of the lands ought to be vested in the superior officer, otherwise some of the surveyors might select that which was most easily measured.
144. Would not such a system as I suggest check the measuring of land which might be easily measured, but not likely to be sold? I doubt it, because, the land which could be easily measured could be run over so rapidly that the increased quantity measured would more than compensate for the higher price of the other; the land which is the best to sell is generally the most difficult to survey.
145. *By the Chairman*: Do you not think it would be a very desirable change in the license system only to pay the surveyor where the land was sold? I would obviate the measuring of unsaleable lands by having the selection made by the district surveyor.
146. *By Mr. Moriarty*: The supervision of the district surveyor would be so detailed as to amount almost to a double survey? No; the district surveyor in riding over his district would merely point out tracts to be surveyed, and after one or two verifications he would ascertain the value of his officers' work. The accuracy of some surveyors' work is so apparent and obvious that an examination is almost unnecessary. If a district surveyor were in the habit of riding over his district there would be no such abuses as measuring land unfit for sale.
147. *By the Chairman*: How would such a regulation apply to old districts, such as the Hunter, because in many places there is no available land? Then there would be no necessity for such an officer.
148. Still, constant surveys are required? They should be performed by trustworthy persons detached on such special service from head quarters, or by surveyors licensed by the Government, who may be desirous of undertaking the duty.
149. *By Mr. Hay*: Would not the district surveyor be determined a good deal by the applications which would be received in such cases? Yes.
150. Upon receiving a certain number of applications he would give instructions to a contract or assistant surveyor to measure? Yes, or do it himself, and he would judge from his knowledge of the parties and of the country where such applications were *bona fide*? I have known applications to be sent in for thousands of acres by persons who have not had as many shillings or pence. In such cases I reported that they were not *bona fide* applications, and my official objections in such cases have always been approved.
151. *By the Chairman*: If applicants were bound to pay for every such survey you would not be troubled with such applications? I think it would be a very good plan that they should not be compelled with unless some money, as earnest, were paid to Government.
152. Did you ever attempt to classify the lands on the country you subdivided—have you made a geological survey as to the features of the country? Yes, I have made such reports; but very little notice was taken of them, beyond approval in acknowledging their receipt.
153. Do you mean to say that these reports are not forthcoming? I think they can be found in the records of the Surveyor General's Office.
154. You have always carried on your lines magnetically—always by needle? Yes, excepting in suburban or town duty.
155. Do you, in sending in your plans, notice the variation? In the districts where I have lately been surveying there is little or no local attraction; they chiefly belong to the coal measures, therefore I take the magnetic meridian.
156. Have you found that there is an annual variation going on? I have not been in a position to make observations upon that point.
157. It would very much facilitate the making of larger maps from the detailed surveys of the surveyors if every man were obliged to put down on every plan sent in the variation of the day? If he had good instruments it would; but hardly two circumferencers in the department will agree. I had two on the Clarence which varied, one, 1° westerly, the other 1° easterly, thus differing 2 degrees from each other.

W. W. Darke,
Esq.
18 May, 1858.

- W. W. Darke, Esq. 158. Therefore there should be a meridian line in Sydney by which the needle should be tested? Yes. The instruments sent out have been different from each other.
159. You have never made observations for the variation? I have assisted in doing so since 18 May, 1858. I have been in Sydney. I have made approximate observations in the country, but my means were imperfect.
160. What do you take it to be now? Ten degrees four minutes.
161. It shews then that it is eastering, for when I first knew it, it was eight degrees twenty minutes? I am assisting now in a series of observations.
162. Have you no large magnets for testing the variations of the needle—for observing the dip or variation? No; we have a long needle belonging to a large Everest theodolite; the needle is eight inches in length.
163. Have you Everest's theodolites? Yes.
164. Do you use them? No; they are too large. I should prefer a smaller one—they are too large for ordinary purposes.
165. They would do for large angles? They would do for a trigonometrical survey of the country.
166. When you were in those districts did you always carry on a consecutive survey, or were they isolated surveys? They were always connected; my duty required that for country boundaries and roads. My duty has been to make a survey of the features of the country, the roads, and in subsequent measures of the Clarence and other districts I have marks, so that I could connect my work.
167. You made landmarks every mile or two? Yes; I could always connect my work. This little table will give some idea of the different results of the labors of the gentlemen of this department (*the witness having referred to Appendix G to the Commissioners' Report*), but it will afford no information as to the nature of the labor; one man may do ten times the work of another, and yet the apparent result will not be so large.
168. *By Mr. Moriarty*: In squatting districts the scenes of his operations will be more detached, and a large portion of time must therefore be occupied in travelling? Certainly, in the case of isolated purchases; but in measuring a large block of land—for instance, at Bathurst—the labor will not be so great as in measuring a much smaller quantity on the banks of a river of the coast country.
169. *By the Chairman*: Do you give the length of lines upon your plans? Yes.
170. The connecting line between any two points, and the bearing? Yes.
171. The only way of seeing whether you were correct or not, would be by sending another surveyor to go over the same ground again to test it? In the absence of my field-book decidedly my word must be taken for it, or it must be re-surveyed.
172. Then the surveys of the Colony depend, in a great measure, upon the reputation of the individual employed in laying it out? Undoubtedly, with the means of approximate verification in the hands of the Surveyor General.
173. Private individuals wishing to have surveys made of their properties would look out for those who were reputed to have professional skill? Of course.
174. In fact, they would employ professional men? They would.
175. Has that always been the case in the Government service? Not always.
176. You do not think that giving a man an appointment makes him a professional man? No. I knew a gentleman who was sent out from England to fill the office, who himself said he was not a surveyor, and never knew anything at all about it.
177. *By Mr. Hay*: At what time was that? About fourteen years ago, to the best of my recollection.
178. Under what authority was he sent out? He was sent out by the Government; he was one of twelve, I believe, who were sent out. I do not know whether they were sent for.
179. He was sent out with an appointment from Home? Yes.
180. *By the Chairman*: Are you obliged to send in your field notes? No; I could not spare them while I am in the district.
181. When leaving a district do you send them in? No; for I am referred to from time to time with respect to matters connected with the districts I have left.
182. *By Mr. Moriarty*: Would not the forwarding of your field notes to the central office obviate the necessity for such reference? No; I am supposed to have them always with me, and I must have access to them when I am referred to.
183. *By Mr. Hay*: Is there not great danger of their being lost? I cannot say; I always carry them about the country with me; but I must have access to them.
184. Is it not desirable that these field-books, or some authenticated copy of them, should be in the central office, in order to obviate the risk of their loss? I think the copying of them would be too laborious a matter—it would occupy too much time; if any deposit were made it ought to be of the originals themselves.
185. Do you not think the means of such reference ought to be in the office of the department, and not in the hands of a particular surveyor, who might meet with an accident at any time, and to whom the public might not be able to apply? I will give an instance; if I had sent in my field-books when I left the Clarence, I should have been unable to have answered the questions which were sometimes referred to me from that district while I was on the Macleay.
186. *By Mr. Donaldson*: As a matter of fact, do not the licensed surveyors hand in their field-books? I do not know.
187. *By the Chairman*: Is there any system of field-book at all in the office? No.
188. Ought there not to be a system of field-book—ought not the principal draftsman of the department be able to read every field-book? Yes.
189. Then of course there would be no necessity to refer to you if the field-books were sent in? No, excepting for special information—not as regards mapping.
190. There has never been any system of field-book? No.

191. *By Mr. Moriarty*: In the event of an officer dying—? The field-books ought to be sent in. W. W. Darke,
Esq.
192. Are the field-books of your predecessor in your possession or in his? Not in mine.
193. *By Mr. Hay*: Have any fresh instructions been issued of late years with regard to field-books? I cannot call any to mind. I form my own system of field-books. 18 May, 1858.
194. Are you certain that no general instructions have been issued to surveyors with regard to keeping field-books and sending them in to the central office? Many years ago, when I went to the northward, I received instructions to send in a copy of my field-book, and I sent in a copy of one or two pages, to convince the Surveyor General of the impossibility of carrying out the instructions. It was as easy to make a copy of my plans as of the field-book.
195. Do you think there is any impracticability in sending in the field-books? Not if all the officers knew how to keep field-books in a proper form; but hardly two keep them alike.
196. The objection you mentioned just now applied to the sending in of copies of your field-books? Yes.
197. That was what you were originally instructed to do? Yes.
198. Have there been any recent instructions, since 1855, with regard to sending in field-books? I can call none to mind.
199. *By the Chairman*: Do you not think the sending in the field-books, as I suggest, and the drafting department being able to plot from them, would be a check upon the work of the surveyor, and test its accuracy? Yes, it would be; but I could not spare my field-book while in the district, because it is my original map.
200. *By Mr. Moriarty*: I ask you, would not the field-books obviate the necessity for such references? Yes, if they were properly kept; that is, as far as mapping goes; but information is often required which local knowledge, aided by reference to the field-book, can alone supply.
201. Are you not aware that it is the system on the railways at home to require the surveyors to send in their field-books to the central offices, and to have the work plotted there? No; I have had no experience at home in these matters.
202. *By the Chairman*: In case of disputes the original field-books are produced—are you not called upon sometimes to produce your field-books? I never have been. When matters are referred to me for report and examination I refer to my field-book.
203. You were employed in selecting lands for reserves? Yes.
204. Did you ever afterwards find them interfered with in the office? Not materially. My suggestions have generally been adopted.
205. You are aware that land offices have been established in different districts? Yes.
206. Have you known of any irregularities having occurred at any of these land offices? No.
207. Have you known parties to get receipts for payment for their land when the money has not found its way to the Treasury? No.
208. In the Report of the Commissioners I find the following question, No. 275, addressed to Mr. Thompson—"Is it the object of the Government here to increase, to a great extent, the amount of land open for selection?" and he answers, "Yes, that is the object we have always had in view; but we have never been able to accomplish our object for want of surveyors."—Has that been the case do you know? I am not in a position to say.
209. You have not been very much employed in the nineteen counties—you have generally been beyond? I have generally been beyond.
210. You are frequently instructed by the Surveyor General how to carry on the survey? Several years ago I was instructed, but since then it has been left to my own judgment.
211. Have you never had any instructions as to the general system upon which the survey should be carried out? Yes, I have, but I was always instructed to modify it by my own judgment, as occasion might require.
212. Did you generally keep north, south, east, and west lines, or did you vary them according to the lay of the stream or country? I traversed the stream as I found it.
213. In the survey of farms what plan did you adopt? Where practicable, I gave the cardinal points; in fact that was a standing order in the measurement of pre-emptive rights.
214. You do not know what is the strength of the department now? I do not.
215. In Mr. Thompson's evidence 2, 312, is as follows—"Do your returns shew the number of days a man is employed on different surveys? Yes; from the returns we see the quantity of work performed, and can judge as to the character of the surveyors"—Do you think any man, not a surveyor, can judge of that? He cannot; he ought to be not only a surveyor, but acquainted with all the local difficulties or facilities. He ought to have local as well as professional knowledge

FRIDAY, 21 MAY, 1858.

Present:—

Dr. ALDCORN, MR. DONALDSON, MR. FORSTER,		MR. HAY, MR. MORIARTY, MR. ROBERTSON,
MR. WHITE.		

G. B. WHITE, ESQ., IN THE CHAIR.

William Wedge Darke, Esq., again called in and further examined:—

1. *By Mr. Hay*: You have carefully read the Report of the Commissioners appointed to inquire into the Surveyor General's Department? I have. W. W. Darke,
Esq.
2. And considered the recommendations they made? I have considered them.
3. Do you think there is much that is desirable in those recommendations, generally speaking? In one or two points matters there recommended are already carried out. 18 May, 1858.

- W. W. Darke, Esq.
21 May, 1858.
4. Will you say what those are? The first recommendation (p. 10):—"We do not, however, recommend that no applications for the purchase of particular lands should be entertained; but it should be distinctly understood that the Surveyor General is competent to reject such applications altogether, or to postpone the survey of the lands applied for until such time as it might be performed without detriment to the public service."
5. Was it not the practice at one time that every application should be attended to, sooner or later? I think it was. Latterly it has been greatly left to the discretion of the surveyor to judge whether the applications are *bona fide* or not, and to report to the head of the department whether it is expedient or not to measure the land.
6. Do you think that is a wise plan, when licensed surveyors are employed, who are supposed not to be, properly speaking, responsible officers of the department? I must beg to amend my remarks on that subject made by me on Tuesday last. I had not then given the subject sufficient consideration, as I was not aware my opinion would have been asked; but now that my opinion is demanded, I may say that I think the system of licensed surveyors ought to be received with the greatest degree of caution, for this reason:—I have never known a salaried officer intentionally transmit an erroneous survey; in fact, on many occasions surveyors have consulted me as to where errors have arisen. I have known them patiently to go over their work three or four times, until they have found them out. In fact, salaried surveyors, looking to future promotion, are jealous of their reputation. I have, however, known an instance of a contract surveyor plotting on the wrong side of the meridian line, to make his work close; and I have known that same person swear to the accuracy of his work, before he got the money for it. Mr. Townsend re-plotted his work, and detected the error. I think, therefore, if licensed surveyors be generally employed, you must necessarily increase the strength of the department, for the purpose of re-plotting their work; but I do not think that would be necessary if salaried officers were employed.
7. Therefore you think we ought chiefly to depend upon salaried officers for performing the work? Contracts might be given to men having diplomas, where expediency required their employment—where it would not pay to station an expensive salaried staff.
8. But you think that must be done with the greatest caution? Yes.
9. Do you think, when much land has to be laid out for sale in any particular locality, that the detail of the work may not sometimes, with advantage and economy, be carried out by a contract surveyor under the immediate eye of a salaried surveyor? Only under his immediate control.
10. You will observe that I mean where a considerable quantity of land in one locality has to be laid out for sale, the general survey being executed by the salaried surveyor—I ask you whether the detail of the work might not be advantageously performed by a contract surveyor under the immediate superintendence of a salaried surveyor? Any detail that could be entrusted to another could be done by an intelligent chainman or draftsman attached to the surveyor.
11. Do you think, in an open country, where there is a deal of work to be done, a district surveyor might not safely have a considerable amount of detail executed under contract? If there were one to supervise; but it would involve re-plotting.
12. Then, in effect, your opinion I take to be, that the contract or license system is, in the main, a bad one? Yes. It is rather contrary to the tenor of my remarks the other day, but I had not then considered the matter as I have done since. I would not reject the license system altogether; but it ought to be received with strict caution. I look at it as a matter of field, rather than of office business, because I think the license system will involve the necessity not only of re-plotting, but of verifying on the ground. The work of a salaried officer, I think, need not be re-plotted; it may safely be depended upon.
13. Then, as to the expediency of employing a licensed surveyor—you would depend upon the discretion of a properly qualified district surveyor? I would.
14. Do you consider the system of district surveyors, as recommended by the Commissioners, a good one? It is, I think, perfectly impossible the Surveyor General can conduct the detail of the business of the whole Colony.
15. You think it necessary, then, to have district surveyors who shall be responsible for carrying on the surveys in their respective districts? I do.
16. Districts of what size do you think might advantageously be allotted to each district surveyor? That is rather a difficult question. I would rather that information on this point were derived from another source, as I do not feel competent to say what extent of country should be given to each district surveyor; much must depend on the character of the ground.
17. You know the extent of the country included within what are commonly called the boundaries of location—how many district surveyors do you think necessary to do the work of those counties? There are four at present, and I believe their districts are vastly too large.
18. Have you considered the plan which is laid down by the Commissioners, of having district surveyors, and under them surveyors and assistant surveyors? Yes.
19. The district surveyor being responsible for the effective working of the department within these districts? Yes.
20. You think the system proposed, of having district surveyors responsible for the management of the survey in their respective districts, and under them surveyors and assistant surveyors, a sound one? I think not only a sound, but a necessary system, in order to carry on the survey of the country properly.
21. Have you had any experience whatever, or opportunities of observing the working of the system of management of the waste lands of the Crown? Judging from what I have seen, I have formed my own opinion; but I have never been in an official position to report upon the matter.
22. I want to ask you whether in the longer settled portions of squatting districts the proper duties of the Crown Land Commissioner might not be performed by a properly qualified district surveyor? Yes, I am clearly of opinion that they might be, with advantage and economy.

23. Do you think a Crown Land Commissioner, to do his duty properly, should be a qualified surveyor? Yes, distinctly. W. W. Darke,
Esq.
24. Do you think, having established district surveyors—to go back to the first recommendation in the Report—that they ought to have a considerable amount of discretion with regard to the lands to be measured for sale? I think they ought to point out the lands to their subordinates that were to be measured. 21 May, 1869.
25. The applications ought either to be made to them, or referred to them for report and determination? Yes; they can judge from their knowledge of the country, and of the parties making the application, whether the applications are *bona fide*.
26. They would be responsible for the land being measured in proper quantity? Yes.
27. The district surveyor should be a responsible officer of the department, acquainted with the character of the locality and the necessities of the population? Yes, and have a general knowledge of the parties occupying the country, in order to judge when applications were worthy attention.
28. Have you known after they have applied, and the land has been put up, that it has not been sold? I have.
29. Do you think by giving the district surveyor this discretion, and referring these applications to him, that all the necessities of the public with regard to the sale would be better met than by any other system? I can see no other method at present; it is in the right direction, although it may not fully meet what is required, but it is certainly a necessary step.
30. Do you think it would be practicable, with due regard to correct measurement, to entrust persons holding licenses from Government to survey with the measurement of any portion of land applied for by any individual whatever, at the expense of that individual, or at the expense of the Government? To depend upon his discretion do you mean?
31. Yes? No, I do not.
32. *By Dr. Aldcorn*: Do you mean in neither case? I would not depend upon the licensed surveyor, unless under the orders of a superior officer.
33. *By Mr. Hay*: Regarding the second recommendation of the Commissioners—as to the character of boundaries—what is your opinion with regard to that; do you think the rectangular boundary should be generally adhered to? I think it should be in those districts where the system of section lines has been established, because detached portions can there be measured in connection with section lines already marked and recorded.
34. Do you not think the great lines of communication should be laid out first in a new country, before the land is measured for sale? I think they ought to be provided for. A general survey ought to precede the measurement of lands for sale.
35. And that ought to be under the immediate eye of a district surveyor? Yes.
36. Then that might involve a deviation from the rectangular system? I think a deviation might sometimes be made with advantage to the public.
37. Do you not think it will be necessary to adopt a certain variation, in order to adapt the allotments to the great lines of communication? I would first make the line of communication, and then lay out the allotments as nearly as desirable at right angles with the line of communication; the direction of streams giving frontage being also considered.
38. You would make the allotments to suit the line of communication, rather than the line of communication to suit the allotments? Yes, certainly.
39. In regard to the roads already existing—the lands laid out on either side of those roads, should they not be laid out more with reference to the line of the roads than to the cardinal points? Yes; that system is adopted already by the standing orders in townships. We give the boundary of the allotment with reference to the angle it forms with the street.
40. *By the Chairman*: Do you not think the system should be according to the features of the country—that the roads should be considered in laying out the lands? Yes.
41. *By Mr. Hay*: The great features of the country,—you would take them into consideration? Yes.
42. And in laying out townships would you not especially attend to the lay of the ground in which the town was to be situated? That would be the first consideration.
43. Disregarding the cardinal points? Yes; they are now disregarded in towns.
44. *By Dr. Aldcorn*: In a valley running north and south, or east and west, would you regard rather the road than the cardinal points? Yes; we already do so.
45. *By Mr. Hay*: With regard to the third recommendation, I believe you have already given your opinion? That it should be received with caution.
46. If the contract system be not abolished, at all events it ought to be admitted with great caution? Yes; I think only where expediency dictates.
47. What are the peculiar circumstances in which you would advise that contract surveyors should be employed at all? I think I have said that anything that could be entrusted to any but the surveyor himself, ought rather to be given to the draftsman or chainman under his own control.
48. These draftsmen and chainmen would be regularly paid—they would not be working under contract? Not under contract, but as paid officers probably looking for promotion.
49. So that in any case you think the contract system might be dispensed with? Yes, in such instances; but there may be cases where it would be cheaper and better to employ contract surveyors than to detach a salaried surveyor and his staff.
50. Will you be good enough to state a case where the contract system may be employed with advantage? In settled districts, where there is a limited quantity of land in demand, it would not, I think, be worth while to station a permanent officer. The work might be done by contract by a man of established name, who had the confidence of the Government and the public.
51. As a matter of economy? Yes. The work of such men whose names are well known would not require to be re-plotted, which is a thing ought never to be contemplated.

- W. W. Darke, Esq.
21 May, 1858.
52. You think it might still be advisable for Government to grant licenses to surveyors in whose capacity they had confidence, which surveyors should be entrusted by district surveyors with the measurement of isolated portions of country? Yes.
53. To that extent you approve of the licensed surveyor system? Yes. Licensed surveyors might be sent from head-quarters to the surrounding counties where it would not be worth while to detach a paid officer, or might be employed occasionally under the district surveyors.
54. *By Dr. Aldcorn*: Then the licensed surveyors, even in these cases, are to be under the direction and surveillance of the district surveyors? Yes, or the Surveyor General or Deputy Surveyor General, at head-quarters.
55. *By Mr. Hay*: In your former evidence I think you gave some opinion with regard to the employment of Royal Engineers—are you aware whether the trigonometrical survey of Great Britain and Ireland has been executed under the direction and by officers of the Royal Engineers? I have heard so; but I must say I am not aware what the results have been. It is a subject I would have rather not been questioned upon; for I would prefer to deal with facts rather than matters of opinion. I would have wished to have declined giving an answer to the question.
56. You did not feel competent to give an opinion with regard to the comparative merits of Royal Engineers and civil surveyors? No, I do not feel competent.
57. With respect especially to a scientific survey, a trigonometrical survey? I would rather not give an opinion upon that point. I have not yet perused my former evidence, but in doing so I must beg permission to reconsider the matter, for I find there is a vast difference between speaking from the impulse of the moment and from mature deliberation.
58. As to the Surveyor General, I may be allowed to ask whether you do not think it necessary that he, as head of the department, notwithstanding the appointment of district surveyors, should occasionally visit the scene of operations in the interior of the country? Yes, I think so.
59. You think it necessary that he should be not altogether resident in Sydney—that he should be able to know what the country consists of—what is to be done, and the circumstances under which it is to be done? Either himself or the Deputy Surveyor General.
60. Do you not think the Surveyor General, as the last referee, should be aware of the circumstances under which the work of his department has to be performed? Yes.
61. He should have a knowledge of the country from occasional tours of inspection? Yes, I think so.
62. So that he may know whether the district surveyors are performing their work in a satisfactory manner, in the same way that the district surveyors by their more minute supervision become aware whether the surveyors under them are performing their work properly? Yes, I do.
63. You suppose the appointment of a Deputy Surveyor General can be necessary only to give the Surveyor General the opportunity of making these tours of inspection—would there be any necessity for a Deputy Surveyor General except for this purpose? Either the Surveyor General or the Deputy Surveyor General should very frequently be in the field, but either one or other should almost always, I think, be at head quarters.
64. Do you not think the Deputy Surveyor General might be district surveyor for the metropolitan district for those counties more immediately adjoining head quarters? I think so.
65. With regard then to the other question, which is this,—whether the Surveyor General, as ultimate referee, ought not to have that knowledge of the country which can only be obtained by tours of inspection? Yes.
66. Otherwise, do you not think if this duty were entrusted to the Deputy Surveyor General, that the Deputy Surveyor General would be the *bona fide* referee where the conduct of district surveyors was called in question, for he alone could have the knowledge of the country to enable him to come to a decision—would not the Surveyor General if he had not this knowledge be too much at the mercy of the Deputy Surveyor General? The Surveyor General might, I think, with advantage to the service make occasional tours of inspection, and when at head quarters the Deputy Surveyor General, might be the metropolitan district surveyor, to direct the operations in the counties about.
67. *By the Chairman*: Are you not aware that the office was first instituted in order that the Assistant Surveyor General, or Deputy, might always be in the field among the officers? I have heard so.
68. *By Mr. Hay*: You think it absolutely necessary that they should make almost constant tours of inspection, either one or other of them? Yes, especially when there are new officers in the field, or many contractors. I ought to have added the other day, when I was asked whether I was ever visited by the Deputy Surveyor General, and I said no, that I was frequently visited by Sir Thomas Mitchell.
69. There is one question I would ask of you which your position may make it a delicate point to answer—do you consider, upon principle, that advancement in the Survey Department should depend exclusively upon seniority? I think so. Not exclusively, but great weight should be given to seniority, for if it be otherwise there will be either the existence or the supposition of favoritism.
70. But do you not think the public advantage is the great thing to be considered? I do not see how the public advantage can be advanced by favoritism.
71. That is not an answer to my question. You have spoken of the suspicion of favoritism which, you think, would arise if seniority were not considered the principal ground of advancement. I ask you whether the suspicion of favoritism is a sufficient ground for any system—whether the public advantage alone ought not to be considered? The public advantage ought to be the first consideration; but I am at a loss to know how the public advantage is to be advanced if officers are to be disgusted with the service by obvious abuse.
72. You said you thought seniority ought to be greatly considered, but my question was whether preferment ought to proceed upon seniority alone? Not upon seniority alone.

73. What other element would you take into consideration? Seniority combined with W. W. Darke, Esq.
 74. Who would be the judge of that? The Surveyor General.
 75. Upon his own responsibility? Upon his own responsibility; and I do not think any officer under the Surveyor General ought to be allowed to influence him in decisions upon that point. 21 May, 1868.
 76. Do you not think that ability to perform the duties of an advanced grade, whatever those duties may be, should also be considered in promotion to that grade, whether that ability arise from age, state of health, or whatever cause? Yes; if such advancement does not interfere with the claims of senior officers equally qualified. I think, if an officer be obviously unfit for his duties, he ought to be pensioned off.
 77. Do you consider a man whose state of health will enable him to do one duty, perhaps as a resident surveyor in a particular district, may not be incapable of doing the more severe and arduous duty of a district surveyor? Yes, I think so; but I cannot identify my idea of such an officer with a district surveyor, as already spoken of.
 78. Some men are, from the state of their health, unable to ride very much, such men could not be employed with advantage to the public as district surveyors? No. I think a district surveyor should seldom be out of his saddle.
 79. When a man became entitled to promotion, according to seniority, if, from the state of his health, or any other cause, he were not fitted for the post to which he would otherwise be promoted, would you recommend that he should be pensioned off—do you look upon it in that light? No; because the superior appointment involves less personal exposure.
 80. That is, the appointment of district surveyor? Yes.
 81. We have just supposed the case where a man, although unfitted for the duties of district surveyor, might be fitted for those of a resident surveyor? If I may be permitted to explain: The duties of a working surveyor—an ordinary surveyor—oblige him frequently to lie out at nights without proper food, a blanket, or anything else; sometimes in marshes and swamps, and in the day-time his eyes are exposed to the glare of the sun; he must, moreover, walk all day, frequently twelve or fourteen hours, (working surveyors can never ride at, to; or from their work.) The district surveyor can always manage to have his tent and his horse, which render a bushman's duty comparatively nothing, and his eyes are not so severely tried; he need not gaze upon his field-book under a vertical sun.
 82. *By Dr. Aldcorn:* But you say the district surveyor should never be out of his saddle—that would be very severe work? I meant to say seldom, and many surveyors would not think that severe.
 83. *By Mr. Hay:* Do you not think in this country, supposing we had only some half-dozen district surveyors to take in the whole range of territory, that the duties of district surveyors would be very arduous? It would require both strength and energy, together with professional ability, but certainly it will not be so trying to the sight for one thing.
 84. Do you not think to be constantly in the saddle to see what is to be done, and how it is to be done, over an extensive range of country, must be more difficult than to have duties confined to a small space, and to have comforts within reach? The subordinate cannot have his comforts about him; he has to survey rivers or ranges in some cases without having the means of taking his tent or proper provisions with him. Many times have I been out without a tent, and slept under a blanket pitched upon a delta—this I have done for years successively. The district surveyor need never be in such a position, as he may always make his arrangement to sleep under a tent at night.
 85. You must have been engaged in a very difficult part of the country? I have been.
 86. Your experience must be somewhat peculiar from that cause. Are you aware of the circumstances of a great portion of the country now being opened up beyond the boundaries—at Liverpool Plains, New England, and Murrumbidgee? I am acquainted generally with those circumstances, especially as regards New England.
 87. Your remarks as to the hardships to be encountered would hardly apply to those districts? No, for you might even drive a tandem over a great part of the country you now refer to.
 88. Your remarks apply particularly to the coast? Yes.
 89. *By Mr. Moriarty:* You have spoken of the New England District—have you noticed anything with respect to the edge of the table land? Yes.
 90. Would not that involve as serious an amount of labor and hardship as any other part? Near the edge of the table land it is very bad, but the surveyor on the coast has the hard work to the east of the range, but I do not think to the westward break of the table land there is so much difficulty.
 91. Is not the country very broken—take the Severn for instance? I have surveyed along there for, I may say, hundreds of miles on the western side of the break of the table land, but it is nothing to be compared to the jumble of precipices and ravines between there and the coast.
 92. *By Dr. Aldcorn:* Have you seen much of the license and contract system in practice—has it come under your own eye? Yes.
 93. Were there any cases in which the work was badly done, where the measurement required to re-plotted—was there a proper supervision of these contract or licensed surveyors? Yes, there was.
 94. And it was by supervision these errors were discovered? Yes.
 95. You stated just now that you think district surveyors would serve all the purposes of Crown Land Commissioners? Yes.
 96. Do you think then that it would be proper that the putting up of lands, or the recommending lauds to be put up, should be entirely in the hands of district surveyors? Subject to the approval of the Surveyor General or of the Deputy Surveyor General.
 97. Do you think, then, that the district surveyor should see all lands that are applied for by private parties? Yes, he ought to have a general knowledge of it.

W. W. Darke, 98. You are well acquainted, I presume, with the present system of marking in measuring out farms: Do you think the present system a good one, or is it effective for the purpose for which it is intended—supposing a large block of land to be measured out under the present system, do you think the mode in which it is marked by the surveyor, whether licensed surveyor or otherwise, is sufficient to enable parties purchasing to find their land? The marks of most of the surveyors are distinctly legible, but the difficulty that has arisen in people finding their own ground appears to have originated at the land offices. Upon the slips or receipts given for the deposit money paid, the numbers of the lots have not agreed with the numbers on the land; a little improvement, which could easily be suggested, would obviate all that.

Esq.
21 May, 1858.

99. But the number is not on the ground at all? In my own case it always is, and I think the surveyor ought to attach a number to each allotment.

100. You think that could be remedied if a system of marking could be adopted so as clearly to indicate to the party purchasing the land purchased? There would be no difficulty whatever about it, provided the receipts given at the land office referred to marks on the ground.

101. *By Mr. Forster*: I suppose we may take it for granted you admit there was justice in the general complaints which have existed against the efficiency of the Survey Department in general—I think it is admitted in this report—I merely put it as a preliminary question? I really hardly know how to answer that question. I am aware complaints have been made, but not always with justice.

102. You are aware complaints have existed, but you are not prepared to say they are just? Yes; in some respects just, in others unjust.

103. If I understand you rightly, you seem to think the Survey Department susceptible of great improvement in its working? Yes.

104. If I understand you rightly, you consider this system of district surveyors to be an improvement? When the Colony was divided into nineteen counties the Surveyor General and the Deputy-Surveyor General were sufficient; now that the country has extended, I think the number of deputies ought to be increased in like proportion.

105. You say a great deal of the evil complained of has arisen from the large extent of country over which the Surveyor General has in later days been called upon to exercise supervision? Yes, I do think so, in a great measure.

106. Then this improvement, which you acquiesce in the propriety of, is called for by the increasing extent of the country and the larger amount of work? Yes.

107. Do you think, under the system as it exists at present, local inspection of what was being done by officers of the Survey Department was carried out to the extent it ought to have been? As far as I was concerned it was never carried out at all, though I was frequently visited by Sir Thomas Mitchell; my duties were left to my own judgment.

108. But I imagine an officer who was conscientious and determined to do his duty would prefer to be inspected, that he might have the testimony of his superior officer to his efficiency and industry? A surveyor's work will speak for itself; he can always detect his own errors.

109. Is that quite in keeping with the tenor of some of your observations in the early part of your evidence, to the effect that reports would never give the work performed, because they could not tell the sort of country where it was done? That referred to the form of the journal, but I am now speaking of the form of field-book, and his maps. When a surveyor lays down his work he can at once tell whether there is a discrepancy; and if he did not discover it, it could, and probably would, be found out in the Survey Office.

110. I have not myself understood that there have been any great complaints made of the correctness of the work; if I have understood aright, the public have complained more of the amount of work—that there was not the work done that apparently there might have been for the expense and with the staff employed? I believe such complaints exist, and that this Committee have now met for the purpose of obviating them; but I believe many such complaints have arisen from want of knowledge of the duties, both general and in detail, that the department and the surveyors have to perform.

111. Do you think there has been any justice in the complaint that the work has not been in proportion to the amount of cost and labor expended? I do, but for this reason, that the system has not been such as would enable a surveyor to do the work he otherwise might.

112. I understand you then that the inefficiency, which you admit in some degree to have existed, arose rather from defect of system than from the incompetency of the persons employed? It is rather a difficult question.

113. I thought I understood you to say so—I thought I was putting your answer in the form of an interrogatory—that the complaints of the public arose principally from the defects of the system? Chiefly from the defects of the system. With reference to this and the preceding question, I would beg, in explanation, to observe, that I have already mentioned an instance of incompetency that came under my knowledge, and I have heard of others, as well as of neglect—in cases of some licensed surveyors, of abuse—these, with a system defective as applicable to a territory now so greatly extended with the absence of knowledge to which I have alluded, may account for many complaints. But I have known of such, both against the department as well as individual members, that have been groundless. One great defect in system has been that land matters have been in the hands of two departments instead of one.

114. In general—I do not ask you to give information as to individuals—have you known complaints to have arisen from the incompetency of persons employed or from neglect of their duty? I cannot call to mind an instance. I do not know that the instances of such that I have mentioned led to any special complaints. I have been so isolated, that years have occurred without any communication with other surveyors.

115. Do you not consider that the evils complained of will to a great extent be remedied by this system of district surveyors? Yes, if proper officers be selected.

116. Do you not consider that the chief good which will arise will be that they will carry out a system of local inspection which did not exist in former times? Yes. W. W. Darke, Esq.
117. I think I understood you to say that the promotion of officers of the department ought to depend entirely upon the Surveyor General? Yes. 21 May, 1858.
118. Then you would propose, I imagine, that the Surveyor General should found his knowledge of the competence, industry, and assiduity of the persons under him upon the reports of the district surveyors? It must come through that channel.
119. You could hardly expect, looking to the immense tract of country under the Surveyor General, he could have personal knowledge of the competency of all the officers under him? Quite impossible; but he may judge from the nature of the work performed, together with report of the district surveyor.
120. But, if I understood you rightly, whatever the amount of work done, and whatever the reports they may furnish, it is impossible to convey the idea of the relative labor of the surveyors employed without a knowledge of the country? Yes; what I said was to that effect.
121. Then local surveyors would remedy the great injustice which I understand has been inflicted upon surveyors in difficult parts of the country,—that their labors have been rated rather by the amount of work done, than by the difficulties they have had to go through in doing it? Yes.
122. In that case, I can scarcely have understood you properly; I thought you said the Surveyor General ought not to be influenced by his subordinates, but that would be impossible by the plan you now propose, as he must take the opinion of the district surveyor? That need not influence him in the direction of injustice; I meant it in a general sense, apart from his own judgment. I would not base promotion simply upon the report of any subordinate.
123. I think I understood you to say, that some of the evil existing arises from the mismanagement of the central authorities—that dissatisfaction existed among a great many surveyors from the treatment they had received? I think such a question was put to me; but my reply was, that I could only speak to my individual instance.
124. You are not aware of complaints existing against the central management? I am not in a position to know of them. I see sometimes in the papers great complaints against the department generally.
125. Speaking of the difficulties of the country, will you be kind enough to state whether you do, or do not, consider that the country in the northern districts, particularly at the head of the Macleay and Clarence Rivers, is most difficult? It is.
126. You have been over a great deal of country, I believe? I have.
127. Surveying in Port Phillip would be a great deal easier than in New South Wales? Very much; in Port Phillip I have for days and weeks averaged fourteen miles a day.
128. Surveying in the interior is more easy than on the coast? Yes. On the Macleay I have found it difficult sometimes to do forty chains; in Port Philip I have done as much as twenty-three miles a day.
129. In the country to which I have referred, the obstructions consist partly of precipices, partly of vines, and bushes? Tangled vines and thick bushes.
130. Torrents and rivers? Yes. I have had in winter time to wade through the deep and rapid Clarence fourteen times in one day's work, lie down at night without a tent, and recross it, waist high, the same number of times the following day.
131. You are acquainted with the marks left by the former surveyors on the Clarence? I am.
132. Can you give an opinion as to how the work on both sides the river has been performed? Yes; I can speak positively as to the work performed by Mr. Burrowes, because I could find his marks on the ground; with regard to Mr. Wilson's work——
133. Which Mr. Wilson? There were two brothers of that name in partnership—I am speaking of Mr. Charles Wilson: I have seen his field-book, and he went over the ground section line by section line, but he did not mark his lines sufficiently on the ground; he went over the ground, but he did not use the axe sufficiently; he did not mark distinctly.
134. His principal fault was, that he did not mark the lines on the spot? Yes. I know of no other fault.
135. I suppose the marks are nearly obliterated? I could not find them.
136. You have reason to believe that otherwise the work was well performed? Yes, faithfully.
137. *By the Chairman*: Do you think the section lines were marked at all? Yes, I think so.
138. Could you find that the bends of the river were accurate? Yes. I found Mr. Wilson's work to be correct in that respect; there was a discrepancy between it and work done subsequently by another surveyor, which I think arose from the latter not having connected properly.
139. *By Mr. Forster*: Mr. Wilson was a contract surveyor, purely? Yes.
140. Can you state the difference—for I do not quite understand it—between a contract surveyor and a licensed surveyor? I look upon a licensed surveyor merely as a surveyor holding a certificate of competency.
141. He is paid by the Government, by what we should call in other employment piece or job work? Yes.
142. A contract surveyor enters into an agreement with the Government by tender? I will give an instance that will elucidate the matter. There are two gentlemen in Sydney who are what are termed licensed surveyors; they take a job at Long Bay, towards Botany, and do that by contract; they are both licensed surveyors, and I think any person before taking a contract ought to have a license.
143. Can you say anything of the work done by Mr. Burrowes? His work appeared to be faithfully done; it is on the north bank of the Clarence.
144. Do you mean us to infer that the work on the south bank of the Clarence is useless to the country? No; it fills up a very important part of the map.
145. It is not altogether lost? No.

- W. W. Darko, Esq. 146. Would you say the survey is worth more than it has cost? • The land was never worth £1 an acre.
- 21 May, 1858. 147. *By the Chairman*: The survey is useful as connecting it with other surveys? No; it was isolated at the time I had to connect between there and Darling Downs, which I did by running up the Clarence River. I also connected it with the Richmond and the New England surveys, at Ben Lomond.
148. *By Mr. Forster*: Are not large quantities of agricultural land being sold on the Clarence? Yes, I believe so, since I left.
149. You do not think the land selected at that time was the land which should have been selected for agricultural purposes? No.
150. There is a large quantity of fine agricultural land on the Clarence? Yes.
151. Principally brush land? Yes.
152. The flats outside the brush are generally good? I cannot speak as to that.
153. Do you not recollect a flat called Phillips' Flat, at the back of Grafton—is not that tolerable land? There are flats there, not very extensive, but subject to inundation.
154. *By Mr. Moriarty*: Very unhealthy, are they not? Yes.
155. *By Mr. Forster*: Did you ever hear of fever and ague there? It is an unhealthy place.
156. Have you any reason to believe that the officers employed by the Survey Department in general, so far as you are acquainted with them, are adequately remunerated for the services performed by them—do you think the salaries given are equal to the duties performed? No; nor in proportion to the salaries of officers in other departments—speaking, of course, of our officers in the field.
157. Is there any difficulty in obtaining competent officers when they are required? I think there is.
158. In allusion to the system of re-plotting, I wish you to explain whether the re-plotting involves the same expense as the survey in the first instance? Not the same, but a very great expense.
159. From experience, have you any knowledge of the system adopted of employing very young men and instructing them in the work of a surveyor? I have.
160. Have you, as a general measure, found the results beneficial? The only way in which it has resulted in any good to me has been that I have been enabled to depend upon them as chainmen.
161. They are better chainmen than common laborers? Yes.
162. I presume if it were possible to instruct them in the knowledge of surveying, they would not remain in Government service unless they were employed at a rate equal to their value? Such gentlemen would be very glad to come to be taught the practice of surveying, I should think; but I do not see why any surveyor should take pupils unless he were paid for it. The young men whom I have had with me I have taken from personal motives, as parties I wished to put in the way of doing something.
163. Should you always find it easy to get men to enter your service in that way, or did you ever find it easy? It is very easy, but it is objectionable, because they are a great incumbrance.
164. With regard to the discretion left to the surveyors generally, both licensed and staff, as to the expediency of selling land in a particular place when an application is made, and to determine whether the applications are *bona fide*,—do you not think to leave large matters of this kind in their hands would be to entrust them with a dangerous power? I think in any matter of magnitude it should be the duty of the surveyor to refer to the officer at head quarters, and act under advice.
165. You would not leave such a discretion with the district surveyors? Not without reference to head quarters.
166. If the decision of a question of such a kind were left to head quarters upon the report of the district surveyor, would not the person at head quarters be almost guided by the report—would not the report be taken as conclusive in most cases? I think not. Upon matters of extreme importance I think the sense of the Bench of Magistrates ought to be consulted.
167. You would suggest a local reference to the Bench of Magistrates? In cases where parties felt themselves aggrieved, I think they ought to have some other means than those at present open to them; and in general matters of magnitude, and great responsibility, the surveyor in charge might with advantage confer with the gentlemen of the Bench.
168. Have you heard complaints of favoritism in cutting off portions of country occupied under pre-emptive rights, or proclaiming reserves upon a man's run by particular surveyors? I have.
169. Have you any reason to believe, as a general thing, that there was any justice in these complaints? Not in those I am aware of—no justice whatever.
170. Are you disposed to admit that under the circumstances I have described, that is, supposing a surveyor to make a report to head quarters, and the person at head quarters to be generally guided by that report, the surveyor on the spot would have an immense power of exercising favoritism if he chose? Yes, under the best system; but they would also be subject to public observation, and the comments of their own subordinates.
171. You think the Bench of Magistrates would act as a local check on the district surveyor? Yes.
172. The officer at head quarters would not act upon caprice, but upon some public principle? Yes.
173. You would permit any person to select land where he liked? Yes.
174. *By Mr. Piddington*: You stated that you had been twenty-four years in the Survey Department of this Colony? Nearly twenty-four years.
175. I think you said also that you are now classed as an assistant surveyor? Yes.
176. Are you aware whether there are any surveyors in a superior rank who have served a shorter term than yourself? Yes.

177. What difference is there in the pay of a staff and of a district surveyor? My pay is now £423, and a district surveyor receives £500 a year, with travelling expenses. W. W. Darke,
Esq.
178. If, in the promotion of a surveyor from one grade to a superior rank, little or no regard be paid to seniority, are you not of opinion that such disregard of the claim of such old and valuable officers to promotion is likely to create discontent among the best class of surveyors? Yes. 21 May, 1858.
179. Are you not also of opinion that an habitual disregard of the claims of seniority to promotion would beget discontent among any class of public servants? Yes.
180. You have stated that in your opinion, as I understand you, the office of Deputy Surveyor General should be filled by some person who would undertake to supervise the work of surveyors in the field? Occasionally.
181. Are you of opinion that such an officer could accomplish the duty occasionally? Yes, occasionally.
182. Is there anything in the training of an officer of the Royal Engineers that will specially qualify him to perform the duty of a surveyor in a new country? I cannot tell. I do not know the course of studies they pursue; but surveyors who have been sent out from home have been sent to me for instruction. I have had them in my tent.
183. Were any of these connected with the Royal Engineers? One gentleman was brought up at Sandhurst; whether he were a cadet or not I do not know.
184. Were these gentlemen connected with the corps of Royal Engineers? No; they were not.
185. Can you say whether an officer of the Royal Engineers is practically qualified to superintend the construction of common roads in a new country? My belief is, that he is, or ought to be, perfectly qualified to make a road; whether qualified to survey and determine a line for a road in a very difficult country I cannot say. The line must be first surveyed and marked.
186. Have you any opinion whether a well qualified surveyor is as well qualified to superintend the making of a road in a new country as, or whether his is better qualified than an officer of the Royal Engineers? I think the ground must first be surveyed by colonial surveyors, and then the engineer may go upon it and make it. The line must first be determined and marked.
187. My question was not as to the making of a road, but I wished to have your opinion upon the question whether a qualified surveyor is better or less qualified than an officer of the Royal Engineers to superintend the roads of a new country? I should say the road surveyor would be the better.
188. What individual officer of the Survey Department selects lands for sale? Each surveyor in his own district. I was instructed to select such land as appeared to the best of my judgment to be in demand, and I was guided by the applications on the spot, or by the obvious quality of the land.
189. Are you of opinion that surveyors of any description, whether licensed or staff, as a matter of policy should, without discrimination, be entrusted with such authority? Not without discrimination. I believe I have already suggested the circumstances under which such may be done, both as to the grade of the officer, the limitation of his sole judgment in cases of magnitude, as well as to the nature of the check upon him in the event of abuse.
190. *By Mr. Mortley:* You have had opportunities of observing the recent arrangements for the division of the territory—defining the spheres of operations of the different district surveyors? Yes.
191. Do you remember what are the limits of the district to the north of the Hunter? I do not know the precise limits.
192. I think I understood you to say that a great advantage would be gained by the appointment of district surveyors, as they would supervise the work of their subordinate officers? I think, with a view to future arrangements, the districts are too large.
193. Do you think an officer can supervise the country from Warwick to the Hunter, including the coast country, with any advantage to the service? I do not.
194. In your general remarks, then, you assume that the district surveyors shall have districts of a sufficiently limited extent to enable them to act with energy and promptitude? The districts should be limited to an extent within which a person could exercise surveillance.
195. Supposing the district surveyor to have charge and general direction of the lands for sale—the charge of Crown lands generally—do you not imagine that some central residence should be necessary where he would be accessible to the public? There should be a central office, but the district surveyor need not be always there. During his absence he may be represented by a clerk or draftsman, who may receive reports, give information, and show maps of the land for sale.
196. The district surveyor should be there so constantly as to enable the public to have communication with him? When not engaged in supervising his subordinates in the field, he should be there.
197. He should be accessible to the public? Yes.
198. As to the complaints made with respect to the selection of lands for sale and making reserves on squatting stations, is not the duty such as to lay the officer open to complaint? It is an invidious and disagreeable duty.
199. In speaking of the promotion of officers resting entirely in the central authority, you assume, I suppose, that the central authority should be thoroughly competent to judge of the merits of the officer—he should be the moving authority of the whole system? Undoubtedly.
200. Do you happen to know the nature of the control exercised by the district surveyor over the subordinates under the present system? No, I have no knowledge on the subject.
201. I think I understood you, in answer to a question by Mr. Forster, to say that the subordinate officers have, if they have the disposition to use, or rather to abuse it, the power of injuring individuals seriously by making improper reserves, or improperly controlling purchases? I think there is that power; if, as you say, an officer could so abuse his power, the

W. W. Darko, Esq., the discretion is sufficiently left open. I allude of course to *present*, not prospective arrangements.

21 May, 1858. 202. If the discretion were transferred from the subordinate to the district surveyor, would not he have the same power of committing abuses? I think not, for there would be a sort of mutual supervision. The district surveyor would not act singly in the matter; his proceedings would be open to his subordinates.

203. As to checking—if I may use the expression—the views of the district surveyor upon a general question of local interest, you suggest the reference to the Bench of Magistrates? I threw it out as a general idea, not by any means intending that he should be put under the control of the Bench.

204. Do you think Benches generally would be willing to undertake such a responsibility in reference to executive matters? I have known interference to have been exercised without authority. But I have found nothing but courtesy, when I have sought opinions or suggestions from Benches.

205. Do you think such interference would be conducive to the public interest? The interference should be confined to particular subjects specially referred to them—in fact, it ought not to be *interference*; the views, wishes, and opinions of the Bench ought to be consulted in many cases—among others in those of difficulty or unusual responsibility.

206. As a general rule, you think their interference would be rather objectionable? Yes, *interference* would. The Surveyor General is a sufficient master. You cannot have two heads to a department.

207. Speaking of home appointments, you have mentioned one or two instances that have come within your knowledge of home appointments being unwise—how many such cases have come under your own observation? I can speak only of one pointedly; in that case the gentleman told me himself,—he made a laughing matter of it—he treated it as a good joke.

208. As to the skill, education, and proficiency of officers instructed at home, you will not give an opinion? I spoke of one person only.

209. Your particular observation is confined to one case? Yes, as being utterly incompetent. Some who have come out have been competent, educated gentlemen, others have had to be taught.

210. Will you mention some of the peculiar difficulties which have suggested themselves to you, under which surveyors educated at home would labor in setting to work? They are decidedly at a loss, those I have seen.

211. What are the difficulties peculiar to this country? I cannot tell how it is, but I can only speak as to the fact that gentlemen sent from home have been sent to me and have been inmates of my tent to be taught their duty.

212. That is to say, one gentleman was sent to you? Two, I have had, and I have declined others.

213. Is it not the fact that some considerable discrepancy was discovered in the neighbourhood of Grafton? Yes.

214. Did not the rights of individuals suffer? It was discovered in time to prevent that; at the time the discrepancy was discovered the lands were unsold.

215. Would not that have been the consequence if the lands had been sold before the discovery of the error? Then the measurement in detail of the lands would have set the error right.

216. *By the Chairman*: I see the late Surveyor General, in his evidence before the Commissioners, stated that a hundred thousand acres of land were available but not purchased—what do you think was the reason that land has not been purchased? In what part of the country is the land situated?

217. He does not say, but he states generally that a hundred thousand acres are open for selection? I can speak only of the districts in which I have been. A great portion of the land has not been sold because it is not marketable; it is not worth £1 an acre.

218. Do you not think it a dangerous authority to give licensed surveyors to measure what lands they like, and to allow them to be paid on the present scale? I have already said I would upon no account trust such power in the hands of such officers.

219. You are in favor of an organized system—you think it much better to carry out the public service in that way than on any other system, however specious it may appear? I think there should be regularly paid officers, though, as a matter of expediency, licensed surveyors might sometimes be employed.

220. You are aware that the Deputy Surveyor General, some time in 1840, reported to the Government that the whole squatting country could be surveyed, and leases be supplied for them, in one year? I am not aware of that. I was at Port Phillip at that time.

221. Did you never get any official letter to that effect, stating such a promise had been made? There was a promise in 1847; but to the best of my judgment it had not that tendency. There were fifteen or sixteen new counties to be proclaimed, and the Deputy Surveyor General placed the Department under a pledge that they should be surveyed and proclaimed by the end of 1848. This promise did not refer to the issue of leases, nor the determination of reserves.

222. If such a promise had been made by the Deputy Surveyor General, do you think it could possibly have been carried out with the force under his control? I carried out my share.

223. Within the year? In the year 1848.

224. In such a way that the leases of all the squatting runs could be supplied? No; the survey for leases was an after affair: it was the proclamation of the counties that was the pledge to the Government.

225. I see by the Surveyor General's evidence that there were twenty-nine surveyors in the service at the date of the Report of the Commissioners; how many of these surveyors do you think were generally employed in the out-works of the country? I cannot tell—I was so secluded in the country; but I was one of them.

226. You have been long enough in the service to know that there were great differences in the positions assigned to the officers? Yes.
227. I have asked this question before, but I would wish to have the answer distinct—are you aware that promises have been made by superior officers to the surveyors, which Government have never carried out? A distinct promise was made to me, with others, direct from Government. The Surveyor General recommended that six of us, on undertaking a certain duty, should be promoted, and the reply was to this effect—"No; let the gentlemen perform what the department is pressed to do by the end of the year, and then they shall have promotion." That promise was never carried out in my case.
228. Did you find during your long service as a field surveyor, that you had no one to apply to in any case of difficulty—no one that seemed to understand your position? I always found that I could apply to the Surveyor General.
229. But he was not always here? He was not always here.
230. I think he was away for four or five years, at different periods? He was a long time away.
231. You have been employed as an examiner of candidates for office? I am one of the Board of Examiners. I have been appointed since I have been in Sydney.
232. Can you name any other officers who have been examiners? My predecessor, Mr. Burrowes, was one; the other members of the Board are Mr. Thompson, Deputy Surveyor General, and Mr. Maclean.
233. Are you aware that the two latter gentlemen have never been in the field at all? I am aware of that in reference to Mr. Maclean; Mr. Thompson, I believe, has been out.
234. Have you not sometimes known Boards of examiners for examining officers to be appointed that knew nothing of the service whatever? Such a case never came under my knowledge.
235. Three military men, for instance, have occasionally been employed to examine officers for the service—are you aware of that? No.
236. Are you aware that some of the officers of the department have been wholly instructed in the profession in the department, and that they have been paid while they have been learning their profession? I think some of them have acquired their knowledge of the profession chiefly in the service.
237. Have you an idea that there have been general complaints among the field officers against the system of management of the service? Yes.
238. You say you have been some twenty-four years in the service? Yes.
239. Do you know that some of those who have been appointed district surveyors have not been three years in the service? I cannot speak to their length of service.
240. They have never been employed on any general survey of the country? I believe such instances exist, or rather such an instance exists.
241. You spoke just now of lining the roads—do you not think the man who marks a line should superintend the making of a road? Highly desirable, if such an arrangement could be carried out.
242. You have handed me letter, dated 10th February, 1856, in which you make some suggestions as to the necessary qualifications of an officer of the service—would you wish that to be placed on record? Yes. It was asked of me, in a sort of half official manner, by the Chief Clerk at the Survey Office. He said he had applied to others, but could not get the information he required. (*The letter was read. Vide Appendix A*)
243. Will you be good enough to state what you consider the maximum and minimum price of making a survey, per acre, in the most difficult country? I find it impossible to answer this. Statistics must be gone deeply into;—an endless variety of circumstances considered—the nature and extent of the survey—difficulties and facilities of all kinds,—together with the expertness or otherwise of the surveyor.
244. Will you supply with your evidence your form of field-book which you suggest for general use? Yes.
245. Have you any further suggestions to offer to the Committee that may be useful in this inquiry? I have but little to add; but would suggest, with a view to economy and speedy performance, the expediency of having two officers at each camp,—a senior, with an assistant or draftsman, capable of assisting, or an articled pupil. Thus, with one party of men, either one or the other can be each day in the field. The senior can first survey the features, rivers, &c., and determine roads; then the form of field-book I propose will enable him at once to determine a design for portions or allotments, which the junior can mark off while the surveyor is plotting and completing his plans for transmission. Thus the expense of a party of men, being more than half their time idle, may be avoided. The surveyor must, in justice to himself, and in proper performance of duty, plot his own work, as I have found that the same precise result cannot arise, or at least very seldom arises, from two plottings. Therefore the surveyor may accuse the draftsman of office errors, and *vice versa*. This bears upon the question of employing licensed surveyors extensively. Their work must be re-plotted, and sometimes verified on the ground—the former process being objectionable, for the reasons I offer above,—in addition to which, with the latter, it would involve a vast unnecessary expense.

APPENDIX A.

COPY of a Letter addressed to Mr. Halloran, Survey Department.

Sydney, 10 February, 1856.

Sir,

I have been, as you may be aware, referred to for certificates of competency respecting parties desirous of being appointed Licensed Surveyors; and as it is supposed to have been officially suggested to the Government that pupils may, with advantage to the public service, be instructed by the officers of the Survey Department, I would observe, in explanation of

W. W. Darke, Esq., my remarks to you yesterday on the subject, that the qualification of such persons as field surveyors appears to me to be necessary, are:—

21 May, 1858.

1st. As Draftsman—which, in addition to sufficient proficiency in mathematics, penmanship, and well practised skill in the delineation of ground, with the ready use of instruments necessary in doing so, must include the difficult process of mounting paper both in single and many conjoined sheets, which, in order to ensure any accuracy in the work to be laid down on such, can only be done in a manner attainable by considerable practice.

2nd. As Surveyor—in which a very material point is the form and manner of keeping a field-book. The old methods may do for the old countries, and even for the open districts of the Colonies, but cannot be applied in the brushy and forest or mountain tracts, without constant embarrassment and error. The form I have found necessary, and which was adopted from me by Mr. Townsend and others, is shewn by the copy of two pages of my field-book transmitted to the Deputy Surveyor General, by my letter of the 17th May, 1848, by which it will be seen that this work is protracted (in an approximate manner), and the features sketched in the field. This occupies one page; the traverse in bearing distances, notes, &c., the other. This method not only very much assists in the final plotting of the work, but in most cases enables any error to be at once detected,—the traverse on the one page laid down checking the figures shewn on the other; and the work can be rapidly included on a reduced general field sketch, necessary for conveying at one immediate view what has already been done, and determining, from time to time, the direction and extent of features to be next surveyed.

The adjustment of instruments is a point to which too much attention cannot be directed; the magnitude of errors that may arise from the neglect of this in regard to sextants, theodolite, and levels, can only be equalled in importance by those that arise from the incautious use of the circumferenter,—not always in consequence of unobserved local variation, but from these instruments frequently differing from each other as much as 2°. Of two of mine lately in use, one was + 1°, the other — 1°; total difference, 2°. The surveyor must, therefore, be able to ascertain, from the mean of careful observations, the geographical variation of his needle, which, with its instrumental error, may be considered for the time as constant throughout his district; but the variation arising from volcanic and other local causes, must be also ascertained and corrected; and thus a considerable knowledge of geology is necessary to recognize localities in which such is invariably encountered.

As a system, the pupil should be taught in laying down his surveys that angles ought not to be projected by any means from lines in various parts of the sheet, excepting, if necessary, in unimportant detail, as it is better to project a whole circle of angles from one meridional line, each tenth angle being marked around from broad arrow 10°, 20°, to 350°, from which all angles are to be protracted.

In the field it will generally be necessary in thick forests, mountain ranges and brush, to produce each traverse line to as great a length as it may be found serviceable, which should, if possible, not be less than 5 chains, and the bearings should be determined also in degrees only, except in intersecting a remote point.

3rd. Besides a mature judgment in selecting, and skill in determining his trigonometrical stations, the officer must be thoroughly competent and expert in observations for the latitude and longitude; the former readily by means of the theodolite, the latter by observation of Jupiter's satellites, or other astronomical process; also in taking elevations by Colonel Sykes' method, or otherwise. He must acquire practically tact and energy in managing and providing for his men, and for the transport of his supplies and appliances under troublesome or difficult circumstances.

I think these, with the perspicuity of style indispensable in making official communications, are necessary points of qualification for an officer of the Survey Department.

I remain, &c.,

H. Halloran, Esq.,
&c., &c., &c.

WM. WEDGE DARKE.

WEDNESDAY, 26 MAY, 1858.

Present:—

MR. ALDCORN,
MR. FORSTER,

MR. MORIARTY,
MR. WHITE.

G. B. WHITE, Esq., IN THE CHAIR.

John Thompson, Esq., called in and examined:—

J. Thompson,
Esq.,
26 May, 1858.

1. *By the Chairman:* You are Deputy Surveyor General of the Colony? Yes.
2. How long have you held that position? Upwards of four years; but, previously, I had been appointed Acting Deputy Surveyor General, viz., on the 8th February, 1853.
3. When did you join the service? I was appointed in this month, thirty-one years ago.
4. In 1827? Yes, in May 1827.
5. That was when you received your appointment in England? That is the date of my appointment.
6. What was your original appointment—that of Assistant Surveyor? Yes; with the recommendation that I should be employed in the office.
7. Have you that recommendation? Yes; there was that recommendation. I was made assistant surveyor in order that I might get a better salary.
8. The salaries of assistant surveyors when you arrived here were all the same—every officer had the same salary? Yes; £200 a year, with an allowance of £100 for forage and lodging.
- 9.

9. There were no grades in the service then—every officer held the same position? I think J. Thompson, Esq. there was a scale determined by the Secretary of State about that time.
10. That was after your appointment—in 1828 I think? Perhaps so.
11. Have you a copy of the Secretary of State's despatch arranging the service? I can procure a copy. (*Vide Appendix A*) 26 May, 1858.
12. Do you recollect Mr. Oxley's death? Yes.
13. It occurred some time in May, 1828, I think? That I cannot remember.
14. Do you recollect that in the *Government Gazette* about that time—the same Gazette, or two or three Gazettes dated immediately after that—there was a Government Notice appointing Mr. Hoddle Deputy Surveyor General? I do not remember any particulars, further than that Mr. Hoddle was made Deputy Surveyor General.
15. Have you any knowledge of the reason why Mr. Hoddle's appointment was set aside? I have not. I apprehend it was in consequence of the appointment of Captain Perry in England; but I cannot trust my memory.
16. Do you recollect that at the time Major Mitchell wished to appoint some other officer to that position? No, I do not.
17. And that in consequence of that wish the Government took upon themselves to make that an office of patronage rather than place the officers according to the Secretary of State's promise to them? I do not remember how it was Mr. Hoddle was removed; I cannot call it to mind at all.
18. I believe you never served in the field, did you. When you first arrived I think you went into the bush? Yes; I was preparing to go into the bush, but Sir Thomas, then Major Mitchell, requested me to remain in the office.
19. And from that time you kept the position of Principal Draftsman, and had charge of all the young officers in the service? Only of the draftsmen.
20. Just after that period I believe many draftsmen were sent for from home, or some arrived from home? I do not remember any draftsmen specially arriving. Surveyors frequently arrived.
21. Mr. Ed. Hallen, I believe, came out as a draftsman? I do not think he came out to any Government appointment at all.
22. And Mr. Larmer? I remember now Mr. Larmer was in the office as a draftsman.
23. Many of these young men who arrived at that time knew very little of their duties, and had to be taught for a period? Yes, a good many of them. Mr. Larmer, however, was a regularly educated surveyor.
24. Many of the men who came out at that time as assistant surveyors had not been regularly educated surveyors—do you know that? I cannot trust my memory to that. I know they all wanted a good deal of training.
25. Is it not your opinion that, however able a man may be as a surveyor at home, he requires to obtain considerable experience in the survey of this country before you can trust him to carry on the duties of a general or large survey? No doubt of that.
26. For many years you held the position of Principal Draftsman, and the drawing and geographical portion of the duties of the Survey Department were under your control? Yes.
27. During the time you held the office of Principal Draftsman I think you also held another, that of Secretary to the Court of Claims? Yes.
28. The principal part of the department was controlled by you most of the time? Only as far as the draftsmen were concerned; I seldom interfered with the clerical business.
29. Were you not often called upon to give an opinion upon the work of different officers of the service? Sir Thomas Mitchell sometimes consulted with me on these points, and used to give me instructions as to what he required to be done.
30. You are aware Sir Thomas Mitchell was frequently away? Then Captain Perry had the management of the business. I acted only for a short time, while Captain Perry was away at the Clarence River.
31. You remarked just now that it requires some time even for a practised surveyor to understand the duties of the service as it is carried on in this Colony—do you think Captain Perry, when he came out here as Military Surveyor, had any knowledge of the duties he was to supervise? Yes; I should say that his having belonged to the Staff Corps fitted him for his position of Deputy Surveyor General.
32. You know how the Staff Corps was formed, do you not? No, I do not.
33. It was formed generally from officers of the line, who were employed in sketching, and sketching is not surveying? No.
34. Do you not believe there is a great difference between civil and military engineering? Of course there is.
35. And the principal works that have been carried on in England, with regard to the development and opening of the resources of that country, are, or have been, originated and carried out by civil engineers? Yes.
36. And they are carried out by them at the present moment—such as public works, light-houses, railways, breakwaters, and harbours—in fact the detailed survey of the country altogether. I am not alluding to triangulation at all, but to the general survey, such as the division of the counties and parishes of England for the Tithe Commutation? Yes; all that has been done by civilians—all the railway surveys too, I believe.
37. Are you at all aware, that even so late as the Crimean war it was necessary to send out a civil engineer and contractor to make the road from Balaclava to the camp, a distance of six miles? Yes.
38. You may not exactly remember the arrangements made by the Secretary of State in November, 1828, as to the different grades of the service? I think there were to be the Surveyor General, Deputy Surveyor General, surveyors, assistant surveyors, draftsmen—
39. And clerks: the despatch even makes arrangements for the junior branch of the service—do you not consider the arrangement of the Secretary of State a proper one for the officers of the surveying staff? Yes; it was a good arrangement for that time.

- J. Thompson, Esq. 40. Was faith kept with the officers with regard to that arrangement? I am not prepared to say. I remember four surveyors were appointed in pursuance of it.
- 26 May, 1858. 41. *By Mr. Moriarty*: I take it, the main function of the Survey Department is professional? Yes.
42. It is a professional department? Yes.
43. Then none but professional men can understand its theory and working, I presume? Certainly not.
44. A non-professional man cannot be competent to direct its proceedings? When you come to that point, perhaps I may differ with you a little; I consider a good administrative officer is required to act as Surveyor General.
45. Does it not often require a professional officer? He should be professional, certainly; a man who knew nothing about surveying could not carry it on.
46. *By the Chairman*: Do you not think there has been a very unnecessary interference with some of the officers of the service by the grades subordinate to them? I do not exactly take your meaning.
47. They have been occasionally unnecessarily annoyed, and people have written to them upon the duties they were entrusted to perform, and found fault with them upon points they knew nothing about, such as forage, and those matters on which a surveyor's efficiency depends? The Surveyor General signs all letters.
48. Does not the Surveyor General often sign letters that he does not read? A Surveyor General ought not to do so; I know I never did.
49. Do you recollect what was the strength of the clerical branch when you first joined the service? No; I should think there were some dozen clerks.
50. I suppose returns of all the officers that have been in the office since you have been there can be furnished by your office? Yes, undoubtedly; the names of the officers are on record.
51. I shall be glad to have a return of that kind appended to your evidence, shewing the names of all officers employed in the professional branch of the service, from the time of Mr. Oxley's death, the dates of their appointment, their promotion, grades, and so on? I will see that such a return is prepared. (*Vide Appendix B*)
52. In answer to question 214, in your evidence before the Commissioners, appointed to inquire into the Survey Department, which is as follows:—"Whom do you consider responsible that these plans shall be properly examined, as far as the case admits"? You say—"Mr. Maclean examines the plans, and gives them out to other gentlemen to calculate the areas, &c." Do you not consider that the person who examines the plans of a surveyor should be a surveyor himself? I consider Mr. Maclean a surveyor; it is true he has had no practice in the field, but he is clever, and thoroughly acquainted with the whole business.
53. I am aware he is clever, but I do not think a theorist competent to report upon the plan of a practical man. I may understand working in iron, and know how to make a horse's shoe, and how to put it on his foot, but unless I have had practical acquaintance with the business, I may prick my fingers and burn them into the bargain? It has always been the practice of the office to employ draftsmen in the duty of examination. Of course the examination now devolves upon other officers, Mr. Maclean having been made Principal Draftsman. I think you will find, if you look to Mr. Maclean's evidence, that he stated at the time that he handed over some of the plans to the subordinate draftsmen.
54. And he has the arrangement then of all the plans of the different officers of the service; he maps them—charting is the word used here, which is an improper term? The word *charting* has been always used; and the application of that term to our maps arose from the fact of our early Governors being nautical men; it is however, erroneously applied. Mr. Maclean does not himself chart, or rather map; there are four draftsmen employed on that branch of the business.
55. When you get these maps you receive no copies of the field notes? We do not.
56. And there is no arrangement whatever in the department of the present day as to the system of keeping field-books? There is not.
57. In answer to question 223, which is as follows:—"You depend in a great measure upon the honesty and skill of the surveyor?" You say—"Yes; there is no means, unless you send another surveyor to go over the work in the field, which is never done, at least private individuals never do it. They trust to the professional skill and reputation of the person employed; and we do the same." May I ask on whom does that judgment devolve? I do not exactly see the gist of your question.
58. The question is this: if a man is to question a professional man as to his duty, he should understand it himself—that is the tendency of the question I am putting now? I think, further on, you will find I state that in the office we soon become acquainted with the nature of the work of a surveyor—whether we can trust to it or not.
59. You cannot, from office knowledge, tell what sort of country he is surveying, for I have been much harder worked in doing one mile a day sometimes than I have been in doing ten miles at other times? That evidence of mine has reference more to marking out lands for sale than to the general surveys.
60. The staff surveyors send in their field-books? Yes.
61. The licensed surveyors do not? No arrangement has been made yet.
62. Do you not think they ought to do so? Yes; and it is intended to make some arrangement for their deposit in the office.
63. I believe those that have been sent in have been of very little use, for they have all been kept in a different style—every surveyor having been allowed to keep his own in his own way? There is no rule laid down as to the manner of keeping field-books. All surveyors in England keep their field-books in the same manner.
64. Do you think it would be an advantage in a public department if every surveyor were obliged to keep his field-book in a certain form, so that any officer in the department might plot

plot his work if it was thought proper? Yes, it might be; but we never find much difficulty in plotting from any field-book, however obscure. J. Thompson, Esq.

65. It would be a check upon the field work? Most surveyors keep their field-books in the same way. 26 May, 1858.

66. The field-books are never examined? No, for to examine them properly would be to plot the whole work over again; they are, however, referred to, whenever the necessity for so doing arises.

67. The private surveyors of the Colony, I believe, have access to these field-books whenever they choose to examine them? Yes, with the permission of the Surveyor General or other responsible officer of the department.

68. The surveyors are required to send in a monthly report as to the nature of the work performed by them? Yes.

69. Do you consider that the monthly return, in its present form—if it has not been altered since my time—is of any use whatever? It is altered now.

70. I am speaking of the monthly return up to the period of Sir Thomas Mitchell's last return to the Colony—that has been altered you say? It has.

71. That, as a criterion of the work done, was useless? No, I cannot say that.

72. Was it not the cause of great dissatisfaction to the officers of the service? I believe it was, to many of them.

73. Some officers were placed in districts where they could do ten or fifteen miles a day, and others where they could do only one, and yet their work was judged according to this form of return? I cannot say that. I do not think the Surveyor General could be so ignorant of the country as to form an opinion in that way.

74. The Surveyor General had very little knowledge of the country, except triangulating points—he knew very little of the brushes of our rivers, for he had very little to do with them in my time? The surveyors were required, in the column for remarks, to afford explanation of any apparent deficiency in the amount of work.

75. You state in your evidence before referred to—"We have maps here to show the licensed surveyors their districts"—Their maps are generally made, I believe, by the salaried surveyors? The salaried surveyors provided the data from which the general maps were compiled.

76. You say—"We have maps to show the licensed surveyors' districts, and these are modified occasionally"? Yes. The ground-work of these maps was, of course, the work of the staff surveyors, but the maps you allude to are merely mounted tracings.

77. You are in favour of the license system being continued? Yes.

78. Will you be kind enough to give a reason for being favorable to that system? It is stated in my evidence:—"On what ground do you prefer the licensed surveyors? There are so many difficulties at present in the way of a surveyor's progress, that his proceedings under salary can scarcely be satisfactory; he may be without labor, without provisions; his horses may be astray; he may be stopped by floods, still his pay must go on; he may be disabled by sickness, still the wages of his laborers must be paid and his horses fed; whereas the licensed surveyor is only paid for the work he actually performs, and the expense is much less. When convicts were the laborers, and bullocks were fed on the natural grasses, the surveyor's salary was not of so much moment." I may add, that however large the number of licensed surveyors might be, it would not involve increase of expenditure without corresponding benefit. The expense would be regulated entirely by the quantity of land required to be brought into the market; in fact it would be a self-regulating arrangement, whereas, under the salaried system, the expense is the same, be the demand for the purchase of land what it may. There is no *elasticity* in the salaried system; when there is a great demand for land you cannot add to your staff, because, if the demand were to cease, you would have a difficulty in reducing the staff, whereas by having a contract surveyor resident in every local land office district, always ready to do what you want, you avoid all salaries, equipment expenses, and embarrassments, and if there is *no work to do* there is *nothing to pay*; whereas the salaries, wages, equipments, &c., &c., must always be provided and kept up, whether land is wanted for sale or not. The only salaried officers should be inspectors; you would then have licensed or contract surveyors under them, paid only for *what they survey*, and sellers of land at the local offices paid only for *what they sell*.

79. Are you not aware that many of these works said to have been performed by licensed surveyors have never been done at all? No; I am not aware of that. Something of the kind has been talked of lately, but I am not cognizant of the particulars.

80. It is quite possible? It would require a great deal of skill to deceive the office.

81. Supposing a man gets a section of ground properly surveyed by some officer before him, and he is ordered to lay it out as a township, is it not possible that he could enlarge that, prepare a plan upon it, and send it in as if he had done it himself? It is possible, but it would be very soon detected. Even the public would immediately find it out.

82. Then it is too late. You have read the Report of the Commissioners, have you not? Yes.

83. With care? Yes.

84. Have you any idea of the difference in the cost of the licensed surveyors' work and the staff surveyors' work? The licensed surveyors' would be considerably cheaper.

85. If the work were done? Yes, of course.

86. You do not take into consideration, when you give the acreage done by the staff surveyor, the features he has surveyed at the same time? Yes, I do. I consider that to estimate the labor of the staff or salaried officers by the acreage is very erroneous.

87. The laying out the lands of the Colony to advantage depends very much upon the professional knowledge of the surveyor? Yes.

88. Do you arrange it in your office beforehand sometimes? Sometimes.

89. You see that the Commissioners who drew up this Report, dated 11th August, 1855, recommend that a new system shall be adopted with regard to surveys? Yes.

- J. Thompson, 90. What do you think of that system? That it is very objectionable.
- Esq. 91. I see that they recommend there shall be three classes of surveyors—district surveyors, surveyors, and assistant surveyors? Yes.
- 26 May, 1858. 92. Is it not generally supposed, that when the Secretary of State made the arrangement as to surveyors, assistant surveyors, draftsmen, and clerks, that there would be a necessity for placing officers in the various districts, having different ranks, but still employed in the same way? Yes, that, I think, was contemplated by the Secretary of State.
93. That was never carried out? It was tried occasionally in a partial manner, but it did not answer. A despatch, of 7th April, 1849, which followed the Waste Lands' Act, directed the Governor to divide the Colony into survey districts.
94. I see the recommendation of the Board is, that the country should be divided into districts, and that there should be in each a district surveyor, surveyors, and assistant surveyors—draftsman not named—but do you not think it desirable, if a surveyor with three or four assistants were sent into a district, that there should be a draftsman attached to him? Yes, certainly.
95. Do you not think it would simplify the work at head quarters? Yes. I must say, however, that I altogether object to branch offices, unless there were a Surveyor General with distinct responsibility for each district.
96. But there should be a control at head quarters? Yes, a general control; an office somewhat similar to that in the United States of America—that office is at Washington, and the head of it is called the Commissioner of the General Lands Office—to this office reports and plans are forwarded from all the Surveyors General, and maps are compiled, deeds of grant prepared and recorded, expenditure of moneys provided for, &c, &c.
97. You would take the American system as nearly as possible? I am not prepared to recommend that, at the present moment, such a system should be introduced here; but, if branch offices are to be established, the chief officer of each should, I think, have a distinct responsibility.
98. You think it would be better that the district or deputy surveyor should have a distinct responsibility, and that he should carry on the general system of survey by contract surveyors rather than by the present system. I understand you to object to calling this officer the district surveyor—you would make him Surveyor General of the district he is in? Yes, if the establishment of branch offices were determined on.
99. *By Dr. Aldcorn*: You would make the district surveyor responsible for all the work done in the district, and those employed under him responsible to him? Just so.
100. And you would have the head department something like that in America—to receive reports and accounts of work done? Yes; the head department exercises general, or rather political control.
101. *By Mr. Moriarty*: To whom would you have these district surveyors responsible? Surveyors General would be responsible to the Commissioner of the General Land Office.
102. To the head of the central department? Yes, politically responsible to him, or more properly, perhaps, to the Minister to whose branch he might belong.
103. *By the Chairman*: The surveying officers under the present system have no responsibility whatever upon their shoulders? Yes, they have, to a certain extent;—they have the laying out of reserves, the recommending of sites for towns, the subdividing of land for sale, and other business, and this I consider a serious responsibility.
104. Still, if he chooses to do as he pleases—if, instead of carrying out the intention of Government, he shews favoritism, what check is there upon him? The check of public opinion.
105. Have you found that a sufficient check? Yes. We have no complaints of the nature you allude to.
106. *By Mr. Moriarty*: With regard to public opinion, take the duty of making reserves—does not the fact of employing an officer in making reserves shew that the person so employed is beyond the reach of public opinion—does it not throw him into contact with one person alone? Yes, if a reserve is alleged to have been made adverse to individual interests rather than public interests.
107. Then public opinion is represented by the individual whose interests are affected? Yes, that is what I meant. Individuals conceiving themselves aggrieved could complain through the medium of the press, which is the organ of public opinion.
108. *By the Chairman*: The instructions to different officers—I do not know what they may be now—have been very much interfered with? Do you mean as to the extent of the reserves?
109. Yes. They were ordered to make reserves of three, nine, twelve, and twenty-five square miles? Yes.
110. That instruction was not carried out? The making of very large reserves was not carried out. We objected to make such very large reserves too general, and were called upon to give a reason for the objection.
111. Do you not think, in some districts through which the high roads of the country run, that it is almost necessary to keep large reserves? Certainly.
112. You are aware that at one time—in Mr. Oxley's time—about Maitland there was a very considerable reserve for a town made? Yes.
113. That reserve was cut up so that Maitland has really now no land for endowment if the Government felt inclined to establish such a system? No; I think the reserve made by Mr. Oxley is still available.
114. I have Mr. Oxley's letter? I know it was the intention of the Government to resume that land, but it became impossible in consequence of occupation.
115. To what do you attribute such a spot as West Maitland coming into existence at all. With lots of available high land around it, why have people selected a bog or a swamp in which to build a town? I attribute the growth of towns on such objectionable sites to the facilities afforded for obtaining small portions of land at a cheap rate.

116. The same facility might have been given by the Government, might it not, under J. Thompson, Esq. different arrangements? You are speaking now of what took place before the Waste Lands Act? 26 May, 1858.
117. Yes? The Government was generally very liberal in giving away allotments. I do not know how it was that East Maitland did not progress.
118. Do you not think the difficulty of getting land by the system then adopted prevented people from building there? As far as my memory goes, anybody who applied for allotments could have obtained them.
119. Within how long a time—twelve months perhaps. An artizan or mechanic coming into a town with a little money in his possession wants to commence to build at once, and if there be difficulty in obtaining land from Government he goes to a private individual and purchases. Such persons make their arrangements to-night and begin to build to-morrow? Yes; that is quite correct. You will observe that towns have sprung up wherever there has been facility in obtaining land.
120. I see the Commissioners are of opinion that if you had a properly organised department it would be much better to have the service under the control of the Government than to have any licensed system? That is their opinion.
121. In carrying out that system of district surveyors, surveyors, and assistant surveyors, it seems to me that length of service has not at all guided the appointments; but men have been selected without any reference to that? You are speaking now of the present arrangements for carrying out that system.
122. With whom does the patronage of the Survey Department rest—with the Surveyor General? Yes, with the Surveyor General and the Minister. The Surveyor General does not make these appointments without the sanction of the Minister.
123. *By Mr. Moriarty:* The Surveyor General nominates, I presume? Just so.
124. *By the Chairman:* Do you consider that every officer who has moved about in a district already surveyed for him, and has done very little other work, should be appointed a supervising surveyor of a considerable district of country unsurveyed? Yes, I think so; if he has sufficient talent and integrity, I see no objection.
125. Ought he not to have some experience? He ought to have experience, certainly.
126. Do you not think that the department loses a great deal of the labor of its officers by constantly removing them from spot to spot? Yes.
127. Half of it perhaps? I am not prepared to say how much; but I always considered it objectionable.
128. A very great deal of a surveyor's time used to be taken up in making maps and plans for the office? Yes.
129. And in writing descriptions of lands? Yes.
130. When in his district, was he imagined to have the information necessary for a general referee in the case of land matters—was he not supposed to give information to the public whenever he was applied to for it? Yes, of course.
131. How was it possible these things could appear in any of these monthly returns that were asked for? They ought to have appeared; the forms for the journals were so framed as to shew how the surveyor was employed during the month.
132. The return was no criterion of the general duties performed by an officer, particularly in some districts of the country? I think the Surveyor General would have been able to judge, even if particulars were omitted in the journals.
133. Do you not think a system of diary or journal would be a better way of describing the labor of a surveyor? That is the course pursued at the present moment.
134. I see there is a considerable difference of opinion with regard to the circumferenter and theodolite; what is your opinion with regard to these two instruments—which do you think the best to carry on the survey with? Both instruments are necessary; but, as I have not been in the field in this country, I am not so competent to give an opinion upon that matter as yourself.
135. Do you not think that either the Surveyor General or the Deputy Surveyor General should be constantly in the field with the officers, supervising the work, in order to see that the work is really done? Yes; if I was Surveyor General to-morrow, I should consider it to be my duty to be occasionally travelling and inspecting.
136. A man might be called upon to make a re-survey, under your inspection, of any work he had sent in? Yes.
137. There is no arranged system of marking land by the licensed surveyors—they are not bound to work the line so that individuals going over the line could find the marks, as they did formerly? The licensed surveyors are bound to mark out their lines properly, and they are furnished for their guidance with a copy of a circular which points out the different modes of marking required, according to the ground and the purpose, as at present practised by the department.
138. Are you not aware that the lines marked on the Hunter, thirty years ago, still remain? Yes; I have seen the marks.
139. While lines made three or four years ago are not to be found? We have had some careless licensed surveyors who have not marked properly; that I have had evidence of—I have seen their marks.
140. Do you not think an officer appointed to the position of a district surveyor, or the Surveyor General of a district—? I would rather say inspector.
141. Well, an inspector—ought to superintend all the duties of a survey, everything connected with the survey of the country, such as marking lines of roads, tracing the natural features, taking levels for any engineering purposes—do you not think there should be one head to control all these matters? Certainly; the inspector of a district should have the supervision of all the work in his district.

- J. Thompson, Esq.
26 May, 1858.
142. You have found that, where there is the interference of two or three departments, one works against the other? It was so in former times.
143. Do you not think a man who lines a road has a better idea of what should be done, and the reason for making a particular curve, than one who takes up the work after the survey has been made? If he is an engineer as well as a surveyor, no doubt it would be desirable that he who laid out the road should superintend its construction, but not otherwise.
144. I believe Mr. Telford, one of the most able engineers, when he made a line merely walked over the ground in the first instance; he did not adopt the system now pursued of taking sections, excepting of that portion he had himself selected in the first instance? I do not see exactly to what you allude; are you alluding to the arrangements for railways?
145. Everything connected with the service. I believe there should be one head for the whole Survey Department of the country, and if different sets of officers, as engineers and surveyors, were required, he should have them under him? That is the way in which railway surveys are conducted in England, and they should perhaps be so conducted here.
146. I think you have had twelve surveyors sent out from England lately? Yes.
147. They have been employed in very little else but railways? Yes.
148. They have not been found as efficient as you expected? Some of them were very deficient.
149. During your acquaintance with the service, there has been no general system of survey carried on in the country? That is a very large question—to what period do you allude?
150. From the time you joined the service? I consider that the survey of the Colony, almost accomplished by Sir Thos. Mitchell, was the result of system, and then, when the squatting districts were to be surveyed, in 1847, there was a system proposed which has been carried out.
151. Do you remember that the Deputy Surveyor General of that day pledged himself to Government that he would survey all those districts within a certain time? There was something of the sort, but I cannot charge my memory with it.
152. *By Mr. Moriarty*: Do you remember any such pledge being given by the Surveyor General subsequent to the period spoken of? No, I do not.
153. *By the Chairman*: You, of course, recollect the time when most of the field officers of the service were struck off the list of salaries? Yes; that was in Sir George Gipps' time—in 1845 or 1846.
154. Do you recollect how long they remained without salaries? No.
155. Do you not consider that that was a breach of faith? Yes.
156. A great deal has been said with regard to the triangulation attempted by Sir Thomas Mitchell,—you are aware that we had no instruments in the Colony to perform a scientific survey at the time such as that spoken of by the Royal Engineers? We had not at that time the instruments necessary for carrying on such a survey.
157. Is it your opinion that the survey, as it was attempted by Sir Thomas, was just the only one he could have carried out? Yes, that is my opinion.
158. And that it is useful, wherever those points can be seen, in fixing the position; for instance the angle of a farm, if you can get three angles that are established, the point is fixed for ever? My answer had reference to a more general view than Sir Thomas Mitchell's points; I was speaking as to the whole survey.
159. Have you read Colonel Mudge's "Triangulation of England"? I have the work.
160. Do you remember when that survey was commenced? Somewhere in the last century, I believe.
161. In 1784? Yes.
162. It is not yet completed, I believe? I think not.
163. Have you an idea of the expense that has attended it? I know the expense has been enormous. I have data as to the expense, but I cannot charge my memory with it.
164. Do you think this young country is fit to undertake such a survey—a survey extending over such an extent of country as we should have to carry it? Certainly not.
165. Do you not think all surveyors should be obliged to send in with their plans the variation of the day, even if they adopted the magnetic lines? If surveys of features were being carried on, but I do not think it would be necessary in laying out lands for sale.
166. Are you aware that as you get into the interior the variation increases very much? Yes.
167. Have you an idea what is the annual variation just now going on? I have known it over and over again, but I do not remember it now.
168. Supposing that in thirty years it makes a difference of a degree, any new surveyor taking up the line from a starting point without making that allowance, would have a material difference at the end of half a dozen miles? He would, if he went on thoughtlessly; he ought to find the old marked line, and proceed accordingly.
169. The trees upon which the marks were might be burned down? Then he must go on till he finds others.
170. Perhaps they might not exist,—in plains to the northward you may go twenty miles without a tree? But there are no old surveys to follow up there.
171. Do you not think it would have been a better system to have made all lines meridian lines from the first? I am very doubtful about that. I think it would only have complicated the operations of surveyors in the field.
172. Only in this way; perhaps there are only a few who know how to do it correctly? You are aware perhaps that the meridional system in America, has been subject to great mistakes.

APPENDIX A.

J. Thompson,
Esq.

M. 28-610.

Colonial Secretary's Office,
31 October, 1828.

26 May, 1858.

SIR,

I am directed by His Excellency the Governor to inform you, that the Right Honorable the Secretary of State has been pleased to authorise (Despatch, dated 31st March, 1828, No. 19,) the following arrangements with respect to the *Salaries* and *Allowances* of the officers and other persons employed in the Department for the Survey of this Territory, viz. :—

Surveyor General to receive £1,000 per annum, which is to include house rent, travelling expenses, or forage for the number of horses necessary for the performance of his duties, and all other allowances.

Deputy Surveyor General to receive on his appointment £500 per annum, which is to include the several allowances specified under the head of Surveyor General, with an increase of £50 per annum after the first year's service, until it reach £650.

Surveyors to receive as follows, viz. :—

(Four)	First	£400 per annum.
	Second	375 "
	Third.....	350 "
	Fourth	325 "

The above is the maximum salary of the respective gradations.

An Assistant Surveyor promoted to the situation of Surveyor is not immediately to receive the salary of the latter office, unless he shall have attained by his standing in the department the maximum salary (£300 per annum) of his appointment as Assistant; his salary if under this sum is to increase progressively at the rate of £20 per annum, and when he shall have enjoyed the maximum salary of Assistant for one year, he is to be placed on the scale as Fourth or Junior Surveyor, on which salary he will remain until removed to a higher step.

Assistant Surveyors to receive on appointment £200 per annum, with an increase after one year's service of £20 per annum, until it reach £300.

The Surveyors and Assistant Surveyors will receive an allowance of 2s 6d. per diem for a horse, when actually kept by them for the performance of their duties, to be certified upon honor; and one ration each when employed in the field, but no other allowance whatever.

Draftsman to receive on appointment £150 per annum, with an increase after one year's service of £10 per annum, until it reach £200.

The above arrangement in those cases to which it applies is to take effect from the 1st of January, 1828, which will entitle the persons then employed on the establishment to the augmentation of salary above specified on the 1st of January, 1829. The allowance for lodging money which the Assistant Surveyors have hitherto received, will be continued until the end of the present year, from which time the augmentation of salary will take place.

I have, &c.,

ALEX. MCLEAY.

FRIDAY, 28 MAY, 1858.

Present :—

MR. ALDCORN,
MR. FORSTER,MR. MORIARTY,
MR. WHITE.

G. B. WHITE, Esq., IN THE CHAIR.

John Thompson, Esq., again called in, and further examined :—

- J. Thompson, Esq.
28 May, 1858.
1. *By the Chairman*: Will you be kind enough to state who have been the administrative officers of the Surveying Department since you have joined the service? Mr. Oxley, Sir Thomas Mitchell, Captain Perry, myself, and Colonel Barney.
 2. Is not the department divided into three branches? I should rather say two. It may however be considered that at present—since the Crown Lands Office has been added—that there are three.
 3. You do not consider Mr. Halloran the administrative officer of his particular branch? No; I do not. He may be considered an executive, but not administrative officer.
 4. Do you remember when the names of the officers of the surveying branch of the service were excluded from the general list of the department usually published in the Colony at one time? No; I do not remember the names of the surveyors being excluded.
 5. You remember the names of the officers of the department used to be published—the whole of them? Do you mean in the almanacs?
 6. Yes. You never remember the names of the surveyors being left out altogether? I do not.
 7. Then it was not by any authority of yours that these officers' names were left out? Certainly not, nor do I think that the circumstance ever came to my knowledge; I must have remembered it if it had.
 8. Have the surveyors ever had a practical representative at head-quarters who, from a knowledge of the nature of their employment, could feel for the difficulties they had to contend with? Sir Thomas Mitchell took the direction of their movements, and prepared their instructions himself; and he was, I consider, from his own experience in the bush, fully capable of appreciating their difficulties.
 9. Do you believe that Sir Thomas had much knowledge of the difficulties the officers had to contend with connected with measuring farms—that he himself was practically acquainted with any of these difficulties? Yes.
 10. Do you think he ever, during the time he was in the Colony, measured a farm? No; I do not think he did, unless it were his own.
 11. Who regulated the field equipments of the field officers? The Chief Clerk, Mr. Halloran, had the management of that; and, of course, made suggestions to the Surveyor General.
 12. Was Mr. Halloran ever in the field in his life? I think not.
 13. In the public service—civil, military, and naval—is it not usual to consult, in the same service, men who have passed through the various grades of the service as to the duties they are about to provide for, before such provision is made? I suppose so; but I have not much acquaintance with military or naval regulations. The equipment arrangement came into the hands of Mr. Halloran because it was a financial matter.
 14. Have the men whose pockets were touched by this arrangement ever been consulted in the various changes that have taken place in regard to the equipment and other requirements of field duty? That I cannot say.
 15. Did you ever hear that the field officers of the service were termed at head quarters the "Experimental Squadron"? I never heard that.
 16. Are you not aware that while reductions of every description have been made in the pay and allowances of the field surveyors, there has been an augmentation in the salaries of officers in the other branches of the service? No; I cannot reply to that. I never at any time had much (indeed scarcely anything) to do with the financial arrangements of the department.
 17. Do you think the financial arrangements of such a service should be left in the hands of a man not at all practically acquainted with the nature of the service performed? I explained before, in answer to a similar question, that the Surveyor General always gave his own decision upon all such matters.
 18. These decisions were sometimes influenced by suggestions, do you not think so? That is unavoidable; in all departments it must necessarily arise that suggestions emanate from subordinates.
 19. There was considerable correspondence with different officers of the service upon this subject? Of their equipments—yes, I think a very large correspondence; but I have no knowledge of it.
 20. Did that correspondence increase very materially of late years? I cannot say.
 21. You said when you were previously before the Committee that the selection of the reserves of the country was left principally to old surveyors of the service—were they not sometimes interfered with? By whom?
 22. By head quarters—I do not know by whom? By the Surveyor General?
 23. Yes; or whoever was at head quarters at the time in his position? I really cannot remember. Do you mean by the Government?
 24. Or, by the Government? Yes; I think I said there was a long correspondence with the Government upon the subject of reserves.
 25. Then the system of laying out reserves in one, three, nine, or twenty-five square miles is done away with? No, it is not.
 26. How is it that the reserves in New England are principally so small? In the table lands of New England there are some very large reserves.

27. About Armidale? Yes; at Byron Plains, and many other spots, there are very large reserves. I know the reserves are small down the Namoi and Gwydir, and in the western interior, because it is not necessary to make reserves there for agricultural purposes, but merely as crossing and resting places for the convenience of the public.
28. You have before said that wherever a large road crosses a considerable river, or is at a convenient distance from the last town, a large reserve should be made? Yes, and has been made I should hope.
29. Are you at all aware of the size of the reserve called Bendemeer? No; I do not remember the size of it just now. I think it is nine square miles.
30. Are you at all aware how much frontage it commands to the river? The river runs through the reserve for two miles and a-half, the frontage may, therefore, be said to be five miles.
31. You are aware that when an officer is on duty he is away altogether—he is not in the position of an officer in Sydney who goes to his office at ten o'clock in the morning, or nine, as it is now, and leaves at four in the afternoon? Yes; he is altogether on duty.
32. When these monthly returns speak of an officer having done eight hours duty, he has, in point of fact, been twenty-four hours in the field? Yes, just so.
33. Some have been twelve and eighteen months, or two years, away from their homes on different duties? Yes, probably; but I cannot speak positively as to any stated period.
34. During that time constantly under canvas in the field? Yes, in many cases.
35. You are aware that upon some occasions postal communication was not to be had? Yes, I am aware of that.
36. Are you aware that sometimes, because officers could not communicate with the Government, and send in these monthly returns, they had their salaries stopped? They have had their salaries stopped for not sending in their returns, but postal difficulties were always taken into consideration.
37. Are you aware that although Government nominally supplied the rations to officers, they have sometimes left them six months without? I do not know about that.
38. You have heard of such things, have you not? No, I have not.
39. You say, in answer to question 312,—“From the returns we see the quantity of work performed, and can judge of the character of the surveyor”: May I ask by what means you can judge of the character of the surveyor? It is quite possible to do what I say in that answer, from a continued inspection of the surveyors' journals.
40. I understand, from one of your previous answers, that there is no inspection of surveyors in the field? I refer to an inspection of the journals.
41. Do you not think such journals may be made without any work being done upon the ground at all? Yes, of course they can.
42. You say, in answer to question 314, you have had difficulty in obtaining competent persons—has there been any reason for that difficulty, or do you think they are not in the Colony? I referred to the time of the gold discovery, when it was extremely difficult to get surveyors; I could not get them. I was acting Deputy Surveyor General at the time, the Surveyor General being in England.
43. Do you not think many competent officers of the service have been driven out of it by the treatment they have received in the service? I do not think that.
44. I would rather say worried out of it? I would not say that.
45. The arranging of districts for the officers in the service was left entirely to the Surveyor General? Yes.
46. Do you know how it was that districts were sometimes arranged for officers and they never could get to them? I do not exactly know to what you allude.
47. I mean, that an officer has been promised a certain district, and instructed to proceed thither, but has never been allowed to get there? I think that may have arisen from Sir Thomas finding it necessary to change his plans.
48. Supposing Sir Thomas has not been in the Colony at the time? Then it would have been Captain Perry.
49. Did you never perceive anything like an obstructive feeling between those two officers? Between Sir Thomas and Captain Perry—they did not agree.
50. So that what one officer ordered to be done, when the other had an opportunity he ordered should not be done? To what extent that was carried out I am not prepared to say. I dare say, however, there may have been such a feeling on the one side or the other.
51. It acted very much against the public interest and the advancement of the department, did it not? It would have done so, no doubt, if it had been carried to any extent.
52. Your answer with reference to the difficulty of obtaining surveyors had reference to the time when gold was discovered? Yes, that is stated in my answer to question 317, which gives a very good history of the matter. I would like to add to my evidence about the old surveyors leaving the department, that many of them left the department because they had made their fortunes.
53. Can you name one? Yes; I can name Mr. Galloway, Mr. McCabe, Mr. Townsend.
54. *By Mr. Aldcorn*: In what way did they make their fortunes? They were at no expense in the bush.
55. They did it by saving? Yes; and they might have perhaps had some little cattle or other speculations.
56. *By Mr. Moriarty*: With reference to Mr. Galloway, do you remember that at the time of his leaving he was supposed to be in very bad health—that he left on account of broken health? Yes.
57. Had not the state of his health some connection with his retirement? Yes; but no doubt he would have tried to continue in the service if he had not had the means of retiring.
58. *By the Chairman*: Sir Thomas Mitchell complained of considerable interference in the Colonial Secretary's Department with the Survey Department—have you found that such interference

J. Thompson,
Esq.
28 May, 1858.

- J. Thompson, Esq. interference had an influence in preventing the carrying out of the survey efficiently? I could not at once reply to that question. It was the opinion of Sir Thomas.
59. Sir Thomas states,—“The fate of the surveyors employed has in general been unfortunate. Some have died miserably, amongst them two of my own sons. Madness has deprived the service of others. The premature old age brought on by constant exposure in the field has been but too apparent, even in cases where old surveyors have left the service without any retiring provision”? That is quite true.
60. *By Mr. Aldcorn*: What remedy could you propose to secure surveyors from exposure in the field—it seems to me to be a necessary condition of their profession? Yes.
61. *By the Chairman*: You know something of Sir Thomas Mitchell’s triangulation? Yes.
62. It is stated here in his evidence that he measured a base, or rather two bases? Yes.
63. I do not see upon the evidence given here that Mr. Dixon ever measured a base upon Liverpool Plains,—did you ever know of it in your office? Yes; he measured a base of 5,280 yards. I remember, too, he measured a base on Normandy Plains, on the coast side of Moreton Bay.
64. You know enough of the nature of triangulation to be aware that no man at all employed in that duty can send in a survey as accurate without having first measured a base—that he could carry on a triangulation to a certain extent over four or five hundred miles of country until he had measured a base of verification—such work if sent in could not be complete, and he could not be held responsible for it until he had measured a base of verification? Just so.
65. Are you aware that I was employed in that way for some length of time? Yes.
66. Are you at all aware of the number of points that rounds of angles were taken from by me? No.
67. You say here in your evidence that they were never returned? Yes.
68. They are returned in the field-book in the office? I do not remember the field-book being delivered in the office; perhaps it was delivered to Sir Thomas.
69. No; he was in England at the time? Both Captain Perry and Sir Thomas were jealous of retaining such things in their own hands. I saw very little of them.
70. You are aware that I was called back to do the work of an officer who did not do his duty—Mr. Gorman—and that there was some angry correspondence about it? There was. I had nothing to do with it. It was in Captain Perry’s time.
71. Are you aware that I demanded an investigation? Yes; that has come to my knowledge, though not officially. You mean of the Government?
72. Yes—it was proposed, but never carried out? That I do not know about.
73. *By Mr. Aldcorn*: You admit the general, I may say universal maxim, that men will work more for themselves than they will for others, and, founded on that maxim, you admit that contract work will be cheaper than salaried or days’ wages work? Yes, certainly.
74. Do you think, from your own knowledge and experience, that the ordinary survey of this Colony, for farm and other purposes, can be efficiently carried out by licensed and contract surveyors, as is done by most other colonies, and by the United States of America, where it is best understood, and that a proper system of supervision should be maintained over these surveyors? Yes.
75. Do you think a proper and efficient system of supervision could be devised for this purpose? Yes.
76. Do you think the appointment of district surveyors, or surveyors-in-chief as they might be called, with enlarged powers, and who should do nothing but direct and superintend these contract surveyors, and give information to the public and intending purchasers of land, would be a proper and efficient mode of supervision? My view of the appointment of inspectors, or district surveyors, is, that they should be always on the move, and therefore that they would not be prepared to give information to the public at any stated place.
77. Do you not think a land office should be instituted and appointed for each district? No; there are already seventy local land offices.
78. I mean in connexion with these district surveyors’ departments? If you mean to allow the district surveyor a residence and office, with draftsmen, clerks, servants, coals and candles, and so forth, that I should consider objectionable.
79. You do not think, then, that a land office should be appointed for each of these districts? Decidedly not. According to Sir Thomas Mitchell’s arrangement, as stated in the additional Appendix to the Report of the Commission of 1855, forty-five of these would be required.
80. Do you think the present districts could be so enlarged that fifteen of these offices would serve for the whole Colony—you say there are seventy at present? Yes; but that does not mean seventy survey districts.
81. Suppose you put four or five of these local land office districts together, and formed them into one, do you think such a district could be managed by one surveyor? I think more than that might be united; eight or ten districts would, I think, be ample for the whole Colony; at present we have only four, and the districts are rather too large.
82. You think double the present number would do? Yes.
83. Do you think a land office in each of these districts would be attended with a greatly increased expense? I do not see how the land office is to be conducted if the officer is to be always on the move; besides, the expense would be enormous.
84. But he would not, I imagine, be constantly on the move? He should be constantly on the move. There should be no excuse for his not being in the field. If you once admit the excuse of his being engaged in office duty, of course he will avail himself of it whenever it suits his convenience.
85. Supposing a land office were established in each of these districts, do you not think a clerk could give all the necessary information to the public, as the surveyor would occasionally be present at the office? Yes; but already we supply all the information necessary to the Clerks of Petty Sessions at the seventy offices. The whole of these seventy offices are supplied with maps and documents relating to every thing concerning their districts.

86. *By Mr. Moriarty*: Under what control are these offices? Under our control at present. J. Thompson, Esq.
- As far as regards their position as agents for the sale of Crown Lands, the duties they perform have just been transferred to the Survey Department from the Treasury.
87. *By Mr. Aldcorn*: You mean the Crown Lands Commissioners' Offices? It is now the 28 May, 1856.
88. Lately it was the Crown Lands Commissioners? Yes.
89. Then your opinion is, that land offices would not be necessary as part of the system of inspection of these district surveyors? I think not; they would only create delays and embarrassments, and fritter away responsibility.
90. And that the present land offices, if kept up by the Clerks of Petty Sessions, would answer all the purpose? Yes, decidedly.
91. It has been proposed to make these surveyors-in-chief, or district surveyors, Crown Land Commissioners? Yes; but I object to that.
92. Then you would confine his work entirely to the supervision of contract surveyors, and the pointing out of land for them to survey? There is another matter which requires to be considered,—whether these district surveyors should also be topographical surveyors, or whether we should have a separate topographical staff. The topographical staff should be salaried, because you cannot very well contract for that kind of work.
93. *By the Chairman*: You would require a higher grade of officers for that? Yes.
94. *By Mr. Aldcorn*: You would have then, under his inspection, topographical and all other officers? It is a matter for consideration whether the topographical officers should be attached to our department, or whether there should not be surveyors for roads and other works attached to the road and engineering department.
95. You think there should be a Commissioner, or Inspector General of Roads? I think that is a matter requiring the consideration of the Government; but if any change is contemplated in the conduct of the topographical and geographical business, it becomes a question whether the Colony is disposed to incur the expense.
96. *By the Chairman*: You would make this topographical surveyor a geological surveyor also, who should give sections of the country? Yes, to a certain extent; but we have a geological surveyor at present, who is preparing a geological survey of the County of Durham, and will go gradually on with other counties—Mr. Keene, who is called Inspector of Coal Fields.
97. *By Mr. Aldcorn*: Have complaints reached your office of insufficient marking, both by licensed and salaried surveyors? We have scarcely had a complaint.
98. Are you aware, from your own knowledge, or from the reports of surveyors who have been in the field, that such improper marking has taken place? Yes, I am aware of it; I have seen it myself. It was in consequence of our employing hastily men who were not strictly conscientious.
99. Would you, in surveying large blocks of land for agricultural purposes, advertise in the *Government Gazette* for contracts, or would you leave it entirely in the hands of the district surveyor? We have very rarely such large blocks of land to deal with; but I think any arrangement of consequence emanating from the district surveyor, should be submitted for the approval of the Surveyor General.
100. Do you think that the expense of the survey is greatly increased by the great minuteness and nicety of the survey, and that such extreme nicety is absolutely necessary in the ordinary measurement of farms? We have but one way of doing it, and that is to do it properly.
101. *By the Chairman*: Do you not think, to get a correct survey of the country, it would be necessary to re-survey many of the old districts, to shew the errors that have existed in olden times? There are not many errors.
102. You are aware that the country at the Hunter was surveyed in sections, and that upon the old maps they appeared in regular squares; but some of these sections, when they came down to the river, did not meet in some instances by eight or ten chains? I do not see how the public is interested in that. The whole valley of the Hunter is alienated, and parties are in possession.
103. The maps do not show the land, and there are, consequently, constant disputes taking place? No doubt; but the general maps do exhibit such discrepencies as have been discovered.
104. *By Mr. Aldcorn*: You think the plan of contract or licensed surveyors might be adopted with advantage and saving to the public in the survey of lands for agricultural purposes? Yes. I think to return to the salaried system would be to go backwards.
105. You would recommend the contract system to be adopted in the great majority of cases in the survey of agricultural lands? Yes; in all cases the measurement of land for sale should be done by contract.
106. *By the Chairman*: You think it much the cheapest and most efficient? Much the cheapest and most satisfactory.
107. *By Mr. Aldcorn*: Do you think it would be desirable that there should be one system of field-books used, in order to preserve uniformity in the out-door work of the department? They are generally kept on an uniform plan—the plan practised in England.
108. It has been stated that there has been careless surveying by contract, or licensed surveyors—do you not think that has also been the case by salaried surveyors? Yes; I know it has been the case. While I am upon the subject of the arrangements for the survey, I may mention that it would be desirable to have licensed surveyors permanently located in every local land office district; not that they need be regularly employed, but that they might be on the spot to do anything that might be required without the delay which results from travelling about; such officers might also be employed by the Government in other matters, so as to offer greater inducement for their permanent settlement.
109. What is the average expense of the survey of agricultural lands in the Colony? The average

- J. Thompson, Esq.
23 May, 1858.
- average expense of measuring agricultural portions by licensed surveyors on the present scale of charges would, I apprehend, be about from 1s. 6d. to 1s. 9d. per acre (but see Report of the Commission of 1855, and Appendix F.)
110. You have a scale for the payment of licensed surveyors? Yes.
111. Is it the same for all kinds of land? Yes; but in New Zealand they have different scales for different classes of land. I obtained information on that subject from a gentleman who had been employed in New Zealand.
112. I know that in brush land a man would not survey one-fifth part of what he would in other land? We have no means of knowing where the brush land is; it is so small in quantity.
113. Would it not be the business of the district surveyor to ascertain that? Yes, when necessary; but if a surveyor takes a contract he will see to that himself—his tender will be governed by the nature of the land.
114. *By Mr. Forster*: I suppose you admit the justice of the remarks made in this Report,—that the department has not been altogether so efficient as it might have been up to a certain time, or up to the present time? Yes; I shew that in my evidence,—it has never been strong enough.
115. Do you consider that the suggestions embodied in this Report will meet the evils that are complained of? I think not.
116. I think I understood you to say you do not approve of the suggestions, in particular with regard to district surveyors? I do not.
117. Have you any suggestions to make yourself, which would shew that these are incorrect. You admit that certain evils do exist, or have existed—you do not consider the department so efficient as it might be, as regards the objects for which it is intended? That is because it is not strong enough.
118. You consider that the deficiency arises from want of strength? Yes.
119. Not from other causes? As I said before, the salaried system is, in my opinion, a mistake.
120. You are more favorable to the license system? Yes.
121. You would retain that with the other? There must be a small salaried staff for geographical and topographical work.
122. Do you consider that the want of local inspection over the work of the surveyors has in any way tended to render the system of survey deficient? Yes, no doubt.
123. Do you not think the suggestion of having district surveyors, or of inspectors, which I understand them to be, properly speaking, will in some degree remedy that want of local inspection? Yes, of course that would be the result.
124. So far you would agree with the suggestion that these district surveyors should be appointed? Yes, inspectors.
125. *By Mr. Aldcorn*: They must be professional surveyors? Yes, of course; men of professional experience, general information, and character.
126. *By Mr. Forster*: I think I understood you to say—although the question was not put formally—that you consider the inefficiency of the system in some degree arises from insufficient remuneration having been given to the surveyors employed? I cannot say that the surveyors employed were inefficient because their pay was inadequate; but certainly that circumstance may have prevented men of talent from entering the service.
127. When vacancies have occurred, have you found any difficulty in filling them again? No; there have always been parties willing to accept the appointments.
128. Competent men—I ask you whether, when vacancies have occurred you have had any difficulty to fill them with competent men? Yes, we have found a difficulty.
129. You have had applications enough from men whom you did not consider competent? Just so.
130. *By the Chairman*: Have all the officers who have been admitted into the service within the last fifteen or twenty years been examined? No.
131. Some have never been examined at all? They have not.
132. *By Mr. Forster*: Have you been aware of any complaints having been made on the part of the surveyors, that they have not been sufficiently remunerated—have they complained generally of that, or have they complained of having been neglected? There has been such a feeling among the surveyors.
133. That they have not had remuneration enough? Yes.
134. Have any complaints come under your knowledge, on the part of the outlying surveyors, that they have been neglected in regard to promotion, and of persons having been placed over them? Yes, numerous complaints.
135. Have those complaints, in your opinion, been at all just? Some injustice may have been done, but I cannot charge my memory with particular instances.
136. You think there has been no general cause of complaint on that score? I do not think there has been any general cause of complaint.
137. Do you think the admitted inefficiency of the Survey Department, up to a certain point—which you say has arisen from want of strength—has never arisen from the defects of the system, or from attempting to do more than was necessary to be done—in surveying in advance of the demand for land, for instance? I have said that the salaried system is objectionable—in my opinion, a defect; and in my evidence before the Commission of 1855, I pointed out the evil of the system of entertaining, indiscriminately, all desultory applications for the purchase of land; but the principal cause of the alleged inefficiency of the department certainly is, that it has never been strong enough. I cannot consider, however, that the measurement of land for sale in advance of the demand is a defect, for it is absolutely necessary.
138. Have you never found that large tracts of country have been surveyed which have not been applied for afterwards, so that the lands thus surveyed have remained on your hands—
have

- have not large tracts been surveyed that have not been wanted? You mean cut up in farms, for sale. We have been anxious to do that; we have been aiming at that for years, to get a large quantity surveyed ready for sale. J. Thompson, Esq.
139. You have never been able to comply with the demand? I think we do so at the present moment. 28 May, 1853.
140. There is a sufficient quantity now in advance of the demand? Whether it is sufficient I am not able to say, but we have a great quantity measured in advance.
141. You do not find so many complaints of land being unsurveyed as formerly? We do not.
142. You think the public are tolerably well supplied? At the present moment I think the reproach of inefficiency as regards the public demand for land has passed away.
143. You think the public are generally satisfied with the work done by the department? Yes. There may be a few isolated places where land is still called for, but, generally, we have satisfied the public. Not less than from 260,000 to 270,000 acres, consisting of some 3,300 portions of land, are surveyed and ready for sale by private contract, and can be obtained, for cash, at any moment at any of the seventy local land offices where there may be lands so open to selection; besides, there are sales by auction going on every month or two all over the Colony.
144. Is it your opinion, then, that with a few further small improvements the department may be made to answer every purpose intended? Yes. If the measurement of the land for sale were done by contractors, and a sufficient number of inspectors, with a few good salaried surveyors under them, were appointed, if needful, for in some of the remote districts the inspector might act as topographical and geographical surveyor, without assistance.
145. Has it been the principle of the Survey Department to permit the right of selection on the part of any settler in the interior, except in cases where land was required for immediate public purposes? Yes; that principle has been insisted upon to a most injurious extent.
146. Then you do not think it is a correct principle? No; it leads to great expense; and when you speak of the inefficiency of the department, I may state that that has been one of the principal causes of the complaints which have been made against it.
147. The admission of too general a right of selection? It was universal.
148. In what way do you think, supposing that principle is wrong, the choice of selection should be regulated? By the discretion of the Surveyor General.
149. How is the Surveyor General to know the propriety of putting up particular land? He can tell by his maps, and also whether he has a surveyor in the neighbourhood.
150. Then does not that give an enormous discretion to the surveyor on the spot? I said the Surveyor General.
151. But how is the Surveyor General to know, except through the district surveyor? By the aid of his maps; he would, however, obtain the report of an inspector when needed.
152. You decide, then, by the maps and the report of the local surveyor, whether the land shall be put up or not? Yes.
153. Then you would refuse applications upon other grounds than the land being wanted for public purposes? We should scarcely ever refuse upon any other grounds than not having a surveyor in the neighbourhood, and then it would be only deferred.
154. You would not refuse absolutely the right of any applicant, but you would not put the country to the expense of surveying a single selection unless a certain quantity were wanted? Just so.
155. You do not deny the right of the applicant to land anywhere he requires it? That is explained in the 7th paragraph of the Land Regulations, viz. :—"Applications may be made for land in particular localities. 7. Persons desirous of obtaining lands in particular localities may make application to have such lands surveyed and brought forward for sale, and their wishes will be complied with as far as circumstances may permit; but much inconvenience to the Government, expense to the Surveyor General's Department and disappointment to individuals, having been found to result from the Regulations under which parties were led to expect that lands in any part of the Colony, within the established counties, could be surveyed and brought to sale immediately on their applying for them, or within an interval of only a few months, it is to be understood in future, that the Government does not bind itself to bring forward such lands for sale within any specified period."
156. Practically, the carrying out of these regulations must be left to the almost arbitrary discretion of the Surveyor General? Yes. The Surveyor General has great responsibilities.
157. *By the Chairman*: Do you not think the classification of lands would obviate that? I do not see that it would.
158. *By Mr. Forster*: It must be left to the local surveyor? Yes.
159. Would not that be arming the local surveyor with too much power? Yes.
160. Do you not think the leaving of such power in the hands of surveyors has been attended with injury to applicants? In a few cases, perhaps, some of the surveyors may have taken advantage of the trust reposed in them.
161. You have heard, I presume, of complaints against surveyors for proclaiming reserves upon pastoral runs where there has been no necessity for them? We have not had many complaints of that.
162. Have you heard of any cases of the kind? I have heard of some.
163. Do you think the complaints have been at all justified by the facts? I cannot call to mind any case in which there was an improper exercise of power.
164. *By Mr. Moriarty*: Have you ever noticed, immediately succeeding a complaint of undue interference with the rights of the squatter by such reserve, an extension of the reserve? No, I never have.
165. Have you ever noticed the position of reserves Nos. 2 and 3 on the maps, in New England? I do not remember.
166. *By Mr. Forster*: Touching these reserves, I particularly wish to know what is supposed to be the general object of reserves made in pastoral districts—say a reserve made on a pastoral

J. Thompson, Esq., pastoral run, or several pastoral runs, previously occupied by lease under the Orders in Council? Such reserves are required for agricultural purposes, and for forming towns, for fords, and for resting places for cattle travelling.

28 May, 1858

167. What is the object of these reserves remaining for years as they do at times—what good is done by them? They are not required in those cases.

168. You think they are useless in many cases? No, I did not mean that; although not wanted at present, they will be required hereafter, for the purposes I have stated.

169. You are aware that these lands are not allowed to be occupied for pastoral purposes? Pastoral occupants are excluded from town reserves.

170. What good is done by the exclusion of the pastoral occupant till the land is actually sold? In certain cases it is necessary to give commonage to the inhabitants of towns.

171. That is to say, in cases where reserves are near a town, a sort of commonage is granted to the inhabitants? Yes.

172. It is clear that in such cases some advantage is gained by the inhabitants of the town, but I am speaking of reserves generally, where there is no such peculiar right—what is the object in the first place aimed at by the exclusion of pastoral occupants? They are not excluded until the reserves are required for sale.

173. They have the use, but not under the same terms? Just so. There is a regulation by which they get a section at £1 per annum.

174. *By Mr. Moriarty*: Has that ever been acted upon? Yes, to a small extent.

175. *By Mr. Forster*: I will refer in particular to the reserves at Port Curtis. There were some five or six counties marked off in Port Curtis? Only three as settled lands, viz.:—Clinton, Deas Thomson, and Livingstone.

176. What good object was gained by the proclamation of those counties? None at present, as settled lands, but it is necessary for the future.

177. How is it necessary for the future, if no advantage is gained at present? But there will be some present advantage, seeing that the lands are open to lease.

178. How long ago were these counties proclaimed? The arrangement was first announced about four years ago, by a notice, dated 24th January, 1854.

179. You say no good has been done during these four years? Not as regards the purposes for which the reserve was made, and perhaps there may not be for fifty years to come.

180. What was the object then, if now, at the end of four years, no good is gained? It was done in accordance with the arrangements of the Orders in Council.

181. Can you point out any Orders in Council ordering that this district shall be selected from the rest of the Colony as that in which pastoral occupancy shall be restricted? The Orders in Council divide the country into three classes of land.

182. I think you do not correctly state the matter,—they authorise the division of the Colony, but do not make it necessary that one particular spot shall be settled district? I suppose it was imperative under the circumstances.

183. Imperative that there should be this division into five or six counties? Not exactly that, but as the division of the old Colony into classes of lands was imperative, I suppose it was considered necessary by the Government in opening a new district around a large harbour, and where a large city was likely to spring up, to follow the same course.

184. How was it necessary that this large tract of country should be taken out of the pastoral districts and put into the settled, since you yourself admit that after four years no good has been attained by it? No good as settled district. I did not make the arrangement, but the Governor and Executive Council, and my view of it is, that in forming the new district they found it expedient to follow the principle of the first Orders in Council.

185. You admit that it has hitherto been without any advantage to the public? Yes, I admit that, as far as the purpose for which it was intended is concerned, but as the settled districts can now be leased for pastoral purposes, there will be some present advantage.

186. *By Mr. Moriarty*: You say that in opening the new district the Government followed out the course indicated by the Orders in Council? Yes.

187. Can you name any other district in which this has been done? No.

188. Do you remember Leichhardt, Wide Bay, Burnett, and Maranoa,—these are in the same way I believe? No; with the exception of Leichhardt, which belongs to Port Curtis, they form part of the original arrangement for squatting districts, but those districts, from time to time, have been altered and enlarged by proclamation.

189. I think Albert, Lower Darling, Leichhardt, &c., have been proclaimed since the Orders in Council—do you remember in any of those districts, with the exception of Port Curtis, whether large reserves in the counties have been made? The Albert is the only district which has been specially dealt with, by a proclamation dated 12th April 1851, (it being then unnamed,) it was embraced in the Lower Darling District, and by a further proclamation, dated 1st November, 1851, the Lower Darling was divided into two districts, the Albert and the Lower Darling. No such arrangements for settled districts as those for Port Curtis have been made in any of the old districts; but, from time to time, large reserves have been announced—for instance, that along the whole of the north bank of the Murray.

190. Port Curtis lies to the north of Wide Bay? Yes. I cannot charge my memory that any particular reasons were given by the Government for this Port Curtis arrangement; it was a matter upon which we were not consulted.

191. Have you ever heard an explanation? Not from the Government, that I remember.

192. *By Mr. Forster*: You admit, I think, that no good has hitherto arisen from it, and therefore that the pastoral occupancy of this country has been restricted and placed under difficulty, without any corresponding advantage? No. There are arrangements for its occupation under annual lease.

193. Why should the squatters in this district have been placed under particular difficulties, under which squatters still nearer Sydney have not been placed? But the settled lands near Sydney and elsewhere are leased under similar regulations.

194. Do you not think that on the face of it there is some injustice? I do not see any J. Thompson, Esq.
injustice. The reservation of settled districts is absolutely necessary for the future, so that the land near the coast shall not in after times be locked up from sale.
195. Would not that apply to land in all parts of the country? Certainly not. The coast 28 May, 1858.
country will be the first to be occupied, whilst parts of the interior will never be sold at all, unless at a very, very low upset price.
196. Has there been so much land sold at Port Curtis as at Wide Bay, for instance—in which district has there been the most sold? At Wide Bay, I believe.
197. Have all the applications for the sale of land at Wide Bay been attended to, or have not a great number been refused? I think some have been refused, and some have been delayed, in consequence of the want of a general survey.
198. Then, if your reasoning applies to Port Curtis, does it not more strongly apply to Wide Bay, where, on your own shewing, it is evident there was a greater demand for land? I am not reasoning upon the matter. Wide Bay was occupied long before Port Curtis, and consequently there would be a larger population and a greater demand for land.
199. I want to know whether you think the arrangement a reasonable or good one? I think the Port Curtis arrangement a proper one.
200. If a proper one, would it not be still more proper in the case of Wide Bay or the Clarence? No; but large reserves have been made at Wide Bay and the Clarence, besides the three miles along the coast ———.
201. There are three miles along the coast everywhere. If this arrangement were necessary or proper at Port Curtis, was it not *a fortiori* more proper and necessary nearer Sydney, at Wide Bay, the Clarence, and other similar places? I answer that in the affirmative if we look only to the present; but the harbour of Port Curtis is so commodious as to lead to the conclusion that the town of Gladstone may become the capital of the North, and consequently it was necessary to make arrangements for the future.
202. *By Mr. Moriarty*: You have given an opinion that the arrangement at Port Curtis has been a proper one; have you noticed the effect it has had upon the occupation of the country—have you noticed whether it has brought the land into more productive use than the country nearer? Of course the settled district at Port Curtis may not be entirely occupied for pastoral purposes.
203. *By Mr. Forster*: Do you think it has advanced the settlement of the country in any way? I do not think it has; although the prospective advantages may have induced more people to settle than under other circumstances.
204. Or benefited agriculture in the least? Of course not at the present moment.
205. What was the object of this reserve of all the sea-coast? I really cannot at once explain; but I think the necessity for it is obvious.
206. Do you think it has been productive of any benefit? It has.
207. Can you mention any instance of advantage? We have been able to see it.
208. There is no squatting occupation allowed on it? Yes; the squatters who have possession hold possession under lease.
209. Of this three miles along the coast? Yes; they can lease it.
210. Are they allowed leases? Yes.
211. Have you never known instances of leases having been refused at Wide Bay? Yes, they have been refused, I believe.
212. *By Mr. Moriarty*: Have you ever known an instance of a lease having been given to a squatter? When Mr. Forster mentioned leases, I understood him to refer to annual leases.
213. Any squatting leases within these three miles? Yes; annual leases for pastoral purposes.
214. *By Mr. Forster*: You said this had been attended with benefit? The exclusion of this land from the eight and fourteen years' leases has been beneficial.
215. Has it increased the revenue? Yes, it has increased the revenue, because we have sold some of it, and got a large price for the land.
216. Did the granting it in annual instead of in fourteen years' leases tend to its being sold more quickly? Yes, certainly; we had comparatively little difficulty in cancelling the annual leases and selling it—no such difficulty as we should have had if it had been under a fourteen years' lease.
217. Then, if I understand you rightly, you say that the system of annual leases is more beneficial, because it gives a greater facility to the sale of lands? Yes, that is the object of it.
218. Does not that argument apply to all the squatting districts from beginning to end? No; because some parts of the squatting districts can never be appropriated to anything but grazing.
219. With regard to the whole system of annual leases—do you not consider it better than the system of eight and fourteen years' leases? No, I do not think it is.
220. You approve of eight and fourteen years' leases? Yes, for some parts of the Colony.
221. Not for three miles along the coast? Just so.
222. What peculiarity is there in this three miles along the coast which renders it more easy to sell lands there than in other parts of the Colony? The peculiarity is, that they have the advantage of sea carriage; and the brush land on the numerous rivers is very fertile.
223. Are there not large tracts included in these three miles reserves that will not be saleable for the next fifty years? Yes, there may be.
224. Why should not these have been included in fourteen years' leases as well as the other? It would be impossible to pick them out.
225. *By Mr. Moriarty*: You say you have not been able to sell lands under eight and fourteen years' leases, except out of reserves? Yes, of course.
226. Has that practice been followed? Yes, whenever the reserves were wanted for sale.
227. Have you ever experienced any practical difficulty in the sale of such lands consequently upon

- J. Thompson, Esq.
28 May, 1853.
- upon their not being reserves? Yes; we have found it necessary to increase the reserves and that has sometimes been attended with difficulty.
228. Have you ever heard of any cases, in which land to a very great extent has been sold prior to the reservation having been made at all? I cannot call to mind any such case.
229. Are you not acquainted with the town of Armidale? Yes.
230. Do you know the date of the reservation of the town of Armidale? No.
231. You are not aware of the fact, that the greater part of the town was sold before the land was reserved at all from squatting lease? Before the reserve was announced?
232. Announced to the person in possession? Announced in the *Gazette*?
233. Or in any other shape? That might be; but we did not communicate with individuals about the making of reserves.
234. The same thing may have existed at Gundagai, Albury, and various other towns in the Colony? Yes; the lands were sold before the reserves were announced. In early days, the Surveyor General had a sort of commission, and made reserves wherever he thought proper, without asking anybody about it.
235. Without informing the public? Without informing the public, until that recent system of announcing was resorted to.
236. As to the reservation of lands, have you ever heard of any marked instances of the settlement of the country having been impeded by premature reservation? No, I have not; I cannot call to mind any.
237. Have you any objection to tell us the nature of your official duties? I am engaged in reporting upon various subjects—difficult subjects, I may say.
238. The routine business of the office? Yes; but I am not engaged in the general business.
239. By whom are the subjects referred to you determined? By the Surveyor General himself; I refuse to receive any instructions, unless endorsed by the Surveyor General.
240. I think, for some short time, you had control of the land arrangements beyond the boundaries? Yes, for about two months.
241. State the circumstances under which you resigned the control? I did not resign the control. The Chief Clerk considered—and with reason—that there was a great deal of routine and financial business which ought to be in his hands; and I only undertook the duties for a short time, until the offices could be amalgamated.
242. Were you consulted as to the arrangement—did you abandon that charge in consequence of your own opinion being that the duty of administering the lands should be in the Chief Clerk's hands? It was my opinion, to a certain extent, and, consequently, I did not object. I was consulted. A Board, consisting of myself, the Chief Draftsman, and the Chief Clerk, was formed for the purpose of determining in what manner the amalgamation of the two departments should be effected.
243. I think I understood you to say, at your last examination, that the Surveyor General or the Deputy Surveyor General should be in the field? Yes.
244. You, yourself, were employed in the field for some period? Yes.
245. Will you state when that was? Two years ago.
246. Since the date of your last inspection, has the Surveyor General or Deputy Surveyor General ever been in the field? No.
247. I think I understood you to say, with regard to the position of the Chief Clerk, that he is an executive and not an administrative officer? Yes.
248. As to the waste lands, does not the transfer of the duties you spoke of just now involve an alteration in his position? I did not consider when I had those duties to perform that I was administering that office; it was Colonel Barney who continued to control it entirely.
249. Will you have the goodness to tell us the difference between the administrative and executive function, as practically understood in the Survey Department at the present time? I should say that the administrative officer determines what should be done, and the executive officer suggests what should be done, and carries out certain matters of routine.
250. Is that the actual practice? Yes, I think that is the actual practice; it is as regards myself.
251. There is some arrangement in existence for supervision by means of inspecting surveyors? Yes; there are four of them.
252. Is the whole territory divided into four sections? Yes, into four districts.
253. Do you think it possible any officer in such a position can supervise, with any degree of efficiency, surveyors spread over a country such an enormous distance apart? No, I do not think it possible.
254. Do you think any good has resulted from the arrangement, or do you not think the effect of it has been to withdraw the services of these four officers from the duty in which they had previously been engaged? I expressed my opinion, in answer to Dr. Aldcorn's question, that there should be inspectors or district surveyors.
255. What control do these district surveyors exercise over their subordinates or brother officers in the field? They are supposed to see that they do their work properly, and that they are not idle. These district surveyors are also charged with topographical work.
256. Do the subordinate officers receive their instructions through the district surveyors? I do not think that the arrangement is quite complete; it has only just begun to come into operation.
257. How long? About a year; it is not a year, I believe, since the officers were appointed.
258. And it is still undetermined whether these officers shall control their subordinates or not? Certainly they should control them, but I think it is not yet determined whether the correspondence should pass through their hands or not; that will in a great measure depend upon the establishment or not of district officers. I think all the correspondence should come direct to the Surveyor General.
259. Do you not think it would materially interfere with the proper supervision of these officers, if they were not made acquainted with the duties required by the Surveyor General?
Yes;

- Yes; they ought to be made acquainted with the duties; that was provided for in their instructions. J. Thompson, Esq.
260. Practically is it so? I cannot say, for these things do not come under my review.
261. Do you know what the present policy of the Government is with reference to the survey of the squatting boundaries—whether anything has been done about it? Nothing has been done, or rather nothing is doing. 28 May, 1858.
262. Do you know what is the present declared intention of the Government? I do not; but it must be done—I mean the runs must be surveyed.
263. Do you know whether anything has been done for the last five or six years, in attempting to accomplish that object? Not so long as that, but I think it is four or five years since Mr. Townsend sent in his survey of the runs
264. Do you know whether Mr. Townsend's surveys were—the majority of them—mere sketches? They were absolutely surveys, or the result of absolute inspection.
265. Was not the country in which Mr. Townsend surveyed peculiarly favorable to the making of sketches? It was a very hilly country.
266. The country up the Murrumbidgee and Murray? Yes. He did not go into the lower country; he has not surveyed any runs below the mountains. There were descriptions made out for the back blocks in the low country, but that was not the result of survey.
267. That was a mere sketch? Not exactly; the features which enabled Mr. Townsend to prepare a diagram from which to draw out descriptions had been carefully surveyed.
268. The last surveys attempted by Mr. Townsend were five or six years ago? As I said before, not so long ago, I think.
269. You cannot tell us whether it is the declared intention of the Government to have the boundaries surveyed or not according to the existing instructions of the Survey Office? Those instructions have been allowed to stand over, and nothing has been done under them lately; they have never been revoked.
270. They are in existence at the present time? Yes, I believe so.

TUESDAY, 1 JUNE, 1858.

Present:—

MR. ALDCORN,
MR. FORSTER,

MR. SCOTT,
MR. WHITE.

G. B. WHITE, Esq., IN THE CHAIR.

William Shone, Esq., called in and examined:—

1. *By the Chairman:* You are a surveyor, in the Surveyor General's Department? Yes. Wm. Shone, Esq.
2. You were appointed from England, I believe? Yes, in 1841, by Lord John Russell, then Secretary of State for the Colonies.
3. You were examined before the Commissioners on the Survey Department in July, 1855? 1 June, 1858.
Yes.
4. You were then stationed in the Illawarra district? Yes.
5. You have had experience in railways, I believe? Yes.
6. Both in England and in this country? Yes. I may remark, with reference to the evidence given before the Board, that I was hurried back to the country directly after I had given my evidence, and had not an opportunity of revising it before it was printed, and, therefore, there may be many things that required correction.
7. At the time of your appointment in England, did you understand that there were any arrangements existing as to the grades of officers of the service? When I received my appointment as assistant surveyor, I gave up a good appointment upon a railway in England. Sir George Gipps had written home to say there was a great demand for surveyors in the Colony. Land was then selling at 12s. an acre, but upon my arrival the price was raised to 20s., and sales had fallen off proportionally. Seven or eight surveyors were appointed at home, and when we arrived the Government had a difficulty to know what to do with us. Everything was disarranged in consequence of the falling off in the demand for land. In the first instance I was sent up to the Clarence, and was given to understand that when I went up there the Messrs. Wilson, who had a contract for surveying that river, would give up their equipment to me. I found, however, that there was no regulation to that effect, and the Messrs. Wilson refused to give up the equipment. Ultimately the equipment was valued by Major Oakes, the Commissioner of the river, but at so high a rate that the Government refused to accept the valuation; consequently I was unable to fulfil my instructions, and the difficulty of communication was so great that it was some time before anything could be done; but I was not to be blamed for that.
8. There seems then to have been no system of arrangement to put the officers into their districts? No system at all. I believe the late Surveyor General, Sir Thomas Mitchell, knew how I should be situated; but Sir George Gipps sent one surveyor here and another there, to dispose of them at the time. Of course, as I had just arrived from England, I expected everything would be all right, but I found it very different.
9. A short time after you had been in the service, did you not hear that there were rules and regulations for governing and controlling the service, which had been made by the Secretary of State? My appointment stated that I was appointed an assistant surveyor for the Colony of New South Wales, at a salary commencing at £200 a year, to rise at the usual rate to the maximum salary of an assistant surveyor, which was then £300 a year. In the month of February, 1844, after my return from the Clarence, Sir George Gipps thought

- Wm. Shone, Esq.
1 June, 1858.
- thought proper to make certain alterations in the department, which materially affected my salary, that is, he allowed some of the surveyors one-third of their pay, and instead of getting £220 a year, I got £73 6s. 8d a year for better than two years and a half.
10. Did you never hear that, in 1828, rules and regulations for the conduct of the service had been received in the Colony, by which it was laid down that the department was to consist of grades? I was not aware of that. I did not, in fact, make it my business to look into the matter; but I understood that surveyors were to rise in the service by seniority.
 11. You were given to understand that? I never got anything official in the matter, but I always understood it was the case before I left home.
 12. Which do you consider to be the chief appointment, that of a surveyor, or that of a draftsman? The duties of a surveyor in the field are much more onerous and responsible than those of any draftsman in an office.
 13. In the profession in England, which of the two is considered the superior officer? The man in the field, decidedly.
 14. Have you ever found during your experience in this Colony, that when you had to account for any survey you have made in the bush, you have had at head quarters an individual or individuals who have understood the work you have had to perform? I think parties in the office interfered too much with parties in the bush in the way of their duties.
 15. Do you think the field surveyors ever had a representative at head quarters? I think not.
 16. In your experience, did the Deputy Surveyor General ever visit you in the field? In one instance he came up the Clarence. Sir Thomas Mitchell sent him up; and his report is now extant in the office, with respect to the state of the survey equipment,—there were lockless pistols, carts without wheels or tires. He saw this equipment, and wrote to say it was utterly impossible for us to do anything. That was the only occasion on which I saw him in the field. On one occasion I saw him on the road to Brisbane Water; but he never came to me, or inspected the work in any way.
 17. Do you not consider it necessary for the efficiency of the service that the Surveyor General or Deputy Surveyor General should always be in the field? I think so; to visit the officers now and again.
 18. Did you never hear in the department that the office of Deputy Surveyor General was instituted for that special purpose? I always thought it was, at least, except during the absence of the Surveyor General, when the Deputy Surveyor General was supposed to take his place in the office.
 19. Did you ever feel any dissatisfaction yourself from having your reports to head quarters noted or remarked upon by men who had never been in the field? Yes.
 20. You have yourself nothing whatever to do with the sale of lands in the district where you are employed? No, nothing whatever. There were Commissioners appointed by the Government for the sale of land. I may remark that in the Illawarra District I have always kept the supply of land in excess of the demand. The system I have adopted has been to lay out two or three thousand acres in any available locality, independently of any application, for I know a great deal of time is lost in going from one locality to another to lay out small farms.
 21. The office of Commissioner is very profitable, is it not? It was very profitable some time ago, but now the land in that district is in a great measure disposed of, and consequently it is not so profitable as it was.
 22. The Commissioners get a per centage? Yes, a very large per centage.
 23. Do you know what the per centage is? I think five per cent. upon sales under £2,500, and two-and-a-half per cent. for anything above that.
 24. Were the parties who hold this particular appointment appointed because of their fitness for the duties they had to perform? I really cannot say as to that. I should have thought the surveyors would perhaps have been the proper persons; but still I could not speak as to any unfitness on the part of those appointed.
 25. Was it made more an office of patronage than an office of utility? I think it is an office of patronage altogether. In fact the Commissioners realise a great deal more than the surveyors who have surveyed the land, three times over. I may remark, with reference to this question, that Clerks of Benches have latterly been appointed to act as agents for the sale of land.
 26. If any person went to the office of the Commissioner for the purpose of getting information, do you think he would be able to give the information that might be required? Decidedly not, for I have had frequent instances under my own notice of the Commissioner sending for information to the surveyor.
 27. These Commissioners could not point out the boundaries of the land? They are not at all acquainted with the matter.
 28. Have you had anything to do with licensed surveyors in your neighbourhood? No.
 29. You have never been employed under the license system? No, excepting for two or three years, when, as I have stated, I was employed on one-third of my pay, which I considered a breach of faith on the part of the Colonial Government, with reference to my appointment at home by Lord John Russell.
 30. Do you think any faith has been kept with any officers of the service who received appointments at home? I think not. I gave up a good appointment, with a prospect of advancement, to come out here. But I was told we must succumb to the circumstances of the times.
 31. In making the officers succumb to the circumstances of the times, did not the weight fall upon the senior men in the department, and not upon the juniors, who were retained on full salaries, while the older officers were selected to try experiments upon? In fact there was no system. Some three or four officers were maintained on full salaries.
 32. Were not these three or four officers employed about Sydney? In one or two instances I think they were.

33. What is your general opinion of the license system as it now exists? I do not think it is a very desirable system. I do not think the same control or surveillance can be exercised over the department that might be if it were properly constituted with salaried officers. Wm. Shone, Esq.
34. Have you examined the scale of charges given to licensed officers? I know what the scale of charges was when I was a licensed surveyor, but I believe they have been raised since. I do not know what they now are. 1 June, 1858.
35. In looking over the return of the amounts received by licensed surveyors, I find that one—Mr. Mann—received about £1,700 in one year, while others did not receive above £400? I have heard of Mr. Mann making £1,600 or £1,700 in a year. It depends a great deal upon the country. In Illawarra a man would not earn his salt, while in other parts of the Colony, if it were a good level open part of the country, he would make a good living; so that a scale could not be carried into effect generally.
36. You think the scale should be fixed in each district, according to the character of the country? In a country like this it is necessary, that is provided the system of license surveying were adopted.
37. I see from the return here, that the amount paid to Mr. Mann, from the 1st July to the 31st December, was £1,327 18s. 3d., and from the 1st of January to the 30th June, 1855, it was £889, amounting together to about £2,200 paid to that officer? I have understood Mr. Mann had earned about that sum, but he would not have realized that amount if he had been in a brush country.
38. Would he have realized one-third of it? Not one-fourth. I think a quarter of a mile in a brush country like Illawarra is as difficult to survey as three miles in an open country.
39. The highest salary which a senior surveyor could receive, according to the rules of the service, was £400 a year? Yes, according to the old system.
40. And when they had arrived at that position, or belonged to the staff of the office, these men were generally sent upon the most difficult feature surveys—in extending the lines of civilization? Yes.
41. Having first surveyed all the features—the roads, rivers, and ranges of the country, that the licensed surveyor had afterwards to survey? Yes.
42. You say you have had nothing to do with the license system yourself; have you not heard that there have been many complaints of the work professed to have been done by licensed surveyors never having been done at all? Yes, frequently.
43. There is no supervising officer to see that these things are done? I believe district surveyors have been recently appointed for the purpose of supervising the licensed surveyors.
44. You refer to the system which is just being commenced? They are initiating the system I believe.
45. You mean the system that was recommended by the Commissioners' Report? Yes.
46. You have read the Report I suppose? Yes; but I believe the Commissioners did not recommend the adoption of the license system.
47. Their recommendation is contained in page 10, paragraph 3? My opinion with reference to that is given in answer to question 1018. I think the proper system to adopt would be, to have the country divided into districts, in each of which there should be an inspecting surveyor, who should supervise the work of the surveyors employed under him, and that everything respecting the business in the district should be submitted to the senior officer. This I think would prevent the exercise of too much control at head quarters. At present, I think, there is too much correspondence with the head office, which tends to obstruct the business. If proper officers were appointed to supervise, and look after the works of the district, of course, it stands to reason that he would be better acquainted with the various local wants of the district entrusted to him than parties at head quarters. If these district surveyors had proper officers under them, I think this system would work remarkably well, especially if there were a Board appointed in Sydney to which they could refer; and the present office might be kept as a record office. A system of that kind, or some modification of it, would, I think, be very desirable, and would work well. I think, certainly, the senior surveyors, or district surveyors, if their districts were not too large, shou'd know the local wants of that district, and that they are the parties who should be applied to for any information upon the subject of land.
48. A very great portion of your time has been taken up with duties that do not properly belong to a surveyor—such as drafting and writing letters? I think an immense deal of duty falls upon a surveyor which is not properly his, which indeed more properly belongs to an engineer than to a surveyor. Every engineer is supposed to be a surveyor; but every surveyor is not supposed to be an engineer, and it is preposterous to suppose that any man who can lay out a square block of land and survey features, will be able to form roads, and make improvements in rivers, and other engineering matters which require a life of study and practice.
49. There are even branches in engineering; one may be an excellent engineer in one branch of the profession but not in another? Yes. With reference to to this matter, I may state, that when I came out Sir Thomas Mitchell appointed me to survey certain lines of road for a railway, as having been employed, under Stephenson, on the Manchester and Leeds and other railways. I did not profess to be an experienced civil engineer, although I knew something of the duties. I think one great mistake that has been made in the office has arisen from the supposition that a man who can lay out a square block of land can do anything.
50. Very many of the men who have been employed about that department have been educated in it, have they not? Yes.
51. And have received salaries during the time they have been learning their profession? Yes. I was bound in the first instance to a civil engineer, and previous to being engaged on railways in England, was engaged on the survey of the Shannon, under Sir John Burgoyne, R.E., and Colonel Harry Jones, R.E., during the years 1836, 37, and 38. I gave satisfac-

Wm. Shone,
Esq.
1 June, 1853.

tion then, and have always given satisfaction—of course I was a very junior officer at that time—and of late years, when I found my health failing, and that I was unable to bear the physical hardships I had previously undergone—feeling debilitated and suffering a great deal from the knocking about to which I had been subjected, I wished to retire from the service. I wrote to Colonel Barney on the subject, and the consequence was that I was placed in a lower appointment. I had received £456 a year for three or four years previously, but lately I have been appointed a first class surveyor, at a reduced salary of £400. The other surveyors, Messrs. Darke and Burrowes, although only assistant surveyors, retaining, I believe, their old salaries of £456.

52. You are a surveyor? Yes; but they, as assistant surveyors, have higher salaries than myself.

53. The Secretary of State's despatch on this matter has been entirely set aside? I have had no official correspondence whatever with Colonel Barney on the subject. I received a private note, stating that there were certain alterations to be made in the department,—that there were four district surveyors to be appointed for the whole Colony of New South Wales, who should superintend the work of all the licensed surveyors in the field, and I was offered one of these appointments. I thought, in the first place, independently of the state of my health, that it would be utterly impossible for one district surveyor to supervise one-fourth part of New South Wales; so I wrote a private note in answer to this private communication, that, as Colonel Barney was previously aware, it was my wish to leave the service on account of my health, as I had not felt able to undergo the amount of physical hardship to be incurred in laying out lands for sale, and other surveys, engineering, &c., connected with the duties of my office. It does not require very great knowledge to lay out blocks of land for sale, but it requires physical hard work, and when I found I could not work as hard as I could wish, I desired to retire. My salary was reduced, and I consider I was degraded from the appointment I ought to have held. If I was returned as fit for work, why was I not returned in my proper position? I was picked out from other surveyors and put on this lower salary, although, apparently it was a higher grade, and if the question of my retirement were ultimately determined upon, this reduction in my salary would affect the amount of my retiring allowance.

54. Do you not think the frequent absence of Sir Thomas Mitchell from his department had a material effect upon its efficiency? I think it must have had, for I think during his absence it came more under the control of the office.

55. It then fell under the control of the Deputy Surveyor General? Yes.

56. The Surveyor General and this officer I think did not work very well together? No; in fact it was the office against the field, and yet not exactly that, for if a party had friends at the office his interests would be advanced most materially, but if enemies were made of parties in office, of course his interests would suffer.

57. Did you never hear it remarked by old officers, that when the Surveyor General was in the office, John Thompson was Surveyor General, but when the Deputy Surveyor General was, Mr. Halloran was Surveyor General? Yes, I have frequently heard that remark.

58. Did you ever see anything to lead you to think that yourself? I have always thought the gentlemen in the office have had too much control over the old surveyors in the field.

59. You have never had any draftsman or other person to assist you in your duties? No.

60. Do you not think if you had had a draftsman you could have done twice as much work as a surveyor? Yes; I think so; a great deal of time is lost in drafting. If there were any large plans to be plotted, perhaps it would be better for the surveyor to plot them himself; but I think, generally speaking, a good deal of time is lost in writing descriptions, and in plotting and drawing these small plans.

61. Do you think the class of men who are now acting as licensed surveyors are equal in education to the class appointed from home, or generally appointed on the staff of the service? I cannot speak positively as to that. I should not like to say, but I should think not. I do not know much of them; in fact, I have met very few besides Mr. Mann.

62. Two of the examining officers of the service are draftsmen? Yes, I believe so. I have heard lately that Mr. M'Lean is one of the examining officers. I obtained leave to go to England in 1852, on account of my health, and on my return I was appointed one of the examiners, with Mr. Burrowes.

63. Mr. M'Lean and Mr. Thompson are the examining officers? Yes.

64. And neither of these officers have been in the field in New South Wales? Never, that I am aware of.

65. Has it been customary to examine every officer who has joined the service of late, whether licensed or staff surveyor? A certain number of officers have of late years been appointed on the permanent staff of the department. I am not aware whether they were examined, but I believe licensed surveyors are examined; still, I think their examination is not sufficient.

66. Did you ever know a staff surveyor to be appointed without examination at all? There may have been parties appointed, but I cannot call them to remembrance.

67. Have you ever during the time you have been in the service had parties sent to you to learn the business of their profession? On one occasion a gentleman was sent to me, in order that I might show him the way of laying out these allotments for sale—Mr. Bennett, who is now engaged in Captain Martindale's department. He was with me for a short time, just to see the system of laying out these portions of land.

68. Do you not think it is necessary before parties are employed in the field that they shall have some colonial experience? Yes, some slight colonial experience, as in the case of the gentleman I referred to; but he is an experienced engineer and surveyor.

69. What instrument have you worked with? I have done the principal portion of my field duties with the circumferenter, because the country is so thickly wooded that it is almost impossible use the theodolite.

70. Have you found much local attraction there? Not a great deal.
71. You could always close the work by right angle lines? Yes; I check the work frequently.
72. The whole of the country is a dense brush, I believe:—do you not think the circumferenter is the best instrument you could have in that case? I really do think so; it is impossible to use the theodolite extensively in this country, except in fixing points, and for trigonometrical purposes.
73. Do you not think it possible that a licensed surveyor getting a map of a district on the two-inch scale could do his work, or a great deal of it, without doing anything except on paper? A man may send in a plan without having ever marked the lines at all. I do not think there is any check upon that, and it would be difficult to establish a sufficient check even with the district surveyors, unless the districts are very much circumscribed; it would be preposterous to attempt it if the whole of New South Wales were divided into but four districts.
74. The district surveyor could say to the licensed surveyor—"You have measured such and such blocks, and I should like to go round them with you, sir"? Yes. The district surveyor should have an office established in the district, and he should be a sort of referee in all matters having reference to lands in the district; he should also occasionally visit the licensed surveyors, and see that they were doing their duty in a proper and efficient manner.
75. Have you found the forms of the office very much multiplied during the last few years? Yes. I think there might be a great simplification of the whole business, as I previously stated, by the appointment of district surveyors, and by leaving a great deal to their control,—perhaps having a Board in Sydney to apply to in the event of any difficult case arising.
76. Do you not think it has been the object of one individual to advance the clerical branch of the establishment, and to make every other portion of the department subordinate to that? Such, I believe, is the general impression. I think these district surveyors should be a sort of Surveyor General for the districts they reside in, and if they are men of probity and honesty, I think the work will be much more efficiently and quickly performed than at present, as such frequent communication with head-quarters is necessary. I would add, that in many instances surveyors are called upon to do duties at present that are quite foreign to the business of a survey office; matters that would more properly come under the control of a civil engineer's department are thrown upon the Survey Department, and consequently there is a great deal of time and labor lost. There is not a proper division of labor, and duties are imposed upon surveyors which would require an infinite deal of attention and study to cope with in a proper way.
77. The Surveyor General, in his examination by the Commissioners, maintains that the system in operation is not of his formation, or such as meets his approval—do you not think a gentleman holding the high position of Surveyor General should have the whole control of the service? Certainly.
78. You were called upon by the Commissioners to give the evidence which was given by you before them? Yes. I was in Sydney, under the circumstances referred to by Sir Thomas Mitchell in his answer to question 1106, and he, I believe, wished that I should be examined by them.
79. Are you aware that any officers of the service, who knew something about the matters under the consideration of the Board, presented themselves, and were refused to be examined? I did hear so.
80. Have you ever found, in your connection with the office, that you had considerable difficulty and trouble with your equipment? Yes, frequently.
81. Your duties have often been delayed? Yes, by the difficulty of getting tents and equipment in some instances.
82. Are you aware that some of the officers of the service, when Mr. Thompson, the Chief Draftsman of the office, was left in charge of the office, refused to take instructions from him? I was not aware of that. It might have occurred when Sir Thomas Mitchell was in England. It may have been Mr. Townsend.
83. You are aware that the clerical and drafting branches of the service were always considered by the surveyors as subordinate to the surveying branch? They were always considered junior to the field branch when I came out from home, but the Chief Clerk considered himself senior, I believe. I do not know what has been done about seniority.
84. Are you aware that in the service of the Royal Engineers the draftsmen are only regarded as staff officers, and never look forward to anything like promotion, although they get better salaries? I am perfectly aware of it. It must be patent to any gentlemen that have experience, that no work is more severe than that of a surveyor in the bush, if he does his duty in a proper and efficient manner.
85. *By Mr. Scott:* Can you state how many acres you have surveyed annually, on the average, in round numbers? I think it is stated in the Appendix to the Report. I find it is 3,019 in six months; but I may state that the survey of 1,000 acres in the Illawarra District is more difficult and arduous than the survey of 5,000 or 10,000 in an open country.
86. Is the number you have stated the result of one year, or of the average? That in the return is for six months,—say about six or seven thousand a year.
87. On the average? Yes. I may mention that, independently of surveying lands for sale, the surveyor performs many other duties, which do not properly belong to him, as the engineering survey of rivers, the laying out of roads and railways, the survey of disputed boundaries, and a number of other matters that are not mentioned in these returns. I have always endeavoured during the time I have been in Illawarra to keep the supply of land in excess of the demand, and at the present time there are some seven or eight thousand acres of land which have not been as yet submitted for sale. These lands sell by degrees.
88. Taking into consideration your own salary, the pay of the men employed by you, and the various contingent expenses of the survey, have you made any calculation of the cost per acre of the survey of the brush land upon which you have generally been engaged? No, I have

Wm. Shone,
Esq.

1 June, 1858.

have not. I have never looked into that particularly. The work of the licensed surveyor is almost exclusively confined to the laying out of lands for sale; but the surveyors on the permanent staff of the establishment have hitherto been employed in various kinds of duties connected with matters that a survey department should not have to do with, but which belong properly to engineering. With respect to the laying out lands for sale in the City of Sydney, a surveyor could send in no return, no average whatever, as there are no lands to sell. In other places where certain improvements are required, such as improvements of rivers, surveys of railways, and so on, a return would give no idea of the duty performed. I was engaged a year and a half on railway duty, and, of course, I could make no return during that time of acreage surveyed.

89. Which system do you consider the best—the salary, the contract, or the license system—provided, of course, the surveyors in each case to be equally good and zealous? I think the licensed surveyor, in a good open country, could realize more than any salaried surveyor under Government. At present the highest pay, that of a district surveyor, is £500 a year, and, from what the Chairman has stated, Mr. Mann has made £2,000 a year. I think, in a good district, a licensed surveyor could realize a great deal more than the highest salary.

90. That is not my question—I wish to know which is the best for the public to adopt. Have you considered any plan or system for the survey of lands for sale, which you would recommend for the public adoption? Yes; I have already stated, that if the country were divided into districts, in each of which there were a surveyor, with a properly constituted staff, and that if these districts were not too large to prevent the efficient surveillance of the district surveyor, the plan would be much more effective, and would work better than the present.

91. You think that system would be found to be cheaper and more efficient than the present? Yes, particularly if the surveyors are confined to the surveying and laying out of lands for sale. They should not be taken away to perform other duties foreign to their office, or be required to do work connected with civil engineering.

92. Your system is for the better and cheaper management of the departmental, as well as the field work? Yes. I would place the district surveyors in the centre of their districts, so that they could see the work of the different surveyors. They should have the land cut up into desirable portions of fifty, sixty, or a hundred acres, and then any party wishing to have land, could go to the surveyor's office, and immediately upon paying his money could get his land.

93. Can you state why that would be cheaper than the present system? I think, under the present system, the licensed surveyors are allowed to take private work, and there is not a proper control over their movements in any way.

94. Supposing the officers were alike efficient, did their duty, and kept to their work, how would your system be cheaper and better than the license system? Because I think a greater amount of control could be exercised over a staff than a licensed surveyor, because the licensed surveyor can do his work when he thinks fit; and if he has private work he is likely to neglect his public work, which he can do at any time.

95. He is only paid for the work he does? Yes.

96. That, according to this return, is from 6s. 6d. to 9s. 3d. an acre,—would the cost be much less under your system? I think it would, decidedly, if what I state was carried out properly, and their duty was confined to the survey of land for sale merely. I think the land might be surveyed for a few shillings an acre.

97. Will you mention how many shillings an acre you think it would cost if your plan were adopted? I should not like to say positively, but, taking the country as a whole, I think half-a-crown an acre would be quite sufficient.

98. For small and large lots? Taking the average. I have not studied the subject so closely as to give a positive opinion.

99. Are you aware what the survey of land in America costs? I believe it is very low in America; I do not believe it is more than nine-pence an acre.

100. Can you state why it should cost us half-a-crown, if in America it can be done for nine-pence? The only reason I can suppose is, that perhaps the physical features of the country are different—the country may not be so thickly wooded; there are more open savannahs and prairies there than here.

101. You think there is no other reason than the difference in the character of the country? I think that may be the principal reason. I do not think any comparison can be drawn between the cost of the surveys performed by the old salaried surveyors and those by the licensed surveyors, because the old officers were so much engaged in feature surveys. Any comparison between their work and that of the licensed surveyors would be preposterous. Perhaps, too, in America, in the first instance, the survey of the geographical features might have cost a great deal of money.

102. You are aware that we wish to lower the price of land in this Colony, but we cannot do so, so long as the cost of survey is from 6s. 6d. to 9s. an acre? The only system by which the survey of the country can be cheaply performed, is to survey it in rectangular lines, and wherever there are natural features, as a river or a stream of water, make those the boundaries; to survey the good and bad lands together, the bad in larger portions than the good, for the good will give the indifferent land a relative value when the other is taken up. By this means there will not be so much of the time of the surveyor occupied as at present in running about, and I think it could be done very cheaply.

103. Would the appointment of these district surveyors, as you suggest, cause any decrease in the expenditure for the Sydney departmental head quarters, in the shape of clerks? I think so, decidedly. I think if a proper system be adopted, it will do away with the necessity of having so many clerks and draftsmen at the office in Sydney, which should be merely a record office.

104. I suppose you have entered into no calculation as to the number of clerks that might be dispensed

dispensed with, and the consequential saving to the country? No; I merely throw it out as a suggestion; whether the plan would be attended with beneficial results I do not know, but I think if the system I have proposed were carried out it would be beneficial and economical to the public.

Wm. Stone,
Esq.

1 June, 1868.

105. *By Mr. Aldcorn:* Do you not think, if there were a system of district or, rather, of inspecting surveyors established, the inspector should not only supervise the work of the subordinate surveyors, but also consider the rate that should be given for surveying certain lands in the district, seeing that at the present time one uniform rate is paid, which is altogether absurd? I should say so. In point of fact, the district surveyor should be a kind of Deputy Surveyor General of the district; knowing the local wants he could manage all the surveys of the district, and attend to all the details.

106. Do you not admit the general principle, that a man will work more for himself than he will for others. If you have conscientious men to deal with, no doubt they will do their duty; but will not men, in general, do more for themselves than they will for others, and in such cases, where there was proper supervision of the contract work, might it not be adopted with advantage? It might, to a certain extent; if licensed surveyors were employed, they should be kept more under the control of the Government than they are now.

107. Do you not think the objection made to the contract system—that the licensed surveyors do not perform their work—would be removed by having inspecting surveyors to see that they do their work? It is possible it would be if the districts were within reasonable limits, but not while a district comprises one-fourth of New South Wales, certainly.

108. Do you think, in that case, it would be necessary that there should be licensed surveyors in each district, in order that the Government might be able to command their services? I think so; if not, the Government would never be sure of having their work done within the stipulated time.

109. Then, in justice to the licensed surveyors, it would be necessary the Government should always be able to find them employment? Yes; it would not pay a licensed surveyor in a poor district if he only got employment now and again. If there were only isolated applications for small farms, even the scale of fees would not pay them; but in some instances they have a carte blanche to survey wherever they please.

110. Do you think that to give surveyors a carte blanche to survey where and how they please is desirable? I have understood that some licensed surveyors have that privilege of surveying. Of course I should think the Government would not give them authority to do the work unless they considered them well qualified, and men in whom they could put some confidence.

111. Do you not think over such men there should be a proper supervision by a higher officer as an inspector? Yes. I should think so. No doubt among the licensed surveyors there are men of standing and character, over whom such supervision would be unnecessary.

112. Do you not think it would be part of the duty of such an officer to select proper land for surveying? Yes; that I conceive would be one of the duties of the district surveyor, to select lands to be measured for sale.

113. Do you think such an officer should have a district sufficiently large to give him employment without surveying at all? Yes; and he should have an office where all the plans relative to the lands of the district should be deposited, and at which parties might apply for information regarding the lands for sale, or the roads in the district. He should communicate officially with the licensed or field surveyors in his district, and, in case of any difficulty arising, he should, of course, communicate with head quarters.

114. In short, you think these district or inspecting surveyors should be able to give the information and do a great deal of the duty now discharged by the head office here? Yes; and I think the duty which has hitherto devolved on the Commissioners—the sale of land—might be discharged by the district surveyor, as he could give information to the public respecting the land which could not be furnished by the Commissioner.

115. Do you not think this system, under proper supervision, would be cheaper than the old system of salaried surveyors? I could not speak positively upon the subject. I think, however, if the surveyors were conscientious men, it would be just as cheap as any other system.

116. You would have a system of supervision over salaried as well as over licensed surveyors? Yes. No doubt there have been many instances of persons receiving salaries who have not done work in proportion; but I look to a man doing his duty in a conscientious and proper manner.

117. You state, in your evidence given before the Commissioners, that you had great difficulty in finding old lines and old marked trees—was that from want of care in marking, or from the length of time that had elapsed? From the length of time that had elapsed, in some measure, and, in the former days of the Colony, the surveyor, particularly in some of the brush lands, did not take the trouble of marking the back lines. In some instances I have had to run lines four or five miles—the back boundary lines—and have had a good deal of trouble in picking up the marks. If, therefore, a surveyor has to commence in a new country, he has a great deal of labor saved.

118. There have been a great many complaints made, both of old and recent surveys, of the difficulty of finding marks—have you thought of any better plan of marking than that at present adopted? The present system adopted, with regard to the corners, is to have a note on the plan numbered or lettered corresponding with the corner pin (if there is not a corner tree), bearing so many links.

119. Do you think a strong peg of some very hard wood, firmly driven in at each corner, with a number burned on it, would be sufficient? There are many instances where it is very difficult in a broken country to adopt any particular system; for instance, the country may be rocky.

120. Do you think any improvement might be made in the system of marking generally adopted? Not to any very great extent, I think.

- Wm. Shone, Esq.
1 June, 1858.
121. *By the Chairman*: Sir Thomas Mitchell says, in his evidence—"We have several hundred thousand acres open for sale," and Mr. Thompson, when he was examined by the Committee, confirmed that statement,—may not a very great quantity of that land be unavailable, although it may have been measured for sale? Yes.
122. There is a general complaint through the length and breadth of the country that people cannot get land, and yet the head of the service says there are several hundred thousand acres open for sale? There is no population to absorb the land—that is the great point.
123. Why should the surveyors measure land in portions of the country where people will not select it? At the Clarence there are hundreds of thousands of acres of agricultural land; but, suppose three or four surveyors were sent up there to survey lots of from fifty to a hundred acres, where is the population to absorb the land? There was a contract surveyor employed there, who surveyed the whole in parishes, and cut up the land into blocks, and I suppose those are some of the lands referred to by the Surveyor General.
124. *By Dr. Aldcorn*: The land was not cut up into small farms? Not into small farms of fifty or sixty acres.
125. *By the Chairman*: It was stated the other day by Mr. Thompson, in answer to a question of mine, that he could not get competent men, and when asked why, he said, because so many had made their fortunes and retired from the service—are you aware of any who have made their fortunes? I can speak for myself, and I know I have not.
126. Have they opportunities of land jobbing? No. Since I have been in the service I have been offered private jobs, but I have never done any private work at all.
127. Are you not aware that while reductions were being made in the means of field officers, there were augmentations of the salaries of officers in other branches of the service? Yes.
128. You were never instructed to keep field-notes after any particular form? No; I generally kept my field-notes in a sketch form, which was generally adopted on the Shannon survey.
129. There is no system of field-notes established in the department? No. I never had any instructions to keep my notes according to any form.
130. Do you think the journals give the Government any information whatever? I do not think so—that is, information of any value.
131. Do you not think these journals have caused great discontent in the service? I think it is lowering to an old surveyor, or to an experienced and conscientious man in any department of the public service, to be obliged to send in a journal of everything he does.
132. Do you think they originated with a practical man at all? No; but I have invariably sent in my monthly journals, except when hindered from doing so by illness. The surveyors received a circular, stating that if journals were not sent in their pay would be stopped.
133. Do you remember a certain year when the officers' names were left off the list altogether—were not published in the almanac, as they had been previously? No, I do not; but I remember that formerly the surveyors were always senior to the clerical branch of the department.

FRIDAY, 4 JUNE, 1858.

Present:—

MR. FORSTER,
MR. MORIARTY,

MR. PIDDINGTON,
MR. WHITE.

G. B. WHITE, ESQ., IN THE CHAIR.

William Shone, Esq., again called in, and further examined:—

- Wm. Shone, Esq.
4 June, 1858.
1. *By the Chairman*: You have been employed, I believe, in marking lines of road on some occasions? Yes.
2. Did you mark a line of road to Illawarra on any occasion? Yes; from Illawarra to George's River.
3. Has that road been made or cleared, or in any other way been marked, than by marking the trees? Yes.
4. How many miles of that road did you mark,—what is the distance from Sydney of the road you made? I do not know precisely the distance; I did not chain it. To George's River from Bulli Mountains I think it must be about thirty miles. I merely re-marked the trees that had been formerly marked by Mr. Darke, heading the Woronora River.
5. Is that line of road now in use? No; it has not been used much. It is of very little practical use; the distance from Illawarra to Sydney is too great for one day's journey.
6. By whose instructions was that line marked? The late Surveyor General's.
7. Have you any idea of the expense of marking and clearing that road? I do not exactly know what was the expense, but I have heard £7,000 or £8,000, that is the road to Bottle Forest. The road lately cleared heading the Woronora River, is a deviation from the Bottle Forest Road—the direction that Mr. Darke was engaged upon formerly.
8. Did you mark the Peat's Ferry Road? Yes.
9. Has that been cleared? Yes; it was formed by gangs, under the direction of Captain Perry, the late Deputy Surveyor General.
10. At the time you marked it, was there any other northern road in existence? Yes; the road by Wiseman's.
11. Have you ever been to Wiseman's Road? Yes.
12. Could you give the Committee an idea of what that road may have cost the public in making? I cannot say.

13. Are either of those lines much used now? No; I think not. I do not think they are of much practical utility, at least the Illawarra Road is not, because it is all grown up again; it is difficult to find the road from the top of Bulli Mountains to George's River—it is an unfrequented road.
14. What is the nature of the country the Peat's Ferry Road passes through? Generally speaking it is a very poor country.
15. That was never completed? I do not think it was completed, but it was cleared all the way.
16. You connected it, did you not, with the other northern road? Yes; it is connected with the other northern road—for a very short distance, till you get towards Brisbane Water.
17. What is the distance of that road altogether from Sydney, till it connects itself with the other road at Dennis' Dog Kennel? I did not chain the road, but merely marked it. I think it is somewhere about fifty miles from Gosford to Sydney by Peat's Ferry Road, but I cannot speak positively.
18. Have you any idea of the cost per mile of making that road? No; I was not engaged personally in superintending either of those roads.
19. Have you ever been instructed to mark any lines of road through the country, which lines have never been cleared? One or two occupation roads, but no public road.
20. No main road? No main road.
21. What is the distinction between an occupation or parish road and a main road? By an occupation road, I understand a road made for the convenience of settlers in back lots to get to the main roads.
22. The same as a parish road? Not exactly the same as a parish road; a Quarter Sessions road. I have surveyed many parish roads in the district I am now in.
23. Is there any difference in the breadth of these roads? Yes. The Quarter Sessions road is twenty feet wide, which is much too narrow, but in marking out or leaving reserve roads, I generally leave fifty links.
24. Is there any breadth fixed by Act of Parliament, or Act of Council? The Quarter Sessions road is the only road which has the width specified by Act of Council, and twenty feet or thirty links is the width, as well as I can recollect.
25. When you first commenced your duties as surveyor did the Government equip you? In the first instance when I commenced my duties, the Government supplied the surveyors with their equipments, then an alteration was made and there was an allowance of £100 a year made for keeping up the equipment.
26. Do you think £100 a year in your district paid for the wear and tear of that equipment? Yes. Latterly, I think the system adopted was, that if we did not spend the £100 a year, the surplus had to be returned to Government.
27. If you spent more than that amount were you repaid? I cannot say, never having been under this system as regards equipment.
28. Then there was, in fact, no allowance at all—if the account was sent in it was paid, whether more or less? At first, £100 a year was supposed to be sufficient to allow for keeping up the equipment, but afterwards alterations were made.
29. Were there many alterations made as to the equipment of surveyors, and the conveyance of the Commissariat department of the service? A good many alterations.
30. Were you ever consulted on those matters at all? No, I do not remember that I was officially.
31. Have you found any inconvenience during the time you have been in the service from attending upon contractors to get the supplies you required to enable you to carry on your duties? Yes; in some instances there have been delay. I think the best plan to adopt is to give the surveyors a certain sum, and to let them find everything themselves.
32. Has that system been adopted? No, I think not. I mean that a certain money allowance should be made for equipment, forage, rations and so forth—would simplify the matter a good deal.
33. The expenses of a surveyor do not depend entirely upon himself, because the contract in one district for the supply of forage for a horse might be ten shillings while in another it would be only half-a-crown? Yes, therefore the allowance should vary according to the district and the price of forage and provisions there. In the settled districts the expenses would be less than in the unsettled.
34. *By Mr. Forster:* Have you been surveying on the Clarence over the land formerly surveyed under the contract system? Over a small portion of it.
35. Can you give any opinion upon the manner in which it was surveyed? I think the survey is now of very little service for the sale of lands there. The land was divided into parishes and cut up into square blocks, but is of very little practical utility.
36. You think it is of no use to the Colony? It of some little use, as shewing the geographical features, but of no practical value for the sale of land.
37. Do you think the money expended upon it will be compensated by the advantage derived to the country? I doubt it. I do not think there is any advantage to be derived from the cutting up of this land into square blocks. I think it would have been quite as useful, and much less expensive, if the features of the rivers, creeks, and ranges, had been surveyed without cutting up the land into these blocks.
38. Do you approve of the contract system to that limited extent? I think, if there were a large block of five or ten thousand acres to be surveyed, tenders might be called for.
39. You are speaking of the contract as distinguished from the license system? The license system is a system of contract, but I think the other system is more desirable for the public good.
40. Are you of opinion that these three different modes—the salary, the contract, and the license systems—all might be applied in certain localities and under certain circumstances? I do not think the license system is a desirable or fair one. In Illawarra, for instance, it would

Wm. Shone,
Esq.

4 June, 1858.

Wm. Shone, would be more difficult to survey 50 acres of land than to survey 300 in an open country. The system of having one scale of fees for all districts is not equitable; there should be a scale made according to the features of the country, and the difficulty of the survey.

Esq.

4 June, 1858.

41. You are aware that very general complaints have been made against the Survey Department, from time immemorial, I may almost say? Yes.
42. Do you think they were to any extent justified? Perhaps so. I think the surveyors were frequently called away to do duties which did not properly belong to the Survey Department, as I have already stated, and that to this circumstance may be attributed many of the complaints.
43. You think the deficiencies of the department arose from want of system? From not having their duties more properly defined.
44. Do you think the want of local inspection was a cause of the deficiencies complained of? Yes.
45. Do you think this will be remedied by the appointment of the district surveyors now proposed? Yes; but their appointment will be of no practical utility if the districts are too large.
46. The success of this system will depend altogether upon the proper appointment of district surveyors, and the extent of country they will have to overlook? Yes.
47. If these officers are properly nominated, you think there would then be the local inspection which was wanted in former times? Yes.
48. What is your opinion of the discretion given to surveyors, as to whether applications should be complied with—do you think that power has ever been exercised injudiciously? I think so. I think a great deal of time has been wasted in attending to applications for isolated surveys. I think the proper way would be to put up a block of land, and divide it ready for sale.
49. Would there not be a danger of large tracts being put up, which would not be demanded for sale afterwards? I think it would be the duty of the district surveyor to select blocks of land, and cut them up into proper portions.
50. Do you not think the survey of large tracts should arise out of a demand, or be made subject to existing demands? I think so; but still I think the supply ought always to be kept in excess of the demand.
51. Have you any other suggestions to make as to the improvement of the system? I think it would be an improvement upon the present system, if the Government think of adopting the contract system, to call for tenders for the survey of large blocks; but still, I think a properly constituted staff of officers, if conscientious men, would do their duty as well, if not better.
52. In all cases you think there must be a staff? Yes; if you have the contract system, you must have inspectors to see that the contracts are carried out.
53. In that case you would do a great deal of the work of the Colony by contract, checked by inspectors? Yes.
54. You think it would be a more effective and economical system? Yes.
55. Do you think any evils have arisen from insufficient remuneration having been given to surveyors? I think so. The duties of officers in the field are very laborious, and I think the remuneration has not been sufficient hitherto.
56. Are you aware whether any difficulty has been experienced in obtaining surveyors? I believe there has been difficulty in getting desirable hands.
57. Have you any reason to believe that the Survey Department has been deprived of any competent or good officers in consequence of supposed ill-treatment from the central authority? I think so—in fact there are very few old officers in the department.
58. You think the officers felt themselves to have been unjustly treated? Yes.
59. Are you aware of complaints having been made by parties who felt themselves injured or aggrieved? Yes.
60. Were these complaints not properly investigated or attended to by Government? I do not know. With regard to myself, of late years I received, on the recommendation of Sir Thomas Mitchell, late Surveyor General, as senior assistant surveyor, a salary of £500 a year—the salary was reduced £45 for tent allowance. From the middle of 1854 to 1857 it was £456, and then I was made a surveyor, with a reduced salary of £400.
61. I am speaking generally—have the Government refused to listen to the complaints that have been made, or have they never entered into them? In my own case I represented the matter to the Surveyor General. I am not acquainted with other cases.
62. *By Mr. Moriarty*: Do you think there would be sufficient competition for the contracts supposing the system were carried out? I think so.
63. In Sydney, no doubt, there would be, but in the country districts? In Sydney I think there are plenty of surveyors who would glad to tender for surveys of land in different localities. In some places there might be difficulty in getting parties; but I think if it were tried it might work well.
64. You think, as a general rule, there would be sufficient competition? I think there are surveyors throughout the country who would be glad to take up these contracts.

APPENDIX A.

For the information of the Committee, I beg leave to append to my evidence the accompanying letters, having reference to certain railway duties performed by me in former years. Mr. Garland, formerly a Member of the Legislative Assembly, called for the production of all these papers, and the Reports to which they refer, now extant in the Surveyor General's Office. They were not produced, with the exception of document marked No. 3, which did not give the information required by Mr. Garland. I contend that this is one of the

the most important engineering surveys which any member of the Survey Department has ever been engaged on; and the production of all the papers, on such a question of importance, should have been printed for public information.

Wm. Shone,
Esq.

4 June, 1858.

No. 1.

No. 50-321.

*Surveyor General's Office,
Sydney, 10 June, 1850.*

SIR,

Having submitted your Report and Plans to His Excellency the Governor, I have received a letter from the Colonial Secretary, of which I enclose a copy; and I have to express my satisfaction that the Governor submitted them to the Executive Council, and that your work has been highly approved of, both by His Excellency and the Council.

I am also authorized to instruct you to continue the survey to Campbelltown and Liverpool; and I have therefore only to request a continuance of the work, on the same principles by which you have hitherto been guided, selecting what may appear to you, after thorough examination, the most eligible direction for your line of gradients, sacrificing as little distance as natural obstacles, judiciously considered, may admit of.

ASSISTANT SURVEYOR SHONE,
Appin.

I have, &c.,
T. L. MITCHELL.

[Enclosure to foregoing.]

*Colonial Secretary's Office,
Sydney, 8 June, 1850.*

SIR,

In acknowledging the receipt of your letter of the 8th ultimo, No. 50-257, transmitting the Report and Plans of Mr. Assistant Surveyor Shone, for what he terms the central line of Railway to Goulburn, I do myself the honor, by the direction of the Governor, to inform you, that His Excellency has submitted them to the Executive Council.

2. The Members of the Council having considered Mr. Shone's Report, and inspected the Maps, expressed their satisfaction with the able and expeditious manner in which Mr. Shone has executed this work; and, by their advice, His Excellency has been pleased to authorise your instructing him to continue the survey to Campbelltown and Liverpool, as recommended by you.

3. By the advice of the Council, the Report and Maps are to be forwarded to the Directors of the Railway Company; and I am to request, therefore, that you will have the goodness to return the Maps to me for this purpose.

THE SURVEYOR GENERAL,
&c., &c., &c.

I have, &c.,
E. DEAS THOMSON.

No. 2.

No. 50-524.

*Surveyor General's Office,
Sydney, 27 September, 1850.*

SIR,

I had great satisfaction in receiving your letter dated 24th September, 1850, transmitting a Plan and Section of the proposed central line of Railway, extending from the Town of Liverpool to the Cataract River, and a rough section of the line from Liverpool to the Wingecarribbee.

I feel the greatest confidence in the accuracy of your plans and sections, and in the soundness of the views set forth in your Report; these must ever remain as evidence of the exercise of talent and industry, alike creditable to yourself as to the department.

As in your letter of September 3rd, 1849, you expressed a wish to return to your customary duties so soon as the Railway surveys should be completed, you will accordingly receive from the Chief Clerk the letters of instructions for surveys about Illawarra and Cumberland, now in the hands of Mr. Burrowes, but which he has been requested to return. Mr. Burrowes will, for the present at least, be retained to complete some surveys about Sydney, but you can obtain from him such of your plans and sketches as you may require.

ASSISTANT SURVEYOR SHONE.

I have, &c.,
T. L. MITCHELL,
Surveyor General.

No. 3.

*Surveyor General's Office,
Sydney, 13 March, 1847.*

SIR,

I have to acknowledge the receipt of your letter of the 11th instant, with the Plan and Sections of that portion of the proposed line of Railway between the Cataract and Nepean Rivers, and to express my satisfaction with the work. I must add, that I consider the survey highly creditable to the department, as well as to yourself individually, especially as it has been completed in a very short time, although carried over a most difficult country. As I cannot continue the survey throughout the whole line until the necessity for it becomes more urgent, I must request you will withdraw your party to the vicinity of Sydney; and on your arrival here, I shall reply to the various points adverted to in your letter.

ASSISTANT SURVEYOR SHONE.

I have, &c.,
T. L. MITCHELL,
Surveyor General.

Henry Halloran, Esq., called in and examined :—

- H. Halloran, Esq.
4 June, 1858.
1. *By the Chairman* : You are Chief Clerk of the Survey Department? I am.
 2. Will you be kind enough to state how long you have been in that department? Since the 1st May, 1827.
 3. You were in it in Mr. Oxley's time? For a short time.
 4. At his death? At his death.
 5. You were examined before the Board of Commissioners, on the 13th July, 1855? In 1855.
 6. That Commission consisted of whom? Professor Pell, Captain Hawkins, R.M., and Captain Clarke of the Engineers, also, I think.
 7. There was no professional officer belonging the service in that Commission? None.
 8. You have stated in answer to question 521, that all matters of accounts and all matters of finance pass through your hands? Yes, I believe I have.
 9. Has there been a general system of accounts applying to the department? Well, I cannot say that it was a very perfect system; not so perfect as it is now.
 10. It is perfect now? All payments are made by the department, and therefore a more perfect audit goes on than in former days.
 11. You stated that every letter that comes in you read, and every letter that goes out you read, and supply any deficiency—you do that, of course, on the authority of the Surveyor General? I presume so.
 12. Have you read this Report from the Commissioners? I have.
 13. What do you think of it generally as a Report upon the three services—the survey, the drafting, and the account or clerical branches of the department? I think it is a very able Report, considering it was made by persons who had little colonial experience—little experience in the matters on which they were reporting.
 14. In their Report they say—“It appears to us that the clerical duties are of a very cumbrous and voluminous nature, involving an amount of correspondence and registry which cannot but lead to considerable unnecessary expense.” Can you explain to the Committee how that branch has arrived at that position? From the Surveyor General insisting that everything should be prepared in draft and submitted to him; the most ordinary paper, the most ordinary reply to a letter, had to be prepared in draft, and submitted to him before being fairly copied, which would amount to perhaps from 3,000 to 4,000 unnecessary drafts in the course of a year.
 15. This could be very materially simplified? It is now almost entirely done away with.
 16. Do you remember the Secretary of State's despatch, so far back as 1828, arranging the department? I remember a letter from the Colonial Secretary, giving an extract from the Secretary of State's despatch. I had it in my hand the other day.
 17. Each officer then in the service had a copy of it sent to him, I believe? Yes, I think every one then in the service had its contents communicated.
 18. Did not many officers at that time remain in the service thinking these instructions would be carried out? I have no doubt the prospect of promotion induced many to remain.
 19. That was not carried out? I cannot say. Any particular instance, if you mention it, I may be able to explain.
 20. Do you remember Mr. Hoddle being promoted, and gazetted as Deputy Surveyor General? Yes.
 21. Have you any idea why that was not carried out? I have not. That would be about 1828; I was then a lad of fifteen years of age, and was not aware of the policy of my superiors.
 22. The department at that time was a very small one? Very small.
 23. Do you think the department, from that time up to the present, has not increased in greater proportion than the population of the Colony, and the extent of the country to be surveyed? That is a question I have not considered. It has increased, and I suppose according to the necessities of the times.
 24. At that time the population was 40,000, about one-seventh the present population, which is now, or was at the last census, 270,000. You may perhaps recollect for what purpose the office of Deputy Surveyor General was recommended, by Mr. Oxley, to be established? I do not recollect, but what I understood was, that the Deputy Surveyor General came out with that appointment to supply the place of Mr. Oxley; that he had the promise of the office of Surveyor General when he took the situation of Deputy Surveyor General.
 25. You do not know that Mr. Oxley recommended that a Deputy Surveyor General should be appointed for the purpose of aiding him in the field, in order that either he or the Deputy Surveyor General might be always in the field? I am not aware of that.
 26. Was it not intended, or was it not recommended, after Mr. Hoddle's appointment was cancelled, that Mr. Finch should be the Deputy Surveyor General? I never heard of it.
 27. Have you never seen any letter on that subject? I do not remember to have seen any such letter.
 28. You are not aware that in consequence of that recommendation, if such a recommendation did exist, a Deputy Surveyor General was sent from home? I am not.
 29. Do you recollect the arrival of the present Deputy Surveyor General in the Colony? Yes.
 30. Do you remember what his appointment was? Assistant Surveyor.
 31. At that time there was no Principal Draftsman in the service, I believe? I think Mr. Thompson came out after Mr. Jackson left the service; Mr. Jackson was the *senior* draftsman.
 32. Mr. Jackson held that position—he was responsible both for your branch and the drafting branch? I think so. There was no Principal Draftsman.
 33. Do you know whether Mr. Thompson was ever in the field at all? I think never in this Colony.

34. When he got the appointment, do you recollect whether it was not upon an increased salary? I am not certain that he immediately received an increase, but he did some time afterwards—£100 a-year additional. H. Halloran,
Esq.
35. Was it then generally supposed by the officers mentioned in the Secretary of State's despatch that he had taken a staff position in the service, and had no claim whatever to the promotion alluded to in the despatch. I cannot say. I am aware that there was an understanding in the office that he did not go into the field because he was physically incapable. 4 June, 1858.
36. That, in fact, he received an appointment at home, the duties of which he could not fulfil, and in consequence of that was placed in a situation much easier and much more remunerative? He received a higher salary some time after. If I recollect, Sir Thomas recommended him, from his peculiar fitness, for the office of Chief Draftsman. I think he had something to do with the preparation of maps in Downing-street before he came to this Colony.
37. Do you remember that another appointment was attached to the office at the time? What was that?
38. Secretary to the Court of Claims? Yes; after Mr. Dillon had been Secretary.
39. There were some emoluments attached to that office? In good times I think they must have been upwards of £100 a-year.
40. I think he received a guinea for each case? I do not know; I think so.
41. In the *Government Gazette* they are enumerated, and you will find, I think, they amount to upwards of 5,000? I do not know; but I could easily tell the amount received by him in any particular or any number of years.
42. Will you append a return to your evidence of the amounts received by him? Yes. (*Vide Appendix A*)
43. In the course of your experience, have you not heard it as a complaint of the officers in the field, that they have had no representative at head-quarters, no one that understood the duties and difficulties of a surveyor in this Colony? I cannot say I have; there was the Surveyor General.
44. The Surveyor General was frequently away from the Colony? I think altogether he was away on three occasions.
45. The management of the department then fell into other hands? Into the hands of his Deputy.
46. Did these officers—the Surveyor General and Deputy Surveyor General—seem to work well together? I think not so. Captain Perry was all obedience; but the other cared to make very little use of him, apparently.
47. Did it ever appear to you, during those periods of control by the Deputy Surveyor General, that a different system was adopted with regard to surveys, or was the system of the Surveyor General carried out as if he were present? I think, as I have said, that Captain Perry was all obedience, and that his disposition was to carry everything out as desired by the Surveyor General.
48. The license system, I think, originated during the Surveyor General's absence? I think not. It originated in 1843, with Sir George Gipps—in 1843 or 1844.
49. Has it come under your observation that many who have been sent out from home as surveyors have not been surveyors? I recollect one, who I believe was not a practical surveyor—Mr. Thomas White. In the recommendation that came out with him he was spoken of as having a knowledge of soils.
50. Are you not aware that out of the first six or seven who came out here, five were not surveyors at all? Do you mean the Thompson batch?
51. Yes. I cannot say I do; some of them held other offices afterwards.
52. You had a very good surveying officer—a namesake of mine—do you recollect him—Mr. Henry White? Perfectly well.
53. Do you not think he was worried out of the service? Driven out of the service. I do not know what you mean by worried; but he left the service because of certain charges brought against him by Mr. Gray, of Port Macquarie, of having used the men of his party as gardeners.
54. Do you think that was satisfactorily proved against him? I think not.
55. What was Mr. Gray at that time? Police Magistrate at Port Macquarie.
56. Mr. White was generally considered a very good officer? Sir Thomas Mitchell entertained a very high opinion of him.
57. He was not a surveyor from England? No.
58. He had learned the profession in the Colony? Yes, I know that he did.
59. You had a Mr. Dixon in the service? I recollect him well.
60. What was his character as a surveyor? I always heard him spoken highly of.
61. Can you give any reason why he left the service? On complaints of the Commandant of Moreton Bay. I do not believe there was any kindly feeling towards him on the part of Sir Thomas after the publication of his map. (*Vide Appendix B.*)
62. That map, I believe, was compiled principally from Mr. Dixon's own survey? I cannot say; but I understood that Sir Thomas Mitchell considered at the time that it was a pirated copy of his own—Dixon told me so. With reference to Mr. White, I may make a remark: I recollect being particularly struck at the time of his dismissal with, what I considered, the injustice of the decision. Mr. Gray brought charges against him. He then brought certain charges against Mr. Gray, and the Acting Governor said, "If you will withdraw your charges against Gray you shall remain in your position." White said, "I will not withdraw them, but prove them." "Then," said the Acting Governor, "I will order your dismissal for employing, in private service, men provided for your public use." I thought it a most unjust decision at the time.
63. Do you think, with regard to that letter from the Secretary of State, faith was kept with the surveying officers? I am not aware of any breach of faith. I cannot tax my memory with any.

- H. Halloran, Esq.
4 June, 1858.
64. There were certain amounts of salary fixed to each grade? Yes.
65. Were the salaries of the surveyors ever increased at all after that period? The surveyors had not increasing salaries, except by change of position; £400 was the highest—that was for the first surveyors; £375 for the second; £350 for the third; and £325 for the fourth. The assistant surveyors commenced at £200, with an increase of salary of £20 a year till it reached to £300; draftsmen had £150, increasing £10 a year till it reached £200.
66. No increase upon those amounts as fixed by the Secretary of State's despatch ever took place? None, until recently. There was the general increase of the gold allowance, but no particular increase until the cases of Messrs. Darke, Gordon, and Burrowes, whose salaries were raised to £325, although they were only assistant surveyors.
67. The salaries of officers in other branches of the service were also fixed by the Secretary of State? The drafting branch, not the clerical; there was no reference whatever made to the latter.
68. Have their salaries been increased? Yes.
69. Then they get much larger salaries than the surveyors? The Chief Draftsman may, but not the draftsmen generally.
70. What amount do they receive now, the maximum salary having been fixed by the Secretary of State at £200? I think Mr. Adams receives £400.
71. Besides the gold allowance? No; the gold allowance is done away with now, or rather reduced, and made part of the permanent salary.
72. Was Sir Thomas ever interfered with in his general duties by any other head of a department? According to the instructions under which he acted, he had to obey all instructions coming from the Governor through the Colonial Secretary.
73. I refer to the detail, the management of his department? I presume only by instruction of the Government.
74. Do you not think, if an officer holds a position as the head of a department, and gets a salary for the performance of the duties belonging to his position, he should be considered competent to perform those duties? No doubt that he should.
75. In Sir Thomas Mitchell's evidence I see that he alludes to having been very much interfered with; he states that the department is not under his control, and the system is not of his devising? Yes, I recollect a statement of that kind; and the Commissioners, commenting upon it in their Report, observe, that they could not get him to shew how he had been interfered with.
76. When that arrangement was made by the Secretary of State with regard to the officers of the service, was it not contemplated that the assistant surveyors would be promoted to the superior position of surveyors, and was there ever any difference made in the duties of surveyors and assistant surveyors? I think, in some one or more instances, possibly others were placed under the directions of surveyors. Mr. Townsend, for instance, had a staff in the Monera district.
77. If others were placed under their directions, were they supported in a style to carry out their duties, if the surveyors found it necessary to complain of those under them? I cannot tax my memory with anything to the contrary.
78. The Report says—"The Surveyor General disclaims all responsibility for the acknowledged disorganization of his department; maintaining that the system in operation is not of his own formation, or such as meets his approval; that he has been improperly interfered with in the performance of his duties; and that he has not received the support of the Government in endeavouring to maintain discipline and efficiency"—Do you think the Surveyor General had reason to make that complaint? I do not think he was warranted in the complaint.
79. Do you not think he was interfered with in the promotion of his officers, and in the appointment of them to different districts? I do not think so. I believe that whatever he recommended, and shewed any reason for, was acceded to.
80. Do you not think sometimes, when he was absent, the arrangements he had previously made were not carried out as he intended? I have no doubt, that as far as he expressed himself they were; for, as I have before said, Captain Perry was always obedient, and desirous to carry out his directions.
81. You are aware that immediately Sir Thomas left the Colony, the promises made of different districts to officers were not carried out? I do not remember any particular instance of his promise not having been fulfilled.
82. In appointing the different districts to officers, you believe Sir Thomas generally directed what officers were to be sent? I think so.
83. Did he at all interfere in the supplies and equipments of officers? Almost every thing was under his direction, even to the most minute matters; even whether the officer should have forage or not.
84. In arranging for the equipments of officers, you remember the Government at one time supplied the officers with every thing? Yes.
85. When an officer made a requisition for supplies, necessary to enable him to carry out the work he was ordered to perform, did it rest with Sir Thomas whether or not he received those supplies? Yes.
86. That system caused a great deal of trouble? Yes, I think so; because of the difficulty of forwarding supplies to distant districts.
87. It was unsatisfactory both to the officers and to head quarters? I think it was.
88. Were the officers in the field ever consulted in these matters at all? Not with my knowledge; I believe Sir Thomas had private correspondence with his officers, but whether he touched upon such matters I cannot say.
89. Do you think from his own knowledge he had any idea of these things? As to what a surveyor should have?
90. Yes? He had had some little experience in the field; he was an officer for retrenching every expense that could be cut off.
- 91.

91. If he had experience in the field, it was generally with an officer under him; and the officer under him had to look after the supplies? Yes; and on his *expeditions* he would take abundance of every thing.
92. The equipment of the Surveyor General was very different from that of a surveyor sent out to do similar duty? Not similar duty.
93. Some had very similar duties? I dare say he took more particular care of himself than he would of others.
94. That system of supplying the equipment was done away, and an allowance was given? Yes.
95. Do you remember the time when, as an experiment, all the officers of the service were struck off the staff? When the alteration was made by Sir George Gipps. I think it was rather for economy than as an experiment.
96. Do you think that was keeping faith with the officers? Most unquestionably I do not. I do not attribute that to Sir Thomas Mitchell.
97. Some of the oldest officers were struck off at that time? Some of the oldest officers were made licensed surveyors, and some junior to them were retained as salaried surveyors.
98. That was just at the time that land was raised from 12s. to £1 an acre; the country was in great difficulty, and there was no land to survey? That was in 1843, or early in 1844. I do not recollect immediately the circumstances of the times.
99. When it was found necessary to remove the officers from their districts, and send them to advance the surveys of the Colony beyond the boundaries, the allowance was given to them? Both within and beyond the boundaries; £70 within, and £100 beyond.
100. Are you aware that £100 never paid them? I thought otherwise—taking one year with another.
101. It depended upon the district—some had twelve or fourteen horses, while others could do the duty with three? I have heard that some kept fourteen horses. I think Mr. Bagot did so; but I looked upon that, in his case, as rather a matter of private inclination or speculation than of necessity.
102. We were allowed forage for how many horses? I think for one saddle and two draught horses. The great object was as much as possible to keep down the expense of forage, which the Surveyor General considered “adverse to the best interests of the service,” as he has stated so in his own handwriting.
103. Still he expected the work to be done? No doubt he did.
104. Do you know whether when he went out to travel in the western country he carried forage? I think he took a small supply of corn, but I am not certain.
105. When he went out upon any expedition, he had sufficient strength to carry all he required for the expedition? Yes; for those distant expeditions he took a great number of bullocks, drays, boats, &c.
106. He was not limited as a man would be who had to find his own equipment? I think that he took ample equipment with him when he went out.
107. So that the statement you have made would amount to this—that a surveyor with a salary of £400 a year and £100 a year allowance would have to keep something like twelve horses? I could not say he *would have* to keep them; of course, I know but little of such matters except from hearsay.
108. I have had to keep a couple of drays on the road constantly and a certain number of carts, and yet sometimes I have been for three or four months almost starving. Do you remember at one time when I was in the service I had no provisions from the month of October to the end of February, when I was on the lower Barwon, in 1847? I have no doubt it was so, but I cannot say I remember it.
109. My tents were burned down, and I was there nearly five months without food, with six free men? I believe you had a very hard time of it on that occasion.
110. Do you remember that my salary was stopped in consequence of the monthly returns not having been received from me? Yes.
111. That was not in Sir Thomas Mitchell’s time? That was in Captain Perry’s time. He had very peremptory instructions on the subject; and Sir Charles Fitz Roy, in 1848 or 1849, said, that if the returns did not come in the salary was to be stopped, and the Surveyor General was to be held personally responsible for the due observance of that order.
112. Are you aware that I applied for an investigation into that matter? I do not remember such application.
113. Are you aware that I ever applied for leave of absence to go home? No, that I cannot tax my memory with.
114. Do you recollect anything of the Deputy Surveyor General charging me with contumacy at that time? I do.
115. Do you recollect what that charge originated in? I looked at the letters the other day; I think it was in your not sending in your work—your journals.
116. Forage returns, I think? I recollect the circumstance. There were three or four distinct charges, a copy of which was sent to you.
117. I requested an investigation, which was never granted? I can produce any official papers.
118. Did you ever see a letter from me during the time I was in the service, complaining of the treatment of officers of the service, and the position they have been placed in, through a series of years, in consequence of not adhering to the Secretary of State’s despatch? I have no doubt I have seen it, but I do not remember it particularly.
119. Do you know that I requested to be examined by the Board when it was sitting? I am not aware.
120. Do you remember seeing me in Sydney at that time—I saw you? I do not recollect that I did. I know that you were not examined.

H. Halloran,
Esq.
4 June, 1859.

- H. Halloran, Esq.
4 June, 1868.
121. I see by your evidence that you are in favor of continuing the system of licensing surveyors under the supervision of district surveyors? Yes.
122. Would not that be very expensive? That depends upon the number of licensed surveyors employed; if you had few the cost of supervision rateably would be increased; if you had a large number to carry the work through rapidly, the cost of supervision will be decreased.
123. Do you think under the license system, as at present conducted, the land is marked? I have heard of instances where marks have not been made, and I questioned the surveyor alluded to upon the subject: he said he did mark the allotments, but that, being on a place called the camping ground, the marks had been kicked out by cattle. I am inclined to the license system, from the circumstance of its having been adopted and continued in America, and I think it wise to follow the example of a careful, an enlightened, and an economical people.
124. Still supervision would be necessary? Indispensably necessary.
125. Do you not think the Surveyor or Deputy Surveyor General ought always to be in the field? Yes, I do.
126. Who should be able to say—"You surveyed such or such a piece of ground; I wish to see it"? You must then have a number of Deputy Surveyors General.
127. Do you not think some years ago, when there were only 40,000 persons in the Colony, one Deputy Surveyor General could have done it all? I doubt it. I have given the matter some consideration. I remember, some years ago, I prepared a sort of scheme for such arrangements. I went through the whole process, from the application to purchase to the issue of the deed. I saw Mr. Deas Thomson about it: he said, if I submitted it through the head of my department, that it should be received for what it was worth; but the officer in charge said he did not think my scheme could be carried out.
128. The position of a surveyor when you first joined the department was very different from what it is now—was it not more difficult, and attended with greater privation and risk? Yes; no question it was a very hard life, and is so even now in the outer districts.
129. Do you not think it was the intention of Government when these grades were formed, to have divided the country into districts, and to place the older officers over them? I have no doubt that that was the object.
130. Do you not think it would be much more advantageous to the service to have men placed in these districts acquainted with every inch of the country, who could give reports when required? Just so; but four are not sufficient for that purpose.
131. But the arrangement was made in 1828—thirty years ago—and, of course, as the wants of the country increase, the staff must increase? Yes. I thought you alluded to the present.
132. For about seven years I managed the four counties of the Hunter, and I believe I got through the work, besides a very great deal of work that an officer could not account for? The Surveyor General has directed that all this work should be included in the monthly return.
133. There is in the Appendix to the Report a letter of Sir Thomas Mitchell's to the Government, dated 3rd February, 1855? I did not see that till long after it had been sent in.
134. In it he recommends the appointment of county surveyors? Yes; I believe he had been advised to do so.
135. Formerly he was opposed to it? I think he was opposed to an officer becoming comfortable in his district.
136. Therefore, when an officer was well acquainted with the country he was removed, and another was appointed, who had to go over the work again? Yes, that has occurred.
137. Do you think, in consequence of that, some of the natural features of the country have been surveyed five, or six, or seven times? I have heard that they have been twice surveyed. Of course that has been a very bad arrangement; for an officer going to a district should know everything previously done in it; he should have tracings.
138. Tracings are now supplied to the licensed surveyors? They make them for themselves, or pay others to supply them.
139. They make them from the originals? From the maps in use, or from the originals, where they need them.
140. Is it not quite possible for a surveyor having the original survey of a stream, without going on the ground at all to fill it up, if he pleases, if he has no one to supervise him? I think, if dishonest, he might do so. Local supervision is, of course, as I have before said, unquestionably necessary.
141. With regard to the surveys of the country as they are now carried on—do you not think the Surveyor General's Department should be responsible? Do you mean for their accuracy of measurements?
142. That every department requiring a survey should get it through the Survey Department? I think so, as regards all surveys.
143. Are you aware that Sir Thomas Mitchell considered himself Chief Commissioner of Crown Lands, by the King's Instructions? That is, not as Commissioner of Crown Lands as at present existing, but a commissioner for apportioning and valuing the lands of the Colony. Colonel Barney was appointed to the former office.
144. Still he considered that having that office he had a right to the other, and should be consulted in all matters connected with the divisions of the country? I think he had some idea that he should have been Chief Commissioner of Crown Lands, as the present Surveyor General is.
145. At page 8 in the additional Appendix is the following question, by the Governor General—"Might not the Survey Department, under proper regulations, be made to render most valuable assistance in all the preliminary work of laying out rail and other roads, and developing the lines of communication throughout the Colony?" The answer is this, "Yes; but I consider that it offers these advantages to a very great extent now. The main lines

"lines of communication have already, by means of my surveys, been opened, or at least, marked out; and that, through supineness in some quarter, they are not maintained as they should be, or not opened, is a standing cause of regret."—To what quarter did he refer? It is likely that he referred to the Northern, or Wollombi Road, by Wiseman's. I have heard it spoken of as a work of almost imperial design; it was partially completed, but it has fallen entirely into decay.

II. Halloran,
Esq.
4 June, 1838.

146. Are you aware that it was completed? I am not aware; but I think an immense amount of money has been expended upon it.

147. A hundred thousand pounds? I should say much less, because it was done by convict labor.

148. Are you able to get men as licensed surveyors who seem to understand their duties? There are many applications, but many of these who come up go back again, and many others who come up do so to get a sort of diploma, as a guarantee to the public that they are qualified, and that they may obtain work from the public.

149. The duties the licensed surveyors have to perform are not so onerous as those which were placed upon the officers who had to extend the survey of the country? No. The measurement of lands within reach of towns, of markets, and of comforts, is certainly not so onerous as where the surveyor is in the remote interior, away from these advantages.

150. Does the system still exist of allowing individuals to select land wherever they please? Yes; either by personal application or by letter to the surveyor in the district—both ways are open.

151. Do you not recollect that it was a general complaint of the officers before they were removed to the western country, that two-thirds of their time was spent in travelling? No doubt they may have complained. The practice, however, originated in the small quantity of good land in proportion to the bad; and of course any person who wishes for land applies for good spots only: hence dispersion, delay, increased cost of measurement.

152. Would it be better to carry on the survey consecutively, without regard to applications? It would be more economical, more politic, better—to precede demand.

153. Leaving it to the officer to mark out such portions of land as he considered would be saleable? Yes; to divide all that is vacant into smaller portions where it is suited to agricultural, and into larger portions where it could be applied to pastoral purposes.

154. That would depend upon his topographical knowledge—his acquaintance with the quality of the land? Yes; the supervisor should thoroughly know his district.

155. Have you a copy of the King's Instructions to the late Surveyor General, brought out with him in 1826 or 1827? Yes. I have, in Sir Thomas Mitchell's handwriting, an extract from Instructions addressed to Governor Darling, which he always referred to as the Royal Instructions.

156. Can you give a copy of those Instructions? Yes. (*Vide Appendix C.*)

APPENDIX A.

STATEMENT shewing the amount annually received by John Thompson, Esq., as Secretary to the Commissioners of the Court of Claims, from 1836 to 1854, inclusively.

(No. 41-224.)

4 June, 1858.

APPENDIX B.

Colonial Secretary's Office,
Sydney, 6th May, 1841.

SIR,

I have had the honor to receive, and to submit to the Governor your letter of the 3rd instant, No. 41-161, offering such observations as you have thought proper to make on a communication and other documents from the Commandant of Moreton Bay, relative to the conduct of Mr. Surveyor Dixon; and in reply I am directed by His Excellency to remark, that, from the evidence of the two men of the 80th regiment—Whiteemore and Turnbull—it seems beyond doubt that Mr. Dixon encouraged his men to force a sentry, and that he also addressed words to the same soldiers calculated to excite them to mutiny, or at least to create in them disrespect to their Commanding Officer, who is also the Commandant of the place.

In any situation this would be, on the part of a person employed on Her Majesty's Service, a very serious offence, but, at a penal settlement like Moreton Bay, it is one which it is impossible for His Excellency to overlook; and Mr. Dixon's conduct has so frequently called for His Excellency's marked disapprobation, that he can have no reason to expect that anything short of removal from the service will have any effect upon him. The Governor, therefore, instructs me to request that you will inform Mr. Dixon that he will cease to receive pay in the department from the day on which His Excellency's decision is made known to him by you.

When Mr. Dixon was lately in Sydney, he insinuated, in a conversation with His Excellency, charges against Lieutenant Gorman of improper intimacy with some of the convict women at the settlement, and the Governor subsequently understood that Mr. Dixon stated these charges more openly to the Private Secretary. Proceedings which His Excellency has had before him on the trial of a prisoner at the settlement, named Ford, render it necessary that these charges should be inquired into. I am, therefore, directed to request that you will communicate this to Mr. Dixon, and call upon him to bring forward any evidence he may have in substantiation of them.

I have the honor to add, that a copy of this letter has been sent to Lieutenant Gorman.

THE SURVEYOR GENERAL.

I have, &c.,

E. DEAS THOMSON.

APPENDIX C.

EXTRACT from the Instructions to the Governor under the King's Sign Manual, dated the 17th July, 1825, relative to the Division of the Territory of New South Wales into Counties, Parishes, &c., &c., and the disposal of lands.

18. And whereas we have, in and by the said Commission, authorised and empowered you, with the advice and consent of our Executive Council, to issue a Proclamation dividing our said Territory of New South Wales and its Dependencies, into districts, counties, hundreds, towns, townships, and parishes, and appointing the limits thereof respectively, and to agree for such lands, tenements, and hereditaments as shall be in our power to dispose of, and them to grant to any person or persons upon such terms, and under such moderate quit-rents, recoveries, and acknowledgments, to be thereupon reserved to us, according to such instructions as shall be given to you under our Sign Manual: Now, we do hereby authorise and require you, as soon as conveniently may be, after your arrival within our said Territory of New South Wales, to issue, in our name, to three discreet and skilful persons therein resident, a Commission, under the Seal of our said Territory, authorizing and commanding them to make a survey, in manner hereinafter mentioned, of all the lands, and a valuation of all the waste and ungranted lands within our said Territory: And it is our pleasure that the Surveyor General for the time being of our said Territory shall be the first and Chief Commissioner to be named and appointed in and by the said Commission.

19. And it is our pleasure that, together with such Commission, you do issue to the Commissioners thereby appointed, instructions requiring them to divide and apportion the whole of the said Territory into counties, each of which shall contain, as nearly as may be, forty miles square; and to apportion each county into hundreds, of which each hundred shall, as nearly as may be, comprise an area of one hundred square miles; and again to subdivide each hundred into parishes, of which each parish shall contain, as nearly as may be, an area of twenty-five square miles; and you are to instruct the said Commissioners that, in making the division aforesaid of our said Territory into counties, hundreds, and parishes, they do have regard to all such natural divisions thereof as may be formed by rivers, streams, and highlands, or otherwise; and that whenever in order to obtain a clear and well defined natural boundary of any county, hundred, or parish, it shall be necessary to include therein a greater or smaller quantity of land than is hereinbefore mentioned, they, the said Commissioners, shall make such deviations from the prescribed dimensions of such county, hundred, or parish, as may be necessary for obtaining such natural boundary: Provided that no such county, hundred, or parish shall, in any case, exceed or fall short of the dimensions before prescribed, to the extent of more than one-third part of such dimensions.

20. And it is our pleasure that that part of our said Territory of New South Wales which hath hitherto been divided into counties shall be comprised in such new survey as aforesaid: Provided, nevertheless, that in case it shall appear to you, with the advice of our said Executive Council, that such new division as aforesaid of such last mentioned part of our said Territory into counties, hundreds, and parishes is, for any cause, impracticable or inexpedient

To issue a Proclamation dividing the Territory into districts, counties, hundreds, towns, townships, and parishes.

Appointment of Commissioners.

Division of the Territory.

That part already divided, if the new division is impracticable.

inexpedient, you shall suspend the execution of these our instructions in reference to that portion of our said Territory until you shall have communicated unto us, through one of our Principal Secretaries of State, the nature of such obstacle, and shall have received our further directions in relation thereto.

21. You are further to require the said Commissioners, from time to time, to make to you reports setting forth the progress which they have made in the before-mentioned survey of our said Territory, specifying therein the limits of each county, hundred, and parish which they have surveyed and apportioned; and you are to require such Commissioners to annex to such their written reports, charts, or maps of every such county, hundred, and parish.

Commissioners to report progress.

Annexing charts or maps.

22. And in case the said Commissioners should not unanimously concur in making to you their report respecting the division of the said Territory, you are to require the said Commissioners respectively to communicate to you the grounds and reasons of the different opinions which they may so entertain respecting any such question as aforesaid; and if upon a consideration of such reasons it should appear to you, with the advice of your said Executive Council, that the opinion of the majority of the said Commissioners is erroneous, you shall, by an order to be made in Council, require the said Commissioners to review such their report; and if the majority of such Commissioners should, after such review of such their report, adhere to their original judgment, so that your acting with the advice of the said Executive Council should ultimately differ in opinion from the said Commissioners, you shall suspend the ultimate decision upon any such question until you shall have transmitted to us, through one of our Principal Secretaries of State, a full statement and explanation of the question in discussion, and until you shall have received our further instructions for your guidance therein.

In case Commissioners do not concur in making their report.

23. And it is our pleasure, that when any such report of the said Commissioners as aforesaid shall be finally approved by you, with the advice of your said Council, or by us, as the case may be, the same shall be deposited among the Records of the Supreme Court of New South Wales, and that an exact transcript thereof shall be deposited in the office of the Surveyor General of our said Territory, and that another transcript thereof shall be transmitted to us, through one of our Principal Secretaries of State.

Reports, when approved by the Governor, to be deposited in the Supreme Court and Surveyor General's Office.

24. And for the better guidance of the said Commissioners in the execution of the duty so to be committed to them, you will, with the advice of the said Executive Council, issue to them such instructions as may from time to time become necessary; and you shall, by a new Commission or Commissions to be for that purpose issued in manner aforesaid, supply all such vacancies in the said Commission as may from time to time arise, by the death, resignation, absence, or removal of any such Commissioner.

Governor to issue instructions to the Commissioners, with the advice of the Executive Council.

To supply all vacancies by a new Commission.

25. And it is our will and pleasure, and we do hereby specially authorize and empower you, in our name, from time to time, to issue under the public seal of our said Territory, Letters Patent for erecting into counties, hundreds, and parishes, such districts as may in manner aforesaid be selected for that purpose by the said Commissioners, in and by any reports so to be made by them, and approved by you or by us as aforesaid, as the case may be; and all such Letters Patent so to be issued by you in our name shall be enrolled among the Records of the Supreme Court of New South Wales, and shall be on record; and the issuing of any such Letters Patent shall by you be made known to all our loving subjects within our said Territory, by Proclamation, to be by you from time to time published for that purpose in the most usual and public manner.

Letters Patent to be issued, erecting into counties, hundreds, and parishes, such districts as may be selected by the Commissioners, by any reports made by them and approved by the Governor.

26. And we do further authorize and require you, in and by any such Letters Patent as aforesaid, in our name and in our behalf to grant to our loving subjects resident within any such county, hundred, or parish, all such franchises, immunities, rights and privileges whatasoever, as consistently with the circumstances, situation, laws, and usages of our Colony of New South Wales may be properly granted to such our loving subjects in that behalf: Provided that such franchises, immunities, rights and privileges shall, as far as the circumstances of the said Colony may admit, be such as are and of right may be claimed, held, enjoyed, and exercised, by our subjects inhabiting and residing in any county, hundred, or parish in that part of our United Kingdom of Great Britain and Ireland called England, and not otherwise.

By such Letters Patent to grant all such franchises, rights and privileges, as may be consistent with the circumstances of the Colony.

Provided that such rights, &c. be such as may be claimed in England, and not otherwise.

27. And it is our will, and we do further require, that such division as aforesaid of our said Territory into counties, hundreds, and parishes shall not for the present be extended into such districts of our said Territory as lie beyond the range of any actual settlements, but that such division as aforesaid shall from time to time be extended into the parts thereof which are at present unsettled, as the cultivation of our said Territory may progressively advance, so that in all future times all persons intending to settle in our said Territory may know in what county, hundred, and parish any particular lands are included.

Such division not to be extended into districts beyond the range of any actual settlements.

28. And it is our pleasure and we do hereby direct, that the Commissioners so to be appointed as aforesaid for the division of our said Territory into counties, hundreds, and parishes, shall also be required and authorized to make a valuation of all the waste and unoccupied lands comprised in every such county, hundred, and parish; and for that purpose it is our pleasure that the said Commissioners shall ascertain the average value of the lands in each parish separately, taking into their consideration the fertility and all other natural, accidental, or local advantages or disadvantages of the land in each parish, as a basis for calculating the value thereof; and in making such their valuation, it is our pleasure that the said Commissioners shall inquire what sum of money might reasonably be expected to be paid for any such lands, if sold for a price to be paid in ready money at the time of the conveyance, in tracts containing three square miles, or one thousand nine hundred and twenty acres each, to be held in free and common socage in fee simple, without the payment of any quit-rent or duty for or in respect of the same.

Commissioners also to make a valuation of all the waste lands in every county, &c., ascertaining for this purpose the average value of the lands in each parish separately;

In making which valuation, the Commissioners to inquire what sum might be expected to be paid, if sold for ready money at the time of the conveyance, in tracts of three square miles, to be held in fee simple.

29. And it is our pleasure that the said Commissioners shall make to you reports of the progress of such their valuation, in the same manner and subject to the same rules and conditions

Commissioners to report the progress of their valuation.

conditions as is hereinbefore provided in respect to the reports so directed as aforesaid to be made of the survey and division of the said Territory into counties, hundreds, and parishes; and such and the same proceedings shall be had and taken upon and in respect to the reports so to be made as aforesaid, or the value of the said lands as are before directed to be had and taken in respect to the reports to be made of the survey and division of the said Territory.

Commissioners to report what lands it may be proper to reserve so as to be surveyed and valued by them;

30. And it is our pleasure, and we do further direct you to require and authorize the before-mentioned Commissioners further to report to you what particular lands it may be proper to reserve in each county, hundred, and parish, so as to be surveyed and valued by them as aforesaid, for public roads and other internal communications, whether by land or water, or as the sites of towns, villages, churches, school houses, or parsonage houses, or as places for the interment of the dead, or as places for the future extension of any existing towns or villages, or as places fit to be set apart for the recreation and amusement of the inhabitants of any town or village, or for promoting the health of such inhabitants, or as the sites of quay or landing places which it may at any future time be expedient to erect, form, or establish on the sea coast, or in the neighbourhood of navigable streams, or which it may be desirable to reserve for any other purposes of public convenience, utility, health, or enjoyment; and you are specially to require the said Commissioners to specify in their reports, and to distinguish in the charts or maps to be subjoined to these reports, such tracts, pieces, or parcels of land in each county, hundred, and parish within our said Territory as may appear to them best adapted to answer and promote the several public purposes before-mentioned. And it is our will, and we do strictly enjoin and require you, that you do not on any account or on any pretence whatsoever, grant, convey, or demise to any person or persons, any of the lands so specified as fit to be reserved as aforesaid, nor permit nor suffer any such lands to be occupied by any private person for any private purposes.

to specify in their reports, and distinguish in the charts or maps to be subjoined to these reports such reserved tracts.

Such reserves not on any pretence to be granted to any person, nor suffered to be occupied by any private person for any private purpose.

Provision to be made for the establishment and support of the Protestant Religion, and for the education of youth by the appropriation of a part of the waste lands;

to be placed under the control and superintendence of one body politic and corporate.

31. And whereas it is necessary that sufficient provision should be made for the establishment and support within our said Territory of the Protestant Reformed Religion as by law established in England and Ireland, and for the education of youth in the discipline and according to the principles of the United Church of England and Ireland. And we have for that purpose thought fit that such part as hereinafter mentioned of the waste and unoccupied lands within our said Territory, with its dependencies, should be appropriated and set apart and should be placed under the control and superintendence of one body politic and corporate to be established within the said territory, by Letters Patent to be for that purpose issued under the Public Seal of New South Wales: Now we do hereby require and enjoin you, when and so soon as such body politic and corporate shall have been vested and established, in pursuance of certain additional instructions herewith given, or hereafter to be given to you in that behalf, to make to the said corporation such grants of lands within our said Territory of New South Wales as hereinafter mentioned.

One-seventh of the lands in each county to be so appropriated, and called the Clergy and School Estate.

To be in one continuous and unbroken tract.

When impossible to select in one tract, at liberty to allot such estates in two or more tracts in the same county.

Such lands to be an average quality and value of the lands in each county.

To make a special and distinct report in reference to such county, pointing out with all possible precision the tracts of land appropriated for the Clergy and School Estates.

When a sufficient quantity of vacant land cannot be found in one county, the deficiency to be made up by an allotment of land out of the nearest adjoining county.

Grants to the said Corporation and their successors to be passed under the Great Seal as soon as the estates are ascertained by the reports of the Commissioners.

All the remaining waste lands, after making these reservations, to be granted to private persons, subject to the following conditions:

32. And for the purpose last aforesaid, it is our pleasure, and we do hereby direct that you do require and authorise the before-mentioned Commissioners to mark out and set apart in each and every county, hundred, &c., into which they may from time to time divide the said Territory, a tract of land comprising one-seventh part in extent and value of all the lands in each and every such county, to be thenceforward called and known by the name of the Clergy and School Estate of such county. And it is our pleasure that every such Clergy and School Estate shall as nearly as may be lie in one contiguous and unbroken part, and that when it shall be impossible to select such a tract of land for that purpose without serious injury or inconvenience to private settlers, then the said Commissioners shall be at liberty to allot such Clergy and School Estates in two or more continuous tracts in the same county. It being nevertheless our will and pleasure, that the Clergy and School Estates in each county shall not be interspersed with or divided by other lands excepting only in such special cases as aforesaid. And it is our pleasure that the lands to be set apart in each county for the Clergy and School Estate thereof, shall be an average quality and value in reference to the general quality and value of the lands comprised in the said county, and that such alterations shall be selected for this purpose as may afford to the said Clergy and School Estates a reasonable and equal share of every natural advantage of water carriage or internal communication which may be possessed by the lands in general throughout any such county; and you are to direct and require the before-mentioned Commissioners to make a special and distinct report to you in reference to such county to be erected in our said Territory, pointing out with all possible precision the particular tracts of land appropriated for the Clergy and School Estates of such county. And in case it shall not be possible to find in any of the counties which may be so erected as aforesaid, a sufficient quantity of vacant and unoccupied land to make up the Clergy and School Estate of that county, then it is our will that the deficiency be made up by an allotment of land to be taken out of the nearest adjacent county in which a sufficient quantity of ungranted land may be found for that purpose.

And it is our pleasure that, when and so soon as the said Corporation shall have been erected and established, you do, in our name, pass under the Public Seal of New South Wales, grants to the said Corporation and their successors, of the Clergy and School Estates aforesaid, when and as they may be successively allotted and ascertained in the several counties of our said Territory, by any reports from the said Commissioners which shall have been finally approved by you or by us, as the case may be, to hold such lands to the said Corporation and their successors, in fee simple, and in fee and common socage tenure.

33. And it is our pleasure, that all the waste and uncleared lands within our said Territory which shall remain after making such several reservations as before-mentioned for the public service, for the support of the Clergy of the established Church of England and Ireland, and for the education of youth, shall be granted in our name, and in our behalf, to private persons willing to effect settlements thereupon, and subject, nevertheless, to the several rules and conditions hereinafter particularly mentioned.

34. And we do require that, from time to time, and when and so soon as the said Commissioners shall have made any report, which being so approved as aforesaid, shall take the limits and the average value of the lands in any parish to be erected in our said Territory, you do by Proclamation in the public *Gazette* of our said Territory, or otherwise, as may be most convenient, make known to all our subjects what is the average price of lands in any such parish, to the intent that all persons may know the prices for which the same will be sold.

As soon as the Commissioners have made any report on the limits and average value of lands, the average price to be published by Proclamation in the *Gazette*.

35. And you are to cause lists of all the parishes in which lands may remain for sale, with the average prices of such lands, to be publicly exhibited in the office of the Surveyor General of New South Wales; and no such lands shall be sold or disposed of until the average price thereof hath been so published and exhibited in the office of the said Surveyor General during one calendar month, and the highest offer which shall, during such month, be made for any such lands shall be accepted, provided that such offer shall at least amount to the before-mentioned average price; and to secure uniformity in all applications to be made for the purchase of such lands, you are to cause printed forms of such applications to be prepared and delivered at the office of the said Surveyor General, to any person making application for the same, on payment of the fee of two shillings and six-pence, and no more; and such applications shall be received in such written form as aforesaid, and in none other.

Lists of the parishes in which lands remain for sale, with the average prices, to be exhibited in Surveyor General's office. No such lands to be sold or disposed of until the average price has been published and exhibited there during one calendar month. The highest offer to be accepted, provided it at least amounts to the average price. Printed forms of such applications to be prepared and delivered at the Surveyor General's office, on payment of the fee of 2s. 6d.

36. And in case any such lands as aforesaid shall continue unsold during a period of three years next after the average value thereof shall in manner aforesaid have been made publicly known, you shall be, and are hereby authorized to accept the highest offer which shall be made for the same, although such offer may not amount to the average price fixed for such valuation as aforesaid: Provided, nevertheless, that in case you should be of opinion that such lands do not remain unsold by reason of the price being excessive, then, and in every such case, you shall and may suspend beyond the said period of three years the sale of such lands at any prices below the said average price.

In case such lands continue unsold for three years, the Governor authorized to accept the highest offer, although under the average price. Provided, nevertheless, that if the Governor is of opinion that the reason why they remain unsold is not because the price is excessive, that then he may suspend beyond the three years the sale at any prices below the average price.

Provided always, and it is our will, that in case you should see sufficient cause of a public nature for refusing any offer made by any particular individual for the purchase of any particular lands, you shall be at liberty to decline accepting such offer, although the price offered may be the best and highest offer received for the same, it being, nevertheless, our pleasure that the best and highest offer is in all cases to be accepted unless the objection to the person making such offer should be of the clearest and most decisive nature.

The Governor may decline accepting the best and highest offer, provided he should see sufficient cause of a public nature for doing so.

37. And it is our pleasure that all grants of land to be made by you in our name to any person or persons in consideration of the payment of money for the same, shall be made to such person or persons, and his, her, or their heirs and assigns, to be by him, her, and them held in fee and common socage, yielding and paying to us, our heirs and successors, a quit-rent of one peppercorn by the year for the same; and every such grant shall pass in our name, under the Public Seal of New South Wales, and shall be executed and delivered to the purchaser or purchasers at the office of the Colonial Secretary of our said Colony, on the payment of the purchase money for the same, or on the payment of the last instalment of such purchase money, as the case may be, and not before, and for the delivery of every such grant, and the preparing the same, the said Colonial Secretary shall be entitled to charge a fee amounting to forty shillings sterling money, and no more, or of such smaller amount as you, from time to time, with the advice of the Executive Council of New South Wales, shall appoint, and every such grant shall, previously to its being so delivered, be enrolled in the Supreme Court of New South Wales; and for making every such enrolment the Registrar of such Court shall be entitled to receive from such grantee or grantees a fee of five shillings sterling money, and no more.

The objection must be of the clearest and most decisive nature.

All grants to be made in consideration of the payment of money to be held in fee and common socage, paying an annual quit-rent of one peppercorn.

To be delivered to the purchaser at the office of the Colonial Secretary—

having been previously enrolled in the Supreme Court of New South Wales. A discount of £10 per cent. on the immediate payment of the price of such lands, that is to say—a payment in gold and silver money within one calendar month after the offer of the purchaser shall have been accepted. In all other cases such price to be paid by four equal instalments, on the four most usual days of payment in the year.

And we do further authorize you to allow a discount of ten pounds per cent. on the immediate payment of the price of any such lands, that is to say—on payment of such price into our Treasury of our said Colony, in gold and silver money, within one calendar month next after the offer of the purchase or purchasers shall have been accepted; and in all other cases such price shall be paid and made payable by four equal instalments, on the four most usual days of payment in the year.

Lands to be put up for sale in lots of 1,920 acres. Charts of each parish to be prepared with division lines, by which the whole parish will be divided into lots of 640 acres each. The Commissioners to annex schedules to such charts, describing the natural and artificial landmarks corresponding with the division lines on the chart.

38. And it is our will that such lands as aforesaid shall be put up to sale in lots comprising one thousand nine hundred and twenty acres, as nearly as may be; and to prevent uncertainty and confusion respecting the lots of land thus offered for sale, you are to require the before-mentioned Commissioners of Survey and Valuation to prepare charts of each parish, with division lines, by which the whole of every such parish will be divided into lots of six hundred and forty acres each; and you are further to cause such Commissioners to annex schedules to such charts, in which they shall point out and describe the natural and artificial landmarks corresponding with the division lines on every such chart, and every such lot of six hundred and forty acres shall also be described in the chart of the parish by a numerical mark; and all offers for such lands shall be made, and all such grants of land as aforesaid effected, in reference to the public chart of the parish in which such lands are situate.

Every lot of 640 acres to be described by a numerical mark, and all offers made, and all such grants effected, in reference to the public chart of the parish in which such lands are situate.

39. And it is our will that no person shall be permitted by any contract or successive contracts to become the purchaser of more than nine thousand six hundred acres of land in the whole, within the said Territory, except in pursuance of a special letter to be by us for that purpose issued through one of our Principal Secretaries of State.

No person to become the purchaser of more than 9,600 acres, in the whole, except by a special letter issued from the Secretary of State.

40. And in case any person purchasing any such lands as aforesaid shall, within ten years next after the payment of the whole of such purchase-money, make it appear to you, with the advice of the said Executive Council, by sufficient proof, to be transmitted to, and laid before such Council, that he hath, within such period of ten years, relieved our Treasury from an expense equal to ten times the amount of such purchase-money by the employment of convict laborers upon such lands, then and in every such case you are hereby authorized and required, by a warrant under your hand, to direct the Treasurer of the said Colony to refund and pay back to any such person or persons the whole price or purchase-money by him,

The whole of the purchase-money (but without interest) to be refunded in ten years to the purchaser who can prove that he has relieved the Treasury of an expense equal to ten times the purchase-money, by the employment of convicts; without refunding any money allowed as a discount on prompt payment.

him, her, or them paid for such land, but without interest, and without refunding any money which may have been retained by or allowed to any such person or persons as a discount on prompt payment; and in computing the amount of the sum saved to our Treasury by the employment of convicts, the purchaser or purchasers shall have credit to the amount of one pound twelve shillings for each and every convict he shall have employed and wholly sustained at his own expense upon such lands as aforesaid, for the term of twelve calendar months.

In computing the amount of the sum saved, the purchaser to have credit for £1 12s. for each convict employed and wholly sustained by him for a year.

At the end of six months after the lands have been so offered for sale, and not sold, grants without purchase may be made of them to any person applying for them, according to a printed form, to be delivered at the Surveyor General's office, on payment of 2s. 6d.

An answer through the Colonial Secretary to be returned in the order of time in which the application may have been received.

The Governor not to assent to such application until he is satisfied that the person applying is able, and intends, to lay out in the cultivation a sum equal to half the price at which the lands may have been valued by the Commissioners.

Such land so granted to be holden in free and common socage, paying a quit-rent of 5 per cent. per annum on the value fixed by the Commissioners.

Every such grant to be delivered at the office of the Colonial Secretary—having been previously enrolled in the Supreme Court of New South Wales.

Such quit-rent not to commence until after seven years next succeeding the date and execution of such grant.

Every such grant to contain a proviso that the same shall become void, unless within seven years from the date thereof the grantee or his heirs, or assigns, shall make out, to the satisfaction of the Governor, that he or they hath or have, during such period, actually expended in the improvement of such lands a sum equal to one-fourth the value at which the same may have been estimated by the Commissioners.

The quit-rent to be redeemable, at the option of the grantee, his or her heirs and assigns, on the payment of a capital sum equal to twenty times the amount of such quit-rent, to be paid within twenty years next succeeding the date of such grant.

In calculation of the amount of such quit-rent, the value of the land shall be estimated at the time of the grant, and not at the time of the redemption thereof.

No person shall be allowed to purchase any land without satisfaction being given to the Governor that the person applying for the same is able, and intends, to lay out in the cultivation a sum equal to half the price at which the lands may have been valued by the Commissioners.

Persons not being a freeholder shall pay the quit-rent immediately after the execution thereof.

41. And it is our further pleasure, that at the expiration of six months next after the time when any lands shall have been so offered for sale as aforesaid, at such average price as aforesaid, and shall not have been actually sold and disposed of, it shall be lawful for you to make grants of such lands without purchase to any person applying for such grants, &c., to the end that uniformity may be observed in the manner of making such applications to be prepared and printed with necessary blanks; and a copy of every such printed form shall be delivered at the office of the said Surveyor General to any person or persons making such applications for the same, on payment of a fee of 2s. 6d. sterling money, and no more.

42. And it is our pleasure that, upon receiving any such application as aforesaid for the purchase of lands, you shall return through the Colonial Secretary an answer to every such person or persons as nearly as may be in the order of time in which his, her, or their application may have been received by you, and that you shall not assent to any such application unless and until you shall see good cause to be satisfied that the person or persons so applying is or are able, and doth or do intend to expend and lay out in the cultivation and improvement of such lands a sum of money equal to one-half of the price at which such lands may have been valued by the said Commissioners.

43. And it is our will that all such lands as aforesaid which may be so granted without purchase shall be so granted to the person or persons applying for the same, and his, her, or their heirs and assigns, to be by him, her, or them holden in free and common socage, yielding and paying to us, our heirs and successors a quit-rent for the same of £5 per cent. per annum upon the value of the lands so fixed as aforesaid by the said Commissioners; and every such grant shall pass in our name under the Great Seal of New South Wales, and shall be delivered to such grantees at the Office of the Colonial Secretary of our said Colony on the payment of a fee of 4s. sterling money, and no more, to such Secretary, for the delivery of every such grant, and the preparing thereof, or on the payment of such smaller fee as you, from time to time, with the advice of the Executive Council of New South Wales shall appoint; and every such grant shall, previously to its being delivered, be enrolled in the Supreme Court of New South Wales, and for making every such enrolment the Registrar of every such Court shall be entitled to receive from such grantee or grantees a fee of five shillings sterling, and no more.

44. And it is our pleasure that such quit-rent as aforesaid, shall not commence to be payable until the expiration of seven years next succeeding the date and execution of every such grant; and every such grant shall contain a proviso or condition to the following effect, that is to say,—that the same shall be and become absolutely forfeited and void unless within such term of seven years from the date thereof such grantee or grantees, or his, her, or their heirs or assigns shall establish, and make out to the satisfaction of the Governor, Lieutenant-Governor, or person Administering the Government of New South Wales, that he, she, or they hath or have, during such period of seven years, actually expended in the cultivation or improvement of such lands a capital sum equal to one-fourth part of the value at which the same may have been estimated by the said Commissioners previously to the issuing of any such grant.

45. And it is our pleasure that such quit-rent as aforesaid shall, in and by every such grant, be made redeemable at the option of the grantee, his or her heirs and assigns, on the payment by him, her, or them into the hands of the Colonial Treasurer, of the capital sum of money equal to twenty times the annual amount of such quit-rent: Provided that such payment be made within twenty years next after the date and execution thereof; and in calculating the amount of the payment so to be made into our said Treasury for the redemption of any such quit-rent, the person or persons making such payment shall be entitled to a credit for the sum of thirty-two shillings for each and every convict who, he, she, or they, may appear to have employed and maintained at his, her, or their own expense, for one whole year in the cultivation of such lands as aforesaid.

46. And it is our will, that no person shall receive, without purchase, a grant of land exceeding 2,500 acres, or less than 320 acres: Provided, nevertheless, that you shall be at liberty to make grants of land of less than three hundred and twenty acres in the immediate vicinity of any town or village, in all other cases in which such grants are not applied for, for the purpose of establishing farms or making settlements, it being our intention, by the before mentioned restriction, to prevent the increase and extension of farms and settlements too innumerable to replace with profit the capital to be expended in the cultivation thereof.

47. And it is our will, that in case any person shall receive a second grant of land without purchase, who hath at any former time received a grant of land from us, either with or without purchase in our said Territory, that the quit-rent made payable on such second grant of land shall become payable immediately from and after the execution thereof, and shall not be suspended for such term of seven years as aforesaid, it being our intention that such suspension of payment as aforesaid shall take place in favour only of persons who have not theretofore made any settlement in our said Colony, and as an encouragement to and assistance to such new settlers.

THURSDAY, 10 JUNE, 1858.

Present:—

MR. ALDCORN, | MR. MORIARTY,
 |
 | Mr. WHITE.

G. B. WHITE, Esq., IN THE CHAIR.

Thomas Cadell, Esq., called in and examined:—

1. *By the Chairman*: What part of the Colony are you from? Benbullen, in the County of Roxburgh—the Bathurst Police District.
2. I believe you applied to the Government to have some lands measured for you for sale? Not directly to the Government, but to the surveyor on the spot.
3. For what quantity of land? From six to eight hundred acres.
4. Had you any obstacle in obtaining the measurement of the land? I had. The surveyor at first told me he could not measure 800 acres without a special application. There was a small spring of standing water that I pointed out to him when I went over the land with him.
5. Not a watercourse? Not a watercourse.
6. Was it in the section? I wished it included in the measurement of a section of the ground.
7. Will you detail to the Committee what occurred with respect to that circumstance? Mr. Burnside, the licensed surveyor, said he must reserve the spring of water, and that he could not measure 800 acres without a special application. I asked him then to measure two 400 acre lots, or to make a section of it—640 acres.
8. Did it in any way connect your property? It was to connect two properties, one 1,540 acres, and another 785 acres.
9. And the land you required was the intermediate portion? Lying between these two lots. I was not aware what would be the quantity required to connect them, but I thought from five to eight hundred acres.
10. Will you state what occurred between this officer and yourself with regard to the survey in question? He said he would shew me his authority to reserve all springs, which was by circular, but he had it not that day to produce. He appointed a day that I should meet him on the land, when he was to shew me the circular; but on going there I did not find him or any trace of his tent. He then went to Hartley, and was absent some ten or twelve days. On his return he said Mr. Davidson had decided the matter against me.
11. Mr. Davidson is the district surveyor? Yes; and Mr. Burnside had seen him at Hartley.
12. The licensed surveyor was under the surveillance of Mr. Davidson? I suppose so. I asked him if the decision referred both to the quantity and to the water, and he said both.
13. He had orders to reserve both? The water in particular, but also the land around it.
14. Did he say what quantity of land around it? I think he mentioned ten acres. The spring is only fit to supply a sheep station. I said I was astonished that Mr. Davidson should have prejudged the case.
15. Was the land in question agricultural or pastoral land? Pastoral land.
16. What was the result of your application to him? He mentioned on the evening he returned from Hartley having seen Mr. Davidson, and that he knew Mr. Davidson would be in the neighbourhood in ten days, and that as he, Mr. Burnside, had three or four days work farther on, he would go and do that work, and return to the land respecting which the dispute was, and by that time Mr. Davidson would be there, and we agreed to refer the matter to him for his report. Mr. Burnside also assured me that he would not measure any land there till the matter was decided, and I went with him and pointed out how I wanted my land connected.
17. Did he measure any land without any reference to your claim? About nine days from that evening I saw Mr. Burnside, and he asked me if I could ride over with him next morning, when he would point out my boundaries and show me what he had been doing. On getting to the outer boundary of my 1,540 acres he showed me that he had reserved a line two chains wide along the side line of one section of my land, where a road can never possibly be carried, and he also pointed out that he had measured twelve 30-acre farms, with roads through them, on the very land I had applied to have measured.
18. Are you at all aware of the scale of fees that licensed surveyors get paid for the survey of land? I am not aware; but I have heard they get £3 for every 30 acre allotment, or 2s. an acre.
19. You wanted yours divided into two portions only? I said if he could not measure it in one to divide it in two; but I preferred its being kept together.
20. I see by the scale of fees he would have been allowed about £14 for surveying the 800 acres together, whereas by measuring it into these smaller portions he would have been allowed about £55? After he had shewn me what he had done, he asked me what would I do. I said I thought it was my duty to write to the Government about what had occurred. He asked to whom I would write, and I said I thought to the Colonial Secretary. He said, I had better write to the Surveyor General. I said, no. I thought it was such a serious case I would write to the Colonial Secretary, and I had no doubt it would be sent to the Surveyor General to be reported upon. He said it would be a serious loss to his family, that he would lose £75 by it. I asked him why did he go on measuring it without my being on the ground, and I may state that I know two of his men had been measuring while he was absent at Hartley. At last he said could not we arrange it; if the matter were sent to Sydney it would be twelve months before there could be any final report from the Survey Office, and that we both should have to go to Sydney on the matter. He had offered if I would nullify his measurements, by ringing or falling the timber, he would measure the sections as I wished, but he wanted a fixed time, I think six months, which I would not agree to. I said I would aid all I could in getting that done. After we had decided upon this, he took out his chart, laid down his pencil upon it and said, "recollect if this 640 acres"—which I said I would fix upon—"if this 640 acres crosses the road I will not measure it for you."

T. Cadell,
Esq.
10 June, 1858.

- T. Cadell, Esq.
10 June, 1858.
21. Was it a cleared high road? The main road. I was perfectly aware that the section line would not come to the road by some little distance, and I thought it a little singular he should wish to reserve this road for frontage to 30-acre farms, and not measure for 640 acres.
22. You are quite satisfied that this land which he wished to measure for 30-acre farms was not fit for agricultural purposes? The land on the road is not so, though small portions of the section are; but he wanted frontages for the farms he has since measured on the same road.
23. *By Mr. Aldcorn*: Was it a road that had been for some time in use? The road to Mudgee—the high road. Mr. Davidson was understood to be camped at Wallerawang, fifteen miles distant, and we agreed to leave the matter to him, and to ride over to see him the next morning. On getting to Mr. Davidson's camp, or the place where he had been camped, we found he had gone home to Kirkconnell the day before. I still said I should write to the Government if I did not see Mr. Davidson, and that I should insist upon having the land measured as I wanted. He said, "Can we not settle it?" and sat down upon a log; I sat beside him. He then took out his chart, and made this offer, that if I would reserve him a particular portion on one side of the 640 acres for 30-acre farms, he would go on the ground as if a chain had not been stretched upon it.
24. *By the Chairman*: Did he tell you that all these matters were left to his discretionary power? Yes; a discretionary power to survey what he liked. I agreed that we should go on the ground as if a chain had not been stretched upon it. On his return the day following we went out, and his camp was then at this very spring. Before he began to measure, he said, "Here is a reserve"—pointing out the corner tree, next the spring—"I must still leave that reserve in the land." I said, "I thought we were to come upon the ground as if a chain had not been stretched upon it; if the water is to be reserved I will not have the whole land in one section."
25. Was there no other water on that section? No other water on that section, but there is a creek within a quarter of a mile, which this land would not have come upon. We then agreed that he was to write to Mr. Davidson, enclosing a chart of the ground, shewing the water, and that if Mr. Davidson answered that the water was not to be included as a reserve, he should measure the section. He at the same time said he would ask Mr. Davidson to come over. We wrote by the next day's post, and expected Mr. Davidson daily, but up to the time I left home he had not come.
26. What date was this? On this day week I left home.
27. How long had you been in treaty about this land? Upwards of four months—from the end of February, when I first took him over the land, and shewed him what I wanted measured. Being out with him on the ground that day, he said it would not matter if we chained the outer side line, and he would just continue that line, to see where it would strike the road, but it did not come near the road, it was six chains from coming on to the high road. We came home with the understanding that we were to write by the next day's post, but Mr. Burnside went on surveying the next opposite section to my 1,540 acres, and I believe, has measured that into 30-acre farms. It is a very poor, barren country.
28. Are any of these 30-acre farms applied for? Not one; that was one reason why he said he would nullify the former measurement. He said, "Not one of these are applied for, and if you will agree to nullify them, I will measure the land as you wish."
29. *By Mr. Moriarty*: By "nullifying them," do I understand that Mr. Burnside requested you to destroy the marks? Yes, by barking or felling the timber—by destroying the corner pins, or marked trees.
30. Are you aware that that would have been a misdemeanour? Perfectly. On noticing in the paper that Mr. Murray, Mr. Davidson's father-in-law, had died, as we had expected either Mr. Davidson over, or an answer from him, I went to Mr. Burnside, and said, I supposed that was the cause of Mr. Davidson's neither replying nor coming. I asked what course we should now adopt. He said he would send down the survey as it was. I wrote to the Surveyor General the next morning, not entering into my grounds of complaint, but stating that I had written to Mr. Davidson respecting the matter, and begging that the survey sent down by Mr. Burnside might not be passed till further inquiry was made.
31. Have you ever heard any complaint in your district of officers of that class measuring adjoining lands to a large proprietor in small portions, for the purpose of forcing them to purchase? No, I cannot say I have.
32. Such a thing is quite possible? Yes.
33. Has much land surveyed in the neighbourhood of Wallerawang not been applied for, and not been sold? A great deal about Wallerawang has been surveyed by Mr. Burnside. I think he surveyed seventy lots there, and forty are all that are in the least likely to be sold.
34. You know the nature of the country about Wallerawang? Yes.
35. Is it much fitted for small agricultural farms? The small quantity that was fitted was taken up long since. A large quantity has been measured that has not been sold, and never will be. A great number of farms have been measured by Mr. Burnside which have never been applied for. When he first came to our neighbourhood he had applications, which he shewed me, for four portions to the south-east of my boundary, by two individuals; two, I think, were for 30-acre farms, and two for fifty acres, at the Dead Horse Flat. He asked me to point out my boundary, and I shewed it to him, or rather the starting point, which Mr. Charlton made some six years ago on a 30-acre farm. After Mr. Charlton had measured that, he went about half a mile to a little flat, and measured other thirty, then again about half a mile from that and measured other thirty. Altogether Mr. Charlton measured about six lots at intervals. That was, I think, in 1852. Mr. Burnside began and filled up all these intervening spaces in thirty and forty acre lots as they would come in. Although he had only four applications. I believe, in this way, to the south of my property, he measured thirty-seven farms.
36. *By Mr. Moriarty*: The farms measured by Mr. Charlton I believe are all sold? Yes, and some measured since by Mr. Armstrong have been sold. Of these thirty-seven farms
round

round Mr. Charlton's measurement, I am certain twenty-eight of them will never be purchased. On some of them you could not sweep off the rock as much soil as would form an acre of cultivable ground.

37. *By the Chairman*: These are conterminous lots? I believe so.

38. An individual having a discretionary power of measuring land in such cases may do a very great deal of mischief in a district? A vast deal.

39. *By Mr. Moriarty*: These intervening blocks—will the possession of them be of importance to the proprietors of neighbouring farms? I purchased two, but they can never be available as a general purchase. I thought it very strange that Mr. Burnside should be away three weeks at a time, and his men going on with the work of surveying this adjoining land all the time he was absent.

40. *By Mr. Aldcorn*: Did Mr. Davidson, the district surveyor, at any time visit Mr. Burnside, while he was measuring these farms? Never.

41. He never was there? No.

42. Did you ever see Mr. Davidson in that district, or in communication on the spot with Mr. Burnside? Never. I ought, however, to mention, that Mr. Davidson had, I believe, started on his tour, had got as far as Wallerawang, and was inspecting the surveys of Mr. Burnside there, and that he was then coming on to Benbullen, but was suddenly called away from his camp—I suppose by Mr. Murray's illness. He had told Mr. Burnside he should be up in the neighbourhood of Benbullen in ten days; he had been overlooking some surveying of Mr. Burnside near Bowenfels, and had proceeded thence to Wallerawang to overlook some survey, thence he proposed to come to Benbullen, and then to go on to Ryalstone.

43. How long had Mr. Burnside been working there in surveying the whole of these farms, or all that he did in your neighbourhood? He came there in February last; I think the last week of February.

44. And has been continually employed since? Yes, excepting during his absence. He has been frequently at Hartley, where he has his home and family. I think he was away at one time for three weeks.

45. Did his men go on surveying on all occasions in his absence? I cannot say on all occasions. As long as they were measuring to the south-east of me, I know his men went out during his absence, because they were boarding at an inn a few hundred yards from my house, and I saw them going out and coming home with the instruments.

46. Do you know whether they were common chainmen, as they are called? One of them was an old resident, and an applicant for many portions of land, perfectly familiar with the boundaries.

47. They were not men acquainted with the profession? Not at all. I said to Mr. Burnside, when he was speaking of the loss his family would sustain, that I was astonished he should have allowed his men to go on with the work and he away. He said he had been over the work. I said I had heard than one of them had been marking, and he replied that Burns—that was one of them—was very wishful to learn surveying, and that he went out practising.

48. *By the Chairman*: Without the instruction of the licensed surveyor? That was his answer. He said he was an Oxford or Cambridge scholar, and was anxious to learn surveying. I believe these two men measured eight or nine farms; I mean those to the north-west.

49. *By Mr. Moriarty*: These farms, measured by Mr. Charlton, have they been purchased by one individual? No; by various parties.

50. They are occupied, I presume, by those parties? I think only three of them are occupied; two are unoccupied, and I purchased one myself adjoining my land. It never had a tenant.

51. *By the Chairman*: Are you aware of licensed surveyors in your district having entered into anything like private traffic in Government land, and becoming land jobbers? I am not aware. On calling at the Surveyor General's Office, on Tuesday after coming to town, and seeing Colonel Barney, to whom I mentioned that I had addressed a letter, he said Mr. Burnside was suspended.

52. In consequence of your report? I could not say. I have not entered into the matter with the Surveyor General.

53. *By Mr. Aldcorn*: Is it your opinion that the spring would have been of any service to these farms supposing they had been sold? The existence of the spring upon the land might have led people to purchase who had never been to see the land; but any one who did go to see it would know that there was no practicable way of getting to the water. It is in a hollow between two most precipitous sides of hills, except in one direction, where it opens to a creek, about a quarter of a mile off.

54. Is it grazing land? Yes.

55. You mentioned that there was a creek near it—only a quarter of a mile off? Yes.

56. Might not that have been a source of supply for these farms? It might have done, but the spring was nearer.

57. *By the Chairman*: You have no more chance of getting that land now than when you applied for it, and perhaps less, because it is subdivided? Yes, it is subdivided; but he himself undertook to nullify the marks.

58. *By Mr. Aldcorn*: How long is it since you wrote to Mr. Davidson? The 19th of May.

59. *By the Chairman*: Are the licensed surveyors very particular in marking the boundaries of lands? No; in my neighbourhood, in the surveys of Mr. Davidson, the marks made eighteen or twenty years ago are perfectly good—they are well marked trees. Mr. Charlton's surveys also are excellently marked; but I must say I have never seen such marks as Mr. Burnside's.

60. There seems to be no system of marking adopted similar to that of former years? No, only a few saplings marked,—one or two on the side line of a 30-acre allotment.

61. And a stranger would probably have to employ a surveyor to point out the lots? And he would be at a great loss to find it unless acquainted with the locality; familiar as I am I could not run down thirty acres.

62. And you have been living seven years in the neighbourhood? Yes.

T. Cad. II,
Esq.

10 June, 1858.

WEDNESDAY, 16 JUNE, 1858

Mr. DONALDSON,		Mr. MORIARTY,
		Mr. WHITE.

G. B. WHITE, ESQ., IN THE CHAIR.

Henry Halloran, Esq., again called in and further examined:—

H. Halloran,
Esq.

16 June, 1858.

1. *By the Chairman*: When the system of appointing officers from home was the only one adopted in the service, was the duty generally satisfactorily carried on? Yes, I think so, generally speaking.
2. The surveys as performed by these officers were afterwards placed in the hands of draftsmen, who mapped them? Yes; they charted them, as they used to call it.
3. That is not the proper term, "charting" is applied to naval, and "mapping" to land surveys? The former was the term used, and though technically inaccurate, not derivatively so. There are *selenographic charts*, which are maps of portions of the earth's surface. The use of the word originated with the early Governors of the Colony, who were naval men, as did also the word "creek," instead of *stream*, or *rivulet*, or *river*.
4. Are you at all aware of the scale upon which these maps were compiled generally? That is not my branch; I cannot say I am acquainted with it.
5. I suppose you know nothing about the field-books, whether there was any general plan or formula by which the surveyors were obliged to return the field-books to the office? No. I recollect strongly urging that they should do so; but they did not, except on leaving the service, or on going to another district.
6. They were not made upon one general plan or formula? I think not—every one had his own system.
7. You have always had a considerable establishment at head-quarters of surveyors, independently of the gentlemen belonging to your branch of the service, and the draftsmen? One or two generally.
8. I see by this Report that there are three put down as belonging to head-quarters? There were Mr. Gordon, Mr. Burrowes, and My Lord Audley, I think, at the time.
9. Was there supposed to be duty for these officers? I should think not for all, for I know that one of them was not employed upon the duties of a surveyor.
10. I see here also that there are 17 draftsmen and 16 clerks—has the establishment increased, or has it decreased since? In 1856 it increased very much; it went up to 29, with the two branches of the department—the Crown Lands and the Survey. It is now 22 or 23 altogether, so that it has gone down again; but we are much pressed.
11. I think I asked you before, but I may repeat the question, do you not think that establishment could be reduced? I think they work fully generally during hours.
12. Could not the work be so simplified as to decrease the number? In every possible way that it can be decreased it has been. Letters of no importance have not been recorded, such as applications for deeds. We have attempted the practice pursued in merchants' offices, for the *impression* of copies; but I do not think it is a safe course to continue, as I have looked to the Railway Office, the Treasury, and Post Office, and find that imperfect impressions were not uncommon; I understand also that in the ministerial departments in England it is not pursued; and that in the Great Western Railway Office, where it was introduced, it was discontinued.
13. In your evidence given before the Commissioners you state that some 12,000 letters pass through your office annually? Last year the number received was upwards of 14,000. I think I said drafts, entries, and fair copies, in my evidence.
14. Do you recollect what number of letters were written to the public out of that 12,000? That I cannot say from memory. The 12,000 is composed of drafts, fair copies, and entries, which reduces the real number to 4,000. At one time the most ordinary letters had to be *drafted*—in fact, written in triplicate. I endeavoured constantly to get rid of that system of drafts, but was always called to account when I did so.
15. *By Mr. Moriarty*: When was this practice discontinued? Immediately Colonel Barney took charge. Immediately I had the power of discontinuing it I did; I had previously attempted it, but was met with rebuke.
16. *By the Chairman*: In answer to question 589—"Do you know what is the number of "letters which have been written this year?—you say 528 to the Colonial Secretary, 826 " to Surveyors, 393 to private individuals, 171 to minor departments, and 49 to the Chief " Commissioner of Crown Lands; printed acknowledgments about 1,219, printed intimations " of land proclaimed for sale, 360. Average of letters and printed letters about 12,000 a " year, exclusive of blank cover reports, allowing for the three copies—draft, fair, and entry"? Yes: that would bring it down to about 4,000.
17. Of these 393 were to private individuals? Yes.
18. *By Mr. Moriarty*: Does that 393 include draft and fair copy? I should say certainly not; there is also a great number of printed letters.
19. But in those letters there are only a few words filled in? There is the dating, numbering, the subject, recording, and noting these letters, and the putting up, addressing, and stamping—all requires time, though trivial in themselves.
20. *By the Chairman*: Can you furnish the Committee with a list of all the clerks who have joined the service since Mr. Oxley's death? It would be a very long list.
21. You can give the number yearly, and the amount of salary paid to them, to show the cost of the clerical department, year by year? Yes, with some trouble. (*Vide Appendix A.*)

22. Can you furnish also a list of the surveyors employed since Mr. Oxley's death, with the salaries of those officers and their contingent accounts, year by year? Yes; it will, however, be an immense labor. (*Vide Appendix B.*) It may be got from the books of the Audit Office and the Treasury, and from our own in later years.
23. Do you remember the names of the officers of the surveying branch being excluded from the lists of the department? What list do you refer to—any general list of the department?
24. There used to be a list supplied by the different departments to the Almanacs of the Colony; and under the head of the Survey Office, the names of the Surveyor General, the Deputy Surveyor General, and then of the surveyors, the assistant surveyors, the draftsmen and clerks were published,—for one or two years this list was excluded altogether? That has been done by the will of the printer, never by the office. Other departments were similarly treated—principals of divisions only shown.
25. Do you remember any of the officers making a complaint respecting this? I think Mr. Galloway in some correspondence made an allusion to it.
26. You do not recollect it? I fully recollect some allusions to myself.
27. I think Mr. Galloway was not the only officer who remonstrated on the subject? He is the only person who did so officially, or whose remonstrance reached me; and I think it was rather with reference to the position in which the names were placed that he objected.
28. Are you not aware it was supposed by several officers that it was omitted for the purpose of abolishing the grades established by the Secretary of State's Despatch? I cannot say I ever heard any thing of the sort; it was altogether an arrangement of the printer. I believe Mr. Galloway mentioned in his letter that Mr. Townsend had felt annoyed about it.
29. You are not aware that I wrote to the Colonial Secretary upon the subject? I am not aware.
30. *By Mr. Moriarty*: Are these publications to which the Chairman has referred official documents? The publishers send, or come to the office and ask for the lists, as a matter of information; sometimes they are given, if we are in a position to furnish; sometimes, where arrangements are incomplete, they are not given. I have lately sent them to the gentleman who prepares the salary abstract, Mr. Williams, the accountant, and he gives them.
31. They are not furnished officially by the head of the department? The head of the department does not furnish them officially.
32. *By the Chairman*: I see that in this Report the Commissioners recommended that the license system should be abolished, with as little delay as the immediate wants of the department would admit, and I think you do not agree with that recommendation? I do not, if I may maintain my opinion. For surveys *beyond* the Settled Districts—feature surveys, trigonometrical surveys or explorations—highly salaried, scientific, and devoted men, with liberal allowances, should be employed. When I bethink me of the gallant Burnett, the chivalrous Kennedy, the unfortunate Stapylton, the devoted Townsend, the martyrs of the Survey Department—and White, and Galloway, and MacCabe—I doubt whether any such could ever be drawn from the ranks of the licensed surveyors.
33. Do you agree with their general recommendation that there should be three classes of surveyors—district surveyors, surveyors, and assistant surveyors? I am of opinion that within the Settled Districts of the Colony a district surveyor, controlling a considerable staff of licensed surveyors, and working right a-head, would operate more quickly, and more cheaply, than under the other arrangement.
34. *By Mr. Aldcorn*: A proper inspecting surveyor? Yes; who should be able to control, direct, and organize.
35. *By the Chairman*: What was the greatest difficulty you had to contend with when you had a staff of officers belonging to the service—I refer to the transport of the commissariat, the supplies of the service? The form of supply requisition from head-quarters. Of course where a person received a money allowance, and could purchase upon the spot anything he required, he moved more quickly than if he had to send to head-quarters for everything he required.
36. The men employed in Sydney got the same allowance as those who were employed five hundred miles away in the bush? No. I stated the other day that it was not so: within the Settled Districts they had £70 a-year, and beyond £100.
37. *By Mr. Aldcorn*: Was that on account of the greater expense the surveyors would be at in the distant districts? The greater difficulty and cost of getting supplies. In Sydney he could purchase a dray second-hand, or at a reasonable price; in a remote district the expense would be much greater, the market being limited.
38. *By Mr. Moriarty*: Is there any other difference in the allowance, besides the difference in the allowance made to surveyors in the Settled and to those in the Unsettled Districts? Only in the case of Mr. Burrowes, who received £100 a-year in Sydney; but he was not allowed to draw rations or forage. That was a special matter of arrangement. Mr. Darke is now receiving the same.
39. *By the Chairman*: How many local land offices have you now? Nearly seventy.
40. You have increased the number very much since this Report was framed—there were then fifty? Clerks of Benches being agents now, we have the arrangement extended to the Unsettled Districts.
41. The commission on the sale of lands at this time, I see, amounted to something like 2s. 4d. per acre? It was very large. I have heard surveyors complain bitterly that they received only so much for surveying such a portion of land, and that the Commissioner, who had merely to go into the auction room and dispose of it, received so much more.
42. Has that commission been reduced at all? Yes. The Clerk of the Bench, as agent, now receives £50 a year in addition to his salary, whether he effects any sale or not; but if the amount realized from sales by him reach £5,000, he then has two per cent. on the whole,

H. Halloran,
Esq.

- H. Halloran, Esq.
16 June, 1858.
- so that his agency or additional salary will reach £100; but he cannot go beyond that, whatever quantity of land he may sell, even though it amount in value to a million.
43. I see that Sir Thomas Mitchell laid the Royal Instructions upon the Table when he was before the Commissioners? I think this is likely to be the document itself: if so, it is an extract copied in his own handwriting. (*Vide Appendix C to first Evidence.*) I understand that the General Instructions of Sir R. Darling and Governor Brisbane are in print, and therefore this cannot be looked upon as a private paper.
44. Have you any large quantity of land for sale at the present moment? I think a quarter of a million of acres measured, but not all open to sale. This contains the Clarence River lands.
45. Sir Thomas Mitchell says here,—“there are several hundred thousand acres of land for “sale in various localities”?” I think the land at the Clarence is included in that.
46. Can you give the Committee a return of the land that has been surveyed by licensed surveyors and not sold or applied for? I doubt if this can be furnished, as it will take a very long time compiling. I may remark, however, that if the land be of town or suburban class we continue to bring it forward again and again; and that if it be of the *country* or *special country* class it is open for selection. If the land measured by a licensed surveyor were obviously of so worthless a character as not to be likely to sell, the surveyor who, from avidity or faithlessness, had surveyed it, would be surcharged or disallowed the cost of measurement.
47. The selection of the land depends upon the surveyor who may survey unsuitable land? Individuals select generally. You may have an unprincipled person either in the position of a salaried or of a licensed surveyor. I mentioned when I was last examined the outlines of a scheme which I had prepared, which urged the necessity for *supervision*; the sending in of field-books; the making use of them when they were sent in; the necessity of uniformity in their arrangement; and of a code of directions being printed in every copy of field-book, so that every surveyor, new or not, might see exactly how he was to operate. If the Committee wish it I can append a copy of that scheme. (*Vide Appendix C.*)
48. The field-books are original maps? Yes, and of much more value generally, I consider.
49. A map may be made erroneously—the field-book shews the notes taken on the ground? Yes.
50. Can you clear up a portion of this answer of Sir Thomas Mitchell to Q. 197,—“The present mixed system of survey you wholly condemn? I wholly condemn it, as “unsuited to the means of working and superintending it. It is not at all my system, and “I would not continue it a day. The correspondence of the department alone engrosses all “my attention, while I am wholly responsible. I see too plainly that much is taking place “which ought not to be left to irresponsible subordinates”?” I would speak gently of the dead; but my interpretation of that would be, that it was a reason for his retaining in his office at head-quarters a surveyor—My Lord Audley. I consider that was a plea for retaining him in his office under his immediate eye, in his very room, preparing drafts of letters, &c. I was questioned respecting My Lord Audley’s presence in office by the Commissioners.
51. When Lord Audley came into the office do you think he was a surveyor at all, or had ever had anything to do with surveying? When he came in he was not a practical surveyor, I believe.
52. Had he made any survey? Yes; he surveyed a run, a certain pre-emptive purchase, and some allotments.
53. How many years was he in the office? I think nearly three in the department. The return is given in the report of the work which he did, and a certain note is appended as regarded that work. I pointed out, when that return was preparing, that the whole of the work had not then come into the office.
54. Lord Audley was not appointed, I believe, during the time Sir Thomas Mitchell was at his post in the Colony? Yes; just shortly before Sir Thomas was leaving for England. I think he went to his district before Sir Thomas Mitchell left: he succeeded Mr. Larmour in the Lachlan District.
55. After he was appointed, was he not kept a considerable time in the office, drafting? As I understood, learning feature mapping; but previously to his appointment.
56. In fact, learning to draw? Yes. He was recommended subsequently as Chief Surveyor, and that he was to have been Surveyor General was a rumour of the day.
57. *By Mr. Moriarty*: Are you aware that Lord Audley was a man of considerable scientific attainments? I cannot say that I have any knowledge of that; I know that he was a highly intelligent man, and I should suppose, from his birth and position, that he had received a good, and probably a scientific education.
58. *By the Chairman*: Who has decided upon the practicability or advisability, or otherwise, of surveying the different lands of the Colony? I suppose the Surveyor General—do you refer to any particular time—the time of Sir Thomas Mitchell, or of Colonel Barney?
59. At any time? I think the head of the department; he may be advised by his deputy; and I know at one time Sir Thomas Mitchell used to consult upon almost every matter with the Chief Draftsman, who was virtually his deputy.
60. That deputy was never a surveyor? That I cannot say; he was appointed by the Home Government as assistant surveyor, and I presume therefore he was qualified as an assistant surveyor; but he was never employed as a surveyor in New South Wales—he was otherwise employed, and the reason is given by Sir Thomas Mitchell, in a letter printed in the Crown Lands Report. He said he recommended Mr. Thompson for the office of Chief Draftsman because of his peculiar fitness for the performance of the duties of such office.
61. Is he fit for anything else? I think him an excellent officer—a man of wonderful energy for one with so debilitated a frame—a man of great intelligence, and of high principle. He is, however, physically weak—a delicate man.
62. And not being fit for the office, was placed over the heads of those who were his seniors
in

- in the service, and who were fit for it. You have no general printed instructions to all the officers of the service? To the licensed surveyors we have.
63. Was any arrangement made, or were any orders given in these instructions, relative to the manner in which land should be marked? I think so, and two circulars have been addressed to them with reference to the marking of land; these I can furnish, if required. (Vide Appendix D)
64. Do you generally keep a list of land open for selection? We have a perfect list, which we obtained from the Treasury, on the transfer of their business to us; and immediately a selection is made the land is erased from the book; and all country and special country lands offered for sale and not sold in the country districts being added to the list, a perfect list is maintained.
65. Are the licensed surveyors prohibited from purchasing land? No, they are not; the agents for the sale of lands have lately been prohibited.
66. The licensed surveyors can become land speculators if they please? Yes.
67. Such things have been done in the office among the staff? One gentleman was said to be a great purchaser of land.
68. Did the Deputy Surveyor General ever purchase any land? I believe he has purchased some few portions and allotments which have turned him in some money. He did not appear personally, I believe, at the sales.
69. I suppose the deed was made out in his name, and his name appeared on the map? I think some other surveyors made purchases. I have heard that one bought some land at Goulburn that turned out very well. I do not think Mr. Thompson, or any other officer, made any purchases that were considered blameworthy. The auction was an open auction, in which he was open to competition.
70. What number of licensed surveyors have you now in the service? Thirty-seven.
71. Thirty-three are mentioned in the Report—have you had no increase since? I will not be certain.
72. Here is a question answered by Mr. Thompson, No. 312—"Do your Returns shew the number of days a man is employed on different surveys? Yes; from the Returns we see the quantity of work performed, and can judge as to the character of the surveyors. We can see whether a surveyor puts down too many rainy days, or days spent in looking for bullocks or horses."—Do you not think it rather presumptuous for a man who never did a day's work in his life to make such an answer as that? That is for him to judge: I should not have made such an answer, because it implies—I would have spoken more directly.
73. Was there any great attempt to get competent surveyors to carry on the duties of the service—was there any effort made about the time of this Report? I think not for other than for licensed surveyors. Advertisements have appeared for persons to offer themselves as licensed surveyors only.
74. You have had no difficulty in getting, as salaried surveyors, competent persons? I cannot say the attempt has been made. The salary has been so inconsiderable as not to be very tempting to persons who could turn their talents in any other profitable direction. Nevertheless some of the salaried surveyors have become very well off; whereas persons in office have rarely become so.
75. The want of strength in the department is owing to the difficulty of finding competent persons? Even as licensed surveyors, many of those who come up, come up, as I said the other day, to obtain a diploma or guarantee of their ability, that they may take private employment, which, I believe, pays them generally better; and many have to go back, either because they are not proficient, or for some other cause.
76. Do you know who got up this scale of fees that appears in the Appendix to this Report? I think it was prepared in the office. I made some suggestion as to an additional amount of fee where the work was done in three months, and a reduction where the work was left over six months, and it was adopted.
77. In addition to these fees, if I remember rightly, there was twenty-five per cent. gold allowance? There was; that allowance has been reduced twenty-five per cent., and on the 1st July next it ceases altogether.
78. You have sometimes had Boards of Examination for candidates for employment? It is the practice now.
79. Of whom do these Boards consist usually, officers in the service? At the present time Mr. Darke, who is in Sydney, is on the Board.
80. Is the Board formed of officers of the service, or of other officers? Officers of the department. Years ago—it may be twenty years ago—Captain Perry, Colonel Barney, and Mr. Dunlop, the astronomer, formed the Board of Examination.
81. Was Mr. Mann ever introduced into this Board—Captain Mann? I do not recollect his having been present. I am not, however, present myself now, though I was in former days.
82. Some officers, I think, come into the department without any examination at all? I think some, merely on testimonials that are satisfactory to the head of the department, as to their competency.
83. Has that always been left to the head of the department? I think so—always.
84. Did not orders sometimes come from the Colonial Secretary to the head of the department that such examination should take place? I do not remember any case. If you refer to any particular case you have in your mind, and will mention it, I shall be able to answer more particularly. I believe some have come in without being examined at all. I have heard of one or two who came in on the recommendation of private individuals.
85. Did one of Capt. Perry's sons come in without any examination at all as assistant surveyor of roads? Yes; but assistant surveyor of roads was only another name for overseer. He was overseer, that was all; he was brought in at six shillings a day originally, as a sort of overseer over a few men employed on the Northern or Hawkesbury Road.

H. Halloran,
Esq.
16 June, 1858.

H. Halloran, Esq.
16 June, 1858.

86. Is there any difference in the position of a Commissioner of Crown Lands beyond the boundaries and of Commissioners of Crown Lands within the boundaries? Commissioners within the boundaries where merely what the agents are now for the sale of lands; the Commissioners beyond the boundaries were of a very different class.

87. What are the duties of Commissioners beyond the settled districts? They are various and responsible. They report on tenders for runs—that I think is one of their most important duties; they assess the grazing capabilities of runs; they report or express opinions on reserves recommended by surveyors to be made. These are, I think, three of the most important of their duties. They express sanction to transfers of runs from one holder to another, which, it appears to me, is a very unimportant duty, and which I hope soon will reside in the hands of the head of the department only; they grant timber licenses, and perform a variety of other minor matters, furnishing various returns, assessment, and the statistics.

88. Have they anything to do with arranging boundaries of different runs? I have noticed instances occasionally of runs being granted with amended descriptions, I suppose to prevent clashing with other runs, or to bring the area within such scope as is necessary to the maintenance of a certain number of cattle or sheep.

89. They have nothing to do with the surveys? They have not. The survey of runs is not going on now.

90. You are entirely dependent upon the surveyor for the maps you have of these squatting districts? Yes, for maps that are looked upon as geographical maps. No doubt some of the Commissioners may be acquainted with surveying, and where a district has not been surveyed they may be able to give valuable information and sketches.

91. What is the expense of that peculiar branch of the service at the present moment? At present there are eight—£5,000 I should say on the reduced establishment.

92. Do you know what it was at the time of this Report? There were sixteen at that time: there are now eight. It is now intended that the surveyors shall perform the double duty of surveyor and Commissioner—that is in districts where the work of the Commissioner is supposed to be nearly exhausted.

93. Do you not think the duties of both officers can be performed by a surveyor? I do not think the two offices would be found to work well together if there were much Commissioner's work,—the operation of one is tardy, and of the other rapid; but no doubt if every Commissioner were a surveyor it would be a great advantage.

94. Do you not think with the strength the department had at one time, if the Commissioners had been surveyors the whole of the country could have been surveyed? I very much doubt it: consider its extent.

95. You have had two offices instead of one. If the Commissioners had been surveyors, I believe each could, in a couple of years, have surveyed his district? I look upon surveying as necessarily a very tardy and arduous operation.

96. If a man is obliged to spend half his time travelling, but if he were to proceed regularly with his survey it would not be so? That is if he were to measure bad and good land as it came, but if he is merely to measure what he is asked for, his measurements must be desultory and tardy.

97. *By Mr. Moriarty*: You have had charge of this branch of the service for some time? I cannot say "charge"—I supervise it as far as I can. I am responsible for the due performance of the routine office duties.

98. You said Commissioners had nothing to do with the definition of runs? Nothing to do with the measurement of them.

99. You omitted any allusion to the definition or the determination of boundaries of runs? I do not think the detail I gave of their duties to be at all perfect. I do not consider myself to be so thoroughly acquainted with the matter as to give a perfect account of every duty performed by them. One I have omitted,—the reporting upon applications to purchase under the pre-emptive right. The Commissioner is also one of the parties to assess the value of the land if it is supposed to possess any peculiar advantage.

100. *By the Chairman*: You sell lands sometimes by assessment, do you not? How is that?

101. Any portion of the run I am living upon I may purchase if I like? Yes, if it does not form portion of a reserve, which is, after twelve months, if not originally inalienable.

102. *By Mr. Aldcorn*: Is there no limit to the extent of the purchase? You may purchase, I consider, every inch of the run during the currency of the lease, under ordinary circumstances.

103. *By the Chairman*: At a valuation? At a valuation, if the land possesses a peculiar value, or at £1 an acre if the surveyor expresses an opinion that it has no peculiar value.

104. *By Mr. Moriarty*: With reference to the opinion you have expressed, do you bear in mind the provision which empowers the Crown to refuse to sell lands? Yes.

105. Has that power been acted upon, within your knowledge, to any extent? Yes, occasionally—not very extensively.

106. Will you tell the Committee whether there is not a main function of the Commissioner of Crown Lands and the Surveyor General, as to supervising these functionaries, to which you have not alluded? I do not recollect any; I dare say there may be.

107. Is not it the duty of these officers—the prime function—to protect the public lands from the intrusion of trespassers? I cannot say that I take your meaning.

108. To protect the public lands from the trespass of intruders? Yes, it is; but the law is at present inoperative, or, to an extent, defective.

109. As to the definition of runs, is it not partly the duty of these functionaries to compare the claims of the squatters for leases with the boundaries claimed on the spot, to remedy imperfections, to arrange disputes, and to give such an estimate of the area included within the boundaries of every squatting run as will enable them afterwards to assess the capability of the run? Yes, it is, I believe, under general instructions. I said, however, just now, I did not

- not profess to be fully acquainted with their duties. What you say is, I dare say, fully the case. H. Halloran, Esq.
110. Could you tell the Committee what are the present instructions of the Government— I presume that, having access to the instructions of both branches of the department, you will know—as to the definition of boundaries of squatting runs, whether anything is done to further the issue of squatting leases? I think the thing is still in abeyance; existing instructions render previous measurement necessary. The last communication was something to this effect:—The Chief Commissioner has long been of opinion that the leases might issue on descriptions approved of or furnished by the Commissioner, and mutually approved of by the parties holding the adjoining runs. The late Surveyor General, and other professional men, have contended that every run must be measured before the lease could properly issue. The present Chief Commissioner, having been pressed about a particular run by the Minister of Lands and Works, solicited that functionary to decide finally the question. I believe that no lease is valid in law that presumes the element of uncertainty; and, though a Commissioner may be highly intelligent he may not be professional, and may thus pass over in a description an imperfection that in a lease would vitiate its legal integrity. I do not remember any communication between the ministerial and the subordinate department since the appeal to his decision upon the subject to which I have alluded.
111. Can you state what the instructions to the Commissioners are; is it, or is it not, part of the duty of these officers to occupy their time in the examination of boundaries? I think they have done so, and under instructions. It is part of their duty to see also that certain boundaries are assigned to each run; that adjoining runs do not clash.
112. Is there not some system in operation by which disputed boundaries are adjusted on the ground? Do you mean legally or by consent of the parties?
113. Legally? Yes; and they are directed by a circular from this office.
114. Is there nothing besides that? Do you mean by correspondence with the department? I cannot say, as the earlier books are not indexed, that I have read up many matters that I could have wished to have done.
115. But the records of the instructions of Commissioners of Crown Lands, I presume, are indexed? No. Letters received by the Chief Commissioner would be in the general register; but I find, without going back to read up matters, quite enough to do to keep me employed sometimes till two in the morning.
116. I presume on application being made to the office you would have some hand in giving these instructions, or in expressing opinions with reference to them? If I were at all informed upon a subject, and requested to express an opinion upon a subject, I should do it.
117. Is it not the practice—are you not invariably required to express an opinion; is it not your duty? I am not taking what you refer to.
118. Is it not part of your routine duty to express an opinion upon applications made to the office? Yes, it is a duty, and performed by me as far as I have time, information, and means of performing it.
119. You have not made yourself acquainted as to whether there is not an arrangement in existence for the settlement of disputed boundaries? I have not, indeed.
120. I think you stated just now, that in some districts in which the assessment of runs has progressed to some extent the Commissioners have been superseded by officers of the Survey Department? It is contemplated, I believe, to replace them by surveyors.
121. Can you say what rule is followed in the selection of those districts? It was not determined in the office, otherwise than that the work was found to be nearly up in those districts.
122. Were any steps taken to ascertain whether it was—were any inquiries made? Yes; a return was made shewing how many runs in these districts tenders were to be reported upon, and how many runs were to be assessed.
123. Do you remember whether that is a recent inquiry? That would be as far as six or eight months ago.
124. Or twelve months ago? It might be.
125. Can you append to your evidence a statement of the number of runs remaining to be assessed in the New England District, from which the Commissioner has been removed? Yes, I believe I can furnish it. (*Vide Appendix E.*)
126. The last inquiry addressed to the Commissioner of that district is that he will state the progress and probable termination of the assessment of runs? Yes.
127. Is it within your knowledge that any of these officers employed in the assessment of runs have required to be distinctly informed by Government whether they were, or were not, to give attention to the examination of boundaries, or were to confine themselves to the assessment of the capability of runs? I do not remember.
128. You do not remember a communication from the Commissioner of the New England District in July last? Yes, in August last. I recollect that case; that was one intended to have been referred to in a ministerial inquiry awhile ago.
129. Was that letter answered or acknowledged? No, it was not.
130. Do you remember a correspondence about the country on the Barnard? Yes; that is now brought to a conclusion, after passing through many hands.
131. Do you remember the date of the communication to the Survey Department? September or October; towards the close of 1857.
132. Was it not in August? It might be; I am not certain as to the date.
133. Can you give the Committee the date on which any action was taken upon that in the Surveyor General's, or any communication made to the Government? No; it is only recently decided. I know it has been in the hands of the Surveyor General, the Chief Draftsman, my own hands for some time, and then for a time with the Tender Board; and

H. Halloran, Esq.
16 June, 1858.

it has been recently decided that this country between the Barnard and the Manning, or the Little Manning, for so this river is called, is *intermediate*. Mr. Thompson and Mr. McLean were both of opinion that it is of the *settled* class, and lands in that district have been let under lease, the 29th March, 1848.

134. Do you remember whether any opinion was expressed by the Surveyor General on submitting the question to the Government? I think I wrote the letter; and also that I, almost against my own judgment, did express the opinion that it was of the *settled* class; but I deferred to the opinion of two persons geographically informed—Messrs. Thompson and McLean—whose opinion I thought, and think, ought to overweigh my own. Still I was strongly impressed with the correctness of the reasoning of the Commissioner, and it was almost in spite of my better judgment that I gave way.

135. You say the matter has been decided; can you inform the Committee how the tenure of the lands of that part of the country stands affected by that decision? There is one run—the Giro run—occupied under 11th February lease; much of the remainder—a large extent—is occupied under the Regulation of the 29th March, 1848. These leases cannot be renewed, or they may be revoked; and then I suppose the tenders, of which there are several, will be accepted, or again referred for arrangement to the Commissioner of the district.

136. Can you inform the Committee whether there is any summary mode of removing intruders from Crown Lands at the present time: is not that a question for the lawyers? I think they have decided that it may be done by process of *scire facias*.

137. I asked you whether there is any summary mode? I am not aware of any.

138. How do you deal with improvements upon town reserves—in the case of improvements where the pre-emptive right is admitted—how do you deal with the improver? He would be allowed an 11th February lease, for which he would pay the [large] sum of £10 for land for which he had already paid. A letter has been written on a certain case in the village of Falconer. The Chief Commissioner recommended that the £10 license fee should be remitted, but that letter has not been replied to. I think the general question was taken up; it was not treated as a specific case.

139. I presume you can furnish the Committee with that correspondence? Yes, I can. (*Vide Appendix F.*)

140. *By Mr. Aldcorn:* It being assumed that a proper and effective method of supervision were established, do you think the system of surveying by contract, or licensed surveyors, could be carried out with advantage to the Colony generally? That has been my opinion for a very long time. I believe that, with a sufficient number of efficient and well paid supervising officers, plenary discretion, sufficient means of locomotion, and a large staff of licensed surveyors working under them right onward, the settled districts might be worked up in a short period—within two years.

141. You think, then, that by such a system great expense would be saved in the working of the department? I am disposed to think so, because all lost time—all time lost in consequence of bad weather, travelling, sickness, accidents or other causes—would be out of the pocket of the surveyors, while in the case of the salaried surveyor it is at the cost of the Crown.

142. Is it your opinion, from your own knowledge, that by the system of license or contract survey the survey of the Colony could be as well done as it has been hitherto by salaried officers? I think so, if you would fully and thoroughly examine your officers in the first instance, and fully and thoroughly examine the instruments with which they would operate, and pay them such a sum as any honest man would be satisfied with earning, and place them under proper supervision.

143. What number of district or inspecting surveyors do you think would be requisite for the whole Colony, to do the work effectually? I should confine the operations of licensed surveyors to the *settled* districts; and I think for these eight or ten, at the most, would be sufficient. Then they would work, not as they do now in a desultory way, but would go right onwards with a consecutive survey, measuring all Crown Lands, leased or not, and this would be more likely to be correct than a survey of a partially connected and desultory character. I may remark, however, that this is the expression of the opinion of an *unprofessional* man, and therefore that I do not care to have more weight attached to it than it deserves.

144. Do you think the district surveyor should do surveying work himself, or that he should be confined to the duty of inspecting the work of the surveyors under him? The inspecting surveyor should check the work of the others by cross lines, as Townsend did with the contract surveyors at Port Phillip.

145. Do you think he might advantageously act as Crown Lands Commissioner too? I should think not Crown Lands Commissioner or Agent for the sale of lands, for their offices have to be open every day; and if any one were to call at the office to purchase land when the agent was away the Crown would probably lose the money. I think, besides, that the heaping offices together is a bad principle.

146. You think the offices for the sale of lands should be maintained as at present, the Clerks of Petty Sessions acting as agents for the sale of land? I think they are convenient and useful; but I myself argued long ago that a *local* sale is not a fair public auction. Eight or ten persons only may meet in the room where the sale is taking place, and arrange, "You take that, and I will take this,"—and thus defeat the object of the Act. The Crown Land Sales Act intended a more extended competition, and I believe if the places of sale were less numerous that advantage would arise.

147. *By Mr. Moriarty:* If you had the places of sale less numerous would you not in many cases shut out from the market the persons most anxious to bid in a particular locality? How many miles does a man travel for a doctor or a coroner—thirty or forty miles is thought very little of in the country.

148. Do you not know that already men have to travel ninety or a hundred miles to a land sale? I think that must be a mal-arrangement of a district where that is the case.

149. *By Mr. Aldcorn:* Of course you would be determined by circumstances in these arrangements—where the police districts were very large you would not throw two together, but where they were small you might do so? I think the public convenience should be studied as far as practicable; but where a man in the country has an object to accomplish he does not mind a ride of forty or fifty miles.

H. Halleran,
Esq.
16 June, 1858.

150. In your opinion the license or contract system would be cheaper and as good, with proper supervision, as the salary or staff system? I would not say cheaper,—if we could have men like Townsend, who delighted to be at work—to whom a month's work seemed to give an increased appetite for further exertions;—the salary system might be cheaper with such men as officers; but I do not think salaried surveyors generally are likely to kill themselves with work, or to drive themselves almost mad, as he did, for the sake of such an income as they receive. If a man can by industry and hard work obtain such a return for his labor as Mr. Maun is said to have done, and who during one year made some £4,000, he has some inducement to encounter hardship, for he soon obtains an independence.

151. Your opinion then is, as I gather, that salaried surveyors have hardly been adequately paid? I cannot say they have been overpaid. I think rather that they have been underpaid; still they have some advantages, poor though they be: they avoid town expenses; they have a tent—which is, however, at times a comfortless residence—and are furnished with a ration, which is a poor thing, and they are saved the cost of servants. Nevertheless, some have acquired a little independence. Mr. Townsend is independent; Mr. Galloway is independent; and Mr. McCabe is, I am happy to say, also independent.

152. They have obtained it by saving? Yes, principally, and by investing their money in shares and in other matters.

153. *By Mr. Moriarty:* You are acquainted with the routine of the office,—can you state what duties are performed by the Deputy Surveyor General at present? I think he could describe them better himself. He has referred to him matters which one supposes to require particular investigation, such as this tender at Palm-tree Creek, in which a certain amount of geographical knowledge should be possessed.

154. You give the case of Palm-tree Creek as an instance where particular geographical knowledge is required? That is the reason it was given to him.

155. Do you not know that all the geographical information necessary for a person to have appears on the face of the paper? A map may be consulted which shows certain creeks; but the party referring would have to decide which was Palm-tree Creek.

156. Does it not appear on the face of the correspondence itself? I should think not; it is still undetermined, and the Board have again sent it back to Mr. Wiseman. Mr. Thompson is perfectly ready to take up anything that is given to him. He got up the appendix to the Land Regulations the other day, and he now has, I believe, to collect, arrange, and prepare for publication the descriptions of all the squattages. But I believe, as I said before, that either the the Surveyor General or the Deputy Surveyor General should be always in the field, as, if the Chief Draftsman and the Chief Clerk be fit for their places, they can, under their chief, carry on the work of the office, if they have proper and sufficient assistance.

157. Is it laid down in any official rule, or is it any understood part of the official system, what matters are to be referred to the Deputy Surveyor General, or does it rest entirely with the head of the department to decide? With the head of the department.

158. So that his duty might be designated under the head of jobs placed in his hands by the head of the department? He has no stated and regular participation in the routine work, but he is always ready, and I have often suggested “That is a matter I would rather not deal with.”

159. Can you state what is the usual routine of the correspondence of the office? I think we have endeavoured to follow out to a certain extent the suggestions of the Board,—that letters should be attended to without the circumlocution that was customary in former days. When I open letters, I have present, for own safety, because they may contain money, the accountant. Matters of survey that are merely matters of routine I have registered and sent to Mr. McLean as soon as they are recorded. Deed-letters I have sent to Mr. Davidson without recording; matters of account I send to Mr. Williams' branch to be recorded in certain books, examined, and prepared for payment. Letters from the Ministerial Office—that is, from Mr. Robertson—I should also send to the proper officer, if they are mere matter of routine; but, if anything more than an ordinary matter, I should submit it to the head of the department.

160. *By the Chairman:* You have not the multifarious correspondence with the Colonial Secretary's Office you had formerly? No; that business is transferred to the Office of Lands and Works.

161. *By Mr. Moriarty:* There is a memorandum of the official routine? Do you mean one written on Colonel Barney's taking charge?

162. I do not know when it was written: I have merely heard you refer to it once or twice—is there such a memorandum in force now? Yes; I think so.

163. Would you have any objection to append a copy of that memorandum? Yes; I think I should, because it is merely between the head of the department and a subordinate. I should not object with his consent—without his consent I should hesitate.

164. It is an official document I presume? I believe not. It has not been seen by above two or three. Mr. McLean has seen it. (*Vide Appendix G.*)

165. *By the Chairman:* Have you read the evidence given before the Commissioners by Mr. Brownrigg? I think I skimmed it over at the time —

166. Generally, I think, all the practical men who were examined condemned the license system as it has been carried on for some years past? As carried on for some years past I think it is defective, wanting supervision.

167. Mr. Brownrigg states, in answer to question 1072—“What is your opinion of the “licensing system? I object to it altogether. I think it is a wrong one. It is open to this “objection,

H. Halloran, Esq. "objection, amongst others, that Government work is often neglected by the parties who have a license for a certain district. The Government work rests as a sort of nest-egg, and as long as the surveyors can obtain private work, they perform that and leave the other undone"?
 16 June, 1858. No doubt they prefer private work when it pays them better. I disbelieve in the licensed surveyors devoting themselves much to private work; but, if the Government claims their exclusive services, it should find them in continuous and sufficient employment, otherwise the compact would be one-sided and unjust. Mr. Armstrong, a private surveyor of high repute, good practice, and fair ability, took, and has, I believe, faithfully performed, the duties of licensed surveyor, without turning aside for private employment. I believe good and faithful licensed surveyors may be found and retained.

APPENDIX A.

RETURN, shewing the ANNUAL COST of the DRAFTING and CLERICAL BRANCHES of the SURVEYOR GENERAL'S DEPARTMENT, with the number of persons employed in each Branch, from 1 January, 1827, to 31 May, 1858.

^a Allowance in lieu of forage for one horse.

NOTE.—Surveyors received an equipment or money allowance in lieu thereof. Laborers were found them, and paid and fed at the public cost; they received forage for their draught and saddle horses, or a money allowance in lieu of the latter, and provisions for themselves.

APPENDIX C.

EXTRACT from a letter to have accompanied and explained the Scheme.

1. The ready disposal of the lands of the Colony to those who can purchase, and will convert to wheat bearing acres, the now comparatively unproductive tracts of land within the settled division of the Colony is, I submit, a question of more than ordinary importance. Two things have to be accomplished: the creating a supply equivalent to or greater than any supposable demand, and the economy and rapidity with which that supply may be rendered accessible.

2. New-comers have, for many years past, complained that, while they awaited the contingencies of the sale of land which they had chosen, the means which would have enabled them to purchase and improve dwindled away in the expenses of living; and the public might well complain of the costliness of measurement. No system has yet been devised to lessen the delay and reduce the expense of measurement. Surveyors paid, "work or no work," with large and cumbrous equipments, have been engaged in the expensive measurement of isolated portions; and these brought into the market in insufficient quantities have quickened competition to an injurious extent, and have left many an impoverished land seeker to lament the day when he set foot on our shores. No doubt a man of sagacity and experience might easily obtain from the holders of the thousands of acres of the Crown a homestead suitable to all his purposes, at a lower price and on easier terms than the law permits with regard to Crown Lands; but the dread of inferior or of damaged titles, and the great reliance placed on Crown Deeds, have always induced land seekers to prefer purchases from the Crown to any others. Now, if the twenty settled counties contain a total of say twenty-six millions of acres nearly, and five or six millions only have been disposed of by the Crown up to the present time; surely there must remain at least some eight to ten millions of available, or moderately good land within these counties in the hands of the Crown. To pursue the old expensive and dilatory system of having these measured in disconnected portions, by salaried "work or no work" surveyors, without any comprehensive arrangement of general subdivision and sale, is to follow our own bad example, and to leave the public still unsatisfied and complaining. The purport of the suggestions contained in the accompanying scheme, neither unconsidered nor lightly advanced, is briefly this: that the twenty counties should be divided into seven large compartments; that the system of measuring for sale on desultory applications should be abolished; that a surveyor should be placed in charge of each of these districts or compartments, with a salary averaging, with commission, say £800 per annum; that under each of these should be placed a strong staff of licensed surveyors, and that they should proceed throughout their districts, measuring directly on—without impediment from preemptive or auction leases, or commonage reserves—whatever land may be found available for agriculture or pasture; lines of road for access being only considered by the district surveyor.

That the whole work, correspondence, and accounts should pass through the district surveyor, by whom the movements of the licensed surveyors would be arranged and directed.

By this means, instead of some fifty or one hundred portions being brought to auction at one time, a thousand portions would be at once exposed to the public choice, and if one hundred only were purchased by auction, the remaining nine hundred would be for selection and immediate purchase.

I propose that the plans should shew more minutely the topographical and geodesical character of the land measured; its facilities of access; its supply of water; and also (and for this the surveyor should be a sworn and paid valuator) the value of the land, in his opinion, as compared with other lands—the £1 minimum still remaining as the upset price. I do not mean that his opinion of the value of the land (he could have no object in deceiving unknown purchasers) should, in any way, govern the minimum price, or keep the land from the auctioneer's table; but that his faithful description and unbiassed professional opinion should be made accessible to buyers, for their information and assistance, as their avocations may prevent their examining, or their want of judgment prevent their justly estimating the value of land open to their purchase. Let the buyer beware (*caveat emptor*) applies well to the *hat* which the purchaser must personally inspect to *fit*, or to the *horse* of which he may easily obtain a friend's opinion and judgment; but as to the land which he could not personally inspect, without possibly an expensive and inconvenient journey, he could have no better guide than the opinion of the

the unbiassed, intelligent, and practised valuator by whom the land had been examined and measured.

The superabundant supply would virtually remove the chief objection to the *auction* system—the delay and contingencies of competition—and the opinion of the valuator would assist and assure him in his purchase. The system of measurement by supervised licensed surveyors has the advantage of *economy* and *speed*, with an assurance of correctness.

Connected with this arrangement would be the adoption of the system of thorough official examination.

(The other features are set forth in the Scheme, so that I desist from copying further.)

I have, &c.,
HENRY HALLORAN.

BRIEF outlines of a SCHEME proposed for the measurement of lands for sale in the Settled Districts, their sale, and the issue of Deeds. (June, 1853.)

It is proposed,—

1st. That the Settled Districts should be divided according to the most convenient geographical arrangement into (say) seven surveyors' districts.

2nd. That a surveyor with a salary of £500 per annum, and forage for a horse for personal use, and a light travelling equipment, should be placed in charge thereof with a staff of licensed surveyors, a qualified draftsman and clerk, and an office placed in the most central position, as a head-quarters.

3rd. That the district surveyor should allot to each of the licensed surveyors a suitable proportion of the undivided vacant Crown Lands within his district,—so arranging their operations that the measurements should be carried forward simultaneously, and as far as possible connectedly and continuously—pre-emptive and auction leased lands being subdivided for sale in the same manner as any other vacant Crown Lands.

4th. That the licensed surveyors should be sworn valuers, and paid a moderate fee for their valuation of every portion of land which they may measure, its peculiar advantages, topographical and natural, being clearly stated in their field-books, as also its convenience to road or water carriage.

5th. That field-books, ruled in the most approved form, of small size, *i.e.* of few pages, with a printed code of directions for the mode in which it is to be kept prefixed to every volume, so as to ensure uniformity therein, should be provided to every licensed surveyor to be returned by him as they are filled up to the district surveyor.

6th. That the plotting of the work, and preparation of plans and of descriptions in printed forms, from such data, should be proceeded with by the district draftsman, to be signed and forwarded by the district surveyor after he has sufficiently examined them, tested the surveys where he may consider them doubtful, rectified them where he may have found them incorrect, or completed them wherein they were imperfect, he retaining the field-books, unless specially called for, until the end of the quarter, when he would forward them to head-quarters.

7th. That the accounts prepared by the district clerk should be examined, passed, and signed by the district surveyor, and forwarded to head quarters for payment, *monthly*.

8th. That the licensed surveyors should be occasionally suddenly visited by the district surveyor, and their *modus operandi* and instruments examined; it being, however, of course, intended that every licensed surveyor and district draftsman should be carefully and sufficiently examined in writing and reported on, by a well-qualified board of examiners, to be paid for such examinations.

9th. That the district surveyor, in addition to the salary named, should receive a commission of, say _____ per acre, on every acre measured in his district.

10th. That all district correspondence should be conducted through him.

11th. That he should, by astronomic, trigonometric, or other operations, test and correct, as far as possible, the surveys in his district, completing, from all data whatever, a reliable map of his district.

12th. That all surveys, with returns, or other required information, should be furnished by him monthly.

13th. That all descriptions of lands, the sale of which is considered expedient, (the plans and descriptions having been examined in the office at head-quarters), should be placed *in original*, with a prepared proclamation, and submitted by the *Surveyor General* to the Governor General for approval and signature.

14th. That the proclamation having been printed, the *original* descriptions re-obtained from the Government Printer—the two departments working in concert,—sale-books should be prepared in the Surveyor General's Office, with abundant *lithographic plans*, and forwarded to the Commissioners managing the land sales.

15th. That the Surveyor General, on the report of sales from the Commissioners—the receipt of the proceeds at the Treasury being ascertained—should forthwith prepare the deeds of grant of the lands sold, from the district surveyors' original descriptions, *a diagram from his plan being endorsed on the deed shewing the land conveyed*; and the deed having been signed by the Governor General, and enrolled in the Supreme Court Registry of Deeds, should be returned to the Surveyor General for registration, and notation on the maps, to be delivered, as was formerly the case, by the Surveyor General to the grantee, or his authorised agent.

16th. Though out of place, perhaps, it may be observed that the marking of allotments in Towns should be more perfect; that larger corner marks, with printed numbers of the sections and allotments, should be used; and that such landmarks, protected by an Act of Council, should be placed under the especial care of the local police.

17th. That the instruments to be used by the licensed surveyors should be examined, and passed by the district surveyors—theodolites being used, where practicable, and the best bar chains being also provided.

Supposed advantages of the Scheme

1. Rapidity of surveys of a connected, continuous, and tested character; with the supervision of a responsible director, and a reliance on their truth and accuracy.
2. The continued application of the licensed surveyor to the performance of his proper duties in the field, and a consequent saving in the cost of measurement.
3. The discontinuance of desultory surveys on application.
4. The satisfaction which every buyer, either by auction or selection, must feel in the more perfect description and knowledge of the land he is about to buy, and the reliance he must place on the honest, informed, and uninfluenced opinion of the surveyor-valuator, guiding him to his choice, though not controlling the upset price.
5. The greater expedition in bringing lands to sale, and in the preparation and delivery of deeds, the saving of registration in unnecessary offices, and of much superfluous correspondence.
6. The greater amount of lands remaining (so soon as the demand is met by the abundant measurements) on the Commissioners' tables for *selection*, and the great convenience and saving of time to purchasers, in the easy avoidance of the *auction* table, and the selection from innumerable portions of which perfect descriptions and valuations are open to their inspection.

HENRY HALLORAN.

APPENDIX D.

(1.)

Instructions for marking Crown Land by Government Surveyors.

In the survey of farms in forest country the trees should be marked within view of each other as near the boundary line as possible; the mark or blaze should be in the shape of a horse-shoe, about breast high; where the tree is big enough to admit of it, the mark should be at least six inches wide, and cut into the wood from one and a half to two inches deep; along the boundary line the trees should be marked on two sides facing in the direction that the line runs; at each corner of the farm or allotment the nearest suitable tree should be marked on four sides, with the horse-shoe mark, and a large piece of bark taken off the tree, on which a broad arrow, at least six inches long, should be marked deeply in the wood, and if the allotments of which the tree forms the corner are numbered, such numbers should be cut deeply in the wood in the horse-shoe mark, on the side of the tree facing the allotment to which such number applies. A large stake (of split stuff, cleared if possible,) should be driven into the ground one foot at least, and left about six inches above the surface at the exact corner, and the bearing and distance of the numbered tree taken from the stake, and noted on the plan. If farms are marked in a plain country where there is no timber, a trench should be cut at every five chains along the line, and a cross cut in the earth, at the corner of each farm; a post-hole hoe will be found to be the most convenient tool for making such marks.

In marking out towns the sides of each of the sections or blocks should be lockspitted all round about six inches deep, and at the corner of each allotment a tangent line about half a yard long should be lockspitted; when it is a double section, the dividing line of the allotments should be lockspitted, or crosses made at the corners of the allotments.

In the general survey of the country, or in a survey made to connect any measured portions, where it extends over more than one mile, Roman numbers should be marked at the end of every mile, giving the distance from the starting point, as these numbers are of great service in taking up the survey at any future period, and are particularly useful on public roads or along the course of streams or ranges.

JOHN THOMPSON,
Acting D. S. General.

Surveyor General's Office,
9 July, 1853.

(2.)

Surveyor General's Office,
Sydney, 10 April, 1848.

(Circular.)

Sir,

The work to be performed by the licensed surveyors is to be in strict accordance with the existing practice of the Surveyor General's Department, which is as follows, viz. :—

2. On directions being received by the licensed surveyor (and which shall have been sent through the regular post), to measure any portion or portions of land applied for to purchase, or as a grant to any public body, or to be appropriated for any public purpose, he is to proceed without loss of time to the survey and measurement, which are to be performed in the usual manner by taking angles with a theodolite, bearings with a circumferentor, and measurement of the lengths of the several boundary lines with a Gunter's chain, verified by comparison with the standard measure. In general the boundaries are to be upon the cardinal points of the compass, with magnetic bearings. Whenever a departure from this rule becomes necessary, either from the windings of a watercourse or road, or from peculiar features in the ground, the reasons for deviations must be made apparent in the plan of the work, and stated in the report which accompanies it. The margins of all lakes, lagoons, and swamps, and also the tracks and courses of continuous mountain ranges, must be measured with

with the chain, and the bearings from each change of station must be noted in the field-book, and furnished in the description. The features of the ground, shewing what part is hilly, and the forms of the hills, and what part is level, must be carefully delineated.

3. Every measured portion must be firmly marked at each corner, by driving in stakes where the soil will admit of it, or by cutting into rocks, whenever they may occur, at the corners. The marks in the rocks are to be broad arrows, crosses, triangles or squares, and each licensed surveyor is requested to preserve uniformity in his own marks, so that they may be easily described and recognized. Marks made by former surveyors are to be noted, but not to be interfered with. Surveys made under these instructions are to be connected with former surveys by means of the marks above referred to, from which measurements with the chain, and bearings of the compass needle, or angles taken with the theodolite, are to be made.

4. The documents in the office, to which access will always be afforded, are to be consulted with reference to previous surveys, in the neighbourhood of which any fresh measurements are made.

5. In extensive and continuous chaining, conspicuous marks on the trees are to be made, of a sufficient height to render them distinguishable from a distance.

6. In laying out a series of country or suburban lots, a way of access must be preserved to each, by marking roads of a chain wide at the back of any range of allotments fronting a river, and leaving a road of half a chain wide between every fourth or fifth allotment, so that the lands at the back may have access to the river or creek for water. It is not essential that each allotment should contain the same area, indeed the windings of a stream will cause the areas to vary, and which is rather desirable than otherwise.

7. The scale on which plans are to be drawn is for country lots 4 inches, and for general survey of features 2 inches to the mile. Town and suburban lots $\frac{1}{4}$ inch to the chain. Plans for towns and villages $\frac{1}{2}$ inch to the chain; on the corner of each plan there must be a reference to the marks or marked trees upon the ground, which shew the corners of the surveyed lands.

8. The surveyed lines and stations, with their lengths and compass bearings, must be shewn on the plans in red color, and a proof line, run diagonally, must also be shewn in the same color.

9. Boundary lines must be black, as well as the outlines of existing tracks of features, if surveyed. If merely sketched they must be shewn in black dots, as indicative of uncertainty. The field-books of licensed surveyors are the property of the Government, and are to be handed over on the discontinuance of the license. Copies of them to be furnished whenever called for.

10. Every plan and description, or set of plans and descriptions, transmitted to headquarters, is to be accompanied by a letter of transmission and concise report, each description being on a separate half-sheet of foolscap paper, and to be complete in every particular, dated, signed, and prepared in the manner in use in the office.

11. Payments will be made upon the certificate of the Surveyor General, (or officer conducting in his absence the business of the department), that the work has been examined and found to be correct. If otherwise, the work will be returned for re-survey, if necessary, or for explanation.

12. Payments for surveys of lands promised to be granted to public bodies or institutions—such as for churches, schools, and ministers' dwellings, of whatsoever denomination—is to be obtained from the parties for whose benefit the grant is proposed, but for general cemeteries, payment will be made in the same way as for other public work.

13. The schedule of fees, of which a copy was forwarded in my circular No. 48-92, of 29th March last, will constitute the whole remuneration of licensed surveyors. No account for travelling or other contingent expenses will be entertained.

14. Licensed surveyors are requested to reside in their respective districts.

I have, &c.,

S. A. PERRY.

To the Licensed Surveyors.

APPENDIX E.

(1.)

THE Crown Commissioner, New England District, to the Chief Commissioner of Crown Lands, forwarding Return of Unassessed Runs in New England District.

(57-156.)

*Crown Lands' Office,
Armidale, 23 March, 1857.*

Sir,

In acknowledging the receipt of your letter of No. and date as in the margin, I have the honor to transmit to you, enclosed, the 1st Return, as per margin, therein called for.

2. In reference to the second Return, I beg to state, that the information is much more readily accessible in the records of the Crown Lands Office, Sydney, than in this. The system in reference to tenders pursued by my predecessors has been such that I cannot afford it without a very great waste of labor, and uncertain results.

3. If furnished with a list shewing the tenders in this district not reported on, or reported upon insufficiently and still undisposed of—as given in the Return recently prepared for the Legislative Assembly—I will give my earliest attention to their disposal.

I have, &c.,

A. ORPEN MORIARTY,

The Chief Commissioner of Crown Lands.

Commissioner Crown Lands.

RETURN

RETURN shewing the number of Runs remaining unassessed in the District of New England, on the 1st of January, 1857.

NAME OF RUN.	NAME OF LESSEE.	AREA.
		Acres.
Fraser's Creek	Wm. Vivers	46,000
King's Plains	Do.	80,640
Moona Plains	A. F. Crawford	16,000
Branza Plains	Jno. Fletcher	40,000

Making in all a total of 80 Runs in the District of New England remaining unassessed on 1st January, 1857.

(2.)

57-3249.

*Crown Lands Office,
Sydney, 21 April, 1857.*

Sir,

In compliance with the request contained in the third paragraph of your letter of the 23rd ultimo, forwarding Return of Unassessed Runs in your District; I have now the honor to transmit a list of Tenders for new Runs in the District of New England, and request that you will furnish your several Reports thereon as early as possible.

I have, &c.,

The Commissioner
of Crown Lands,
New England.

GEO. BARNEY,
Chief Commissioner of Crown Lands.

LIST referred to.

NO. OF TENDER.	APPLICANT.	NAME OF RUN.	WHEN REFERRED.
3 August, 1849 ...	John Mackay.....	Myra	10 Aug., 1849.

21 Sept., 1855 ...	J Barry.	Ben Hall	24 Sept., 1855.

APPENDIX F.

*Crown Lands Office,
Sydney, 15 February, 1858.*

Sir,

By the letter of the Colonial Secretary noted in the margin, it is decided that ^{30th Nov., 185} the rent of a lease to enable persons under the Regulations of 11th February, 1851, to purchase, without competition, improved allotments in reserves for towns which had been taken from their runs should be *ten pounds*; the purchase to be made during the currency of the lease, being subject to the condition that the improvement is equal in value to the unimproved value of the land to be purchased.

2. It has occurred to me to submit, for the consideration of the Honorable the Secretary for Lands and Public Works, that, as the value of the unimproved allotment is in
201—C 2 many

many instances less than half the rent charged, whether the rent under the lease issued for the specific purpose of enabling parties who have made the improvements to purchase the land improved should not be rather nominal—the improvements having been made on the faith of the law of the country—on land on which a rent was already paid. Indeed, it may be argued that a squatter whose improvements fall within a reserve is entitled rather to receive from the public compensation for the loss of the use of the land immediately contiguous to his improvements, and to that which he is allowed to retain by purchase, and that, save as an arrangement rendered necessary by the date of the law at the time it was made, it is not apparent why land should be taken out of the operation of one lease, giving a pre-emptive right, with the view of being included in another lease.

The Under Secretary
for Lands and Public Works.

I have, &c,
GEO. BARNEY,
Chief Commissioner of Crown Lands.

APPENDIX G.

MEMORANDUM for the Surveyor General as to better amalgamation and operation of Survey, and Crown Lands Offices.

As I believe it to be the wish of the Minister presiding over this division of the public business of the Colony that the Department of Survey and Management of Crown Lands should be made effective, from a progressive and vitalizing spirit of operation, and economic, from a due application of means to the performance of duties which are indispensable to the due carrying out of certain business about which the department should concern itself; and as I believe that both the Honorable the Secretary and the Surveyor General are of opinion that a proper amalgamation and supervision of the duties are essential to such operation, I take the liberty to propose, for consideration and adoption, the following arrangements:—

- 1st. That the direction of the clerical and account business of the Crown Lands Branch should fall, in the same manner that the same business pertaining to survey falls, under my immediate supervision and arrangement, not less because I am convinced that the proper supervision of the business requires it, but because I think on the promotion of Mr. Mciarty such an arrangement was intended, and was indeed due both to the service and to myself.

This would, of course, bring the supervision and care of all records more particularly under the eye of the Record Branch clerk, from which good would unquestionably result; it would bring the supervision of the large accounts of management under the supervision of the experienced account clerk now supervising this business; it would bring the correspondence more particularly under my own observation, and would give much time for the consideration of matters supposed to involve peculiar difficulties, both in the survey and management, to the Deputy Surveyor General, which was, as I understood in the personal interview held with the Honorable Secretary prior to the passing the departmental estimates, his intention and desire.

The question as to whether the measurement of runs for the purposes of lease is indispensable is at present under submission. Should that, under present circumstances, be determined to be impracticable, and the suggestion of the Surveyor General, that general descriptions, in which holders of adjacent runs should concur mutually, be adopted, then I would submit is opened a field for the professional knowledge and experience of the second officer of the department in the revision and arrangement of such descriptions, and in all the matters necessary to the mutual satisfaction of the parties, prior to the preparation of leases.

Reverting to the survey branch, I think that the assistance of the same officer may be found valuable in the preparation of instructions to the district surveyors, and in the consideration of how far the means supplied may at one time take up both the measurements required for sale and the progress of general survey, the introduction of the theodolite in surveys, and the prosecution on more correct principles of the surveys of the Colony, however partially, to which the correspondence of His Excellency Sir William Denison with the late Surveyor General, and the recommendation of the Board of Commissioners, so clearly and forcibly point.

To pursue, as we are now pursuing, the same course of operation which prevailed when the investigation alluded to occurred, and to the improvement of which course that investigation and those recommendations were directed, cannot, I think, be either contemplated or desired; and although an unprofessional functionary like myself may invite attention to these considerations, it is for the professional and experienced individual to whom I have before referred to take up, under the authority of his superior, and to vitalize and bring into operation the recommendations of the Commissioners in reference to such a subject.

What I contemplate in the "management" branch is the immediate and perfect arrangement of all documents, the supplying, for the future, indices to the books of correspondence, the supervision of accounts, the excision of all superfluous and indirect action and letters, the preparation of lists shewing exactly what work as regards tenders or assessments remains in the hands of each Commissioner, and how long it has been there, and the due bringing forward for pressing up all matters of unusual delay.

In taking the responsibility which such additional supervision and duty would involve, I require to be considered as the Chief Clerk and Cashier of the Department of Survey and Management of Crown Lands.

H. H.
7 April, 1857.

The

The Deputy Surveyor General, the Chief Clerk and Chief Draftsman, are requested to take into immediate consideration the various matters alluded to in the accompanying mem., with a view to some permanent scheme for conducting the department. The estimate for 1858 (which is now required) cannot be prepared until the proposed scheme has been approved by the Honorable the Secretary for Lands and Public Works.

G. B.
14.

Addressing ourselves merely to the question of the amalgamation of the Crown Land Office with the Surveyor General's Office, we are of opinion that it may at once be placed with all other business under the control of the Chief Clerk. It appears to us that the finance of the Crown Land Office may merge into that of the Survey Office, Mr. Herbert becoming Mr. Williams' assistant, but that the clerical business should as far as possible be kept as a distinct branch of the department, like the record branch, the finance branch, or the sale of land branch. The Deputy Surveyor General would then have no further responsibility as regards the Crown Land Office now under his direction, than to attend to such matters as the Surveyor General may think proper to refer to him.

Approved.
G. B.
May 1.

Surveyor General's Office,
24 April, 1857.

COPY of Memo.

Colonel Barney,

It appears to me that the old system of *pencil memoranda* on letters, and their passing through various hands, should cease, if the arrangements are to be simplified, writing decreased, and business expedited.

At present I will confine myself to surveyors' letters. Were the letters, after having been submitted to the Surveyor General, passed through my hands to Mr. McLean for his report, and he were to write it briefly *in ink* on the letter, I could, on its return to me from him, perform what was necessary, either by a letter or a blank cover, and submit complete for signature, without its passing through any other hands. The responsibility of a correct report would rest with Mr. McLean, and the responsibility of pursuing a correct and judicious course, under such report, with myself. I cannot see the need of anything further.

H. H.
19 Oct., 1855.

Issue an instruction to the effect of the above memorandum.

Ordinary correspondence, and such as relates to matters of detail or routine, to be dealt with at once by the first officer to whom it is submitted: indeed every possible method must be adopted for saving labor.

G. B.
27 Oct., 1855.

THURSDAY, 17 JUNE, 1858.

Present:—

MR. ALDCORN,		MR. FORSTER,
MR. DONALDSON,		MR. WHITE.

David Robertson Gale, Esq., called in and examined:—

1. *By the Chairman*: You reside, I think, on the Clarence? I do.
2. And are in charge of some property there? I am acting as agent for Mr. Joseph Sharpe.
3. This gentleman has purchased some of the lands in that neighbourhood? He has exercised the pre-emptive right in two or three cases.
4. Other lands around these pre-emptive right lands have been subdivided, have they not? Yes; other lands have been subdivided into allotments, and sold as farms.
5. Not on the application of Mr. Sharpe? No.
6. Were they surveyed on the application of any one, or merely at the will of the surveyor in the district? I believe, generally, at the will of the surveyor merely.
7. Was it your intention, or the intention of Mr. Sharpe, to purchase some of that land? Yes; we applied for section 15 of Retreat Station, 17 having been previously disallowed.
8. You had applied for 17 and 18? For 17 at least, and then we applied for 15, the section upon which Mr. Miller's head station stood at one time.
9. Did you live at that head station? No; it was before I had gone down there. Mr. Sharpe had bought the run with the cattle, and some time before Mr. Miller's selling the station he had removed the head station to section 7, but there still remained the cleared ground on section 15, which had been cultivated, and he supposed he was still entitled to exercise the pre-emptive right in consequence of the improvement; for, though the fencing was all removed, the ground had been cultivated, and the clearing was still there. The application was allowed, then Mr. Fry, acting for the Government, and Mr. John Shannon, acting for Mr. Sharpe, assessed it in 1854, I believe, about March or April.
10. What value was placed on it? I do not know the valuation; I was not there then; I am merely speaking of facts I know from papers in my possession. For some cause or other

D. R. Gale,
Esq.
17 June, 1858.

Mr.

D. R. Gale,
Esq.
17 June, 1858.

Mr. Fry did not send in his report, although, I believe, it was signed and ready. In consequence of this neglect Mr. Sharpe renewed his application on the subject, and it was referred again for assessment on or about March, 1855, and it was assessed a second time by Mr. John Shannon, on the part of Mr. Sharpe, and Mr. Fry, on the part of Government, at, I think, £1 an acre. That report was sent in, and after all this had been gone through, Mr. Wilson, the then contract surveyor of the district, volunteered a statement that it ought to be cut up in small farms and sold; in consequence of this the Government would not receive the money from Mr. Sharpe, and the result was, that it was cut up into farms, a large portion not being bought at the time it was put up, but some of it was purchased by Mr. Greaves, the then licensed surveyor, about the upset price of £1 per acre.

11. *By Mr. Aldcorn*: Was he the person who volunteered the statement? No; that was Mr. Wilson; but he was dismissed upon another ground—on the ground of some alleged peculation as Clerk of the Bench at Grafton.

12. *By the Chairman*: Are you aware that by subdividing the land into small portions the surveyor would receive a much larger sum than if it were sold in one block? It has always been my opinion that the sole reason for the subdivision of this land was that by subdividing it he would receive much larger fees. Indeed he would have received no fees if it had been sold to Mr. Sharpe; as the land had been surveyed before by Mr. Burrowes. This is a copy from Mr. Burrowes' map. (*The witness produced the same.*)

13. Did not the proximity of this land to Grafton make it desirable that it should be subdivided into suburban allotments? It is about two miles from Grafton, from the extreme boundary of the township, and beyond the suburban lands.

14. You put up some land, I think, upon which a stockyard was erected? The lands were put up by the Government, and we wished to buy the allotment on which the stockyard stood. That was on the Woolport Run, the run near Alamy Creek.

15. Did you get that land? I erected the yard in the beginning of 1856, or the end of 1855, as there are certain belts of scrub on this run, out of which it is difficult to get the cattle, and this was erected at the lower end of the run, to enable me to brand the calves, and manage the cattle generally, as we found it difficult to get them through these belts of scrub to the yard which stood at the upper end of the run, close to the boiling down house. During that season—the boiling down season of 1855-56—I shot, I think, 180 or 190 head of cattle, and had them carted up, rather than risk the chance of driving them through these scrubs. Mr. Sharpe applied to exercise his pre-emptive right on sections 10, 11, and 12. I think it was section 11, either that or 10, on which the stockyard stood. The application was disallowed.

16. Do you know why? I do not. Some time after Mr. Greaves subdivided sections 10, 11, 12, 5, and 6, into small farms for sale.

17. These are low alluvial lands, are they not? Yes, they are all good lands, partly subject to floods; during the last eighteen months the water stood on the greater portion, and now stands—it does not run off, as there is no fall to the river. As Mr. Sharpe intended to remove the cattle in consequence of the leases being disallowed, some time before the sale of these allotments he instructed me to buy the allotment upon which the stockyard stood, to have the use of it in removing the cattle. This allotment was advertised for sale, as it now turns out, on the 12th January, 1857, in the *Government Gazette*. I saw Mr. Greaves on the day after Christmas, having previously, I may say, bought a lithograph plan of Mr. Greaves' survey, sent down from the Surveyor General's Office for sale to intending purchasers, and supposed to be a copy struck from the plan forwarded to that office by Mr. Greaves, and this shewed no stockyard whatever.

18. Did it shew any other buildings? Yes, two huts which we have down there, which were correctly enough shewn. In consequence of not being able to find from the lithographed copy the allotment upon which the stockyard stood, I asked Mr. Greaves whether the allotment upon which the stockyard was situated was for sale on the 12th January following, as advertised in the *Gazette*. He assured me it was not, and promised to write me, letting me know when it would be for sale. A few days before the sale I went down, not being altogether satisfied with his statement, to examine the map at the Police Office—the map placed there by Mr. Greaves I believe—and on that map I found the words "stockyard," with a little square written in ink, upon the portion of land not then advertised for sale. That map was coloured, the red portion showing the allotments for sale on the 12th January, and the white portion, being the centre of the survey, was not advertised for sale, and upon this white portion the word "stockyard" was written.

19. It appeared to have been put in subsequently? Yes. It was not lithographed, but put on by pen and ink. In consequence of Mr. Greaves' statement I did not attend the sale, believing his statement that the land was not for sale on the 12th January. Some time after the sale reports reached me that the stockyard was put upon the wrong allotment on the map at the Police Office, and that Mr. Greaves himself had purchased the allotment upon which it actually stood, although not shewn on the map. These reports I did not believe at first, but, being reiterated, I began to believe there was something wrong, and went to Mr. Greaves for an explanation. This was in May 1857, at the sale of the next block of ground, marked white on the plan of the January sale.

20. The Government have lithographs of that portion of the country? When the district surveyor subdivides a portion of land he sends the survey here. Several hundred lithographed copies of the survey are made, and are sent back for sale to intending purchasers at 1s. each. I have lodged with the Minister of Lands and Works a copy of the map shewn at the Police Office before the sale of the 12th of January.

21. At the May sale you found that Mr. Greaves had purchased the land with the stockyard in January? Yes; between the January and the May sale I had often heard that the stockyard was falsely placed upon the map of the land sold in January, and that Greaves had actually purchased the allotment on which it stood, but I did not believe it at the time; however,

however, seeing him at the sale, I asked him for an explanation upon the subject. He then admitted to me that it was wrongly placed, and that he had himself bought the allotment on which it actually stood, at the upset price. He took his pen and struck the square, and the word "stockyard" out of the map. This was not the same map as that shewn at the January sale, but appeared to me to be the office copy; and the stockyard was also falsely placed on the map shewn in May. He took the map off the table, and struck the word "stockyard" off the white portion of the map. It stood originally upon allotment 127, and he put it upon allotment 124.

D. R. Gale,
Esq.
17 June, 1868.

22. *By Mr. Aldcorn*: Where it should have stood? Yes.

23. That was on his own property? Yes.

24. *By the Chairman*: Has he the land at present? He has. Mr. Sharpe, naturally feeling aggrieved at this proceeding, thought upon principle he ought to expose it. I did not think it advisable to come to had terms with Greaves, seeing the power he had there, and avoided mentioning the matter to Mr. Sharpe for several months; but as he came down in July or August following, having instructed me to buy the stockyard allotment, and finding it sold to another party, he demanded an explanation, and asked me to put the facts in writing, as to why I had not done as he had directed. It was then my duty to state the facts, and I did so in two letters, dated 7th July and the 17th July, 1857. These, with a letter from himself, and a *fac simile* of the map exhibited at the Police Office, at the January sale, were laid before the Minister of Lands and Works at the time, but the matter has been put off, from one cause or another, until yesterday. At first the Minister for Lands and Works referred the matter to the Surveyor General, who again referred it to Mr. Greaves for an explanation; Mr. Greaves' explanation was received by the Surveyor General, and an answer was sent from the Surveyor General's Office to Mr. Sharpe, stating that the explanation was satisfactory. Mr. Sharpe was not disposed to let the matter rest thus, as he was even denied a copy of the explanation, in which he and I were charged, as he was informed, with having made various statements contrary to fact; and in consequence of these charges of Mr. Greaves he insisted upon further investigation; that at last was assented to, and the matter was gone into yesterday morning before Mr. Robertson. The ultimate decision of Mr. Robertson was, that Mr. Greaves had committed a gross blunder in misplacing the stockyard, and stated that it would have been best for the parties themselves to have settled the matter out of his office; and then Mr. Greaves made a proposition that he should convey over the stockyard allotment to Mr. Sharpe, at £1 an acre, which he himself had paid for it. Mr. Sharpe declined this offer; and then Mr. Robertson said, that the better, and indeed proper way, would be to put up the land again for sale by auction, and that he would lay the matter before the Executive Council, recommending that the sale to Mr. Greaves be annulled, and the land again put up to auction. That Mr. Sharpe agreed to, and there the matter stands.

25. *By Mr. Aldcorn*: Only the allotment on which the stockyard stands? That is the only allotment which Mr. Sharpe wanted, in order to have the use of the stockyard in removing his cattle.

26. *By the Chairman*: Do you believe that the licensed surveyor, Mr. Greaves, had any instructions from the Surveyor General, or the Deputy Surveyor General, to cut up these lands, or that he did it upon his own responsibility? I cannot say, but I believe he did it upon his own responsibility. He has bought a considerable number of these allotments himself, or for other parties for whom he acted as agent.

27. At the minimum price? Generally; not always—town allotments in some cases have been run up. I am now speaking of some time since, and he has been re-selling these country lands at an advance upon the upset price which he paid. Sometimes the lots have been passed, and he has then handed in a slip, and taken them up at the upset price.

28. Do you believe then that he has been paid by the Government for making these surveys, and afterwards has been paid a commission by private individuals for buying? I do not know whether he received a commission or not, but I have heard on one occasion that he promised to act as agent for Capt. Wiseman in the purchase of some allotments, but I do not know this of my own knowledge.

29. In re-selling these lands at Grafton are they again subdivided into smaller allotments? No. I believe they have been re-sold in the same allotments. I am told that some for which he paid £1 an acre he sold to Messrs. Porter and Elliott at £4 10s.

30. Have you heard any other complaints of this officer? I may mention another. These sections (*referring to a plan*) are not marked as leased to any one; they are at the head of Retreat Run, and are mere scrub and hill of no value, and, I believe, beyond the Settled District, from the best information I can obtain, being beyond a radius of eight miles to the nearest point of the township. These were put up for lease some time ago at Grafton, and, as I did not wish a party to go there who might interfere with our cattle, I attended the sale, and to my surprise Mr. Greaves' brother, an assistant surveyor, was present, and the principal bidder against me for these sections; the only other bidder was a person of the name of Gregory, for one or two sections, but I believe neither were *bona fide* bidders. Greaves' brother bid for every section.

31. Did he get them? No; but I had to give upwards of £5 for each section of the last two. This opposition, I believe, arose simply because we had insisted upon the investigation of the matter respecting the sale of the stockyard allotment, a sort of animus having arisen, as is frequently the case in such disputes in small communities. Mr. Greaves' brother, or the other person, is not at all connected with squatting, and I do not see of what use the land could be to either of them.

32. *By the Chairman*: He has no establishment? Greaves' brother has no establishment, but is merely acting as his brother's assistant.

33. *By Mr. Aldcorn*: Did he state this in public? Yes; he was standing by the auctioneer

D. R. Gale,
Esq.
17 June, 1858.

when the allotment was put up, and used words to this effect—"This allotment is swampy, gentlemen."

34. *By the Chairman*: Did Mr. Greaves attend the sales? Yes, generally. I also heard him state that an allotment which has a frontage to Carr's Creek had no water frontage. There was a map lying at the time on the table shewing the water frontage.

35. Did he purchase that? No. A person in the room checked him, and said, "That will do, Mr. Greaves; we have only to look at the map to see that it has a water frontage." I think Mr. Avery bought it; he had been looking at the ground previous to the sale, and had satisfied himself as to what the allotments were.

36. You think, then, that this individual rather obstructed than advanced the sale of land by the Government? I have no hesitation in saying he has been acting solely for his own benefit throughout, and for the benefit of one or two other parties who have been engaged in land jobbing; every move has been for some personal benefit, or nearly so.

37. Many of these are improper subdivisions, and not necessary for small farms? It is not necessary to cut them into such small farms; I think some might have been very well cut into large, and some into small farms, but these are all small—thirty to fifty acres; very few as much as fifty, and those near the town are cut into still smaller farms—ten, fifteen, or twenty acres.

38. *By Mr. Aldcorn*: Do you know whether there have been any applications made by *bona fide* agriculturists for the farms into which the section to which you first referred, namely, section 15, was subdivided? I am satisfied there were none, for Mr. Wilson told me—it was a voluntary statement of his own—and shewed me the letter to the Surveyor General, in which the original application was made by him to be allowed to cut up this land instead of letting Mr. Sharpe have it; and this was after the farce of valuing it had been gone through.

39. In reality these small farms were not bought by parties who would occupy them, but by Mr. Greaves? By speculators; none but three or four were bought by *bona fide* bidders who wished to occupy the ground. Five or six were sold on the first occasion; but most of them have been taken up since by parties exercising what they call the right of selection for speculation; and the whole of the section at this very moment is still uncultivated, although some parts have been fenced in as grass paddocks.

40. And who would occupy them as agricultural farms? No. Mr. Greaves has never occupied the land he has been buying in this way. I may mention that the improvements of Retreat Station have been removed to section 7. We applied, after we found we could not get section 15, to which I have referred, for section 7, where there is the Retreat Station stockyard, several houses, and cultivation ground, formerly occupied by Mr. Miller. At the time we applied for it Mr. Bligh said he had not arranged for a residence for himself. He had recently come to the district to supersede Mr. Fry; and he reported that a certain portion of the southern side should be reserved as a residence for the Commissioner, he having taken a fancy to a portion of it.

41. Did he get it? I do not know what was the result of his application for a residence; but I believe it was reported that it would be too far from Grafton, and that, as Police Magistrate, he must be nearer the town. This is about six miles away, by the winding of the road. In consequence of that he bought a residence in the township. Finding that Mr. Bligh had arranged for a residence in town, we renewed the application to be allowed the whole section; it was referred to him and he reported, as he told me, that we should have the whole section, excepting a portion of it for the Richmond Road to pass through on the lower side, and about nine acres along the river side, where there is freestone cropping out, for a quarry; but, for some cause or other, the matter was again referred by the Surveyor General to Mr. Bligh for a second report. I saw him on this occasion, and he said it would be necessary for Mr. Greaves to go up and survey it. Mr. Greaves did come up, and placed his theodolite immediately behind the huts, put in no pickets, and made no lines. Some time after this the Surveyor General's letter was sent to me by Mr. Sharpe, to whom it was addressed, stating that half the section had been disallowed in consequence of its being intended to form a village reserve.

42. This is about six miles from Grafton? Yes; and includes our stockyard, a great portion of the weaning paddock, and another paddock—in fact, the proposed line would come close to the huts.

43. *By Mr. Aldcorn*: You have only a lease of it? Yes; but this was the head station, and we wanted to purchase it. There the matter stands. Mr. Sharpe believes that this is entirely in consequence of the investigation upon which he has insisted before the Minister of Lands and Works.

44. Is it a likely place for a village? No; it has no water on it, and when the river is salt, which it sometimes is for five or six months at a time, the villagers would have the water to cart some two miles, as we have not been able to get water by sinking at Retreat; besides, the whole of the land opposite is reserved, where a village might have been formed.

45. *By the Chairman*: Is this high land? Yes; it is all high land here, not subject to floods.

46. And is only a mile and a half from where there is a village reserve? Yes. It is very poor land. I would not give five shillings an acre for it as a speculation.

47. *By Mr. Forster*: With reference to a piece of land which was in the occupation of Mr. Burrowes, and in which he was understood to have some right—are you able to inform the Committee who is the owner or possessor of that? Mr. Sharpe leased it from Mr. Owen. I prepared a paper whereby Mr. Owen agreed to cancel the lease; that paper was signed by Mr. Owen, and our lease terminated. That was in 1855.

48. Who is the owner of it? Mr. Owen, as far as I know.

49. Are you able to state whether it is public or private property? I can simply state that Mr. Burrowes, as I understand, held some letter from the Government, agreeing to give a grant; and that that grant has never been received; it is all that Mr. Owen holds, I believe, as his title to it.

50. Can you give any information with regard to the land that was in the possession of Mr. Charles Wilson formerly? No further than this, that Mr. Wilson said he would not be allowed to purchase it unless he gave at the rate of £25 an acre. But I believe he has completed the purchase to some portion of it at least now, as he has effected improvements upon it.

D. R. Gale,
Esq.
17 June, 1868.

MEMO.—Questions and Answers 34, 35, 36, and 37, were struck out by the witness when his evidence was sent to him for revision, but were subsequently re-inserted by order of the Committee. (*Vide Proceedings of the Committee, Thursday, 22 July, 1858.*)

JOHN J. CALVERT,
Clerk of Select Committees.

THURSDAY, 22 JULY, 1858.

Present:—

Mr. WHITE, Mr. ROBERTSON,		Mr. FORSTER, Mr. PIDDINGTON, Dr. ALDCORN.
------------------------------	--	---

G. B. WHITE, ESQ., IN THE CHAIR.

W. R. Davidson, Esq., surveyor, called in and examined:—

1. *By the Chairman*: You are an officer in the Survey Department? Yes.
2. How many years have you been employed in that service? Twenty-eight years.
3. You received your appointment from Sir George Murray? Yes.
4. *By Dr. Aldcorn*: Of the Ordnance? He was then Colonial Secretary.
5. *By the Chairman*: At the time you received that appointment were you aware of there being any instructions from the Secretary of State as to the grades of officers of the service? Yes, I was aware there were instructions of the kind.
6. You are aware that these grades were to consist of Surveyor General, the Deputy Surveyor General, Surveyors, Assistant Surveyors, Draftsmen, and Clerks? Four surveyors were named.
7. You supposed at that time, when you took the office, that these arrangements would be carried out in their integrity? I thought so.
8. From your experience, do you think they have been carried out? No, I don't think they have; they have been departed from in some cases.
9. Have you found, in the course of your experience as surveyor, that the lower grades of service, according to the arrangement of Sir George Murray, have had control over the upper grades? Yes, in a great measure, I think.
10. You are now employed in the district of Bathurst? Yes, the Western District.
11. You have charge of it as district surveyor? Yes.
12. And with a grade not arranged? I believe it is a new arrangement.
13. You have been employed in other districts besides Bathurst? Yes; in the neighbourhood of Sydney.
14. You have travelled over the Colony, and done considerable duties in squatting districts? Yes; I have surveyed a large portion of the squatting district of Wellington.
15. I believe your standing in the service is senior surveyor? I consider I am second to Mr. Thompson.
16. *By Dr. Aldcorn*: The Surveyor General? To the Deputy Surveyor General.
17. *By the Chairman*: Do you think that Mr. Thompson ought to be in that position? I am not aware of the rules of the service; I think it ought to have fallen to the senior surveyor.
18. During the time you have known Mr. Thompson, were you aware of his having done duty in the field? No.
19. Are you aware that it is necessary to do so to take the appointment of Deputy Surveyor General? Yes.
20. Are you aware that he is physically incompetent to carry out the duty he was appointed for? I am not aware; I heard that he was in delicate health.
21. Did you never learn, or hear it spoken of, that the appointment of Chief Draftsman was made purposely for him, and that it originated with him? No, I was not aware of that.
22. Was there a Chief Draftsman when he joined the service? There was Mr. Finch; he occupied a position of that kind.
23. He was one of the surveyors? Yes.
24. He stood next to the Deputy Surveyor General? Except Mr. Hoddle, he was senior.
25. Were you here when Mr. Oxley died? I was not.
26. Did you ever learn, on Mr. Oxley's death, when Sir Thomas Mitchell was Deputy Surveyor General, Mr. Hoddle was appointed Deputy Surveyor General? No; I did not know that. It was before I came to the Colony. Captain Perry was in that position when I came.
27. You are not then aware, in consequence of Sir Thomas Mitchell wishing to make Mr. Finch Deputy Surveyor General, instead of Mr. Hoddle, that the Government sent home for one, and one of the offices were lost to the department? I was not aware of that. That was before I arrived.
28. Are you aware, with respect to the department and the Colony generally, that the Surveyor General's Department has been provided with officers from home by patronage? I am aware

W. R.
Davidson,
Esq.
22 July, 1858.

W. R.
Davidson,
Esq.
22 July, 1856.

aware that the appointments of the officers of the Survey Department were formerly made by the Secretary of State; of late years I have had no opportunity of knowing how they are made.

29. If Mr. Thompson had not been appointed Deputy Surveyor General, you have a right, according to the Secretary of State's Despatch referred to, and ought to be Deputy Surveyor General at the present time? I ought to succeed Mr. Thompson, the present Deputy Surveyor General, according to seniority.

30. There never has been any reason to doubt your efficiency as an officer since you have been in the service? I have Sir Thomas Mitchell's letters giving me all credit when I have been out with him and alone.

31. During the time you have been in the service Sir Thomas Mitchell has often been away from the Colony? Yes, more than once.

32. The duties of the service has been controlled by different heads in his absence? Yes, by different heads.

33. Did you never hear it as a sort of proverb amongst the officers of the service that when Sir Thomas Mitchell was in the Colony Mr. Thompson was controller, and when he was not in the Colony Mr. Halloran was controller of the service? I understood that Mr. Thompson had a great deal to do with the management of the department in Sir Thomas Mitchell's time.

34. And this management varied at different times? Yes, I think so.

35. The duties fell first into one hands and then into another? Yes.

36. It was almost obvious to the officers working in the field from the style of communications received by them? I used often to be certain of it myself.

37. You have seen a change occur in the communications to the field officers during the time these changes took place? Yes, I have.

38. How were you able to distinguish the difference? When Sir Thomas Mitchell left I had various and frivolous complaints about monthly progress journals.

39. You think you could tell, from the tone of the letters, the party who had control of the service then? Yes, I suppose so, particularly those threatening a stoppage of my pay when all the journals were in.

40. *By Dr. Aldcorn*: The field journals? Yes.

41. *By the Chairman*: Do you recollect when the journals commenced? No, I do not recollect.

42. Had they commenced when you joined the service? I was a long time at head-quarters; probably they originated before I took the field.

43. What was the impression of the working men—of the surveyors? That these journals might be filled up and made to shew well by surveyors who were not very hard workers.

44. That the journals were no test of the work performed? I think not. They certainly were a test if the parties did the work and filled them up correctly.

45. Do you think it possible to judge of the duties of the surveyors, and if by these books they performed their work? Not correctly.

46. Do you think that a man required to report upon the works and duties of a surveyor should be a surveyor himself? Most decidedly.

47. Did the officers controlling the head of that service for years—have they ever been in the field? Some have never been in the field, I believe.

48. Have you not heard that draftsmen and others were censors and valuers of the works of the surveyors? I know that in the office that is the practice.

49. You know they have made remarks upon the work of different officers in the field? Yes.

50. You have never been employed on the license system? Not when it was properly reduced to a system. The late Sir George Gipps established something of this kind in 1845, when the department of the Surveyor General was reduced. I was employed under that system.

51. What is your opinion of the working of that system? I have had to report on some of the licensed surveyors, and found the work was not satisfactory, particularly as to marking boundaries.

52. You have seen the scale which was paid for their services—what do think of it? I don't know the present scale; I think some alteration has been made since it was sent to me.

53. Did you see the former scale issued from Mr. Thompson or Mr. Perry? Yes, I recollect the former scale; I think I worked under that scale.

54. It was a paying scale? Yes.

55. It was one that paid a man much better than if he were a salaried officer? Yes; if he had plenty of work to do it would pay. At the time I worked, it was limited to instructions received from the head of the department as to what was to be done. I had no option of doing what I thought proper.

56. You are aware that a licensed surveyor can select any spot he pleases and cut it up? Yes.

57. Don't you think by that system a great deal of land is cut up that is valueless? Yes, I am sure of it.

58. These lands are amongst the large quantity of land unsaleable and yet surveyed for the public service? No doubt.

59. And the public will not buy it? No.

60. Do you recollect any experiment being tried with regard to the old officers of the service: were you not struck off the salaried system for the purpose of trying the licensed scheme? Yes, I was, in 1845 I think.

61. You received your appointment from home, and expected the arrangement made by the Home Government with you would be carried out? Yes, I did.

62. It was not carried out? Not in that instance.

63. Do you recollect the time? I think it was 1844 or 1845, when land was increased from five shillings to twelve shillings per acre.

64. It was a time when there was little demand for land? The circumstances of the Colony were difficult. There was a monetary crisis about that time, and great depression.
65. So, taking away your salary when there was little demand for land, and putting you on the license system, and giving you £100 a-year with it, was a great inconvenience? It was a serious inconvenience, and great loss.
66. It was a breach of faith? Yes; it was a breach of faith.
67. Are you aware that some of the licensed surveyors made large incomes? Yes; I have heard very large amounts.
68. As much as £3,000 a-year? I don't know the amount—I am told a very large sum.
69. Then, according to the rate of pay given for the work, contract work, to these licensed surveyors in good districts, you would prefer that system to the one you are employed under? Certainly; I would particularly in former times, and when a younger man.
70. What is your opinion the general duties of the Deputy Surveyor General should be? I should think the supervision of the officers employed in the field.
71. You are not aware that was the cause of the office being first instituted? I was not aware of it.
72. And that the Deputy Surveyor General of the Colony has never performed that duty? I don't think it has ever been performed by the Deputy Surveyor General.
73. Have you ever been visited by the Deputy Surveyor General during the whole time of your employment? Never.
74. Or any supervising officer? Never.
75. Are you aware that the office of Principal Draftsman was instituted for the purpose of doing that duty which the Deputy Surveyor General has been doing for years, and that consequently we have had two Principal Draftsmen rather than a Deputy Surveyor General and a draftsman? There have been two officers, the Deputy Surveyor General and Chief Draftsman, ever since I joined the department.
76. Have you any knowledge of what the Deputy Surveyor General does now? No; I have no means of knowing.
77. There is a great deal about measurement by acreage—you have been considerably employed in feature surveys? Yes; I was occupied in feature surveys in the Wellington squatting district and elsewhere.
78. How long were you without measuring an acre of ground? I think for five years.
79. Don't you think that unfair, to average the work of staff surveyors at 9s. and licensed surveyors at 6s.—one only does acreage and the other is employed two-thirds of his time in feature surveys? I was employed for five or six years in surveying features in the squatting district of Wellington, and during that time did not perform any acreage surveying.
80. Were you extending the limits of the country? Yes; in the interior.
81. During the time you were making feature surveys had you any assistance in the shape of draftsmen? No, in no way.
82. You had to make all your maps? Yes.
83. A very great portion of your time was taken up in making maps? Yes; a great deal of time was consumed in that way.
84. If you had had a draftsman would you not have had a greater portion of time for survey? Yes.
85. Would it not have been a saving to the country? Yes.
86. Have you had much correspondence with the office—a great deal of descriptions to write? Yes; a large number of descriptions to write.
87. It occupied you a long time? Yes; describing town allotments.
88. This ought to be the work of a draftsman or assistant under you? Any one could do that duty—a clerk.
89. Did you ever find that they were experimentalising about equipment with respect to yourself and party? I have never been consulted about my equipment, or the proper way of having them supplied; changes were always made without reference to me.
90. I believe in the Army and Navy, when it is necessary to take the field in any way, officers of old standing are consulted as to the allowances to be given to the juniors in the service in carrying out particular duties—have you ever been consulted in that way? I am not aware of the arrangements of the Army and Navy; but I have never been consulted, except privately by Sir Thomas Mitchell.
91. Do you not think the old officers, long in the service and high in the grades, should be consulted? Yes. I think so.
92. Who is generally supposed to originate the arrangements? I think generally it was the Chief Clerk of the department.
93. Has he travelled much in the interior? Not that I am aware of.
94. Has he been out of Sydney? Not that I know of.
95. Do you think a man continually living in Sydney would constitute him fit to keep up the equipments? I am sure unless an officer has served in the field in this Colony he cannot give a correct opinion as to what equipment or number of men a surveyor should have.
96. You remember at one time the Government found your equipment? Yes, they did.
97. And then after that, for a certain sum, you were ordered to find your own equipment? We purchased the equipment from Government at a valuation, and were allowed £100 a year to find our equipment.
98. Did that cover it? I think it was sufficient in some districts.
99. Do you think it sufficient in the interior where a double equipment is kept up? The expense of keep for horses in the Western District is very high, and all articles of equipment, from the high price of carriage, very expensive. I generally had six or seven horses in the interior. The original cost of the equipment was something considerable.
100. Did the correspondence regarding forage and rations occupy much of your time? Not

of late years. I have had a particular allowance. I have had no trouble since I spoke to the late Sir Thomas Mitchell about it. When out on the gold survey with him he then saw the necessity for it;—the country was destitute of feed, being the winter season, and the horses could not work without forage. Since then allowance has been granted for a saddle horse and two dray horses.

101. When you first joined the service do you recollect the strength of the office—the different branches of the department? I think there were four surveyors, fourteen or fifteen assistant surveyors, and four draftsmen, when I joined it.

102. I mean the clerks' branch? I think there were four.

103. It has increased very much of late? I don't know how many there are now; I think that was the number then, four.

104. Do you not think it has increased and become a more important branch seemingly than any of the other branches of the department? Yes; seemingly it is the most important branch of the service.

105. Do you not think it most unnecessarily so? I cannot say—the survey branch appears to be made subordinate to it.

106. Have you read over the Report of the Commissioners? Yes, I have.

107. Made in 1855? I have read over the Report.

108. Does your opinion accord with theirs with regard to the license system being an improper one? Yes.

109. You think the service would be much more ably performed if performed by a set of men belonging to the service? I think so.

110. Do you not think the licensing system is more one of patronage than service? I don't know if I can answer that question; I know so little of the means by which these gentlemen obtain the appointments. I suppose patronage must lay somewhere—I don't know where.

111. You are one of the district surveyors? Yes.

112. You are the senior officer of the service? I consider myself so.

113. You do not stand on the list as senior officer of the Survey Department? I think I do; but I saw my name in the *Gazette* with a gentleman's name before me; I don't know whether that is a new arrangement, but I think it wrong.

114. Do you remember the time when the names of the officers of the service used to appear in the almanac yearly? Yes.

115. Do you recollect it being struck out? No.

116. Lately it has been printed thus:—Surveyor General, Deputy Surveyor General, Principal Draftsman, and Principal Clerk? It may have been so. I have observed in some of the almanacs the names of the senior officers of the department are placed amongst the last; this I do not think occurs in other departments in the Colony.

117. Was the system of survey by sections adopted? I have not been employed in cutting the country into sections.

118. Carrying on sections of land through the country? I never had any duty of that nature to perform.

119. The Bathurst map appears to be divided into sections? I think it was before I had charge of the district.

120. Did you ever attempt to tie these sections with those of other districts bordering thereon? No, not by sections.

121. You have connected them by traverse points? Yes.

122. What instrument do you usually use? The circumferentor.

123. What is your opinion of the circumferentor with regard to its correctness and with regard to the quickly performing the duty? I think the circumferentor is a good instrument, and the duty is performed quickly. It would be difficult, I should say impossible, without clearing the line, to use the theodolite correctly.

124. On account of the country being wooded? Yes.

125. You have surveyed large portions of the country, 300 or 400 miles in extent? Yes.

126. You have started at a point and closed at a point? Yes; with a good instrument and care the work will close very accurately.

127. You are acquainted with the Bogan; in that part of the country, supposing you had to triangulate, could it not be carried out? No; there are no points; it is as level as the sea.

128. You might as well attempt to triangulate a coal pit? It is quite level in that part of the country.

129. How many official letters do you generally number in a year? The years differ very much: during the time of service in the squatting districts there was very little correspondence; now I have a considerable correspondence as district surveyor.

130. In the general correspondence of the measuring of farms there is a great deal to do? Yes.

131. Many of these letters have considerable enclosures, with 200 or 150 descriptions in them? Yes, necessarily, when employed in surveying town or suburban allotments.

132. If you lay out 300 or 500 allotments, you have to return separate descriptions for every one? Every allotment.

133. That duty could be performed by draftsmen? Yes; a clerk could perform it.

134. Do you not think that the contract system would be a much superior system than the license system under the supervision of district surveyors? I think probably it would be a great saving to the Government, and also a better system.

135. Are you aware that the licensed surveyors never mark the land at all, and, if they do mark it, the marks are not visible? Yes; I am aware that the trees are in some cases insufficiently marked.

136. The marked lines of the old surveyors in some districts are very easily found? Yes; I have found mine that I marked seventeen years ago, and have had a difficulty in finding the marks of a licensed surveyor although marked only a few days before.

137. It is quite possible, with the records obtained by parties from this office, such as traces of rivers, and traces of the ranges of hills, that they might make plans without going on the road at all? You may adopt a survey, and make a plan from it.

138. The work of a surveyor depends a great deal on the district he is employed in? Much depends on that.

139. You have been in the far west and coast districts? Yes.

140. There is a great difference in the work? Very great indeed.

141. A man might work a mile while another did ten miles? Yes.

142. And the man that worked one mile might work the hardest? Yes.

143. Have you ever felt the monthly returns to be an annoyance? I think they were often used as an annoyance. I have had letters threatening to stop my pay when my journals were all sent, and also when I have been beyond post communication, and could not forward them. I speak of former times, not since Colonel Barney took charge of the department.

144. Have you ever heard of a person having his pay stopped for six months during the time he was away from all postal communication? I recollect your informing me that you had your pay stopped.

145. That I never had pay or provisions for five months? Yes.

146. Do you consider that these monthly returns, such as they are, ever originated with a practical man at all? I don't think a practical man would approve of their being adopted.

147. Do you think Sir Thomas Mitchell approved of them? I don't think he did. From a circumstance that occurred when on the gold survey with him, I have reason to think he did not.

148. If the license system is to continue, do not you think it would be very desirable to change the system, so far as to pay the surveyor only when the land was sold? That would be a certain arrangement, and I think a deposit to cover the expenses of the survey should be made by the applicant for land of doubtful value, because it is easy to get parties to apply for land who may not intend to purchase.

149. *By Dr. Aldcorn*: They would get them to survey? Yes.

150. *By the Chairman*: And not purchase them? Yes.

151. Perhaps the land would not be applied for at all? Yes. I think licensed surveyors have a *carte blanche* about that.

152. Don't you think that system does possibly a great deal of mischief? I think it may.

153. And it puts the landed proprietors at the mercy of the surveyor, if he felt inclined to annoy them? It is no doubt the case, but in the located parts of the Colony you cannot measure land without interfering with some one.

154. There never has been a system of field-books since you have been in the service that required it to be kept on a particular system? No; I think the surveyors keep their field-books as they please.

155. Your field-book is supposed to be the property of the Government? Yes.

156. The licensed surveyor does not return any field-book? I do not know. Their maps may be considered a field-book; they give the length of lines in chains, the bearings, the various points and features of the ground.

157. I suppose that answers the purpose of a field-book? Yes.

158. It is the original map of the surveyor? Yes, it may be considered so.

159. Have you ever been instructed during your time in the service to note the variation of the compass? No, I have not.

160. You have found frequently some local attraction? Yes, on many occasions.

161. Do you find a difference in the western districts, the Lower Lachlan, and the variations at Bathurst? I never tried it.

162. Are you called on now to send in finished plans as formerly? I am not at all employed in making plans now; I am supervising the work of the licensed surveyors.

163. Do you not consider it is a tax on the field surveyor to be obliged to send in these finished plans? It occupies a great deal of time.

164. A pretty plan may be an incorrect one? Yes.

165. Would you not advise that every surveyor should put the bearings and length of line on the plan? It was not the practice. If they sent in a field-book that was all that was required; I did so when I left the Western District.

166. You are not called on to send in your field notes until you leave the service? I sent in my field-books when I was transferred from the Bathurst District to the squatting district of Wellington.

167. Were you at all employed in arranging squatting runs? Yes, I was.

168. And did that occupy much of your time? Yes, a great deal of my time.

169. In that district were the runs defined at all? Very indefinitely.

170. No survey made of them? No survey made of them; there was much disputing about dividing lines; and I had much difficulty in the surveys I made in settling them.

171. Don't you think it necessary such an important public department as that of the Surveyor General of New South Wales should have a form for keeping these books? If the work was plotted by draftsmen it would be desirable.

172. Don't you think it would be desirable, instead of occupying so many of them at the head department, to detach some of them to the survey parties? Yes.

173. That is if the system of a surveying staff were to be retained? Yes.

174. You believe the circumferentor to be the best instrument for carrying a survey through wooded countries? Yes; I think it was invented for the purpose to supersede the use of the theodolite; and no instrument has yet been invented equal to it for taking surveys through woods and uncleared ground.

175. The needle becomes useless? Yes.

176. Don't you think it would be of advantage to the service to establish a meridian line in each district, and mark from it? Yes. I have just received instructions, I may mention, of marking the meridian line in different parts of my district.

W. R.
Davidson,
Esq.

W. R.
Davidson,
Esq.

22 July, 1858.

177. Do you not think the day is fast approaching when a re-survey of the whole country will have to be made? I am not under that impression.

178. Are there not many errors in the old surveys, and are there not parish boundaries established—do not you think it would be well to make the parish maps and throw all the errors on the parish? I think the boundaries of the parishes will ultimately have to be correctly defined; the present boundaries of parishes in the Western District are section lines marked on the map, but not on the ground.

179. These are sectional lines? These lines are not marked on the ground.

180. *By Dr. Aldcorn*: Have you formed an opinion as to the best and cheapest mode (cheapness I think the great object of the present inquiry) of conducting the surveying of agricultural lands—these lands I refer to, chiefly? I think the contract system would be the cheapest.

181. Do you think that system, with proper supervision, is as good as the work generally done by salaried surveyors—I mean with the proper supervision of inspecting district surveyors? I think so by contract, when they know the work is to be checked.

182. There is nothing on this side of the Colony—the lands of the Colony—which would render that system ineligible or unsuitable? There is not much available land now in large tracts, and that in the settled districts would be against the contract system.

183. Are you aware this is the only mode of surveying practised in the United States of America? I am not aware of it.

184. Are you aware that it has been adopted within the last five years in New Zealand without loss to the Government? I am not aware of it.

185. And found to be the cheapest, with proper supervision exercised by the district surveyor? I think it would be the cheapest.

186. How many district surveyors do you think it necessary to establish in the Colony—four could not do the work? I don't think so; I have got so much ground to travel over that it is difficult to carry out the duty satisfactorily. The licensed surveyors in the Western District are scattered over a large tract of country, comprehending the County of Bathurst, part of Georgiana, a large portion of Westmoreland, part of Cook, County of Roxburgh, part of the Hunter, County of Brisbane, and the Counties of Bligh and Wellington, besides visiting at times distant places in the squatting districts; but I understand it is in contemplation to increase the number of district surveyors—they are not now sufficient. There is a greater amount of duty proposed to the district surveyor, with less means of carrying it out—fewer men in the field—and unless four men are allowed to the district surveyor he cannot perform his duty.

187. Licensed surveyors go about with four men and a large stud of horses? I have got four men lately allowed; I should be unable to perform the duty without that number.

188. You always require three or four men? Three is not sufficient; one has charge of the tent, one has charge of the horses—you cannot do without three in the field. When we first went into the field we had seven men; it has gradually been diminished since.

189. And the work done in those days, persons can see the marks in the present days. I think it is thirty years ago since you were with me—it was in 1828? No, in 1830, I think.

190. Have you had much to do with the Commissioners of the service? Yes, I have had a good deal of intercourse with them.

191. Do you not think if they had been surveyors it would have been much better for the country? Yes.

192. Have the gentlemen appointed been acquainted with (not mentioning names) valuing land and defining boundaries? Some have been very well acquainted with it.

193. Were you ever in the Castlereagh District? Yes.

194. You have now a Commissioner, although he lived there thirteen years has never seen it? The last Commissioner of the District of Bligh is a very active man, and I believe did his duty well.

195. When you get your evidence will you be kind enough to put any suggestions with regard to the survey service of the country, which you think advantageous to the country, and give us your ideas? I think the survey of the lands of the Colony would be cheaper if carried on by contract, and, if under proper supervision, as correct as the present system; but in the nineteen counties there are not many large tracts of country available, and this might operate somewhat against this system. The district surveyor has at present no control over the licensed surveyor in one very important respect—without reference to him, the licensed surveyor may measure any land even of doubtful value, and which might not meet a market if brought to sale. They are also authorized to receive applications from any parties for the purchase of land, and applications are often made without any intention of purchasing; but the circumstance of the land having been applied for will in a measure form some excuse for its measurement. To insure the genuineness of these applications, a deposit, to cover the amount of the expense of survey, should be required from the applicants. In order to enable the district surveyor to carry on his duties properly, he should be furnished with an office in the chief town of the district, to which should be attached a draftsman. Correct maps should be furnished by the department, shewing the lands alienated and those held under pre-emptive right. He should at least have four men permanently attached to his party, and with a less number it is impossible to travel the country and check the licensed surveyors' work. The licensed surveyors ought to inform the district surveyor of their intention to cut up a particular portion of country, as he only from a visit to the land would be able to judge of the propriety of doing so. It is not the licensed surveyors' interest to be particular in this respect, at present they have too much power delegated to cut up portions of land in unavailable country; a power formerly only allowed to particular officers of the department, who had no interest in the result of the survey.

TUESDAY, 3 AUGUST, 1858.

Present:—

MR. ALDCORN,

MR. WHITE.

MR. HAY,

G. B. WHITE, Esq., IN THE CHAIR.

H. Sanderson, Esq., C.E., called in and examined:—

1. *By the Chairman:* You are a civil engineer, and were for some time connected with the Survey Department here? Yes.
2. Had you any professional experience at home? I have had a great deal of professional experience for the last ten years.
3. Were you engaged by the Home Government to come to this Colony as a surveyor? I was; for the purpose of making surveys in this Colony.
4. What description of surveys? It was not particularly defined to me by Colonel Dawson; but I was engaged as a surveyor. I was appointed a Government surveyor 7th July, 1855, with a number of other gentlemen.
5. What was your first employment in the Colony? My first employment was in the exploration of the country, taking trial levels, &c., necessary for the execution, or making of surveys for railway purposes.
6. What was the nature of your engagement with the Government—what salary were you to receive, and what means were to be provided to enable you to carry on these works? On my arrival in New South Wales the Government, through the Surveyor General, proposed that the surveyors should have £400 a-year each salary, and £400 a-year allowances.
7. Were you not sent to Moreton Bay to carry out a survey for road purposes? Yes; I was sent to the Northern District—to Moreton Bay and Darling Downs—for that purpose.
8. Had you any parties to aid you, or did you find your own men? I had two surveyors appointed under my charge who accompanied me—Messrs. John Malley and John Hunt Grogan.
9. You were not at all employed in the survey of Crown Lands for sale? No, I was not.
10. *By Mr. Hay:* You were employed in a preliminary survey for railway purposes? Yes.
11. *By the Chairman:* What instructions had you with regard to making preliminary surveys for railroads—were you ordered to go from point to point—? My instructions from the Surveyor General were rather intricate; they were only to go from point to point—to keep one general direction, whether practicable or not.
12. Is that the system adopted in England in making a survey for such a purpose? No; it is very different at home, and anywhere else where railways have been made. The engineer sends out his assistant, and gives him general instructions to find the best line between two points, irrespective of the towns.
13. And then a section of the country is taken? Yes, and trial sections are sent in.
14. *By Mr. Aldcorn:* The surveys you made had reference rather to common roads than to railroads, had they not? I was particularly instructed to make surveys for railroads.
15. *By Mr. Hay:* I think you say you have not been employed at all in the survey of the country, except for railway purposes? No.
16. Since you left the Government service have you been employed in private surveys of the country? I have made small private surveys in the neighbourhood of Sydney.
17. You came out, in the first instance, to be employed as a licensed surveyor, upon certain terms? To be employed as a surveyor, on certain terms, for a certain period, but my salary was not named. Colonel Dawson informed me that the scale by which I should be paid would enable me to realize some thousand or fifteen hundred a-year, clear of my expenses in the field.
18. You were to be paid by a scale? Yes, a scale was submitted to me.
19. Is that the scale by which licensed surveyors have since been paid? Yes, I believe it is. It is the scale substituted for that in use up to April 1854.
20. When you came out the Government did not wish to employ you and the other gentlemen who came out with you as licensed surveyors? The Governor General proposed that we should be employed on the railway survey.
21. You are aware that you were employed under a particular vote for the purpose of extending railway surveys? Yes.
22. In the course of your experience in the country, have you formed some decided opinion as to the way in which the survey of the country ought to be conducted? I have formed an opinion.
23. *By the Chairman:* Will you be kind enough to give your opinion upon that matter? I think a trigonometrical survey ought to be resorted to; but, in the first place, the course of existing roads, creeks, and rivers, ought to be surveyed in the ordinary manner by traverse.
24. What instrument would you use? The circumferentor for traversing. I am opposed to the present system of laying out the lands. I think all frontages to rivers and creeks should be reserved for the general benefit of all purchasers of Crown Lands and of the public.
25. Do you not think public roads down to certain points or bends in the river would answer all the purposes? Yes, it is in that way I preserve the frontage to the river—the allotments would come down to near the river—but I would reserve a right of road along the side of the river.
26. *By Mr. Hay:* That is to say, you would not alienate any portion of the frontage of a river? I would not give an absolute right to the purchase of the land—
27. Would you give a common right? Yes, to all purchasers of property in the neighbourhood.

H. Sanderson,
Esq., C.E.

3 Aug., 1858.

- H. Sanderson, Esq., C.F.
3 Aug., 1858.
28. *By Mr. Aldcorn*: You would give the breadth of a road merely? It would be about the breadth of a road. It is a principle which is adopted in the Canadas to retain the land on the banks of rivers. A road is almost always left. (*For particulars see a diagram with notes, which I purpose appending to my evidence.*)
29. You do not contemplate anything more than a road; you do not contemplate anything that would amount to a common? No; simply sufficient width to allow of a road being formed.
30. *By the Chairman*: Our rivers are sometimes very tortuous, in a distance of two or three miles there may be seven or eight miles of water frontage—would you leave a road in such cases? It might not be practicable in such cases; for instance, on some portions of the Hunter there would be some difficulty in reserving the bank.
31. *By Mr. Hay*: Generally speaking, the rivers are tortuous here? Yes.
32. *By Mr. Aldcorn*: Do you not think nearly the same object would be obtained by having straight roads running at right angles, and with pretty frequent outlets from the back allotments to the water? Yes; if the back allotments have the right of access to the water that is all I contemplate. I do not wish every allotment to have a right of frontage, but the right of a road to the river without trespassing on his neighbour's land, and this would be effected if my system was carried out.
33. *By the Chairman*: Do you not think every surveyor, knowing his duty, would in laying out a large portion of country, arrange for that in his plan? I should naturally think so; it would be simple enough to do so.
34. You are aware that it depends very much upon the mode of laying out the land by the surveyor whether the land brings £1 or £5 an acre? I think a great deal depends upon the surveyor's subdivision of the lands, if he does not use sufficient care or discretion he may reduce the value of some lands very much—far below their value—by a bad subdivision of them. I am rather opposed to the system of licensed surveyors. I think every qualified surveyor in the Colony ought to be employed in surveying Crown Lands; and I am of opinion that if surveys were made by contract, and tested and examined, as at home, by an Examiner, or by a Board of Examiners, the cost of survey to the Government would not be more than eighteen-pence an acre.
35. *By Mr. Hay*: Do you mean that the surveyors should be examined, or that their work should be examined? Their work.
36. *By the Chairman*: You would have an officer appointed for that purpose? Either an officer or a Board similar to that at home. Colonel Dawson in the Tithe Survey Office has three assistants; and the establishment altogether, I think, costs the Government somewhere about £2,000 a year.
37. *By Mr. Aldcorn*: Do the Examiners travel to different parts which have been surveyed, or do they merely examine the returns sent in by the surveyors? They examine the surveys and field-books. They compare the field-books with the surveys, and in some cases, where there are any suspicious circumstances which lead to a belief that there is something inaccurate, an Examiner is sent on to the survey.
38. Do you not think it desirable to appoint officers having districts allotted to them, whose duty it should be to visit the surveyors at their work, and exercise a general supervision over them—do you not think that would be better than to have a Board sitting at a central place like Sydney? I think so, but the Examiners might be away from the central Board, in various parts of the country.
39. *By the Chairman*: In a country like this, half as large as Europe, it would not be possible for any three men to travel over it and supervise the work of the surveyors; do you not, therefore, think it would be better that the Government should appoint officers as district surveyors who should have the supervision of these contract surveyors, and go over their work with their field-books? Yes. Large surveys are easily tested, by simply taking the alignment of natural points and running diagonals. I think two days occupied in this way would discover any inaccuracies upon a large survey of 2,000 or 3,000 acres.
40. *By Mr. Aldcorn*: There is a point of very great importance—the proper marking out of lines, and this has been very imperfectly attended to by licensed surveyors—do you not think it would be necessary for the inspecting surveyor to see the land himself, and to see that the marks were such as would remain in the ground? I think it is very necessary that land should be marked out in a permanent manner, and that the instructions to the surveyors should be to that effect.
41. *By Mr. Hay*: What do you mean by a permanent manner? For instance, if any trees formed a portion of the boundary, I think they might be partly cut down, and their stumps might be marked in such a manner as would prevent mistake. I think the driving of sticks in rocky ground cannot be considered permanent. The nature of the climate, and of the ground, causes sticks, however fast they may be driven into the ground, to be removed within twelve months. I have seen it in my own case, where the base lines have been staked out, and within seven or eight months the stakes have all disappeared, though they had been driven into the ground three or four feet.
42. *By the Chairman*: It would not be difficult to find stakes driven into the ground in that way? In some cases they are covered by the debris of vegetable matter, and in cases of flood in low lands they are washed away. I would observe that, according to the Estimates for the present year, the fees to licensed surveyors amount to somewhere about £10,000, which, taking thirty as the number of licensed surveyors, would give an average of about £330 a-year to each. Now, I think a licensed surveyor could do four times as much work as that amount would pay for, and therefore I look upon this sum as representing employment for licensed surveyors for only three months in the year, and this is one reason why I object to the license system.
43. *By Mr. Aldcorn*: What system would you substitute? I think every qualified surveyor ought to be allowed to tender for surveys of Crown lands.

44. *By the Chairman*: Do you not think candidates for this privilege ought to be examined? *H. Sanderson, Esq., C.E.*
No, I do not think it is necessary. I think, for their own sakes, they would make accurate surveys, especially if they had to undergo the test I before suggested. The Tithe Commutation Surveys of England and Wales were made very accurately, and surveyors were invited to tender for that. 3 Aug., 1858.
45. Might not many men be employed who were not surveyors? Possibly men might obtain the contracts from Government, and employ surveyors; for this reason, because some surveyors might not have the means of themselves to make the surveys, and as a matter of convenience they would induce the party (who would make the pecuniary advances) to contract with the Government.
46. *By Mr. Hay*: The Chairman wishes to know whether the Government should not, in the first instance, test the ability of surveyors before they were employed—in what way could they be tested but by an examination? I think, possibly, it might be necessary that some surveyors should be examined.
47. *By the Chairman*: Have you read the scale of payment for licensed surveyors? Yes.
48. What do you think a surveyor could earn by that scale, if he had constant work in such a country as the Hunter or Moreton Bay? I am almost certain I could make from £1,000 to £1,800 a-year.
49. Do you not think you could make between £3,000 and £4,000? Possibly so; but I speak at a very moderate calculation. In some portions of the country, like Darling Downs, it would be no difficult matter to measure five, ten, or fifteen miles a-day.
50. You have never been in a brush country such as Illawarra, or about Port Stephens? I have been on the dividing range engaged in making surveys.
51. Have you ever traced down one of these brush rivers? Yes, the Bremer on the eastern side, and other rivers on the western side of the Great Range.
52. How much of such a country do you think could be done in a day, where you were obliged to take all the bends? I think it would be a difficult matter to survey half a mile a-day in some cases.
53. You see the scale does not provide for any difference in the country,—one individual may be put in a brush country where he may not earn £150 a-year, and another may be put in an open country where he may make £2,000 a-year, and not do half the work of the other? Yes.
54. Do you think that scale was ever drawn out by a man who understood surveying? No; and I beg to state that the scale is so very ill proportioned that the cleverest and most skilful surveyor might be put upon some description of work which would have the effect of barely paying his expenses, whilst an ordinary surveyor would in other cases realize his £2,000 a-year.
55. *By Mr. Aldcorn*: You have stated that you think Government lands for small farms might be surveyed at an average expense of eighteen-pence an acre; is that opinion founded upon your own experience; do you think the general run of the land of the Colony—I do not refer to the brush lands mentioned by the Chairman—but the general run of the Colony, could be surveyed for eighteen-pence an acre? I think so.
56. *By the Chairman*: Do you not think—taking the brush land and all into consideration—it might be done at an average of eighteen-pence an acre? If I could take a very large tract of country I should have no objection to take it for that; I have traversed the country for professional purposes from Brisbane to Warwick, to Drayton and Tenterfield, a distance of two hundred miles from the coast, and from what I have observed, I am certain that 1s. 6d. an acre would pay the surveyor well for his services.
57. You know something of the range dividing the eastern and western waters? Yes; I have taken levels over that range for three different routes for railway purposes.
58. *By Mr. Hay*: That is the range between Darling Downs and the waters of the Brisbane? Yes.
59. *By the Chairman*: Did you find that a very difficult survey? The survey over the range was rather difficult, in consequence of the ravines and deep gorges in the mountains.
60. Before you went there you had a tracing of the range? I had a plan of the country shewing the divisions of the water with a red line upon it, shewing the general direction I was to take, and my work was useless with respect to the lines between Ipswich and Warwick, in consequence of the impracticability of the routes laid down.
61. In consequence of that impracticability, did you propose any other line? Yes. I transmitted a report, together with sections over the dividing range, to the Surveyor General; the range could not be crossed without several miles of tunnelling, notwithstanding the steepest gradients were made use of.
62. Did you leave the surveying service? I was dismissed the service after being suspended three months.
63. Will you state the reason of that? I found that my instructions were rather of a novel nature; in fact, I was held responsible for the amount of work done by the two surveyors under my charge, and was placed in authority over them, yet my authority was disputed, and I was compelled to report that fact to the Surveyor General.
64. Was any result obtained by the Government from your surveys of this country? Not that I am aware of; I believe the Government have not made any report upon them; in fact, I question whether they have come under the notice of the Railway Commissioners yet.
65. You have never had anything to do with the Railway Commissioners? I believe it was owing to the Railway Commissioners asking for certain reports that I was suspended.
66. Was there any inquiry into your conduct, or were you called upon to explain it prior to your dismissal? The Executive Government held an inquiry into my matter.
67. Were you allowed to be personally present? No, I was not. I made an application to the Honorable the Minister for Lands and Works, stating that I wished to be present.
68. You are not aware what occurred at the inquiry? Not at all.

H. Sanderson,
Esq., C.E.
3 Aug., 1858.

69. *By Mr. Hay*: Before the question was decided you had an opportunity of making an explanation or defence, had you not? I had; but I was not aware at the time my case was under consideration that the Surveyor General had preferred a charge against me of having acted dishonestly towards my laborers.

70. What has become of your assistants, Messrs. Grogan and Malley? I am not aware.

71. Are they in the Government service? I believe Mr. Grogan was *Gazetted* as a licensed surveyor a few months ago, but I think he has not been employed upon any works at all. I think he was *Gazetted* on the 12th March last.

72. *By the Chairman*: During the time you were engaged in surveying did any party from head-quarters ever visit you? The district surveyor was authorised to visit my camp and to inspect the work.

73. That was Mr. Galloway? Yes. In fact Mr. Galloway told the surveyors under me that they must obey my instructions, in consequence of some communication he had received from the Surveyor General, who stated that he should consider it his duty to dispense with the further services of the party unless they sent a return of their work. I went to Brisbane and saw Mr. Galloway. This was on the 21st April, 1857. After explaining to him my position, and stating that I had written three times to ask permission to visit head quarters to get amended instructions, and further instructions as to any further survey, Mr. Galloway said, "He did not know how to advise me, that the Survey Department—making use of an expression of his own, which I did not understand—" was all sixes and sevens, that the mode "of carrying out the survey as applied to railways was not proper, and that a great deal of "time was occupied in doing unnecessary work." He then said I must take my own measures, and if I thought proper to proceed to Sydney he should not object to it. I believe Mr. Galloway has subsequently stated in his report something contrary to what he stated to me.

74. Did you ever ask for a proper official investigation of your case? Yes; I wrote to the Honorable Mr. Murray, the successor of Mr. Hay, asking for a thorough investigation of my case. I did so more especially because I consider that the Government, not wilfully or unjustly, but possibly from misrepresentation, conceived that I had acted dishonestly to my laboring men; and as the decision of the Executive Council was very offensive to my feelings, and damaging to my reputation, I prayed a further inquiry, which was never granted to me.

75. *By Mr. Aldcorn*: Were you, before your dismissal, aware of this charge of dishonesty to your laborers? No, I was not—at least I was aware of the charge being referred to the Minister of Lands and Works.

76. Were you officially informed of it? I was officially informed of it by the Surveyor General in a communication to me dated 7th May, 1857.

77. *By Mr. Hay*: Did you not propose to make arrangements for the payment of some of these outstanding debts? Quite so. At the time the Surveyor General communicated to me the subject matter of this charge, there was then standing to my credit a sum more than sufficient to discharge the claims of these men, and I gave full power to the Surveyor General to pay these men; and, notwithstanding that I gave this power, and that the Surveyor General said he would pay the men and withdraw the charge, the charge was still preferred, and brought before the Executive, who could not have been aware of the fact that I had arranged the payment of the moneys due to these men with the Surveyor General.

78. *By the Chairman*: You mean that at that time a sum was due to you from the Government? My allowances for April.

79. *By Mr. Hay*: Were you not insolvent at the time? I believe a creditor had endeavoured to compel me to sequester my estate, but that was afterwards withdrawn. The reason the money was not paid to the men at the time when they presented my order to my agents was because I did not receive my salary regularly; and it is a well-known fact that surveyors employed hitherto have had to wait three or four months for their pay. I have had to wait four months, and several times three months. My agents sometimes would meet my cheques or orders, and sometimes they would not.

80. *By the Chairman*: In consequence of these delays? In consequence of these delays. My laboring men who have left me never intended to do me an injury when they applied to the Surveyor General for payment.

81. Have their claims been paid? Yes, by Mr. Williams, the accountant in the Surveyor General's Office, some time ago.

82. *By Mr. Hay*: How long did their claims remain unpaid? Their claims remained unpaid, so far as I was concerned, three months.

83. When did the men leave you? The men left me in December, 1856; that was at Warwick.

84. When were their claims finally paid? The 3rd of September, 1857. The Committee will allow me to state that they could have been paid in the previous May, when that charge was preferred against me by the Surveyor General, for at that time my April allowance was due, and was not drawn by me. I requested the Surveyor General to pay that amount.

85. *By Mr. Aldcorn*: You say he agreed to do so, and to withdraw the charge? So I understood.

86. *By Mr. Hay*: Was there anything to that effect in writing? I had a personal interview upon receiving his letter of the 7th of May, and requested that the two men, James Kennedy and Hugh Hossack, might be pre-ent.

87. You have been an applicant for employment since your dismissal? Yes.

88. In the railway department? Yes, I have.

89. Were your applications ever entertained? Yes; I had several interviews with Captain Martindale, but not latterly.

90. Did he examine you at all as to your qualifications? No, he did not.

91. Was your work examined by the railway authorities? I think it has not been. I think, in consequence of Moreton Bay being about to be separated from this Colony the Government

Government did not think it worth while to go into the examination of any work done there. H. Sanderson, Esq., C.E.

92. Do you know that it was not submitted to the railway authorities? I think not; I think Mr. Whitton told me that he had never seen my work. 8 Aug., 1858.

93. At the time your work came in Captain Mann and Captain Hawkins were the officers of the railway department? Yes; that was only with reference to the Brisbane and Ipswich line I have a communication, dated 20th March, 1857, from the Commissioners of Railways, addressed to the Surveyor-General, stating that the information supplied by the assistant surveyor "is so very meagre that the Commissioners find it quite impossible to form an opinion as to the situation of the terminus for Ipswich." The reason why the information was so meagre was the imperfect state of the instructions given to me. If I had been allowed to take what surveys I thought necessary, the sections and plans of the Brisbane and Ipswich Railway would have been a great deal more elaborate, and have contained a great deal more information.

94. You had not obtained leave of absence when you came to Sydney? No. I reported myself to the Surveyor General upon my arrival in Sydney, stating my reasons for coming.

95. Had you applied for leave of absence before? Three several times.

96. And had been refused? In each case.

97. After that, you came to Sydney without leave of absence? I consider that the observation which the district surveyor (who was my immediate superior officer) made to me was tantamount to a permission to leave the district.

98. But you say you believe he has given a contrary account of the conversation? Yes, I was informed that he had done so in a report.

99. Then it was simply a *vivâ voce* conversation between you and him? Yes.

100. No other persons being present? No; but I should be very sorry to say anything that was untrue.

101. *By Mr. Aldcorn:* In your opinion, the contract system is greatly superior in all respects to the license system? Yes; I think a greater amount of work would be done, that it would be more accurate and much cheaper, and many qualified surveyors who are in the Colony would be employed.

THURSDAY, 5 AUGUST, 1858.

Present:—

- Mr. ALDCORN,
- Mr. FORSTER,
- Mr. WHITE.

G. B. WHITE, ESQ., IN THE CHAIR.

Mr. Charles Frederick Gorton called in and examined:—

1. *By the Chairman:* You are employed in the Surveyor General's Department? Yes. Mr. C. F. Gorton.

2. What is your employment there? I am entry and dispatch clerk; I have charge of the entry and dispatch room. 8 Aug., 1858.

3. Have you been many years in the service? I am in my seventh year.

4. How many years have you been in the Colony? I arrived in the Colony in 1840

5. What was your previous employment? I was in the navy.

6. You belong to the clerical branch of the department? Yes.

7. Mr. Halloran, I think, is the Chief Clerk of that department? Yes.

8. Have you of late years had anything to complain of with regard to your position in the service? Yes, I have, several times; Mr. Halloran has endeavoured to keep me at a low salary for many years.

9. How do you mean he has endeavoured to do so? He has never forwarded any recommendation to the Surveyor General when I have asked him for promotion.

10. Have younger men been passed over your head, or received larger salaries than yourself? Three who were my juniors were promised promotion over my head, but Mr. Hay, the late Secretary for Lands and Works prevented it. They were put on the fixed establishment in 1857, and I have been on it since 1st October, 1853.

11. Are there grades of clerks in the office, first, second, and third class clerks? Yes

12. To what class do you belong? The third.

13. Since you have been on the establishment have any of the third class clerks been passed over your head into the second class? No; but clerks have been brought in from other offices over my head to fill second class clerkships.

14. Has the department increased in that particular branch very much since you have been in it? Yes, very much.

15. Do you recollect the number of clerks in that branch when you joined it? I think there were seven.

16. *By Mr. Aldcorn:* Including the Chief Clerk? Including the Chief Clerk.

17. *By the Chairman:* How many are there now? Twenty in all, including the Chief Clerk, two having been reduced on 31st ultimo.

18. Without counting supernumeraries? There is only one supernumerary, Mr. Budge, who has the preparation of the deeds; the others have been put on the establishment since 1857.

19. When you joined the office the business of the Commissioners of Crown Lands was not connected with your office? No

20. How many clerks are there belonging to the peculiar branch of the service? Five.

21. They do all the work of that branch of the service? No; they do not do quite the whole

Mr. C. F.
Gorton.
5 Aug., 1858.

whole of it. The letters are mixed in the two books; some of the Commissioners are addressed from the survey branch and some from the Crown Lands.

22. That would give an increase of eleven clerks, since you joined the service, in the survey branch alone? It will give an increase of eight clerks in the survey branch alone. When I first joined I was a supernumerary for sixteen months; and then I was put on the establishment by Sir Thomas Mitchell. There were two others besides myself who were supernumeraries; so that there were only five on the establishment.

23. Is there very much more business now than there was when you joined? Yes; the number of letters has more than doubled—nearly trebled.

24. Are not many of these letters merely printed forms? Not from the dispatch room. From the 1st of January to the 1st of July there were 6,270 letters sent from our room, and there were no printed forms included among those. That number was exclusive of printed forms, circulars, and deeds.

25. You cannot classify those letters so as to state what number were letters to the public, and what to officials? No. The total number for 1857 was 12,369, exclusive of deeds, printed forms, and circulars. The deeds average about 500 a month; last month we sent away 740, and the month before 550.

26. *By Mr. Aldcorn:* Do you mean that all these were manuscript letters, not forms merely? The instructions to surveyors are partly printed forms, and partly filled in with writing—they are included. The individuals' letter-book alone, up to this time, contains 800 this year.

27. *By the Chairman:* How is it that the clerical branch of the department has so much increased of late years—is it from the additional sale of lands, or from the extension of the country? The applications for land are much more numerous of late years than when I first joined. The number of applications for land, and also the number of licensed surveyors, have much increased. Letters are more numerous to the licensed surveyors, and also to the land agents, who have lately been transferred to us from the Treasury.

28. You belong to the record branch? To the entry and dispatch room.

29. What branch does that belong to, for Mr. Halloran says he has three branches under his direction—the record branch, the sale of lands branch, and the issuing of letters and accounts—entry and dispatch he does not seem to count as a branch at all? I was originally under Mr. Armitage in the correspondence branch, as it was called, but there have been so many alterations made that we now scarcely know what branches we are in. The last return to the Departmental Retrenchment Committee stated that I was in charge of the entry and dispatch room. (*Vide Appendix C.*)

30. Does the Surveyor General appear to have anything to do with the arrangements of the office? Yes.

31. Then Mr. Halloran's recommendations or reports upon the efficiency of officers go to the Surveyor General before they go any further? They go to the Surveyor General.

32. Are they ever altered by the Surveyor General? I have known them in only one instance changed.

33. Will you state what that instance was? It was a recommendation that Mr. Pretious should take Mr. Simpson's place when he left, at £245, and I believe Mr. Halloran recommended that he should not have it; the Surveyor General recommended him for it.

34. In giving the number of clerks belonging to the office, do you include those who are detached from—I believe there is one, if not two, at Moreton Bay? There is one. I do not reckon Mr. Perry at Moreton Bay.

35. How long is it since Mr. Perry joined the department? About twelve months after I joined.

36. Do you know how many times he has been in and out of the service? He was sent from our office to Moreton Bay.

37. Was he not in the office before? I am not aware.

38. Was there any examination as to the qualification of applicants when you joined the office? We used to be examined at the Colonial Secretary's Office by a Board. I was examined when I was put on the fixed establishment.

39. Of whom did the Board consist? Of Mr. Macpherson, the Auditor General, and the head of our department.

40. Do you think that in consequence of having undergone that examination, and of having been a certain time in the office, and taken a certain position in your branch, you ought to be removed to the next higher position if you were senior? If there were no charges of inefficiency, it was formerly usual to promote the seniors.

41. Have any charges been brought against you? No.

42. Not any? Not any.

43. Have you had any correspondence with the Surveyor General upon any subject connected with your position in the service? Yes; I applied for the salary of £300, as I was the senior of my grade, and was in charge and had been in charge for nearly twelve months. Mr. Thomas, who was placed on the establishment only in 1857, as assistant correspondent, has been recommended, and, I believe, been approved of by Mr. Robertson, to have £300 a-year.

44. Who recommended him? Mr. Halloran.

45. Mr. Halloran's recommendation you think has some weight? Yes; we are generally led to suppose it has the whole weight.

46. Have you the correspondence or copies of it here? Yes, I have a rough draft of it. (*The witness handed in a letter addressed to the Surveyor General, dated 2nd July, 1856. Vide Appendix A.*) To that I received no reply. (*The witness handed in a letter addressed to the Under Secretary for Lands and Works, dated 17 July, 1858—vide Appendix B; and a memo. addressed to him by Mr. Halloran, on 9 August, 1857, with reference to the transaction of the duties in his branch of the department—vide Appendix C.*)

47. Did you receive any answer to that? No.

48. Will you be good enough to state what your grievances are? I have merely the same to state as I have written.

49. Your grievances are embodied in the letters you have laid before us? Yes.
50. Do you conceive that there is any favoritism shewn with regard to appointments? Yes; I conceive that Mr. Halloran has the sole appointment, for several juniors have been recommended to be passed over my head.
51. *By Mr. Aldcorn*: You ought not to be withheld from stating your opinion by fear of any consequences? In several instances juniors have been placed over those in the office. I may mention Mr. Jackson, who was brought in to copy deeds merely, and he was placed over several gentlemen, his seniors, in charge of the deed room. Mr. Davidson was also placed over the head of Mr. Heywood. Mr. Heywood was kept at a salary of £185 a-year, and Mr. Davidson has a salary of £200, although, on Mr. Heywood's leaving the office shortly afterwards he received a very flattering letter, and was highly spoken of to the Honorable Secretary for Lands and Works.
52. Then there have been other complaints of injustice in the branch of the service to which you belong? Yes, several times.
53. *By Mr. Aldcorn*: Have you been promoted at all since you entered the service? I have been promoted once, to the third class.
54. From being a supernumerary? Yes.
55. When did that take place? After Sir Thomas Mitchell's last voyage to England, in October, 1853, I was placed on the establishment.
56. Have you not been promoted since then, during these five years? No; I received my annual increase of £15 per annum, till I arrived at £270 a-year, but when the gold increase was deducted I was put back to 245 a-year, at which I have been ever since.
57. Have you ever applied to the Minister for Lands and Works during the last two years, stating your case? I applied last year, when Mr. Hay was Secretary for Lands and Works, to beg that I might retain my position in the department, next to Mr. Underwood, because Mr. Halloran then recommended Messrs. Chambers, Simpson, and Thomas to be put over my head, and Mr. Hay allowed me to retain my position, and he complied with my request; but they have been raised up to me in salary, and now Mr. Thomas is recommended to go above me altogether, and I believe that has been approved by Mr. Robertson, though I have not been officially informed of it.
58. Have you made any application to Mr. Robertson on that subject? The letter I have handed in is a letter addressed to Mr. Robertson.
59. You consider, from not having been promoted, that you have been unfairly dealt with? I attribute it entirely to Mr. Halloran; to no one else.
60. But you do consider yourself unfairly dealt with from that want of promotion? Yes, very. When I first entered the service, and Sir Thomas Mitchell wrote for me to join the office, Mr. Halloran objected to me, before he knew me, for I had seen him but once or twice before. He objected, I believe, simply because my wife's father, Mr. Duncomb, had been Chief Clerk in the office some seven years, when Mr. Halloran was quite a boy with him, but he took a dislike to Mr. Duncomb, and I can only attribute his dislike to me to that cause. He told Sir Thomas Mitchell, before I went to the office at all, that I should be of no use in the department.
61. You say, that although no clerk in your own department was put over your head, yet that clerks from other departments were promoted over you? Yes; Mr. Williams was brought in from this office, and put in as corresponding clerk above me and Mr. Underwood.
62. Is he a connection of Mr. Macpherson's? Yes. Mr. Smith has been put over me in the land sales' department since that.
63. Where was he before? In the Treasury. On that occasion, nearly the whole of the clerks in the department wrote to the Principal Secretary, to beg that we might be allowed to receive any promotion that might arise from vacancies, stating there were plenty in the office capable of taking the duties, and praying that strangers might not be brought in.
64. Was that a joint letter? Yes.
65. Did you receive any answer from the Principal Secretary? Mr. Smith was appointed, and I believe we received no answer.
66. *By Mr. Förster*: Do you consider that this favoritism, of which you complain, is part of a system, or that it merely belongs to your individual case? I believe it is part of a system, because the cases of Messrs. Davidson, Jackson, and Hindmarsh will show that, although juniors, they were placed over the heads of seniors.
67. In all these cases of promotion over the heads of others are you able to state positively that the persons promoted, were unfit for the offices to which they were promoted? No, they were not unfit; but the persons who were senior to them were quite as fit.
68. Then you do not claim promotion for yourself and others on the mere ground of seniority, but of seniority accompanied with equal fitness? No; I should never have claimed £300 a year, if I had not been capable of doing the duties.
69. Were you, on entering the service, led to believe that the system of promotion would be carried out in the way you suggest? When I entered the service it was invariably the practice for seniors to be promoted.
70. When you entered the service was there any contract on the part of the Government, and into which you also entered—did the Government make any contract with you which you consider they have broken? There was no contract at all.
71. Then, do you say that the agreement that was made with you by the Government upon entering the service has not been fairly carried out? There was no agreement at all, there were certain regulations at that time which guided the service, that if no fault were found with an officer, in any branch, he was promoted by seniority.
72. Where do you find those regulations—are they in writing? It is the custom of the service—the usage.
73. From what source do you derive this custom—who is to be the interpreter of it?

Mr. C. F.
Gorton.
5 Aug., 1858.

Seniority

Mr. C. F.
Gorton.

5 Aug., 1858.

Seniority, in every case where no blame was attached to an officer, was the ground of promotion.

74. *By the Chairman:* Did you ever hear of the Secretary of State's Despatch to the Government here, arranging all the departments in the Colony? Yes.

75. Did you not hear that that Despatch was the document by which officers at the head of departments were to be guided in the distribution of promotion? Yes.

76. *By Mr. Forster:* When you entered the service you considered that if you conducted yourself properly this principle of promotion by seniority would be applied in your case? Yes.

77. You thought it part of the remuneration attached to your office? Yes; if I carried on my work efficiently I expected promotion.

78. Such promotion as you expected depended upon the contingency of a vacancy occurring? Yes.

79. Then, if vacancies had not occurred you would not have felt injured? No.

80. Then, if vacancies had not occurred you would have considered yourself fairly remunerated? Vacancies have occurred, and I have been passed over.

81. This mode of remuneration could not possibly have been applied unless vacancies had occurred? No; but application might have been made for promotion to a higher class.

82. Do you think length of service should entitle to promotion in rank? Yes.

83. Supposing the public did not require additional service in a particular grade, do you think those below that grade should be promoted to it, simply on the ground of the length of their services? In another office the gentleman who has been in charge, who holds the same position as myself, is I believe in receipt of £400 a-year; and I know for certain that he has £375, although he has a great deal less work than there is in my branch.

84. What I want to know is, whether you consider the service you have rendered to the country has been fairly remunerated or not? No, I do not think it has.

85. You think you have not had pay enough? I think not, for the time.

86. Then why did you remain in the service if you thought you were not sufficiently paid? I remained in the hope of promotion, because I had endeavoured to do my best, and it is the custom in the service, if an officer does his best and there is no complaint against him, to promote him when vacancies occur.

87. Do you think if you left the public service and applied yourself to your profession in a private way you would make more? I think I might have done so; but I was a family man when I first joined the service, and have been afraid to run the risk of leaving.

88. You, in fact, preferred the certainty of the Government service to the chance of greater remuneration from private employment? Yes, with the hope of promotion.

89. You state that the hope of promotion induced you to remain in the public service? Yes.

90. Do you think that is a general feeling among officers of your grade and standing? Yes.

91. You think the general feeling is that promotion has not been fairly distributed? Yes; and if persons from other offices are to be brought in, to be placed over the heads of others who have been waiting for years in the hope of promotion in the event of a vacancy, it is not of the slightest use for them to exert themselves at all. There is no inducement held out to them if every time a vacancy occurs a junior or stranger is to be put over the heads of older officers.

92. You seem to think there has been some personal feeling against you? Yes.

93. May there not have been, to regard the matter in a more charitable point of view, not a personal feeling against you, but a stronger liking for other people? I have always imagined so.

94. *By Mr. Aldcorn:* Others have suffered as well as you,—clerks below you, or in the same grade, were deprived of their chance of promotion? Yes.

95. *By Mr. Forster:* How comes it that Mr. Halloran has the sole disposal of the promotion? I cannot say.

96. How can you state so positively that he has the disposal of it? That is my belief; if he says he will recommend any gentleman for a particular appointment, that gentleman is sure to get it.

97. Are you quite certain that Mr. Halloran may not a little exaggerate his influence in that way?

98. *By the Chairman:* Can you directly state that Mr. Halloran has never made any complaint of you? Not that I am aware of. On one occasion, in 1856, my pay was stopped for one day's absence without leave, although others who have been absent at times have not been served in the same manner.

99. He has never complained to you that you were slow at your work? He never said anything of the sort.

100. You always considered that Mr. Halloran was perfectly satisfied with you in your position in that department? Yes; and I have been placed in nearly every branch in the office.

101. *By Mr. Aldcorn:* You state that these men who were brought in from other offices and put over you were qualified persons, but that there were in the office those who were equally qualified—do you think, although their general qualifications might be good enough, strangers could be so well qualified to perform the duties as those who had been trained in the office? I should say not, decidedly.

102. Did the other clerks who were in the same class with you—third-class clerks—also consider themselves unfairly dealt with because their promotion was stopped as well as yours? Yes; we all wrote against it.

103. Have you ever heard that there is a species of influence exerted over every branch of that department? Yes.

104. And that has brought the service into its present inefficient state? Yes.

105. It is over every branch? Over every branch there is the same influence.

106. *By Mr. Aldcorn:* By what individual, or what party do you understand that influence is exerted? By the Chief Clerk—the Secretary, as he is now called.

107. *By Mr. Forster*: Do you consider that the department is in an efficient state? I do not consider it is.
108. You know what it is intended to do—does it do that work so well as it might do it? No.
109. Do you think in that department the work could be done with a smaller allowance of heads, or sub-heads, as they are called? Yes.
110. And an increase of working men? If the work were more evenly divided I am positively sure a less number might do the work.
111. Do you not think the expense of the department is a great deal caused by having so many heads? Yes.
112. Can you give the Committee any idea how many of these supervising gentlemen could be dispensed with—do you think one would be enough? Yes; I think one would do the whole of it, aided by an active officer for out-of-doors work.
113. *By the Chairman*: Have you not known that there has been a great jealousy between the minor heads of that service? Yes.
114. Each fighting for supremacy? Yes.
115. Consequently much of the public business has been thwarted? Yes.
116. Have you anything further to suggest to the Committee with respect to the conduct of the service? I have only to add, that if some regulations with regard to the promotion of officers in the public service were adopted, whereby individual power would not be allowed to interfere with their just claims to such reward, that they would prove to be the greatest inducement for the application of exertion, zeal, and diligence.

Mr. C. F.
Gorton.

5 Aug., 1858.

APPENDIX A.

*Surveyor General's Office,
Sydney, 2 July, 1858.*

Sir,

Being the senior of the 3rd class of clerks, next to Mr. Underwood, and the senior of my grade of clerks receiving £245 per annum, as well as *in charge* of a branch of the duties of this department, I beg to present my claim for one of the £300 voted for the present year, and which in your blank cover memo., 57-64, (57-612) of 20th March, to the Honorable the Secretary for Lands and Public Works, you stated you should be happy to consider favorably.

My seventh year's service in your department commenced on the 1st April last, during which period I have belonged to the fixed establishment as 3rd class clerk 4½ years. I have had charge of the Entry and Dispatch Room since the 18th of August last, assisted by two clerks only, during which period more than 12,000 letters and documents, besides numerous deeds, money letters, &c., have passed through my hands, in a manner which I trust has given satisfaction, notwithstanding that when the same duty was less onerous (having now been much increased by the correspondence with the land agents) four clerks were employed in its performance.

In most of the departments the work I am engaged in is considered to be of the highest importance, and in the Colonial Secretary's Office, in which the correspondents were less numerous, the gentleman in charge of the same branch was in the receipt, I have been informed, of £400 per annum.

By the reduction of the gold allowance, and the cessation of the annual increase, I lost last year £40, which, had the same been continued, would have made my salary £300 on the 1st of October next; whereas the two gentlemen receiving the same pay as myself, viz., £245 per annum, had an addition of £35 to their former salaries last year; and the promotion of either of them at this moment to £300 would give an increase to their salaries of £90 in two years, and cause a loss to myself of £60, for no assigned reason, having been most diligent in the performance of the duties entrusted to my care, which the Chief Clerk was kind enough to acknowledge to me yesterday to be the case.

I humbly hope, therefore, that you will be pleased to consider me deserving of the promotion I have so long sought, both on account of my seniority and my having to be responsible for the due performance of duties requiring so much alacrity, care, and attention.

Should it be your intention to recommend a junior clerk for the promotion which I consider to be only my just right, I have the honor to request that this application may be forwarded for the consideration of the Honorable the Secretary for Lands and Public Works.

I have, &c.,
C. F. GORTON.

The Surveyor General.

APPENDIX B.

*Surveyor General's Office,
Sydney, 17 July, 1858.*

Sir,

On the 2nd instant I addressed the Surveyor General on the subject of my promotion to the 2nd class of clerks in this department, and respectfully requested that, should it be his intention to recommend any of my juniors in office, he would favor me by submitting my application for the consideration of the Honorable the Secretary for Lands, &c., prior to any final decision being arrived at.

The application alluded to contains a true statement of my services, duties, &c., and it is therefore with much regret that I am compelled to trouble Mr. Secretary Robertson on the subject; but the great difficulty of obtaining the slightest promotion in this office, either by using the utmost exertions in the performance of the duties entrusted to one's care, or otherwise, will be seen from the following facts.

Mr. C. F.
Gorton.
5 Aug., 1858.

On the day after the passing of the Estimates I had a conversation with the Chief Clerk on the subject of the different salaries as voted for the present year, and mentioned that I trusted the Surveyor General would nominate me to one of the salaries of £300, to which my seniority, and the satisfactory manner in which I had conducted the duties of my branch (to the latter of which Mr. Halloran assented), I considered, with due deference, would entitle me; but, much to my surprise, he informed me that I was to remain at my present salary, viz., £245, and that Mr. Thomas, an *assistant correspondent and considerably my junior* in office, was to be appointed to the second class; but that he had Colonel Barney's authority to assure me that if I quietly submitted to this arrangement I should not be forgotten in the framing of the Estimates for 1859.

On the following morning I waited on the head of my department, and humbly requested that he would not permit me to lose my standing this year, as I had received no promotion during 1857, but had on the contrary suffered loss: the Surveyor General then said that he had not given the appointment of the officers to the different salaries the least consideration, but that when the matter was properly laid before him he would immediately do so, and thought he should make it all right. In mentioning this circumstance I beg to be permitted to state, that it is not my intention to cast the slightest imputation on my superiors in office, but merely to shew that promotions would seem apparently to rest solely with the Chief Clerk, and that, therefore, it is evident that his protégés or favorites are sure to pass over the heads of seniors, who, from their not being entrusted to perform the duties considered to be of any importance, are prevented from shewing their capabilities to conduct them.

In conclusion I have the honor to express a hope, that if *inefficiency*—a term so frequently made use of for the purpose of lowering an individual, and of preventing all further inquiry into his case—has been urged in this instance, that I may be allowed to express my willingness to pass an examination in English composition, the dead and living languages, &c., with any gentleman in the clerical branch of this department, notwithstanding that I have done so on two occasions already, once at the Royal Naval College, where I passed the *first* examination out of thirteen candidates, and received highly flattering commendations from Admirals Sir Frederick Maitland, Sir Phillip Durham, Dr. Inman, Professor of Astronomy, and Lieutenant Loring, the Governor of the said College; and again for the Civil Service, in the Colonial Secretary's Office, Sydney, in 1853.

Trusting, therefore, that I may be allowed to retain my rank in this department next to Mr. Underwood, and that my thus troubling the Honorable the Minister for Lands and Public Works may only be considered in its true light, viz., an endeavour to obtain the salary for which I have so zealously labored, and which, as a family man, is of every importance to me.

The Under Secretary for
Lands and Public Works.

I have, &c.,
C. F. GORTON.

APPENDIX C.

It will be the duty of Mr. Gorton, as letter record clerk, to see that *all* letters, &c., are duly entered, indexed, and despatched, day by day; and that if by staying the ordinary hours, with occasional over-hours under pressure, the work cannot be kept up, to report that to me officially. He will see, however, that effort is made to accomplish this with the present means—by the exercise of diligence and energy. He is to understand that I hold him personally responsible.

H. HALLORAN.
19 Aug., 1857.

WEDNESDAY, 11 AUGUST, 1858.

Present:—

Mr. ALDCORN,		Mr. MORIARTY,
Mr. FORSTER,		Mr. WHITE.

G. B. WHITE, Esq., IN THE CHAIR.

William Meadows Brownrigg, Esq., called in and examined:—

- W. M.
Brownrigg,
Esq.
11 Aug., 1858.
1. *By the Chairman*: I believe you are a surveyor? I am.
 2. And have been so for many years? About nineteen.
 3. In Sydney? Yes.
 4. You were examined, I think, before the Commissioners appointed to inquire into the Survey Department, on the 18th of July, 1855, relative to the management of that department? I was examined.
 5. Have you seen the Report drawn up by the Commissioners since that date? I have.
 6. Have you read it very attentively? I will not say very attentively, but I have read it.
 7. I think you were questioned particularly with reference to the license system? I was.
 8. They wished to obtain your opinion whether a license or contract system would answer better than the salaried system then in operation? They did.
 9. You have been in the habit of attending the Surveyor General's office on business frequently? I have.

W. M.
Brownrigg,
Esq.
11 Aug. 1858.

10. You have had access to all the different records of that department whenever you required? I have, most liberally.
11. Have you ever noticed whether any system with regard to plans was adopted there? I think, from examining the field-books and plans, it would be better if there were an organized system, both as regards the scale and the mode and manner of keeping field-books generally.
12. You mean to say that there has been no system of keeping field-books? Every surveyor appears to have kept his field-book after his own fashion. I think, also, that the field-book should be kept systematically, and in such a manner so that any surveyor could read the work, and plot it as readily as the party by whom the book has been kept.
13. So that any draftsman should be able to plot the work as it was sent in? For the purpose of the draftsman it is required more particularly than for any one else, for many draftsmen are mere machines or copyists, who have no idea of surveying.
14. In these plans have you noticed any note made as to the variation of the day of the survey? No, I do not think I ever noticed anything of the kind.
15. You are aware that a change in the variation is going on, that it is eastering? I do not think there has been any great variation for many years. In fact, in looking over *R. binson's Mechanical Philosophy*, published in 1843, I find the following statement:—"In 1576 the variation in London was $11^{\circ} 15'$ E.; in 1622 it was $6^{\circ} 12'$ E.; in 1662 it coincided with the true meridian; in 1792 it was $9^{\circ} 40'$ W.; in 1740 it was $6^{\circ} 10'$; in 1804 it was $24^{\circ} 8'$; in 1815 it was $24^{\circ} 18'$ W. Hence it appears in less than forty years, in one instance from 1662 to 1700, the variation varied from itself $9^{\circ} 40'$; and this may very reasonably be expected to occur again. For, although within the last forty years (that is, up to 1835), little alteration has taken place, yet the laws by which it is governed are as yet unknown to us."
16. There is a diurnal variation? Almost an hourly one.
17. It ebbs and flows with the tide? It depends upon the weather or season of the year, whether very hot or very cold; for instance, you will find the greatest difference possible in the variation according to the hour at which the observation is made; if taken early in the morning, again at one or two, and a third time in the evening, there will be several minutes difference—about fifteen minutes a day on the average; that is to say, the maximum on any day is attained to the eastward about 7 a.m., from which time it continues moving westward until between 2 and 3 o'clock p.m., when it returns again towards the east. It is a very difficult matter to manage.
18. *By Mr. Aldcorn*: Is not a meridian line absolutely necessary? You never can have accurate surveying without it. A true meridian line ought to be laid down carefully on every plan intended for a future or permanent reference; because, not only does the magnetic meridian vary from the true meridian, but its variation is materially different in different places, and this difference is constantly undergoing changes—nay, almost every magnetic needle has a variation due to itself; this last arises from the difficulty, if not impossibility, of the maker being able at all times so to centre a needle that the magnetic poles shall coincide exactly with the extremities of the needle. Therefore, where rigid accuracy is required, a true meridian should be marked on the ground, and referred to fixed points on the plan.
19. *By the Chairman*: In consequence of not having a meridian line to work by, there is great difficulty, even in the neighbourhood of Sydney, in ascertaining property, saving by the descriptions of the deeds, and these, in nine cases out of ten, are inaccurate? They are inaccurate; they are no descriptions at all. If you take any of the early grants, I defy any man in existence to ascertain the property. It states thirty acres for a farm in such a locality, without giving a starting point, or the length of the line, or one single thing by which you could identify the land.
20. *By Mr. Aldcorn*: Is not that likely to cause innumerable suits in Equity? It does so; and I could go to a certain locality, not far from Sydney, and involve them all in law proceedings in consequence of this absence and vagueness of descriptions.
21. *By the Chairman*: In fact you have no starting point; in making these surveys you have to find out, by the evidence of old inhabitants, where the original boundaries were marked? Yes; not only that, but lose perhaps days, not only in obtaining the evidence you require, but in going over ground that you would not require to survey, to obtain a correct starting point.
22. And in most instances you find these incorrect, as far as the deeds are concerned? Many of the deeds give no bounds at all, as I have already explained.
23. Even where that is done? Even where that is done there is a considerable variation sometimes in both bearings and length of lines.
24. Do you not think it will be necessary, in order to prevent confusion, that where the Government have laid out parish boundaries, to have all the errors corrected with those boundaries, and to have maps made out as the lands really are, rather than as they are described by deed—something similar to the tithe survey at home? You cannot disturb old boundaries, however incorrect they may prove to be; subsequent surveys must be based on them, and thus "confusion becomes more confounded." The fact of the matter is, that I would put more faith in recent surveys than I would upon any old survey.
25. Do you think these errors have originated from the carelessness of surveyors in the first instance, or from confusion of boundaries? There was a great deal of carelessness in the olden times—I speak of thirty or forty years ago; there is a great deal more accuracy now than existed then.
26. Do you not consider that an individual to have charge of the surveying service should himself have been a practical man? I would prefer a practical to a theoretical man any day in any science. Theory is very good, but practice is far better. I might describe very theoretically how to amputate a man's leg, but if I was ordered to operate, I fear the patient would lose both limb and life.
27. You have been some nineteen years in the Colony; during that time how many practical men

W. M.
Brownrigg,
Esq.
11 Aug., 1858.

men have you had at the head of the surveying department of New South Wales? I can hardly speak of the qualifications of those who have been at the head of the department. The reputation of Sir Thomas Mitchell was very great, and I think deservedly so. That of the present Surveyor General, Colonel Barney, I should consider to be of a high standard, not only from his scientific attainments but also from his length of service in the Royal Engineers.

28. But Sir Thomas Mitchell was frequently away from the Colony? He was.

29. Who then appeared to manage the business of the service? Captain Perry during some period.

30. He was ostensibly the head? He was the recognised and official head of the department.

31. Did you never understand from the officers of that service that they were too much interfered with by subordinate branches of the service? I cannot say. I think that is a difficult question to answer. I cannot vouch from what I have heard; but such may be the case.

32. Do you consider the drafting branch a subordinate branch of the service? I consider it a very important branch.

33. But it is subordinate to the other? No question about it. One is a mechanical thing, the other is scientific. A man may be a good draftsman but know nothing of surveying. I have had men who have been very clever in drafting who could not plot an angle.

34. Do you think a draftsman is a proper man—a man who has been only a draftsman all his life—is a proper person to hold the position of Deputy Surveyor General? If he has been *only* a draftsman—if he has had no previous training or practice as a surveyor—he cannot be.

35. He is not a fit person to be there? He may have a good deal of theoretical knowledge, and, from length of service, an extensive knowledge of the details of the department, which may render him a very efficient officer at head-quarters.

36. Do you think draftsmen who have been paid by the department—who have been educated by the department—fit men to send in the country as surveyors, they never having been in the field as surveyors? If they had never been in the field, I think they would be *very inefficient* as surveyors, and I should not feel disposed to place much confidence in their work. No doubt their theory would assist them.

37. But I understood you to say just now that a man may be six or seven years in an office as a draftsman and be unable to plot an angle? I did not mention any such period. I have unfortunately had one or two in that position, but I cannot speak with reference to the officers in the department. I believe them to be most efficient draftsmen; and I must say the drafting in that department is equal to any I have seen, and I have seen a great deal. It reflects great credit on the Survey Department.

38. You object to the license system here? I do.

39. Will you state, for the information of the Committee, your reasons for that objection? There are several. I do not think licensed surveyors are under proper control or supervision in any way, and many of them I believe to be quite inefficient.

40. You do not think a man ought to have power who has no responsibility? Certainly not; and the licensed surveyor has no responsibility. He is not under the control of the department in any way. He is open to take private work, which he does largely. Many instances have come under my knowledge. The work under the system may be very faithfully done, but the system is open to great license in carrying out the details of a survey. There is no check to know whether a man's survey is correct or not; that can only be tested hereafter, when surveys have to be connected and some of the lines and angles re-measured.

41. A man in that position may subdivide lauds in small plots which are quite unfit for sale? Yes, perfectly useless.

42. The greater the number of subdivisions the more the surveyor is paid? Yes; and the quicker he gets through his work the quicker he gets his money. Still I do not mean to say that the license system, or the contract system, under the proper surveillance and control of the department, would not prove efficient. I think the boundaries or marks are not sufficiently and permanently defined. They may do very well for a time, but I doubt whether in the course of a few years any of these marks would be found. The surveyors are under no particular control as to landmarks, and this I think is a great defect in this system of surveying, not only with reference to future surveys, but for the security and satisfaction of purchasers.

43. You are of opinion that there should be some law with respect to landmarks? No doubt, and a *very stringent law*. I would not only go so far as regards landmarks, but farther; I would make a proposition as regards a place of record and registration for all lands subdivided and sold by public auction or private contract. There is nothing of the kind in the Colony; there is a place for the registration of deeds, but I maintain that with every deed there ought to be a plan shewing the subdivisions of the original land. Now, there is no means of ascertaining the subdivisions of the land, and when plans fall into the possession of auctioneers or solicitors there is the greatest difficulty in procuring information.

44. You think there should be a registration of plans in the Surveyor General's Office? There is always that; but I think no plan should be issued from the Surveyor General's Office without a diagram of the land sold; when that land is subsequently divided, I think a diagram of all such subdivisions ought to be registered with the deed of every portion sold.

45. Did you ever endeavour to induce lawyers when drawing out deeds to have a diagram attached to the deed? I have, and very many of them adopt the system, while others say their clients will not incur the expense; but I say there should be a law to compel it. Sometimes there is a diagram put into the deed in the office of the solicitor by one of the clerks, but I will not say whether that is correct or not; I have seen these diagrams put in without the aid of any professional surveyor. Many solicitors, however, will not prepare a deed without the certificate of a surveyor as to the identity of the land.

46. Do you think proper care is taken in the examination of licensed surveyors before their appointment? I cannot say what the ordeal they are put through may be, but, from circumstances within my own personal knowledge, I should say there are some I should term not qualified.

47. You do not think that power at any time breathing upon a man can make him a surveyor? I should think not; there must be some training, some scientific attainments to make him that.

48. You see that under the license system one scale applies to all kinds of country—ought there or ought there not to be a difference in this respect? No doubt there ought, because one surveyor may be put to work in an open country where he may earn a great deal of money, while another may be put in such a country—Illawarra, for instance—where he could not earn his salt.

49. *By Mr. Aldcorn:* Such as brush land? Yes, and not only brush but broken land, and coast line.

50. *By the Chairman:* In an open country a man may earn £20 a-day? In the squatting districts a man may earn £10 a-day, if he is very industrious; I have myself made £10 a-day in squatting districts, and I have been in other places where I could not earn £1.

51. In the subdivision of division of towns do you think the scale of fees for this work was ever drawn out by a man who knew what field work was? I cannot say that I have noticed the Government scale of fees. (*The scale of fees was handed to the witness.*) I think the scale is excessive with reference to field surveys—that is a very liberal allowance, £2 a mile for lineal measure.

52. Would you not prefer, ten to one, being a licensed surveyor upon that scale, in an ordinary district, to being upon the staff at a higher salary? According to this I should, for I should make a great deal more money.

53. And the work, generally speaking, is not so well done under the license system? I think, where a man has a fixed salary, and an establishment, you will find the work more correct, because he has no object or interest to slobber over his work.

54. You think it would have been better years ago to have made district surveyors, who should have been responsible for the proper performance of these duties? I would suggest that there should be a Deputy Surveyor General over a certain district only. I would divide the Colony into three divisions; I would call them the Southern, the Northern, and the Western Districts; over each of these I would have a *Deputy Surveyor General*.

55. *By Mr. Aldcorn:* Who should be in the field pretty often? Always; and under him I would have *district surveyors*, each being responsible for a certain portion of these large subdivisions.

56. *By the Chairman:* When the office of Deputy Surveyor General was first instituted the Colony consisted of only 40,000—we have now a population of nearly 300,000? That is the reason I would have an extension of an efficient staff to meet the spread of population, and to answer all requirements for colonization.

57. What was the office of Deputy Surveyor General instituted for? I am not aware; but I suppose if the Deputy Surveyor General is at head-quarters, he is to take the place of the Surveyor General when he is absent; and if the Surveyor General is present in the office, the deputy should take his place in the field.

58. You are aware that there has been no supervision of that sort over any of the officers for years? I do not think there has been within my knowledge; I think the Deputy Surveyor General has been out very little. The officers of the department will be able to answer that question better than I can.

59. It has appeared to the public generally that there have been half-a-dozen heads to that department: there have been the Surveyor General, the Deputy Surveyor General, the Principal Draftsman, and the Chief Clerk, all of whom have considered themselves heads of the department? I cannot answer that question; each would consider himself the head of his own particular branch. If I have wanted anything particular, I have gone at once to the head of the particular department in which I knew the information was to be obtained, and he has given instructions to those under him to give me the information I required.

60. May I ask you whether in your private practice you adopt this scale in making your charges? No, certainly not; I am entirely regulated by circumstances. If I have employment in the vicinity of Sydney, or in Sydney itself, which will admit of some little attention to the office, my charges are in proportion. If I am taken away altogether from my office and my home, I have a fixed charge of £3 3s. a day. But I very frequently perform the work by contract, and I generally find that the most satisfactory to both parties.

61. You would not object to the adoption of such a scale as this? Certainly not; I would willingly adopt it.

62. Did you observe at the bottom of the scale that not only are these few allowed, but that there is a good increase of twenty-five per cent? There is, but that is only a temporary thing. I have had great difficulty in the squatting districts to get as much as fifteen shillings per lineal mile for surveys. I see £2 is allowed here.

63. I think you say you would prefer the contract system, with supervision? I have very often worked by contract myself.

64. *By Mr. Aldcorn:* You say that in your own practice you generally find that the most satisfactory to both parties? I do; it prevents misunderstanding after the work is done. If we both know our locality—and the proprietor of the property generally does—and if I have the same information, it is generally mutually beneficial.

65. *By the Chairman:* A similar system of contract might be entered into with the Government by any competent officer, supposing there were proper supervision? Most certainly, if there were proper supervision.

66. Do you not think if the contract system were adopted it would be much cheaper to the country than payment for the work upon such a scale as this? No doubt. I mean contract

W. M.
Brownrigg,
Esq.
11 Aug., 1858.

W. M.
Brownrigg,
Esq.
11 Aug., 1858.

by tender. I would take it cheaper than that as a contract, but I would prefer the scale if it were left to me.

67. Did you observe by whom the scale is signed? No.

68. "John Thompson"—Supposing the contract system were adopted, and a whole district were taken, at what price per acre do you think it ought to be surveyed? That would depend entirely upon the physical character of the country—upon whether it were an open district or a coast district. Coast districts are very, very difficult, and very tedious.

69. *By Mr. Aldcorn*: Could you give any idea of the cost of surveying open country, and then the average cost of coast land? As I said before, it would entirely depend upon the physical character of the country, which varies in every locality. I think the scale ought to vary in different districts. At present there are many districts where a man does not get paid, and yet the scale of remuneration is alike for all; this should not be.

70. Are you aware that in Victoria the whole of the lands of the Colony are being surveyed at an average of some nineteen-pence an acre? No, I am not. There ought to be a very proper supervision over it.

71. I believe there are district surveyors established? Besides district surveyors, I would, as I have already stated, have a Deputy Inspector General at the head office of each of the three great divisions of the territory which I have already proposed.

72. He would overlook even the district surveyors? Yes. There should be a regular chain of responsibility, similar to that which exists in the army, each officer forming a link in the chain of authority, and all subject to supervision.

73. *By the Chairman*: You do not think a man who has been nothing but a draftsman is a competent censor of the work of a surveyor? He must possess scientific attainments for that, and have a general knowledge of the Colony and the character of the locality in which the work is done.

74. *By Mr. Aldcorn*: You mean that he must have a practical knowledge of surveying? Not only practical knowledge, but local knowledge also, as I have stated. If a man has never been in the field he is not likely to possess that knowledge, unless he has been for a number of years in the position of judging the work others have done, and thus has a standard to go by.

75. Do you not think that supervision by a superior officer is also necessary, for the purpose of pointing out to either the licensed or the contract surveyor the proper land to be surveyed, in order that it may not be left to the judgment or inclination of the immediate surveyor? It ought not to be left to the surveyor himself, for he might be under local influence, and wanting in proper judgment.

76. *By the Chairman*: Are you aware that it has sometimes been left to these parties to measure as they have pleased? I think it has in a great measure been left to them to survey land.

77. *By Mr. Aldcorn*: In some cases it has been left entirely to the surveyor? I believe it has, in a great measure. I object to the system myself, and I think any man who put up an isolated spot should be called upon to pay for it; for it is impossible for a surveyor who is liable to be drafted from one end of a district to another to satisfy the demands of the public or make it profitable to himself.

78. *By the Chairman*: Do you not think consecutive surveys should be made under the supervision of the district officer? Yes; you would then have a sort of connected survey. If a surveyor has a license to survey what he likes, he will leave the rough and take the smooth.

79. *By Mr. Aldcorn*: Are you aware whether a great part of the land said to be surveyed and not sold at present consists of land not worth buying? I believe a great deal of it is.

80. *By the Chairman*: Have you been over much of the land surveyed by licensed surveyors? I have been over some.

81. Have you observed much difference between the old and the new systems of marking? I think there is a great defect in the system. I would have all corners properly lockspitted, where practicable, or otherwise permanently marked.

82. That is with regard to country allotments? Even on country allotments all corners ought to be well defined. I have, when I have been surveying in a practicable country, carried a plough with me on a cart, and marked the line with the plough; this mark will remain visible for years.

83. Have you any further suggestions to offer to the Committee? Having carefully perused the suggestions offered in the able Report of the Commissioners appointed to inquire into the Surveyor General's Department in July, 1855, for the government of that important branch of the public service, I can only refer to that Report, as offering suggestions of a most important character, and rendering further comment on my part unnecessary.

Charles Edward Langley, Esq., C. E., called in and examined:—

C. E. Langley, 1. *By the Chairman*: You are a Civil Engineer I believe? I am, and a Surveyor.

Esq., C. E. 2. You have been long in the Colony? Twenty years, very nearly.

3. And have been in private practice most of the time? Yes.

11 Aug., 1858. 4. You have had a considerable experience of boundaries? Yes.

5. All over the Colony? Very nearly.

6. Have you found much difficulty in tracing them occasionally? Yes, but there are others as well marked now as they were thirty years ago when they were first marked; some of the old boundaries are plainer now than those which have been more recently marked.

7. You mean that the boundaries are plainer upon the ground marked many years ago than those which have been marked under the new system of licensed survey? Yes.

8. Have you had considerable difficulty in tracing the marks of licensed surveyors? Yes I have; they are not sufficiently cautious in making the lines continuously so as to enable one to follow it out.

9. You are frequently obliged to refer to old boundaries? Yes, sometimes we are obliged to pick up old boundaries to find new ones. There is one place in particular I could name, where a township was laid out, I could find none of the lines, and only two pegs, and that had not been laid out two years. A man asked me to shew him his land, and I could not do so without the plan from Sydney, and then I could hardly do it, but I found the original marks.
10. *By Mr. Aldcorn*: In short, the township had disappeared? The sticks had been pulled up and the marks were not to be traced.
11. *By the Chairman*: Some hundreds of allotments had been laid out, and there were only two pegs? I could only find two pegs, and those were near the line. I walked miles and could not trace the lines, although it was a fine clear country.
12. There does not seem to have been any system of marking lines or placing landmarks? Not by that surveyor in that instance.
13. Generally there is no system laid down by the Surveyor General in his instructions to his officers? I believe recent instructions have been given to the surveyors to brand the pegs, and to leave them six inches out of the ground, which will hardly answer the purpose, as a cart or dray passing over would be likely to break them off? I think it would be better to leave them out only two or three inches.
14. Have you seen the scale of fees paid to licensed surveyors? I have.
15. Do you not think it sufficiently liberal to justify the requirement that the land shall be properly marked, even lockspitted? Yes, every town ought to be lockspitted at the corners of all the streets. I am told that in Adelaide, where the land is well grassed, they cut out the lines of the streets and the numbers of the sections on the ground itself by removing the turf, so that there is a map on the ground. I think that might be adopted here on suitable ground.
16. Have you had access to the records of the Surveyor General's Office whenever you have desired it? Yes.
17. Then you have had an opportunity of seeing the field notes of the different officers in the service? Yes.
18. Both of officers on the staff and of licensed surveyors? Yes.
19. There does not appear to have been any system of field-books? There is not; every one keeps his field-book as he has been accustomed to keep it: there is no general system laid down.
20. Many of these books are useless to a stranger? To a stranger they are perfectly useless, unless he had the key to the cipher he could not make it out.
21. As public records they are perfectly useless? Yes, to a certain extent.
22. It is your opinion that the field-books of a public establishment should be kept systematically? They ought to be kept on a system laid down for that purpose and properly filed.
23. In the examination of different maps have you ever remarked any note of the variation of the day upon them? Never.
24. Having been in the Colony twenty years you must be aware there is a variation? I do; I have checked it frequently.
25. What do you consider to be the annual variation? It varies; it goes backwards and forwards a few minutes. The last time I took it by altitude at South Head, it wanted 17 seconds, being 9 degrees 57 minutes.
26. It is now estimated at 10 degrees easterly? Yes.
27. The average increase is about two minutes a year easterly? About that. Some of the lines marked twenty years ago differ from those now marked by a variation of about 40 minutes to a degree, in very old surveys about a degree and a-half.
28. Do you not think every person should notice the variation of his instrument? Every instrument ought to be put in a certain position, and the variation should be registered in the field-book, north, south, east and west, for there are many instruments not exactly at right angles if you read them across.
29. The difficulty of centring is such that few instruments if reversed will read the same? They will not unless they are very carefully done.
30. You have no meridian line in Sydney to refer to? I have one myself; there is none in the Government department.
31. There is one at Parramatta? There is; I assisted Mr. Dunlop to lay that—at least to correct it, when it had got out of order.
32. In going over the surveys in the neighbourhood of Sydney and in the County of Cumberland generally, have you found much difference between the descriptions in the grants and the appearance on the map? Yes; you will find lines marked at different times running away from each other, having been made without any reference to the variation.
33. Individuals who had just arrived in this Colony without any knowledge of the circumstances, or of the variation, are very likely, if carrying on a survey according to a deed, to make errors? Very likely, and private surveyors reap a benefit by their mistakes. I have surveyed some property, and I found one line eleven chains out. I found one, but I could not find the other surveyor's line. I had to go back miles across the river to pick up the old lines, in order to pick up this line, and I found the latter eleven chains out.
34. Is it not your opinion that it is almost necessary to have a proper survey made here similar to the tithe survey at home? Yes.
35. And to have the whole work start from a meridian line in each district properly laid down? Yes, a base line.
36. You have had experience on the Hunter? Yes.
37. Have you not found that these sections instead of eighty chains run eighty-one and a half and eighty-two? Yes.
38. Starting from Newcastle and going up to Murrurundi, what would be the difference in consequence

C. E. Langley,
Esq., C.E.

11 Aug., 1853.

C. E. Langley, consequence of this—would it not be two miles? You would not be on the ground that was granted at all. In the County of Cumberland it is nearly as bad.
Esq., C.E.

11 Aug., 1858. 39. As soon as these lines that have been marked these thirty years and upwards die out, and the trees that have been marked are burned down and disappear, will not constant disputes be likely to arise, unless some landmarks are established before these disappear? Yes; but almost all the grants are void from uncertainty—they have no starting point. A grant is put into your hand which says "a farm of 140 acres," and you can go and mark that out in any place you like.

40. Except there is the fork of a river or something to start from—do you not think these forks of rivers should have been starting points? There should have been some such starting points, although even they change. There are hundreds of grants not worth this piece of paper if the matter were litigated. If these grants were made to fit as they ought to do, you would displace grants altogether, in consequence of the superabundance of the measurement.

41. You know that almost all the sections on the Hunter are a chain or a chain and a half too wide? I never measured one that was correct, and I always kept my chain as correct as I could. I never measured one that measured eighty chains, but I have come, I think, as near as eighty chains fifty links.

42. Yet the lines are there to speak for themselves? The lines are cut out as correctly as possible, but in many of the surveys I have measured I have found only three lines cut—one line for the whole string of sections, and the two cross lines, but no back line.

43. You are aware that the section system is altogether incorrect—that lines which ought to cross rivers when they come to the back land crowd some of the sections out? Yes, and I have seen at ——— a line which did not come within seven chains of where it was shewn on the plan.

44. The general maps submitted to the office are incorrect? The greatest inaccuracy is this, that the new surveyors who have been appointed have put their work on to the old work, and have not taken the precaution to know where the old work stopped before they plotted it on the plan, and the consequence is that the new work joined on is not in the position it ought to be in.

45. Are you aware that the Surveyor General knew all these things? I believe Sir Thomas Mitchell did.

46. Even before his time the surveyors were instructed not to interfere with the old boundaries—where the old boundaries could be found? I measured a property at Wingacarabee, which was described as 2,500 acres, and found it to be nearly 3,000. When you give two chains of land more to a section than there should be, when you come to the last section you are not upon the land granted. The plan of surveying adopted in Michigan, in America, is, the principal rivers, creeks, &c., are surveyed and the feature of the country correctly laid down; the principal roads are traced out, then the land is marked out to suit the natural boundaries, as near as possible.

47. What instrument do you consider the best to work with in this Colony? The theodolite.

48. Would you use it here? You cannot use it now, for you have to use the needle to check it in finding out old boundaries.

49. If you are obliged to use the needle, which is the best instrument? I have one, I think the best I have seen, it has a circumferentor with a needle seven inches long.

50. The larger the needle the better? Yes; it is divided into half degrees, has a vertical revolving telescope, and three levels.

51. It has all the advantages of the theodolite as well as a large needle to work from? It is cumbersome, but it is a beautiful instrument for laying out allotments, for you can lay them out to an inch.

52. Have you had much experience of the license system? No, I have not. I have seen a good deal of it.

53. What is your general opinion of the license system as now carried on? My opinion is that it can never work well. One man is placed in a very difficult district, a mountainous scrubby place, where he cannot earn enough to keep his men and himself, and another is in a fine country that he can get over his work very rapidly.

54. Do you know of one officer having made something like £3,000 in a year? Yes; I knew that gentleman when I was up the country; I was there at the time, and heard he had made that sum of money. The fees ought to be regulated according to the kind of country a man had to travel over, because one man may get a fine open country, while another may have a difficult country, where he can earn nothing. I have taken contracts myself for surveying, sometimes I have made a very good thing of it, at others I have lost money. The surveyor to whom I have just referred was a licensed surveyor, and he had three surveyors to work for him.

55. You would, I presume, recommend that if the license system be continued it should be under proper supervision? Decidedly; there is now no supervision at all; every one does what he likes. If a man is dishonest, he can say the work is done, and furnish a description of land he has never seen.

56. Are you aware that all practical men who have been examined on this subject, not only by this Committee but before the Board, object to the license system, and that all the office men recommend it? I am not aware of the fact, but office men may know a great deal about it; they can talk the thing over, though they have never had any practical experience of surveying. Surveying is a very easy thing to do, and that is the reason there are so many mistakes; a man who has been working all his life is more cautious than a young man who has not been three times in the field. A young fellow says, "I am surveyor; I can do this or that," which an old surveyor accustomed to the business would not venture to do.

57. What, from your experience, do you think would be the best system for the general survey of the country? My decided opinion is, that the present system of appointing district

- trict surveyors is a very good one, because he need not go over the work, but may check it by means of two or three diagonals; he can plot his lines, and see whether they fit on it or not; that is the only system which ever will be carried out in this country with success. C. E. Langley,
Esq., C.E.
11 Aug., 1858.
58. Suppose the contract system were adopted, with a supervision of that kind, do you think it would be done cheaper and better? It would be done better, for nobody would undertake to do the work but a surveyor, when he knew there would be a check, and that he would have to do the work over again if it were incorrect.
59. Do you not consider, that in order to be able to supervise work in that way the officer should have had considerable experience in the Colony? No doubt he should be a practical field surveyor.
60. Have you seen the list of those who have been made licensed surveyors lately? Yes.
61. Do you think sufficient care has been taken in making these appointments? It is a very difficult thing for me to say; but I think there are plenty of persons to be found who have the requisite experience, and I think it very wrong to send an inexperienced boy into the bush who has never been in the bush before; he may be very clever, but I think it is running a great risk.
62. You do not think young men who have been employed six or seven years in drafting, who have been in fact educated in the Survey Office without having been in the field, are capable of carrying out the duties of surveyors? I would not say that, but I would not trust them myself. Government may do so, but I would not, as I should be responsible for them if I did.
63. Are you aware that there never has been any responsibility? Yes, and that is the reason so many blunders have been made; it will take at least five and twenty or thirty years to set this Colony straight as respects the survey; it will have to be done over again, every bit of it, and before long Government will have to issue new grants for many that have been issued. There is one place I would not go to for ten guineas a-day, near Pennant Hills. There are few starting points there, and there are slips of land three chains wide between some of the grants. In the Illawarra district there is a most extraordinary variation of the compass from local attraction; I found in following one line that it was 5° 11' out. I did not know that there was any attraction until, when I was about two or three miles away, I found that I was leaving the property altogether. I took back sights, and found there was a variation both ways.
64. *By Mr. Aldcorn:* What was the nature of the country there? A red kind of whinstone—volcanic.
65. Do you think the contract system, with proper supervision, the best and cheapest for the Government to employ where a great deal of land is to be surveyed? Yes, I do, decidedly; because I have tried it myself in America. We were obliged to furnish our field-books every Saturday night, and leave them until Tuesday.
66. What is the system generally adopted in America? The contract system. I served my time to the States Government as engineer and surveyor.
67. Are meridian lines generally laid down in the American States? The lines are run between the States, which are considered as stationary lines, and everything is worked from them.
68. *By the Chairman:* They take the trouble of putting down landmarks in large surveys, and these are all considered as starting points? Yes, and no one would dream of disturbing them. If it is a square allotment, the pillar is square; if not square, the stone is cut to point in the right direction.
69. Have you ever seen work reduced and put into a general map by the camera lucida? No. If it could be done to a scale I have no doubt it would be a beautiful process; but I think the difficulty would be in the perspective, for one part would be on a different scale to another.
70. Have you any further suggestions to make to the Committee? There is one thing I would mention with respect to the roads. There have been roads laid out in this Colony which all its wealth would not make. The plan adopted in Canada is to lay out the roads first, and then to lay out the land at the side of the roads.
71. Do you not think the district surveyor, who should be well acquainted with the topography of the country, should have something to do with the roads? Yes; he ought to direct the laying out of roads, and everything connected with them.

FRIDAY, 13 AUGUST, 1858.

Present:—

MR. WHITE, | MR. MORIARTY,
MR. FORSTER.

G. B. WHITE, ESQ., IN THE CHAIR.

Fredk. James Naylor, Esq., called in and examined:—

1. *By the Chairman:* You are senior clerk in the Crown Lands Management Branch of the Survey Department, are you not? Yes. F. J. Naylor,
Esq.
13 Aug., 1858.
2. You were formerly—for some years before the amalgamation of the departments—in the Crown Lands Department? Yes, since the year 1850—the first of January 1850.
3. Can you give us a general outline of the duties at the present time? Do you mean as to my own work, or as to the business of the department?
4. The business of the department? It is to control the work of the Crown Lands Commissioners in the various districts of the Colony.
5. Does the department itself not invest you with responsibility? Yes. We act upon the information of the Commissioners generally; they are the officers in the field who give the information.

- F. J. Naylor, Esq.
13 Aug., 1858.
6. Does the responsibility rest with the department, or with the officers in the field? With the head of the department in Sydney.
 7. How many clerks are there under your direction? I cannot say that there are any actually under my direction; they are now under the direction of the Chief Clerk of the Survey Office, Mr. Halloran; five is the number.
 8. There are five clerks connected with the Crown Lands Department? Yes.
 9. The two departments are entirely amalgamated now, are they not? Yes, I believe they are.
 10. Do you know whether the official correspondence generally has increased or diminished since the amalgamation of the departments? Increased, certainly.
 11. Has it increased during the last eighteen months or two years? Yes, I think so.
 12. Will you give us a sketch of the routine which the correspondence ordinarily follows on the subjects connected with the ordinary business of the Unsettled Districts? Taking one letter?
 13. Taking one letter as a specimen? Taking one letter which reaches the office from a Commissioner on the subject of a run, it comes first to the Chief Clerk, Mr. Halloran; it is opened by him and sent to the Record Clerk, Mr. Armitage, to be recorded; it then goes back to Mr. Halloran, if he wants to see it, and he sends it to the Chief Commissioner of Crown Lands; then it comes back to me most likely through Mr. Halloran again for a history of the case, which of course I have to give; then it goes back to the Chief Clerk again; if he agrees with my minute upon it he initials it and sends it back to me to get a letter written upon it, or to write it myself.
 14. Is that an illustration of the general system? It is an illustration of the general system in reference to letters.
 15. Are your minutes confined to histories of cases, or do you enter upon the subjects? I enter upon them too, of course, if I am asked; but sometimes I am only asked to send up the former papers in the matter. Sometimes I am asked to write a *precis* of the case.
 16. You do not as a general rule give opinions upon questions of law? No; only when applied to. That happens, though, very frequently.
 17. You very frequently are applied to? Very frequently, indeed.
 18. As to the bearing of the law? As to the bearing of the Crown Lands Regulations.
 19. And in those cases are sometimes involved the rights of individuals? To a very great extent.
 20. As a general rule, whose minutes are embodied in the letters which are sent from the office to the Government or to private individuals? Well, I should think the larger quantity of them now are minutes of Mr. Halloran. A very great number of the cases are very simple, and do not require very elaborate minutes.
 21. Do differences of opinion frequently occur between yourself and Mr. Halloran? Sometimes we differ in opinion; but I generally see him and talk to him about it, and say where I think he is wrong.
 22. Of course in such cases your view will be overruled? Not always.
 23. Can you tell us what description of cases are usually forwarded to the Government for decision—what kind of cases are usually disposed of in the office—is there any rule? There is no rule. It depends entirely upon the head of the department. Cases he thinks ought to be brought before the Minister for Lands and Public Works are those that touch upon the regulations and laws regarding Crown Lands; anything of that sort would go before him. Simple cases he always deals with himself. "Simple cases" I ought not to say perhaps, but cases which do not exactly go far into the Laws and Crown Lands Regulations. The question as to refunding rent, reversals of forfeitures of runs—questions of that sort are always brought before the Minister for Lands and Public Works from the office.
 24. And all questions involving points of law and regulation? All questions of that nature.
 25. In point of fact none but cases of minor importance are dealt with at once in the office? I would not say of minor importance only.
 26. Well, questions which do not go very far into the law? Yes, questions which do not require you to go far into the bearing of the regulations and the law.
 27. Can you say whether in these latter cases many find their way to the head office in the shape of appeals from the view of the department? I do not think there are many.
 28. Do a great number of cases which comprise the office's correspondence go to the head office, or are they dealt with at once? They are dealt with at once—the greater number.
 29. What is the routine followed in cases which have to be submitted to the Government for decision? A minute is written by the Chief Clerk, Mr. Halloran; he submits it for the approval, or otherwise, of the Chief Commissioner, and it comes to me to be embodied in a letter. That letter is sent to the Secretary for Lands and Public Works.
 30. And then a letter is written back? Then a letter, of course, is written back to the office, and upon that further action is taken.
 31. And in the event of the case not seeming to the Minister complete for decision it is referred back? Yes.
 32. And there is a letter answering that again? There is a letter answering that again. It might be that in the meantime reference is made to the Crown Lands Commissioner, or some officer of the department.
 33. Does it often happen that cases are referred back for explanations and reported on, and referred back again for explanations and then reported on? It sometimes happens.
 34. Are there not marked cases, in your knowledge, in which correspondence of that nature has been going on for a considerable time between the Minister for Lands and Works and the Surveyor General? The most marked case I remember is that case of Hardy's, in the Lachlan District, about runs on the Merool Creek. There was a very considerable correspondence between the Minister for Lands and Public Works and the Chief Commissioner of Crown

Crown Lands. I remember a case by-the-by a long time ago in the Moreton District, in F. J. Naylor, Esq. which there was a correspondence between Pearce and Reeves and the Colonial Secretary and the Chief Commissioner of Crown Lands about the "Crow's Nest" run.

35. You do not remember anything of recent occurrence? I do not remember anything that there has been any great correspondence about lately. 13 Aug., 1858.

36. Are cases of intrusion on squatting runs of common occurrence? Yes.

37. How are they dealt with? The persons who complain are now usually told that it is a matter between themselves and their neighbours, and that the Crown has no power to interfere.

38. I speak of intrusions by unauthorised persons? They have not been lately numerous.

39. Such cases for instance as were formerly dealt with by the licensee being authorised to file informations? I do not remember a case of that kind lately; the only case I remember (and it is one I have mentioned) was that in which Messrs. Wise and Marsh obtained a run on the Merool Creek, which Hardy had occupied. The only way the Crown was able to act then was by an action in the Supreme Court. The action was tried at Goulburn.

40. You know it was the practice formerly when a person took an authorised possession the Crown authorised him to check intruders—that has not been the practice during the last two years? The Crown now say that they have no power to do it since the inauguration of the New Constitution Act, or rather since the repeal of the Waste Lands Act.

41. That has been a matter determined by law since that very time? I believe so. There was a question raised whether there was not some old Act which would authorise the Crown still to exercise the same power, which you will perhaps remember—some Act of King William IV.

42. I remember it was decided that the Crown had no authority to deal with intrusions. Now, can you state of your own knowledge whether any case has been submitted to the Government? There have been cases, but I cannot now remember the names of the parties; I have no doubt I should be able to hunt them up.

43. Can you state whether this is the fact:—whether, after the Surveyor General having applied to the Government for an authority for the summary removal of an intruder, and that authority being refused on the ground of there being no law to authorise it—within a short time subsequently a similar course was taken with regard to another case? No, I do not remember it.

44. Are there any instances of disputed boundary of any importance? Yes.

45. Are there many? Several. As an illustration, I can mention one. In the district of Wellington, at a place called Cumbooglecumbang, Mr. Brewster is the licensee of the run now; his neighbour claims a great deal of land which he considers to be a portion of his run.

46. Is there any rule or arbitration for the settlement of such disputes? The Commissioners have instructions how to act in such cases.

47. Are those instructions ever acted upon? Yes; where we have Commissioners and where they can make the persons who dispute meet. The difficulty is to make them meet.

48. They have instructions, but the difficulty is to enforce these instructions? Yes, the difficulty is in enforcing them.

49. Is any attempt being made in the case you speak of to enforce these instructions? Yes. The Commissioner was instructed some months ago to act under orders, or at least under a circular as to the settlement of these cases, and he appointed a time to meet the parties who disputed. At the appointed time they did not meet. Then in the ordinary way he would have had an arbitrary power to have the boundaries fixed within three months; but nothing was done.

50. But if a party does not choose to abide by his boundary? He has power to fix the boundary if after giving notice the parties do not meet.

51. But suppose the parties do not abide by it? I presume the Crown would abide by the Commissioner's decision. However, in the case I mentioned the Commissioner was removed from the district.

52. Can you supply the Committee with a memorandum, appended to your evidence, of the number of runs assessed and remaining to be assessed in each district at the present time? Yes. (Vide Appendix A.)*

53. In those districts from which the Commissioners have been removed have any instructions been issued for the assessment of runs remaining unassessed? Full instructions have been sent to deal with those cases and all other cases, to three, out of, I think, five of the surveyors who have been appointed to act as Commissioners, but I do not quite see how they are to attend to it.

54. From your knowledge of the labor connected with the determination of boundaries and the assessment of the capability of runs, as you have gathered it from the office correspondence, do you not think where such a duty exists it will be necessary to employ the whole time of the officer? Decidedly, for a time.

55. Supposing it to be conscientiously performed? Yes; I always suppose them to perform their duties conscientiously.

56. And you think that those duties in districts from which Commissioners have been removed will employ the whole time of the officers? Yes, for some time to come. They have so far to go, so much ground to get over, and they have to waste so much time in appointing meetings—in getting people to meet who are interested in the matter.

57. Connected with the gold fields beyond the boundaries, and the control of the Native Police being removed?

58. Is that business transacted by the Lands and Works Department? The Native Police by the Inspector General of Police: the Gold Department by the Minister for Lands and Public Works.

* Witness failed to supply this Appendix. (Vide Minutes of Proceedings on 1st October, 1858.)

- F. J. Naylor, Esq.
13 Aug., 1858.
59. What course is followed in the tenders for new runs now? The tenders are opened on the first Monday in every month by the Land Board. The Board meets to open them. The tenders which they think are objectionable they reject. Those which they consider to be in the right form are entered in the Record Book, and abstracts of them sent to the Commissioners of Crown Lands for reports. The Commissioners make these reports for the information of the Land Board. The Land Board, acting upon these reports, usually either recommend them for acceptance or rejection. The final disposition of them is with the Secretary for Lands and Public Works and the Governor General.
60. The report in every case is made by the Land Board? In every case. Reports on the tenders are written by me for the information of the Land Board.
61. How do you mean for the information of the Land Board—do you mean reports which the Land Board sign afterwards? Which they sign or alter. I endorse upon a tender, according to the report of the Commissioner, what is thought to be the reason either for rejection or acceptance. This is brought at the monthly meeting before the Land Board, and upon this they act.
62. Then you draw up the reports of the Board before the meeting? I draw up the report for the Board to look into before the meeting of the Board.
63. In what form are these reports drawn? In the shape of a minute for the Land Board to decide—in the way it has always been done.
64. And these minutes are prepared by yourself, not under direction? By myself. That business has usually been under my charge.
65. And as a general rule are your reports questioned? No, I think not.
66. In point of fact, that business is conducted by you; the reports are drawn up by you before the Board meets, and your reports are rarely questioned? No, not in one case out of twenty.
67. Are tenders numerous now? Very numerous.
68. They are increasing? Increasing, decidedly. There were 124 on the first Monday of this month.
69. There has been, I think, no new country opened lately, has there? No; but there has been a large number of applications for land in new countries. However, those of course have been rejected at once.
70. Applications for land in new countries beyond any Commissioner's district? Yes; a great many tenders are sent in for land on the Burdekin River.
71. Can you give us an estimate of the number of tenders for land in these new districts? Of those that are under reference and undisposed of—in every one of the districts they are very numerous. In one district alone—the Leichhardt—there are four hundred.
72. Only four hundred? The last return showed three hundred and ninety-six. That is only in the Leichhardt District.
73. Have any instructions been recently given to get rid of the tenders called speculative tenders? There was a letter written about July, 1855, giving full and clear instructions to the Commissioners upon the subject.
74. And has the subject been taken up since? Oh! yes; the Commissioners have been told more than once to expedite these matters—to report upon the tenders as fast as they can.
75. The instructions you speak of I suppose were written upon the memorandum you showed me the other day? Yes.
76. Have these instructions been acted upon to a very great extent as regards speculative tenders? No, because it has been found out of the question—impossible—to do it.
77. Why? As the Land Board and the Government have insisted upon every tender being dealt with upon its own merits.
78. In what respect does that involve the impossibility of carrying out the instructions? If a person has applied for land—very often though he may not have ever been out and seen the land, although he may have no intention in the world of occupying it—if he shews clearly what land he means, and somebody else applies for the same land at the same moment, who has been there and seen it, and the man who has not been offers one halfpenny over the other, he must get it, although it is an entirely speculative tender.
79. Do you think it possible for a person who has never seen the country, and never been on it, but who has had it described to him only by some person who has been there, or who may tender from a map, we will say, can so describe the country as to leave no doubt whatever of its identity? Sometimes they get information from persons who have been there. Sometimes they can go by the maps. They may be wrong or they may be right, of course, but where it happens to be right it makes it then so hard to deal with the case.
80. But do you not think that their happening to be right is an infrequent occurrence? Yes; I think they would be much more wrong than right.
81. Can you supply a copy of the minute in question? Yes. (*Vide Appendix A.*)
82. It was mentioned to me the other day that there were two or three cases of very large moment in the Northern Districts undisposed of now, one case in particular? Do you allude to Palm Tree Creek?
83. No, a matter upon which there has been frequent reference by Captain O'Connell to Mr. Halloran? I do not remember it at this minute.
84. The case of Palm Tree Creek is still undisposed of? It is still undisposed of. The Commissioners and the Land Board are not able to agree as to the true Palm Tree Creek, or rather, the real Palm Tree Creek.
85. Do you remember how long that case has been pending? I think since 1855.
86. Do you remember looking into that case at all in 1856? Yes.
87. Do you remember a memorandum of mine in 1856 or the beginning of 1857? Distinctly.
88. Do you not think that if that had been acted upon the case would have been disposed of? I think if the instructions issued then to the Commissioner (which were advised in the minute) had been made definite, the case must have been disposed of.

89. It would have been brought to issue, at any rate? It would have been brought to issue, F. J. Naylor, Esq., certainly.
90. There was a practice in existence some years ago—I do not know whether it still exists—by which parties mortgaging or wishing to mortgage their ruus to Sydney merchants could, by leaving an incomplete transfer in the Crown Lands Office, and having it recorded, have it mortgaged in point of fact—is that still in existence? I do not know of any such practice myself officially. Transfers have been left in an incomplete state for a year or two years. 13 Aug., 1858.
91. To a large extent? Yes; privately, I do know such a thing has existed.
92. When you say “privately” you mean that the thing has come to your knowledge in the office, although not in an official shape? Yes. Persons who have brought in their applications for transfers have asked us not to have them made out, because it was done by way of mortgage, and they have failed to go through some form which was necessary to make the document complete.
93. Which form could be supplied at any moment? Yes, by either party.
94. Do you not know that that practice is a great convenience? It must have been a great convenience.
95. Have you heard any complaints of a number of cases of that kind having been taken up by the office, and dealt with, without the parties being consulted? It was determined, after consideration, to push to completion all incomplete transfers; but I have heard of no official complaint.
96. Then the practice of allowing transfers to remain incomplete is not sanctioned by any office rule? No; it is rather discouraged.
97. Are there many outstanding leases under the Orders in Council brought into the Settled Districts? Yes.
98. Is the pre-emptive right still attached to these leases? Yes; the pre-emptive right of purchase over improvements and sections contiguous to the improved sections.
99. Is it not a regulation that the pre-emptive right should cease at a certain time? Those were for lands held for other than pastoral purposes. I am alluding now chiefly to lands brought within the Settled Districts, such as the County of Stanley.
100. Do you know whether the claims of Sharpe, of Grafton, are outstanding still—they have led to great discussion? Yes, the claim of Sharpe, for lands at Grafton improved by him, is still outstanding.
101. Do you know the date of his application for those lands? It is far back. The first application was made some four or five years back. The greater portion of his applications have been settled, and he is in possession of the land applied for. However, Sharpe’s was a case entirely peculiar: a case of that sort might not happen again.
102. Do you not think, from your knowledge of the office business, that it would be very much simplified if that branch with which you are connected were placed under the immediate direction of the Under-Secretary—if it were attached to the Ministerial office, in fact? I have always thought, and do still think, that the Crown Lands Office should be an office by itself.
103. Do you not think it would be an immense saving of time and labor if your branch were detached from the Survey, and attached to the Ministerial department? I think it would be a great saving, and a better arrangement.
104. The nature of the business is such that no inconvenience would arise from its being removed from the Survey branch? I think so, decidedly; holding still to my own idea, which I have expressed very frequently, as to the Crown Lands Office being an office by itself.
105. Have you seen any marked cases of reports upon important general subjects addressed to the Surveyor General, accepted and adopted by the Surveyor General, and addressed by him to the Government, without any acknowledgment of their source, or without the original document being forwarded? I do not quite understand your question. If you allude to any one case I shall be glad to —
106. Can you name a case in which such a thing has occurred as a report from a subordinate officer upon a general subject—making suggestions upon a general subject—being transferred *literatim*? Not *literatim*.
107. *Verbatim* or abridged? I remember one case where a report was made by an officer, and had been used, and where the letter itself had not been sent off, and the name of the subordinate officer was not used.
108. And the suggestions were adopted? The suggestions were adopted.
109. Can you describe the correspondence in that case. It has been asked for, but not furnished yet. Can you say the subject of it? Can you mention any case?
110. Take the case of dealing with improvements? There was a letter written, or a minute written, by a Commissioner of Crown Lands in the New England District, saying that certain things ought, in his opinion, to be done, and a letter recommending these same opinions to be adopted was written to the Secretary for Lands and Public Works.
111. And the original letter was not forwarded? The original letter was not forwarded, as far as I can remember; in fact, I have no doubt it was not forwarded.
112. Nor the author of the suggestions alluded to in any shape? As far as I remember he was not.
113. Do you know any other occasion in which that has occurred? I do not remember any other at this moment; perhaps my memory might be refreshed.
114. *By Mr. Forster*: The survey and management and sale of Crown Lands are all under one department, are they not? The survey and the management. The sale, I would not answer about that—it is a thing I hardly know anything of.
115. But it is not conducted by any other department? I am not quite sure of that.
116. Well, at all events, the administration of the Crown Lands is all in one department? Yes, the general administration.

- F. J. Naylor, Esq., 117. Can you tell the Committee how many supervisors of the department there are—meaning by this, officers employed not to do work, but to superintend the work of others? In what branch?
- 13 Aug., 1858. 118. In the whole, how many heads of the department have you got that are not actually working? They all work; but as to the number—in these *heads* do you count the Chief Commissioner of Crown Lands?
119. I include everything—including also the political head of the department, from him downwards? It would take time to make out the return.
120. Cannot you say in round numbers how many superintendents the department has? Going down from the Secretary?
121. Going down from the Secretary—who have not to work? I think that all clerks have to do work; I know I have.
122. I don't allude to clerks, but to superintendents, not only of the department, but of every branch? It would be rather a nice thing to calculate. There is the Minister for Lands and Public Works.
123. That is one? The Under Secretary of Lands and Public Works under him; the Chief Clerk under him; then there is the Surveyor General; then the Deputy Surveyor General; then there is the Chief Clerk, Mr. Halloran; and then there is the Chief Draftsman, Mr. McLean.
124. That makes seven. He is the superintendent of draftsmen? Yes.
125. Is not the Chief Commissioner one? He is the same officer as the Surveyor General.
126. Then you make out seven heads of departments in round numbers? Seven heads in the way you allude to.
127. *By Mr. Moriarty*: Is there not a Land Board? There is a Land Board.
128. *By Mr. Foster*: Now, from what you know, do you think it requires so many superintendents? I think not, decidedly.
129. Do you think the work could be more effectively done if there were fewer superintendents and more working men? I think if the whole management of the Crown Lands, whether Survey or otherwise, and the Department of Lands and Works, were joined, it would save a great deal of labor, and do away with a great many superintendents; and there you might make a saving.
130. Do you not consider that the expense of the department proceeds a good deal from the salaries paid to these superintendents I have spoken of? I think that if some officers who hold these offices were paid less, and the juniors, on whom is imposed the work, were paid more, it would be much more satisfactory.
131. What do you mean by satisfactory—of course it would be satisfactory to the juniors, but do you think the public would benefit by it? I think there is no need for so many heads.
132. Can you give any idea of how many heads you think would be enough? Do you mean for one office, or the whole management?
133. I mean altogether. You have told the Committee that there were seven heads (or what we are terming general superintendents)—how many of these do you think you could dispense with? If the offices were joined, you could dispense with about three or four of them.
134. Can you say on what principle the salaries are paid to these gentlemen—is it for the actual work they do, or the responsibility, or to keep up a dignity? It is not to keep up the dignity.
135. You think that is kept up sufficiently without salaries? It is a thing I have not thought of. I think more of working between nine o'clock and four o'clock.
136. Can you say on what principle these salaries are paid? I think it *has* gone a great deal more by length of service than by actual efficiency.
137. Then you think by the condensation of the department, or of the branches of the department, the whole might be rendered more efficient? I think so, decidedly.
138. Do you think that any of the working men are overpaid—I mean the working clerks? I am sure they are not.
139. Do you think they get enough? There are some instances where they do not get enough. I can mention one instance in the office in which I am: a clerk who has been there ever since the year 1852, who works hard, and has worked harder perhaps than any other clerk there, and who has been trying for extra salary for two or three years past, and has never had his claim recognized in any way. I think his case is one in which the claim ought to be recognized; I allude to a gentleman of the name of Marsh.
140. *By Mr. Moriarty*: Is it not the peculiar characteristic of the branch of the service to which you have been attached that no promotion at all was permitted during a number of years? Promotion was seldom.
141. Do you remember how many promotions occurred during the last eight years? I do not recollect the exact instances. I know as to my own case: I went into the office in 1850, and it was about 1855 before I got any promotion.
142. Was not your promotion the result of accident to you? It was the result of accident.
143. *By Mr. Foster*: Do you think any of these heads of the branches of the department whom I have called by the name of superintendents, in order to indicate them briefly—do you think any of them are overpaid? I am always glad to see all officers of the Crown highly paid, and I think that they ought to be.
144. But upon what principle is a man paid more—the Head Secretary for instance—than the working clerk under him? Because he has more upon his hands—at least it is thought so; and he has more work for the mind, and his responsibility is greater.
145. Do you really think his responsibility is greater? My own opinion is, that some of the lower clerks have as much responsibility as the higher clerks.
146. Do you think there is any sound reason why the Head Secretary should get more than the clerk immediately under him? Yes.

147. Will you state what you consider the reason? I think there ought always to be grades F. J. Naylor,
of pay and grades of office in the department. Esq.

148. But does not that involve the idea of superior dignity, which you do not think ought to enter into the consideration? Dignity I do not look at at all, I do not believe there is any idea of it. 13 Aug., 1858.

149. Then what is the meaning of this notion of grades—Is it requisite, in order to make the public service more efficient, that there should be those grades? If there were a regular system of grades, and as fast as one of the higher grades became vacant, or the officer left, the next highest (if he were able to do the work well) took his place, I think it would hold out great inducement to persons entering the Government service.

150. We will suppose now one of these offices—of Head Secretary—vacant, do you think there would be any difficulty in filling the place at the same salary? At the same salary I think you might have any office under the Crown sold for half the pay which is offered if you offered them in the reverse way that you lease runs, and let the lowest bidder have them.

151. But that might bring them into hands that are not efficient. I am speaking of persons capable of performing the duty—do you think if a vacancy occurred in any of these offices that there would be any difficulty in filling them for the same salary, or a lower one? No.

152. Do you not think that the applications would be very numerous? I am sure they would.

153. Do you not think the offices might be filled at considerably less salary by persons quite capable of doing the duty? Not a very great deal less.

154. But still at something less? Yes; you would always find persons who are anxious to enter into the service of the Crown, and £50 or so would not be to them a very great object.

155. But then, would efficient men be got at a lower salary, men who could do the duty and undertake the responsibility? If you took the pay at a certain standard,—say you have a man doing a certain duty, and receiving £650 a-year, and you say if he leaves can you find other people to do his duty for £600 equally well, I say yes.

156. But you could not apply this principle to the lower offices? No, I do not think any man would then give a halfpenny to go into them if the salary was decreased.

157. If the lower offices were vacant you would not find people to take them? No.

158. Or likely to take them? No. I think there is more inducement in every way than to accept offices of the lower grades.

159. But what is the lowest salary at which you think an unmarried man could live on in Sydney, in that condition to which he is supposed to belong, or in that style which he is supposed to keep up? I do not think he can live at all under £300 a-year.

160. Well, supposing that the average condition of clerks is that of married men—and we must allow an average family—what do you think, then, taking that element also into consideration, is the salary which a man could afford to live on—making an average allowance for children? A man with a wife and three or four children could not live upon less than £400 or £500 a-year; but if clerks will have wives, of course they do it at their own risk.

161. But don't you think the public service ought to make provision for the average condition of human life? I think the public service ought to get the best officers they are able to obtain, and to pay them at an average, fair rate, without any idea of their condition as married men or single men.

162. But supposing that it was found cheaper to pay unmarried men altogether, do you not think the public service would in that case be deprived of many useful married men? Decidedly.

163. Do you think it would benefit by excluding married men, as a rule? I would not exclude anybody.

164. But if it is necessary to admit married as well as unmarried, is it not necessary then to take, as an element in considering the salaries, the average condition in which gentlemen of that rank or condition would live? In considering the salary, I should consider the office first. I should say, here is a certain duty to be done, a certain office to be filled, it is worth so much; and I should appoint the best officer I could get to do the work, let him be married or single.

165. But then if the salaries were cut down to that basis at which married men could not live, it is evident that none but unmarried men would accept these offices? I certainly say again, I do not think the Crown has anything to do with man and wife.

166. I admit that in individual cases; but as a general rule, is it not necessary to make provision for what is usual? As a general rule in the service, I should provide for the office and not for the man.

167. Well, if you followed that rule rigidly out, would it not tend to the exclusion of married men? No, because there are high salaries as well as small.

168. In that case, you think no special provision ought to be made for married men—that the probability of a number of men being married should be taken into consideration in fixing the salaries—don't you think that is reasonable? I do not think so.

169. Would not the carrying out of your rule rigidly exclude married men, at all events from a certain rank? It seems not, because there are men now with wives and families living upon about £250 a-year.

170. Well, if they do live on that it is rather against what you are saying—I thought you said they could not live on less than £500 a-year? As they ought to live. Some men can live upon anything almost.

171. These men who live upon £240 a-year, do you think their life is a miserable one? Yes.

172. Both for themselves and their families? Yes. There was one officer, some two or three months since, mad enough to get married on £150 a-year; but because he chose to do that I see no reason why he should receive the pay of £500 a-year.

173. Then you don't think that much good could be effected by cutting off any salaries, the upper

F. J. Naylor, Esq.,
18 Aug., 1858.

upper or the lower? I have an opinion of my own upon the higher salaries, certainly; and by the higher ones I mean those that I consider to be really high.

174. *By Mr. Moriarty*: These you speak of are engaged in matters—or the majority of them—of which you have no official experience? No, no official experience; I speak of them merely as they are.

175. *By the Chairman*: It is your opinion, I think, that the officer who has charge of the public lands of the Colony should be a Minister of the Crown? I think so; but that is an opinion I offer with very great deference.

176. Is it your opinion that the head of the service should divide his duties in such a way that there should be three or four officers having charge of the different branches of the service, instead of being obliged to have every thing through the Chief Clerk of the department, as you now have, as well as through the head of the department? I think that every office ought to be made into two or three branches under the head officer—which, of course, makes no higher pay—and that the head of every branch should be responsible for his own portion.

177. When you get your evidence to correct, if there is any thing you think of that will be useful to the Committee will you be good enough to add it? I should have been glad to have entered at length into what I, with great deference, consider the most economical and satisfactory way of controlling the management of Crown Lands—for it is to this alone that I have directed my attention; but as I know, by report, that the Committee have examined my superiors in office, and others much more capable of forming a just and proper opinion on the matter than I, I refrain. I would at the same time respectfully express my anxiety to be useful in any way in assisting the Committee as far as my ability allows me.

APPENDIX A.

*Crown Lands Office,
Sydney, 13 July, 1855.*

Sir,

The rapidity with which tenders for new runs have accumulated in the new districts recently opened to the northward, as compared with the extension of occupation into those districts, renders it necessary that your attention should be directed at once to measures having a tendency to prevent abuses of the present system of location, which abuses, if not guarded against, are likely to produce difficulties hereafter, and dissatisfaction to those who are unable to obtain country for their stock at present.

2. No doubt the disproportionately small rent charge to the value of the country in the present circumstances of the Colony has led to a great deal of country being taken up not really required by the applicants; and again, the adjacent districts not being as yet completely overstocked, the stockowners are not driven to take up new runs, at the risk of the uncertainty of tenure which must exist, until all the tenders are disposed of. But it is greatly feared that very many tenders have been sent in which, on examination, will be found to be quite speculative, and to get rid of these should be the first step towards the settlement of the district.

3. It will be advisable to reject at once all tenders not clearly conformable to the Regulations, both as regards size and shape of the runs applied for, distinctness of description, &c.; and as all tenders clashing with one another will also be rejected, and the runs offered to competition as adjusted, those who really require the country, and who being directly interested would naturally be anxious to comply with the Regulations, will be enabled to secure the runs explored by them, and taken up by their stock; while, on the other hand, those applicants who have sent in tenders upon imperfect information, and who are invariably found to be the most rapacious in their attempts to monopolize country, will be passed by.

4. I have, therefore, to direct you to lose no time in reporting upon tenders for new runs which have severally been sent to you, bearing in mind the following general rules:—

1. All tenders which are found upon examination of the country to be in all respects unobjectionable, should at once be recommended for acceptance; every day's delay involves a loss to the revenue, and prolongs the uncertainty, which checks occupation. When country is once under a rent charge, its occupation will very soon follow. It would, perhaps, be well that those runs which have been stocked at the occupant's risk should first be dealt with.
2. All tenders not conformable to the Regulations in regard to distinctness of description, &c., should at once be recommended on those grounds for rejection.
3. All the tenders which clash should be adjusted, and the descriptions of the adjusted runs submitted for advertisement.
4. Upon the activity displayed by the Commissioner on the first settlement of the district, depends whether it is to become, when more thickly stocked, a theatre of litigation and embarrassment, or of regular and unceasing productiveness, and at no time are evils so great likely to creep in under a loose or tardy administration of the system.

I have, &c.,
GEO. BARNEY,
Chief Commissioner of Crown Lands.

The Commissioner of Crown Lands.

WEDNESDAY,

WEDNESDAY, 18 AUGUST, 1858.

Present:—

MR. ADLORN,
MR. FORSTER,MR. MORIARTY,
MR. WHITE,

G. B. WHITE, Esq., IN THE CHAIR.

Frederick William Birmingham, Esq., called in and examined:—

1. *By the Chairman:* You are employed in the Surveyor General's Department? I am.
2. How long have you been employed there? About three years and a half—since the 20th April, 1855.
3. In what capacity have you been employed? In the office and in the field; I have been employed as a draftsman, and afterwards as a licensed surveyor.
4. You were at first a draftsman in the establishment? Yes. I entered as a draftsman, on trial, with a promise of a district if I could “come into their ways.”
5. Had you been long in the Colony previous to entering the department? From the 27th February to the 20th April, 1855, but previously about three years in Victoria, part of this time in business for myself.
6. You have then had some Colonial experience? Yes, altogether now about six years; from my landing in Victoria in 1852, to the present time.
7. Have you been employed about the towns principally within the Settled Districts? Within the Settled Districts, in fact in the County of Cumberland.
8. You have not been employed in the service beyond the County of Cumberland? No.
9. Were you in the department when the inquiry of the Commissioners took place, the Report of which was printed 23rd November, 1855? I was.
10. Have you read that Report? I read, not the evidence, only the Report as it appeared in the *Empire* newspaper or the *Herald*. I have served under one of the officers who was a member of that Board, Captain Hawkins, in the survey of Liverpool and other places.
11. He is a Captain of the Royal Engineers? Yes.
12. For what purpose did he make the survey of Liverpool—for a civil or military purpose? A general use, but the Borough Engineer of Liverpool, a Mr. Newland, condemned it, and adopted a scale of twenty feet to an inch in his survey of Liverpool for Corporation purposes. The Ordnance survey of the town was on a scale of five feet to a mile. I spent about eight years of my life on the survey of England and Ireland, and I do not see that much good was derived from that survey. It certainly was a very minute survey, taking it as a large mass. I refer to the trigonometrical survey of Great Britain and Ireland; but engineers have thrown it over; they have found it incorrect in many places, and it has been but little used.
13. Can you state any particular instance of incorrectness having been discovered in the trigonometrical survey of the Ordnance? The principal error caused a revision to be made of several of the counties in the North of Ireland. There have been several errors discovered in it. I was draftsman, surveyor, and examiner, and was engaged in gathering statistics on the survey department, and I know—from my own observations, under seven different officers of engineers, namely, Lieutenant Durnford, in Ireland; Captain Bailey, in York; Lieutenant Cameron, on the contour survey of Preston; Captain Tucker, at Wakefield, and again at York; Captain Williams, at York; Captain Hawkins, at Liverpool; Lieutenant Barlow, at Liverpool and Doncaster—that errors did remain after the maps were published.
14. You were employed as surveyor on the trigonometrical survey of Ireland—have you been also employed as a civil engineer? Yes, I have been a civil engineer.
15. What is the general impression of civil engineers with regard to these surveys, are they often taken as data upon which large works are proceeded with? No, they are not. A rough sketch of a country is as good for a person who has not been in the country before. For instance, I know a very incorrect map of the County of Cumberland, Wells' compilation, that is very incorrect, but still it is useful to me, for the Survey Department does not furnish me with any information.
16. As to the features of the country is it useful? It is useful to a certain extent as a sort of guide, but it is not sufficiently accurate to justify an engineer in making any calculations from it.
17. The trigonometrical survey of Great Britain and Ireland extended over a very long period? A very long period. I entered that survey in the West of Ireland in 1838 as a “civil assistant.”
18. I think it was commenced in 1784? A very long time ago; I forget the date.
19. The department was carried on rather expensively? No, it was expensive and inexpensive—two ways—the officers were very well paid and very well treated through the country; the civilians were very poorly paid, as one of the officers remarked—“The more you press the nettle the less it stings you.” It was the practice of the military to ride over the civil engineers and to take all the credit to themselves for work performed.
20. Then you do not approve of the supervision of military surveyors in carrying out civil surveys? No. With regard to military surveyors there is only this to be said, that they have imitated the French, and made a trigonometrical survey of England and Ireland; but nearly all the works they have taken in hand have been erroneous. In the survey of the town and castle of Windsor, (by an engineer officer, an error of five feet in the levels was discovered,) undertaken for drainage purposes, the maps of the town and castle were on a scale of five feet to the mile. I worked on some of these maps in York, under the command of Captain Tucker, R. E.
21. They are, perhaps, more fit for war than for civil purposes? Decidedly; and if they would pay more attention to that, perhaps they would excel, or come up to, the French engineers.

F. W.
Birmingham,
Esq.
18 Aug., 1868.

F. W.
Birmingham,
Esq.
18 Aug., 1858.

22. You have had some experience of the license system of survey in this Colony—the Commissioners in their Report recommend that it should be abolished? Because, as I have been informed, Sir William Denison wished to get rid of Sir Thomas Mitchell and his licensed surveyors, and to place Captain Hawkins as Surveyor General. I believe they had no just reason for abolishing the license system, if under proper supervision; as it appears to me the licensed surveyors do the work cheaper than salaried surveyors, and I can give some proofs of it.

23. Do you not think that a contract system would be better than a license system? To a certain extent a contract system would do in a new country, but there must be a responsible staff.

24. You would recommend that with the license system there should be a staff of salaried officers? I think on the whole there ought to be a salaried system, and when there was an overplus of work contracts might be given out, under proper supervision.

25. Do I understand you to recommend the contract system, under supervision? What I mean is this:—that in some places it will not pay a contract or license surveyor to do the work for the Government.

26. *By Mr. Aldcorn:* You mean that there ought to be a party who should be responsible to the Government, and who should supervise these contracts? Yes.

27. Do you not think an accurate survey of the country depends very much upon the experience of the party conducting it? Certainly. A man requires two kinds of experience in a country like this: He requires to be trained in the old country, and then to get two or three years colonial experience. Such a party could of course train the youth of the Colony.

28. You think, however clever a man may be coming from England, he requires colonial experience before he can undertake work in this country? I know that from my own experience; I also know that when I went to America I required some experience before I understood them, although they speak our language, and read our books, and study our works.

29. *By Mr. Aldcorn:* They have different methods from ours? Yes; a new country and an old country are very different in all respects.

30. *By the Chairman:* Who has the appointment of parties applying for licensed surveyorships? I believe the Surveyor General is the fountain head in the department, and he recommends them; but I do not know how they make them.

31. Were you examined by the Board? No, I was not; I do not think they thought it necessary, and, another thing, I do not think there was a Board fit to examine me at that time on sewerage, water works, railways, large surveys, and large scale plans, contour surveys, &c.

32. You are rather in favor of the license system—you prefer that to placing a man upon the staff of the establishment, and appointing him to a district? No. There should be two sorts of salaried surveyors,—one stationary (to be finally turned into “county surveyors”); the other sort movable, and sometimes placed in number, more or less, according to circumstances, under the first class—the stationary class—who should be composed of surveyors who had a camp life for some years; and, as the old ones died or disappeared, the young ones could from time to time be promoted, and the documents of a district might be safely entrusted to such a stationary surveyor, &c., with advantage to the particular district. To understand me, it is necessary that I should mention what I have seen, both in the office and out of doors in the County of Cumberland. I should say there are some parts of the country where the scale of prices would pay a man as a licensed surveyor, and would enable him to make a home in the country; but, in the County of Cumberland, a licensed surveyor cannot live upon the scale.

33. Has the scale been revised lately? The scale is anything they like. In some instances the licensed surveyor is allowed and paid at the rate of three guineas per diem for work that otherwise would bring him in perhaps only £1, according to the scale, for some two or three days labor. This is the sore point in licensed surveying in the County of Cumberland—the surveyor is left to the mercy of any one who may be in power in the office at Sydney.

34. The scale upon which the Commissioners appointed to inquire into the Surveyor General's Department reported is this (*handing the scale appended to the Report to the witness.*) Is that the scale under which you have been paid? Yes; this is it. The gold allowance was reduced from 25 per cent. to 18½ per cent., and has been taken off altogether lately.

35. This is the scale under which you are now working, but the gold allowance has been taken off? Yes, principally, but not in every case.

36. If you had plenty of work, this scale, I think, would pay? It would depend upon the sort of work. Take, for instance, the work I left yesterday—to mark out the boundary of the Parramatta Domain; no tracing was sent, and I lost a day and travelling expenses to Sydney from Parramatta, my head quarters; and so for every little paltry job of £1 or 30s. or so, (of course I must be in possession of whatever information the Surveyor General's Department has, in order to place the survey in its proper position,) and I must, therefore, come to Sydney to seek it.

37. Do they give you no fixed point to go from? No; and in a district like Parramatta, where a man receives but poor profit—in fact, now a days I am losing—it is absurd, having three, four, or five towns or townships in a district—Penrith, Liverpool, Campbelltown, Narellan, &c.—to suppose that a man will go to the expense of £8,000 or £9,000 to trace all the documents relating to towns in his district and the country around; therefore the licensed surveyor has to travel to Sydney on every occasion to get information.

38. I thought the department in every case sent a tracing? No; I offered the party who seems to be acting in that office—the Chief Draftsman—that I would willingly pay for copies of any documents I required, rather than be taken from my business to come to Sydney on every occasion. He said—“I see what you want, you want to shift the responsibility on to us.” I said, “I own that is what I want to do; what is the good of your
“department

"department if you will not be responsible for the documents, and will not send a proper copy when required?" or words to this effect. They would not do it, but I maintain I am right in thinking that the responsibility should dwell with the documents.

39. You could not vouch for the correctness of your starting point by any documents given by the department? No; in the Survey Department they make themselves responsible for nothing. I have to come to Sydney to pick out in the best way I can the information I want; all the responsibility lies upon the surveyor in the particular district in which he may be employed.

40. In the particular district in which you are employed as a surveyor do you find many disputes as to boundaries? Yes; the work that has been done there is very incorrect.

41. And if you get into difficulty with regard to that work, you have to grope your way out in the best way you can, and have no information from the department? Yes, you have to fight your way out; you can get no support from the Survey Department; you have an order to do so-and-so, but have no tracing to assist you; you then have to travel to Sydney, at your own expense, to get the necessary information. Here is a case in point, which shows the absurdity of the present arrangement. I have had two jobs to do at Liverpool, and my bill was allowed at two guineas a day in one case, but in the other it was reduced by two guineas. The items of the bill are as follow: 3a. 1r. 5½p in the town of Liverpool, for which I put down a charge of £6 4s. 8d.; one day to Sydney to get information, £. 2s; that I charge as a surveyor; railway fare, 4s. 2d. In fact I should tell you I intend to give notice of my intention to resign the licensed surveying.

42. But you are still in the service? Yes; but I am about to resign if no alteration is to be made in the present rates. Three fares to Liverpool, 9s.; one day's professional service in the field, £2 2s.; laborers, one at 6s. and one at 5s. Then I have put down ¼ of a day for drawing plan, writing boundaries, description, and letter to the Surveyor General. Altogether the bill came to £6 4s. 8d., and it was reduced to £4 4s.

43. Who has the power of examining your accounts? It is a peculiar department; if you want to arrive at anything, nobody knows anything, nobody does anything, but still it is done. I consider that the Chief Draftsman acts as Deputy Surveyor General, and it is probably this person who examines the surveyors' accounts. The present Deputy Surveyor General does nothing that I know of in this matter; and the Surveyor General does anything that is initiated by Mr. Halloran or by the Chief Draftsman; and the Chief Draftsman, to make himself appear very efficient, likes to take off a pound or two, I suppose, from a professional man, in order that he may get his own salary raised, or something of this sort.

44. Do you think a draftsman is a competent judge of the work of a surveyor in the field? I should say not.

45. A man who has never been in the field can have no knowledge of the difficulties the surveyor has to meet and overcome? No.

46. Do you think any obstacles are thrown in the way of surveyors by the clerking and drafting branches of the Surveyor General's Office? As far as the clerking part goes, I never bother my head much about that. As to Mr. Halloran, who has been, and is, at the head of that branch, he has always been very polite and very civil. The only thing I have to say about him is, that he has been tardy in giving me twenty-five or fifty per cent. on account of my work when I have wanted it. I have sometimes lost two or three days waiting for my money when it has been due; but, in justice to the department, I am compelled to inform you that this state of things has been gradually wearing off, and now (so far as I am concerned) two hours or so suffice to place me in possession of those advances I may ask for: this is a great boon, for which I feel thankful.

47. Do you think the general obstruction in the survey of the country is owing to the difficulties thrown in the way by these two branches of the service? That is not exactly where the obstruction lies: the two branches are there, to be worked for better for worse, by a Surveyor General and Deputy Surveyor Generalship. The colony requires first a sound active Surveyor General, who will not be kept stuck in a room for exhibition as a curiosity, like the Koh-i-noor at the Great Exhibition, or the Tiger at Brickfield Hill. He should be an active man, who would say to the professional men under him, when he met any of them, "Good morning, Mr. So-and-So. Well! what are you doing?" He should be a sort of man that the surveyors could look up to as if he were their father. He should be a sound, practical man, and not too proud.

48. You have never seen either the Surveyor General or the Deputy Surveyor General in the field supervising your work? I do not think they would like to attempt it. I do not think there is one in the office would like to undertake the responsibility of examining the various field operations of the surveyors; but this opinion of mine may be incorrect.

49. From want of capacity? It would be too much for me to say that Colonel Barney did not know how to survey, for I do not know much of Colonel Barney, excepting what I have seen of him during the last three years; but this I do say, that he is not fit to be Surveyor General, and that no Royal Engineer is. As to his Deputy Surveyor General, we know that is at present a blank; some one may be paid for it, but it is a blank.

50. Under proper supervision and arrangement you think the surveys of this Colony could be much more efficiently performed and at less expense to the public? I am certain of it, by putting an active Surveyor General and a proper Deputy Surveyor General into the office.

51. Do you not think there are too many masters about head-quarters? There is too much indifference at head-quarters as to the wants and requirements of the surveyors, and this may create ignorance. I believe that almost every room in the office has a master of some sort; and these masters, so long as Surveyor Generalship and Deputyship interfere but little with their notions, will cause discontent to a certain extent to take place in the office as well as in the field. Some quarrel, or, perhaps I better say, seem jealous and distrustful of each other betimes. This is more prevalent in the clerking, I believe, than in the drafting branch.

F. W.
Birmingham,
Esq.

F. W.
Birmingham;
Esq.
18 Aug., 1858.

branch of the office; but as quarrelling and jealousy of position is more confined to the office than the field men, I cannot say how many masters the office may contain—too much.

52. We are very desirous to get information as to the working of the department, and also as to any means by which the efficiency of the department might be increased. What is your idea with reference to the latter point? I will give my idea: The Surveyor General should be a well-educated and independent man, in this way—he should be just in all things, and should not in any way lend himself to injure any professional man in his department simply because some powerful man out of doors dislikes a reply to a political question, or any thing that way; he should be well-trained in the engineering profession, capable of maintaining a proper and just line of professional conduct. In the next place, I believe that in a new country it is necessary that there should be a very active Deputy Surveyor General, a man who has travelled to gain experience, who understands something about engineering works, sanitary works, water works—in fact, everything connected with his profession, so that he could be able to examine anything that came before him in connection with towns or corporations. He should also know on what scale the maps were to be, in order to align streets of towns, take levels, and so on. Such a Surveyor General, and such a Deputy Surveyor General, if they were put into the department, would soon bring it into good working order. As to the office parties—I was in the office some five months and a half, and I can conscientiously say that, although I have been in several offices in the old country—in surveyors', engineers', and Royal Engineers' offices—as a body of men they work their hours faithfully.

53. Do they make work for themselves? Which way?

54. By circumlocution—by creating a great number of unnecessary official letters? There is a great deal of nonsense, form, and stuff attached to the department; but, as I said before, a good and active Surveyor General would alter all that, and would put the clerks and draftsmen in their proper positions.

55. There is a very considerable difference between military and civil engineering? Yes. The military engineers are proud; they seldom condescend to speak with their men, and other such persons, therefore they remain in ignorance of much practical knowledge. Civil engineers “fraternise,” and thereby increase their stock. This is the cause of difference between the military and civil engineers.

56. You have been employed in engineering in England? In Ireland, England, America, and these two Colonies, on surveys, on engineering works, &c.

57. By whom are the most important works in the civilised world carried out? By civil engineers, certainly.

58. Do you think the execution of any great public work in England would be given to the Royal Engineers? No; but in England the people are sometimes imposed upon by false representations. A little grant from an enormous revenue can be got, no doubt, for the purposes of surveying; in fact for anything. The people are overmatched betimes by those in power (as it appears to me). The engineer officers may be engaged on breakwaters or on works of defence at the present time, for all I know to the contrary.

59. By whom have all the railways, breakwaters, and harbours of refuge in England been constructed? By civilians. The fact of the matter is this—a Royal Engineer officer knows very little about civil engineering; he gets a smattering of engineering matters—principally with reference to military operations—at school, and then he is drafted off to the Survey Department, probably. That is all the experience he has, for he is too proud to be “Good fellow, well met,” with any person who could teach him any thing, and therefore he remains in ignorance of much useful matter.

60. Do you not think theoretical knowledge is necessary to the profession? In order to execute any thing you must first have the theory in your brain. Before you can work with your hands a certain amount of theoretical knowledge is necessary.

61. *By Mr. Aldcorn:* Do you not think academical training is necessary? It is useful, but I do not believe that it is all important. If one man had academical knowledge and another practical knowledge, I would give double as much to the practical as I would to the theoretical man. I knew a man in Ireland, a first rate mathematician, who was trying to square the circle, which I believe is a very hard thing to do, but he could not survey a triangle.

62. *By the Chairman:* A man may be able to cover this table with algebraic formula, and not be able to apply one of them? Yes, and not be able to tell you how many superficial inches are on the table.

63. *By Mr. Aldcorn:* What is your opinion of the different systems—the salary, the license, and the contract systems—which do you think would be the preferable one for this Colony—I am supposing that there should be a salaried officer to supervise the work of the surveyors in either case? I really think upon the whole, to do justice to all parties, the salaried system would be the best, for this reason, that in the County of Cumberland a man will not save £20 in the year, while in another district a man may save five, six, eight, ten, or eleven hundred a year.

64. Do you not think it possible that a scale might be applied so as to pay the different surveyors in proportion to the facility or difficulty of surveying the country? Yes, I think so—to add fifty per cent. in the County of Cumberland to that scale of John Thompson's as the survey charge for farms. In the country districts I think they might still continue to work on the scale, for in the country districts they have a fair field, and are not tied down by a thousand different portions, as a surveyor in the County of Cumberland is.

65. Do you not think, supposing the head of the department were such a man as you yourself describe, that the Surveyor General could affix a fair rate to every piece of work in the County of Cumberland? Certainly he could, if he had a practical man as his deputy.

66. Do you think if he were to do so, and then ask the surveyors “How much will you do this piece of work for?”—it would work well? I believe it would act well, but I believe the

the only thing in which you would save by having contract surveyors would be the travelling expenses. You will be at the cost of tracings, &c., to guide them, and also the expense of supervision.

F. W.
Birmingham,
Esq.

18 Aug., 1853.

67. Is it not a principle in human nature in all parts of the world to work harder for oneself than for any Government or master? Yes, I grant you that; but, as I said before, if you have got an active Deputy Surveyor General, he will know what amount of work each man should do per day.

68. You have been in America? Yes.

69. What is the system generally adopted in America? Contracts generally, in the Western States. They give good salaries in the Eastern States, and expect hard work, and they will not be satisfied without they get it.

70. Is not a great deal of the surveying for the Government done by contract? I believe so. I was engaged in engineering, &c., when I was in America.

71. You state that errors have been found in the trigonometrical surveys of Great Britain and Ireland, and I believe it is the fact, from the very severe criticism to which it has been submitted, that some errors have been discovered—would that survey in the construction of a railway, or in marking out a line of railway through the country, be at all looked to? No.

72. Would it be of any use? If there were no county maps published it would be useful as a guide; in fact the survey is between two extremes—of no use and every use. These surveys are a guide, but you cannot calculate from them. Where a large number of people are engaged on a vast survey, some will be naturally stupid; and no matter how many good ones you may have, the bad will damage all your reputation as a body. Several good engineers and many excellent surveyors commenced their career on the Ordnance surveys of Great Britain and Ireland. I will name one person, as being near—Mr. Darbyshire, Engineer-in-Chief in the Colony of Victoria; he served under Captain Charles Bailey, R.E., in Yorkshire, during my service under that officer. During the railway ferment in Great Britain, the Survey Department lost something like three hundred civilians, or “civil assistants,” who “bolted,” and were engaged by various engineers, &c., on engineering works; this I know well, for I left them on two different occasions in England. Studying this matter politically, it appears to me that the yearly grants in England for Ordnance surveying purposes are not altogether fruitless. The tithe computation survey and railway works, &c., from time to time, have been much benefited by such a department as the Ordnance Survey being in existence.

73. Are you aware that in Scotland especially—it was not practised in Ireland—any gentleman having a large estate can get a trigonometrical surveyor to come to that particular estate and survey it all minutely, to the very garden, upon a payment of sixpence an acre? I do not know.

74. You would not consider it just that the Government should conduct a trigonometrical survey chiefly for the benefit of large landed proprietors? Certainly not. In a new country I should say that no surveys should be made but such as were absolutely necessary for the sale of land, survey of roads, and the like.

75. Are you aware that some surveyors have, in the course of the year, lost a considerable sum of money under the licensed system? I can assure you I have not made one penny over my expenses latterly. I am placed in Parramatta this way:—Last year I drew from the department about £420. Out of that £420 I had, for every paltry job of one, two, three, five, or ten pounds, to pay my travelling expenses. I had to lose a day upon every one of these jobs, in coming to Sydney to seek primary information.

76. Are you aware that other surveyors have made large sums, handsome incomes? Yes; and I know, from two or three jobs I have had, that if I had a number of large jobs I could make a home in this country.

77. Then you do not think that any scale, if it is to be applied to all kinds of lands, can be a just one? No; it will ruin some licensed surveyors and make men of others. If a licensed surveyor is placed in the country he has a fair field, and in two or three months he can trace all the documents he requires, which would prevent many visits to the Sydney office, but in a district like mine, it would take a man four or five years, and cost him perhaps several thousand pounds, to trace all the documents he would require.

78. *By the Chairman:* Yet all these documents cannot set you right with regard to the landmarks of the Colony? No; but if you know the documents of the people all round about, you can place your survey in such a way that they cannot prove you to be wrong. It requires as much travelling to do £2 worth of work in my district as it does to do, probably, £500 worth in the country.

79. Do you not think there should be an office in a district like Parramatta? Yes, and I also think there should be four or five district offices, or more, where the documents referring to the district should be, to enable parties to refer without having the trouble of coming to Sydney. I think there should be a sort of travelling clerk, or clerks, at the Treasury, who should meet the surveyor of a district on a certain day, of which notice should be given, and sell the lands in the districts. At present, if the people of and about Parramatta want to buy land, they have to come up to Sydney at a considerable waste of time and money.

80. Have you anything further you would wish to state to the Committee? I think it hard that a man who has to learn a profession at considerable expense and labor should, when he sits down here, have but £420 a-year, pay all his laborers, travelling and equipment expenses, also keep head-quarters and a horse, supply all wear and tear, &c., &c., while a clerk who has little more to do but sit in his office receives his six or seven hundred pounds per annum.

81. *By Mr. Moriarty:* Under the surveyor's scale I understand you to say that some of the men get large earnings? Yes; but I think if they do their work well they earn no more

- F. W. Birmingham, Esq.
18 Aug., 1858.
- than they deserve, for I think a man should be able to make provision for his old age; if a man can make no more than a living it is a losing game for him.
82. Am I to understand that you think there is any favoritism in the employment of licensed surveyors? I do not know about that, but there is a lot of absurdity about the whole department. I cannot say there is any favoritism. Of course the persons who have worked together for years know each others wishes or wants, and may have probably a large amount of local interest at their service, which a stranger cannot have; and I believe some young men have gone out after two or three days examination, and have got better districts than I can get, or, at all events, the one I work in.
83. *By the Chairman*: The nature of the district has a great deal to do with the amount of remuneration received? Yes; as I have said, in a district like mine, in the County of Cumberland, you cannot do any good under the scale.
84. *By Mr. Aldcorn*: Do you not think the true remedy is to double the remuneration in some places, and diminish it in others? Yes; but, as I said before, I think it would be better to pay salaries, if you had two men at the head of the department who were competent and active—competent to judge of what should be performed in each district per day.
85. Are you aware what is the average cost of Government surveys in America? I am not.
86. Did contract surveying ever come under your observation in America—do you know at what rate per acre surveys would be performed, say of prairie land? No; it would depend upon the price of labor—what you would have to pay to your men; but I do not think you could institute any comparison between this country and America. In that country wages are very low to what they are here, and provisions are plentiful and extremely cheap; the trees are of a softer nature, and of course much easier to be marked; it is also my opinion laborers work more there than here per annum; the temperature of climate may have much to do in this way. Again, travelling is extremely cheap, and of all sorts. I know of surveyors living, say boarding at an hotel, in the Western States, for two dollars per week, equal to 8s. 4d of our money—why, in fact, one journey between Parramatta and Sydney, with dinner, costs as much as the surveyor can live on in America for a week. The difference is this, he makes a week's work into dollars, the surveyor here makes nothing but a loss of one day and money.
87. Do you think six shillings an acre a very high rate to pay for the survey of land over all this Colony? Certainly; I consider that the scale, if there were no travelling expenses, and there were ten, twenty, or forty farms to be surveyed at a time, but not less than ten, would pay; it would leave a fair profit in most districts in a new country like this; but to survey under ten farms on the present scale is a ruinous matter.

APPENDIX A.

Parramatta, 21 August, 1858.

It appears to me that a scale of salaries after the *rates* mentioned below for each person would do well for the Survey Department of this Colony, the Department paying for labor and forage, and even travelling expenses where necessary:—

Risen by merit:—

The Chief Surveyor (now called Surveyor General)...	£700 per annum.
Deputy Chief Surveyor (now called Deputy Surveyor General)	600 „
Stationary or District (eventually County) Surveyors	550 „

Any one of these offices to be filled by no person who has not served at least three years as a Camp Surveyor of and on the Department.

Rising by merit:—

First Class Camp, or movable Surveyors	£500 per annum.
to be Engineering Surveyors, so far as talent is concerned, at least.	
Second Class Camp, or movable Surveyors	450 „
to be Engineering Surveyors, and to know how to adjust instruments, take levels, &c.	
Third Class Camp, or movable Surveyors	£300 per annum.
to be able to survey and draw well; to be capable of surveying towns if required.	

Learners or Pupils of the Department, to rise by merit to Camp Surveyors, &c.

First year as a pupil	£75 per annum.
Second year do.	100
Third year do.	150

These pupils to serve with Camp and District Surveyors.

A pupil, at the expiration of three years, to be examined by a practical Board for the place or appointment of third class Camp or movable Surveyor, if application for such examination be made; if incompetent, still to work as a pupil for one year at £150 per year, and try again, and so on.

First or Chief Draftsman at a salary of £450 per annum; other draftsmen according to ability.

The Clerk of the Chief Surveyor's Department, £440 per annum; all others according to ability.

Colonel George Barney, Surveyor General, again called in further examined :—

1. *By the Chairman* : Will you be kind enough to inform the Committee what is the present duty of the Deputy Surveyor General? The present duty of the Deputy Surveyor General is to attend to any matters connected with the departmental duties that I may instruct him upon. He is at present fully employed, under instructions from Mr. Secretary Robertson, in compiling a pamphlet exhibiting the boundaries of the different runs in the various districts; he also revised the Land Regulations lately published, and I refer to him any complicated matters for report which would occupy time, and which relieves the clerical branch of a considerable amount of duty.
2. In fact he is doing the duty of a clerk? Not altogether the duty of a clerk, but he is not employed in field duties at all.
3. Do you think it possible for any man having no knowledge of the country to arrange these runs? He merely extracts the boundaries from the *Gazettes*, and arranges them.
4. Who arranges the boundaries that we see in the *Gazette*—the descriptions of the different counties—are they arranged by a practical surveyor, or are they arranged on paper in the office? The tenderer sends in a certain description of the runs he tenders for, and that description is referred to the Commissioner of the district for report. He examines the run, and reports whether the boundaries as described are correct or not. Under the new arrangements the surveyor will do that, and of course it will be more satisfactory.
5. Under the arrangement, what has guided the placing of officers in charge of districts—their efficiency or the length of their services? They have been taken together. Where officers of old standing have been capable of conducting the work, they have been appointed, as in the cases of Messrs. Davidson, Henderson, and Burrowes. There were other three of the old officers whose names were brought forward. I wrote to these three gentlemen to inform them what duties would be required of them, and to ask them if they considered themselves physically capable of undertaking the fatigue, as they would be constantly in the saddle. The reply of Mr. Shone, first of all, was that he was not capable. The reply of Mr. Gordon was nearly to the same effect, and he said that he would be glad to retire from the service. With reference to the other, Mr. Darke, it appears that I unintentionally committed some error in my communication with him. It was there stated—"If you consider yourself capable, I would recommend you to be appointed a district surveyor." I have not seen that paper since, but I believe it to be worded as I have said, for Mr. Darke has stated it to be so; but it was not my intention, for I was perfectly aware that Mr. Darke had three times submitted medical certificates, and that his sight was unequal to the duties and exposure to which he would be liable. I brought him up to Sydney, in the expectation that he would be able to do the duties in the Sydney district, in connection with the head-quarters, and in that manner he has since been employed.
6. Some of the younger officers have been appointed district surveyors—for instance, Mr. Adams? Yes. I was instructed by the Secretary for Lands and Public Works to make selections from the licensed surveyors, if I thought them competent for the appointment. I considered it to be fair to appoint only one, and that one was Mr. Adams, who had conducted himself in a manner particularly satisfactory; he had been exceedingly active, and he has proved that my judgment of him was correct.
7. How long has he been employed in the service altogether? I do not remember. I think between four and five years.
8. Can you state what general surveys have been made by him? I do not think he has made any general surveys.
9. Have any extensive surveys been performed by him—any large feature surveys? I am not aware; I do not think so.
10. Until he was placed in his present position he had had nothing to do but to measure small farms in a nearly used up country? That is very probable; but I am not prepared to state what he had done previous to his appointment. He was extremely correct in his work; whatever he did was correct and well done.
11. In Mr. Thompson's evidence before the Commissioners, in question 866 he is asked, "Do you know anything of the circumstances of Mr. White's not having supplied to this office the records of his triangulation?" He says, "Yes; I was acting as Surveyor General when the correspondence with reference to that matter took place.—Was Mr. White specially employed triangulating? Yes; he had special instructions from the Surveyor General—Was that in connection with Sir Thomas Mitchell's private triangulation? Yes; I think the intention was that it should be a continuation of Sir Thomas's triangulation; and it would have formed also a connection with the work of Messrs. Dixon and Burnett? Yes—Up to which it nearly reached? I cannot tell, for Mr. White never sent it in."—Do you not know that the records of that triangulation are in your office? Yes, for I handed to you the field-book only yesterday.
12. From that field-book any one could plot if they knew how to plot? Yes.
13. You saw the rounds of angles? Yes.
14. He is asked if he knew the reason why I had not sent in the result of my work, and he answers, "He always promised to do so." I gave the field-book into his hand, and have not seen it since until yesterday. Mr. McLean says, in answer to question 750, "Mr. G. B. White was employed in carrying on the triangulation from Sir Thomas Mitchell's three-sheet map northward, and I believe he nearly reached to Mr. Burnett's triangulation at Darling Downs; but his surveys have not been received, and consequently the surveys to which you allude are not put down on a map in connection with triangulation." Now the surveys were received at the time? I presume that he meant the actual plotted survey, because he must have been aware of the field-book having been in the office.
15. Can you supply to the Committee a return of the licensed surveyors, and of the clerks appointed to the department since the license system commenced, whether they were examined

Colonel
G. Barney.

18 Aug. 1858.

Colonel
G. Barney.
18 Aug., 1938.

or not by a Board, and, if examined, the names of the examiners, and also the names of the rejected candidates, and of their examiners? I will supply it to the Committee. (*Vide Appendix A, Nos. 1 and 2*)

16. *By Mr. Moriarty*: This compilation of boundaries upon which the Deputy Surveyor General is engaged, upon what information is it founded? It is merely a compilation from the *Gazette*.

17. Does it embrace runs of every tenure? Yes, every occupied run.

18. I presume you are aware that the only descriptions made of old licensed runs are the claims made in 1848? Yes.

19. And that the Crown Lands Department has been engaged for the last ten years in revising these? Yes. I do not, myself, see much utility in the work, for it must always be subject to revision; it is, in fact, a sort of history of the runs, as far as it can be made out.

20. This compilation will include all amendments and agreements as to boundaries? They will appear in an amended form wherever an amendment has been made.

21. If compiled from the *Government Gazette*? That will be the basis of it—the majority of the runs appear in the *Gazette* just as they were tendered for; still this can never afford a correct description of all runs; no doubt there are complaints of interfering with boundaries, and these are subject, as you know very well, to correction by the parties themselves, if they will come to a decision. Where any error has been committed in the description the correction is adopted.

22. The original *Gazette* publications will, in the great majority of cases, be superseded? They will in some cases be superseded, but wherever they have been officially superseded by other descriptions these will appear in the pamphlet, instead of the gazetted descriptions.

23. When you say "tenders," I presume you mean original claims for leases? I allude to claims under tender as well as for claims for leases. There is a description in the tender, and upon that description the tenders are accepted, unless they are corrected by the Commissioner.

24. You are aware that there is a great difference between the tenure of lands occupied under license formerly and those under licenses granted subsequently? Formerly there was no limit; 300,000 acres might be taken up at one time, now there can be only 16,000, or sufficient to feed 4,000 sheep.

25. In fact, unless this work which is now being prepared be kept corrected from time to time, parties consulting it will fall into error? Yes.

26. *By Mr. Forster*: I presume you have heard a great number of complaints made from all quarters against the operation of what is called the tendering system? Yes.

27. Has it come under your consideration in any way to propose or devise a plan for preventing the evils that arise from it? There is now in progress an experiment in the Bogan country being carried out. There are about a hundred and fifty or two hundred runs on the Bogan River under survey, the boundaries to be marked by the surveyor, and they will be put up to public competition, and I anticipate they will realise a very large amount of money beyond what they would have done under tender. I think, if that arrangement could be generally adopted, it would be very advantageous, and prevent all complaints.

28. Do you think, as a general rule, it is at all likely the Government will be able to survey runs in advance of the enterprize of squatters? I think it may be done by a sufficient staff of surveyors; at this moment, to the northward—in the country beyond the limits of occupation—there are a great many runs, perhaps a hundred or a hundred and fifty, tendered for, which cannot be accepted because they are beyond the reach of protection, and beyond any acknowledged district.

29. Protection! but does the question of protection in any way enter into the question of the legal right of tenderers to have their tenders accepted? It is considered so—that has been one of the objections by the Government.

30. You mean to say, when tenders are received by the Government they are rejected on the ground of there not being sufficient protection? That has been one of the grounds—that they have been beyond any acknowledged district is the main objection.

31. You mean beyond any district proclaimed by the Government? Yes.

32. Do you consider that a legal ground for refusing a tender? That is a legal question.

33. Have many protests been made to the Government of the rejection of tenders upon that ground? Yes, there have, in this way:—When a district has been proclaimed, and tenders sent in, some difficulty is caused; the original tenders are referred to by the parties who have previously sent in tenders, who considered themselves to have the first claim.

34. Do you not think they have an equitable claim in that case? Yes. I tried several years ago to settle this question—when the Albert and Lower Darling districts were opened to tender. I was quite aware there were a great many squatters beyond the proclaimed districts—that they had been in occupation for several years, and I considered that it would be very injurious and unfair to them that they should not have the option of having their tenders fairly considered when the district should be opened. I made two propositions to the Government—one was, that they should have the option of occupying the land on paying the back rent and assessment—that was objected to; and another was, that they should have the option of taking it at whatever might be offered by any other tenderer. I wished to give them a prior right.

35. Do you consider that to allow this prior right is strictly just? I think it is but fair that the parties should have some allowance for the risk they run. They go into an unoccupied country among hostile natives, and run very considerable risks; and there should be some consideration shown them. They occupy the country however with their eyes open; they know that they occupy at their own risk.

36. Do not the Orders in Council distinctly throw the whole country open? No.

37. The Orders in Council do not limit the country to be occupied? No; but the Government of the country restricts it by the authority of the Order in Council.

38. On what part of the Orders in Council, or of the Crown Lands Act, from which the Government derives its authority, does the Government ground the authority it assumes to limit tenderers to a certain locality? The regulations of 31st March, 1848, arising out of the Order in Council, 9th March, 1847.
39. It is assumed rather from the necessity of the case than from any legal right? The Order in Council affords the right.
40. *By Mr. Moriarty*: Is not the Government, by the Orders in Council, appointed to fix a time and place—? Yes; but that is the time and place for the receipt of tenders.
41. If a tenderer sends in a tender at a time and place not authorized, does not that affect the right of the tenderer? Yes.
42. *By the Chairman*: Can an individual tender for any quantity of land? He can, for any quantity, but it must be divided into blocks of 16,000 acres.
43. He can still keep that country without putting any stock upon it? Yes.
44. Does it not lead to speculation in runs—do not individuals take up runs without any intention of stocking them? No doubt there is a great deal of speculation. I know a run that was sold the other day without stock. I think the party paid one year's license, £10, and then sold the run for £800 without a hoof upon it.
45. *By Mr. Forster*: Whose fault was it that there was no hoof upon it—had the Commissioner reported upon it? The tender was accepted.
46. You consider that it would be for the benefit of the country that parties tendering, should be compelled to stock their runs? Yes, decidedly.
47. What is the particular wrong done by this speculation to which you object—who is the loser? Government does not lose.
48. Who does lose? The purchaser, who has to pay generally a large bonus for the transfer. It is a speculative business altogether, which I do not think is fair.
49. Do you think the principle ought to be, to allow the first occupant in every case to possess the land until wanted for sale—do you think that would be the proper principle of administering the Crown Lands? I think the first occupant should have the first claim to the land.
50. Can you state of your own knowledge that there is any large tract of country now from which occupants are debarred by the operation of the present system? Yes, to the northward of Port Curtis; I suppose there are to the amount of one hundred and fifty tenders.
51. Accepted? No; they cannot be accepted, because they are beyond the authorized bounds of occupation.
52. If they are not accepted, how are the parties debarred from taking them? They do take them up, at their own risk.
53. Would it not be desirable that in all cases where tenders are, or where there are large tracts of country occupied, there should be a Government machinery to meet the public demand, in order that tenders might be reported upon as soon as possible? Yes; there is a defect in this respect, as these tenders are put aside as useless, and give the parties no claim at all.
54. What trouble can they then cause to any one if they do not give a claim? I am alluding more to the licensed districts in the cases I mentioned of speculation.
55. Then you are alluding more to accepted tenders? Yes.
56. In the other case, the first occupant is not prevented taking up country? He occupies at his own risk, and so far creates a great deal of unnecessary correspondence. As soon as districts are opened, parties tender for the land which people have occupied, and this creates extensive speculation, which is injurious to the first occupant; because the parties who tender in the second instance will give a very high premium, satisfied that the party in occupation must have the run, and will give a bonus to the party to give it up, which is frequently the case.
57. In that case there is injustice done to the original occupant—does that arise from the tendering system—does it not, from your own shewing, arise from the Government not proclaiming a sufficient number of districts to meet the demand? Yes, in some measure.
58. If a district were proclaimed before occupation would not the first occupant have the first chance? Yes, but he must expect opposing tenders.
59. Then the injustice is caused, not by the system of tendering, but by not having a sufficient number of districts proclaimed? The opening of a district is attended with great expense, as it is necessary to have a Commissioner and a staff; and the Government, I presume, has not hitherto been able to meet the demand, or may have other reasons for not opening new districts.
60. Do you find in any cases that evil has arisen from the inattention of Commissioners to their duties? I dare say occasionally a Commissioner in a very extensive district has not examined the whole of the country under his charge.
61. Are you acquainted with any cases where tenders have remained in your office for five years without being reported upon? Yes; I have known them to be delayed for a longer period.
62. Was that the fault of the Government, or of the Commissioner? Of the Commissioner, in some measure.
63. I presume these are cases not likely to occur again? No; the old tenders will now soon be worked up, but delay must take place in extensive districts, where the lands tendered for are widely scattered.
64. At present would it not be possible for the Government to meet the evil in this way, by always allowing the outside district to embrace the outside country which was not proclaimed, so as to allow tenders to be accepted, whether beyond a certain boundary or not? Then if a tender were to come in, it would not be possible to examine the country to see whether the tender was correct or not.
65. How are the tenders examined at present? I have just stated that the districts have

Colonel
G. Barney.
18 Aug., 1858.

Colonel
G. Barney.
18 Aug., 1858.

been so large that the Commissioners have not been able to visit many of the runs, and that the duty has been postponed from time to time; and, of course, if you extended the district it would make the difficulty greater.

66. Supposing the tenders are so numerous as to lead to the result you speak of, is not the easy remedy to proclaim another district; if only a small number, might they not be considered to be within the district farthest north? The shortest plan is to open a new district. I recommended some time ago that a new district to the northward should be opened, and I have again brought the matter forward on the Estimates for 1859.

67. You have spoken of the expense of opening a new district? Yes; the appointment of a Commissioner and party becomes necessary.

68. Do you conceive that the entire evil can be met without an alteration of the law? No; I think the law requires to be altered; in a new Land Bill provision might be made to meet this evil.

69. You think the subject does require legislation? Yes.

70. Do you think the principle I have alluded to just now would be but just, that the original occupant should be protected from intrusion till the land was required for sale? Yes, I think so.

71. The tendering system you would propose to abolish in that case? No; I do not think you can do that, for the claims must be acknowledged in some shape or other. It would not do for a man to say "I have got 16,000 acres of land for which I am willing to pay £10," without any knowledge of what land it is that requires to be assessed. The survey of a district into runs would necessitate their being put up to competition by tender.

72. The Commissioner in all cases has to visit a run before he reports—he ought not to report without visiting it? He ought not.

73. But they do in some cases? Yes, it has been done, I believe.

74. There are certain descriptions, are there not, required to be set forth in tenders? Yes.

75. Do you think, as a general rule, that these descriptions can convey to the Commissioner a knowledge of the locality unless he visits it? If he keeps up his chart, whenever new runs are authorized he will be able in many cases to define the boundaries without visiting the ground. For instance, suppose he has marked on his chart a river with a certain starting point, he knows there is a block of 16,000 acres, five miles frontage and five miles back, in the occupation of a certain party, and he is then able, if another person applies for the next block, to define the boundaries, and can at once report upon it.

76. How is the person who applies to know all about the names of the boundaries? He ought, of course, to visit the ground if he tenders for a new run, otherwise he can obtain information from the Commissioner of the district, or from published descriptions of adjoining runs.

77. Is that the practice generally? Yes.

78. Is that a common practice with people exploring to the northward? No, not in the new country.

79. I allude to the new country particularly? In that case a man makes a selection, marks the trees, and prepares the descriptions.

80. May not fifty people mark trees in lines that intersect each other? Yes, in the new country.

81. How can a Commissioner know a run unless he goes and looks at it? He must do so in a new country.

82. Then would not the necessity of visiting the spot provide for the difficulty you were suggesting in the case of previous occupancy—the Commissioner having to visit and ascertain that the party was in occupation would enable him to decide the question of prior occupancy with an equal probability of arriving at a correct conclusion, as at present? A person taking up a run in the new country to the northward would have no Commissioner nearer than that of the Leichhardt, and he has already, probably, from 300 to 350 runs tendered for but not reported upon, and he could not spare time to go into the new country even had he authority to do so.

83. You say a new district is required there? Yes; in fact there are so many tenders open in the Leichhardt District that I proposed there should be an Assistant Commissioner appointed to dispose of these, and as soon as they were worked up, which would be in about a year, the Commissioner could then go into the new country, the district being proclaimed and opened to tender. Of course in opening a new country numerous tenders must be expected, and if they are not disposed of at an early period there is great subsequent difficulty and delay. It is understood that the country to the north of Leichhardt is a splendid country, and would be immediately occupied if authorized.

84. *By Mr. Moriarty:* Do you think there is any attempt at occupation in the Leichhardt District where tenders are so numerous? Yes; but where there are so many tenders I dare say a very considerable number will clash, and be rejected—probably out of 300 tenders not more than 100 will be accepted; but then they all require examination.

85. Does not the examination of a tender which is a sufficient one involve a much greater degree of labor and detail than would be necessary to meet an insufficient one? Yes.

86. Might it not be determined in many cases without the country being gone over that the tender was insufficient—could it not be ascertained from the nature of the description? Yes. Tenders are frequently so vague that they may be rejected at once. Tenders are also informal and inaccurate in other respects.

87. But a certain degree of accuracy is essential? Yes.

88. You can say whether that degree of accuracy is attained by merely inspecting the description? In a new country where the features are unknown you cannot tell. If the features—the ranges, rivers, and creeks—were surveyed, you would know what country was likely to be occupied, and you would then be able to put the runs on a chart, and these would afford to some extent the required accuracy.

89. Do you think it would be unreasonable to require that a person applying to Government for a lease of the new country should describe the features so much in detail as to ensure the indentification? It would be very desirable; but people who tender have generally no knowledge of the features of country. If parties tendering were required to supply descriptions fit for lease, much time and trouble would be saved.
90. We know that all the country in the world admits of a definition of some kind? In some shape; but the description is often given in such a way as to cause great trouble. Frequently a Commissioner reports the description to be so vague that he cannot find the country. No doubt many of these tenders are made in the city without reference to any knowledge of the country at all.
91. That I believe has been an evil generally complained of by parties anxious to take up new country? Yes. If you could distinguish parties who really wish to occupy from those who tender upon speculation, there would not be much difficulty, for the parties generally who seek the ground are able to give some description. For instance, the other day there came in some twenty or thirty tenders for runs upon a stream to the northward; they began at the junction of two streams; they then went up on each side of one stream, the boundary of one commencing at the termination of another, and they proceeded in this way many miles. There is no difficulty in such a case.
92. Unless some other party has taken up a portion of the ground? Yes. In the Burnett District there were some great mistakes with reference to the Palm Tree Creek, and there have been numerous conflicting tenders in consequence. One Commissioner has taken one view of the case, and another Commissioner has taken another, and now the Land Board, who open the tenders, have had to decide which is the correct view of the case.
93. Do you not think if applicants were required to give something like an approximation to a clear description of the country they wished to occupy, would involve the necessity of their examining the country? Yes; but I fear it could not be done generally with sufficient accuracy without survey.
94. The disposal of tenders in such circumstances would be a comparatively easy process? Yes.
95. The cases of difficulty to which you referred just now are on the immediate boundary of the older settled districts? Yes; it was on the inner side of Palm Tree Creek, near the boundary of the Burnett District. There are the North and South Palm Tree Creeks, and the difficulty was, which was the main creek. From looking over Leichhardt's papers it was very difficult to say which it was; but the other day, when Mr. Gregory was in Sydney, I asked him to attend the Board when it met; and it was under his report that a decision was come to. Mr. Gregory was very clear upon the matter, and the Commissioner had evidently made a mistake.
96. All this difficulty and uncertainty, I presume, must have arisen from the deficiency of the description in the outset? No; the descriptions upon the stream were sufficient; the five miles frontage to the stream makes that decisive; there can be no difficulty in such a case; but where you have no stream to guide you the difficulty arises. In this case it was a want of knowledge as to which branch of the stream was the main creek.
97. Is not that regulation with regard to the five miles square entirely subordinate to that requiring the natural boundaries to be observed, where they exist? The natural boundaries are taken where they are to be had; but if 16,000 acres is equal to the depasturing of a certain number of sheep, it is taken as a square block—that is, with an acknowledged frontage to a river.
98. Is not that declared by the regulation to be rather a subordinate consideration—a strict adherence to a rectangular boundary? Generally upon a river where there are no marked features, and extensive plains on both sides, that is adopted.
99. Is that the general character of the new country? No, I do not think it is; I believe the country is well watered.
100. In fact, the adherence to natural features where they exist would obviate much of the difficulty? I think so.
101. In a paper handed in to the Committee by Mr. Naylor—an official memorandum, dated 16 July, 1855—these instructions are contained: “1. All tenders which are found upon examination of the country to be in all respects unobjectionable should at once be recommended for acceptance; every day's delay involves a loss to the revenue, and prolongs the uncertainty, which checks occupation. When a country is once under a rent charge its occupation will very soon follow. It would perhaps be well that those runs which have been stocked at the occupant's risk should first be dealt with. 2. All tenders not conformable to the regulations in regard to distinctness of descriptions, &c., should at once be recommended on these grounds for rejection; and, 3. All tenders which clash should be adjusted, and descriptions of the adjusted runs submitted for advertisement.” Has your attention been pointedly directed to these points? Yes.
102. Do I understand that the majority of the great mass of tenders in the Northern District which were sent in at first, and which have been sent in from time to time, have been got over? No. I have already said that in the Leichhardt there are from 300 to 350 tenders undisposed of. That will always be the case with new districts. I stated just now that I had suggested that Mr. Wiseman should have an assistant to enable him to get rid of these tenders with the least possible delay, but it is not considered expedient by the Government.
103. Have you received reports of any of these outstanding tenders? No. I do not consider them outstanding if they have been reported upon.
104. You do not consider that there has been any neglect on the part of the Commissioner? No. Mr. Wiseman is particularly active; he is a very excellent Commissioner. Since we have got rid of the old tenders there has not been so much difficulty; the tenders are reported upon much more promptly than they used to be.

Colonel
G. Barney.

18 Aug., 1858.

- Colonel G. Barney. 105. Is it not the fact that the great majority of these old tenders are for country that had been abandoned entirely—for instance, on the Upper Darling? Yes; a great many of them are.
- 18 Aug., 1858. 106. During a number of years there have been no Europeans in the country? I dare say the country has been occupied, but Commissioners had no knowledge of it.
107. Is it not the fact that the Upper Darling country was almost abandoned in 1851 and 1852 by white people? The Bogan and that part of the country was; but I do not think the Darling was abandoned.
108. I think you will find it was at the time labor became so scarce? It is very probable; but I do not remember. A large area of country has been tendered for; but the want of water causes great difficulty in the occupation. There is great speculation now going on in reference to these back runs. A man sends in a tender for a back run with a positive certainty that, if he can do it without the knowledge of the party occupying the river frontage, his tender will be accepted, and he then immediately makes a bargain with the occupant. This has become known to the squatters, and the consequence has been that a number of applications for back runs have been made by them.
109. Which has led to country being leased which otherwise would not have been? Yes.
110. Then, as far as that goes, the tendering system has been advantageous rather than otherwise? There it has; but, if these runs had been surveyed and put up to competition, they would have realised double the money. This experiment on the Bogan will, I think, be very satisfactory in that respect.
111. *By the Chairman:* That is a fine country? It is.
112. *By Mr. Moriarty:* It is a vacated country? Yes; in consequence of the hostility of the natives. It is now open.
113. The peculiarity of that country is, that, having been once occupied and vacated, the runs are now liable to be put up to competition for tender, and that peculiarity is confined to this country? Yes. Mr. Abercrombie had a run there which he was obliged to vacate in consequence of the hostility of the blacks, and, finding that the land was about to be open, he made a large demand upon the Government, on the ground of his original right to the run.
114. How did you treat the demand—he did not obtain it? No. About 150 runs will be put up to competition as soon as surveyed.

APPENDIX A.

(No. 1.)

RETURN of Surveyors employed under the Licensed System, from 1840 to the present time.

Surveyor General's Office,
Sydney, 28 August, 1858.

GEO. BARNEY,
Surveyor General.

NOTE.—Previous to 1844, Surveyors working for the Government, but not on the salaried staff, were termed Contract Surveyors, and forwarded Tenders for surveys, which if accepted, they carried out according to a specification furnished by the Department. In 1844, a re-organization of the Surveyor General's Establishment having taken place, many of the Field Staff accepted employment as Licensed Surveyors, receiving one-third of their original salaries as a retaining fee, an allowance of four Government men, to be provisioned, &c., by the Surveyor, remuneration for work performed for the Crown, according to a scale of fees, and a right of private practice. On 31st January, 1848, approval of the scale of fees by which Licensed Surveyors are now paid was received, and from this date therefore the present licensing system commenced.

Examination of Candidates.—In reply to a letter, dated 12th June, 1857, from the Honorable the Secretary for Lands, &c., inquiring as to the arrangement for examination of candidates for appointment on the Staff of the Surveyor General's Department, and whether any and what alterations were necessary; it was stated that candidates for employment as Licensed Surveyors, &c., had been admitted heretofore on the Surveyor General's knowledge of their history and character, or the production of satisfactory testimonials, while others who were unknown, and without satisfactory testimonials, had undergone an examination by a Board of Examiners, who reported officially to the Surveyor General; and if the report were satisfactory, and the appointment requisite, it was recommended for the approval of the Government. The reply concluded by proposing an arrangement for the examination of all candidates in future.

(No. 2.)

RETURN of Clerks appointed to the Survey Department since the commencement of the Licensing System in 1844.

NAME.	WHEN EXAMINED.	NAMES OF EXAMINERS.	DATE OF APPOINTMENT.	REMARKS.
F. Becke (3 class, 1 May, 1847)	Exd. and passed	Usual Board of Examiners..	1 May, 1847.	Those gentlemen who had not passed an examination, and were in the office at the time, were placed on the permanent staff in 1857, in accordance with authority from the Honorable the Secretary for Lands, &c., which sanctioned the placing of individuals in the Survey Department on the fixed establishment, after one year's probation.

Surveyor General's Office,
Sydney, 28 August, 1858.

GEO. BARNEY,
Surveyor General.

TUESDAY, 24 AUGUST, 1858.

Present:—

MR. ALDCORN, | MR. MORIARTY.

MR. WHITE.

G. B. WHITE, ESQ., IN THE CHAIR.

Colonel George Barney again called in, and still further examined:—

- Colonel G. Barney.
24 Aug., 1858.
1. *By the Chairman*: A petition has been referred to the Committee with reference to the position of Mr. Ralfe in your department; can you furnish us with any information upon that subject? I beg to submit to the Committee certain papers connected with his case. (*vide Appendix A.*)
 2. *By Mr. Moriarty*: Besides your office of Surveyor General, you hold that of Chief Commissioner of Crown Lands? Yes; the departments were amalgamated on the death of Sir Thomas Mitchell.
 3. Has it not been considered a primary function of the Chief Commissioner of Crown Lands to place the occupants of Crown Lands in possession of the leases claimed under the Orders in Council? No doubt. The fact is, there have been very few applications for leases since 1849. I think only about 120 leases for the old runs have been issued; there are some few in progress, but when I have asked the question of licensees who have come to the office, they have said, in most cases, that they consider the license quite as good as a lease. Those squatters

squatters who require leases are now in the habit of asking for permission to get their runs surveyed themselves, and when the plans are approved they then may obtain their leases, as a matter of course.

Colonel
G. Barney.
24 Aug., 1858.

4. But is not the Crown pledged to issue the leases? According to the regulations the leases should have been issued, but the department has not had the means of issuing them, even if they had been required.

5. Have not leases been claimed by the majority of the squatters? No, only for such old runs as were held under license when the Orders in Council came into operation; very few applications for leases have been received from licensees of new runs.

6. Are there not in your office a number of claims from parties for leases? Not a great many since 1849; there are some—I do not know exactly the number; but those who actually require them are getting the surveys of their runs made at their own cost.

7. You are aware, of course, that the licensed occupants of Crown Lands in 1847 were entitled to leases? Yes.

8. Provided they claimed them within six months? Yes.

9. Are you not aware that every squatter in the Colony claimed a lease, in pursuance of that regulation? I cannot charge my memory whether all of them claimed; of course there were a great many claims at that time; but the parties have not pressed the matter.

10. Do you remember when these claims were made? I think the majority of the claims were made within a certain period after the formation of the department—about 1849 or 1850, soon after the Orders in Council came into operation.

11. You mean the claims in pursuance of the Orders in Council? Yes; applications have come in since, but very few.

12. The department was formed in January, 1849? Yes.

13. And the majority of the claims were made within what period? Within a couple of years of that time, to the extent of about 1,500.

14. I think I understood you to say just now that leases had been issued but to a small number up to the present time? A very small number—about 120 altogether. During last year there were perhaps one or two issued occasionally.

15. Then the number of runs under promise of lease is—how many? Upwards of 3,000 to this date, embracing old and new runs.

16. You say that the majority of the squatters consider their licenses to be as good as leases? Yes.

17. Have you ever heard any objection urged against these licenses with regard to their validity? Occasionally a squatter who wants his lease expresses an objection; he, of course, will not consider the license as good as a lease, or he would not ask for a lease; but such occasions are very few.

18. Are you aware whether these licenses are admitted in the Supreme Court as evidence of title? I do not think they are; in fact, you can never form an idea what will be the result of a trial in the Supreme Court with reference to lands held under license.

19. Are you not aware that these licenses have been uniformly held to be void from uncertainty? They have been, generally.

20. What particulars do the licenses contain with reference to the land to which they are intended to refer? Almost the same terms as the lease: they guarantee possession for a certain period.

21. For what periods do they guarantee possession? The original licenses were for fourteen or eight years from 1852. For runs tendered for the licenses take date from the first payment.

22. The original licenses? The original licenses for periods of fourteen and eight years from 1852.

23. As distinguished from leases? Yes; they were from 1852 (1st January) for old runs.

24. Has there been any alteration in the licensing system since then that would alter the terms of the licenses? Yes; by a very late instruction they are subject to any modified conditions the Legislature may impose.

25. That is to say, the licenses as distinguished from the leases? Yes; the instruction applies only to tenders received subsequently to the date of the instruction.

26. *By Mr. Aldern*: The lease would contain the same limitation? The instruction only applies to runs tendered for lately.

27. *By Mr. Moriarty*: I spoke of the limitation of the license itself, that license which you say is as good as a lease? The limitation is considered the same as for the lease; the tender is for a lease for fourteen or for eight years, according to the circumstances, whether in the intermediate or unsettled districts. The approval of that tender does not now, since the late instruction alluded to, guarantee that the license or lease shall be held for that number of years, but it is subject to any arrangement that may be entered into by Parliament.

28. By license, I presume you mean —? The approval of the tender is the license.

29. Your remarks, then, have reference to new runs? Yes.

30. With regard to old runs which are licensed, do the licenses of these runs contain any such limitations as you speak of? No; they are authorised to occupy for a period, either fourteen or eight years, from January 1852.

31. Understand me—I refer distinctly to the runs which were under license at the time of the proclamation of the Orders in Council? Yes, at that time they would be for fourteen and eight years. I forget when the new arrangement took place; but the original licenses were guaranteed, in fact, for fourteen and eight years.

32. That is to say, the licenses signed by the Government, which the parties held? Yes.

33. Do they contain any reference to boundaries? Yes, the boundaries are described in the *Government Gazette*.

34. In the licenses of the old runs—the runs licensed at the time of the issue of the Orders in Council? Yes; the *Gazette* contains the description of the boundaries.

Colonel
G. Barney.
24 Aug., 1858.

35. Will you state what arrangements are now in progress for completing the preliminaries necessary to fulfil the promise of a lease? Everything now is awaiting the survey of the runs; but I have not a sufficient staff of surveyors to admit of the work being done. If any person is very anxious to obtain a lease, he has to apply for permission to get the run surveyed, at his own expense, by a licensed surveyor—a qualified person; and upon the exhibition and approval of his plan the lease is issued.

36. Are not the public assured by the published regulations, that the Government intends to survey runs at the public cost, and places parties in possession of their leases? Yes, but it has been only very partially done.

37. As to the boundaries of runs as they are described in the licenses—where are the boundaries derived from, in the case of disputed boundaries? The descriptions of boundaries are in the first instance supplied by the tenderer.

38. I speak of licenses? They must be tendered for. In the first instance the description is supplied by the tenderer; it is then sent to the Commissioner of Crown Lands, for examination and approval, and if possible the boundaries are adjusted. The Commissioner has authority to adjust boundaries.

39. I am speaking now with reference to licensed runs, not new ones; I am speaking with reference to old ones? The descriptions are derived from the original occupants.

40. The old licenses? You are speaking of the time before the tendering system came into operation? As far as I know, the descriptions were then derived from the records of the office, as supplied by the original occupants.

41. As far as your own opinion goes, do you not think it important that parties who hold promises of lease from the Crown should be put in possession of leases? Judging from the opinions of the parties themselves, it is necessary only that a very limited number of leases should be issued; for the parties generally consider the license as good as a lease.

42. Is that your own opinion of the matter, from observation of the proceedings in the Supreme Court? My opinion is that leases should be issued if promised, but more particularly to parties who have applied for them, and who really seem to wish to have them.

43. Do you know whether there is any considerable number of parties who have never claimed the leases under the Orders in Council? There are very few, if any.

44. A considerable number? I think so. I think there must be a great many.

45. Then under what tenure do such parties hold now—parties who have omitted to claim leases at all? They hold under the sanction of Government. The holding is approved by the Government, and they have received notice that their applications are approved by the Government.

46. You say a considerable number of persons omitted to claim leases under the Orders in Council—I ask under what tenure such parties now hold their runs? They hold by the approval of the Government.

47. Is there any regulation in existence, or any law by which the Government is authorized to allow these parties to remain in possession? Yes; the Orders in Council are sufficient.

48. Is there any part of the Orders in Council which refers to any other tenure than that of a lease—will you look through them, and see whether there is any other occupancy than that under lease from the Crown? (*The witness referred to the Orders in Council.*) There is an authority of some kind I know.

49. I understand you to say you think there is some authority by which the Government is authorized to continue parties in possession otherwise than under lease? I am not quite clear on the matter. I am not aware of any alterations having been made, or of any question having been brought forward, by any lessee or licensee at any time.

50. Is there any regulation at present in existence for the settlement of disputed boundaries of runs—any summary mode of settlement? None, except by survey.

51. I speak of disputed boundaries? All disputed boundaries are settled by the Commissioner, who is empowered to make arrangements with the parties, and to induce them to come to a decision themselves.

52. To what extent does the Commissioner's power go—how is he empowered? If the parties do not agree, he is empowered to settle the boundaries of dispute himself.

53. Have you ever heard of such a power having been exercised? Yes.

54. I speak of licensed runs—I do not refer to applications for new runs at present? You are speaking of old runs?—All the disputed ones were tried by the Boundary Commissioners.

55. I speak of the settlement of existing disputes—any disputes that may exist at the present time—are you aware of any considerable amount still existing? I am not aware of a great many. I have one or two in hand. They are generally settled by the Commissioner and the parties.

56. You do not at this moment remember any instance where this has been done? No; but I dare say I shall be able to find some.

57. This would be preliminary to the survey of these boundaries? Yes.

58. The object of that survey would be to lease? Yes.

59. Then the Commissioners have authority to settle disputed claims for the possession of leases? Yes.

60. In the event of parties not agreeing? Yes.

61. What is the present state of the decisions of the Disputed Boundaries Commissioners—of the disputed claims? Those that were reported upon by the Boundary Commissioners and approved by the Government have almost all been acted upon; but few have been disputed. I do not know that any, or if any, very few leases have been issued upon them.

62. What effect have they at present in law—are they binding at all upon the parties? They are binding by the award of the Government.

63. How does the Government enforce its award? By introducing the amended description in the lease when issued.

64. Are you aware whether there is any law in existence by which parties are bound to abide by

Questions and answers 44 to 49 inclusive were struck out by the witness, when his evidence was sent to him for revision, but were subsequently re-inserted, and the Explanatory Note in reference thereto printed in the margin, by order of the Committee. (*Vide Minutes of Evidence on 1st October, 1858.*)

JOHN J. CALVERT,
Clerk of Select
Committees.

* Note referred to.

Replies to questions 43 to 49 inclusive have been made under an erroneous consideration of question 43. When I stated that there were a considerable number of persons who had never claimed leases, I intended it to apply to runs held under tender; and I considered that, under the Orders in Council, tenders having been accepted, a sufficient authority was afforded for occupation and remaining in possession until leases could be prepared.

by descriptions of runs affirmed by the Boundary Commissioner's report? The Boundary Commissioners were appointed by Act of Council, and that should be decisive.

Colonel
G. Barney.
24 Aug., 1858.

65. But in point of fact, does that Act make the Boundary Commissioner's report decisive upon the parties? I think so.

66. Or was it not assumed that the issue of a lease by the Crown in pursuance of that report would have that effect? It would have that effect, but no leases have been issued.

67. You are aware that many of the Commissioners' reports have been upset by the decisions of the Supreme Court? Some of them have.

68. During the interval that has elapsed since the passing of the Act, within the last eight years? Yes.

69. During the last eight years these decisions have been put aside by the decisions of the Supreme Court? I presume the Government would not attend to the decisions of the Supreme Court in this matter; the Government would not alter the boundary in consequence of the decision of the Supreme Court.

70. In point of fact, the Government still holds its decision to be operative? Yes.

71. Notwithstanding any proceedings that may be taken? Yes.

72. Is it not the fact that these actions constantly occur in the Supreme Court, and very considerable penalties are imposed sometimes? There are two or three parties always in Court, but I do not think, with the exception of those two or three parties, there are many cases.

73. Are you aware, or have you not observed, that during the last eight years a very considerable number of squatting cases have been tried in the Supreme Court? There have been cases tried; but, considering the number of runs, I do not think they can be considered numerous.

74. As a matter of fact, I understand you to say that—with the exception of holding its decisions to be binding upon itself—Government has not taken any means of compelling obedience to the decisions of the Boundary Commissioners; that is to say—the Government has taken no steps to enforce the decisions of the Boundary Commissioners? No; no question appears to have arisen upon them.

75. In point of fact, on the purchase of a run how can the purchaser find out the boundaries of it, or how can he assure himself that he has not purchased an interest in a law suit? He refers to the *Gazette* for the boundaries.

76. But how can he assure himself that those gazetted boundaries are not liable to dispute? He takes the chance of the boundaries; they are all marked, and before he makes the purchase he should ascertain that the description is correct.

77. How do you define the present tenure of squatting runs—in what shape does it stand now—under what right do the holders of old runs in the Colony hold? The right arises out of the Orders in Council.

78. Which is the offer of a lease in fact? Yes.

79. So that the present tenure is the promise of a lease? Yes, it is the promise of a lease.

80. And to ascertain what the promise embraces the parties are obliged to —? Refer to the *Gazette*.

81. Farther inquire into the accuracy of the existing description on the ground? Yes.

82. There is no means by which they can at once assure themselves of its correctness? No, except where they are surveyed.

83. And the correctness is confirmed by the lease having issued? Yes.

84. And those cases are very few? Very few; not above 120 altogether out of about 3,000.

85. Has anything peculiar struck you in reference to the trial of squatting cases in the Supreme Court as bearing upon the operations of your own department? No. The principal point in actions in the Supreme Court—the point upon which the cases turn—is the previous occupation. The Court does not seem to care whether the occupation has been authorized or not so long as there has been previous occupation; the case is decided in favor of the first occupant.

86. The issue is joined upon the question of first occupation? Yes.

87. Will you state what it is, as distinguished from first occupation, which gives the right of lease to a squatter as a Crown tenant? The first occupation is probably an unlicensed occupation, and the direct occupation would be upon the acceptance of a tender.

88. Of the older runs? Not the acceptance of a tender upon the old runs, because by the Orders of Council occupation was authorized up to a certain date.

89. Will you state what it is that gives the right of lease under the Orders in Council as distinguished from old occupation—upon what does the right of lease offered by the Orders Council rest? Upon approved boundaries.

90. Was it not licensed occupation for twelve months preceding the publication of these Orders? Yes, it was.

91. In distinction from the issue which is tried in the Supreme Court in squatting cases, there is a right granted by the Orders in Council which has no reference to that? Yes.

92. So that the right affirmed by the Orders in Council rests upon a different base from any that is tried in squatting cases in the Supreme Court? Quite.

93. Do you know whether this question of the promise of a lease ever arises in squatting cases? I do not think it does.

94. And, as a general rule, Government does not hold itself bound to interfere with that right or promise of lease by any process? No; Government takes no part in the trials.

95. So that, in point of fact, expensive and troublesome as these trials are, they do not touch the actual tenure? No.

96. Then the only tenure known to the Orders in Council being a promise of a lease, do you not think that parties who are subjected to the difficulties and expenses of these actions have reason to complain that the Government has not given them the protection of their leases, has not completed the only tenure known to the law? There may be some cases of hardship.

- Colonel G. Barney. 97. All the expense which may arise in these cases is irrespective of the tenure which has been in operation since the proclamation of the Orders in Council? Yes.
- 24 Aug., 1858. 98. That tenure being the promise of a lease for eight or fourteen years, of which seven years has expired? Yes.
99. So, in point of fact, as far as regards the intermediate lands, during seven out of eight years, the parties have not had the leases they were promised, and have been obliged to test their rights in the Supreme Court upon a totally different issue? Yes.
100. Does not that circumstance strike you as a particularly strong ground why the Government should issue the leases? There is no doubt it would be better, if practicable, that leases should be issued; it would save a vast cost of money to these parties who are bringing the question into the Supreme Court, and it would of course tend to satisfy the minds of squatters generally; but it has been quite out of the power of the Government to survey runs and grant leases. There is a positive instruction that leases were not to be issued except on surveyed descriptions of runs. One of my first acts as Chief Crown Lands Commissioner was to suggest that leases should be issued upon descriptions agreed to by the parties and approved, but not surveyed. That was overruled, I believe, by Sir Thomas Mitchell, and the consequence was that, with the exception of the Murrumbidgee District, where Mr. Townsend was stationed, there was a very small portion of the runs surveyed. My opinion was that descriptions of runs might be so prepared as quite to answer the legal purpose for which they were required.
101. That was your opinion at the time when you had not the control of the Survey Department? Yes.
102. And you still entertain that opinion? Yes, quite so. I think it would be more simple now, as a large proportion of the Commissioners of Crown Lands will be surveyors. It will be more simple and easy in operation now, but it will occupy a great deal of time, and, of course, a very large amount of expense.
103. Do you not think, as a general rule, that in an undulating country—in which, as a matter of fact, you are aware runs are taken up by falls of water—it would be particularly simple to define them by reference to the watersheds? In numerous cases, undoubtedly.
104. You are aware that in most undulating countries runs have been taken embracing certain falls of water—on certain creeks? Yes.
105. That is a general rule in all mountainous countries, in squatting districts? Yes.
106. Do you not think runs so taken up admit of easy definition without survey? To a certain extent. I have always been of that opinion.
107. Do they not admit of *certain* definition? Yes. In a very large portion of the runs there is no necessity for survey, but in others it is difficult to define without survey in a scrubby and broken country.
108. These are the exceptions, I presume? Yes, they are the exceptions.
109. Were not the efforts of the officers under you—the Commissioners of Crown Lands—directed for several years towards the preparation of final descriptions of runs? Yes.
110. Of these descriptions the great majority are assented to finally by the parties, are they not? Yes.
111. In a great many cases by the adjoining occupants? Yes; that is part of the instruction—that the consent of adjoining occupants should be obtained, and then there is no difficulty in the matter.
112. Was not that proceeding put a stop to by the announcement that all the runs would be surveyed at the public cost? That was in 1852.
113. Since 1852 all such proceedings have been stopped, have they not? Not quite stopped, where the parties have in conjunction with the Commissioner considered these descriptions of boundaries correct.
114. As the Commissioners were informed that runs were to be surveyed, do you not consider they were thereby relieved from the necessity of doing that? They were in a measure relieved, but they were instructed in cases of applications that have come in for correct descriptions of runs to carry out that regulation.
115. That has been a proceeding confined to isolated cases since 1852? Yes. We have had very few boundaries regularly surveyed.
116. In point of fact, the Commissioners of Crown Lands for the last four or five years have been assured that it was the intention of Government to survey runs? Yes.
117. And the public have been similarly assured? Yes.
118. Do you not consider it a necessary preliminary, in order to arrive at the value of a piece of a country and to form an estimate of its extent, that its limits should be defined? You ought to know its limits pretty well, but it would not require an accurate survey for that.
119. The rent of a country depends upon its capabilities? Yes.
120. So that, in point of fact, by the Commissioners being assured that a survey was in prospect which would completely define the limits of the country, their proceedings in assessing that country have been checked? They have been in some measure checked; but I do not think it has operated very unfavorably to the assessment of runs. I think it is almost impossible to form a judgment of the capability of a run, as to the stock it will carry, without the experience of several years. I think, generally speaking, the assessment of runs has been made by the Commissioner with the assistance of the parties concerned, and a reference to the returns of stock for previous years. It could not be expected that a Commissioner who possibly had not been on a stock station before his appointment should be capable of judging what a run would carry. I think it must require very considerable experience.
121. Would it not require a very close examination of the country to verify, or qualify, any estimate based upon returns? It would, no doubt.
122. Whether the appearance of the country itself would or would not give fair grounds for an estimate, no estimate should be made without an examination? No; the ground should be closely viewed.

123. And, as a general rule, the appearance of a country will indicate whether it has been over or under stocked? Yes.
124. The growth of scrub in an overstocked country would be an indication? Yes.
125. Are there many runs unassessed up to this time? Yes, a great many. In the Lower Darling, for instance, there are 130 or 140.
126. Of these runs that are not assessed, and of the runs which have not been assessed at any time since the proclamation of the Orders in Council, how has the rent been charged—upon what principle? It is charged upon the area of the ground.
127. Upon the estimate of its area? Yes.
128. Upon the estimate of its area preceding that examination which would be necessary to form an estimate of its capabilities? Yes.
129. So that, in fact, the rent of unassessed runs is based upon a principle still more liable to error than others? Yes, it is an erroneous estimate, no doubt; but assessments have been more particularly attended to within the last few years. According to the regulations a single station is to be confined to 16,000 acres, which is supposed to carry 4,000 sheep, and many of these have latterly been assessed at 5,000 and 6,000, as they have been found capable of carrying that number.
130. Is that rule of charging upon the area of runs prior to their assessment universal—does it apply to all runs? No.
131. Does it apply equally to new runs as to old? Runs under tender are all confined to 16,000 acres, or enough to feed 4,000 sheep.
132. Is the rent of such runs charged upon the area? No; these are charged upon the supposition that they are capable of carrying 4,000 sheep, but many of the runs that are tendered for and accepted to carry 4,000 sheep, may embrace double the area allowed by the regulations; then, until they have been assessed, the parties would pay only for 4,000 sheep.
133. Then, on the country being valued, is the rent considered liable to adjustment for back years? Yes.
134. Does the same rule apply to rents charged upon the area of the country? Yes.
135. That is for old runs not assessed? No, not for old runs not assessed—of course nothing could be done with them; they have been charged upon the area alone.
136. But when the assessment occurs —? They would be liable for back rent.
137. So, in point of fact, if a run passes through half a dozen hands the last holder would be responsible for back rent? No question of that sort has occurred.
138. What I want to establish is this—you say the assessment of the country is in some measure delayed by delay in the definition of its boundaries —? Of course it must be.
139. That during that delay the rent continues charged upon the estimate of its area, based upon still more imperfect information —? No doubt.
140. But you say that the rents charged upon the area are liable to adjustment on the capabilities of the run being determined? Yes.
141. And that the same rule applies to new runs taken up by tender? Yes.
142. With this exception, that such runs are charged upon the estimate of their area? Yes.
143. Now, can you say whether the officers of the Survey Department have any instructions to measure runs? No, excepting it may be in two or three special cases, where they have been approved of by the Government; but such cases are very limited indeed; in fact, it is impossible to afford the time of the surveyors to do it. I have hardly sufficient strength to keep up the survey of land for sale, to meet the wants of the public. I have no means of conducting surveys beyond that.
144. It is some considerable time, I think, since any run was measured? I think almost the only two that have been surveyed for several years are Mr. Donaldson's, who paid a portion of the cost, and, I think, Dr. Dobie's.
145. Each of these parties either paid for the cost of the survey or a portion of it? Yes. I do not think there have been half-a-dozen cases of surveys of runs made by the department for some years.
146. So that the Commissioners of Crown Lands and the public are assured by the Government that it is their intention to survey the land at the public cost, and the officers of the Survey Department are informed that they are not, or not told that they are, which is the same thing? No, they are not told. Since I have been in office the strength of the department has not admitted of the employment of surveyors on such duty.
147. You said just now that you are of opinion the definitions of boundaries drawn up by the Commissioners are as good as leases? Quite as good, for the purpose of leases, provided the descriptions are perfectly clear, and consented to by adjoining occupants.
148. They embrace descriptions of all the runs assessed up to the time of the order to measure runs? Yes, these are all clear enough, and since that time there have been numerous descriptions approved by the Commissioners, which are quite sufficient, in my opinion, for the purpose of leases.
149. But these descriptions have been prepared without instructions? The instructions are, of course, to make as perfect descriptions as they possibly can; and in examining the land for the tenders the Commissioners make numerous alterations in the boundaries. The tenders are approved, subject to amended descriptions.
150. After the Commissioners were informed, in 1852, that it was the intention of the Government to survey the runs, would it not be considered by them as a waste of time to make an imperfect survey? Generally the instructions to the Commissioners were to make the boundaries as perfect as they could. I do not think they had any business to consider that the runs were to be surveyed after their descriptions.
151. Were not these instructions given to them prior to the determination of the Government to survey the runs? Yes, they were; but I know that the instructions given to all the Commissioners who subsequently went away were, that they were to make the boundaries

Colonel
G. Barney.
24 Aug. 1858.

Colonel as perfect as they could. The determination of the Government might have had the effect
G. Barney. upon some of them of causing them to slur over their work.

152. Was it any part of their work, as set down in their instructions, to examine boundaries
21 Aug., 1858. at all—how could they report upon the tenders as they ought without they did so? They
ought to go upon every run to examine the boundaries.

153. I am not speaking of the boundaries for which tenders are made in the outlying
districts—very few tenders are made, I think, in the older districts of the country? Yes,
not many.

154. With reference to these districts, the duty of examination of boundaries with reference
to tenders is very limited? Yes.

155. With reference to lands under promise of lease, has it been any part of the duty of
the Commissioner, under his instructions, to interfere with boundaries at all? Yes, of
course, in reporting upon his tenders. How can he otherwise give a satisfactory report
unless he sees the land—how can he know whether the boundaries are at all correct?

156. Without reference to tenders at all—speaking of the older districts, of which you say
that few tenders are made in them—with reference to runs which have been in occupation
many years, is it any part of the duty of the officer to meddle with boundaries at all? They
frequently have to meddle with boundaries to settle disputes—they are frequently instructed
to do so.

157. Is it any part of their instructions, or are they not assured by the instructions that
the Government intends to measure them? The instructions are published in the book of
regulations.

158. I would suggest to you that the instructions to Commissioners of Crown Lands are,
that Government intends to measure the boundaries of runs? No doubt that is in the
printed instructions.

159. The Commissioner's interference has been confined to cases where specific application
has been made? Yes.

160. So that any Commissioner proceeding to interfere with all the boundaries in his district
would be exceeding his instructions? I would not find fault with him if he had time and
were to do so; but he would not be able to do it and keep up his work.

161. It is not part of his special duty to examine boundaries in detail and mark them? I
think it is his business to see that the boundaries are correct.

162. At any rate, the question is open to some difference of opinion? If he is called upon
he has to do it; but I do not say that the Commissioner should run over his district to look
out for errors in boundaries. If he were requested by the parties themselves to mark their
boundaries of course he would do it. He is instructed to do so whenever applications are
made to him, which is not very frequent.

163. You do not think it part of his duty on visiting a district to assess it, to examine the
boundaries and describe them? No; but I presume he examines the run when he assesses
it—not with a view to fixing the boundaries.

164. The fixing of boundaries is rather beside his duty? It is, rather; he would not fix
the boundaries at that time; he would rather consider the boundaries as fixed; he would
not correct any errors of boundaries at that time; his duty would be simply to assess the
capabilities of the runs. If he were at that time asked to examine the boundaries of a run,
no doubt he would do it, if possible.

165. Do you consider that, his instructions not requiring him to examine boundaries on
assessing runs, he can fairly be responsible for the boundaries of his runs being perfectly
described? No; I do not see how that can possibly be, for the Commissioners are repeatedly
changed.

166. I assume the case of a Commissioner for several years in a district in which the
boundaries of old runs are in an unsettled state—do you think the officer responsible for
their undescribed state? In a certain measure he would be, of course. It would be his
duty to make himself acquainted with the state of the runs. Runs cannot be erroneously
described without being pointed out by the neighbours.

167. May not runs be so imperfectly described as to prevent objections being made to
them—is it not, in fact, rather the characteristic of published descriptions of runs that they
are absurdly imperfect ———?

168. *By the Chairman:* Have you never heard of a Commissioner being twelve or thirteen
years in a district who has never seen two-thirds of it? Yes.

169. And he, of course, had to report upon the runs? Yes. I am aware that Commissioners
have reported upon runs without seeing them.

170. *By Mr. Moriarty:* I understood you to say just now that it is not distinctly part of the
officer's duty to examine the boundaries of a run when assessing its capability? I think not.

171. Supposing that in a given time he had arrears of work to make up, and were visiting
the runs, would it be his duty to examine the boundaries? Not unless called upon by the
parties.

172. It would not be in itself such a duty as should occupy him? No.

173. Under his instructions? It would not.

174. Do you think that an officer, aware of the fact that Government had no intention of
surveying runs, although that intention was declared—nothing having been done to that end
for several years—and being of opinion that leases should issue upon his descriptions of the
country—should pass over the country without preparing descriptions of runs? You allude
to old runs—these, unquestionably, exceed the area prescribed by the regulations, and, of
course, they do not require assessment; they are assessed by the gazetted area. Some of
the old runs are from 200,000 to 300,000 acres.

175. I understood you to say just now that the gazetted area was the estimate used to
compute the rent until the capabilities had been determined? That is the area upon which
the estimate is based.

176. I wish to know whether an officer, knowing that Government was not surveying boundaries, and apparently did not contemplate doing so, would, in consonance if not in strict accordance with his instructions, be bound to examine boundaries in assessing the capability of a run? In all cases it would be his duty to settle boundaries to the extent of his knowledge of them; but I do not see that he should be called upon in all cases to regulate the boundaries: he could not do it.

Colonel
G. Barney.
24 Aug., 1858.

177. Do you not think it, at all events, of vast importance to such an officer to know whether Government would take advantage of his service in completing the boundaries or not? I suppose they know that pretty well; they cannot mistake that.

178. I understand you that it is not part of his duty under his instructions? He cannot mistake the orders and regulations.

179. Suppose the officer thought the regulations did not express the views of Government, and suppose such officer were anxious to make the most of his time, it would be an object with him to know whether his proceedings were approved or not, and whether it was his duty to examine boundaries in detail? They all know it is their duty to give the best information in their power with reference to runs; they know that perfectly well.

180. I understood you to say just now that it is not part of their duty to examine boundaries except on application? I am speaking of very old runs, whose boundaries should have been settled long, long ago; there are hardly any complaints of those old boundaries.

181. Is it not the fact that all disputes in all squatting actions have been confined to such cases? It may be so, but there are very few even of those which are subjects of dispute. You hear frequently of squatting cases in the Supreme Court, but they are generally the same parties who appear over and over again.

182. Will you suppose such a case as this:—A has a run, described as a run bounded on the east by B; on the north by C; on the west by D; and on the south by E; and that B, C, D, and E have all their runs described in the same manner, all being unassessed? Yes.

183. In such a case do you not suppose disputes would arise when the claims of A, B, C, D, and E, came to be inquired into on the ground? Their runs are all described and marked by themselves.

184. Have you never heard that going into such claims upon the ground has produced a host of disputes, which were never before thought of? There have been occasionally, and it must be the case until they are all regularly surveyed; without that it is almost impossible to define an accurate boundary of these large tracts of country.

185. Which survey there is not much probability of being made? No.

186. In such a case do you not think that an officer proceeding to assess any one of these runs, or all of them, would be bound to inquire to what limits they each extended, to find out for himself what the ground was that he was assessing? No doubt he ought to know what he was assessing; but, in the case of large areas, such as these old runs of 200,000 or 300,000 acres, it would be impossible for him to give his time to the actual definition of the boundaries; he must take the boundaries as they were pointed out to him by the licensee.

187. Suppose he finds the description to claim one boundary and the licensee another? Then he ought to satisfy himself.

188. He ought to examine the country in detail so far as to satisfy himself whether such boundaries exist? Yes.

189. In fact he ought to give some attention to boundaries? Yes; if in a large tract of country he has reason to think the area is incorrect, he ought to satisfy himself, but he cannot very well ascertain that fact except by survey.

190. Would it be his duty to ascertain that fact, or would not he exceed his instructions by so doing? He certainly would not be found fault with. Wherever he could get positive information he would not be found fault with for exceeding his instructions.

191. Suppose such a case as this:—that an officer, within a certain time, had to assess a certain number of runs, do you not think it would be of vast importance to him to know whether he was to describe the boundaries? Yes; but if he were instructed to assess a hundred and fifty runs within three months, it would be his duty to assess these runs under any circumstances, and to abandon the other part of his business, unless he were to report at once that the work could not be done, and solicit further instructions.

192. You said just now that it would be of great importance that an officer in assessing a run should ascertain what he was assessing? Yes; but if he had a positive instruction to assess so many runs in such a time, it would be his duty to do that under any circumstances, for he would not receive such an order unless for an important object.

193. Do you remember my own case, when I urged this matter upon your attention twelve months ago, and required distinctly to be informed whether it was the wish of the Government that I should devote any portion of my attention to boundaries or not? Yes.

194. Do you remember whether, during my tenure of office, I received any instructions or not? I do not know. It was not long before the notice of your removal from office—about what date was it?

195. Somewhere in July or August 1857? I think at that time it was in agitation that you should be removed from your district.

196. Was it not the more important that I should know what I should do during the time I remained? I forget the circumstances connected with your letter; there is no doubt you should have received an answer to it; it must have been an oversight that you did not.

197. You do not know whether any steps were taken in that matter until I mentioned the matter to the Minister for Lands and Works? Your letter was noted by me to be submitted for consideration when the new Land Bill was to be discussed.

198. Do you know what rule was followed in selecting the districts to be reduced? Yes; those that were nearest completion by the returns of the officers themselves. Upwards of two years ago it was proposed to reduce several of the old districts; and when the question was put to me whether it should be done, I stated that I would not recommend it at that

Colonel
G. Barney.
24 Aug., 1858.

time, but that perhaps a couple of years from that time the work in some of the districts would be so reduced that I might be able to recommend that the Commissioners should be removed from them. It was with that view returns were called for showing the number of runs unassessed, the number of tenders unreported upon, and it was upon those returns that the districts were recommended to be done away with.

199. Do you remember about what period it was decided that particular districts should be reduced? No; it must have been when Mr. Hay was Secretary for Lands and Works, in 1856.

200. You say the districts were selected with reference to the state of the business in them? Yes.

201. Can you state the number of runs remaining to be assessed in the various districts which you recommended to be reduced at that time? I can. (*Vide Appendix B.*)

202. What do you suppose the average number of runs in the old licensed districts? I will furnish a return. (*Vide Appendix C.*)

203. In the reduced districts what arrangements have you made for the charge of Crown Lands unassessed runs? Surveyors have been appointed to act as Commissioners of Crown Lands.

204. Then, supposing any very considerable arrear of duty in any of these districts, do you not think the proceedings of the surveyors would be hampered? Of course they cannot be expected to do so much surveying; it must interfere with them so far.

205. Do you find any complaints of unauthorized intrusion upon Crown Lands? Not many.

206. Have you had any complaints of unauthorized intrusions upon runs? Not many; there are occasional complaints, but not to any amount.

207. How do you deal with such cases when they do occur? The parties must arrange it themselves; the Government does not interfere in the matter.

208. Is there any means by which the parties can arrange? Yes; upon application to the Commissioner he will arrange.

209. I speak of wholly unauthorized intrusion, not of trespass where the land is in dispute—is there any arrangement by which parties can prevent others coming and settling upon their runs against their will? One method is to apply to the Government to have them ejected, which is, under certain circumstances, done: otherwise they have to manage the business themselves.

210. Does the former system of authorizing the party trespassed upon to remove the trespasser still remain in force? Yes.

211. Have any such cases occurred recently? Yes; I think one or two cases have occurred not a long time ago. I cannot remember what they were.

212. Suppose the case of a party being in possession of a run for which another party had previously tendered and paid rent, how would the Government proceed to place the successful tenderer and eject the intruder? The course would then be for the Commissioner to place the man who holds the run in occupation.

213. It would be necessary first to eject the intruder—how could that be done? By bringing him before the Bench, under the Waste Lands' Act.

214. Is that the practice now? Yes, that is done now; but there are very few cases of that sort.

215. Are you clear upon that point, that it is done now? I think I can get you a case.

216. Are you not aware that the Waste Lands Sales Amendment Act has expired—that it has been repealed by the Constitution Act? You are right; I remember there is no Act now.

217. You are not aware of any marked inconvenience having been felt, arising from intrusion? No; the cases are very few indeed.

218. The correspondence on the subject of Crown Lands Management is still very considerable, is it not? Yes.

219. Are the returns to the Government in such cases of frequent occurrence—is there much correspondence between your department and the Minister of Lands and Works upon such subjects? No, I do not think a very great deal. Of course all questions of that nature go to him. The chief portion of the correspondence relates to runs and tenders; the tenders are very numerous, indeed. The first Monday of the month I have had as many as 300 tenders; last month there were 140; and I should think there are that number now in the tender-box.

220. Have these all to be submitted to and decided by the Government? Yes; the mass of correspondence arises from them.

221. Do you not think there would be a saving of labor if these were opened in the Minister's own office and dealt with at once? I have been in the hope that that would be done, and I think it must be by-and-by. When the two offices are under one roof we shall have done in five minutes what now requires a correspondence of a dozen letters. I think it most important that the offices should be under the same roof.

222. *By the Chairman:* Are you aware that in the year 1847 descriptions for the leases were promised to be ready for the Government to be delivered to the squatters within a year? Yes, if possible.

223. Do you think the officer in charge of the Survey Department who made such a promise could have had the most remote idea of what he promised? He must have satisfied himself that he could not do it.

224. *By Mr. Aldcorn:* In point of fact, were the early runs—those that were occupied in the year 1847—measured in a rough way? A great number were measured. In the Murumbidgee district Mr. Townsend surveyed a very considerable number, and I think the leases were issued, nearly all of them, if not quite, for that part of the country.

225. Do you think the Government could possibly have issued leases upon those that were not measured at all? My opinion has always been, from the commencement, that the Commissioners

missioner could supply sufficient descriptions in very many cases for a lease without a survey.

226. Your opinion is that in all these cases the Commissioner has been possessed of information sufficient to found a lease upon? He ought to have been in possession of such information. Colonel
G. Barney.
24 Aug., 1858.

227. Do you think the Government were under any obligation to issue the leases where they were not applied for? No, I do not think so.

228. The Act says very distinctly the leases are to be applied for—the Government gets the power by the Order in Council to grant the leases, but the application has to be made by the occupier? Yes; very few applications have been made, as I have said, since 1851. Of the old runs for which leases were to be issued under the Orders in Council 9 March, 1847, about 1500 applications for leases were received, out of which number about 120 only have been issued.

APPENDIX A.

No. 1.

58-329.—Blank Cover.

No. 58-78.

RALFE JAMES.—Applying for gratuity or further employment.

3 February, 1858.

I beg to enclose a copy of a report prepared at the time of the presentation of Mr. Ralfe's petition to the Legislative Assembly. I am not aware that I can add anything thereto as regards the circumstances of his case up to to the date of the report.

It was intended to employ Mr. Ralfe at the M'Leay River, but the services of Mr. Millington becoming available, and it appearing that the demand for land would require the undivided services of a surveyor in the district, that intention was abandoned. The preparations which Mr. Ralfe may have made were premature.

GEO. BARNEY,

S. G.

4 March, 1858.

The Honorable
The Minister for
Lands and Public Works.

No. 2.

MEMORANDUM relative to Mr. Ralfe's memorial to the Legislative Assembly, dated 6 September, 1846.

In the early days of his official career Mr. Ralfe was employed upon some very difficult and dangerous coast surveys.

Subsequently he was stationed at Port Macquarie.

In 1841, at his own request, he became a contract surveyor, but with the understanding that he was still to be considered an officer of the department.

At the end of a year the Government refused to continue the contract; the Government also refused to allow Mr. Ralfe to return to the department as a salaried surveyor.

A long correspondence ensued—the Government refused to give Mr. Ralfe either a retiring gratuity or a grant of land.

A compensation of £150 for loss in the value of his equipment was to have been given to Mr. Ralfe, but he never obtained it.

Mr. Ralfe applied to the Secretary of State, but without success.*

For some ten years Mr. Ralfe was not engaged in the public service. He went to England about 1846-7, and returned to the Colony about 1850, as a surveyor to the Australian Agricultural Company.

In 1851 Mr. Ralfe applied to the late Sir Thomas Mitchell to be reinstated in the department, but that was declined.

In 1852 Mr. Ralfe, at his own request, was gazetted as a licensed surveyor, but such employment is terminable by the Government at any time, and consequently no claim arises.

What Mr. Ralfe states as to his title to 1000 acres of land is strictly correct; it was the practice of the Colony to give every one land—more or less—and the obtaining of land was always held out at home as an inducement to the acceptance of office in the Colony.

Mr. Ralfe was as much entitled to receive 1000 acres of land as the other surveyors of his time—Mr. Finch, Mr. Huddle, Mr. Richards, and Mr. M'Brian—and no doubt he would, like them, have got 1000 acres; but Mr. Ralfe, perhaps, in his too enthusiastic pursuit of his business, neglected to obtain an order to select, until, by a Government Notice, he was precluded from obtaining land whilst in service—this notice was allowed to act retrospectively against the claim of Mr. Ralfe, although the promise was undoubtedly established by precedent.

Mr. Ralfe's claim for 1000 acres of lands merits the serious consideration of the Government, and is apparently provided for in the 58th section of the Constitution Act, 18 and 19 Vic. cap. 54.

APPENDIX

*The reasons by which the Government was influenced in the treatment of Mr. Ralfe will be evident from the correspondence; but for the sake of brevity the particulars have not been entered on.

Colonel
G. Barney.

APPENDIX B.

24 Aug., 1858.

RETURN shewing the number of Runs remaining to be assessed at the period when the reduction of certain Commissioners' Districts were recommended.

Name of District.	No. of Runs to be assessed.
Albert	91
Lower Darling	117
Maneroo	Nil.
Murrumbidgee	130
Lachlan	30
Wellington	1
Bligh	82
Liverpool Plains	6
Gwydir	17
New England and M'Leay	80
Clarence River	23
Moreton and Darling Downs... ..	Nil.
Maranoa	57
Wide Bay and Burnett	156
Leichhardt	76
Port Curtis	24

RETURN shewing the number of Tenders remaining to be reported on at the period when the reduction of certain Commissioners' Districts were recommended.

Name of District.	No. of Tenders to be reported on.
Albert	27
Lower Darling	51
Maneroo	14
Murrumbidgee	7
Lachlan	41
Wellington	3
Bligh	91
Liverpool Plains	1
Gwydir	20
New England and M'Leay	Not any.
Clarence River	14
Moreton and Darling Downs	9
Maranoa	31
Wide Bay and Burnett	56
Leichhardt	396
Port Curtis	103

APPENDIX C.

RETURN shewing the number of Runs in the Old Licensed Districts entitled to Leases under the Orders in Council, 9 March, 1847.

Name of District.	No. of Runs.
Lower Darling	12
Maneroo	166
Murrumbidgee	243
Lachlan	214
Wellington	124
Bligh	176
Liverpool Plains	149
Gwydir	100
New England and M'Leay	162
Clarence River	51
Moreton and Darling Downs... ..	91
Maranoa	9
Total... ..	1,497

FRIDAY, 27 AUGUST, 1858.

Present:—

Mr. ALDCORN,
Mr. DONALDSON,Mr. FORSTER,
Mr. MORIARTY,

Mr. WHITE.

G. B. WHITE, Esq., IN THE CHAIR.

John Thompson, Esq., again called in, and further examined:—

1. *By the Chairman:* It is stated in the evidence of Colonel Barney that there is a responsibility attached to the office of a surveyor now which there never was before—can you explain what that responsibility is? Colonel Barney, I apprehend, referred to the district surveyors. J. Thompson,
Esq.
27 Aug., 1858.
2. In what way are they more responsible now than they were formerly? They have to superintend the working of all the assistant surveyors and licensed surveyors in their respective districts.
3. In what way are they more responsible for the duties of the department than officers who formerly held a position in the service—do they give any security to the Crown for the way in which they carry out their duties? They give no security whatever.
4. Is it not important that persons holding that responsible office should be experienced men? Undoubtedly.
5. Is it the case that the most experienced men in the service have been appointed for that duty? I am not prepared to answer that question; I had nothing whatever to do with the appointments.
6. Then you cannot say that these men have been selected for their colonial experience? I am not at all aware of the reasons for their appointment; I was not consulted.
7. With regard to the salaried and licensed system, I think you have already said you considered the salaried system much more expensive than the licensed system? Yes.
8. And that there are no more responsibilities attached to one system than to the other? I do not exactly follow you.
9. That there is no more responsibility upon the officer who holds office directly from the Crown than upon one who performs work under a license or contract? There is more responsibility attached to the salaried officer.
10. A similar responsibility to that of the licensed surveyor at present, which is actually no responsibility at all, excepting as to his character? The salaried surveyor would be considered a bailiff or servant of the Crown.
11. Colonel Barney says—"In fact, no one can know better than the Honorable Chairman that the permanent staff involve the expenditure of money in a variety of ways, where that expenditure would not be incurred under the system of licensed surveyors. For instance, last year, during nearly four months it was so extremely wet that surveyors could not go out to work at all, but at the same time they were all paid, their horses had to be fed, and their equipments to be kept in order"? Yes, of course.
12. Then the large fees given to the licensed surveyor are given to cover all these losses that may arise? No, that was not contemplated when the scale of fees was framed.
13. Do you not think that similar remarks might apply to any other service of the Government—to any service where out-door work is necessary, where they could not perform their duty in a certain state of the weather? Of course.
14. Colonel Barney, in answer to Q. 49—"Still, the licensed surveyor must be paid sufficient upon the whole to enable him to sit idle during those seasons"?—says the scale has enabled him to do that; it has been high hitherto, but it has been reduced. Do you mean to say that was not contemplated at all? Yes, to the best of my recollection, it was not contemplated at all.
15. Colonel Barney, in speaking of the work of the licensed surveyor, says he thinks the work is sufficient for the purpose—do you not imagine that, if work is to be done, it should be done well? There is only one way to do it, and that is to do it properly.
16. In selecting individuals for positions of trust in the department, with whom does the selection rest? With the Surveyor General and the Minister of Lands and Public Works.
17. With the Minister of Lands and Public Works? Yes.
18. Then the change that has taken place in the department with regard to the new arrangements has originated with the Minister of Lands and Public Works? Yes.
19. The Minister of Lands and Public Works, in making such a selection from the officers of the department, I should imagine is governed by the histories of the officers given by the department? I cannot say what may have passed between the Surveyor General and the Minister, but I apprehend that the Surveyor General recommended certain officers.
20. Colonel Barney says—"It is very hard in some cases, but you must be aware that where a number of gentlemen are employed in a department, some may be considered more competent than others—some more diligent than others." How is it that the competence or diligence of an officer is arrived at? From the experience which the Surveyor General has of their work.
21. It has been said the Surveyor General never goes in the field? Colonel Barney has never been in the field.
22. It has already been stated that there is no supervising officer? In the field? There was not formerly, but now there are four district surveyors.
23. But to select these district surveyors it is necessary that some one should know something of them. This is the question that is answered in the way I have read: "It is very hard in some cases, but you must be aware that where a number of gentlemen are employed in a department,

J. Thompson, Esq. "department, some may be more competent than others—more diligent than others." I should like to know the standard by which competence or diligence is arrived at? I am not in a position to answer that question. I should be glad if I could; but I was not consulted in these matters.

27 Aug., 1858.

24. Officers belonging to the surveying service may be in the field for months together without having ever seen their homes, I believe? Yes.

25. While officers at head-quarters have their daily office hours? Yes.

26. They go to their offices now, I believe, at nine A.M., and remain till four P.M.? Yes.

27. The officer who is in the field is constantly on duty? Yes.

28. He has no home to go to, except his tent, and, consequently, during the whole time he is away he must be on duty? Yes. I think I have given evidence to that effect before.

29. Before we can arrive at anything like an accurate survey of the Colony, do you not think it would be necessary almost to recommence the survey? I do not see the exact meaning you attach to the word "accurate;" if you mean a truly perfect, geodetic survey, of course trigonometry in the higher branches would be necessary.

30. You are aware that the descriptions of land, as given in the deeds, in many instances do not correspond with the land as measured on the ground? Yes.

31. Consequently, if a parish is eight or ten miles broad, and every farm in that parish is described as eighty chains, when they are eighty-one chains, or eighty chains and a-half, there would be an error in every parish of several chains in a mile? Yes.

32. *By Mr. Moriarty*: Do you remember on former examinations stating, with regard to supervision in the field, that you did not think it possible that any supervising officer can supervise with any degree of efficiency a district spread over such an extent of country as that now placed under a supervising officer? Yes; and I suggested that there should be seven or eight supervising officers.

33. In fact you think the present system of supervision is incomplete? Yes.

34. *By the Chairman*: In the Report made by the Commissioners on the Survey Department, in 1855, it was recommended that each surveyor should have the assistance of a draftsman; that has not been carried out, I believe? It has not.

35. It has been done in one instance, at Moreton Bay? Yes; but the surveyor at Moreton Bay is an office man.

36. Has he no field duty to do? He has, and the draftsman has charge of the office in his absence.

37. Who is the draftsman at Moreton Bay? Mr. John Perry.

38. He has been in the department before, has he not? Yes.

39. More than once? Yes, more than once; I think he was a clerk in Sydney.

40. *By Mr. Moriarty*: Who is the officer in charge at Moreton Bay? Mr. Burrows.

41. Is he stationed at Moreton Bay permanently? Yes. There is an office at Brisbane, a regular branch of the Survey Department to a certain extent, as directed by the Waste Lands Act.

42. This officer is required to attend the office? Yes, occasionally, for it is understood that he has the supervision of the whole district.

43. He is also Crown Lands Commissioner for Darling Downs? He is.

44. Is he one of the supervising officers? Yes; he is the "district surveyor"—that is the term used now.

45. *By the Chairman*: You were Deputy Surveyor General, in charge of the department, when Colonel Barney became Surveyor General? Not in charge; I was Deputy Surveyor General, but not in charge.

46. Colonel Barney succeeded Sir Thomas Mitchell? Yes.

47. As soon as Colonel Barney took charge you were ordered out on field duty? Yes, shortly afterwards.

48. How long did you continue doing duty in the field? I only took one journey.

49. What was the peculiar duty you performed on that occasion? It was very various; I had to see that the railway surveyors were properly equipped, and were carrying on their work; I had to see that all the licensed and salaried surveyors were at work, and were properly equipped, and that their work was being properly executed; I had to inspect the Local Land Offices, to turn my attention to lines for railways and for roads, and to make general inquiries on any subject connected with the business of the department.

50. That was the first time in the Colony that you were ever practically employed in making surveys? The first time I was ever out on duty—no; that is not quite correct, for I had been to Maitland before.

51. On similar duty? On similar duty.

52. *By Mr. Moriarty*: You made various expeditions, did you not? Only two; I had forgotten the Maitland one; it was only a short excursion; the second journey was a very long one.

53. *By the Chairman*: The Surveyor General states that he considers it to be the duty of the Deputy Surveyor General to be constantly in the field, why then did he cause you to discontinue your duties in the field? There was some difficulty about my expenses, and the matter was dropped.

54. How many branches are there belonging to the Surveyor General's Department now—how many distinct heads are there? Three, I should say.

55. Will you name them? The survey, the drawing, and the clerical—of course there are some subdivisions.

56. Do you know if it was the general complaint of officers in the service that the allowances for field equipment and travelling were not sufficient—was it not a cause of general dissatisfaction? Yes.

57. You yourself experienced that you could not travel in the country without means? Certainly.

58. Do you consider that the allowance given to the officers at the time the money allowance was given was sufficient? I did not consider it sufficient.
59. Who arranged these allowances? I cannot exactly say, but I apprehend the Chief Clerk, as financier of the department, in consultation with the Surveyor General would make suggestions about these allowances, and before Responsible Government commenced the Colonial Secretary had a voice sometimes in these matters, because the Governor's authority was then required for all expenditure.
60. Do you not consider that the Surveyor General, as head of so important a department, should have the entire control, and that neither the Colonial Secretary nor any other man should interfere with the details of the department? Yes.
61. Do you not think the public business would be more efficiently performed if the head of the department were alone responsible for carrying out these details, and that if he could not do so he should be removed? Yes.
62. Do you not think the field allowance—the forage, in fact the whole Commissariat of the department—has been the cause of a good deal of the inefficiency of the service? You mean the inefficiency of the service in former times?
63. Yes; I mean that in former times the same forage allowance was given to an individual in Sydney as to one who had to journey five or six hundred miles into the interior, or to the extremity of the Colony? I am not sufficiently acquainted with the history of these allowances to be able to express an opinion.
64. All sorts of experiments have been tried with them? Yes, all sorts.
65. The experiments having been made at the expense of an individual who had no voice in the matter? That I cannot reply to.
66. You had nothing whatever to do with the railway surveys? Yes, I had for a short time. I prepared the instructions to the railway surveyors.
67. Have you a copy of these instructions? No, but I will procure a copy. (*Vide Appendix A.*)
68. Did you recommend the system now adopted in making surveys for railways of taking sections from point to point, or of first finding out the line and then taking the sections of the line as defined? The instructions were founded upon a draft supplied to the office by the railway engineer, Mr. Brady, and did provide for an examination of the tract of country through which a railway was proposed, and the taking of what are called flying levels, as the first steps.
69. Do you not conceive that in making surveys for railways the first object should be to find portages of water, and then to arrange the levels to meet those portages? Yes; but when a country is much broken there should be a most accurate survey of the features of the whole line of country through which the railway is to pass, so that an engineer in his closet should be able to sketch out his lines upon paper and consider their practicability.
70. Do you not think a great deal of the work now it is performed, having been performed only with regard to cross sections—sections from point to point—is now perfectly useless? A great deal of it.
71. Is it your opinion that the men sent out from England for the purpose of making these surveys of the country were capable of performing the duty—do you think they knew the topography or features of the country at all? Of course not; they were merely competent to take levels.
72. Do you think it should be left to Non-Commissioned Officers of Sappers and Miners to suggest lines of railway? I think not, certainly.
73. They may be very competent after the lines have been fixed upon to carry out the mere sections of the country? Yes, to level and chain.
74. *By Mr. Moriarty:* Are the trial surveys of railways made under your direction? Not now, but they were for a short time. Before I went on my journey I had the business of the railway surveys in my hands.
75. Not since? Not since.
76. *By the Chairman:* Some lines of railway have been carried by officers of the service, Mr. Shone, for instance? Yes.
77. The surveys, I suppose, are in the office now? Mr. Shone's plans of his surveys and levels were in the office, but they are now in Capt. Martindale's office.
78. Were you ever employed in surveying before you came to this Colony? Yes.
79. Did you ever make any survey? Yes. I am very anxious, if the Committee will allow me, to make a statement of my professional and official experiences.
80. My question was put with a view that you should do so—will you now be so kind as to make any statement you may see fit to the Committee? I was articled to Mr. Pawley, a friend of my father, for five years, and I served my articles. Mr. Pawley was in charge of the drawing branch of the Quarter-Master-General's Department at the Horse Guards.
81. In the military branch of the service? Yes; he was allowed private practice, and was extensively employed by engravers and publishers.
82. Was that as a compiler or as a surveyor? As a geographer.
83. In getting up maps of the counties geographically? Yes, and atlases and illustrative maps and plans. My attention was directed to the compilation and construction of maps and charts of all sorts, drawing plans, and other geographical work. For instance, I was employed to correct for Pinnock his edition of Goldsmith's Geography. During my articles I received my mathematical education. Mr. Lee, the then Secretary of the Royal Society, consented to receive me as an evening student, and with him I went through an entire course of mathematics.
84. You have been in the habit of constructing maps upon all projections? Yes. With Mr. Lee I went through Euclid, conic sections, spherical trigonometry, fluxions, algebra, Brook Taylor's Mathematical Perspective, &c., and when I left Mr. Lee he said I was competent to calculate the orbit of a comet. This peculiar education was intended by my family
to

J. Thompson,
Esq.
27 Aug., 1868.

J. Thompson, Esq.
27 Aug., 1828. to fit me to go into the India House, where my uncle, Mr. James Malbon, had charge of the Hydrographic Office, and had the custody of all the charts and maps. Captain Horsburgh, the Company's Hydrographer, was compiling in my uncle's office. He was very aged, and it was thought I might succeed him also—the two offices being combined. However, before my articles were out, the Company's Charter was so far abrogated as to render the Hydrographer's Office no longer necessary, and there was an end of that plan. At the end of my articles I had to turn my attention to other matters. I became, I may venture to say, one of the best pictorial plan draftsmen in London.

85. That is more ornamental, perhaps, than useful? Yes. I will come to the surveying presently. I wish to give the Committee an idea of my professional education. I studied landscape painting; was a pupil of Copley Fielding; and I exhibited. I then turned my attention to surveying. I placed myself under Mr. Dean, one of the Duke of Bedford's stewards, a celebrated surveyor and engineer; and the first thing I was employed upon was a pictorial plan of Blenheim, for which I had to survey and sketch all the features, and the gardens, &c. I then went to the Peak of Derbyshire, for the purpose of running levels for canals. Here is my book of the levels. (*The witness produced the same, and read—“Field Book of the Levels taken on the line of the proposed Grand Commercial Canal, 1824.”*)

86. The canal was not formed, then? No. These are the flying levels. Here is the prospectus. (*The witness produced plan of the same, and read—“Surveyed by Charles Dean and John Thompson.”*)

87. What is the extent? Altogether about seventy miles. On my return to London, I was engaged upon a survey of the Maidenhead Commons. I made the whole of this survey myself. These are the field-books of that survey. (*The witness produced the same.*) I was then sent to Ireland to make a pictorial plan, and sketches of the scenery of Ballinlough Castle estate. I was afterwards employed to draw plans for William IV, then Duke of Clarence, of his residence in Busby Park. The celebrated Loudon, the author of the *Encyclopædias*, then sought me out; he had lost the use of his arm, and he proposed to me to assist him in his drawing, and agreed to instruct me in landscape gardening, which was his profession. It was then I first began to write for the public on subjects connected with my profession; Loudon's Magazine afforded me the opportunity. Here is my first article. (*The witness produced a volume of Loudon's Magazine.*) “Remarks on the effect of Lombardy poplars on park scenery, by John Thompson, Land Surveyor and Pictorial Draftsman.” Here is another, “Remarks on the effect of Cedars of Lebanon upon garden scenery, by John Thompson.” Then here is the first design for the naturalizing and improvement of the parks. (*The witness produced the same, and read—“A design for improving the parks by extending Kensington Gardens, and continuing the Serpentine River into the Green Park, &c.”*) That is imitated in a design for St. James' Park, published in the *Mirror*. (*The witness produced the same.*) A proposal was then made to me to undertake the formation of a geographical drawing branch in the Colonial Office in Downing-street. I was there upwards of a year, compiling various maps from sketches of travellers, and from different documents they had deposited in the Library; and Sir Robert Wilmot Horton, who was then Under Secretary, and afterwards Governor of Ceylon, employed me to make a diagram for him, to illustrate an article of his for the *Quarterly Review*, to shew the uselessness of the retrenchments then agitated. (*The witness produced the diagram.*) The confinement at Downing-street did not agree with my health, and it was proposed that I should come to this Colony. At that time Sir Thomas Brisbane had sent home for instruments, proposing to measure an arc of the meridian. Governor Darling was also pressing for surveyors. At first I refused, but after a lapse of some months I consented to join the department, and I was then appointed an assistant surveyor, but with the understanding that I was to take charge of the drawing business in the office, because a great change had taken place during the few months spoken of: Governor Darling had sent home urgent despatches for surveyors, and Major Mitchell was appointed Deputy Surveyor General. However, as I thought it possible I might be employed upon surveying, and perhaps in measuring the arc of the meridian, I supplied myself with all the necessary instruments and books. I also placed myself under Mr. Lynn, a gentleman employed to prepare cadets for the East India service; and with him I studied navigation, and again went through spherical trigonometry.

88. Whose spherical trigonometry did you study? Hutton's. On the voyage I took the sun, as the sailors call it, worked the latitude and longitude, kept the ship's course on a chart of the Indian Ocean which I got from the India House; I also kept a meteorological table, so that I arrived in the Colony with the prestige of all the attainments necessary to carry on any surveying or other work which might be required of me. Mr. Oxley immediately placed me in charge of the drawing branch in the office; in about six months he died, and Major Mitchell became Surveyor General. Governor Darling treated me harshly; he cut off the allowances which the Secretary of State had specially provided I should receive. There was a long correspondence, which ended in my being obliged to work myself up by annual increase to the maximum salary of £300.

89. I think Governor Darling was instructed from home of the duties of all the officers of the different branches of the service, and the positions they should occupy? If he had been fully instructed about me he would perhaps have acted differently; because a little time after the arrival of Sir Richard Bourke he raised my salary from £300 to £500. He was pleased to say he was aware of the importance of the duties I performed, and was satisfied with my manner of performing them. He also made me Secretary of the Court of Claims, and said that his doing so was not only with a view to my merit, but for the purpose of improving my circumstances, for I had been kept very poor by Governor Darling. I may state that I conducted the business of the Court of Claims, which was very difficult, to the satisfaction of the Government and of the different Commissioners; and I at the same time acquired a considerable knowledge of the laws of real property, an important advantage to an administrative

trative officer in a new colony. A good many years passed over, and the fees of the Court of J. Thompson, Esq., Claims fell off.

90. Can you state the amount of money you received from the Court of Claims? I do not exactly remember, but a return has already been furnished to the Committee by the Chief Clerk. As the Secretaryship of the Court of Claims had been given me for the purpose of improving my circumstances, and as the fees had fallen almost to nothing, I thought it a sufficient ground of appeal to the Secretary of State for an increase of salary, and I obtained Sir Charles Fitz Roy's recommendation for another £100 per annum, which I obtained, making my salary £600. I should before have stated that Sir Richard Bourke had directed that I should rank next to the Deputy Surveyor General.

27 Aug., 1858.

91. Was not that a breach of faith with the surveying officers, and in contravention of the Secretary of State's Despatch relating to the arrangements of the service? It might, perhaps, be so considered; but it has been found impossible to adhere strictly to those arrangements.

92. It is very seldom that a staff officer either in the army or in the navy holds any rank, the extra remuneration he gets is supposed to compensate him for the loss of promotion? But it was the reverse in my case. On Captain Perry's illness, being next in rank, the charge of the department, of course, devolved upon me, and I acted as Surveyor General for fourteen months, to the entire satisfaction of the Government, although it was a very trying period for the department, being just after the gold discovery, when the diggers and settlers were anxious to invest their newly acquired wealth in land, and I had not the means of surveying to meet the demand. Sir Thomas Mitchell returned from England, and resumed the duties of his office, and I was then appointed Deputy Surveyor General. That appointment was confirmed by the Secretary of State, and on the decease of Sir Thomas Mitchell, if the custom of the British Government, or the Secretary of State's arrangement before alluded to, had been strictly followed out, I should now be Surveyor General. My competency to fill that office or the office which I now hold is, I think, sufficiently guaranteed by thirty-one years experience of the working of the department; and as something more is required from an administrative officer than a mere knowledge of the profession or business he may have to supervise, I think I may be permitted briefly to allude to my different writings on subjects connected with my profession; particularly I would mention an article in the *University Magazine*, on the elevation of the dry land.

93. That is a geological question, is it not? Yes, physical geology. And now, perhaps, I may be permitted to refer to what has taken place elsewhere with reference to the necessity for a Deputy Surveyor General. The question has been agitated several times, in consequence, I apprehend, of Sir Thomas Mitchell's not employing Capt. Perry; but the result has always been that a Deputy Surveyor General was considered indispensable.

94. A Deputy Surveyor General was found to be necessary before Sir Thomas Mitchell's time. Mr. Oxley had written home, and Major Mitchell came out as Deputy Surveyor General? Yes; the question has been agitated both here and in England, and it has always been considered that a large department like that of the Surveyor General requires two principals. Now, although Colonel Barney has been in the office almost every day since he has been appointed, yet, if he had been sick, or away upon duty, or if he had wanted leave of absence, some one would have been required to conduct the business of the department, and that one, properly, would be the Deputy Surveyor General. I ought now to apologise to the Committee for having so far trespassed upon their time, but as I believe some remarks have been made, to my disparagement, as to my fitness for the office I hold, calling in question my professional acquirements, and alleging that I am not a surveyor I have felt it to be due to myself to make this explanation.

95. A man may understand the theory of a profession very well—for instance, a man may be acquainted with the theory of surgery, but unless he were practically acquainted with it I would not submit myself to him for a surgical operation—but there is still a necessity for practice in the different branches of the profession. With respect to pictorial plans, I have seen very beautiful and very useless ones? But here is sufficient evidence of my practical acquaintance with the subject. (*Referring to the field-books produced.*)

96. You have no colonial practical work—nothing you have done in the Colony you can lay before the Committee? No. I was never permitted to leave the office. I have made but one small survey.

97. There is one question I wish particularly to ask you—I think you reported to the Government that there was no work in your office connected with my triangulation—Will you look at this book (*producing a field-book*) which I received a few days since from Colonel Barney at the office, and say whether that contains the work referred to? I have never seen this before; I was not aware that it was in the office; you must have given this to Sir Thomas Mitchell.

98. No, it was sent up to the office? It would go up to him, and he would keep it by him. He and Capt. Perry kept everything of that sort to themselves.

99. It appears then that field-books are not examined when they come in, for that has been in the office ever since I returned it in 1850? They are not examined.

100. Until I had that book I could not plot the triangulation? Just so.

J. Thompson,
Esq.

27 Aug., 1858.

No. 56-30.

APPENDIX A.

Surveyor General's Office,
Sydney, 9 January, 1855.

Sir,

A survey and level being required in extension of the Southern Line of Railway, I have to request that you will proceed with all despatch to Mittagong, taking with you Messrs. Kelly and Oliver, with the necessary instruments and laborers.

Examination
of country.

2. You will receive herewith (to be returned) plans in two sheets, on the scale of two inches to the mile, exhibiting the country between the Gibraltar Gap at Mittagong, and the town of Goulburn, to which at present your survey and levelling is to be confined. On the plan is shown by a red line the direction suggested by the Railway Commissioners as that which it appears to them the railway is likely to take. The first sheet of this plan, extending from the Gap to Paddy's River, shows not only the features of the country, but also all the alienations and the topography; whilst from Patrick's River to Goulburn the alienations, &c., are shown upon a plan on the scale of half an inch to the mile—which is also to be returned.

3. In the direction of the said red line the country is to be thoroughly examined by yourself and your assistants; and, although as far as the knowledge of the country derived from the plans deposited in this office affords, it would appear that the red line is the preferable route, still it may be that a better pass may be found through the Towrang Mountains than where the road at present passes; and you will observe, too, that on either side of Towrang, that is from Mittagong on the one side and to Goulburn on the other, there are two roads; and it may be that a line in the direction of either of these may be preferable to that suggested; but this will require much consideration and examination of the country, and particularly it will be necessary to ascertain whether Goulburn should be approached by the present road, and the Railway taken through the town, or whether it would not be better to approach Goulburn to the south of the Governor's Hill, so that a terminus there may serve for arrival and departure to the west and south without obstruction.

Trial Levels.

4. When you have arrived at the conclusion that the red line or any other line may be tried, you will return to Mittagong, and commence taking flying levels and laying down bench-marks, taking your height from one of Mr. Shone's bench-marks, as exhibited on the tracings from the plans of his survey and section now enclosed.

Bench-marks.

5. On the choice of spots for these bench-marks I need not enter, as you will be aware of what is required. I may mention, however, that, as a rule in railway surveys in this country, tree stumps when used for marks, and that will be very often, are to be notched in the roots; whilst rocky and flat places are to be marked with the broad arrow. The bench-marks are, of course, to be numbered; they are to be colored with white paint, if possible, the numbering being in black letters, otherwise the numbers should be cut, but so as to distinguish them from the numbering of the survey stations, as mentioned hereafter. At least one bench-mark per mile is to be laid down, and, where practicable, the level and heights above datum of the top of every remarkable hill, and the bottom of every valley, are to be ascertained. You will keep an accurate register of all the bench-marks laid down by you, and be prepared to explain it at any time. The flying levels above referred to, and by which the heights of your bench-marks are to be determined, may be taken without chaining; but it will be necessary that the lines of these levels, the positions of the bench-marks and their number, together with the heights, should be shown upon the plan now furnished, which will then exhibit a sort of preliminary survey, and from which, when completed, the more detailed survey may be commenced. It will be necessary, however, before commencing the detailed survey, that you forward to this office a tracing from this two-inch plan—indeed, unless the line should prove very favorable, you had better forward, from time to time, a tracing of as much as you may have completed, and particularly if any serious difficulties are presented. You will also note on your plan the character of the rocks, especially at all the spots where deep cutting or tunnelling may be required. A report on the practicability, or otherwise, of constructing a railway through the country should accompany the tracings, so that, if necessary, the Railway Engineer may be consulted.

Final Levels.

6. Eventually, when this trial line is approved of, you are to begin upon the detailed survey, by running a series of base lines through the centre of the tract of country which may have been found to be the most eligible direction for the rail, and to which you will thus confine your principal line of level. At every five chains on your base lines (to be marked by a stake) you will ascertain the height, and take therefrom, on each side, lateral levels, to an extent of ten chains, if needed; but wherever any difficult features present themselves, either natural or topographical, you will take such further levels as may put the engineer in full possession of the character of the ground—this will be particularly needed at the Gap, and at many other places along the line. You will, of course, connect your levels with your bench-marks, thus testing their accuracy; and at every twenty or thirty chains supplementary bench-marks should be laid down, to be referred to by letters instead of figures. At each of the principal stations a larger stake than usual should be driven and painted red, the numbers being also painted thereon; but, should this be impracticable, the numbers might be cut in Roman letters. The contained angle is also to be taken and noted. It will be necessary, too, in passing through forest land, to mark the trees on each side of your line, so as to indicate its direction; these marks may be the ordinary horseshoe surveyor's mark, the particulars of which you will readily ascertain in the bush.

Surveying.

7. On either side of the principal line, for a distance of twenty or thirty chains, or as far as the lateral levels may extend, a detailed survey is required, showing all the features and the topography, with the names of the occupier of land and houses, the boundaries, if possible, of original grants, names of places, &c. Further to assist you in this part of your survey, tracings from plans of the immediate neighbourhood of Goulburn are enclosed, as well as tracings of the villages of Marulan and Murrumbah.

8. You will prepare a plan of your survey on a scale of ten chains to the inch, ^{Plans.} showing all the features, the topography, and the levels; the features and the topography you will show in black; the base or survey lines, with the five chains stations and the bench-marks, you will show in red, but the principal stations (that is, where the direction of the line changes,) you will show and number in blue; your heights in feet are also to be shown in red, but the lengths and bearing of your lines, as well as the contained angle, are to be in black. The magnetic meridian is to be shown by these blue lines drawn across your plan at distances of six inches. Your plan is also to contain a tabular form in full explanation of the coloring and marking as is hereby directed. A separate plan, showing a section of the main line of level, as well as of any lateral lines of importance, will also be required; such plan to have the horizontal scale four chains to the inch, and the vertical scale 40 feet to the inch.

9. The plotting, drawing, and finishing of the plans are to be done on the ground.

10. The levels will be taken by yourself, whilst the chaining and the sketching of the topography and features, and the laying down the marks, may be confided to your assistants. I have no desire, however, to confine you to any particular arrangement, as it will be better perhaps that the labor should be divided according to your respective attainments, and experience.

11. In confiding to you the direction of such an important part of the Southern Line of Railway, I look to receive from you and your coadjutors such plans and reports as may be creditable to the department; and I trust that all care and diligence will be exercised in carrying out these instructions.

12. You will not hesitate to apply to me, by letter, for any further instructions, assistance, or tracings that you may require, observing, however, that the rules of the department require that every separate matter should be the subject of a distinct communication.

J. W. Condon, Esq.,
Assistant Surveyor for Railways.

I am, &c,
GEO. BARNEY,
S. G.

WEDNESDAY, 1 SEPTEMBER, 1858.

Present:—

MR. ALDCORN,		MR. MORIARTY,
MR. FORSTER,		MR. PIDDINGTON,
MR. WHITE.		

G. B. WHITE, Esq., IN THE CHAIR.

Colonel George Barney again called in, and still further examined:—

[The Clerk of Committees read Mr. Gorton's letter appended hereto.]

1. *By the Chairman:* Will you be kind enough to state to the Committee when you became aware of Mr. Gorton having applied to me, as Chairman of the Committee upon the Survey Department, to be examined? I do not exactly remember what day it was, but I saw you a few days after, and asked you the question—whether Mr. Gorton had applied to you personally, and I informed you that he had acted without my knowledge. I did not give credit to it when I first heard of it—I did not think it possible that an officer under my orders would adopt such a course without my sanction. Colonel G. Barney. 1 Sept., 1858.
2. He had not at the time received your sanction? He had not.
3. Do you conceive it to be necessary that any officer belonging to your service, if required to give information to a Committee sitting to inquire into matters with reference to your department, should first apply to you? It would be etiquette to do so, but I have never thrown any difficulty in the way, and should never think of doing so; but in this instance I was not aware whether he would be brought before the Committee or not. He never asked me in any shape—I should have given him permission, as a matter of course, had he asked me. I do not exactly remember the date, but I apprehend it must have been before it was publicly known that he was to be brought before the Committee. He never applied either to me or to the Secretary for Lands and Works.
4. After having received your permission to attend the Committee would it have been necessary that he should have applied to the Secretary for Lands and Works? He ought to have applied to me, as a matter of course, as head of the department; but had he applied to the Secretary for Lands and Works I still should have asked him the question—why did he not transmit the application through me, as head of the department, that being customary in all cases.
5. How long has he been in the department under your orders? I do not recollect. He was in the department when I joined it.
6. Has he generally been efficient in the branch of the service to which he has been attached? Not altogether efficient, or else I should have recommended him for a higher salary; but I have had to find fault with his work on several occasions. I could bring an instance forward: There were two gentlemen placed under him to conduct a certain duty, and there was an important circular placed in his hands to be issued. I presumed the circular had been issued and was awaiting replies to it; finding they were longer than I considered they ought to be, I sent to ask on what day the circulars were despatched, when, to my surprise, I found they

Colonel
G. Barney.
1 Sept., 1858.

they had not been despatched at all—they were placed in Mr. Gorton's hands, and he says he handed them to the gentleman working with him; and when I asked whether the circulars were forwarded, he found them under this gentleman's papers. It was his business to see that they were sent away.

7. Did the questions which have been read originate with you? Yes.

8. Not with Mr. Halloran? Not with Mr. Halloran. I do not know how such a surmise could have originated; it was my own memorandum. I thought the conduct of Mr. Gorton was very improper; in fact, there is a disposition with more than one gentleman in the office to oppose Mr. Halloran, and to originate privately vexatious complaints against him; they think to annoy him.

9. You must be aware that Mr. Halloran has been supposed to have a great deal too much power in the office for a long time? I am aware of it. During Sir Thomas Mitchell's time he was accused of writing improper letters to surveyors; in fact, it was said that letters of censure generally originated with Mr. Halloran. Now I have looked over a great many of Sir Thomas Mitchell's memoranda, and have found that statement to be not correct.

10. But some extraordinary letters were written when Sir Thomas Mitchell was not in the Colony? Those, I presume, must have been written by Captain Perry or by Mr. Thompson. A question of that kind came before me connected with Mr. Galloway's case. Mr. Galloway accused Mr. Halloran of originating a paper that had been despatched from the office. He found great fault with it, and wrote a very improper letter on the subject, which he was afterwards compelled to withdraw. It was not done at the instance of Mr. Halloran, and Mr. Galloway admitted that by the withdrawal of his letter.

11. You are aware that the general complaint has been that while this has been called the Survey Department, the surveying officers have been kept at about the same salaries, while the salaries of officers in every other branch of the department have been increased in an extraordinary ratio—for instance, draftsmen were limited by the Secretary of State's Despatch to £200 a-year? It is impossible we could get competent draftsmen at £200 a-year.

12. What does your first draftsman now receive? The salaries vary from £200 to £650: Mr. McLean receives £650.

13. While the salaries of the surveyors have not been increasing, the salaries in every other branch have been increased doubly? I am not quite certain whether I proposed an increase to the Survey Department; but, of course, all these increases have been approved by the Secretary for Lands and Public Works.

14. You are aware that the general complaint of the surveyors in your service has been that there has been an undue interference with them by the clerical branch? There has been one or two complaints, I believe; but I do not know that I have had any other than that of Mr. Galloway before me.

15. Are you not aware that I wrote once to the Colonial Secretary, and once to the Surveyor General, upon that subject, about ten years back? No, I am not. When I joined the department I submitted an estimate to the Government for carrying on the work of the department, which was not approved of, as being excessive, and I think very possibly I provided in that estimate for larger salaries for the surveyors, but I am not quite sure of that; at all events the estimate was not approved.

16. In an inquiry of this description extending over so many years back it is necessary that the Committee should obtain every information possible, and persons desiring to give such information should not be interfered with by heads of departments? Not at all, and I am willing to give every possible information from the records of the office, but I cannot be expected to be fully acquainted with matters which occurred so many years prior to my connexion with the department.

17. While the Committee are endeavouring to obtain this information, is it not your opinion that no person should be interfered with so long as he gives correct information? Certainly not.

18. These notes to Mr. Gorton and Mr. Darke originated with yourself? With myself. If I have committed a breach of privilege I am sure I had not the slightest idea of doing so at the time. I wanted to establish my complaint of insubordination on the part of Mr. Gorton, but any desire to interfere with the Committee never crossed my mind—I had not the slightest intention of such a thing.

19. You are aware that a similar complaint has been made with regard to interference with a witness who was examined before the Committee on the late Railway Accident? I have had too much work on hand to admit of my reading all these reports, but these questions now under consideration, if I remember rightly, were put before I had any knowledge of the time Mr. Gorton was to come before the Committee.

20. You are not aware whether these questions were put before or after he came to the Committee? I apprehend it was before he came; however, I do not know when he came before the Committee.

21. The date when he was examined was the 5th August? I did not know that he had been before the Committee at the time I wrote the questions. I had not the slightest idea of attempting to injure him with the Committee, it was merely to support my report of his insubordination, and it certainly was an act of insubordination his asking to be brought before the Committee without my knowledge.

22. May I ask you if Mr. Darke asked permission to come before the Committee? No.

23. Did he not submit a petition to you before it was sent to the House? No. He asked me if I had any objection to his bringing some matter before the Parliament, and I said, "You may send as many petitions as you please."

24. Did he submit the petition to you? No; it was casually he asked the question, while I was in conversation with him. I fully anticipated he would then have sent his petition through the usual course. It might have been presented by Mr. Secretary Robertson if it had been sent in the usual way.

25. *By Mr. Piddington*: I think you say you had made a complaint of insubordination against Mr. Gorton? Yes.

26. Upon what grounds had you made that complaint? I will tell the particulars of the case: Last year a precisely similar instance occurred to that which has taken place this year. When certain of the estimates were under arrangement, Mr. Gorton considered that he was entitled to a higher salary than that he received; I was not of that opinion, and the consequence was, that he addressed a very improper letter to the Secretary for Lands and Works, which he was eventually compelled to withdraw. Mr. Secretary Hay's reply to this gentleman was to the effect that Mr. Gorton must withdraw his letter, which was of an insubordinate character, and that if he brought the matter forward again it would be his (Mr. Hay's) duty to recommend his dismissal. This year he did precisely the same thing, and had to withdraw his letter in the same way. This being the second time Mr. Gorton had shewn an insubordinate spirit, I acted upon Mr. Secretary Hay's letter, but, instead of his dismissal, I recommended that he should be allowed to obtain service elsewhere.

27. *By the Chairman*: Will you furnish the Committee with a copy of the letter sent to Mr. Hay? I will. (*Vide Appendix A, No. 1.*)

28. *By Mr. Piddington*: Then your complaint of insubordination was not made in reference to the circumstance of Mr. Gorton's examination before this Committee at all? Not at all.

29. It was not at all connected with it? I think that my report of his insubordination had been submitted previous to the examination of Mr. Gorton. I certainly was not aware that he had been examined. I asked the questions alluded to with the view of supporting my statement of his insubordination.

30. Then, in fact, his conduct here was taken into consideration with reference to the charge of insubordination? Yes, it was, so far as previously stated.

31. But his conduct here as a witness was taken into consideration by you in support of that charge? Not his conduct as a witness; it was an act of insubordination to apply privately to the Chairman of a Committee to be brought forward for examination without my knowledge.

32. Then that, in addition to his former conduct, was viewed by you as an act of insubordination? That was an additional act of insubordination.

33. I think you have stated you would have permitted Mr. Gorton to have given evidence if he made an application to you? Yes, decidedly.

34. His non-application was viewed by you as a breach of etiquette—I think you used that term—rather than anything more serious? As an act of insubordination.

35. I think you stated that it was a breach of etiquette? It was a breach of etiquette certainly.

36. Then which portion of Mr. Gorton's conduct weighed most with you in reference to your recommendation of dismissal? It was in connection with his previous conduct, as already stated by me.

37. If Mr. Gorton had not been examined before this Committee would you have viewed his application as a sufficient reason for recommending his exchange? Decidedly; I had done so previous to learning that he had been examined.

38. *By Mr. Moriarty*: May I ask you whether Mr. Gorton's case was pending at the date of the memorandum to him? I did not know when he came before the Committee.

39. I ask you whether this correspondence was pending or was decided upon by the Government? It has not been decided upon yet, that I am aware of; it will await the report of the Committee, I presume.

40. Then you had, previously to writing this memorandum, recommended the exchange of Mr. Gorton? Yes; and it was merely in support of that recommendation that I adverted to those questions in my report to the Secretary for Lands and Public Works.

41. Do you remember what was the interval between Mr. Hay's intimation that a renewal of this application would lead to Mr. Gorton's dismissal and the second application? Nearly twelve months; it was at the time of the preparation of the Estimates.

42. When the matter was renewed this year by Mr. Gorton you carried out Mr. Hay's intention? Yes. The course pursued by Mr. Gorton kept the office in a state of disorder, and hindered the public work. When my letters were sent into the office to be copied, whatever the questions were, were discussed by the clerks; they canvassed these matters instead of attending to their duties. If Mr. Gorton had asked my permission to have gone to Mr. White, or had wished to make an official application through me to be examined by the Committee, as a matter of course I should have acceded to his request. I had done so a few days previous to Mr. Darke, who asked me verbally whether I had any objection to his submitting his case to the Parliament. I said, "No; you may submit as many cases as you like."

43. *By Mr. Piddington*: I suppose you view it as necessary to due subordination in every department that in a case where a subordinate is required to be examined before a Committee of this House that he should previously obtain the consent of the head of his department? No; I have considered this a positive authority, and have never interfered in such a case; but as a point of etiquette I consider it to be due to the head of the department.

44. *By the Chairman*: Do you not think it an extraordinary power to give to the Chief Clerk, the selection of gentlemen for promotion? Upon whom can one depend if not upon a Chief Clerk who has been from twenty to thirty years in a department?

45. Still, does it not open a door for favoritism; if an officer standing in a certain position is not fit to fill the office next above him, is he fit to be in the office he holds? In this instance the person next to Mr. Halloran (Mr. Armitage) is a very competent person, and his opinion, in addition to that of Mr. Halloran's, is taken in matters relative to promotion—he is very conscientious.

46. *By Mr. Piddington*: What is the system of promotion adopted in the Survey Office? It is distinctly understood, and was more particularly laid down by Mr. Hay, when he was

Colonel
G. Barney.
1 Sept., 1858.

Colonel
G. Barneby.
1 Sept., 1868.

Secretary for Lands and Public Works, that promotion was not to depend upon seniority, unless that seniority were accompanied by competency and attention to duty. A memorandum to that effect was issued, and placed over the mantle-piece in the Chief Clerk's room; it was read at the time, and was fully understood by all.

47. *By the Chairman*: That may apply to officers upon joining the establishment now, but it can scarcely apply to those who entered twenty years ago? I am alluding to my own time.

48. *By Mr. Piddington*: I presume the claims of seniority would be considered in connection with competency? Yes, that is distinctly stated.

49. In reference to competency as constituting a ground of promotion, what is the test of competency, and by whom is the party subjected to the test? The accuracy with which the work is performed, and the period within which it is performed, are the two great points.

50. Who is the judge of these? I am the judge of them; but of course I am in a great measure guided by the two senior officers of that branch of the department. I am alluding entirely to the clerical branch of the department.

51. Do you invariably take the opinion of the two officers next to yourself in cases of promotion? Yes, invariably; but then I make personal inquiries myself. In the case of Mr. Gorton, I examined the books, and I brought forward the charge to which I have alluded, of neglecting to send these important circulars, and leaving it entirely to the gentleman immediately under him.

52. What obstacle is there to prevent you alone from being judge of competency in the case of clerks in your own office? I may be judge of the competency of clerks, but there may be other points in connection with their attention to their office duties, and their conduct in the office, upon which I may require information.

53. Do they not come under your notice in both these particulars? They do; but it is hardly to be expected that I can be acquainted with all the clerks in the office, and unless I were I must give way in some measure to the opinion of those who have the immediate control of them.

54. How many clerks are there in your office? Three or four and twenty.

55. Are you not able, from your position as head of the department, to become fully acquainted with the conduct of these gentlemen in the office? Yes, I am generally; but still I do not think I should be justified in acting entirely upon my own opinion. I look to these gentlemen, the first and second clerks, for reports upon the conduct of the clerks, and upon their efficiency, and I hold them responsible.

56. You hold the first and second clerks responsible for the efficiency of the department? Yes, as far as regards the clerical branch.

57. Who is the third clerk? I do not know.

58. Why do you limit the responsibility to the first and second clerks? The first clerk has the general control altogether. The second clerk has the control of the room which he has in charge.

59. Has not the third clerk control over some other room? No.

60. There is no particular gradation after that? No.

61. *By the Chairman*: Have you a minute or note-book in which you put down any dereliction of duty? No, I have not; I have not had much fault to find with the performance of their duties by the clerks.

62. Officers may frequently be blamed without even knowing they are blamed—complaints may be made to you without their even knowing it? It may be so. It is Mr. Halloran's duty to check any of the clerks whom he may find neglecting their duty.

63. If it is found necessary to make a complaint of an officer to you, is he warned of it, or does any investigation take place—has he any opportunity of defending himself? I do not remember any case of an officer having applied for an investigation.

64. Officers in the service have applied for investigations? I do not remember any during my time. If an investigation were applied for, as far as I am concerned, I would not refuse it. I think it my duty to give officers under me every opportunity of explaining anything that may be brought against them.

65. *By Mr. Piddington*: Do you think you could perform the duty of your office with a fewer number of clerks than you have? No; I am decidedly of opinion that we want more.

66. What are the hours of attendance? From nine to four.

67. Have you any means of testing the attendance at the hours you have mentioned? Yes. I am always in the office at the hour fixed. I used to keep a record, but I found it open to abuse and objection, and I did away with it, with the understanding that if I found any gentleman absent at the usual time for commencing work, he would have to make up the deficiency by remaining till a later period than the ordinary office hours.

68. Would it not be very easy to keep a time-book? It is very simple to keep a time-book, but it is not so easy to ascertain its correctness.

69. Supposing you had a page opened for every day in the week, and that at a quarter past nine you, with your own hand, or some one appointed by you, drew a line across the page and made it imperative upon every gentleman coming after that time to sign his name below that line—would not that be an efficient method? I have no complaint to make of their attendance.

70. How do you ascertain it? The clerks must pass my room.

71. Then you rely upon your own observation? Yes, generally.

72. Is not that a doubtful reliance? If there is any particular case of delay in the attendance it is communicated to me by the Chief Draftsman or the Chief Clerk.

73. Then, in fact, the Chief Clerk as well as yourself is engaged in observing the arrival of these gentlemen? Yes.

74. Would not a book, such as I have described, have been a more simple arrangement? I found it a great nuisance to the gentlemen.

75. What was the difficulty as well as nuisance to the clerks? I do not know that there was any difficulty, certainly; I should not have used the term.
76. The chief difficulty was the nuisance? Yes. It appeared to me to be a childish kind of thing.
77. *By Mr. Forster:* Was it felt to be a duty by the persons who really attended well? Yes; they considered it a nuisance that there should be so little confidence placed in them as to render it necessary they should write their names in a book when they came in.
78. You have spoken of an insubordinate letter written by Mr. Gorton? Yes.
79. Was that letter written last year? Yes, and repeated this year.
80. In what respect did you consider it insubordinate? It was insubordinate in character.
81. Was the language disrespectful? Yes, it was.
82. Can you mention any of the terms you consider particularly disrespectful? I do not exactly remember.
83. You do not mean that the making the complaint was an act of insubordination? Yes, the making a complaint if submitted improperly; if the application was submitted direct to the Secretary for Lands and Public Works, instead of through the head of the department.
84. On what ground—according to what rule, or what law—do you come to the conclusion that all clerks are bound not to make complaints but through the heads of their departments? What is the meaning of the word head, if that is not the case? A soldier would not make a complaint to his commanding officer, but through the captain of his company.
85. You infer an analogy between military and civil service, and think the discipline observed in the one should be also in the other? Yes.
86. But clerks in your office are not subject to military law? It is a rule of office.
87. It is what you call etiquette perhaps? Yes.
88. How are clerks to understand this etiquette if they have not been long in the public service—there is no written law of etiquette, is there? No, I do not suppose there is.
89. Is it not a natural thing if a man has a complaint to make, for him to make it to that source whence he thinks he may obtain relief? I believe it to be well understood that complaints should be made through the head of the department.
90. But supposing a complaint were made through the head of a department which head chose to suppress the complaint—? Then he would be perfectly justified in adopting what course he pleased—supplying the head of the department with a copy of any letter he may have addressed to a higher authority.
91. In that case would he not be guilty of insubordination if he were to complain otherwise than through the head of his department? I do not know that he would; but I do not think any head of a department would suppress a complaint.
92. I do not say that any heads of departments now in office would do so, but such a case is possible; we have had heads of departments who have been guilty of acts of a worse character, and we might have some heads of departments who would suppress complaints? If a clerk addressed me on any subject, and I suppressed it, it would be his duty to reiterate his complaint, and to request that it might be submitted to the Secretary for Lands and Works.
93. In fact, make another complaint to the same authority, the same head, who might suppress that also? It would then be open to the junior to take any course he might think proper; it would not then be considered an act of insubordination.
94. Supposing a man to labor under a grievance, and the first and second applications to the head of his department to be suppressed, three months might elapse before he could seek redress by any other means? I do not think such a case can possibly occur.
95. Are you not aware that complaints—I am not saying whether correct or not—have been made against the Survey Department for years past, and they do not seem to have been attended to? I am not aware of any complaint from any officer of the department having been unattended to while I have been in office.
96. I am not implying that? Of course I cannot say what has been done by other parties.
97. With regard to the letter sent by Mr. Gorton to Mr. Hay, you say that letter was insubordinate? There were terms in the letter that were improper.
98. Then it was the terms you found fault with—they constituted the insubordination? That was one part of the insubordination, the other was the submitting the complaint in an irregular way.
99. Have you a copy of that letter here? No; but the letter appended to Mr. Gorton's evidence, dated 17th July, 1858, is very nearly the same.
100. Will you be kind enough to point out in this letter the terms which you considered to constitute the act of insubordination? (*The witness read a portion of the letter as follows.*)
 "In mentioning the circumstance I beg to be permitted to state that it is not my intention to cast the slightest imputation on my superior in office, but merely to shew that promotions would seem apparently to rest solely with the Chief Clerk, and that, therefore, it is evident that his protégés or favorites are sure to pass over the heads of seniors, who, from their not being entrusted to perform the duties considered to be of any importance, are prevented from shewing their capability to conduct them."—That is a case of insubordination, no doubt, as he attempts to cast an imputation upon me.
101. Upon the Chief Clerk, I should say? No; he says "his protégés or favorites are sure to pass over the heads of seniors," which implies that I give way entirely to the opinion expressed by the Chief Clerk—that I do not consider the matter myself.
102. Is not this actually the complaint he makes—this portion of the letter which you consider insubordinate—that certain promotions have been made without reference to merit? Yes.
103. Then, after all, that language merely states the complaint—there is no disrespectful language? But there is a disrespectful complaint, a statement that promotion was confined to Mr. Halloran's protégés.
104. If you prevented him making this statement would you not prevent his complaining at

Colonel
G. Barney.
1 Sept., 1858.

Colonel
G. Barney.
1 Sept., 1858.

- at all? There is no objection to his making the complaint at all, but it was an act of insubordination for him to make it without first submitting it to me.
105. That is another point; you consider the submission of this letter without your knowledge another act of insubordination? Yes.
106. You have said, in the course of your evidence, that Mr. Hay stated he would recommend his dismissal if he brought forward this matter again? Yes.
107. Then if he were thus debarred, how was he to bring forward his complaint at all? I suppose Mr. Hay meant, without submitting it through the proper channel.
108. If I understood you rightly, Mr. Hay, in his letter, stated, that if Mr. Gorton brought the matter forward at all he was to be dismissed? I forget the precise wording of the letter, but I can supply a copy of it. (*Vide Appendix A, Nos. 2 & 3.*)
109. In consequence of these instructions of Mr. Hay, you took the step you have taken with regard to Mr. Gorton? Yes, in connexion with Mr. Gorton's subsequent insubordinate proceedings.
110. What you consider to be a lenient step—instead of recommending his dismissal you recommended his removal? To some other employment.
111. Not as a surveyor at all? He is not a surveyor, but a clerk.
112. Are you aware whether he is competent? He may be competent for another class of duty.
113. Would this removal be considered a punishment? It would be considered a punishment in some measure, for the removal of a man under such circumstances cannot be gratifying to his feelings.
114. Supposing there were no other office for which he were competent, what would be done then? He might be permitted to seek employment elsewhere.
115. Might it not be possible, if this recommendation were to be carried out, that instead of punishing him you might punish the public? If he were not fit for the department to which he was sent they would adopt their own course with him. He is fit for a certain position; he might do for the position he is in, but certainly with more attention, and not entitled to an increase of pay.
116. In fact you think he is fully remunerated for what he does? Quite.
117. If he is in a place for which he is fit, will the public service benefit by his removal to another office? I think my office would be benefited by his removal.
118. You think you could get a better man for the same money? Yes. It is evident that he agitates the office, to the neglect of duty not only of himself but of others. He is occupied in writing all these papers instead of attending to his duty.
119. Do you think he causes other people to neglect their duty? I am satisfied that the papers I send out to be copied are canvassed in the office, by which the time of the clerks is occupied.
120. You mean that they occupy their time in the examination of the papers instead of in copying them? In canvassing the questions to which these papers allude; for instance, this very question of increase of pay was evidently canvassed in the office even while the papers were before them; I received numerous letters on the subject.
121. Do you not think the subject of increase of pay is likely to be canvassed at all times, in all offices, without reference to any documents that may be sent to them—is it not a very natural topic of conversation? Yes, no doubt.
122. Do you find that, in consequence of Mr. Gorton being in the particular position he occupies in the office documents are longer in being copied? I do not know; but after copying they are canvassed by the gentlemen, and Mr. Gorton must lose a great deal of time in writing his own letters originating in these documents.
123. You do not mean to imply that the subjects of the documents copied by the clerks are never to be discussed—I suppose they must have some time for relaxation? They have no time in office hours to discuss such matters.
124. Can you say that these letters are written in office hours? I cannot positively say that they are, but I have very little doubt of it.
125. You distinctly deny that the step you have taken with regard to Mr. Gorton was in consequence of anything done by him with respect to this Committee? Most positively. If I have committed any error in the matter it has been quite unintentional. I had not the slightest, the most remote idea of interfering with the Committee in any shape or way. If Mr. Gorton had asked me for permission to bring the matter before the Parliament or Committee, I should have granted it at once. My complaint is altogether confined to Mr. Gorton's personal application to the Chairman of the Committee without my knowledge—not at all in reference to further proceedings before the Committee.
126. You considered that you were merely carrying out the former recommendation of Mr. Secretary Hay? Yes, in connection with Mr. Gorton's subsequent conduct.
127. Is this a common practice when clerks are found fault with, or are not exactly competent for a particular office, to remove them to another? Yes, I believe so.
128. It is considered a kind of secondary punishment? Yes, perhaps so.
129. I suppose in all these cases there is a diminution of pay? Very possibly there may be.
130. The clerks would hardly consider it a punishment if they got increased or equal pay? Sometimes they are very glad to change to where the duties are easier.
131. In all these cases I suppose the authorities are careful to insist upon either diminished pay or increased work, otherwise the man is not punished at all? I do not know what is the course.
132. Are you aware what are the employments generally selected as punishments? I do not know that they are selected as punishments at all.
133. You imply that when gentlemen are removed from their offices they have been either incompetent or insubordinate—are you aware of any gentlemen having been made Crown Land Commissioners as a punishment? No.

134. *By Mr. Aldcorn*: You state that it is a rule, or a general practice, in your office, that all subordinate officers making a complaint shall send in the complaint to the head of the office? Yes.

135. Suppose a complaint to be against the head of the office himself, do you not think it a dangerous power to put into his hands? I do not think so, for if the officer at the head of the department will not attend to any complaint made, it is sure to become public, and would be attended, in all probability, and very properly, with the removal of the head of the department. I should never contemplate keeping back a complaint, even though it were against me personally.

136. I am speaking generally, whether it is a power that should be entrusted to the head of a department? I know it is a rule in the service, and I think a proper one.

137. *By the Chairman*: In the army a man can demand a Court Martial; that is not the case in the Civil Service—he is often condemned unheard? If an officer, or any one in the department wrote to me to make a complaint as to any one in the department, or as to myself, and had cause to suspect that the complaint was suppressed, he might then request to have the complaint sent on to the Secretary for Lands and Public Works, and it must then go on as a matter of course; it could not be withheld.

138. *By Mr. Aldcorn*: Are you not aware that when a Committee of the Legislature, the highest authority in the State, are sitting, their object is to obtain every information with reference to the subject to inquire into which they have been appointed, and may take evidence from any man who offers himself, or who is known to be acquainted with the matter; and that any such person may attend without the permission of either the head of his department or of the Secretary for Lands and Public Works? If an officer is warned by a Parliamentary Committee to attend, of course he must attend, but as a matter of etiquette he should state to the head of his department that he had been warned.

139. Suppose the case of a subordinate officer who had long attempted to get from the head of his department redress for a grievance, and suppose also that he knew a Committee to be sitting to receive information on all matters connected with the department, do you think he would be justified in coming forward with his complaint, even without communicating his intention to his superior officer? I do not think a man should privately obtain an introduction to the Chairman, and solicit to be called before the Committee—I do not think that is a proper course to pursue, for he must know well that if he brings the question forward properly before the head of his department it must, as a matter of course, come before the Committee.

140. Supposing the case had been once, twice, or thrice before the head of the department, and the grievance were unredressed, it may be for years? I cannot fancy such a case; however, should such a case arise, the proper course would be to address the Government, supplying the head of the department with a copy of the letter.

141. *By the Chairman*: As the head of the department, are your recommendations for promotion generally sufficient? I think, generally, they may be considered sufficient.

142. After you have made such recommendations have you ever found yourself thwarted in the service? By what?

143. By any other influence—have you ever been thwarted in your attempt to obtain the promotion of an officer? I do not remember a case.

144. Have you never heard that there was a great deal of favoritism at one time? Yes, years ago.

145. *By Mr. Moriarty*: How did the subject of Mr. Gorton's examination come under your cognizance? I heard it casually; I cannot bring to my recollection who told me. It was that which led me to put the questions alluded to.

146. You assumed that the examination had reference to his own case? No doubt.

147. I understood you to say that you would not have refused this gentleman permission to attend the Committee? No. I would have considered it my duty to have assented if he had applied to me.

148. Did this gentleman intimate to you in any shape that he was about to come to the Committee? In no shape.

149. He did not apprise you that he had been summoned? No.

150. Then your principal complaint against him is for having absented himself without leave? No. I did not take that into consideration.

151. That would have been sufficient in itself to have directed your attention to him? Yes. The main fault was the bringing his case forward without my sanction or knowledge.

152. You said just now there were some parties in the office willing to prefer complaints against the Chief Clerk on any subject? Occasionally I hear rumours; they do not make complaints direct to me. I hear rumours of complaints against him, but I must confess I cannot trace any just cause of complaint against him. He is a most excellent officer, and is so fully conversant with the affairs of the office that if any one commits a blunder he is acquainted with it at once.

153. *By the Chairman*: The complaint against him is for interfering with matters he does not understand? You refer to the Survey Branch. I do not think he interferes with those matters.

154. He has not the same opportunity as formerly. When the officers were supplied with their equipments by the Government complaints were made of his interference by every officer in the service. Mr. Halloran would say, "You must not have that—you cannot have this." It was like a War-Office clerk dictating to a general what he should or should not have? All requisitions as they come in are laid before me, and I strike out anything that I think is wrong.

155. An officer to know what is necessary in order to carry on a certain duty should be acquainted with that duty? Yes; but there is a certain amount of stores and other things allowed, and if anything beyond that is required a reason is asked for the necessity of the demand—explanation is called for.

Colonel
G. Barney.

1 Sept., 1858.

Colonel
G. Barney.
1 Sept., 1858

156. *By Mr. Moriarty*: This dissatisfaction which you say is existing, do I understand you, is confined to a few? A few. Understanding there were complaints against Mr. Halloran by the officers of the Survey Department, I instructed Mr. Halloran, on my assuming charge, that no letter of any description should leave the office without my signature; of course, therefore, the responsibility rests with me and not with Mr. Halloran. I carefully peruse every paper previous to attaching my signature.

157. I suppose, then, that neither the Chief Clerk nor any one else presumes to send a letter from the office without your signature? Certainly not. I have given positive orders to the contrary. I believe it now occupies me nearly two hours a-day in perusing and signing the various documents submitted to me.

158. *By Mr. Aldcorn*: Do you not think an immense proportion of this correspondence might be curtailed? I have adopted every plan I can devise to curtail the correspondence; we print circulars, and a large number of letters. I should say, upon the average, we receive eighty letters a day, sometimes as many as a hundred, and many of these are packages containing enclosures. Every one of these have to be recorded, receipt acknowledged, then they have to be entered, then they come to me for final settlement, and then the letter has to be written. Independently of this a great amount of correspondence originates in the office of the Secretary for Lands and Works; for during the last two years numerous applications for land are sent to the Secretary for Lands and Public Works, instead of coming direct to me. They are minuted by the Secretary and then sent to me, and this occasions a great deal of work. The only way by which I could at all lessen the writing would be by making minutes upon the letters, and transmitting them at once to the parties, with the request that they might be returned; but this would perhaps be a dangerous experiment, originating from the correspondence, should the papers not be returned.

159. *By the Chairman*: The establishment of the office of Lands and Public Works has increased the correspondence? I do not think anything has been gained in that respect. If the two offices were under one roof, there would be a great saving of time and correspondence.

160. *By Mr. Moriarty*: Do you not think if a great portion of the business transacted by you as Chief Commissioner of Crown Lands were placed under the Minister for Lands and Public Works, the labor would be lessened? It has been my opinion always, from the time I became Chief Commissioner of Crown Lands, ten years ago, that the Crown Lands should be under the Survey Department; for a large amount of correspondence arose between the two departments, and delay was thereby occasioned.

161. Do you think the letters before yourself and the Surveyor General exceeded fifty per annum? I do not know the number, but there was constant difficulty arising. I repeatedly stated in my letters that the duty of Chief Crown Lands Commissioner should be conducted by the Surveyor General.

162. Will you append a copy of one of those letters to your evidence? (*Vide Appendix B.*)*

163. Can you state, upon inquiry, whether or not during the eight or nine years you held office as Chief Commissioner of Crown Lands, the number of letters passing backward and forward between your own office and that of the Surveyor General exceeded fifty? Yes; the records have been examined, and it appears that 75 letters were issued in one year (1854); this probably may be taken as an average.

164. *By the Chairman*: Had you the Commissioners of Crown Lands within the boundaries under your control? No.

165. They remained with the Surveyor General? Yes; my duties were confined to districts beyond the boundaries. One of my chief reasons for suggesting that the duty of Chief Commissioner of Crown Lands should be united with that of Surveyor General, was with reference to the survey of runs for leases.

166. *By Mr. Moriarty*: Nothing has been done in that way? Not much has been done; about 120 leases have been prepared and issued under surveyed boundaries.

167. Therefore that reason does not operate? There has been considerable correspondence on the subject.

168. You are aware that the Surveyor General had the descriptions of all the runs in the Colony? Yes; they were supplied from the Crown Lands Office.

169. Do you not think the Surveyor General had in those descriptions sufficient information to enable him to go on without farther reference to you? No doubt, if he had the means; but he had not the means of surveying, consequently, the leases could not be prepared.

170. As far as the information possessed by the Government went? Yes; he had from time to time all the information the Crown Lands Office could afford. The reason why so little has been done with reference to leases, has been the want of surveyors.

171. Has it not been patent to you that Government would never survey the runs? The Survey Department had not the means; it required so extensive an estimate to provide surveyors.

172. Did you not always think it entirely out of the question? It would require great means to do it, but it certainly could be done.

APPENDIX

* Not able to be traced. *Vide* Col. Barney's letter to Clerk of Assembly, dated 17th September, 1858, appended hereto.

APPENDIX A.

No. 1.

The Surveyor General to the Under Secretary for Lands and Public Works, forwarding letters from Mr. Gorton, Clerk in his Office, and advising his removal from his Department. 1 Sept., 1853.

Colonel
G. Barney.

Submitted, 25th.

57-4169.
No. 57-206.*Surveyor General's Office,
Sydney, 24 April, 1857.*

SIR,

Mr. Gorton had no right to demand to know the grounds upon which the Surveyor General's judgment was formed with respect to his qualifications; and the Surveyor General having intimated that he considered the terms on which he had sought to learn those grounds objectionable, Mr. Gorton should have embraced the opportunity afforded him of withdrawing the letter—*He must now do so*, otherwise it will be considered that he does not wish to continue in the service.

Mr. Gorton must further understand, that, in my opinion, the Surveyor General did no more than his duty in recommending for promotion those gentlemen who were in his opinion, from experience and peculiar aptitude, best fitted to fill the higher offices in the department satisfactorily.

Mr. Gorton had no right to promotion, except in so far as he might be decided to be the best man for the office under the circumstances. As to that I should depend upon the recommendation of the Surveyor General, whom I hold responsible for the efficiency of the department, and this course I followed in sanctioning the distribution of offices proposed by that officer. If Mr. Gorton considers himself aggrieved he might appeal to me as he did, and that appeal ought to have been considered final. The valuable time of the heads of departments must not be taken up by a continued discussion of such points. My answer must be held to be conclusive, and my decision must be practically acquiesced in. Any further attempt to open the matter up on Mr. Gorton's part will be taken as indicating an insubordinate spirit, and will compel me to advise his dismissal.

J. H.

25 April.

I have the honor to submit, for the consideration of Mr. Secretary Hay, certain letters addressed to me by Mr. Gorton, a clerk in my office, and to request attention to that of the 22nd instant, which, appearing to me to be of an improper character, I gave Mr. Gorton the option of withdrawing it, which, however, he declines—see his letter of the 23rd instant.

2. It now becomes my duty to state, that I have not that high opinion of Mr. Gorton's ability or conduct which would induce me to place him over the heads of gentlemen in the office, who are conducting their duties in a most satisfactory manner, nor has the correspondence herewith raised Mr. Gorton in my estimation, on the contrary, I consider that he is setting a very bad example, and that his removal from the department is necessary.

I have, &c.,

GEO. BARNEY.

The Under Secretary
for Lands and Public Works.

S. G.

No. 2.

*Department of Land and Public Works,
Sydney, 29 April, 1857.*

Sir,

Referring to the correspondence between yourself and Mr. Gorton, a clerk in your department, relative to the promotions which have taken place in your office, which was enclosed in your letter of the 24th instant, No 57-206, I am directed by the Secretary for Lands and Public Works to inform you that Mr. Gorton had no right to demand to know the grounds upon which your judgment was formed with regard to his qualifications, and that upon your having intimated that you considered the terms in which he had sought to learn those grounds objectionable, Mr. Gorton should have embraced the opportunity afforded him of withdrawing the letter. He must now do so, otherwise it will be considered that he does not wish to continue in the service.

2. I am at the same time to state, that Mr. Gorton must further understand that, in the opinion of Mr. Secretary Hay, you did no more than your duty in recommending for promotion those gentlemen who were, in your opinion, from experience and peculiar aptitude, best fitted to fill the higher offices in your department satisfactorily. Mr. Gorton had no right to promotion, except in so far as he might be decided to be the best man for the office under the circumstances. As to that, Mr. Hay would depend upon your recommendation, you being held responsible for the efficiency of the department, and this course Mr. Hay followed in sanctioning the distribution of offices proposed by you.

3. I have further to state, that if Mr. Gorton considered himself aggrieved he might appeal to the Secretary for Lands and Public Works, as he has done, and that appeal ought to have been considered final. The valuable time of the heads of the department must not be taken up by a continual discussion of such points.

4. In conclusion, I have to inform you that this reply must be held to be conclusive, and the decision herein conveyed must be practically acquiesced in; any further attempt to open the matter up on Mr. Gorton's part will be taken as indicating an insubordinate spirit, and will compel Mr. Secretary Hay to advise his dismissal.

The Surveyor General.

I have, &c.,

M. FITZPATRICK.

No. 3.

Colonel
G. Barney. 58-6968.
1 Sept., 1858,

No. 3.

Surveyor General's Office,
Sydney, 26 July, 1858.

Sir,

I have the honor to request that you will be pleased to forward the enclosed letter to the Under Secretary for Lands and Public Works, at your earliest convenience.

The Surveyor General.

I have, &c.,
C. F. GORTON.

Mr. H.—Afford Mr. Gorton the opportunity of withdrawing this correspondence, and let me know the result to-morrow morning.

G. B.,
July 26.

Under date 26 July, Mr. Gorton declined to withdraw the correspondence.

G. B.

Mr. Gorton should put forward his claims, such as they are, more temperately. It will be necessary that he withdraw the correspondence, as suggested by the Surveyor General, 26 July. Holding, as I do, the Surveyor General responsible for the proper and efficient working of his department, I am not disposed to interfere with any decision of his, unless in an extreme case.

J. R.
31 July.

Surveyor General, B. C., 31 July, 1858.
M. F.

APPENDIX B.

Ordered to be inserted in lieu of—(Vide Minutes of Proceedings, dated 1 October, 1858.)
Survey Office,
17 Sept., 1858.

Sir,

With reference to your note of the 15th inst., informing me that my evidence of the 1st instant had been returned without the copy of my letter suggesting the advisability of amalgamating the offices of Surveyor General and Chief Commissioner of Crown Lands, intended to form Appendix B; I beg to state that at present I cannot trace any correspondence on the subject alluded to

I have, &c.,
GEO. BARNEY,

R. O'Connor, Esq.,
Clerk of Legislative Assembly.

WEDNESDAY, 8 SEPTEMBER, 1858.

Present:—

MR. ALDCORN,

MR. WHITE.

MR. MORIARTY,

G. B. WHITE, Esq., IN THE CHAIR.

Henry Halloran, Esq., again called in and still further examined:—

[The Clerk read the letters addressed by Mr. C. F. Gorton to the Chairman.]

- H. Halloran,
Esq.
8 Sept., 1858.
1. *By the Chairman*: You have heard the letter of Mr. Gorton read; and the allegation he makes appears to be, that he has been questioned both by yourself and by Colonel Barney, in consequence of having given evidence before this Committee? I think not; I think there was not any question from myself.
 2. No; the memorandum is signed by Colonel Barney, but Mr. Gorton distinctly states here—? His belief or impression?
 3. You deny having done so? The question is not yet put to me.
 4. May I ask you if your advice or memorandum was addressed to Mr. Gorton? If it were not considered to be wanting in respect to the Committee, I would say that the question would be more fitly put to the Surveyor General.
 5. The question has been asked of him? Then I would say for myself that not only did I not advise, but that I was not consulted; and that, had I been consulted, a sense of delicacy would have kept me from expressing an opinion upon a matter in which I was personally concerned. I was merely the medium of these communications, the one passing to Mr. Gorton and back, and the other to Mr. Darke and back.
 6. *By Mr. Aldcorn*: They passed through you in the usual course? Yes; they were sent to me to send across.
 7. *By the Chairman*: According to official routine? Nothing further.
 8. It would be rather a breach of the privileges of the House if any one interfered with an officer in any department for submitting himself to an examination by a Committee? I do not think it was intended to interfere with the proceedings of the Committee. The offence consisted in his not intimating, in the first instance, his desire to wait upon Mr. White to Colonel Barney. He was wanting in respect to his superior officer; not that it was strictly necessary that he should have done so, but as an act of courtesy or official propriety.
 9. Did he not intimate to Colonel Barney that he was to be examined? I think not. He sent me a memorandum of one of the meetings of the Committee, and asked me whether he should go, and my reply was that the call of the Committee was imperative; there was no avoiding that. I think he has a memorandum in my handwriting to that effect.
 - 10.

10. *By Mr. Moriarty:* Do you remember whether that was previously or subsequently to his examination before the Committee? Previously, I think, but I cannot say. If it were a notice to attend the Committee, and if that were the first notice, it must have been previously.
11. Then in point of fact he did submit the matter to his superior officer? In that way. It is not *that*, however, which I refer to as objectionable in his conduct, but to his having, appealed to Mr. White in the first instance, without mentioning his intention to the head of the department? Mr. Darke, I believe, did so, and asked if he had any objection.
12. It was not this gentleman's appearance here in pursuance of the summons to which objection was taken, but to his having taken some previous steps to be examined? Yes: I think that was considered objectionable. When he *had* received a notice from Mr. Calvert, and put the question to me whether he should attend, I said "Certainly, the order is imperative."
13. Did you make the Surveyor General aware of his having mentioned the matter to you? It is very likely I did.
14. From the tenor of the Surveyor General's remarks in his examination I gather that it was the neglect of Mr. Gorton to acquaint his superior to which he attached the most importance? I think not; but to the preliminary appeal. He may not have remembered, for, as you yourself may have observed, his memory is not a very faithful one.
15. Can you inform the Committee in what position the matter stands at present—whether Mr. Gorton has been suspended? No; he is still in the same position.
16. He has not been suspended? I have not heard a word of that.
17. Has not the Surveyor General recommended that he should be dismissed, or removed to another office? That he should exchange into another department, or find other employment.
18. *By the Chairman:* Is that in consequence of what occurred before this Committee? I can produce a draft of the letter. I did not write it; and I have not, therefore, a distinct recollection of every word.
19. *By Mr. Aldcorn:* Is it your impression that the recommendation was made in consequence of what took place here? *Certainly not*; but because he is dissatisfied, and he will remain dissatisfied until he is placed in a better position; and I am of opinion that his position is as good as his capacity entitles him to expect. His correspondence shews that he does not even spell correctly.
20. Have you any idea what he has been? I believe that originally he was a midshipman, that he afterwards studied for the Church, and afterwards kept a small school.
21. He has stated to me that he was a lieutenant in the navy? I think he was a midshipman, and that afterwards he acted as a teacher to some of Sir Thomas Mitchell's children. Sir Thomas Mitchell brought him into the office.
22. *By the Chairman:* The Minister for Lands and Public Works has been informed of the circumstances connected with this case? He has, every document.
23. And the letters which have been written since his examination here? He has copies of the memoranda.
24. And of the letters that were sent from Mr. Hay twelve months' ago? Yes; these were sent back also. On a former occasion—when all the salaries were reduced, and mine was reduced to a much larger extent than his—he felt dissatisfied, and appealed, and appealed, and appealed, until it was necessary to check him.
25. You are not aware of the Minister for Lands and Public Works having come to any decision in the matter? No; I have not received any information, nor made any inquiry on the subject.
26. Can you give the Committee a list of all the officers who have been employed as Commissioners of Crown Lands from the beginning to the present time, the date of their appointment, the date of their leaving the service, and the salaries they have received? I have no doubt such a return can be furnished. (*Vide Appendix A, Nos. 1 and 2.*)
27. Was there an officer in the department of the name of Sanderson? There was one, a railway assistant surveyor—Henry Sanderson, to whom I think you allude.
28. He was in your department until he was turned over to the railway authorities? I heard him say yesterday to Colonel Barney that he was not ever turned over to Captain Martindale. He was originally appointed at home as a licensed surveyor, and he came out to this Colony with eleven others.
29. He came out to the Colony under agreement? For three years, as licensed surveyor. Upon their arrival it was determined not to extend the license system, and then arose the question how they should be employed.
30. They were sent for a special purpose? For the survey and measurement of Crown Lands for sale.
31. For the survey of roads, were they not? I think not—certainly not.
32. *By Mr. Aldcorn:* After they arrived here they were put upon the railway, were they not? Yes, with their own consent, at salaries of 400 a-year, and £400 for allowances. When the proposal was made to them one of them alone said he would consider the matter, but all the others readily accepted it.
33. *By the Chairman:* Did Mr. Sanderson survey for the whole three years? No.
34. He has been again appointed a licensed surveyor lately, has he not? I have seen his name gazetted, and an intimation thereof has been made to the Surveyor General.
35. The Surveyor General has refused to give him employment? I believe so.
36. Are there any papers in your office connected with this case, which would shew the position in which he stands with the Government, or why he is not continued in the service? I think I could produce them. Mr. Galloway stated that Mr. Sanderson and the other two assistants had not performed during, I think, nine months what one diligent individual could have accomplished in three.
37. Has it not been customary where an individual has been brought from home under engagement, if employment has not been found for him to pay the stipulated salary until his return, and also his passage home? I do not remember an instance.
38. Was it not done in the case of Mr. Thomas White, who was sent here? I think his passage home was paid.

- H. Halloran, Esq.
8 Sept., 1858.
39. He went home, and I believe the Home Government insisted upon his payment afterwards? His passage home was not, as far as I can learn, paid by the Government; his salary was paid up to to the 3rd January, 1843, including the period of his suspension.
40. Mr. Sanderson says the cause of his dismissal from the service was having left his station without permission? Yes, that was one of the reasons. There was also another much more serious matter: He had received the allowance money, and part of that money was either spent or detained by him. I remember two of the men—Hossack and another—coming to Sydney and appealing to the then Chief Secretary, Mr. Parker.
41. These men were afterwards paid? They were paid afterwards.
42. Was that at all owing to the Government not paying for work? No; he had been paid regularly, month by month, up to a certain date.
43. You are satisfied that it was not in consequence of his not having been paid by the Government that the men were not paid? I am distinct upon that point.
44. *By Mr. Moriarty*: That not only was he paid the money for his men, but his own? Not specifically for his men, but the equipment allowance of £100 a-year, as well as salary.
45. *By Mr. Aldcorn*: You mean that as the allowance for chainmen? Yes, and for all other expenses—for means of locomotion, camp equipage, instruments, stationery, food, forage, and everything.
46. That is the practice with regard to all licensed surveyors? No; he was not then a licensed surveyor at all, but an assistant surveyor on railway duty, with fixed salary and allowance.
47. Was there not a Mr. Debenham employed in the north-west district? Yes, as a licensed surveyor for some time.
48. Is he employed in the service now? He has twice lately been employed under special contract.
49. Not as a licensed surveyor? I am not certain that he holds a license. I think not.
50. I thought you employed no officer who had not a license? Or had had a license. Mr. Knapp is employed occasionally; he has a sort of sleeping license.
51. *By Mr. Moriarty*: Can you inform the Committee what there is in the license issued by the Crown to the squatter annually to identify the authority to occupy a run with the run to which it is intended to apply? After the first year's rent has been paid then comes the authority to occupy, and that contains a description of the run.
52. Does that apply equally to the runs licensed at the time of the promulgation of the Orders in Council? I am referring to those under tender. The others would occupy according to the claims sent in, unless altered by the Commissioner or by the Disputed Boundaries Commissioners.
53. What particulars in reference to runs are embodied in the annual license? I cannot say, for the licenses are issued from the Treasury. I am not certain whether they give a description.
54. Have you had an opportunity of seeing them? I do not think I ever saw one.
55. Will you append a copy of one? Yes. (*Vide Appendix B.*)
56. You are aware that the licensed occupants of Crown Lands in 1848 were entitled under the Orders in Council to leases, provided they made application for them? Yes.
57. Can you now state whether any considerable number of occupants of Crown Lands omitted to claim leases? No; I cannot say that any have.
58. Are you aware of any considerable number of demands for leases being unsatisfied—of runs licensed at the time of the publication of the Orders in Council? That resolves itself into a question of how many leases have been issued—very few, indeed; about three hundred; so that there must be a very large number remaining unsatisfied.
59. Is it the fact that the majority of the parties claimed or omitted to claim leases? Originally they claimed, for security. I think subsequently many have expressed indifference about the issue of formal leases.
60. By the Orders in Council, application should be made within six months from the date of promulgation? Yes, it was so stipulated.
61. What I want to know is, whether any large number have not claimed under these Orders? I should think not any would omit.
62. By the 11th section of chapter II in the Orders in Council it is required that the demand for a lease should be made within six months? Yes, such was the requirement.
63. I want to ascertain whether any considerable number of persons have omitted to make this demand? I should think all in occupation, and in a position to make the demand, did make the demand: it was their safety to do so.
64. *By the Chairman*: In these descriptions of the different runs, is the valuation attached to each description, or its capability for grazing purposes? The description should always be, and generally is, attached to the assessment of the grazing capabilities.
65. Then to some extent the Government could arrive at a valuation of the runs, as to what they would carry? I do not think the acreage an indication of what they would carry.
66. But the Commissioner's report would be —? The Commissioner's report would be a very near approximation to the truth, and satisfactory to the holder, because he has a voice in that assessment of the capabilities of his run.
67. *By Mr. Aldcorn*: And there is power to appoint a third as umpire where they do not agree? Yes; they (the valuers or assessors) not agreeing, it is referred by a certain clause to the Governor General, for the appointment of an umpire.

ADDENDUM.

After my examination an impression arose in my mind that Colonel Barney had spoken to me on the subject of his memorandum before he sent it to me; and an apprehension that my memory had deceived me, and that I had not stated matters as exactly as I could desire. I could not bear such an idea; and I therefore put the question direct to the Surveyor General, whether he had in any way consulted me or sought my opinion. His answer was certainly not—"I may have mentioned the memorandum after I had written it, but I had fully determined before-hand." Mr. Gorton has therefore made a grievous misrepresentation—the *third* as regards myself, and with evidently a mischievous intention.

APPENDIX TO THE FOREGOING EVIDENCE.

APPENDIX

NOTE.—Services of Commissioners Jardine, Bligh, Huthwaite, Durbin, Massie, Manning, and Whitty, dispensed with 31st March, 1853

APPENDIX B.

H. Halloran,
Esq.

8 Sept., 1858.

NEW SOUTH WALES.

LICENSE TO OCCUPY WASTE LANDS OF THE CROWN.

No. By His Excellency the GOVERNOR GENERAL of all the Australian Possessions, and Captain General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, &c., &c., &c.

WHEREAS application for a License to occupy certain Waste Lands of the Crown, situate in the District of MURRUMBIDGEE, in the Colony of New South Wales, and known as

Now I, the Governor General aforesaid, do hereby authorise the said sum of Pounds, upon payment by him of the Shillings, into the hands of the Colonial Treasurer of the said Colony, and upon the due acknowledgment of such payment hereunder by the said Treasurer, to occupy the said Waste Lands, for the term hereinafter mentioned

Upon the issue of this License by the said Colonial Treasurer, the same is to operate and be in force from the first day of July, 1853, until the 30th day of June, 1854, and no longer.

£

Given under my hand, at Government House, Sydney,
this day of A.D. 1853.

RECEIVED, the above sum of
Pounds, this day of }
Shillings, 1853.

Noted

Colonial Treasurer.

[Petition of Licensed Surveyor Henry Sanderson, C. E.]

THURSDAY, 16 SEPTEMBER, 1858.

Present:—

MR. DONALDSON,		MR. PIDDINGTON,
MR. FORSTER,		MR. WHITE.

G. B. WHITE, ESQ., IN THE CHAIR.

Henry Sanderson, Esq., C. E., again called in and further examined:—

1. *By the Chairman:* You were a short time since examined before this Committee? I was. H. Sanderson, Esq., C.E.
2. I think your further examination with reference to some matters personal to yourself was at that time objected to? I think it was, by Mr. Hay.
3. You have since that petitioned the Legislative Assembly? I have. 16 Sept., 1853.
4. And that petition has been referred to this Committee? Yes.
5. You state in this petition that you were removed from the public service? Yes, about the 31st July, 1857.
6. Will you state to the Committee what was the cause of your removal? The cause was, I believe, that certain charges were made against me by the Surveyor General.
7. What was the nature of these charges? The first charge was that I had come to Sydney without the permission of the Surveyor General.
8. When you came to Sydney did you come on public duty, or to explain to the Surveyor General any circumstances connected with the duties in which you were engaged? Yes; I had written three times officially to the Surveyor General, asking for leave, and at the time I came away I had the verbal consent of the District Surveyor, Mr. Galloway.
9. Are you aware that Mr. Galloway has denied that? I believe he has, officially, but I have never seen his report. I know this—he advised me to come to Sydney at once.
10. What was the particular object of your coming to Sydney—was it connected with the line you were surveying? Yes; there had been some difficulty about the selection of the route between Brisbane and Ipswich, and Darling Downs, across the range. I wrote to the Surveyor General, and condemned the two lines—the one by Spicer's Creek and the other by Cunningham's Gap—as impracticable.
11. When you were employed upon that duty were you instructed to take a section of country from point to point, or were you directed to make a line of road? I was rather confined by my instructions. I was obliged to make a survey from point to point.
12. As a surveyor, do you consider that is a proper way of carrying on sections of a country for railway purposes? Certainly not. I think every liberty ought to be given to the surveyor to make use of his own ability, talent, or skill, in whatever he had to perform.
13. In consequence of your coming to Sydney to represent this to the head of the department you were dismissed the service? That was one of the charges, but there was another charge made against me of not paying my men's wages, and that I believe was the cause of my being dismissed. I think the Executive would not have dismissed me, but for the latter charge having been preferred by the Surveyor General.

- H. Sanderson, Esq., C.E.
16 Sept., 1858.
14. Were you called before the Executive Council at all? No, I was not.
15. You were never heard in your defence respecting the charges made against you? No; I only heard from hearsay, not officially, of two charges,—one that I had not performed sufficient work, and the other that I came to Sydney without leave,—and upon these charges I wrote in defence of myself to the Executive, through Mr. Hay; but at that time I was not aware that there was a third charge brought against me by the Surveyor General, as I had understood from him that that was not to be brought forward, the matter having been settled. The circumstances out of which this charge arose were these:—I had given to the men who were employed by me an order upon my agents for the payment of £30, and it appears that when they presented that order the money at that time due to me had not been paid to my agents, and they refused to honor the order.
16. At that time was there any money due to you by the Government on account of work performed? Yes, upwards of two months pay and allowances.
17. And in consequence of that money not having been paid this circumstance occurred? Yes; these men were not paid. They were going to Sydney, having left my service, and I gave them an order upon my agents. They called upon the Surveyor General, and showed him this order, and he, instead of informing me that it had been dishonored, or had not been paid, referred it to the Minister for Lands and Works.
18. Since that time you have had no employment in the service? I have not.
19. Since you came from Morcton Bay, and were informed that your services would no longer be required by the Government, you have been re-gazetted? Yes; on the 9th August, 1858.
20. Since you were re-gazetted as a licensed surveyor have you applied for employment? Yes, I have. Since I was gazetted I have applied to the Surveyor General, who wrote to me to state that he had no employment for me.
21. Then at the present time you are not employed by Government? I am not.
22. You have seen the Surveyor General with reference to employment? I have, several times.
23. Did he give any reason for not employing you? No; he merely said he had made a report against me, and having done so he could not employ me; and I think he said I had obtained my re-appointment in opposition to his wishes. That seemed to gall him, or make him more determined not to employ me.
24. I suppose your object in getting re-gazetted was, that you might obtain employment from the Government? Yes; I wished to be employed by the Government, in order that I might prove I can do my work satisfactorily.
25. How long is it since you arrived in the Colony? I arrived in November, 1855.
26. It is upwards of three years since you were appointed from home? It was three years in July last.
27. During what period of time have you been employed by the Government? From January 1856 to 22nd April, 1857, when I left Brisbane.
28. You came out here under the impression that you were to be permanently employed? Under an agreement for three years, but which was considered to be permanent; not as a salaried surveyor, but as a surveyor—to be paid according to a certain scale for the work performed.
29. In that arrangement you were called a licensed surveyor? Yes; and I was to have full employment for three years, upon the scale which it appears was recommended in a letter sent by the Colonial Secretary, dated 20th June, 1852. "I venture to suggest" he says, "that application might be made to Her Majesty's Government, in order that twelve surveyors be engaged in England by the Colonial Agent General, to survey by contract on the last approved scale of terms as herein enclosed; full work on these terms being guaranteed to such surveyors for three years from the date of their arrival in this Colony." Under these conditions I engaged and came out here.
30. These conditions were not adhered to upon your arrival? No; the Governor General, wishing to have certain surveys made for railways, and finding some of the gentlemen who had come from England, myself included, were *au fait* at making railway surveys, it was agreed that we should be employed upon these surveys at a salary of £400, and £400 for allowances, including equipment, horses, forage, transport, rations, and labor.
31. Have you any further statement you wish to lay before the Committee with reference to the matters complained of in your petition? Yes; with the permission of the Committee I append to this evidence a statement generally referring to the allegations contained in my Petition (*Vide Appendix A*), and also a letter from Hugh Hossack, dated 2nd April, 1858, marked in red ink "Important," (*Vide Appendix B*); also copy of agreement between Her Majesty's Government and myself, (*Vide Appendix C*); also copy of Petition addressed to His Excellency the Governor General, dated 5th August, 1857, (*Vide Appendix D*); and of a statement addressed to His Excellency the Governor General and the Members of the Executive Council, dated 8th July, 1857, (*Vide Appendix E*); also copy of a letter from the Under Secretary for Lands and Works, dated 22nd September, 1857, (*Vide Appendix F*); and of a letter to the Honorable T. A. Murray, Minister for Lands and Public Works, dated 10th October, 1857, (*Vide Appendix G*); also abstract of my allowances for April, 1857, shewing Mr. Henry Halloran's certificate of payment to Hugh Hossack of £30 for wages due to himself and James Kennedy, (*Vide Appendix H*); also letter from the Surveyor General, in reply to my request to be re-employed, dated 19th August, 1858, (*Vide Appendix I*); and memorandum from Mr. Licensed Surveyor Chaucey, upon the same subject, dated 31st August, 1858, (*Vide Appendix J*).

APPENDIX A.

H. Sanderson,
Esq., C.B.

STATEMENT made to Committee by Mr. H. Sanderson relative to his removal from the Public Service.

16 Sept., 1858.

Referring to my removal from the public service upon the charges preferred against me by the Surveyor General: in regard to the first charge—viz., insufficiency of work performed by myself and party—I beg to refer the Committee to my monthly progress reports to the Surveyor General, and to state that during the whole period of my sojourn in the northern districts I attended to my duties to the best of my ability, and as far as I was able, considering the many difficulties I had to encounter. In regard to the second charge—viz., absenting myself from my district without permission—there can be no doubt that I did wrong in coming to Sydney; but, taking into consideration all the circumstances of my anomalous position, and the acephalous conduct of the officers who were placed under my authority, I cannot see how I could avoid coming to Sydney, especially when the Surveyor General had previously intimated to me that it was his intention to recommend the removal of the whole party. I beg to refer the Committee to the Surveyor General's letter of the 23th March, 1857, No. 360, addressed to the District Surveyor, Moreton Bay, to my letter of the 22nd April, 1857, No. 84, addressed to the District Surveyor, Moreton Bay, and to my defence, addressed to the President and Members of the Executive Council, dated 8th July, 1857.

Referring to the third charge—viz., the non-payment of wages due to James Kennedy and Hugh Hossack, employed as surveyor's assistants by me, and to which I have partially replied in answer to questions 14, 15, and 16—I beg to state to the Committee that I was not aware that such a charge had been preferred by the Surveyor General to the Executive Council at the date when I submitted my defence (8 July, 1857); that it was not until the beginning of August, 1857, that I learnt the nature of the third charge; that on the 6th August, 1857, I presented in person a petition to His Excellency the Governor General, praying to be heard in my defence before the Executive Council. I beg to refer the Committee to a copy of that petition, which is appended also to my letter of the 10th October, 1857, addressed to the Honorable T. A. Murray, the then Minister for Lands and Public Works, and to a letter from Hugh Hossack, dated 2nd April, 1858, marked in red ink "Important."

Referring to my re-appointment to the public service, at the instance of His Excellency the Governor General, whom I memorialized on the 22nd July last, and to which re-appointment I was gazetted on the 9th August last, I beg to state to the Committee that I am not employed by the Surveyor General, neither am I permitted by the Surveyor General to be employed by any licensed or other Government surveyor of the colony, except only as a chainman, which I decline to accept, for reasons which will be obvious to the Committee. In confirmation of these facts, I beg to refer the Committee to the Surveyor General's letter of the 19th August, 1858, No. 1331, and to the memorandum of Mr. Licensed Surveyor Hugh Snell Chauncey, of the Kiama District (a copy of which I append), who entered into an agreement with me to employ me during the months of September, October, and November, 1858, to make surveys of Crown Lands by contract, but was compelled to repudiate his part of the agreement in consequence of the Surveyor General's veto. I also beg to refer the Committee to my memorial of the 7th September, 1858, which I addressed to His Excellency the Governor General on the subject, and which I presented in person, praying His Excellency to cause inquiry to be made, and redress given for the pecuniary injury sustained by me in consequence of the Surveyor General's interference. I further beg to state that the Surveyor General has prohibited me from having any employment in the Railway Department (where my professional services would be very beneficial to the Government) by reporting to the Chief Commissioner for Railways that I am not qualified to make surveys for railways, &c., &c.

In further reply to questions 24 to 30 inclusive, I beg to state to the Committee that in accordance with the terms of my agreement, (assuming the sum of £800 per annum to be a minimum equivalent to the quantity of work I could have executed in one year,) had I been permitted to work by contract or scale, I should have received from the Government the sum of £2,200 to the end of last month (August); whereas, in consequence of my removal from the public service, I have been deprived of all my salary and allowances since June, 1857, in the former, and May, 1857, in the latter. I further beg to state to the Committee, that on or about the 24th November, 1858, my agreement with the Government terminates; that my arrears of salary and allowances to that date are £1,166 13s. 4d.

I humbly submit to the consideration of the Committee the nature and terms of my agreement with the Government,—that had I been permitted to carry out the terms of that agreement, I could not have come in contact with those obstacles and difficulties which beset me in the new position it pleased His Excellency to place me. But, assuming that I was appointed a salaried officer, (to make surveys for railways, at salary and allowances of £800 per annum,) by His Excellency the Governor General, on the 30th November, 1855, and by accepting such appointment I cancelled my former one, I beg to state to the Committee, that in accordance with the 18th instruction contained in the Governor General's Commission and Instructions under the New Constitution, which goes on to say,—“And whereas we have, by our said Commission, authorized you, upon sufficient cause to you appearing, to suspend from the exercise of his office within our said Colony any person exercising the same under and by virtue of any commission or warrant granted or to be granted by us, or in our name or under our authority: Now we do charge and require you, that before proceeding to any such suspension, you do signify by a statement in writing to the person so to be suspended the grounds of such your intended proceeding against him, and that you do call upon such person to communicate to you, in writing, a statement of the grounds

“upon

“ upon which he may be desirous to exculpate himself; which statement and exculpation
 “ you will lay before the Executive Council, and having consulted them thereupon, you will
 “ cause to be recorded in the Minutes of the said Council, whether they or the majority of
 “ them do or do not assent to the said suspension; and if you thereupon proceed to such
 “ suspension, you are to transmit both of the said statements, together with the Minutes of
 “ Council, to us, through one of Our Principal Secretaries of State, by the earliest con-
 “ veyance. But if in any case the interests of our service shall appear to you to demand
 “ that a person shall cease to exercise the powers and functions of his office instantly, or
 “ before there shall be time to take the proceedings hereinbefore directed, you shall then
 “ interdict such person from the exercise of his powers and functions, preserving to him,
 “ however, until such proceedings shall have been taken, the emoluments and advantages of
 “ his office,”—I ought not to have been entirely removed from the service, but suspended
 until the pleasure of Her Majesty be known, and the emoluments and advantages of my
 office preserved to me; whereas I was suspended, without it being signified to me the grounds
 upon which I was suspended. Further, that I was never called upon by the Government to
 communicate in writing a statement exculpating myself; and finally, I was dismissed the
 public service, at the end of July, 1857, without the consent and approval of Her Majesty,
 and deprived of all pay. I beg to refer the Committee to the case of Mr. Thomas White,
 (who had a similar appointment to mine,) who was suspended on the 31st July, 1842, until
 the pleasure of the Home Government was known, and who received his pay and allowances,
 and passage home, from the time of his suspension until the same was confirmed by Her
 Majesty's Government.

HENRY SANDERSON.

APPENDIX B.

*Rushcutter's Bay, near Sydney,
 2 April, 1858.*

SIR,

In reply to your request, asking me to state my opinion in reference to the
 matter which caused you to be dismissed from the public service, I beg to state that, during
 the whole period I was in your service, viz., from the 1st December, 1855, to the 8th
 December, 1856, your conduct to myself, and the other men forming your camp, was all
 that could be desired; you always looked after the comfort of the men in camp, and your
 kindness and liberality on all occasions was well known to every one in your service.

The unfortunate money-order for the sum of £30, which myself and James Kennedy
 agreed to receive in part payment of wages due to us, and which was subsequently made the
 substance of a charge against you, apparently by us, but in reality by the Surveyor General,
 was (in my opinion) given to us by you with the most honest intentions, and that, at the
 time you gave us the order I am of opinion that you really and truly believed that there
 funds to your credit in the hands of your agents. It is my firm belief now, and was then,
 at the time of this transaction, that had the Government promptly paid your salary and
 allowances when due, your order of the 8th December, 1856, for £30, upon your agents
 would have been cashed when presented for payment at Brisbane by us on or about the 14th
 December, 1856.

I have read the Honorable Robert Campbell's letter to you of the 5th November,
 1857, in which he states he has formed a favorable opinion of your complaint against the
 Government for dismissing you from the public service on a charge of dishonesty against
 myself and James Kennedy. I quite agree with the opinion of the Honorable Mr. Campbell.
 I believe your conduct was perfectly honest; and I am of opinion that the Government were
 led to believe, by misrepresentation, that which was not true, and which subsequently caused
 them to dismiss you.

Truly and sincerely sympathizing with you in the undeserved and unmerited punish-
 ment which your family and self must have suffered in consequence of your unjust dismissal
 from the public service, on so false a charge of dishonesty to myself and James Kennedy
 (your late servants), and trusting that the Government of the day will restore you to
 employment,

I am, &c.,

HUGH HOSSACK.

P.S.—I ought to observe that you eventually paid James Kennedy and myself the
 amount of the order, viz., £30, notwithstanding that we could not have compelled you, after
 the injury you sustained by us.

H. H.

To Mr. Henry Sanderson.

APPENDIX C.

AGREEMENT made this seventh day of July, one thousand eight hundred and fifty-five,
 between Henry Sanderson, of 13, Cheltenham Terrace, Chelsea, in the County of
 Middlesex, Esquire, of the one part, and Edward Barnard, of Cannon Row, in the
 City of Westminster, Esquire, Agent General for Crown Colonies, for and on
 behalf of Her Majesty, of the other part.

WHEREAS Henry Sanderson hath been duly appointed a surveyor in New South Wales, on
 the terms mentioned in the enclosure of the Despatch of the Governor General, dated 20th
 June, 1854, No. 80, (Executive) and hath received the sum of Fifty pounds on account of
 his contract, with a free passage to the Colony:

Now, the said Henry Sanderson, in consideration of the premises, doth hereby agree
 with the said Edward Barnard that, should he, the said Henry Sanderson, relinquish his
 said

said appointment as aforesaid, or quit the said Colony without leave, within the period of three years from the date of his arrival in the said Colony, that he, the said Henry Sanderson will, upon so quitting the said Colony, or relinquishing his said appointment, refund and repay to the Colonial Secretary of the Government of the said Colony for the time being, or to the Agent General for the said Colony in London for the time being, the amount paid for the passage, and also the sum of fifty pounds advanced to him as aforesaid.

Provided always, that nothing herein contained shall bind or oblige the said Henry Sanderson to repay the said passage money and fifty pounds, if at the time he shall relinquish his said appointment, or quit the said Colony as aforesaid, the Colonial Secretary of the Government of the said Colony, or person acting as such, shall certify that he, the said Henry Sanderson, is unable, from bodily or mental infirmity, to continue in the performance of his duty as such surveyor.

Witness our hands this seventh day of July, in the year of our Lord,
One thousand eight hundred and fifty-five.

Signed by the said Edward Barnard,	}	(Signed)	EDWARD BARNARD.

APPENDIX D.

To His Excellency Sir William T. Denison, K. C. B., Governor General
of New South Wales, &c., &c.

The humble Petition of Henry Sanderson, Assistant Railway Surveyor, lately employed in
the Moreton Bay and Darling Downs Districts,—

SHEWETH :—

That your Petitioner received, on the 31st July last, from the Honorable the Secretary for Land and Public Works, the unfavorable decision which the Executive Council arrived at in the case of your humble Petitioner.

That your Petitioner, conceiving that he has already suffered much punishment in being suspended during a period of three months and deprived of all means of subsistence for himself and family, humbly prays your Excellency will favorably consider his case, with a view to the reinstatement of your humble Petitioner to his former position.

That your Petitioner having been suspended since the 1st May last, and having received no salary or allowance during the period of his suspension, he and his family, consisting of his wife and child, are reduced to a state of great pecuniary distress and almost actual want.

That your Petitioner humbly prays your Excellency to seriously consider the private as well as the departmental circumstances which compelled your Petitioner to leave his district.

That your Petitioner, having a proper and due regard for the discipline of Her Majesty's service, did not intentionally commit an act of disobedience, but, in his humble opinion, conceived that he was not doing wrong under the circumstances.

That your Petitioner humbly prays your Excellency to take notice that your Petitioner was not in fault with reference to the complaint made to the Honorable the Colonial Secretary by the laborers James Kennedy and Hugh Hossack, because, at the time when these men presented your Petitioner's order to his agent at Brisbane there were no funds in hand, notwithstanding that two months' salary and allowances were overdue; and that upon the Surveyor General, in his official communication of the 7th May, 1857, No. 515, informing your Petitioner that unless these men were paid your Petitioner's dismissal from the service would be advised, your Petitioner immediately wrote an explanatory letter in reply, dated 8th May, 1857, No. 57-86, and further, that the Surveyor General has now in his possession (hands) (which he has retained out of your Petitioner's allowance for April last, at your Petitioner's request) the sum of thirty pounds (£30) for the sole purpose of satisfying the claim of the said James Kennedy and Hugh Hossack.

That your Petitioner, if it is considered necessary, prays to be heard by your Excellency in further explanation of his conduct, which has been so severely punished, for the purpose of satisfying your Excellency's mind of the absolute necessity of your Petitioner coming to Sydney.

Your Petitioner therefore humbly prays that your Excellency will be pleased to take these matters into your Excellency's consideration at your earliest convenience, as the delay already so bitterly experienced by your humble Petitioner, and the unfavorable decision of the Executive Council, has placed him and his devoted family in a state of ruin and destitution.

And your Petitioner, as in duty bound, will ever pray.

HENRY SANDERSON.

13, Jamison-street, Sydney,
5 August, 1857.

N.B.—I presented the above Petition to His Excellency in person on the 6th instant. I was permitted to explain many matters to His Excellency, who was pleased to command a re-hearing of my case, with a view to my reinstatement.

HENRY SANDERSON.

13 August, 1857.

13, Jamison-street, Sydney,
7 August, 1857.

YOUR EXCELLENCY,

Referring to the subject matter contained in my humble Petition, which your Excellency most graciously permitted me to present in person yesterday, I have the honor to inform your Excellency that I ascertained from my late agents, Messrs. R. Towns & Co., that my salary and allowances for the month of November last was not received in Sydney by that firm until the 19th of December following, and that the late Mr. George Christie (R. Towns & Co.'s agent at Moreton Bay) could not possibly receive the said salary and allowances until the 29th December. The men, James Kennedy and Hugh Hossack, leaving my service on or about December 8th, and presenting my order at Brisbane not later than December 14th, your Excellency will perceive that the funds which I anticipated being placed to my credit to meet their demands had not been received.

I may also mention, in order to convince your Excellency of the frequency of such casualties occurring, that my salary and allowances for December last were not received in Sydney until the 27th February.

I have, &c.,
HENRY SANDERSON.

To His Excellency
Sir W. Denison,
&c., &c.

APPENDIX E.

Sydney, 8 July, 1857.

To His Excellency Sir William T. Denison, K. C. B., Governor General, President, and the Honorable the Vice-President and Members of the Executive Council, New South Wales.

The statement of Assistant Railway Surveyor Henry Sanderson, in reply to the charges preferred against him by the Surveyor General.

In July 1855, the Right Honorable Lord John Russell, then Her Majesty's Secretary of State for the Colonies, was pleased to appoint me as assistant surveyor in the Colony of New South Wales, at the recommendation of the Right Honorable the Earl Fitzwilliam and Lieut. Colonel Dawson, R. E., Tithe and Inclosure Commissioner.

I embarked with my family on board the ship "Chowinghee," at Southampton, 8th August, 1855. Messrs. Berry, senior and junior, Rowland, Hicks, Condon, Twynam, Grogan, Malley, Kelly, Oliver, and my brother, Edmund Sanderson, embarked with me, having received similar appointments.

On my arrival in this Colony His Excellency Sir W. Denison was pleased to appoint me as Assistant Railway Surveyor. I was in hopes of accompanying my brother Edmund, but I was ordered to Moreton Bay at the latter end of January 1856, in company with Messrs. Malley and Grogan, the former being at that time on very ill terms with me, in consequence of my complaining of his drunken habits (whilst on board ship) to the captain; quarrelled with me a few days after my arrival in Moreton Bay; he then stated that he would do all he could to injure me, and also that he would not obey my instructions, although he knew that I was placed in authority over him. The ill-feeling of this officer towards me is well known amongst the gentlemen who came out with us; it is also known by Mr. Halloran, the Chief Clerk in the Surveyor General's Office.

My duties in Moreton Bay were, with the assistance of Messrs. Malley and Grogan, to make surveys for railway purposes from the coast at or near Brisbane to Warwick, and other places across the Dividing Range. Although there was no difference in the salaries of myself and the assistants above-named, yet I was placed in authority over them, and held responsible for the amount and accuracy of the work performed by them. There were many disputes between the assistant surveyors and myself, arising from the feeling that they were not subservient to my authority, and especially upon one point, viz.—their progress returns: these reports I was authorized by the Surveyor General to prepare myself. The assistant surveyors, particularly Mr. Malley, refused to supply me with any information whatever, consequently I reported him to the head of my department. I believe the Surveyor General did not take any notice of this act of insubordination further than to write to Mr. Malley. I may here remark that as the assistant surveyors refused to supply me with their progress returns, I was never aware of the amount of work done, consequently I could not judge whether their progress was satisfactory or not. In June 1856, owing to the dissatisfaction of the Surveyor General at the state of the work done, Mr. District Surveyor Galloway was placed in authority over us, and instructed to superintend the operations of myself and party, and make his report to the Surveyor General; much unpleasantness and acrimonious feeling was engendered in consequence of the proceedings of Mr. District Surveyor Galloway encouraging a system of talebearing and recriminations amongst the party. Notwithstanding that I, as the head of that party, had conducted the whole correspondence; notwithstanding that I had throughout the whole period of my sojourn in Moreton Bay and Darling Downs Districts explored and examined the country in the most minute and careful manner, made all the reports, tracings, sections, &c., &c., and taken all the necessary flying levels, also permanent and check levels; notwithstanding that I endeavored, as far as lay in my power, to do my duty and follow the instructions of the Surveyor General, yet my conduct did not appear to give satisfaction; in fact the Surveyor General condemned me for the faults of those under me. On the 20th April, 1857, I received an official communication from the District Surveyor, No. 42, dated 15th April, 1857, enclosing letters from the Surveyor General and the Chief Commissioner of Railways. The perusal of these documents convinced me at once
of

of the necessity of my repairing to Sydney, unless the District Surveyor could advise me how to act.

The Chief Commissioner of Railways' letter, dated 25th March, 1857, states in the first paragraph,—“That the information furnished by the assistant surveyor employed to inspect the Moreton Bay District with a view to laying out a line to Darling Downs, is so very meagre that the Commissioners find it quite impossible to form an opinion as to the situation of a terminus for a railway at Ipswich.” Secondly,—“That the line as at present (laid down) marked out is in several places almost impracticable. An entirely new survey should be made, or that the present one be further detailed by cross sections.”

Taking the Chief Commissioner of Railways' letter in its individual sense, it is impossible to put the construction upon it that the District Surveyor did. I respectfully submit that, according to my professional knowledge as an engineer and railway surveyor of many years' practice, that a better line could not be obtained between South Brisbane and Ipswich; that it is in any portion of it practicable, I having very closely examined the country, and taken care not to have any severe gradients or impracticable curves. I do not believe that the Chief Commissioner of Railways could refer to the Brisbane and Ipswich Railway. It is my impression he means this—that there was not sufficient information on the plan of the Brisbane and Ipswich survey at Ipswich to enable him to form any opinion, as, at the date he writes to the Surveyor General (25th March) he had not then in his possession a continuation of the survey and section from Ipswich to the Darling Downs; he could not, therefore, fix upon a site for a terminus. If, then, I had commenced an entire new survey of the country between Brisbane and Ipswich, or even amended it elsewhere but at Ipswich, I should have been guilty of a most unnecessary waste of time and money.

The Surveyor General's letter of the 28th March, 1857, addressed to the District Surveyor, does not instruct that officer how to proceed in reference to the Chief Commissioner of Railways' letter; it simply states that the District Surveyor will have the goodness to issue to the railway surveyors under his direction “instructions to proceed in the way he may consider the more desirable;” and it further states that the District Surveyor is to furnish the Surveyor General with a report on the subject, stating the reasons which induced the District Surveyor to pursue any particular course. It finally closes by stating, that unless the Surveyor General receives immediately a return of the work performed by the party, accompanied by the necessary plans, he (the Surveyor General) should consider it to be his duty to recommend the removal of all the officers constituting it.

The District Surveyor's letter of the 15th April, 1857, does not give me any instructions how to proceed in reference to the Chief Commissioner of Railways' letter. It states, in paragraph 2, as follows:—“I have to remind you that I returned to you the plan alluded to in August last; and in my letter No. 56-210 I pointed out the very deficient amount of information upon it, especially in not having shewn, as instructed, the features, topography, and flying levels, for thirty chains on each side of your base lines, and in not having extended your survey laterally where difficulties occurred. You returned the plan much amended, but, as you had not made the proper survey as directed by the Surveyor General's (original) instructions to you, the information upon it still remained absurdly meagre, and I would have again returned the plan for the insertion of the information, but the Surveyor General being particularly anxious to ascertain what your party had done, I at once transmitted it for his information.” Now, with regard to the above quoted paragraph, the District Surveyor evidently misunderstood the meaning of the Chief Commissioner of Railways' letter; after complaining of the “absurdly meagre state” of the survey of the Brisbane and Ipswich Railway, he “suggests,” in paragraph 3, the necessity of the Surveyor General returning the said plan for the purpose of having added such further information and cross sections as may be (requested) required by the Chief Commissioner of Railways.

Referring to the plan of the survey of the Brisbane and Ipswich Railway, I respectfully beg to state that I never sent in the plan unfinished. The plan was sent in to Mr. District Surveyor Galloway by Messrs. Assistant Surveyors Malley and Grogan, without my knowledge, and before I had inserted any portion of my levels upon it. I further state, that I had great difficulty with Mr. Assistant Surveyor Malley in obtaining possession of the said plan, for the purpose of inserting the necessary longitudinal and lateral levels. That officer behaved to me in the most ungentlemanly manner, bid defiance to my authority, and refused to place the said plan in my hands until I threatened to report him. I did not receive the plan of this survey until August, 1856, seven months after its commencement, and the joint work of Messrs. Malley and Grogan. I am certain that I could have executed that survey myself, to the satisfaction of the Surveyor General, within three months. The survey being made by Messrs. Assistant Surveyors Malley and Grogan, and the plan being sent in by those officers to the District Surveyor, it is therefore evident that the District Surveyor's letter, No. 56-210, could not apply to me, and therefore not at all applicable to the subject matter of either the Surveyor General's or the Chief Commissioner of Railways' letters.

The receipt of the District Surveyor's letter, and the evident misconception he put upon the enclosures, determined me upon seeking an interview with him without delay. I therefore left my duties, and proceeded to Brisbane, arriving there on the 20th April; on the 21st (Monday) I had an interview with the District Surveyor at his office, North Brisbane, on the subject matter of his letter of the 15th April, and the enclosures. Mr. Galloway admitted that he did not know what course to pursue; he stated that the (Survey) office in Sydney was in sixes and sevens; that the *modus operandi* of the survey, as carried out by the instructions of the Surveyor General, was not proper; that a great deal of time was uselessly wasted, in doing the most unnecessary things; he could not give me advice; recommended me to act according to my own ideas; and finally ended the interview by stating that he would seek further instructions from the Surveyor General. The unsuccessful result of this interview determined me upon proceeding to head-quarters at once; before doing so, however, I wrote to Messrs. Assistant Surveyors Malley and Grogan, enclosing copies of

of the Surveyor General's, the Chief Commissioner of Railways', and the District Surveyor's letters. I reminded them of the necessity of widening the surveys they were then engaged in, putting down more durable stakes on their base lines, marking well the trees, and instructed them to peg and lay out to a distance of twenty and thirty chains on either side of their base lines right angled lines at every ten chains. I may here remark that my reason for giving the above instructions to the assistant surveyors of my party, was because on the survey of the Brisbane and Ipswich railway, executed by those officers, they had neglected to peg and lay out for a distance of twenty miles right angled lines. I was therefore obliged in taking the necessary cross sections to waste much valuable time in cutting through dense scrub, and performing laborious operations, which ought to have been done by the assistant surveyors and their men whilst engaged in the said survey. I may also mention that immediately previous to coming to Sydney I was engaged in taking the necessary longitudinal and lateral levels on the line to the west of Ipswich, and finding neither trees marked or the base lines staked, I was obliged to write to Mr. Malley, requesting him to go over the whole of his survey from Ipswich to the Dividing Range, in order that he might be able to replace every peg that was removed—also to mark the trees on both sides of his base lines, which was not the case, especially in the first ten miles from Ipswich.

On the 21st April I acknowledged officially the District Surveyor's letter of the 15th April. I informed him that I had written to the assistant surveyors under my charge. I gave him official notice of my intention to proceed to Sydney by the "Yarra Yarra" the next day, stating my reasons for doing so.

On my arrival in Sydney I reported myself to the Surveyor General personally, and by letter No. 85, dated 29th April. On the 1st May I received notice of my suspension (from duties) from the Surveyor General, for absenting myself from my district without his permission.

In defence, I humbly beg to observe, that although the Surveyor General may probably justify himself in suspending me for coming to Sydney without leave, yet he overlooked the repeated acts (gross) of insubordination on the part of Mr. Assistant Railway Surveyor John Malley. I hope, therefore, you will take into consideration the following circumstances which compelled me to leave my district:—

First.—The position of authority I had over Messrs. Assistant Railway Surveyors Malley and Grogan was never recognized by those officers during the whole period of our duties in Moreton Bay, the difference of opinion on that point between the Surveyor General and the District Surveyor, the former recognizing Messrs. Malley and Grogan as my equals, and not subordinate to my authority, at the same time holding me responsible for their acts; the latter maintaining that I was in authority over them to all intents and purposes, and that I ought to be supported by the head of my department.

Second.—The unsatisfactory state of the work performed by the party collectively, the determined opposition of Mr. Malley against me, his defiance of my authority, and refusal to obey my instructions or to afford me any information.

Third.—The condemnation of the survey of the Brisbane and Ipswich railway (as so condemned by Mr. District Surveyor Galloway) by the Chief Commissioner of Railways, the improbability of a better line being obtained, and the District Surveyor being unable to give me further instructions in reference to the same.

Fourth.—The impracticability of making a line of railway from Ipswich to Warwick across the Dividing Range in the present stage of this Colony, according to the general route of the Railway Commissioners, and the Surveyor General's instructions giving me no power to exercise my professional skill and judgment in the selection of a line of railway from Ipswich on to the Darling Downs which would be practicable, as well as economical and advantageous to the interests of the district.

Last.—The Surveyor General expressing an unfavorable opinion as to the amount and quality of work done by myself and party, and of his intention to advise the Government to dispense with its further services.

These are the circumstances which caused me to proceed at once to head-quarters, in order to ascertain my real position with reference to Messrs. Malley and Grogan:—To pray that the Honorable the Secretary for Lands and Public Works may cause an inquiry to be made in reference to the conduct of Messrs. Assistant Railway Surveyors Malley and Grogan, in order to confirm the truth of the statement I am now advancing, that the progress of each party may be taken separately, so that the Government may see what amount of work each officer has done: to convince the Surveyor General that, as far as my duties were concerned, he could not justly be dissatisfied with me: to obtain from the Surveyor General amended instructions in reference to the Brisbane and Ipswich Railway, and if not required, to pray for leave to give the Commissioners of Railways such further information as I may be in possession of: to prove to the Surveyor General the utter impracticability of a line of railway being made at the present period on or even in the immediate neighbourhood of the general route between Ipswich and Warwick, as laid down by the Railway Commissioners: to suggest that in lieu of expensive detailed surveys, permanent and lateral sections being made in future trial sections only, accompanied with traverse skeleton surveys be adopted; that future instructions shall not bind me to any particular route or direction, but that I should be allowed to use my professional experience and judgment in selecting the best route, wherever it may be situated: to pray that the Government may be pleased to give me the means of preserving intact my professional reputation by inspecting all the reports, sections, plans, &c., &c., done by me in Moreton Bay and Darling Downs Districts, and allotting to me a separate district, or a portion of one, apart from any other officer, the work, such as surveys, sections, levels, plans, &c., &c., to be executed by myself only, and for the accuracy and quantity of the same I alone will be responsible, and by the result stand or fall.

HENRY SANDERSON,
Assistant Railway Surveyor.

Sydney,

Sydney, 8 July, 1857.

Sir,

I have the honor to enclose to you a statement which I urge in my defence, and which I respectfully request you will direct to be laid before the Honorable the Members of the Executive Council when my case comes before their notice.

2. Upwards of two months having elapsed since the Surveyor General suspended me from my duties as Assistant Railway Surveyor, I respectfully urge the importance of early attention to my case, the delay increasing the difficulties of my position every day.

I have, &c.,

HENRY SANDERSON,

A. R. S.

The Honorable the Secretary for
Lands and Public Works.

APPENDIX F.

Department of Lands and Public Works,
Sydney, 22 September, 1857.

Sir,

Referring to your letters of the 5th and 11th instant, requesting that you may be informed of the cause of your dismissal from the public service, as you understand that it is generally supposed that you were dismissed for incompetency, I am directed to inform you that you were removed from the public service under the following circumstances, viz. :—

- In the first place, it was represented that the quantity of work performed by you was insufficient.
 - 2nd. Before this charge was disposed of you left your district, not only without leave, but contrary to the wishes of your immediate superior, and for the latter act you were suspended; and
 - 3rd. Whilst these combined charges were still pending, complaints were made to the Government, by persons employed by you, of the non-receipt of their wages, although the Government made you a fixed allowance for the maintenance of your equipment.
2. These matters having been formally brought before the Executive Council, that body arrived at the decision expressed in the appended extract from the Minute of their proceedings.

I have, &c.

MICL. FITZPATRICK.

Henry Sanderson, Esq.,
Sydney Flour Mills,
Margaret-street, Sydney.

Extract alluded to.

The Executive Council do not consider Mr. Sanderson's explanation satisfactory, and they deem his conduct towards his laborers so highly discreditable and dishonest that they can only advise that his suspension be now terminated by dismissal from the public service.

EDWARD C. MEREWETHER,

Clerk of the Council.

29 July, 1857.

APPENDIX G.

Sydney, 10 October, 1857.

Sir,

I have the honor to receive your communication of the 22nd ultimo, No. 1322, in reference to my letters of the 5th and 11th ultimo, addressed to the Honorable the Secretary for Lands and Public Works, requesting that I may be informed of the cause of my dismissal from the public service. Your absence from Sydney is the reason why I have delayed until now to make this communication.

2. The very unfavorable nature of the decision of the late Executive Council, as conveyed in your communication of the 22nd ultimo, inferring no less than a most serious charge of dishonesty against me, the falsity of such a charge, and the untrue statements which have been brought against me to mislead the Executive, and finally to cause them to consider it to be their duty to dismiss me from the service; the great injustice to me, and the injury to my character, compels me to urge that my case may be inquired into, and thoroughly investigated, with a view to prove the falseness of such charge, and to upset the grounds upon which the Council acted.

3. To proceed seriatim. First: The wording of the decision of the Executive Council states, that it was represented in the first place that the quantity of work performed by me was insufficient. Secondly: That before this charge was disposed of I left my district without leave, contrary to the wishes of my immediate superior; and for this act I was suspended. Thirdly: That whilst these combined charges were still pending, complaints were made to the Government by persons employed by me of the non-receipt of their wages, although the Government made me a fixed allowance for the maintenance of my equipment. It therefore appears upon the face of this statement, that the Executive arrived at their decision solely in consequence of the manner in which the third charge was preferred against me.

4. With regard to the first charge, viz., insufficiency of work. First: I deny that the work I have performed during my sojourn in Moreton Bay (not omitting to take into consideration the very difficult nature of the work, and the unparalleled wet season that I had to contend with) was insufficient. Secondly: That the Surveyor General in his letter of the 28th March, No. 57-360, addressed to the District Surveyor at Brisbane, Moreton Bay, states as follows: "I may at the same time add, that unless I receive immediately a return of the work performed by the party, accompanied by the necessary plans, I shall consider it to be my duty to recommend the removal of all the officers constituting it, of which you will be good enough to apprise them." Now, two days after the date of this letter (which I did not receive from the District Surveyor until the 20th April following), I transmitted to the Surveyor General the returns and plans alluded to in his letter, and which he would not receive before the end of April. I therefore respectfully submit that the Surveyor General having carried out his threat (as conveyed in his letter of the 28th March) in representing to the Government, previous to his receiving my reply to his said letter of the 28th March, that my work was insufficient, he not only wilfully deceived me, but acted towards me in an unfair and ungentlemanly manner, in wilfully omitting to give me official notice that he had preferred such a charge.

5. With regard to the second charge, viz., leaving my district without the permission of the Surveyor General—the very fact of my reporting myself to that officer on my arrival in Sydney, and subsequently on the 29th April by letter is an admission of the offence. But the statement in my defence to the Executive Council, explanatory of my reasons for coming to Sydney, is a decided contradiction (borne out by numerous facts) to the words "contrary to the wishes of your immediate superior," because it states particularly that on the 21st April I had an interview with the District Surveyor at his office, North Brisbane, on the subject matter of his letter of the 15th April, and its enclosures. Mr. Galloway admitted that "he did not know what course to pursue; that the Survey Office in Sydney was in sixes and sevens; that the *modus operandi* of the survey as carried out by the instructions of the Surveyor General was not proper; that a great deal of time was uselessly wasted in doing the most unnecessary things; he could not give me advice, recommended me to act according to my own idea." Therefore, I respectfully submit that my coming to Sydney was *not* contrary to the wishes of my immediate superior, but with his knowledge and consent, which I am prepared to prove. My reasons for leaving my district have been fully laid before the Executive, in my statement addressed to that body; and I feel convinced that if that charge had been the only one against me, the Executive could not in justice have confirmed my suspension. I feel it to be my duty to observe, that notwithstanding I made application for leave of absence from my district three separate times, to come to Sydney upon most important private affairs, I was refused leave each time by the Surveyor General; thereby suffering the loss of several hundred pounds, because I could not come to Sydney to punish a man who was defrauding me. Other officers who came out to this Colony, and who went into the country at or about the same time that I did, had leave of absence whenever applied for; for instance—Mr. Assistant Surveyor Rowland was in Sydney last month on leave; he then informed me that he had had leave several times, and that twice he came to Sydney without leave, yet no notice was taken of these facts by the Surveyor General. Mr. Assistant Surveyor Twynam has had leave of absence twice; Mr. Assistant Surveyor Berry has had leave of absence several times; Mr. Assistant Surveyor Sanderson, my brother, has had no leave, but has been reprimanded by the Surveyor General for leaving his district, viz., for visiting his family, who were living out of the district in which he was then employed. I venture to suggest that a Return ordered by the Honorable the Secretary for Lands and Public Works upon the motion of an honorable Member of the Legislative Assembly, showing the number of applications for leave of absence from each officer not granted, and the number of those granted, during the years 1856 and 1857, will be of service to the Government, and prove the truth of my assertion.

6. With reference to the third and final charge, viz., my conduct towards my laborers being "highly discreditable and dishonest," I respectfully submit, on the following grounds—First. That the Surveyor-General has with malicious and wicked intent preferred statements against me calculated to mislead and misdirect the Executive in the performance of their functions. Secondly. That the Surveyor General communicated to me, in his letter of the 7th May, No. 515, that he had that day received an intimation from the Secretary for Land and Works, that unless I settled the claim of James Kennedy and Hugh Hossack, who had applied to him through the Colonial Secretary, my dismissal from the public service would be advised; that on receipt of the above-named letter I immediately wrote to the Surveyor General, and stated that I never disputed the claims of J. Kennedy and H. Hossack; that on their leaving my service at Warwick in December last, they agreed to take my order upon my agents in Brisbane for the amount due, promising at the same time to inform me when they arrived in Brisbane of their having received payment. I further stated that these men never communicated with me, and I was not aware that they had not been paid until the 5th May last, when I happened to be informed

informed of the fact by Mr. Hay. I further stated that it was my intention to settle their claims immediately. I afterwards appointed a meeting with the men at the Surveyor General's Office on the 10th May, on which occasion I authorized the Surveyor General to pay the men their money out of the sum of £33 6s. 8d., my allowance for April, then due, which he assented to, but did not pay until 3rd September last, four months afterwards. The Surveyor General has his own reasons for delaying the payment of this money for so long a period. Thirdly. That the Surveyor General did wilfully omit to officially inform the Government of the nature of my reply to his letter of the 7th May, and of the arrangement I had made for the payment of these men's claims. Fourthly. That he persisted in preferring this charge against me, at the same time well knowing that he had funds belonging to me in his possession which he had faithfully promised to pay to these men, in accordance with the arrangement made on the 10th May. Fifthly. That my petition to Sir W. Denison, of the 5th August, wherein I had stated that I was not in fault with reference to the complaint made to the Government by the laborers J. Kennedy and H. Hossack; that at the time when these men presented my order to my agent at Brisbane there were no funds in hand, notwithstanding that two months' salary and allowances were overdue; and my further communication of the 7th August to His Excellency, wherein I had stated that I ascertained from my late agents that my salary and allowances for the month of November last was not received in Sydney by that firm until the 19th December following, and that the Brisbane agent could not possibly receive the said salary and allowances until the 29th December; the men, J. Kennedy and H. Hossack, leaving my service on or about the 8th December, and presenting my order at Brisbane on the 14th, fully a fortnight before my November allowance had been received at Brisbane;—being referred by Mr. Hay to the Surveyor General for his confirmation, he (the Surveyor General) did wilfully and with malicious intent report falsely and in such a manner as to make it appear to the Executive that the statement I had made in my petition was false; and further reporting privately to several members of the Government that he had no funds of mine in hand to pay these men, notwithstanding that he subsequently paid them out of my April allowance, as the official records show.

7. Upon these grounds, and upon the truth of the statements I have made, I respectfully submit that the decision of the Executive Council is erroneous. I therefore earnestly appeal to you, in your capacity as a Member of the Government, to your honor as a gentleman, to lay my case before your Honorable colleagues, for their consideration. For the sake of justice, I claim, I ask for a revision of my case. I deny in the most solemn manner, with the fear of God before me, that when I gave my order upon my agents in Brisbane to the men Kennedy and Hossack I had any intention whatever of defrauding them of any portion of their wages. It is well known that many surveyors now in the public service of this Colony oftentimes have their cheques and orders dishonored, in consequence of the delay in the payment of their salaries and allowances. Are they to be punished because circumstances render it impossible for them to receive their pay punctually?

I have a letter before me now, from a friend of mine, an officer belonging to the Surveyor General's Department, and employed in the Southern Districts, in which he observes,—“I am now three months without receiving my salary,” &c. The men Kennedy and Hossack, on their arrival in Sydney, had no intention whatever of doing me any injury in applying to the Colonial Secretary. Total strangers in Sydney, and not aware of the consequences, they applied to whom they thought they could obtain cash for their order. Hossack being a hired servant to H. W. Parker, Esq., M.P., the then Colonial Secretary, naturally applied to his master, for himself and his comrade; and when his application reached the Surveyor General, the latter, instead of communicating with me, as he had promised the men that he would do, and as he ought to have done, thought proper to keep the matter silent, so that it might, with his careful nurture, grow into a serious charge.

8. I have been induced to extend this document to a greater length than I intended, because I am most anxious that the present Executive should arrive at the truth. To allow the decision of the late Executive Council to remain unaltered—to enter no protest against it on my part,—is tantamount to an admission that I am guilty of dishonest conduct towards my laboring men. On the contrary, I have paid all their just demands. I have been invariably most liberal to them; and Kennedy and Hossack in particular can truly state that they never had a more liberal master than myself.

I plead not guilty to this monstrous charge, and I fearlessly demand a searching investigation into this matter. I protest against the right of the Executive condemning me, and exercising that power which only a jury of my country could exercise in another place. It is stated by several of my friends that I shall not obtain justice; that the power and influence of the Surveyor General is sufficient to silence the Members of the present Administration, and burk the inquiry. I cannot believe that any Member of the Government will refuse to listen to my cry for justice. Fully and wholly confiding in their honor and sense of justice, I leave the issue of this appeal in their hands.

9. The injury that I have sustained because of the Surveyor General's animosity against me is incalculable. I have been deprived of pay and all means of subsistence for my family, by his arbitrary orders. My wife and child were in Brisbane, Moreton Bay, dependant upon the generosity of a foreigner, for three months; and the Surveyor General, knowing this, refused to pay me what salary was due to me until I threatened proceedings. My property, consisting of all my correspondence, journals, maps, plans, scientific works, instruments, tents, baggage, &c., are still in Moreton Bay, and detained there through the instrumentality and agency of the Surveyor General. If I had been guilty of embezzlement, as falsely represented by the Surveyor General, all the privations that I have suffered I should have deserved. I should not have made my case known to so many people, also to

My property still in
Moreton Bay, 24 May,
1853.

Members

Surveyor General, by
his Chief Clerk, Mr.
Halloran.

Members of the upper and lower Houses of Parliament, which I have done; on the other hand, I should have kept a quiet tongue. The malignant feeling of the Surveyor General has even been brought against me in private applications for business; and in my application of the 15th ultimo to the Chief Commissioner of Railways for employment as a railway surveyor. With regard to the latter application, I had adopted the suggestion and advice of Sir W. Denison; but on the receipt of my letter by Captain Martindale, that gentleman referred it to the Surveyor General for his report; not knowing how I had been dismissed, and the cause. I felt assured that the Surveyor General's report would be unfavorable. This assurance became a conviction on the 21st ultimo. On that day I met Colonel Barney in O'Connell-street, and expressing to him my regret that he should be so very hostile to me, he observed that I was dismissed the service for coming to Sydney without leave. At the same time, if I had not come he would have obtained my dismissal in Moreton Bay, as he had a great dislike to me. I reminded him of his partiality and favor in giving leave of absence to other officers, mentioning their names. Colonel Barney replied, that these officers had no right to inform me of such favors, and abruptly left me, stating that he would, if possible, prevent me from obtaining any further employment in the public service of this Colony.

10. It may be asked what motive the Surveyor General had to cause him to have any ill feeling against me. In reply, I respectfully state there were many motives; and upon the Executive reading my defence, together with my correspondence to the Surveyor General, from the beginning of 1856 to last March, I respectfully submit that they will see several motives which have caused him to have an ill feeling against me. I have no doubt in my own mind that I have been sacrificed partly because of my condemnation of the works proposed by the Surveyor General in Moreton Bay.

11. Taking into consideration all these circumstances, I have every confidence in your dealing justly with my case. I feel assured that you and your Honorable colleagues will alter that most unjust and cruel decision, wherein the late Executive have branded my name with dishonesty, and placed it upon public record, to be handed down to posterity.

12. I question very much the legality of the decision of the late Executive, as expressed, and I am not alone in this opinion. I am informed, upon good authority, that improper influences have been at work against me by the Chief Clerk of the Surveyor General's Department; being informed by one of the oldest and most respected of the officials of that department, that he, the Chief Clerk, was my enemy. I am not therefore surprised at the unfavorable result of my case.

M. E. L. Burrowes, Esq.,
now District Surveyor,
Moreton Bay.

Paid salary and allow-
ances to the end of May,
1857, and salary for
June, 1857.

13. Having made a claim for salary for the months of July and August (being suspended during that period), and also for means to take myself and family back to England, I earnestly request that you will obtain the decision of the Executive as early as possible, having sent in my claim on the 11th September last.

Apologizing for the liberty I have taken in prolonging this communication to so unusual a length, and earnestly praying your early attention to the subject matter therein,

I have, &c.,

HENRY SANDERSON.

The Hon. T. A. Murray,
Secretary for Land and Public Works,
Sydney.

APPENDIX H.

No. _____ of Warrant No. _____ of 185 _____ Voucher No. _____
 ABSTRACT and ACQUITTANCES of the Allowances of the undermentioned Assistant Railway Surveyor, from the 1st to the 30th April, 1857, inclusively.

SITUATION.	NAME.	Date of original Appointment to the Public Service.	Date of Appointment to present Situation.	PERIOD.		No. of days.	FIXED SALARY.		TEMPORARY INCREASE.		TOTAL.	We, the undersigned, do hereby acknowledge to have received from the Surveyor General the Sums opposite to our several Names, being in full of our Salaries and Allowances respectively, for the periods specified in this Abstract.	Date of Payment.
				From	To		Rate.	Amount.	Rate.	Amount.			
Assistant Rail- way Surveyor}	Henry Sanderson.....	1857. 1st April.	1857. 30th April	400	33 6 8	33 6 8		1857. Sept. 3.
TOTAL.....							£	33 6 8	33 6 8		

I Certify that I was the above-named person actually employed in the situation, and during the period, specified opposite my name, and that I provided myself with the requisite number of Chainmen, Provisions, Equipment, &c., at my own cost.

HENRY SANDERSON.

I Certify that of the sum allowed for Equipment, viz., £33 6s. 8d., the sum of £30 has been paid to H. Hossack, as wages, with the authority of the Honorable the Secretary for Lands and Works, and at the desire of Mr. Henry Sanderson.

HENRY HALLORAN.
 5 September, 1857.

201—03

APPENDIX

APPENDIX TO THE FOREGOING EVIDENCE.

APPENDIX I.

Surveyor General's Office,
Sydney, 19 August, 1858.

Sir,

In reference to your letter of the 16th instant, I have to inform you that, as verbally communicated to you yesterday, I cannot give you any employment.

I am, &c.,

GEO. BARNEY,
S. G.

Mr. Licensed Surveyor H. Sanderson.

APPENDIX J.

COPY MEMORANDUM.

Sydney, 31 August, 1858.

THE Surveyor General stated to Mr. Licensed Surveyor H. S. Chauncey this afternoon, that he could not countenance Mr. Chauncey employing Mr. Licensed Surveyor Henry Sanderson, because he (Mr. Sanderson) had obtained his re-appointment to the public service in opposition to his (the Surveyor General's) wishes, and that he (Mr. Sanderson) had by most unceasing perseverance obtained his object.

H. S. CHAUNCEY,
Licensed Surveyor.

[Petition of Mr. Assistant Surveyor Darke.]

FRIDAY, 1 OCTOBER, 1858.

Present :—

MR. FORSTER,
MR. HAY,

MR. PIDDINGTON,
MR. WHITE.

G. B. WHITE, Esq., IN THE CHAIR.

William Wedge Darke, Esq., called in and examined :—

W. W. Darke,
Esq.
1 Oct., 1858.

1. *By the Chairman*: You have been for many years a surveyor in the service of the Government? More than twenty-four years.
2. You have presented a petition to the Legislative Assembly, which was ordered to be printed on the 31st of August last? Yes.
3. Before you presented that petition to the House did you consult the Surveyor General on the subject? I did.
4. Did he see the petition? He did.
5. Did he make any remark to you at the time? He told me that, so far from his having any objection, he would forward it himself, if I pleased; but I told him I thought it had better be done by one of the Members of the House, thanking him at the same time for his kindness.
6. He made no objection whatever? Not the slightest. I showed it to him for the purpose of asking his permission.
7. Did you state at the time that you were desirous of having the petition approved by the Minister of Lands and Works, or of getting his permission? I did not.
8. You did not think it necessary? It did not occur to me. I should say in explanation, that I had previously requested the matter contained in that petition to be forwarded to the Government, through the Minister for Lands and Works, then Mr. Hay; but in place of doing so it was shelved in the Survey Office, as I learnt some months afterwards.
9. It never was forwarded? It never was forwarded—at least not on that occasion.
10. Was the petition you speak of similar to the one you have presented to the Assembly? It was not a petition; it was an official letter containing the same matter, or nearly the same matter, as is embodied in that petition. It had been laid aside during the previous Ministry, and I thought that when a new Minister came in I might as well bring it forward again.
11. I think you said you have been in the service of the Government for twenty-four years? Yes; upwards of twenty-four years.
12. And you are still an assistant surveyor? I am still an assistant surveyor.
13. You say in your petition that you have seen "nearly every junior officer promoted above you, as well as strangers recently appointed to grades superior to your own"—is that the case? It is the case.
14. Can you give the Committee any idea why that has been the case? I cannot. I can only say that I felt it to be a great hardship; but I am really not sufficiently acquainted with the matter to ascribe motives to any one.
15. Was it not generally supposed that an arrangement set out in the despatch of the Secretary of State for the Colonies, in 1828, would have been carried out, and that officers would have been promoted according to seniority, unless there was something to their prejudice? I certainly always thought so.

16. You have seen such a document? I always believed such was the official understanding.
17. Was it not the general feeling of the officers of the Survey Department at the time you joined the service? Certainly. I had that impression, at all events, and I know of none who thought differently. These promises were, in fact, renewed to me from time to time by the Surveyor General.
18. That despatch appears to have become a dead letter? I never saw it.
19. Faith, it would seem, belongs only to the higher grades of the service, not to the subordinates at all? In my case no faith has been kept.
20. Are you paid now by salary, or according to the duties you perform as a licensed surveyor? By salary.
21. Is your salary regularly paid? Yes, to the amount authorized for me.
22. Is there any money due to you now for any matter connected with the service? None, excepting my forage allowance, which is not paid; the contractor's accounts, for which I am responsible, are in abeyance at the present moment.
23. To what extent? Since the middle of August last.
24. What may the amount be? I cannot tell; I do not think it is decided in the department.
25. Can you give the Committee no idea? The authorized allowance for an officer in the field is £280 a-year, and find himself everything; but, though doing duty at present at Illawarra, (although stationed in the Sydney District) I am not considered to be in the field. That being the case, I neither get the field allowance nor the allowance of a surveyor at head-quarters; and, as I have already said, the contractor's forage and ration accounts are in abeyance, and I am responsible to him for them.
26. To what do you attribute that neglect? I think it is because no definite arrangement has been arrived at as to any official status.
27. Is there no system with respect to field allowances? Yes; but I and one or two others appear to be exceptions. The allowances to every one else are determined.
28. With whom does that rest—the Surveyor General? I cannot undertake to say. I believe even my salary is unprovided for on the Estimates.
29. I believe you are now the oldest officer in the service? Yes, excepting Mr. Thompson; I am the oldest in the field, unquestionably.
30. *By Mr. Hay:* You say your salary has been regularly paid this year? Yes, to the amount authorized for me, not to the amount I should have received had I been promoted as promised.
31. And yet you understand it has not been provided for on the Estimates? I am told so.
32. How long is it since you have been doing district duty? Since the middle of August.
33. Were your allowances as a surveyor at head-quarters paid up to that time? Yes; £100 per annum for out-door expenses—to find tools, &c., for duty, and to convey my men to any duty within a radius of six miles by rail, omnibus, or water; no horse nor forage has been allowed to me.
34. It is since you were appointed to district duty that no allowance has been paid? Yes.
35. And you believe that is because it has not been decided what allowance you shall get? I believe that to be the case.
36. You do not know with whom the decision rests? No.
37. It has not been intimated to you? No.
38. Have you made any application on the subject? I have.
39. Do you know if it has been referred to the Secretary for Lands and Works? I believe Mr. Halloran spoke to Mr. Fitzpatrick on the subject yesterday.
40. *By the Chairman:* Who regulates these allowances, are you aware? I think the amount is ordered by the Minister for Lands and Works.
41. Are the officers most concerned in finding field equipment ever consulted? I never have been.
42. You are aware that generally in the army and navy, when allowances are to be made, a Board of General Officers, who have passed through all the grades, are the men who fix those allowances? I have heard so, but I have no personal knowledge of the fact.
43. No such system has ever been adopted in the Survey Department? I can only repeat that I never was consulted—that my allowances have been determined, from time to time, without reference to me or the nature of my duties. I have sometimes had occasion to remonstrate, and to say that the allowances were not sufficient.
44. Is there any officer at head-quarters who understand the subject? I do not think there is an officer at head-quarters who understands the requirements of officers in some districts; indeed, I may say that I do not think the requirements in the districts generally are understood.
45. The equipment requisite in one district is very different from that required in another? Yes. In some districts you can only move about with pack-horses or bullocks, while in others a surveyor can have the comparative luxury of a tent—can carry his appliances, provisions, &c., comfortably in a covered cart or dray—can travel on horseback instead of walking, or drive, either in a commodious or costly vehicle, if he chooses.
46. The duties of a surveyor in a coast district and in a western district are very different? Very different.
47. And the means of transport very different? Wholly different.
48. *By Mr. Piddington:* What is the nature of the allowances you allude to as not having been allotted to yourself? £280 per annum has been allotted to field officers—of this I have received no intimation: being on field duty expenses are unavoidable; but I do not know what may be sanctioned, either as to the nature of any outlay or the amount.
49. *By the Chairman:* Paying men's wages, and so on? Not wages. The allowance is to cover the expense of forage,—rations for myself and men, horses, carts, sometimes boats, saddlery, ironmongery, tents and all appliances, and to supply wear and tear.

W. W. Darke,
Esq.
1 Oct., 1858.

- W. W. Darko, Esq. 50. *By Mr. Piddington*: All those necessaries that are incidental to the performance of the duty? Yes.
- 1 Oct., 1858. 51. Do I understand that you have entered into that necessary expenditure? No; I have a Government equipment. Up to the 30th September I understand the Government will defray expenses incurred by me; from the 1st October I must meet the outlay, pending final determinations respecting myself. I am expected, I believe, to buy the equipment. All I can understand is, that the matter is very unsettled, and that no definite conclusion has been arrived at.
52. Have you incurred any expenditure on account of the service of the Government that you have not been reimbursed? I have not. I have not paid the contractor, but he holds me responsible.
53. *By Mr. Hay*: Have you no equipment? I have the loan of a Government equipment. When Mr. Shone retired he was authorized to hand over his equipment to me.
54. You use that equipment? I do.
55. What allowance do you expect for equipment while you are using that—not £280 a-year? No; but if I am to buy it, (as I believe I am expected to do,) then I should require £280 a-year to keep it up. I received a circular, desiring me to report what Government property was in my hands, and as to the expediency of its being sold. If it be valued, and I take it at a valuation, or if it be otherwise sold, then the allowance of £280 a-year would commence from the 1st of October, and then I must provide and maintain my own equipment.
56. Has it been intimated to you that you will be obliged to take that equipment at a valuation? It is optional; part of the equipment must be condemned.
57. Have you made any report on the subject? I am doing so now, and am in personal communication with the department on the subject.
58. Then I suppose the decision awaits your report? No decision can be arrived at until my destination is determined.
59. Then there is something else undetermined—your final destination is undetermined? Yes.
60. In point of fact, you have not suffered from the want of an allowance for equipment? The only thing at present is, that I have drawn from the contractor rations and forage. I am informed that his accounts are to be returned to him, and I am responsible for them.
61. Do you know why the contractor's accounts have been returned to him? Some have been returned because exceeding the amount provided for. I saw Mr. Halloran yesterday, and he said he would see what could be done.
62. *By the Chairman*: At one period in the service the Government found everything? Everything.
63. *By Mr. Hay*: You have not had any written reason given to you why the contractor's accounts were returned? None; further than that the amount of those returned was in excess of authority.
64. Did you make any application in writing with respect to them? No.
65. And you do not know where the difficulty arises—whether in the Surveyor General's Office, or in the Department of Land and Works? I should suppose it to be in the Department of Land and Works.
66. Something connected with the Estimates? I imagine so.
67. *By the Chairman*: When you were first in the service everything was found by the Government? Yes.
68. Instruments, tents, equipment, labor, and everything? Yes.
69. Were you not all at once ordered to take the Government equipment at a valuation? Not exactly ordered; it was placed at our option; I cannot say we were ordered to do it.
70. A yearly allowance was then given to you to enable you to keep an equipment of your own? On that occasion I bought my own equipment, and they gave me a yearly allowance to keep it up.
71. How many experiments of that description were tried. Two, I think.
72. Who generally paid for them? Paid for what?
73. The experiments—did it not generally come out of the surveyors' pocket? I cannot say I lost anything by it. I preferred it to being supplied with the necessary appliances by the Government.
74. Do you recollect what was the yearly allowance at that time? £100 a-year, when I first went to the Clarence, in 1847.
75. There you required pack animals? Yes.
76. Consequently you did not require so large an equipment as if you were going on an interior expedition? Not so large, but fully as expensive; as in the coast districts boats are required, and the service soon wears out horses and bullocks; it is more than made up in discomfort, exposure, and lesser matters. Sometimes your pack animals fall, or turn restive, and your boxes, &c., roll down a precipitous mountain, breaking everything—pack-saddles, harness, and all.
77. *By Mr. Piddington*: Are you of opinion that the system formerly pursued by the Government—that is, the Government finding everything necessary to the performance of the duty—was a better system than the new system of making it a charge, as it were, on the surveyors? No, certainly not. It was expensive to the Government, and insufficient for the officers. In the first place, in those days I think officers used to carry about a great deal more than was necessary; and what they drew from the contractors was of very inferior quality. There were also great delays sometimes in getting what was really required.
78. Can you give any reason why the articles supplied by contractors should necessarily be of inferior quality? I need only instance the very instruments which are in the Survey Office now, sent out by contractors from home; they are not fit for any one to work with.
79. Then you are of opinion that it is beneficial to the public service to leave the duty of providing

providing equipment in the hands of the surveyors themselves? I am. With regard to my official position, it may be necessary to say under what circumstances I am in Sydney. Last February twelve months I received a note from the Surveyor General, informing me that the Colony was to be divided into four great divisions, each to be under the charge of a district surveyor. That note concluded in words to this effect:—"One of these districts is at your disposal, please let me know your wishes as soon as possible." Upon the receipt of that note I wrote to Colonel Barney and thanked him, not doubting that now I should receive the promotion which I had looked for so many years. However, when I came here I found that all these appointments were already filled up or promised; and so when there was nothing else to be done for me, I was asked if employment in the Sydney District would suit me; I said yes; but of course they could not put me in the same position as I would have been in had I been appointed a district surveyor; and I am now getting the pay of a subordinate clerk. That is the reason my position is undetermined.

W. W. Darke,
Esq.
1 Oct., 1858.

80. *By Mr. Hay*: Was that a private letter? It was, but referring entirely to official matters.

81. Did you write in consequence of receiving it? I did.

82. *By Mr. Piddington*: Have you any objection to furnish the Committee with a copy of that letter? I have not; I will supply it. (*Vide Appendix A.*)

83. *By Mr. Hay*: And also your reply? Yes. (*Vide Appendix B.*)

84. You are now acting, you say, as a surveyor at head-quarters in the Sydney District? Yes. I was surveyor here before, until I was sent into the interior. I only supposed the present to be a temporary arrangement. I was told three other district surveyors were to be appointed, and I undertook this duty, waiting for one of those appointments.

85. How long was it after that letter was written before you came to Sydney? My reply induced a correspondence which delayed my coming.

86. What was the nature of that correspondence? Colonel Barney then wrote and said he thought I must have misunderstood his communication of the 19th February 1857; and after some further correspondence, finding that everything was going wrong, I made arrangements to come up to Sydney immediately.

87. Are you in possession of the whole of that correspondence? I believe I am.

88. Will you have the goodness to append it to your evidence? (*Vide Appendix C and accompanying Note.*)

89. Did you make any application for a retiring allowance? No, that was forced upon me; I considered so. I remonstrated against being kept so constantly in the field under exposure and hardships, and I requested relief from that particular duty.

90. On the ground of your constitution not now enabling you to stand it? No; but I said truly that my sight was suffering very severely and required relief. I made the application chiefly on that account, and also, I may say, because I desired to be put in a position which would enable me to be near my family.

91. Was that an official correspondence? It was. Whenever I have applied latterly for promotion that has been adverted to; but it was forced upon me.

92. This official correspondence went on until very lately? Yes.

93. Was it in consequence of the private correspondence you have before adverted to? No; that was a distinct matter.

94. Then that official correspondence resulted from the application on your part to be placed on retiring allowance? No; my original application was to be relieved from field duty. I pointed out that I was a Commissioner of Crown Lands, and if employed in that capacity should have the advantage of such relief as I sought.

95. Were you made acquainted with the character of the duties of the proposed district surveyors? I was, distinctly, by Colonel Barney's note of the 19th February, 1857.

96. Did you feel that your appointment to one of those offices would operate as a relief to you from field duty? Certainly. It was not exposure to hardship, but the constant strain of the sight that I complain of; in fact I was once distinctly told by two or three medical men that I was going blind; and that distressed me, as you may conceive, beyond measure.

97. Do you believe that as you understood the duties of a district surveyor, as they were described to you, you would have been qualified to perform them? Yes.

98. *By the Chairman*: Peering constantly through an instrument impairs the sight? Very much; but the greatest trial to the sight is writing throughout the day on your field-book under the glare of the sun.

99. *By Mr. Hay*: Would you have been relieved from all that as a district surveyor? Not from all of it, but to a very great extent. The minute mapping is enough to destroy any man's sight, after so many years.

100. Is your sight recovered now? In a great measure; at all events, by using glasses, I can perform my duty.

101. *By the Chairman*: Do you think it the duty of the surveyor at any time to make these finished plans? I think each surveyor ought to plot his own work.

102. There is a difference between plotting and making a finished plan? Yes; but I think it would be hardly fair to the surveyor himself if he did not map his own work, as none but he can delineate truly the features he has surveyed, and surveyors frequently pride themselves on being good draftsmen.

103. Are you aware how these maps are generally sent in in France? I am not. I beg permission to add, that I considered the question as to my sight finally settled when Dr. O'Brien and Dr. Alleyne, as a medical Board, reported upon it.

104. *By Mr. Hay*: When did that take place? About six months ago.

105. In consequence of the official correspondence you have alluded to? Yes.

106. What was the character of that report? That my sight had been injured by exposure and duty, but that I was fit for service under conditions relieving me in that respect. I had represented to Drs. O'Brien and Alleyne the effect on my sight from plotting my field sketches

- W. W. Darke, Esq. sketches under a vertical sun, with the constant use of lenses both under such circumstances and in office.
- 1 Oct., 1858. 107. You consider that that matter was concluded then? Yes.
108. But since then your position still remains undetermined? Yes.

ADDENDUM.

I beg permission to annex, as additional appendices to my evidence, in reference to my petition now before the Committee, the letters, statement, medical certificate, and copies of official memoranda, below mentioned, viz. :—

Letter to the Surveyor General, dated 15th January, No. 56-2, referring to the promise of promotion made to me by the Governor in 1847, and submitting extracts from official letters on that subject. (*Vide Appendix D.*)

Letter from the Surveyor General, dated 18th February, No. 56-311, in answer to the above. (*Vide Appendix E.*)

Letter to the Surveyor General, dated 3rd August, 1857, No. 57-10, referring to my ability to perform the duties of district surveyor, and requesting that the representations conveyed by my letter as above (*Vide Appendix D*) may be submitted to the Minister for Lands and Works. (*Vide Appendix F.*)

Statement explanatory of the pecuniary "loss and injury" complained of by my petition. (*Vide Appendix G.*)

Medical certificate from Drs. O'Brien and Robertson, respecting the injury my sight has sustained. (*Vide Appendix H.*)

Copy of the Deputy-Surveyor General's memorandum to the Surveyor General, dated 6th February, 1856, on the subject of my letter of the 15th January, No. 56-2. (*Vide Appendix I.*)

Copy of Mr. Halloran's memorandum on the same subject, dated 24th January, 1856. (*Vide Appendix J.*)

WM. WEDGE DARKE.

APPENDIX A.

*Survey Office,
Sydney, 19 February, 1857.*

My Dear Sir,

Under new arrangements, New South Wales will be divided into four large districts, to each of which is to be appointed an officer whose duty will be chiefly in the field, controlling the surveyors in the district, both permanent and licensed. The duties devolving upon the officer in charge of the district will be the selection of land for survey, to ascertain that such surveys are correct, and that the surveyors conduct their work with due diligence; to obtain statistical information, &c., &c. The officer in charge will be supplied with a light equipment, which will enable him to travel through the country, stopping at such points as he may consider necessary to examine work done, or for the selection of land for survey.

One of these districts will be placed at your disposal, should you feel yourself competent to the fatigues of the required duty; and I have to request that you will make me acquainted with your views as early as practicable.

Yours truly,
GEO. BARNEY,
S. G.

W. W. Darke, Esq.,
&c., &c., &c.

APPENDIX B.

*Belgrave, Sunday Morning,
15 March, 1857.*

Dear Sir,

Your note of the 19th ultimo has only now reached me, in consequence of the mails having been retarded by the flooded state of the rivers.

In order to reply by return of post (leaving this morning) I have barely time, by a few lines, to say that I shall be glad to act in the official position you have offered me—a promotion for which I must express my grateful acknowledgments.

I hope that my district may include the country in which I have been employed during some years past, on account of my being intimately acquainted with the localities and features, and considering the impossibility of removing my family into the interior.

Believe me, dear Sir, &c.,
WM. WEDGE DARKE.

APPENDIX C.

*Belgrave, M^r Leay,
28 March, 1857.*

Dear Sir,

I am in immediate receipt of your note of the 21st instant. My reply to your kind communication of the 19th ultimo was hurried, having had but a few minutes time to acknowledge it by return of post; and I regret I did not convey to you that the duties of a district surveyor, as you point them out, would relieve me from the injury my sight is constantly

constantly receiving from draftsman's work, and are such as have been the object of my hope during some years past. W. W. Darke, Esq.

I will only add that I am confident in my ability to discharge the duties that will devolve on me, if I may be, as I earnestly hope and request, entrusted with their performance. I Oct., 1858.

Colonel Barney,
Surveyor General.

I beg, &c.,
WM. WEDGE DARKE.

NOTE.—The remainder of the correspondence here called for would form part of this Appendix. I cannot immediately lay my hand upon it. All I can find at present is my note in answer to Colonel Barney's of the 21st March, 1857.

APPENDIX D.

No. 56-2.

*Surveyor General's Office,
Sydney, 15 January, 1856.*

Sir,

I have the honor respectfully to request that you will allow the following representations to be submitted for the consideration of His Excellency the Governor General.

1. On the 2nd of November, 1847, I was instructed to undertake the survey of the McLeay and Clarence squatting districts, (the latter including the Richmond), the object of such survey being, as I was then instructed, and more fully informed by supplementary instructions of the 16th February, 1848, to determine the boundaries of certain new counties which the Deputy Surveyor General had pledged himself to the Government the department should survey, and have ready for proclamation before the end of that year. Sur. Gen. letter, 47-320, annexed. (A.) S. G., 48-42, (B.)

2. I beg to represent that a promise was made by the Governor, the tenor of which was to promote to the rank and pay of full surveyors such assistants as should complete their portion of this promised duty.

3. Out of the fifteen counties required, in addition to the four originally entrusted to my survey, four others, including nearly two degrees in latitude of the Great Dividing Range, (not in my district) were annexed to my share of this duty by the Surveyor General's letter of the 7th October, 1848. These I also promised to complete. 48-392, (D.)

4. With reference to clauses 2, 4, and 5 of my general instructions, mentioning the assistance to be rendered by contract, and other surveyors, I beg to represent that I received no such assistance; and having, moreover, been instructed for the more extended surveys above mentioned, I found it necessary (as sanctioned by clause No. 9) to "alter the course prescribed by the 3rd article," as regarding the survey of the impervious Bellinger and Nambucca country; a duty not requisite for the determination of the county boundaries, nor possible, with any view to their timely completion.

5. I now respectfully solicit notice of the following extracts from letters annexed:—

From the Deputy Surveyor General, 31 July.—No. 48-275.

"Knowing, as I do, the rough country you have had to contend with, I feel much pleasure in relinquishing the administration in chief of the affairs of the department in awarding you full credit for the exertions which have enabled you to bring your work into so tangible a form." (C.)

From the Surveyor General's letter of 18 December.—No. 48-515.

"I have to acknowledge the receipt of your letter of the 15th November, 1848, by which you forwarded me a rough sketch and descriptions of eight counties for proclamation. I am very much pleased with the very timely and satisfactory manner in which you have performed this duty." (E.)

I beg particular notice of the remainder of this letter, which refers to new duties, now become necessary from the sufficient completion of the original instructions.

From Mr. Thompson, Acting Deputy Surveyor General, 13 April.—No. 54-472.

"I do not fail to recognize the value of your difficult and excellent survey and delineation of that portion of the Great Dividing Range to which you allude." (F.)

6. Although these duties, extending over 13,500 square miles of as difficult a country as any in the Colony, were punctually performed by me, as I promised, at serious constitutional sacrifice, three officers, all my juniors, have been long since promoted,—the Governor's promise was overlooked in my instance,—and the flattering passages I can refer to in many official and private communications have afforded nothing more in result than a feeling of gratification from the expressed approbation of the head of the department.

7. I therefore venture to hope, that you will recommend for the favorable consideration of His Excellency the Governor General, that I may be allowed the difference of pay between that which I have received and the amount I should have received, had the promise I have referred to been fulfilled; together with corresponding precedence in your department, twenty-one and a-half years of service placing me next in seniority to Mr. Davidson.*

I have, &c.,

The Surveyor General,
Sydney.

WM. WEDGE DARKE,
Asst. Surveyor.

* That is, according to the periodical official returns from the Survey Office; but I always believed, and now find, that I am senior by date of appointment to Mr. Davidson.

WM. W. D.
1 October, 1858.

W. W. Darke,
Esq.

APPENDIX E.

Surveyor General's Office,
Sydney, 18 February, 1856.

1 Oct, 1853.

Sir,

In reply to your letter of the 15th ultimo, No. 2, I beg to inform you that, under present circumstances, His Excellency the Governor General has no power to accede to the application for promotion conveyed therein.

2. With reference to the request preferred in the last paragraph of your letter, I have to point out that it would be utterly useless at present to submit such a claim for consideration,—there being no fund to which claims of that nature could be chargeable.

I am, &c.,
GEO. BARNEY,
S. G.

Mr. Assistant Surveyor Darke.

* Vide Paragraph 6.

APPENDIX F.*

No. 57-10.

Surveyor General's Office,
Sydney, 3 August, 1857.

Sir,

I beg permission to refer to conversations and correspondence, with which you have honored me, on the subject of my ability, with regard to health, to perform the duties of a District Surveyor.

2. With respect to my ability, I have already offered you my unqualified assurances in the affirmative, and shall be happy to refer to the opinion of a medical board, if considered necessary.

3. Although I hoped from the tenor of your note of the 19th of February last to have been appointed to the only remaining district (as I am informed) now, or lately, vacant; yet, if such an arrangement be not considered expedient, I do not wish to urge that point; but would request to be re-appointed to the Sydney District, if, in determining the future destination of your officers, you have not already selected another for that service.

4. In saying re-appointed, I beg to explain that in December, 1845, I succeeded Mr. Townsend as surveyor at head-quarters, and performed all duties arising in Sydney—worked up all arrears handed to me from my predecessor, as well as directed the construction of a road to Illawarra (making all surveys connected therewith), until ordered to the Clarence, McLeay, and Richmond districts, in 1848.

5. I must add that my removal was arranged during the absence of the Surveyor General in Europe, under the following circumstances: An officer of the department, who had been already stationed many months at the Clarence, was appointed for that duty, under new arrangements then matured. He was either unable or unwilling to go there, to carry out the instructions given for redeeming a promise the Deputy-Surveyor General had made to the Government, referring especially to those districts; and I was sent in his place. I beg to enclose for your perusal a note I subsequently received from Sir Thomas Mitchell on the subject.

6. I beg respectfully to request your re-perusal of my letter of the 15th January, No. 56-2, and, as matters bearing on the present subject, which I therein endeavoured to bring under notice, are not probably known to the Honorable the Secretary for Lands and Public Works, I beg that it may be forwarded, with your observations, together with the reply with which I was honored from you on the 15th February, No. 56-311, by which I hope I am justified in saying, that His Excellency the Governor General does not deny, nor refuse to recognize, the propriety of my representations.

I have, &c.,

The Surveyor General,
Sydney.

WM. WEDGE DARKE,
Asst. Surveyor.

APPENDIX H.

W. W. Darke,
Esq.

MEDICAL CERTIFICATE.

Sydney, 5 February, 1856.

1 Oct., 1856.

We hereby certify that, having examined Mr. William Wedge Darke, we are of opinion that his vision has been impaired by his occupation as surveyor.

We are moreover of opinion, that a continuance of his occupation, under the circumstances he has detailed to us, would further impair his vision, but that under more favorable conditions he could for a considerable time to come pursue his profession.

B. O'BRIEN, M. D.

JAMES ROBERTSON, M. D.

APPENDIX I.

(Copy of Mr. Thompson's Memorandum.)

Memorandum for the Surveyor General, as required on Mr. Darke's letter of 15 January, 1856.

The Colonial Secretary's letter of 17 November, No. 47-446, which authorized the survey of the Squatting Districts, has reference to surveys required for bringing into effect Her Majesty's Orders in Council.

The Surveyor General's letter of November 2, No. 47-320, to Mr. Darke, in pursuance of the above directions, tells him to carry on the general survey of the district.

It has always been understood and admitted that the general survey of a squatting district was to comprise such a survey of the features of the district as would admit of the determination of the reserves required by the Orders in Council as well as of the county boundaries, and the construction of such a map as should exhibit the reserves. (*Vide letters, with papers, marked E and F.*) Such maps were furnished by Mr. Townsend, Mr. Davidson, Mr. Galloway, Mr. Larmer, Mr. M'Cube, &c.

Mr. Darke has not sent in any such general map, consequently, according to the Colonial Secretary's letter of 17 November, the work is not satisfactorily completed.

That Mr. Darke has been interrupted by the labor difficulty is a fact—that he has been engaged in other than the general survey is a fact—and that he has done the work alluded to in his letter, viz., the county boundaries is a fact; but, in strictness, he has not done the work which, as I apprehend, was contemplated by the Colonial Secretary's letter, No. 47-446, to which he refers.

If it were the completion of county boundaries only that was to ensure promotion, why did not Mr. Darke complete at the end of the year 1848, when he had completed them?

I think it will be found too that the promotion to which he refers did not spring out of the completion of the surveys required by the general instructions of 1847 for the survey of the squatting districts, but on rather the result of vacancies, &c.

J. T.

6/2/6.

APPENDIX J.

Copy of Mr. Halloran's Memorandum.

Colonel Barney,

The promise of promotion conveyed in the Colonial Secretary's letter of the 17th November, 1847, although not officially made known to the surveyors, was, I believe, very well known to them all.

I do not feel quite satisfied to express any opinion whether the work required in the instructions to Mr. Darke, and on which the promise of course will hinge, were completed thoroughly; the Deputy Surveyor General, who will be back in a few days, will be better able, and to him you will perhaps refer this particular question.

The intention of Mr. Darke to retire from the department originated some four years ago, and has never been abandoned: his continuance from year to year has therefore been uncertain, and in the promotions which took place in the meantime (*Vide Appendix G*) his interests were in no way considered compromised.

24 January.

THURSDAY 7 OCTOBER, 1858.

Present:—

MR. FORSTER,

|

MR. PIDDINGTON,

MR. WHITE.

G. B. WHITE, ESQ., IN THE CHAIR.

Colonel George Barney again called in, and still further examined:—

1. *By the Chairman:* Last Thursday a motion was made by Mr. Hay, "That Colonel Barney be examined before this Committee as a witness for Thursday next, for the purpose of then producing all the papers having reference to Mr. W. W. Darke's promotion in, and proposed retirement from the Survey Department, together with any report made by the Medical Board in reference to that gentleman's eyesight."—Do you produce those papers? I have the whole of the papers here, and shall be happy to furnish the Committee with copies of such as may be deemed necessary. (*The witness produced the papers.*) I may be permitted

Colonel
G. Barney.

7 Oct., 1858.

Colonel
G. Barney.
7 Oct., 1868.

mitted to observe, that there can be no question as to the qualification of Mr. Darke as a surveyor; the whole matter hinges upon his incapacity to work, from a disease of the eyes, to which effect he has submitted several certificates. He has been under examination by a Medical Board, and the last certificate sent in, which I have here, is signed by Dr. O'Brien and Mr. Alleyne. They were called upon to make an official report. They did so, and it is to the effect that, although Mr. Darke's eyes are affected by disease, he is capable of work, provided he were not exposed to the glare of the sun. (*The witness read the report. Vide Appendix A, Nos. 1, 2, 3, and 4.*) Upon the strength of this report I suggested that as Mr. Darke had applied for leave of absence, he should be kept in Sydney during the progress of certain work—plan drawing in connection with his previous surveys—and that he would be capable of doing all the work about Sydney of a desultory character, where he would not be so much exposed to the constant glare of the sun. He has been employed in that way since his arrival in Sydney.

2. Is it not your opinion that, although a man may be incapacitated for the performance of his duties in the field, where he will have constantly to look at the sun for eight or ten hours a day, he may be able to perform other duties connected with the service? Yes. But, in the case of Mr. Darke, the subject of his retirement has been in agitation now since 1851, and he has submitted several medical certificates which have entirely condemned him. The matter was brought before the Executive Council. He was informed he would be allowed to retire, and he expressed his gratitude that the Council had sanctioned his retirement.

3. He did apply to be allowed to retire? Yes. I admit that the position of surveyors is a very hard one. They are exposed to all kinds of weather in the field, and have very hard work. I find, on looking over the records of the office, that after fifteen years' service their health generally begins to decline. Some of the best men of the department have failed in that way—Mr. Shone, Mr. Galloway, and several others. It is a very harassing duty, no doubt.

4. There is a great deal of difference between the circumstances of a man looking through a theodolite all day and bushing it out all night, and of one engaged occasionally with a circumferentor, and in the superintendence of others? Yes.

5. Mr. Darke complains, that some officers who have scarcely done a day's duty as compared with the old officers, have been appointed district surveyors, while he has not been promoted? That may be traced to this circumstance, that since 1851 there has been a daily expectation of his retirement. He has himself brought forward the matter several times; and from the reports of his imperfect vision, he has not been considered with reference to promotion to a higher position. Two or three years ago, when I entered upon my appointment, I expected he would leave the department, and it was generally understood that he would retire on a pension. He is now completing the office work of his surveys of the Richmond and Clarence Rivers; but, perhaps owing to his defective eyesight, he appears to be indolent; unquestionably he has not done the amount of work he ought to have done. There were several complaints of him even in Sir Thomas Mitchell's time.

6. *By Mr Piddington*: I was going to ask you whether any complaints of incapacity or indolence had been made by the superior of Mr. Darke? I have here a memorandum of Sir Thomas Mitchell, which I found the other day. It is dated 27 October, 1851, and is as follows:—"The extraordinary length of time that has elapsed since you last sent in your monthly journal obliges me to say, that it will be impossible that I can certify at the end of the month (now at hand) that you are employed in the performance of your duty, as sending in the journal was part of that duty, and that the most indispensable. Six months have now elapsed, I find, since your monthly journal has been sent in, for which omission—tolerated too long—I shall deserve, and very probably may incur the censure of the Government."

7. *By the Chairman*: Where was he then employed? At the Clarence River.

8. Was there postal communication with the place at that time? Yes. He acknowledged the receipt of the communication, and when he sent in the return it was very unsatisfactory; in fact there had been but little work done.

9. *By Mr Piddington*: Have there been any communications made subsequently to that of Sir Thomas Mitchell by the superiors of Mr. Darke? Yes, from Sir Thomas Mitchell also.

10. What was the complaint subsequently made? Of the same thing—of not having sent in his journals, principally; and that when they have been sent in they have not exhibited the amount of work that ought to have been done, but which I have attributed to his defective sight. I must confess I do not think he could do the work which ought to be done by a surveyor.

11. *By the Chairman*: You are aware that in some districts a man might do eight or ten miles in a day, while in the coast districts there is particular difficulty, and so much work could not possibly be done? Yes.

12. Sir Thomas Mitchell not having been in the coast districts, and comparing Mr. Darke's work with that of other surveyors, might suppose that he had done very little, while in reality he might have labored much harder than they. For instance, a man at the Murrumbidgee might go over ten or twelve miles, while on the Clarence he could not go over a mile and a-half? Yes, I know it is difficult in the Macleay District. There was a report made by Sir Thomas Mitchell, in September, 1855, relative to Mr. Darke. (*The witness read the same. Vide Appendix B.*)

13. *By Mr. Forster*: Do you consider that, on the whole, Mr. Darke has been unfairly dealt with by the Government? No, I do not.

14. Are you aware of the complaint he makes? It is, I believe, that he has been passed over.

15. You consider Mr. Darke qualified for the office he now holds? Yes.

16. You consider that he has not been unfairly dealt with in having been placed in that position? Not at all. I think he is fortunate in having been placed in that position.

17. Do you think Mr. Darke, making full allowance for this defect of eyesight, qualified for the post of district surveyor? Certainly not.
18. On what ground? His eyesight is so bad that he would pass me in the street as near as I am to you without recognizing me. It would be impossible for him to see over an extent of country.
19. As he has made a complaint against the Government, it is only fair to ask, although it is a delicate question, whether there are any other reasons besides his eyesight which might be taken to justify the Government in overlooking him? From my own personal knowledge during the period of two years I have no reason to suppose so.
20. Can you state the length of time Mr. Darke has been employed in the service of this Colony? He came into the service, I think, as he states, in 1834.
21. Was he not in the public service at Port Phillip? Yes.
22. Was that before he came here? No; at that time Port Phillip formed part of this Colony.
23. He has not been in the service of the Port Phillip Government since the separation of the Colony? I think not.
24. Are you aware whether complaints were made against Mr. Darke for indolence while he was at Port Phillip? I am not aware.
25. You have no knowledge how he conducted himself at Port Phillip? None whatever.
26. Are you aware whether the loss of sight in Mr. Darke has been caused entirely by his work in the public service? I think there is no doubt of it; it is a common thing with surveyors; they begin to lose their sight very early indeed.
27. You think it arises from exposure to the glare of the sun? It is from exposure, no doubt; and the eye is also affected by being so constantly applied to the instrument.
28. *By the Chairman:* You are aware that in the public departments at home military officers are employed in the War Office, and naval officers in the Admiralty Office? Yes.
29. They are supposed to be able to give better information as to the arm of the service to which they belong than the mere clerks of the office? Yes.
30. I had an idea, and I have the idea yet, that there should be some officer in the office who should understand what was doing in the field? No doubt it would be a great advantage to the service.
31. Although an officer might not be able to look through an instrument, he might be able to arrange maps and give instructions to the younger officers of the service? He certainly might.
32. The general complaint of the surveying staff is, that the department being a surveying department, they are subordinate to the officers of every other branch, to the Chief Clerk, and the Principal Draftsman, each of whom receives a higher salary than the surveyors; while in the Secretary of State's Despatch the position of these officers is inferior to that of the surveyors? I do not see that the fact of a man receiving a higher salary should give him precedence in rank.
33. *By Mr. Piddington:* Has Mr. Darke, in your judgment, performed the work undertaken by him lately with efficiency and despatch? No, certainly not with despatch.
34. That want of despatch and efficiency you attribute to the defect in his eyesight? Yes. He is unquestionably an indolent man, but I think that in some measure originates with his sight; for instance, in plan drawing he is obliged to work with glasses, and we know very well that an hour's work of that kind will painfully affect the eye. He cannot stick to his work as he otherwise would do.
35. *By the Chairman:* Mr. Darke says he has been twenty-four years in the service, and he has seen nearly every junior officer promoted above him, as well as strangers recently appointed to grades superior to his own? He has no grade at present.
36. The grades have been abolished, excepting that of first class surveyor and second class surveyor? In anticipation of his retirement for the last eight or ten years he has not been subject to promotion, but he has better pay than a first class surveyor.
37. His principal grievance is that if he had been promoted when he was entitled to promotion he would have been in the receipt of £1,000 more than he has received? His promotion was, I am told, dependant upon certain work being done. I believe a verbal communication to that effect was made by Captain Perry to Mr. Darke, but there is nothing on record respecting it.
38. He states that he did that work? He did so far as to permit of the boundaries of the counties being fixed, but he had the feature surveys to make afterwards, which he has not done yet. That is the work he has in hand now.
39. Many of those county boundaries are suppositious? Very likely.
40. They are merely paper maps? They must be, for the feature survey is very imperfect; we are obliged to take an imaginary line.
41. You have some of Mr. Darke's maps in the office showing his feature surveys? Yes.
42. The Committee do not wish to overburden the evidence with a mass of papers, but will be glad if you will append to your evidence any important documents bearing upon the state of Mr. Darke's eyesight, or affecting the question of his efficiency in the public service? I will do so. (*Vide Appendix C., Nos. 1, 2, 3, 4.*)

Colonel
G. Barney.

APPENDIX A.

No. 1.

Sydney, 5 April, 1858.

Sir,

In reply to your letter of the 31st December, 1857, requesting us to examine and report upon the state of Mr. Surveyor Darke's sight, with regard to his fitness in that respect to perform the duties of a surveyor,—we beg to state that we have examined Mr. Darke, and at the same time referred to a certificate written by Drs. O'Brien and Robertson, on the 5th February, 1856, relative to the state of his vision at that time.

It appears to us that, in consequence of a more than ordinary sensibility of the optic nerves, Mr. Darke is still unfit for the performance of such duties as would require exposure to the glare of the sun; but we think him quite capable (so far as his vision is concerned) of performing any of his duties which do not necessitate his constant exposure to the sun.

We have, &c.,

B. O'BRIEN, M.D.
HAYNES GIBBES ALLEYNE, M.D.

The Under Secretary
for Lands and Public Works.

No. 2.

I hereby certify that Mr. Darke consulted me in the month of June, 1851, for conjunctival inflammation of both eyes, which for some time incapacitated him from following his accustomed duties; and I also certify that, in the following September, I was again consulted by him respecting his eyes, when I informed him that I was afraid that cataract was commencing; but I have since had reason to consider the affection more of the character of amaurosis, or nervous disorder of the eyes.

HENRY TAYLOR, M.D.,
Surgeon.

Port Macquarie,
Nov. 12, 1851.

No. 3.

I hereby certify to have known W. Wedge Darke, Esq., Government Surveyor, residing on the M'Leay River, for a period of nearly four years, during which time he has several times consulted me about his eyesight. I have this day made another examination, and positively state that he is suffering from an (*affaiblissement de la vue*) amblyatry, and that if much exposed to the vicissitude of the atmosphere, which his profession necessarily lays him open to, will, in all probability, bring on a complete amaurosis; and I certainly doubt that any medical treatment could now restore the eyesight to its normal state.

CHS. H. GABRIELS,
Surgeon.

Kempsey, M'Leay River,
Sept. 10, 1855.

No. 4.

I testify having seen and examined this day Mr. Darke, Government Surveyor.

Mr. Darke with whom I had some conversation about two years ago upon the bad state of his vision, has evidently, and according to his statement, been suffering for years an amblyopia amaurotica, (*affaiblissement de la vue*) without doubt occasioned mostly by the influences of a sub-tropical climate and the intense brightness of the Australian atmosphere, and regardless exposure to which both the duties of a surveyor demand.

I am fully convinced that no medical treatment will restore to Mr. Darke a sound eyesight. I am convinced likewise that Mr. Darke, should he continue to follow his vocation, might bring upon himself a complete amaurosis.

SCHRADER, M. D.,
From Kiel, Danish Dependency,
On the Baltic, Wolstein.

Port Macquarie,
4 September, 1855.

APPENDIX B.

The Surveyor General to the Colonial Secretary, relative to the report that Mr. Darke is idling his time at Port Macquarie.

Surveyor General's Office,
Sydney, 18 May, 1852.

Sir,

In acknowledging the receipt of your letter, No. 52-307, of the 12th May, in which, in returning the surveyors' journals, you acquaint me, by the direction of His Excellency the Governor General, that His Excellency has been informed that both Mr. Darke and Mr. Gorman are idling away their time and making no progress whatever in the completion of their surveys,—I have the honor to state, for the information of the Governor General, that, for a considerable time past, the very slow progress of Mr. Darke in the preliminary survey of the small district committed to his charge, has been the subject of correspondence with him, and all that could be done by writing, and all that I could think of saying to urge him to the completion of his work has been written and said. Mr. Darke is

is now under stoppages for overdrawing forage and rations, and his allowance for equipment and labor has been partially stopped, with the understanding that he was to employ himself in drawing plans of the remainder of the work which he has been chaining and sketching ever since he was sent into his district, in the beginning of the year 1848.

2. Some six months ago, when Mr. Darke made his appearance in Sydney for medical advice, I had occasion to stop his salary, and to bring his name under His Excellency's notice; he had then spent in sickness and drawing nearly a whole year, without having surveyed a single chain, and now this further period of many months has elapsed. But I am without the receipt of any plans from Mr. Darke, or of any journal to show what he is doing. I could not be aware that, whilst in the field, Mr. Darke had totally neglected the preparation of plans of his work, and, consequently, were I now to interrupt his alleged drawing, the labor of years, acquired at a great expense, might be thrown away, and this is one of the considerations which has led me, in some measure, to tolerate Mr. Darke's tardiness, until, as I am glad to find, his idling has come to the ears of His Excellency the Governor General, who will perhaps favor me by saying what steps he would wish to be taken in the matter. I have, however, to observe, in order so far to palliate what I have said above, that Mr. Darke is, I believe, afflicted with a nervous disorder of the eyes, of a dangerous character, and as he has been seventeen years in the service, it will perhaps be considered expedient, should the affliction of his eyes, under medical certificates, be pronounced incurable, that he should retire from the service on such pension or allowance as his length of service may commend him to.

3. As evidence of the trouble I have had with Mr. Darke, I beg to enclose a copy of one of the numerous letters of a similar character which I have had to address to him, No. 51-679 of 14th November.

I have, &c.,
T. L. MITCHELL.

Colonel
G. Barney,
7 Oct, 1858.

APPENDIX C.

No. 1.

PROCEEDINGS of the Executive Council on the 27th May, 1852, with reference to a letter from the Surveyor General representing the very slow progress of Mr. Assistant Surveyor Darke in the survey of his district, and suggesting that, if the disorder of his eyes be pronounced incurable, he might be allowed to retire from the service on a pension.

Minute No. 52-19. Confirmed 7 June, 1852.

His Excellency the Governor General lays before the Council a letter from the Surveyor General containing some remarks on the conduct of Mr. Assistant Surveyor Darke, in reply to an intimation made to him, by direction of the Governor General, to the effect that information of a reliable character had reached His Excellency that Mr. Darke was idling away his time at Port Macquarie, and was not making any exertion to complete the survey on which he is engaged.

2. The Surveyor General states, that for a considerable time past the very slow progress of Mr. Darke in the preliminary survey of the small district committed to his charge has been the subject of correspondence, and that all that could be done by writing, and all that he could think of saying, has been written and said to urge Mr. Darke to the completion of his work. The Surveyor General's report is in other respects unfavorable to Mr. Darke; but it is stated in palliation that he is afflicted with a nervous disorder of the eyes of a dangerous character, and as he has been seventeen years in the service, the Surveyor General suggests that, should the affection of his eyes be pronounced incurable, it might be expedient that he should be permitted to retire from the service on a pension.

3. After due consideration of the circumstances stated in the Surveyor General's letter, the Council advise that on the production of the necessary medical and other certificates, Mr. Darke should be allowed to retire on a pension calculated with reference to his present standing and length of service, and that, pending the approval of the Secretary of State, he should receive an allowance equal to the pension so computed from the date of his quitting the public service.

4. As the expense of the Survey Department is borne wholly on the Crown Revenue, the Council are of opinion that the pension recommended to be granted to Mr. Darke should be also drawn from that source.

MCHL. FITZPATRICK,
Clerk of the Council.

*Executive Council Office,
Sydney, 11 June, 1852.
No. 52-104.*

No. 2.

*Encampment, McLeay River,
11 August, 1852.*

Sir,

I have the honor to acknowledge the receipt of your letter (No. 52-442) of the 10th ultimo, informing me, first, that a determination has been arrived at by the Government that I shall be allowed, on the production of the usual certificates, to retire from the public service on a pension; and, second, that this consideration is extended to me from the representations that you have made with regard to my sight.

Colonel
G. Barney.
7 Oct., 1858.

I must most respectfully offer my grateful acknowledgments for this consideration, not only to the Government I have had the honor to serve so long, but to you as my immediate superior, who, by pointing out the condition that the performance of my duties has reduced me to, have procured for me so great a boon.

I am thus relieved from the deepest anxiety in two especial respects: in one, from feeling assured, from the rapid progress amaurosis has made during the last two years, that I could not use a field-book under the glare of the vertical sun (to which the origin and progress of this disease has been owing) during one or two more summers without incurring almost a certainty of that which I dare scarcely allow myself to think of; in another respect, because I find that I cannot perform the duties that I well know are required of me under the present arrangements and circumstances with regard to labor in the manner I could when unembarrassed in this respect. It would be irksome, and I think unnecessary, to go into details of the tiresome delays and vexatious circumstances arising from this source; nor would I on this occasion mention it but that I would truly assure you that such, together with the state of my sight, reasonably and kindly considered with the work that has been and will be before you on the final transmission of my papers, will I fully believe deter you from acquiescing in any imputation against me of intentional idleness.

As I am now in the field with a party (having been engaged during the past and the present month in measuring lands on the M'Leay), I think, considering the difficulty, delay, and expense of forming one, that it would be conducive to the public service if I may be allowed to complete the work I intended on starting, viz.—to connect Hodgkinson's work on the M'Leay with my own on the Clarence, which I consider it my duty to proceed with until I shall receive your further instructions. And I would especially beg leave to complete this, before availing myself of the permission conveyed by your letter now under reference.

The Surveyor General,
&c., &c.,
Sydney.

I have, &c.,
WM. WEDGE DARKE,
Asst. Surveyor.

No. 3.

Assistant Surveyor Darke to the Surveyor General, soliciting relief from field duty, or a retiring pension for length of service and injury to sight.

No. 55-25.

*Belgrave, M'Leay River,
10 September, 1855.*

Sir,

I respectfully acknowledge your letter of the 17th ult., No. 55-1126, referring to the unsatisfactory nature of my reports of field work; and in transmitting by this post my returns for July and August, I deeply regret that the complex nature of my duties, under unavoidable contingencies of hinderance, with the absence of either office or field assistance, preclude reasonable hope that the Governor General will now entertain any more favorable view.

I did not suppose that the request for relief from field duty, conveyed by my letter of the 21st July, No. 18, would have suggested the necessity of my retirement from office also, and ventured to hope that long service would have recommended me for some such arrangement.

Under this painful and unfavorable position, it is my duty to report myself unfitted for the field service required from the office I hold, in consequence of a gradual and increasing failure of sight during many past years of duty. The exposure at night, in all weather, with the effects of a nearly vertical sun, having induced a disease which Dr. Fullerton, in 1851, professionally pronounced to be "incipient amaurosis."

In 1841 and 1842, when on duty at Port Phillip, finding it impossible to get over my ground with a tent, or any but the most bare means of shelter, and having men of a class who would follow anywhere, I adopted the pack, as the only way to get on. But my sight then first began to fail, and suffer from the intense reflection of the sun from my field-book. This was aggravated by a short but similar exposure in the Wooroonora (Govell's) country; and confirmed during a whole winter on the survey of the Great Dividing Range (under a blanket only) from Ben Lomond to Darling Downs—previously attempted, but reported on and abandoned as being impracticable; while all my surveys on the Clarence and Richmond, necessarily performed in a similar manner, at length made it obvious that relief from such duty would shortly become necessary.

On the receipt of your letter under reference, I immediately proceeded to Port Macquarie to obtain a certificate as to the state of my sight from Mr. Schrader, a German physician, who with Mr. Gabriel, a French surgeon practising at Kempsey, (the only medical men within 120 miles,) gave me the certificates I now enclose, together with a declaration from Mr. Tozer referring to an examination by the late Dr Taylor.

These, with the decided opinion of Dr. Fullerton, if it be determined that I may not have the advantage of office employment, will, I trust, under your kind and favorable recommendation to the Governor General, be sufficient to justify my soliciting a pension for twenty-one years service, under circumstance of impaired sight, occasioned by the nature of my duties.

The Surveyor General,
&c., &c.,
Sydney.

I have, &c.,
WM. WEDGE DARKE,
Asst. Surveyor.

No. 4.

The Surveyor General to the Colonial Secretary, relative to Assistant Surveyor Darke's retirement from the service, or employment in office.

Colonel
G. Barney.
7 Oct., 1858.

No. 55-854.

*Surveyor General's Office,
Sydney, 27 September, 1855.*

Sir,

I have the honor to transmit herewith an application from Mr. Assistant Surveyor Darke, in which he solicits relief from field duty, or a retiring pension on length of service and injury to sight; and I can not omit to add, in transmitting this application and accompanying documents, the expression of my regret that the state of this talented surveyor's health obliges him to seek such retirement at this time.

2. I take leave also to vouch for the extensive services to which he refers, in which his eyesight has been permanently injured; and to state that the surveys of Mr. Darke have all been of an accurate and substantial kind, which, from his being a good geologist, have in some cases derived additional value from that circumstance.

3. As it would appear that office duty is still within the compass of Mr. Darke's wishes, to endeavour to provide for his family's support, it may deserve His Excellency the Governor General's consideration how far in the re-organization of this department, now long delayed by me, awaiting the result of a late inquiry, it would not be advisable to employ surveyors in the clerical duties of this office as much as possible; in which case perhaps such old and tried servants of the public might still afford to it the benefit of their experience in the field, in professional matters coming before them.

I have, &c.,
T. L. MITCHELL.

The Honorable
The Colonial Secretary.

FRIDAY, 22 OCTOBER, 1858.

Present:—

MR. FORSTER,
MR. HAY,

MR. PIDDINGTON,
MR. ROBERTSON,

MR. WHITE.

G. B. WHITE, ESQ., IN THE CHAIR.

John Rae, Esq., Secretary to the Railway Commissioners, called in and examined:—

1. *By the Chairman:* Your attendance has been required in order that you may produce a letter connected with the dismissal of Mr. Henry Sanderson from the Government service: he was formerly in the Survey Department and afterwards, I believe, was transferred to the Railway Department? I am not aware that Henry Sanderson has been connected with the Railway Department since I have held office in it. He was dismissed by the Surveyor General, I believe. I can find no paper connected with his dismissal among our records. John Rae,
Esq.
22 Oct., 1858.
2. Mr. Halloran stated to us that we should get that document from you? He applied to us on the 13th October, by a letter, which we received on the 15th, for the paper connected with this case, and stated that he believed it was in our department. After a careful search, I sent a verbal message to him that it could not be found. He then said, he was not sure where it was, but that he merely fancied it might be with us.
3. Mr. Halloran says, in a note addressed to the Clerk of the Assembly, "I am still unable to forward a copy of the letter respecting Mr. Sanderson; the papers are in the Railway Department"? The other surveyors who were sent out with Mr. Sanderson were transferred to the Railway Department. They have been re-transferred since, and I have the papers connected with them; but Mr. Sanderson was dismissed before they were transferred to us at all. The first letter from Mr. Sanderson to the Chief Commissioner is dated 20th October last, applying for a copy of his agreement. We have a copy of his agreement with the English Government, and of certain correspondence relating to giving up some of his papers and documents which had been left at Moreton Bay after his dismissal, but we have not the paper connected with the dismissal itself.
4. I will read the portion of Mr. Halloran's evidence which relates to this matter. He is asked—"Are there any papers in your office connected with this case which would shew the position in which he (Mr. Sanderson) stands with the Government, or why he is not continued in the service? I think I could produce them. Mr. Galloway stated that Mr. Sanderson and the other two assistants had not performed during, I think, nine months, what one diligent individual could have accomplished in three." In a letter written subsequently, dated 6th October, he says—"I regret that I am still unable to forward a copy of the letter respecting Mr. Sanderson. The papers are in the Railway Department, and I have not yet been able to obtain the document in question." In his letter dated the 13th, and received on the 15th October, he states that he believes the paper is with us; but I can only answer, to the best of my belief it is not, and never has been. I made a most diligent search, and caused the record clerk to do the same, and there is no such document to be found. I merely answered his letter verbally. I sent the record clerk to him to state what was the fact—that we could not find it—and he said he merely supposed that it had got with some other papers. He thought we might have it, but was not sure.

Charles James Armytage, Esq., called in and examined :—

C. J.
Armytage,
Esq.
22 Oct., 1853.

1. *By Mr. Robertson* : How long have you been employed in the Surveyor General's Department? About twenty years.
2. Have you access to the records of the office? Yes.
3. Would any official complaint made of any officer of the department be recorded? Yes.
4. Are you aware whether any complaint has been ever made of the Chief Clerk for his having interfered with matters not properly pertaining to his position by any officer of the department, or by any of the public? No, excepting in one instance by Mr. Galloway, who was ordered by Sir William Denison to withdraw his letter, or be dismissed the public service.
5. How long has Mr. Halloran been in the service? I believe over thirty years.
6. Is he considered a zealous and conscientious officer? Yes.
7. What leave of absence has he had during the time you have been in the office? I cannot say positively what length of leave, but I know that he has never been away from the office more than three weeks at a time, if so long. The longest time he was away was, I think, in May, 1848, when he was absent about three weeks.
8. How frequently has this occurred—once a year? No. He has had very little leave indeed; in fact I cannot say that he has had any particular leave, excepting that in May, 1848, and in 1841, when he was away for eight days, on the occasion of his marriage. He has been away sometimes for a day, or a couple of days, but this is very seldom indeed.
9. What hours does he generally give to his duties daily? He gives all the office hours, and I believe sometimes works at home. I know that he has frequently been in the office when I have been there beyond the usual hours, and sometimes on Saturday afternoon, when the offices are supposed to be closed.
10. Does he take home a box of papers? Sometimes.
11. Have you reason to know, from the state of the papers when they leave the office and when they return, that he has worked upon them? Yes; upon the following morning the evidence has been that the papers have been acted on.
12. There was a Mr. Gorton in your office? Yes.
13. Was he, do you think, a capable and efficient clerk? To a certain extent he was efficient; but he was, I am sorry to say, not a zealous clerk, and that I think has been the sole reason that he has come into collision with Mr. Halloran. I must say that Mr. Halloran has always "drawn" towards a man who has worked hard and well in the office. Mr. Gorton, I am sorry to say, from the first (and it has been not only my own remark but the remark of others) has never shewn any disposition to do more work than he was actually obliged, and never voluntarily exceeded the office hours of attendance during any pressure of work.
14. Do you consider that his general conduct was that of a good officer? I can scarcely say it was, for if a man knows there is plenty of work to be done, and does not put himself out of the way to do it, or to assist in doing it, he can, I think, be scarcely called a good officer—that is, a faithful servant.
15. Do you think his ability and his services warranted him fairly to expect a better position in the service than he really had? No, I do not.
16. Was he frequently insubordinate in the office? No, I cannot say that he was. Whatever may have passed between him and Mr. Halloran or the Surveyor General I am not aware; but I know of no case of insubordination, excepting the recent correspondence, which was so considered.
17. To what correspondence do you allude? To that submitted to yourself and Mr. Hay.
18. That is not recent, but was before Mr. Hay left office; this correspondence runs over some eighteen months? Yes.
19. This gentleman refused to comply with some request first made by Mr. Hay, and subsequently by myself, and would persevere in the course he was pursuing? Yes.
20. You are aware that Mr. Hay caused it to be communicated to Mr. Gorton that unless he complied with the instructions given to him with reference to that matter he would be dismissed the service? Yes.
21. You are aware that he persevered in his non-compliance? Yes.
22. Would you call that insubordinate conduct? Yes, those were certainly acts of insubordination; but I thought you referred to disturbances in the office.
23. Did Mr. Halloran appear to have any personal dislike to this gentleman? No. He was formerly tutor to Sir Thomas Mitchell's children, and when he was first brought into the office Mr. Halloran objected, on account of his being too old to begin the service; but ever since he has been in the office he has been treated the same as the other officers.
24. Still you say—and it is only fair that this should be known—that Mr. Halloran from the first objected to Mr. Gorton? Yes; solely on account of his age.
25. Is it not possible then that Mr. Halloran might be disposed not to favor Mr. Gorton? I think not; I have never seen any thing to warrant such a supposition.
26. Does Mr. Halloran treat the clerks fairly? Yes, I think I may say he does.
27. Do you think in the promotions that take place Mr. Halloran acts fairly, and makes choice from no other consideration than what appears to him to be the benefit of the public service? Yes. I think I may fairly repeat what I said just now, that Mr. Halloran is always "drawn" to the man who works hard.
28. Do you consider the clerical strength in that office sufficient? No, I do not.
29. How is it as compared with the clerical staff of 1853? In 1853 we had twenty-five clerks; at the present time we have twenty; the work being double what it was in 1853.
30. Then, I presume, the clerks in 1853 must have had very easy times? I cannot say I think they had. The office hours were shorter at that time, but there was still a great deal of work done.
31. Is it not the fact that you have seen in that office a great deal of intoxication? No; that was before my time.

32. What is called "sprecing"? Since I have joined the office I have not witnessed many such scenes. Instances have occurred, but the gentlemen transgressing have been either warned, disrated, or dismissed.
33. You say the clerical staff is not sufficient now—do you not think that there might be such alterations made in the correspondence between the Office of Lands and Works and the Survey Office as would very much reduce the actual clerical labor, and at the same time justify a reduction in the number of clerks, without doing injury to the public service? I think not. A great many alterations and improvements have been made in that way since you took office, but I do not think any further alterations would obviate the necessity of employing the present number of clerks, or even more.
34. You are aware that since I have been in office some change has taken place relative to the correspondence between the Office of Lands and Works and the Survey Office—that there has not been so much correspondence as formerly? Yes. I think the labor has been saved in your office, not in ours. I must say that, personally, I was delighted when I saw these alterations, because they exactly accorded with my own expressed views for some time past; for it was evident to me that our chariot wheels would always drag heavily so long as the machinery was so cumbersome. If I might be allowed to make the suggestion, I think it would be a great advantage if the Secretary for Lands and Works had an office in our building, as, instead of writing letters to his department, it would then be necessary only, in many matters, to submit cases to him for his decision, and by this means there would be greater expedition, and a decrease of labor.
35. Would you have only the Surveyor General's Department under the same roof as the Secretary for Lands and Works? I would have the Railway, and all the departments connected with Lands and Works. We daily see the inconvenience of the present system.
36. Do you think there has been much inconvenience from the reduction of the correspondence effected under a minute of mine? No.
37. Then I am at a loss to understand why you think it cannot be carried farther, for it seems to me that the system of communication by blank covers might be extended? I think that it might be extended, and that all applications sent to our office for the measurement of land might be merely referred to the Chief Draftsman, and upon being minuted as unobjectionable, might be sent at once to the surveyor; and letters affecting the interests of the writers only, might likewise be at once answered under blank cover. That would remove a great deal of the odium cast upon the office.
38. Do you correspond with the Treasury? Very little; it is nearly all done by blank covers.
39. There is one matter upon which I should like to have your opinion:—you are aware that at present on the arrival of the plan of a town at the Survey Office it is sent to the Minister for Lands and Public Works for his approval; that it is then submitted to the Executive Council, and remains a week after having been brought before the Council for approval; that it then passes through the hands of the Clerk of the Executive Council, and probably remains with him three or four days; that it then returns to the Office of Land and Works, where it probably remains some few days; and at length reaches the Survey Office approved, when instructions are given for measuring, and submitting the allotments for sale—do you think all these forms, which involve a delay of six weeks or two months, necessary? No, if you can depend upon the surveyor; it all turns upon that. If you have a man like Mr. Adams, who can be trusted to select a site, design the town, and survey the allotments for sale simultaneously, a great saving of time would be effected, and the public demand satisfied by an early sale of the allotments.
40. I think it would be giving a surveyor too much power to allow him to decide where towns should be: you are aware that a course very different from the ordinary one was pursued with regard to Rockhampton; that immediately upon the receipt of the plan it was submitted to the Executive Council, and that as soon as the proclamation came back from the Governor General the allotments were advertised in ten acre blocks, even before they were measured? Yes.
41. You are aware that in that way nearly two months was saved? Yes.
42. Are you, from your experience in the department, of opinion that any evil would follow from adopting that practice in all cases? Perhaps that is rather a geographical question, which I ought not to presume to answer; but, under the present strict scrutiny of the Chief Draftsman, I should think the practice might be adopted.
43. Take the town of Wee Waa, now before the Executive Council; that is not a place of much importance? I believe that it might be adopted in the case of Wee Waa.
44. Take any town you please, I wish to know whether you see that any injury could follow to the public service were I to adopt the course with reference to a plan of that town that I did with reference to the town of Rockhampton? No, I do not think it would.
45. If that plan were generally adopted, would it not largely reduce the correspondence and save the time of the clerks? I do not think it would save the time of the clerks, but the office would not stink in the nostrils of the public as it now does from delay.
46. I will endeavour to put the matter more clearly: I presume the fact that the office stinks in the nostrils of the public from delay causes a great deal of correspondence, and if these towns are withheld two months longer from sale than necessary there may be ten or twelve letters sent to the office, and these letters will require answering—would not that alone affect the clerks? Yes.
47. You think then there are improvements of that nature which will very much reduce the clerical work, without injuring the public service? I do not think it would materially reduce the number of letters; we should still have letters from persons wishing to purchase particular allotments.
48. But if there were delay they would write again, and you would have again to answer their letters? Yes.
49. Do you not, from your experience in the office, think printed letters might be more frequently

C. J.
Armytage,
Esq.
22 Oct., 1858.

C. J.
Annytage,
Esq.
22 Oct., 1858.

- frequently used in mere matters of course? They are used very frequently at present, and I do not think we could adopt them to a greater extent.
50. *By the Chairman*: Have you anything to do with the equipment of officers of the service? No.
51. Who was the party to whom requisitions were formerly sent in? The Chief Clerk, for submission to the Surveyor General. (*Vide "Appendix A, No. 1."*)
52. Alterations were often made in those requisitions—with whom did they originate? Sometimes with the Chief Clerk; sometimes with the Surveyor General.
53. Did the Surveyor General ever look at them? Yes.
54. Sometimes the Chief Clerk made these alterations? Yes.
55. Do you suppose he had any knowledge of the duties the officers in the field had to perform? I believe not.
56. Who kept the accounts of the officers of the service generally? I believe they were all kept in the Audit Office. (*Vide "Appendix A, No. 2."*)
57. Not by the Chief Clerk? No.
58. I believe soon after gold was discovered in this Colony an additional allowance was given to officers of the service? Yes.
59. Do you know if it was withheld from any officer of the service? Not that I am aware of.
60. *By Mr. Piddington*: In reference to the accommodation provided for the staff of the Surveyor General, is it at present sufficient for the accommodation of the Department of Lands and Public Works? No; it is not large enough for our present use.
61. Would any considerable addition be necessary for the purpose of enabling the Secretary for Lands and Works and his staff to be accommodated? We have not sufficient for ourselves.
62. Would the addition of three or four rooms be sufficient? I suppose the addition of four rooms would be sufficient, but it would be necessary that they should be large ones.
63. You think such a change would produce a great saving in the public service, as well as afford the public and the departments more convenience? Yes.
64. *By Mr. Forster*: To what staff do you allude? To the Secretary for Lands and Works, and the clerks attached to him.
65. Would not the presence of the Secretary for Lands and Works be as necessary in other offices as in yours? I spoke merely of our own office. I think it would be desirable that the Secretary should be in our building, in order that any matter might be at once referred to him, and the labor of writing letters be avoided.
66. A large staff would scarcely be necessary for that purpose—if the Secretary were to be present at the office with one clerk at certain times of the day, would not that answer the purpose? No, for cases in which we require to refer to him are so numerous.
67. You would want him there all day? Yes. I think the Colonial Architect's, the Railway, and all the departments under the Minister for Lands and Works should be in one building.
68. Would not that plan get rid of a number of heads of branches now in existence? I think not, for you would still require the same surveillance in each branch.
69. Do you think there is any necessary connection between lands and public works? That I cannot answer.
70. Because, under the plan you propose, you would have these departments under the same roof? I speak of them because they are at present connected; they come under the same branch.
71. Do you not, in the abstract, think there is a kind of antagonism between works and lands, and that they would be better under two heads? I think they would.
72. Because the supervision of the public lands is based upon the intention of the lands, whereas in the capacity of supervisor of public works, the Minister in some degree becomes the proprietor of lands, which is rather antagonistic to alienation and settlement? As far as I can see, I think the separation of the two is desirable.

APPENDIX A.

No. 1.

MEMORANDA.

Requisitions from Surveyors for various Articles of Equipment, &c.

For the sake of greater certainty I have referred to masses of original requisitions. I find the rule to have been, that they were always submitted by the Chief Clerk to the Surveyor General; to have been altered or approved by him even to the most minute particulars, as in one case the refusal by the late Surveyor General to issue a spade to Assistant Surveyor Wright.

No. 2.

Surveyors' Accounts.

The accounts are now audited and paid in this office: formerly they were received into this office, examined, sufficient vouchers obtained, and the whole then forwarded in Abstract to the Auditor General's Department for audit, and to be then sent on by that Department to the Treasury for payment. I find, on referring to the old Registers of Accounts, that no unnecessary delay took place in forwarding the accounts to the Audit Department.

MEMO.—To be attached to Evidence on Survey Department given at the Bar of the House.

ERRATA in Evidence given by J. Thompson, Esq., at the Bar of the House, in Committee of Supply, February 17, 1859.

- Answer 12.—*For* “380 or 390,” *read* “480 or 490.”
„ 15.—*For* “Larmour,” *read* “Larmer.”
„ 22.—*For* “known, which,” *read* “completed, no such.”
„ 39.—*For* “two to Melbourne,” *read* “one to Maitland.”

Legislative Assembly.
NEW SOUTH WALES.

EVIDENCE TAKEN AT THE BAR OF THE HOUSE
IN COMMITTEE OF SUPPLY.

(APPENDIX TO MINUTES OF PROCEEDINGS, FEBRUARY 17, 1859.)

A.

THURSDAY, 17 FEBRUARY, 1859.

Colonel George Barney examined as follows:—

1. *By Mr. Murray:* You are Surveyor General? I am.
2. How long have you held that appointment? Three years and a half.
3. Have you ever been engaged at all in actual surveys in the field? Yes; I have been engaged in the survey of Great Britain, in surveys in Spain, and in surveys in the West Indies.
4. In what survey in Great Britain were you engaged? In the survey of part of Berkshire and Buckingham.
5. In connection with any great survey? Yes, in the great survey under Colonel Mudge.
6. What survey were you engaged in in Spain? Generally speaking, in works of defence and approaches.
7. In military surveys? In military surveys.
8. What were your particular duties in connection with the Ordnance Survey in Great Britain? I was the actual surveyor of a certain portion of country—that is, the survey by theodolite and chain plotting.
9. The angular measurement? Yes.
10. How long were you engaged in that survey? No great length of time.
11. Can you say how long? I think about seven or eight months.
12. Were you employed by yourself, or were you attached to any particular branch of the survey? I was employed by myself, under the directions of Colonel Mudge and Mr. Dawson, who then had charge.
13. Have you ever been in the field as a surveyor in this Colony? No, never.
14. It is one of the recommendations of the Board appointed by the present Governor General some time ago that the Surveyor General or the Deputy Surveyor General should be in the field? It was, but I was given to understand that the Surveyor General was to control the department at head-quarters.
15. Was that the recommendation of the Board? I do not recollect; at all events, I received such instructions.
16. From whom did you receive them? From the Governor General.
17. Was that the practice previously to your appointment, do you know? No, certainly not; but the late Surveyor General was found fault with for being absent so much from head-quarters, for neglecting the duties at head-quarters for the purpose of exploring the country.
18. You have never been in the field in this country? No.
19. Has the Deputy Surveyor General ever been in the field actually? I am not aware—not in my time.
20. Who exercises any surveillance over the surveyors? Latterly the district surveyors; for the last two years they have done, in fact, the duty that ought to have been done by the Deputy Surveyor General. The country has been divided into five districts, and a district surveyor has been appointed to each of these districts, and has the entire control both of the staff and of the licensed surveyors under him. He finds them in work, engages in any contract, examines the work, examines the instruments, and reports monthly as to the progress of survey.
21. Then these district surveyors actually do duty in their districts as Deputy Surveyors General? Yes; they receive instructions from head-quarters of course.
22. Do you think the practice is a good one? Yes.
23. What is your experience of the surveys actually made—do you think they are in any way questionable or not? I have no doubt they are questionable, that has always been my opinion since I first came to the Colony. I have always thought the surveys were in such a state that by and by a Bill of Indemnity would become necessary.

Colonel
G. Barney.
17 Feb., 1859.

Colonel
G. Barney.

17 Feb., 1859.

24. Why should it be required? Because the surveys are not correct. I do not mean to say *generally*, but in many instances it will be found that when the works of the country come to be filled up there will be great errors discovered.
25. You have reason to believe that will be the case, and that a Bill of Indemnity will be necessary? That is my opinion.
26. Of course you are well acquainted with the surveys from your position? Yes.
27. Do you think the surveys now carried on are so correct as to avoid any contingency of that kind? No. They are more correct than they were, but there will be occasionally errors arising from defective instruments, and carelessness in not starting from fixed points. There is a great difficulty in commencing a survey in a large open country at a distance, it may be, of 100 or 150 miles from any fixed point, and the gentlemen employed do not like to traverse that distance, therefore they take it in the best way they can.
28. That course involves some neglect of duty on their part? It involves error.
29. If it is their duty to make their surveys as nearly correct as possible, they ought not to trust to any hap-hazard method? They ought not; but if a man has to traverse from fifty to a hundred miles for the purpose of connecting his work with a fixed point, if he is a Government surveyor, that is, a man on the staff, of course a large portion of his income is so far thrown away—it makes no appearance. In the case of the licensed surveyor all his work is examined at the head-quarter's office: all the plottings are gone over; the areas are completed in the office before any description is given to the public.
30. But the licensed surveyors within the settled parts of the country are not exposed to any of the difficulties that they may be liable to in the remote districts? They are exposed to a great deal of difficulty; for instance, in the settled districts there is an area of four or five millions of acres of land not surveyed.
31. The general features are, I presume, surveyed within the settled districts? Most of them.
32. The general features of rivers and mountain ranges? Yes; but there is constant difficulty even with the licensed surveyors in discovering the points from which they are to work. For instance, the trees have to be marked, and these are frequently destroyed by bush fires, and this creates difficulty.
33. Do you think that is often the case? No doubt.
34. I know something of surveying myself, and I know this, that I can readily in the neighbourhood in which I reside trace lines marked for the last thirty years? In most instances no doubt you could, but still you will find cases where the marks are utterly destroyed.
35. Do you mean the whole line destroyed, so as to be utterly untraceable? No, I do not know that the whole line would be; but in town lots, for instance, the angle marks are destroyed, and it is from these you take the bearings of the other allotments.
36. Then I understand your opinion to be, that either within or beyond the settled districts the surveyors employed are liable to great difficulties, and consequently to errors, in carrying out their surveys? Yes; they are perhaps not disposed to give so much time to their surveys as they should.
37. Have you known any grave errors to result in consequence of these circumstances? Yes, certainly.
38. Can you state any? I cannot charge my memory. I know that many errors have arisen in that way.
39. Both within and without the limits? Yes.
40. Do you know any instance at all where the squatting runs beyond the settled districts overlap each other in consequence of the irregularity of the surveyor? Not in consequence of the irregularity of the surveyor, because till lately it has been the duty of the Crown Lands Commissioner to mark and report the boundaries. Many of these gentlemen not being surveyors have been liable to make errors. I recommended ten years ago that all Commissioners should be surveyors, and that they should undergo examination as surveyors before they took the field. This was approved, but was never carried into effect.
41. But in point of fact, the irregularities which occur both within and beyond the settled districts, either through the neglect of the surveyor employed or from the force of the circumstances in which they are placed, are such that will render a Bill of Indemnity at some future period necessary? Yes. The older surveys, before the country was so well peopled as now, were attended with still greater difficulties.
42. Why do you think a Bill of Indemnity will be required? Say two or three people have land a short distance from each other, and another person applies for the intervening space; when you come to fill it up you find that there has been an error in the marking; for instance, you may get the lines in the shape of a wedge instead of rectangular, and you cannot correct them.
43. That is to say, that in consequence of the irregularity of the survey the lines have not run properly, either north, south, east, or west? Yes.
44. Do you attribute that to anything else than to these gentlemen not starting from fixed points? Yes; they do not attend to the variation of the compass.
45. All the surveys of the country are magnetic, I believe? Yes.
46. The variation of the compass is considerable? Yes; it varies very much during the day.
47. And it varies also in different localities? Yes.
48. The instruments also differ from each other? Yes. These particulars should be, and are, noted down.
49. The errors, then, are attended to at the present time? Yes.
50. Are they attended to so far as this, that the lines shall be due north and south, instead of the surveys being magnetic, as they used to be? Yes; the variation is marked upon the survey at the time.
51. But it is not the true north and south line that is regarded in the survey? The survey is still magnetic, but the variation is noted.

52. Then, again, you are aware of this fact—that the variation of the compass in this Colony is different in different places? Yes; it varies as much as nine degrees in some places.
53. How is that detected? It should be detected by a meridian line.
54. Is it detected? I think it is, in the office.
55. Only in the office? Yes.
56. The surveyor in the field does not ascertain the true north and south line of the particular locality where he is engaged? I do not think he does.
57. He applies merely the general variation of the country to every locality? Yes.
58. We know as a fact that the variation differs in particular places? Yes; but when the variation is noted you know how to act.
59. How can you determine in the office what the variation may be? The variation is marked on the survey—upon every survey and in the field-book.
60. The variation is taken in the field-book? Yes.
61. There is no attempt to take the true north and south line in the field? No.
62. Then, in the description given in the deeds of grant to parties who may purchase land, is there in the description stated as to what the variation is? Yes, in all the deeds.
63. In the deeds? No, nothing in the deeds.
64. How is a proprietor then to know how his land really runs? There is no variation given; the deed simply gives the bearings.
65. A line bearing north so many chains, east so many chains, and so on? Yes. We now attach to the deed a diagram, which gives the variation.
66. How long has that been the case? It has been proposed some time.
67. I have had deeds within the last few months, and in them had nothing of the kind? I do not think you had.
68. Is the state of the survey as it now stands generally such as to satisfy you that it is correct? I am satisfied that it is not positively correct.
69. Have you turned your attention to any measure by which it might be made true? The only way I think would be to measure a trigonometrical base, and fix the triangulation of the country.
70. That would be a very expensive process? No doubt.
71. Might it not be done by meridian lines? It might, in a manner, but not at all satisfactorily. Besides, by adopting a trigonometrical survey you would carry on the survey of the features of the country.
72. You were engaged on the survey of Great Britain? Yes.
73. Do you at all know what was the expense of that? I forget the exact sum, but it was very large. I did supply an estimate to the Governor General of the average cost of a trigonometrical survey of this country—I forget the amount.
74. What do you think it could be done for? I cannot remember.
75. You are aware that the survey of Ireland—I am speaking from memory—cost some two millions? I think it did.
76. What then do you think the expense here might run up to? I cannot say.
77. At all events it would involve an enormous expense? I have the apparatus for measuring the base—it is a very expensive apparatus—and when I came into the department I instructed the surveyors in the field to search for bases for trigonometrical purposes, and I have received reports from several which are highly satisfactory, and as soon as I ascertained there were such bases, asked for £5,000 to measure a base. I also proposed to ask for £5,000 annually to carry out the work, but the sum was struck out of the Estimates.
78. The measurement of one base alone? Of one base.
79. Of what length? Twenty-five or twenty-six miles.
80. And this would involve an expense of £5,000? Yes, for carrying out correct measurement.
81. The carrying out of a trigonometrical survey with anything like ordinary exactitude would involve and immense expenditure? Yes; but it might be done gradually.
82. What would be the expense of marking out one or two meridian lines? There would be no expense in that.
83. Not much? No.
84. Still, a few of them over the face of the country would be an advantage? The surveyors have been instructed to mark meridian lines.
85. Where are they so engaged? Wherever they are, in each district.
86. They are so engaged? I know there have been one or two marked, but I have no report of more having been done than that in one or two instances.
87. However, as the matter stands at the present time, you are of opinion that the surveys are incorrect, and may involve litigation? Yes.
88. And, in order to carry out a correct survey of the country, the magnetic system ought to be abandoned? Yes.
89. Do you know that any great evil has resulted from any irregularity in the survey beyond or within the limits? No doubt—great.
90. Disputes have arisen between individual proprietors of adjoining properties? Yes; communications frequently come in on that subject.
91. Then the whole of your answers serve to shew that your department—of course I do not presume that it is owing to any mismanagement on your part, or on the part of those under you—is not in a satisfactory state? I do not think so.
92. And you think a Bill of Indemnity may be required? Yes.
93. Disputes having arisen between neighbouring proprietors of land in consequence of the imperfect manner in which the surveys have been carried out? Yes; they have arisen in a great measure from the manner of marking the ground; but a new system of marking has been adopted, which will in a great measure obviate future errors.

Colonel
G. Barney.

17 Feb., 1859.

- Colonel
G. Barney.
17 Feb., 1869.
94. When surveyors in the interior send in their reports, how do you ascertain where their starting points are? They are always shewn on the sketch.
95. Then, as far as the starting points are concerned, it must be to a certain extent suppositions? It must be traced to some given point.
96. But you say the surveyors do not always do that? That is ascertained in the office.
97. What control have you over them? We ascertain when the work comes to be plotted in the office.
98. Then, again, how are the gentlemen in the office in a position to shew how the new work done in the field is to be tacked on to old work in the office? The points are given; and, besides, in comparing the new surveys with the old ones you can check that.
99. That may be done where the surveyor starts from a proper starting point, but how can the survey be checked in the office when he starts from a supposititious point—how can you tack the new on to the old survey? I hardly know how that is done.
100. Still that is an important point? It is.
101. But at all events it is clear that the surveys as practically carried out are not satisfactory? No.
102. That they are liable to many and serious errors? There are a good many, no doubt.
103. On this particular point—the connecting the work in the office with the work in the field—you cannot say what check there may be? I do not immediately recollect what the check is.
104. Then, under such circumstances, the maps in the office must be liable to great errors? Of course they must be, and no doubt the errors will accumulate.
105. Are you at all aware, from your experience in the office, that any great errors in consequence of this have been detected, and are under consideration? I cannot mention any, but I know there are many.
106. Are you aware that there is at present a dispute between the Commissioner of, I think, the Lower Darling and some of the authorities under the Surveyor General, regarding the distance between Fort Bourke and the mouth of the Darling? The distance is only some miles; it has been passed by a horse, but there has been no actual survey made for a hundred and fifty miles.
107. Sir Thomas Mitchell has been down there, I believe? Yes.
108. I understood from Sir Thomas Mitchell that he chained every step he took? I think not.
109. Is there no record of that in the office? I think not. I have always understood there is a certain distance which has not been surveyed.
110. I have been assured that he chained all the ground he went over? It is my impression it is not so. I have had no occasion to test the thing.
111. Reverting to the point from which we have digressed—can you give any information at all as to the proportion in which these supposititious starting points, as used by surveyors in the interior, bear to those which actually start from fixed points? They are obliged to fix the points by observation.
112. What observations do they take? They fix the point by the theodolite.
113. How can they do it by the theodolite? Very well.
114. Fix the point? Yes.
115. Do you think, generally speaking, they are able to fix the point so as to be able to avoid the possibility of error? I think they ought to know it.
116. Nevertheless there are a great many errors? Yes.
117. Will you state how many persons are employed in your department? I cannot tell without reference to the Estimate. (*The witness referred.*) Upwards of two hundred people employed.
118. How many of these are surveyors? First of all, there are five district surveyors—these gentlemen do not do much surveying. For this year it is proposed to employ eight surveyors of the first class, ten surveyors of the second, and eighteen of the third class.
119. How are these eighteen employed? They are employed in different districts; there are two on Darling Downs.
120. What work are they doing? They are employed in various works; in the survey of roads, of sites for towns—they are always employed.
121. How many of them are employed in the measurement of land for sale? They are all employed in the measurement of land for sale, but they are not always employed in that way, but in marking out roads, and in reporting upon various matters connected with the department. They are under instructions to ascertain the volume of the water of rivers, with a view to irrigation.
122. Do you think that is a matter of any moment now? I think it a matter of great importance.
123. At whose suggestion is that done? The Governor General's.
124. In the present state of the country do you think there is any practical use in it? Yes; I think irrigation is highly important.
125. Do you know whether any parties in any part of the Colony avail themselves of irrigation? To the southward—the Murrumbidgee.
126. In irrigating lands for cultivation? No; it is more with a view to stock stations.
127. Is much of the time of the surveyors engaged in this way? No. There are but a few rivers that admit of their waters being turned. In some parts the land is irrigated for cultivation.
128. Can you give any information as to the extent of land which has been measured for sale within the last two or three years? Last year I think there were 150,000 or 160,000 acres, this year about 250,000.
129. Is the land surveyed on the application of individuals or spontaneously by Government? Both ways.

130. If individuals apply for land do you consider that their applications should be promptly attended to? Yes; instructions are given immediately—but delay frequently arises in this way:—A man may want twenty or thirty acres at a distance of a hundred miles from the place where the surveyor is employed, and he could not be sent that distance to measure this small quantity merely, and the applicant may therefore have to wait until other land in the neighbourhood is applied for.

Colonel
G. Barney.

17 Feb., 1859.

131. I will call your attention to a case in point: An application was made two or three years ago, to which I directed your notice when I was in office, by a man named Carey for some land near Yass, and this had been passed over for two or three years, although the land was within a short distance of the surveyor? You cannot control the licensed surveyors.

132. I gave directions that the surveyor should be reprimanded in consequence of that neglect? Yes.

133. Was he reprimanded? Yes.

134. The case has been brought forward of the measurement of the towns of Murulla and Wingen? Yes.

135. Can you explain the cause of delay in that matter? Yes; both of these towns were measured, and a considerable time passed without any application being made for land at either of them. This was in consequence of the Braidwood road not being decided upon; it was not passable. As soon as the road was brought into a state of repair, the question of Wingen and the other township was looked to, and surveys were made of both places, which were approved by the Executive. When the Executive saw there was a necessity for these two places being opened, Mr. Cuthill, the surveyor, was instructed to survey Nelligan at once, and to submit the survey with the least possible delay. He allowed several months to pass, and I was obliged to threaten him with removal unless he expedited his work. Still further delay occurred, and I wrote to say if the plan and survey of Nelligan were not sent up by the first post he would be superseded. He did then send them up almost immediately, and when we came to examine them we found the work was done by a man whom I had dismissed, whom he had no business to employ, and that the survey was altogether incorrect. Upon these matters being made known, I instructed a surveyor about ten days ago to go down and survey the land, and to send up his sketch with the least possible delay. The work, about which Mr. Cuthill was employed a year and a half, was done by this gentleman in three days, and it proved Mr. Cuthill's work altogether erroneous.

136. Then the efficient officer did in three days what it took an inefficient officer twelve months to do? Yes.

137. Of course you must have been aware of the length of time which, under ordinary circumstances, would be sufficient to enable a man to lay out a town? I could not tell the character of the country.

138. Supposing under ordinary circumstances it would require a month, or supposing two months—how was it this man was not dismissed before? He promised to send up these papers time after time.

139. Are you aware that it is a part of the country to which a steamer plies twice or three times a week, and that some persons have built stores there upon public land? Yes; there are two or three stores.

140. This inefficient officer was allowed to remain twelve months with his work unperformed? He had other works in hand at the same time.

141. What other works? He had orders for several surveys.

142. Applications for land? Yes. It now appears that Murulla proved the best site for a township. It is six or seven miles higher up the river, and nearer Braidwood than Wingen. There is plenty of fresh water there, and a steamer goes up to it nearly every other day. Land at both places will be offered in a few days.

143. Do you remember what the expense of the department was when you first joined it? I know that the department was very weak indeed, and altogether insufficient for the purposes required. At that time I submitted an estimate, I think, amounting to £73,000, which was objected to as something extremely extravagant, and I had to reduce it. The department was in consequence weakened, at least it was not so strong as it ought to have been to conduct the work properly.

144. The expense of the department now is £72,000? That is the estimate for the present year.

145. Is that in excess of the amount for last year? Yes; I think last year it was £64,000 or £65,000, but upon that there has been a saving of £8,000, or £9,000.

146. How does the difference arise? It arises in additions to the staff, in consequence, in some measure, of the opening of the Northern District. There are two additional first class surveyors, two second class surveyors, and one additional surveyor, and these, of course, require a larger number of men; last year there were 83, this year there are 106.

147. In these very remote districts—in the new country opened to the north—what are the particular duties of the surveyors employed? They are employed in laying out the township of Rockhampton, and one above that place, at the head of the boat navigation, and also in surveying the river.

148. In surveying the features of the country? Yes.

149. Are any of them employed in that district, or in any other district, in laying out the boundaries of runs? No.

150. These are done by the Commissioner? That has hitherto been done entirely by the Commissioner.

151. It has been stated in evidence, before a Committee of the House during the last year, that there were two townships measured—Wingen and Murulla—that could not be found? Yes.

152. Were they measured during your time in the department? No.

153. Do you know what became of the surveyors who measured them—have they been retained

Colonel
G. Barney.

17 Feb., 1859.

retained in the service, or were they dismissed? I do not think they were dismissed; in fact it has been done for several years, and all the marks have been eradicated.

154. How? In consequence of their having been badly marked.

155. That must have involved some neglect on the part of the persons employed? I presume when the plans came into the office they were examined, and proved to be correct.

156. Still these men were retained in the service? I do not know who they were.

157. Are there many applications for small farms now in the office? No, they are not very numerous latterly, in fact we have got more licensed surveyors now, and the work is done more expeditiously. There are applications, but not to any detrimental extent. No doubt there are a number of small applications, some standing over for three or four years.

158. How do you test the qualifications of licensed surveyors? They are examined at the office.

159. Are they subjected to a very particular examination? Yes; of course there is no field examination, but generally they bring specimens of their surveys—of their field work.

160. Is it a strict examination? Yes, it is quite sufficient.

161. Is it the practice of the department at all to subject persons to this examination without employing them? No; but I know it has been considered by many that if they can be examined, and obtain a license, they can use it as a certificate of character.

162. Under such circumstances are they examined? We have examined several, who have been informed that they would not be supplied with work, but that they would be expected to take work whenever ordered to do so.

163. In the case of such gentlemen are there many instances of their being actually employed afterwards? Yes.

164. You give the certificate, then, with the clear understanding that the party receiving it shall be at the service of the Government when required? Yes. To prevent the examination being carried on merely for the benefit of the parties, I suggested the payment of a fee of five guineas—it is now six.

165. Will you be good enough to state what are your own services in the office? Uninterrupted attention to the office. All the papers that come in, which vary in number from sixty to a hundred letters a day, require my attention and direction.

166. What are these letters connected with—are they mere departmental correspondence? They are all departmental correspondence.

167. With the other offices in Sydney? No, with the officers in the country.

168. I see you have in your office twenty-seven clerks? No, I have not that number; we have nineteen; but there are positively more than that, for I took the opportunity when a clerk of higher class left the department some time ago, to suggest that I should be allowed to take three persons in his stead, the salaries of the three amounting to the same as that one.

169. There are twenty-seven on the Estimate—there are two descriptions? They belong to the drawing branch.

170. Are the duties of these clerks chiefly confined to correspondence? Yes, and to the examination of surveys.

171. Do you devote much attention to the examination of surveys? Yes; every plan comes before me.

172. The correspondence is very great? Yes.

173. It is given in evidence that a Commissioner wanted two saddles, and that no less than sixty or eighty letters passed between him and your office before he obtained them? Yes; at that time there was a great deal of difficulty in getting anything authorized.

174. Is that difficulty removed now? Yes, entirely.

175. Do you think it at all practicable that this correspondence could be limited? I do not think it can; I have adopted every plan to limit it.

176. The labor of the department seems to be, to a great extent, taken up with correspondence? A great saving has been effected by the adoption of blank covers. Instead of long letters submitting matters to the Secretary for Lands and Works blank covers are used, and that saves a vast deal of correspondence; and I look upon it that when the Secretary for Lands and Works is in the same building as the Surveyor General, there will be a vast amount of correspondence saved. By personal communication more correspondence will be gone through in one hour than could otherwise be disposed of in a week.

177. I understand that you regard the actual survey of the country as merely one branch of the particular duties of your office? But one branch.

178. There are many other things that claim your attention?—Almost every thing. Frequently, in the afternoon, when I think I may quit the office, I have two despatch-boxes, as full as they can hold, of papers submitted to me for approval and signature.

179. That arises I imagine from the amalgamation of the two offices of Chief Commissioner of Crown Lands and of Surveyor General? Yes.

180. Do you think it a convenient arrangement? Yes; I suggested it myself, soon after I became Chief Crown Lands Commissioner, two years ago. I experienced great inconvenience from the offices of Surveyor General and Chief Commissioner of Crown Lands being separate, and, at the risk of losing my own berth, I proposed that they should be amalgamated.

181. But do not the duties of Chief Commissioner of Crown Lands militate against those of Surveyor General? I do not think they do.

182. Are you, as Chief Commissioner of Crown Lands, able to pay the attention which Sir Thomas Mitchell, or any gentleman in that office, might pay to the actual Survey Department? There have been no feature surveys since I have been in the department. The strength of the department would only admit of my keeping surveys in hand sufficient to meet the wants of the public.

183. These surveys, according to your own evidence, are at present in a very imperfect state? I do not mean to say the whole of them are in an imperfect state.

184. There are great irregularities, and grave disputes may arise? Yes.

185. Do you not think there might be a stricter surveillance if the officer at the head of the department were untrammelled by such an enormous amount of business? I think the district surveyors render that unnecessary. Colonel G. Barney.
186. These perform the duty of Surveyors General? Of Deputy Surveyors General, in their own districts. 17 Feb., 1869.
187. Then there are actually five Deputy Surveyors in the field? Yes; it is proposed this year to make another—that will be six.
188. That is rather an unusual arrangement—that was not the case? No, it was not; this is the second year of the arrangement.
189. So that in fact the duties heretofore performed by the Surveyor General, or by the Deputy Surveyor General, in Sydney, are provided for by five deputies in the field, and one is to be added? Yes; but we have to control them.
190. Then five officers are appointed to do the duty formerly performed by the Surveyor General and Deputy Surveyor General? No; because the Surveyor General has to check them. But I am not aware that the Surveyor General ever visited the country in the way these gentlemen do.
191. The surveys are, from your statement, evidently in a very imperfect state? To a certain extent.
192. Do you think it desirable that any reorganization of the department may be made? Yes, I think arrangements may be made; certainly so far as the land regulations are concerned, I have no doubt better arrangements might be made.
193. For the reorganization of the department? Yes.
194. Do you regard it as at present in a satisfactory state? Not altogether.
195. Have you made any suggestions for the reorganization of the department? No, I have not. I have been gradually carrying out the recommendations of the Commissioners.
196. In what case? In almost every case. Some progress has been made, for instance, in the drawing branch; we have established lithographs—
197. But with regard to the work in the field; what we have to complain of is the work in the field—what alterations have been made on the recommendations of the Commissioners with reference to the work in the field? Everything that they recommended has been partially carried out, except as to the trigonometrical survey; but that has been no fault of mine that that has not been done.
198. You have made no suggestion to the Government in regard to the reorganizing of the department? No.
199. Have any communications been made to you by the Government on the subject? Yes; one communication was made to me by yourself.
200. An intimation was given to you that it was deemed desirable by the Government that you should retire on a pension or allowance? Yes.
201. Have you heard anything of that since? No. Mr. Cowper, now Principal Secretary, told me personally that it was in contemplation to send for an officer from England to relieve me, and he asked me my age; I told him I was seventy-six, and that I had no objection, as I had been upwards of half a century in Her Majesty's service, and upwards of twenty years in the Colony. The Colonial Secretary asked me if £500 a-year would satisfy me. I said, certainly, and that I would be prepared to hand over the department as soon as my successor arrived. I heard no more of it till I received your letter, which was quite a different thing.
202. You were satisfied to retire on a pension of £500 a-year? Your letter was to this effect:—It is the intention of the Government to reorganize your department, for which purpose a successor has been sent for; upon the arrival of that gentleman the Government will be prepared to take into consideration what pension you will be entitled to under the regulations, at the same time trusting your long length of service will meet with the approval of the Legislature. I have no objection to retire, but I should not like to retire upon a paltry sum.
203. You would be quite satisfied to retire upon £500? Yes.
204. *By Mr. Robertson:* You have stated once or twice that the district surveyors do the duty of Deputy Surveyors General in their districts? I corrected myself, and said the Deputy Surveyor generally, latterly.
205. Then, in answer to Mr. Murray, you said that the duty of the district surveyors—of these five gentlemen—was nearly the same as had been heretofore the duty of the Deputy Surveyor General: is that correct—do not these surveyors measure land? Yes; they do occasionally, but to a very small extent. Possibly they will in a short period have leisure to measure much more land, but in the first organization of these appointments the time of these officers will be fully occupied in the examination of the work performed by the different surveyors, in the selection of land, the entering into contracts, and a variety of other duties.
206. But it never was the duty of the Deputy Surveyor General to measure lands for sale, though it will be, and is the duty of these gentlemen, when other duties do not occupy their time? Yes; the fact is that the Deputy Surveyor General has done no duty in the field since I have been in the department.
207. Then it would seem to be an error that these five gentlemen will have to do what the Deputy Surveyor General formerly did? Ought to do.
208. I was not aware that it was the duty of the Deputy Surveyor General to measure land, and lay out towns? No, he would have no measurements to make; it would be his duty to select sites for towns, and report upon the country generally.
209. You say in your evidence that a Bill of Indemnity will be required to put to rights the difficulties arising from bad measurements? Yes.
210. Did you mean that to apply to old or to present measurements? More particularly to old measurements, because we are much more particular now than we were.
211. Have you ever informed the Government of the probability of this? Yes.
212. When did you do so? I have spoken of it repeatedly.

Colonel
G. Barney.
17 Feb., 1859.

213. Is there anything on record of yours—? I do not remember that there is. I am not perfectly satisfied of it—I spoke of it publicly.
214. You say you are aware that there have been many errors in surveys? Yes.
215. You said you did not remember any particular ones? No.
216. Do you not remember Mr. Weaver being dismissed for making errors? Yes. If it comes to that I have dismissed several licensed surveyors; but what I meant was that I could not give you the position of the land that had been erroneously measured.
217. When gentlemen are found thus negligent are they not dismissed? Yes.
218. Do you not remember the case of Hebblewhite, where 640 acres of land was measured, and then 100 acres were measured from it and both sold? Yes, I remember that. I know there are many cases—in fact cases are not at all unfrequent.
219. All these were old cases, were they not? Yes.
220. You have stated that you have had a few meridian lines made from which your surveys will be taken? Yes.
221. Have the district surveyors instructions to do this? Yes.
222. When you say you have only two or three of them, you do not mean to convey that it is not an instruction to each of these to make them? It is a positive instruction.
223. You said, in answer to Mr. Murray, that it was not possible, or that you did not see how it could be carried out or land in isolated positions could be connected with the general survey of the country—is it not the fact that the rivers are laid down on the maps? Some of them, but a great many are not laid down.
224. Where lands are sold is it not so in all cases—where we sell lands are not the rivers charted? Not when you are selling under pre-emptive right.
225. Will you tell me some river? I believe the Richmond and the M'Leay have been surveyed, but we have not got the surveys charted yet.
226. Is it not the custom of the department to insist upon their having this amount of knowledge—to fix the spot so that the survey may be connected by line with some other survey, or with a river? Yes; if the river is surveyed there can be no difficulty in connecting the survey with it.
227. Do you know any surveyors who have made mistakes in their surveys being permitted to remain in the public service? Yes; but they have not been paid for their surveys until they have corrected them. It has not been thought desirable to get rid of surveyors, for until lately they have been scarce; but in all cases where they have made mistakes they have been severely reprimanded, and have had to correct their work without extra payment.
228. You have spoken of irrigation—do you mean to say that any considerable portion of the surveyor's time is taken up in making inquiries as to irrigation; or do you mean, that in going into a country and laying it out for sale that they simply take the elevation—? The instruction given is, that whenever they have an opportunity, and are engaged in the survey of a river, they should take advantage of it to measure its volume.
229. Would that cause much delay? No, not at all; an hour's work would give you the volume of a river.
230. Therefore the object was merely to take advantage of the surveyor being on the spot to ascertain the possibility of irrigation? Exactly.
231. You have said that the townships of Neilligan and _____ had been surveyed some years ago, and that the Executive Council approved them? Yes.
232. Do you remember when it was the Council approved them? It was in 1854, I think.
233. How happened it that the matter remained until quite lately? Because there were no applications for land, and the question of the road from Braidwood was at that time undecided.
234. You said the reason you did not dismiss Mr. Cuthill, but permitted him to remain for twelve months without surveying these two towns, was that he kept making promises? Yes.
235. Did he not say that it was impossible to measure the land because the water was on it? No, for it would have been incorrect if stated. There are two swamps in that spot, but they are omitted in the plan.
236. From time to time you were reminded of these townships, and of the necessity of getting the land prepared for sale, and Mr. Cuthill supplied you with such excuses that you thought it was better to yield than to remove him at once? Yes.
237. *By Mr. Williamson:* You have stated that on account of many of the surveys being erroneous you think a Bill of Indemnity will be required? Yes.
238. Do you mean to say that these erroneous surveys have been made through the mistake or carelessness of the surveyors, or did I understand you to trace some of them to the variation of the compass? Mistakes have arisen both from carelessness and from not attending to the variation.
239. Are you aware of any great variation during the last thirty years? Yes; a change of nine degrees.
240. Do you mean a change in particular parts of the Colony? Yes, in particular parts; I cannot tell exactly where it is.
241. Do you state now on the charts made in the Survey Office the change of variation you mention? Yes.
242. Is the variation of the compass as it exists at present marked, or as it existed twenty years ago? It was the practice to draw all the charts north and south.
243. It is the practice still, is it not? No, not at all.
244. Do I understand you to say that charts now are not made by the magnetic bearing? Yes, the surveys; but I mean laying out the lines of streets.
245. I am speaking of boundaries of country allotments? Yes.
246. They are still surveyed by compass? Yes.
247. Are they charted in the Survey Office by the magnetic bearings? Yes.
248. How is the variation of the compass ascertained now? That is ascertained at the time of the survey by each surveyor.

Colonel G. Barney.

17 Feb., 1869.

- 249. Who forwards it to the office? Yes; it is on his chart.
- 250. You say the country surveyors have instructions now to mark meridian lines? Yes.
- 251. In each district? Yes; the instructions are to mark numerous meridian lines.
- 252. Are these meridian lines connected with each other? No; it is only a late instruction.
- 253. They are only meant for the connection of local surveys? Yes.
- 254. So that there can be no connection of the meridian line in one county with a meridian line in another county twenty miles off? Yes, that may be done; but now it is done simply for the correction of the instrument.
- 255. But not for the correction of the compass? No.
- 256. The surveyors in the field and the district surveyors, who are paid stated yearly salaries—is there any check in the Survey Office upon the quantity of work performed by them? Yes; the surveyors make a monthly statement of the work performed by them; the surveyors in the district send their reports through the district surveyor to the Survey Office.
- 257. The surveyor in the field sends in his field-book and the monthly return of the work done to the district surveyor? Yes.
- 258. Is there a surveillance over their work kept in the office? Yes; every survey is examined in the office. Instead of sending down the field-book, which is apt to be lost, I give instructions to the surveyors to shew a column on the chart giving the bearings and distances.
- 259. I am alluding more particularly to the quantity of work done? Of course it is very easy to ascertain what work has been done—that is in the return.
- 260. For instance, a country surveyor surveys a certain quantity of land in the course of a year, another surveyor in a neighbouring county surveys ten times as much—is there any difference made in such cases? There may be a difference in the country. Sir William Denison considered that each surveyor should survey 10,000 acres a-year, on the average.
- 261. Whatever the country? Yes; that was founded upon false reasoning, for in some parts of the country a man could not do half that quantity, while in others he might do much more.
- 262. Have you ever observed in a district where there were both licensed and salaried surveyors, that the former did much more than the latter? He does frequently, but not always; and a very natural reason, for it is that he has to realise an income, while the income of the other is already realised.
- 263. Has it not been pointed out to you that the salaried surveyor employs certain days in field work and certain days in plotting, and makes his return accordingly, whereas the licensed surveyor employs fine weather for field work and wet weather for plotting? They both do that.
- 264. As a rule, has it not come under your knowledge that the licensed surveyor makes much more use of his time? I do not think a permanent staff surveyor would venture to plot in fine weather when he was sure of having some wet weather. What could he do? he would be idle. I think the officers are generally industrious.
- 265. Has it been brought under your notice, in checking the work of licensed surveyors, that there are more mistakes in their work than in that of salaried surveyors? Yes, as they hurry their work more, in order to realize a certain sum. The salaried surveyors are all in the outside districts, where there are not licensed surveyors.
- 266. *By Mr. Faucett*: You stated that some of the errors of the survey at different times arose from the variation of the compass? Yes.
- 267. You also stated that the variation of the compass at the time of the survey was stated on the work? Yes.
- 268. Then, knowing the variation as stated on the plan at the time, and being able to ascertain the variation at the present time, could you not see from those two sources whether the plan was correct or not? Yes; but the variation might be put down incorrectly.
- 269. Then the variation must have been incorrect? Yes.
- 270. Then, of course, the incorrectness of the survey does not arise from the variation, but from the incorrectness of the statement of the variation? That is what I mean, of course.
- 271. You have some knowledge, I suppose, of the Hunter districts, and the manner in which the lands there have been laid out? Yes.
- 272. I suppose you are aware that the surveys there are very unsatisfactory? Yes, I know it.
- 273. And that titles to property are in consequence insecure? Yes; and for that reason I think a Bill of Indemnity would be necessary.
- 274. You propose, I understand, a Bill of Indemnity for this? I do not propose any such thing. I say it is a matter that requires consideration.
- 275. You do not propose a re-survey of these places? No, it would be of no use; the people are in possession, and a Bill of Indemnity would ensure them that possession. In consequence of errors committed in that way, a man may have built on the wrong land, and been in possession many years.
- 276. *By Mr. Jenkins*: Who performs the duty of Commissioner of Crown Lands in those pastoral districts where the Commissioners have been discharged? The district surveyors have been appointed Crown Lands Commissioners, but there are two vacant districts now—the Wellington and Bligh districts. An alteration was made in the division of the Wellington district. The Albert district, where Mr. Perry acted as district surveyor, was distinct, but was added to the Lower Darling, and part of the Lower Darling was taken away and given to Mr. Beckham. Mr. Perry was then instructed to take charge of the Wellington and Bligh districts, but he resigned; and in consequence these districts had no Commissioner at all. The Secretary for Lands and Works, in the Estimate, provided a certain sum for the purpose of assessing runs in this district.
- 277. These district surveyors have, in addition to other duties, to report upon fresh tenders for runs? Yes.
- 278. Is it part of their duty personally to inspect the runs before reporting? Yes.

Colonel
Gt Barney.

17 Feb., 1859.

279. Would not this duty you have now imposed upon these district surveyors necessitate their neglecting their own particular duty connected with the Survey Department? It would certainly reduce the amount of survey they would perform annually.

280. If the surveyors had to perform this duty, would it not take them away from that particular work? There are only one or two licensed surveyors in the districts beyond the boundaries.

281. May I ask you who is the district surveyor in the northern district, and where he is placed? Mr. Wood. His head-quarters are at Rockhampton, but he is always in the field; he has never been established anywhere; he returns to Rockhampton occasionally, to plot his work.

282. Are you aware whether the district surveyor before reporting has to go upon the run? Their positive instructions are, that they shall visit the runs before reporting. This is only a late arrangement. I cannot call to recollection whether they have reported upon any run yet.

283. You cannot state whether any district surveyor has been upon any run yet? I cannot say. I know in some few instances runs have been reported upon, but I have been led to suppose they have not been upon the runs. I have put the question whether for the purpose of making their reports they have been upon the runs.

284. What have been their answers? I have had no answer.

285. Do you know of any runs, or of any portions of runs, claimed by different parties—the parties holding the run or portion of run from the Crown? Yes, there are many instances of that kind. That is the fault of the old District Commissioners. I know several of them who were in the habit, when they had to report upon distant runs, of marking upon their chart the position of these runs, and in that way would make them in erroneous positions.

286. Have you had applications made to you within the last twelve months for assistance—for surveyors to settle these disputed boundaries? Yes.

287. Have you acceded to these requests? No; I have not had the means. Occasionally there has been a survey made; but whenever there has been any dispute, and I have been requested to make a survey, I have suggested that the parties should employ a private surveyor, or come to an arrangement with a surveyor—each party expressing himself willing to abide by his decision.

288. You have not taken active steps to send down a surveyor to settle the dispute? There may have been one or two instances, but not to any extent.

289. Do you know any owner of runs on the Bogan who may have applied to you for assistance? No.

290. Any case of two parties claiming the same land—each holding a license for the same run? The Bogan has been only lately occupied.

291. I may remind you of a gentleman of the name of Dangar, and some others? I do not remember.

B.

John Thompson, Esq., examined:—

J. Thompson,
Esq.

17 Feb., 1859.

1. *By Mr Murray:* You are Deputy Surveyor General? Yes.

2. How long have you been in the Surveyor General's Department? Very nearly thirty-three years—thirty-three years in May.

3. I suppose you are pretty well acquainted with the manner in which the surveys of the Colony are carried out? Yes.

4. Do you know anything at all of the surveys in the remote districts of the Colony—in the unsettled districts? There is no survey at all. All the leading rivers are surveyed; that is all.

5. How are the boundaries of the runs determined? They are not determined in any way, except by the description of the tenderer.

6. Which the parties give themselves? Yes.

7. How are the boundaries of leases defined? The boundaries of leases are the result of surveys.

8. Are these surveys correct, have you reason to suppose? Yes.

9. Do not the runs overlap each other in many parts? Not those that have been surveyed.

10. Those that have been surveyed are all correct? Yes.

11. Do you know whether there has been any correspondence between the Commissioner of the Lower Darling and your office as to the distance from Fort Bourke and the mouth of the Darling? Yes, I am aware of that.

12. What is the nature of that correspondence? The Commissioner is under the impression that the distance between the confluence of the Darling and Fort Bourke is 390 miles, whereas in reality it is 380 or 390.

13. How has that been ascertained? By survey; it is accurately laid down, determined by latitude.

14. The Surveyor General just now stated that it had never been surveyed? It has been surveyed and chained.

15. Do you know who chained it? Mr. Larmour, when Sir Thomas Mitchell went on his expedition down the Darling.

16. Do you think the Surveyor General's Department, taken generally, as efficient as it was in old times? Yes, I think so.

17. There are certain irregularities in the surveys now, are there not? To what surveys do you allude?

18. It has been stated here this evening that the work of surveyors in remote districts is liable to this objection, that it does not start from any fixed point in many instances? It must start from some fixed point. J. Thompson,
Esq.
19. Not from a previously measured point? Yes, some previously measured point, of course. 17 Feb., 1859.
20. According to Colonel Barney they do not do that, but assume a position, and then begin the new work? Then it would not be known how to apply it to the general maps.
21. How do you test the work in Sydney? The measurement of lands for sale, or general survey?
22. General survey? The general surveys of rivers are known, which work is going on at the present moment. The general surveys of rivers are not tested.
23. Are the feature surveys of the country tested? Feature surveys are not tested; there have been no feature surveys for the last four or five years.
24. What then are the surveyors doing in remote districts? Laying out towns and measuring runs.
25. The department in Sydney appears to be rather a cumbersome one—there appears to be a great deal of clerical work in proportion to the work in the field? It is not too large, indeed the clerical branch is rather deficient.
26. How many draftsmen do you think absolutely necessary for twenty-five surveyors? But there are fifty licensed surveyors.
27. There is a sum of £25,000 on the Estimates for these licensed surveyors—how do you make out that there are fifty—do you know it from the facts of the case? There are not perhaps fifty absolutely employed, but there are fifty altogether.
28. And the draftsmen in the office have to plot their work as well as that of the ordinary surveyors? Yes.
29. What is the general duty of the draftsmen in the office? They are various. The duties are divided; one branch of draftsmen, consisting of seven or eight, draw land for sale, they receive the surveys, examine them, correct the descriptions, schedule them, and prepare the proclamation.
30. The draftsmen do all that? Yes.
31. But do not the surveyors who survey farms send in plans? Yes, but these plans have to be examined, to see that they are correct.
32. Is it the duty of the draftsmen to see that they are correct? Yes.
33. And they then insert them in the general map? Yes.
34. You think the seventeen draftsmen in the office barely sufficient for the work they have to do? Yes.
35. How many were there when the survey of the whole nineteen counties was made? I cannot exactly call to mind; I think about half the number.
36. Yet the survey of these nineteen counties involved the survey of some twenty-four millions of acres? Not an entire survey; there was a survey of features and a survey of grants.
37. There was a great deal of work in that? Yes; but the surveys were not so numerous as in the survey of these small portions of land for sale.
38. You think there can be no reduction in the clerical or drafting branch? I am firmly of that opinion.
39. Have you been in the field? I made one journey to Albury and two to Melbourne.
40. You are a surveyor, I suppose? Yes.
41. Have you worked in the field? Yes.
42. Not in this country? Yes, but not much; I was never allowed to leave the office; the Surveyor General, Sir Thomas Mitchell, was always in the field himself.
43. And that was the reason you were not? Yes.
44. You are of opinion, taking into consideration the work to be done, that the department is not numerically larger than it ought to be? Yes, I am of that opinion; I am also of opinion that some arrangement should be made for the survey of the features of the squatting districts.
45. That would involve a large expenditure? Yes.
46. You are about to retire from the department yourself? I am not aware of the position in which I stand.
47. I see no sum on the Estimates for a Deputy Surveyor General? No.
48. Do you think it necessary there should be a Deputy Surveyor General? I think so large a department, embracing more or less the control of three hundred persons, requires something more than one person to conduct it.
49. It has been stated in evidence given before this House that the Deputy Surveyor General should be always in the field, and the Surveyor General is of that opinion also? Yes.
50. If that is so, how is it you have never been employed in that way yourself? Do you mean recently?
51. Since you became Deputy Surveyor General? After I came back from Albury, or from Melbourne, the expense of my journey was objected to, and some delay occurred; I was then directed to take a journey to the north. In my journey to Albury I had found my own equipment, and when the journey to the north was proposed I asked for an equipment and allowance for my travelling expenses; and it was considered that my demand for an equipment—which was for one man, two horses, and such allowance as would enable me to feed the horses—was too great an expense, and the matter dropped.
52. What was the object of the journey you undertook? The object was very general.
53. Was it in connection with the general survey of that part of the country? It related to every matter connected with the business of the department. I was to see that the railway survey was properly equipped, to see that they laid out proper lines, to examine all the local land offices, to see the licensed surveyors at their work, to put myself in communication with the principal inhabitants in the towns to ascertain what they required, to pay attention to the

J. Thompson, the roads, and any other matters that I conceived came within the province of the department.
Esq. I think I made about a dozen reports upon different subjects; I remember one was on the matter of the Bathurst Burr.

- 17 Feb., 1859. 54. Was that within the limits of your duty as Deputy Surveyor General? It was a very important matter. The Bathurst Burr was spreading itself all over the country.
55. Latterly you have been employed in drawing up some report upon the boundaries of runs? I have been employed in analysing and reporting upon very difficult cases relative to runs, and upon various other matters arising out of the business of the department.
56. It has been stated by the Surveyor General that "the present duty of the Deputy Surveyor General is to attend to any matters connected with the departmental duties that I may instruct him upon. He is at present fully employed, under instructions from Mr. Secretary Robertson, in compiling a pamphlet exhibiting the boundaries of the different runs in the various districts; he also revised the land regulations lately published, and I refer to him any complicated matters for report which would occupy time, and which relieves the clerical branch of a considerable amount of duty."—These are the duties in which you have latterly been engaged? Yes.
57. How long have you been so occupied? Ever since my return from that journey.
58. Do you consider these particular duties such as a Deputy Surveyor General ought to be engaged in? I think the Deputy Surveyor General should be consulted in most matters in the administration of the department.
59. These particular matters in which you have lately been employed seem to belong to the duty of the clerks in the office, for instance, the compilation of the boundaries of runs? They could not have been done by a clerk—it requires a great deal of attention.
60. It may, but still it is a mere compilation? The other pamphlet was much more difficult.
61. The pamphlet exhibiting the boundaries of particular runs in various districts? It is extremely difficult.
62. *By Mr. Wild:* With reference to the mode of surveying carried out by both licensed and salaried surveyors, of course the same method is pursued? Yes.
63. What is your opinion as to the relative value of the work performed in these offices—as to the mode in which it is performed? I see no difference; it all depends upon the character of the surveyor.
64. How many licensed surveyors are there? About fifty.
65. How many salaried? Eighteen.
66. Have many dismissals taken place lately, either of salaried or of licensed surveyors—say within the last two years? I have had so little to do with the general business of the department that I cannot say.
67. I do not mean as to the exact number, but I wish to know whether it has been a frequent occurrence? Not a frequent occurrence; but as to the licensed surveyors —
68. I am not asking as to the dismissal of licensed but of salaried surveyors—you are of opinion that the work is as well done by licensed as by salaried surveyors? Yes.
69. Where, as a general rule, are licensed surveyors stationed? In the settled districts.
70. What is the reason of that arrangement? That the work is more fixed; in squatting districts it is irregular, and not so easily valued, and therefore, it is supposed the salaried surveyor is the more appropriate officer.
71. Why is the work not so easily valued in the outer districts? There is so much travelling.
72. You think it desirable to have salaried surveyors as far as possible in the outer, and licensed surveyors in the settled districts? I am rather disposed to recommend licensed surveyors altogether.
73. Still you think the work done by salaried surveyors is equal in accuracy to that performed by licensed surveyors? Yes.
74. Can you tell me whether there are more cases of misconduct on the part of the salaried surveyors than on that of the licensed surveyors? I cannot answer that, for the general business of the department has not come under my notice.
75. *By Mr. Jenkins:* I understood you to say that you have performed no field work yourself of late years? It is only three years ago I went that journey into the interior.
76. It has been stated that you were required, on the discovery of gold in the Northern Districts, to lay out a town or towns? I believe it to be an instruction to the surveyor to make a survey of the whole of that district, to the extent of six hundred miles, with the view to determine the sites of towns.
77. Did you undertake that duty? No; I submitted to the Government that I was not strong enough.
78. You were physically unable to do the duty? Yes; I submitted a medical certificate from Dr. Bennett that I was not.
79. You would have been quite willing to have undertaken the duty had your health permitted? Yes.
80. Have you received any further communication in consequence of that? It was intimated to me that the Government would dispense with my services, and that I should be allowed compensation, or a retiring allowance.
81. I suppose you would be willing to retire on getting a fair allowance? I am entitled to a certain pension. I am an Imperial Officer, and entitled to a pension under Act of Parliament.
82. How many years have you been in the service? Thirty-two.
83. You consider yourself entitled to a retiring pension? Yes; I am entitled to a retiring pension if Government wish to dispense with my services.
84. *By Mr. Denichy:* I understood you to say, in answer to a question from Mr. Murray, that your duties as Deputy Surveyor General are, and have been, altogether clerical—that you are engaged in the office altogether clerically, or, at all events, that you have not been in the field? Yes.

85. We understand also that the Surveyor General takes charge of the correspondence and the management of the Department in Sydney? Yes.
86. Then there is, so to speak, no supervising officer in the field? No, except the district surveyors, who are now the supervising officers. J. Thompson
Esq.
17 Feb., 1859.
87. These district surveyors are supervising officers over the licensed surveyors? Yes, and salaried surveyors too.
88. There is no supervising officer over the district surveyors? No.
89. Then the department in Sydney is entirely dependent upon the reports of the proceedings by the district surveyor? Not entirely, because the work undergoes revision and examination in the office; that makes the necessity for so many people there.
90. That is to say, all reports of surveys transmitted to you by the district surveyors are revised in the office? Yes.
91. Upon what data in the office are they revised—have you any means of checking them, or of testing their accuracy? Yes, sufficient means.
92. What are those means? They are scaled, the area is calculated, and the work is compared with former surveys.
93. Then the means of testing is by former surveys? In a measure; but the survey itself is tested in certain ways.
94. That duty is performed by the draftsmen? Yes.
95. Are all the duties connected with testing the surveys made by the licensed surveyors under the supervision of a paid surveyor done by draftsmen? Yes.
96. What are the duties of the clerks? There is an enormous correspondence going on.
97. And the clerks are entirely devoted to the management of the correspondence? Yes.
98. Has the Chief Clerk any special duties? Yes, to control the correspondence.
99. Does not the Chief Clerk practically, and in point of fact, do all the control of the correspondence? Yes.
100. Then what part does the Surveyor General take in the control of the correspondence? He signs all the letters, and, I presume, reads their contents.
101. Then all you know of the part taken by the Surveyor General is, that he signs all the letters, and, you presume, reads their contents? Yes.
102. But the letters are written by the Chief Clerk? Yes; but they are written sometimes, of course, upon some memoranda or minutes of the Surveyor General himself.
103. Does the Surveyor General take any part in supervising, or in any other way controlling the duties of the draftsmen? Not much; he does to a certain extent.
104. To a certain extent? A little; he does not visit the rooms.
105. All he does do is, that he occasionally visits the room where the gentlemen employed in this work sit? Very seldom.
106. Is it your opinion that the Surveyor General, or the Deputy Surveyor General, should be an officer in the field? Not always in the field.
107. But that he should be periodically in the field? Yes. I should consider it my duty, were I Surveyor General, to inspect at different times the whole Colony.
108. Are you aware that since the appointment of Colonel Barney to the office he has made any inspection? No; he has never moved from the office.
109. Have you performed any general survey since you have been in the office? No.
110. I understood you to say that you have been in the field? Yes; but I was on a tour of inspection.
111. Was that in your function of Deputy Surveyor General? I was Deputy Surveyor General then.
112. You did it as Deputy Surveyor General? I did it because I was commanded to do it.
113. Was the command that it should be in the nature of a special survey? I was commanded to take a certain journey to see that everything was correctly performed.
114. I am to understand you that the journey was in the performance of your special duty as Deputy Surveyor General? Yes.
115. You can inform me, no doubt, as to the way in which payments are made to licensed surveyors? Yes; there is a scale of fees being regulated by the area.
116. Is the rate of fee paid for every acre measured? It varies. It was the result of much consideration; I consulted some of the best mathematicians in the department and out of it.
117. Is it a graduated scale? Yes.
118. For what quality of surveying is the higher rate paid? For smaller portions.
119. For smaller portions—in connection with the difficulty in the survey or in connection with the small amount of work given to the individual? Yes.
120. The work done by the licensed surveyor is examined, I presume, by the district surveyor? The district surveyor, I imagine, would not examine all the work; it would be impossible. He would inform himself whether the surveyor conducted himself with propriety in performing the work, and if he had any doubt he would test it with the chain.
121. Do you mean in all cases he informs himself as to how the licensed surveyor conducts himself? Yes.
122. That is to say, he examines the work with a chain? No; that is if he thinks the surveyor is not trustworthy.
123. If the surveyor is trustworthy that is sufficient information, and the District Surveyor proceeds no further? Yes.
124. The Surveyor General has also a vast deal to do with the administration of Crown Lands? Yes.
125. Do you think the expenses of the Survey Department are materially increased by the transference to it of the Crown Lands Department? The expenses are considerably increased by the transference of that department to the Survey. In 1858 the real expense of the Survey was only £32,000, and the residue went for the Crown Lands, and other matters—engineering, and so on.

J. Thompson, Esq., 126. Can you, from your practical acquaintance with the department, conceive no way by which the labor of so many clerks for the purpose of correspondence could be diminished? No. I have given the matter some consideration, and I cannot see any way by which it can be diminished. Embarrassment arises at the present moment from the small number.

17 Feb; 1859.

127. Have the clerks much more to do than to copy the correspondence which are the productions of the Chief Clerk? Yes; there is besides a branch for the financial business, for the deeds, for registration, for correspondence; each of these takes four or five clerks. Of course that is a matter I am in no way qualified to answer.

128. *By Mr. Hay*: Are you now employed in the Survey Office? I am still retained in the Survey Office.

129. What was the nature of the communication made to you by Government? It was to the effect that in consequence of my inability, as admitted by the medical certificate, to undertake surveys in the tropics—and the district extended to Halifax Bay, which is three hundred miles within the tropics—the Government did not think it necessary to continue me in the service, and would submit to the Legislature what provision should be made for me.

130. Are you aware whether any farther steps were taken to carry out that intention on the part of Government? Some intimation was made to me that in remodelling the department occupation for me may still be found.

131. When was that intimation made to you? Recently.

132. Are you aware in what capacity it is intended to employ you? It is in the capacity of director of Crown Lands Commissioners, either with the title of Commissioner of Crown Lands, or Secretary of Crown Lands—to take the entire management of Crown Lands.

133. I understand you to refer to that portion of the business which was formerly in the hands of Colonel Barney as Chief Commissioner of Crown Lands? Yes.

134. How is the management of that practically provided for in the office in the meantime? Colonel Barney does both duties, and all the clerks formerly in that department are amalgamated with the survey clerks.

135. There is no separate staff maintained now for the administration of Crown Lands? It is a distinct branch, but the two offices are amalgamated, and the finance is all under one branch.

136. Who is at the head of the particular portion of the staff devoted to that service at the present moment? Mr. Shadforth; he succeeded Mr. Naylor, who was preceded by Mr. Moriarty.

137. From your knowledge of the present state of the Survey Department, and of its state for a great many years past, are you prepared to say that the part of the business which may be called the office part is in a satisfactory condition now? I think it is; but the clerical branch is not strong enough.

138. You think that portion of the business which is in the hands of the Chief Draftsman, and also the clerical portion, is well performed? Yes, except that the branches are not strong enough.

139. You have not much knowledge of the business in the field, but is that business conducted so well as it might be, both as to the quality of work performed and as to the amount? I do not think the salaried system is satisfactory or works well.

140. Would you have the whole of the field work performed by licensed surveyors? Yes; there might be one or two exceptions, under particular circumstances, but I would have it all done under inspection.

141. This inspection would in reality be equivalent to what is intended by the district surveyors? Yes, the same thing.

142. It would in fact be a system of contract? Yes.

143. Under competent district surveyors? Yes.

144. Would it not be necessary for the gentleman at the head of the department—the Surveyor General—to see how the district surveyors performed their duty? Yes.

145. It would be necessary that he should visit the different parts of the country and ascertain how the duties were performed? Yes, I am of that opinion.

146. Nothing of that sort has been done for some years? There has been no supervision in the field since I came back from Albury.

147. No system can be satisfactory without proper inspection in the field? I think that the Surveyor General or the Deputy Surveyor General should make frequent journeys.

148. And that the business of the district surveyors ought to be mainly the inspection and supervision of contract surveyors? Yes, and the laying out of towns, determining lines of road, and various matters.

149. The laying out of townships, the preparation of lands for sale, and the laying out of roads ought to be entrusted only to responsible district surveyors? Yes, and many other matters of that kind to be reported to the Surveyor General, should come under the review of the district surveyor; matters relating to minerals, the pressure of population on particular parts.

150. Are you aware whether the district surveyors who were appointed of late have been employed from the time they were appointed upon their proper duties as district surveyors? I am not prepared to answer that.

151. You are prepared, I suppose, according to the option of the Government, to retire, either upon the retiring allowance to which you consider yourself entitled, or to continue to take that position in the Survey Office in which your talents and experience will render you useful—either of these alternatives you are prepared to embrace? Yes.

152. *By Mr. Wild*: You said just now, in answer to a question, that you had about fifty licensed surveyors? Yes.

153. How many of these are employed? I could not say.

154. Are half employed? Yes.

- 155. Do you think thirty are employed? I apprehend there are not; it does not come under J. Thompson, my review.
- 156. Have you not the means of knowing whether there are not more than half? I should not think there are. 17 Feb, 1859.
- 157. You said just now you considered the clerical part of the department in rather a good state than otherwise? Yes.
- 158. You consider that the clerical staff was rather slight than otherwise? Yes, that there is not sufficient strength.
- 159. Have there been many dismissals lately? There have been many changes.
- 160. Have there been frequent dismissals? There have been two or three—I could not tell how many.
- 161. Allow me to call your attention to one case, that of Mr. Gorton—you recollect, no doubt, the cause of his dismissal? Yes.
- 162. It is a very recent case? It is a case which did not come under my notice.
- 163. I understood you to say just now that the Deputy Surveyor General was generally consulted? No.
- 164. You cannot give me any statement as to the reasons of Mr Gorton's dismissal? No.
- 165. You know nothing about the case? Nothing more than has been reported.
- 166. Officially you know nothing of the reasons for the dismissal? No.
- 167. *By Mr. Jenkins:* Do you think these district surveyors could perform the duties of the Commissioners of Crown Lands, and at the same time not neglect their own duties? I do not think they could.
- 168. Are you aware whether any complaints have been sent in from the owners of runs who have not been able to get Commissioners to decide upon disputes of boundaries? I believe there have been.
- 169. Are you not aware of any particular case? The appointment of these Commissioners is very recent.

1858-9.

Legislative Assembly.

NEW SOUTH WALES.

M R . C . F . G O R T O N .

(COMPLAINING OF HIS DISMISSAL FROM OFFICE.)

Ordered by the Legislative Assembly to be Printed, 4 February, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.
The humble Petition of Charles Frederick Gorton, late a Clerk of the 3rd Class in
the Surveyor General's Department,—

SHEWETH UNTO YOUR HONORABLE HOUSE :—

That your Petitioner served six and a half years in the capacity of clerk in the Surveyor General's Department, and that prior to the passing of the Estimates for the year 1858 he applied to the Surveyor General for promotion to the Second Class, to which he was entitled both by seniority and also by his having been placed in charge of a branch of the duties of the Department since August, 1857.

That in the month of July last your Petitioner was summoned to give his evidence before the Select Committee of your Honorable House then sitting on the Management of the Survey Department, and that prior to or during his examination he was informed by the examiners that he should suffer no loss or detriment by giving any information in his power to the Select Committee.

That shortly after his examination by the above mentioned Select Committee your Petitioner received from the Surveyor General a blank cover memorandum from the Honorable the Secretary for Lands and Public Works, stating that your Petitioner should put forward his claims in a more temperate style, but declining to interfere with the arrangements of the Surveyor General unless in an extreme case.

That your Petitioner (believing he might take advantage of the permission which he conceived to have been granted to him by the Minister for Lands and Public Works, namely, that he should put forward his claims, &c.) again forwarded his application through the head of his Department to the Honorable the Secretary for Lands and Public Works, begging a reconsideration of his extremely hard case, namely, that of being refused the promotion for which he had labored hard, without any fault having been found with the manner in which he had conducted his onerous duties; and also that of having a clerk put over his head who was his junior in the service by nearly two and a half years, and who had never been in charge of any branch.

That the Surveyor General, in his letter to the Minister for Lands forwarding Petitioner's application above referred to, begged that Mr. Robertson would particularly notice your Petitioner's insubordination, in having opened a case (viz., an application for promotion made the year before, and which had been decided on by the former Secretary for Lands and Public Works, Mr. Hay, and which decision, on a different subject and under a different Government, your Petitioner could not for a moment suppose had been intended should remain in force to stop his advancement for ever); and also in his having given evidence before the Select Committee, and enclosing to Mr. Robertson a copy of his (the Surveyor General's) queries, with the replies thereto, which had been sent both to your

Petitioner and also to Mr. Surveyor Darke, relative to the cause of your Petitioner's examination before your Honorable Committee, and at the same time begging that your Petitioner might be told to find some other employment, or to be allowed to exchange into some other office.

That your Petitioner on the 22nd of September last was handed a Minute of the Executive Council, dated the 17th of September, 1858, which stated that your Petitioner's services would be dispensed with on the 30th of September last; thus, although Petitioner's case had been finally settled by the Honorable the Secretary for Lands and Public Works, (no complaint having been preferred against him at any time,) on his insubordination being pointed out, *in having given evidence before your Honorable Select Committee*, he was instantly dismissed, on a notice of eight days only, without even the usual compensation, to find a maintenance for himself, a wife, and eight children—the latter of whom are too young to obtain any kind of living.

That your Petitioner had been led to believe that his extremely hard case would be particularly noticed in the final Report on the Management of the Survey Department, but as the present Session is far advanced without the final Report having been laid before your Honorable House, and as your Petitioner has no means of subsistence, your Petitioner humbly prays that your Honorable House will be graciously pleased to afford him such redress and relief as his distressing case may seem to your Honorable House to merit.

And your Petitioner will ever pray, &c.

C. F. GORTON.

Sydney, 3 February, 1859.

1858-9.

Legislative Assembly.

NEW SOUTH WALES.

MR. CHARLES F. GORTON.

(CORRESPONDENCE RELATIVE TO DISMISSAL OF.)

Ordered by the Legislative Assembly to be Printed, 7 April, 1859.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 8 March, 1859, That there be laid upon the Table of this House,—

“ Copies of all Correspondence between the Surveyor General
“ and Mr. Gorton, and between the Surveyor General and the
“ Government, with reference to Mr. Gorton’s dismissal from
“ office.”

(*Mr. Wild.*)

SCHEDULE.

No.	PAGE.
1. Mr. C. F. Gorton to Surveyor General, asking for an increase of salary. 2 July, 1858 ..	3
2. Further letter, enclosing one to the Under Secretary for Lands and Public Works. 17 July, 1858	3
3. Letter above mentioned. 17 July, 1858 .. .	4
4. Mr. Gorton to the Under Secretary, forwarding duplicates of letters, (2 and 3). 19 July, 1858	5
(Surveyor General's Report thereon and previous correspondence)	5
5. Mr. Gorton to Surveyor General, forwarding letter to the Under Secretary vindicating his character. 26 July, 1858.. .. .	6
6. Letter above mentioned, (with minutes thereon). 26 July, 1858	6
7. Surveyor General, calling upon Mr. Gorton to withdraw the correspondence. 9 August, 1858	7

9. Further letter. 17 August, 1858	9
10. Surveyor General, complaining of Mr. Gorton. 21 August, 1858	9
11. Proceedings of the Executive Council, dismissing Mr. Gorton. 6 September, 1858	10
12. Mr. Gorton to the Surveyor General, asking for a written dismissal. 28 September, 1858..	11
13. Surveyor General in reply. 13 October, 1858	11

MR. CHARLES F. GORTON.

No. 1.

MR. C. F. GORTON to THE SURVEYOR GENERAL.

*Surveyor General's Office,
Sydney, 2 July, 1858.*

SIR,

Being the senior of the 3rd class of clerks next to Mr. Underwood, and the senior of my grade of clerks receiving £245 per annum, as well as in charge of a branch of the duties of this department, I beg leave to present my claim for one of the £300 voted for the present year, and which in your blank cover memo., No. 57-64 (57,612) of 20th March, to the Honorable the Secretary for Lands and Public Works, you stated you should be happy to consider favorably.

My seventh year's service in your department commenced on 1st of April last, during which period I have belonged to the fixed establishment as a 3rd class clerk $4\frac{3}{4}$ years; I have had charge of the Entry and Despatch Room since the 18th of August last, assisted by two clerks only; during which period 12,000 letters—money letters and documents, besides numerous deeds—have passed through my hands, in a manner which I trust has given satisfaction, notwithstanding that when the same duty was less onerous—having now been much increased by the correspondence with the Land Agents—four clerks were employed in its performance.

In most of the departments the work I am engaged in is considered to be of the highest importance; and in the Colonial Secretary's Office, in which the correspondents were less numerous than in this, the gentlemen in charge of the same branch was in the receipt, I have been informed, of £400 per annum.

By the cessation of the annual increase, and the reduction of the gold allowance, I lost last year £40, which, had the same been continued, would have made my salary £300 on the 1st October next; whereas the two gentlemen receiving the same pay as myself, viz., £245, had an addition of £35 to their former salaries last year, and the promotion of either of them at this moment to £300 would give an increase to their pay of £90 in two years, and cause a loss to myself of £55, for no assigned reason, having been most diligent in the performance of the duties intrusted to my care, which the Chief Clerk was kind enough to acknowledge to me yesterday to be the case.

I humbly hope therefore that you will be pleased to consider me deserving of the promotion which I have so long sought, both on account of my seniority and my having to be responsible for the due performance of duties requiring so much alacrity, care, and attention.

Should it be your intention to recommend a junior clerk for the promotion, which I consider to be only my just right, I have the honor to request that this application may be forwarded for the consideration of the Honorable the Secretary for Lands and Public Works.

I have, &c.,

THE SURVEYOR GENERAL.

C. F. GORTON.

No. 2.

MR. C. F. GORTON to THE SURVEYOR GENERAL.

*Surveyor General's Office,
Sydney, 17 July, 1858.*

SIR,

I have the honor to request that the enclosed letter, together with my former communication to you of the 2nd instant, may be forwarded to the Honorable the Secretary for Lands and Public Works, should it not have already been sent, in order that it may be laid before him prior to his sanctioning the arrangements of salaries for the present year.

I have, &c.,

THE SURVEYOR GENERAL.

C. F. GORTON.

Submitted with my letter of this date, No. 55-253.
Sur. Gen. Office, 19 July, 1858.

G. B.

No. 3.

No. 3.

MR. C. F. GORTON to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Surveyor General's Office,
Sydney, 17 July, 1858.*

SIR,

On the 2nd instant I addressed the Surveyor General on the subject of my promotion to the second class of clerks in this department, and respectfully requested that, should it be his intention to recommend any of my juniors in office, he would favor me by submitting my application for the consideration of the Honorable the Secretary for Lands and Public Works, prior to any final decision being arrived at.

The application alluded to contains a true statement of my services, duties, &c., and it is therefore with much regret that I am compelled to trouble Mr. Secretary Robertson on the subject; but the great difficulty of obtaining the slightest promotion in this office, either by using the utmost exertions in the performance of the duties intrusted to one's charge, or otherwise, will be seen from the following facts:—

On the day after the passing of the Estimates I had a conversation with the Chief Clerk on the subject of the different salaries as voted for the present year, and then mentioned that I trusted that the Surveyor General would nominate me to one of the salaries of £300, to which my seniority and the satisfactory manner in which I had conducted the duties of my branch (to the latter of which Mr. Halloran assented) I considered, with due deference, would entitle me; but much to my surprise, he informed me that I was to remain at my present stipend of £245 per annum, and that Mr. Thomas, an assistant correspondent, and considerably my junior in office, was to be appointed to the second class; but that he had Colonel Barney's authority to assure me that, if I quietly submitted to this arrangement, I should not be forgotten in the framing of the Estimates for 1859.

On the following morning I waited on the head of my department, and humbly requested that he would not permit me to lose my standing this year, as I had received no promotion during 1857, but had on the contrary suffered loss. The Surveyor General then said that he had not given the appointment of the officers to the respective salaries the least consideration, but that when the matter was properly laid before him he would immediately do so, and thought he should make it all right. In mentioning this circumstance, I beg to be permitted to state, that it is not my intention to cast the slightest imputation on my superiors in office, but merely to shew that promotions would apparently seem to rest solely with the Chief Clerk, and that therefore it is evident that his proteges or favorites are sure to pass over the head of seniors, who, from their not being intrusted to perform the duties considered to be of any importance, are prevented from shewing their capabilities to conduct them.

In conclusion, I have the honor to express a hope that if inefficiency—a term so frequently made use of for the purpose of lowering an individual, and of preventing all further inquiry into his case—may have been urged in this instance, I may be allowed to express my willingness to pass an examination in English composition, the dead and living languages, with any gentleman in the clerical branch of the department, notwithstanding that I have done so on two occasions already, once at the Royal Naval College, where I passed the first examination out of thirteen candidates, and received highly flattering commendations from Admirals Sir Frederick Maitland, Sir Phillip Durham, Dr. Inman, Professor of Astronomy, and Lieutenant Loring, the Governor of the College; and again for the Civil Service, in the Colonial Secretary's Office, Sydney, in 1853.

Trusting therefore that I may be permitted to retain my present rank in this department, next to Mr. Underwood, and that my thus troubling the Honorable the Minister for Lands and Public Works may only be considered in its true light, namely, an endeavour to obtain the salary for which I have so zealously labored, and which, as a family man, is of every importance to me.

I have, &c.,
C. F. GORTON.THE UNDER SECRETARY
FOR LANDS AND PUBLIC WORKS.

No. 4.

No. 4.

MR. C. F. GORTON to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Surveyor General's Office,
Sydney, 19 July, 1858.*

SIR,

On Saturday morning last I had the honor of addressing a letter to you, through the Surveyor General, on the subject of my salary for the present year; but from its not having been sent through the Despatch Room as yet, and from my being fearful lest the arrangement of the salaries should be approved of prior to its receipt, I now do myself the honor to forward a copy of the letter above alluded to, together with a copy of my application to the head of this department of the 2nd instant.

I have, &c.,

THE UNDER SECRETARY
FOR LANDS AND PUBLIC WORKS.

C. F. GORTON.

Forward to the Surveyor General, who will perhaps have the goodness to explain to Mr. Gorton the proper channel of communication in this case.

B. C., 19 July.

M. F.

Returned, with reference to my letter of the 19th instant*, with this observation that I consider the proceedings of Mr. Gorton unwarrantable and improper.

I enclose for consideration correspondence which took place in 1857 of a similar character, and for which Mr. Gorton was brought under censure. I am most anxious to consider and promote, as far as is practicable, deserving subordinates; but whether they are deserving, or whether the fit time has arrived, is for me to determine.

GEO. BARNEY,
S. G.

*Surveyor General's Office,
21 July, 1858.*

The Surveyor General to the Under Secretary for Lands and Public Works, forwarding letters from Mr. Gorton, Clerk in his Office, and advising his removal from his Department.

(No. 57-206.)

*Surveyor General's Office,
Sydney, 24 April, 1857.*

SIR,

I have the honor to submit, for the consideration of Mr. Secretary Hay, certain letters addressed to me by Mr. Gorton, a clerk in my office, and to request attention to that of the 22nd instant, which, appearing to me to be of an improper character, I gave Mr. Gorton the option of withdrawing it, which, however, he declines—see his letter of the 23rd instant.

2. It now becomes my duty to state that I have not that high opinion of Mr. Gorton's ability or conduct which would induce me to place him over the heads of gentlemen in the office who are conducting their duties in a most satisfactory manner, nor has the correspondence herewith raised Mr. Gorton in my estimation—on the contrary, I consider that he is setting a very bad example, and that his removal from the department is necessary

I have, &c.,

The Under Secretary
for Lands and Public Works.

GEO. BARNEY,
S. G.

Mr. Gorton had no right to demand to know the grounds upon which the Surveyor General's judgment was formed with respect to his qualifications, and the Surveyor General having intimated that he considered the terms in which he had sought to learn those grounds objectionable, Mr. Gorton should have embraced the opportunity afforded him of withdrawing the letter. *He must now do so*, otherwise it will be considered that he does not wish to continue in the service.

Mr. Gorton must further understand that in my opinion the Surveyor General did no more than his duty in recommending for promotion those gentlemen who were, in his opinion, from experience and peculiar aptitude, best fitted to fill the higher offices in the department satisfactorily. Mr. Gorton had no right to promotion, except in so far as he might be decided to be the best man for the office under the circumstances; as to that, I should depend upon the recommendation of the Surveyor General, whom I hold responsible for the efficiency of the department; and the course I followed in sanctioning the distribution of offices proposed by that officer. If Mr. Gorton considers himself aggrieved, he might appeal to me, as he did, and that appeal ought to have been considered final. The valuable time of the heads of departments

* General letter, shewing the distribution of salaries under the Estimates.

departments must not be taken up by a continued discussion of such points. My answer must be held to be conclusive, and my decision must be practically acquiesced in. Any further attempt to open the matter up on Mr. Gorton's part will be taken as indicating an insubordinate spirit, and will compel me to advise his dismissal.

25 September.

J. H.

[Letters alluded to withdrawn]

The Surveyor General to the Under Secretary for Lands and Public Works, respecting Mr. Gorton's application for promotion to higher duties.

(No. 57-255.)

*Surveyor General's Office,
Sydney, 15 May, 1857.*

Sir,

I have the honor to state, for the information of the Honorable the Secretary for Lands and Public Works, that, on being made acquainted with the purport of your letter of the 29th ultimo, No. 250, Mr. Gorton requested permission to withdraw the letter of the 22nd ultimo, the tenor of which I considered objectionable, which permission has been granted.

2. I may add that, on making this request, Mr. Gorton stated in explanation that the above letter (with the others which were transmitted by my letter of the 24th ultimo,) was not written in disrespect to the head of his department, but merely with a hope that some little increase to his salary might be thereby obtained for the support of his family.

I have, &c.,
GEO. BARNEY,
S. G.

No. 5.

MR. GORTON to THE SURVEYOR GENERAL.

*Surveyor General's Office,
Sydney, 26 July, 1858.*

SIR,

I have the honor to request that you will be pleased to forward the enclosed letter to the Under Secretary for Lands and Public Works, at your earliest convenience.

I have, &c.,

THE SURVEYOR GENERAL.

C. F. GORTON.

Mr. H.,

Afford Mr. Gorton the opportunity of withdrawing this correspondence, and let me know the result to-morrow morning.

G. B.,
July 26.

Mr. Gorton should put forward his claims, such as they are, more temperately. It will be necessary that he withdraw the correspondence, as suggested by the Surveyor General on 26th July. Holding, as I do, the Surveyor General responsible for the proper and efficient working of his department, I am not disposed to interfere with any decision of his, unless in an extreme case.

Surveyor General,
B. C., 31 July, 1858.

JOHN R.,
31 July.

No. 6.

MR. C. F. GORTON to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Surveyor General's Office,
Sydney, 26 July, 1858.*

SIR,

The letter which I had the honor of addressing to you on the 17th instant having been handed to me, for the purpose of entering the blank cover memorandum endorsed thereon, and of effacing any superfluous notes, &c., prior to its re-transmission, I could not but observe that the Surveyor General had denied, as it appeared to me, the veracity of three of the statements contained therein, and I therefore feel myself called upon, in support of my character, both as a man and a gentleman, to beg leave most respectfully to assure you that I do most solemnly declare that I have stated *facts only*, and that I can scarcely conceive it possible that it would be supposed for one moment that any one could be so void of sense as to write a deliberate falsehood, knowing at the same time that it must be forwarded through the same officer to whom it alluded.

In

In the third paragraph of the letter above alluded to, opposite to the sentence "but that he had Colonel Barney's authority to assure me," &c., the Surveyor General has marked in pencil "not so" with his initials G. B., and which I am led to believe is intended to convey the meaning that Mr. Halloran did not hold his authority to assure me of any such arrangement having been intended, as the Surveyor General was not present during my conversation with Mr. Halloran on the subject.

In the fourth paragraph Colonel Barney's initials are again affixed in pencil, at the word "thought," with "no" above them; and again at the sentence, "are sure to pass over the heads of seniors," &c., with the remark of "improper, and, in fact, incorrect"; but I feel no hesitation in saying that the expressions quoted by me were those made use of by both Colonel Barney and Mr. Halloran, from my not only having mentioned them immediately after my interview with each officer to several gentlemen in the office, but from my having taken a note of them on leaving their respective rooms.

If, however, it should be considered that I have expressed myself improperly, I beg that it may be truly ascribed to my having addressed you under the painful impression, real or imaginary, of having suffered injustice, without entertaining either personal feeling or disrespectful intention.

I have, &c.,

C. F. GORTON.

THE UNDER SECRETARY

FOR LANDS AND PUBLIC WORKS.

I say most unhesitatingly, tho' with great respect, that Mr. Gorton's letter contains, as far as I am concerned, two mis-statements—first, in that he states that I informed him that he might expect consideration if he *submitted in silence*; and, secondly, in that he represents that my favorites and proteges are passed over the heads of their seniors. On reading Mr. Gorton's letter I was struck so forcibly with the mis-statements contained therein that I for a moment considered whether it was not my duty to make them the ground of direct charge against that individual. As far as I am concerned the case stands thus:—On Mr. Gorton incidentally observing to me, in reference to the Estimates which had just passed, and to which I alluded, that he hoped to be recommended for one of the £300 salaries, I replied, "I am sorry to say no—I feel bound to recommend Mr. Thomas." Mr. Gorton evinced great disappointment, and spoke of his seniority, and of his family, and of his recent diligence. I admitted the last. I walked over to the room of Colonel Barney, and, alluding to what had occurred, I said, "Have I your authority to say that, in the forthcoming Estimates for 1859, the claims of those who, by their exertions, enable us, with our reduced numbers, to keep up the work, shall be favorably considered." To this the Surveyor General assented, and this and nothing further did I communicate, whatever Mr. Gorton may suppose or state. This promise I had intended to endeavour to make good. As I, on authority, believed the claim not to be a good one, I certainly should never have promised consideration for "submitting in silence" to the disallowance of the claim.

26 July, 1858.

H. H.

With reference to promotion to vacancies, it should be clearly understood that it will depend upon zeal and merit—on no account to be understood to follow in the order of existing appointments.

G. B.

Mr. Halloran,

If required to do so, I am both ready and willing to make an affidavit to the truth of my statements before a Magistrate, and, having stated the truth only, I beg to decline withdrawing this correspondence.

26 July, 1858.

C. F. G.

Submitted with reference to my communication* of 19th instant, 58-258.

No. 7.

THE SURVEYOR GENERAL to MR. C. F. GORTON.

(No. 58-814.)

Surveyor General's Office,

Sydney, 9 August, 1858.

SIR,

I have to inform you that, having submitted to the Secretary for Lands, &c., your letter of 26th ultimo, with its enclosure, I have been honored with this intimation—
"That Mr. Gorton should put forward his claims, such as they are, more temperately; that

"it

"it will be necessary that he withdraw the correspondence, as suggested by the Surveyor General on 26th July."

2. I have now, therefore, to require that you withdraw your correspondence in question; and in doing so, I must express my regret that you should now, for a second time, have forgotten so far what is required in public correspondence as to render the adoption of the present course imperative.

I have, &c.,

GEO. BARNEY,

C. F. GORTON, Esq.

S. G.

No. 8.

MR. C. F. GORTON to THE SURVEYOR GENERAL.

Surveyor General's Office,

Sydney, 10 August, 1858.

SIR,

In accordance with the instruction of the Honorable the Secretary for Lands and Public Works, conveyed to me in your letter of the 9th instant, I have the honor to withdraw my correspondence of the 26th ultimo; and also to request that you will favor me by forwarding the enclosed letter, addressed to the Honorable the Secretary for Land and Public Works, and which contains my claims to promotion, now set forth in such a manner as, I trust, will meet with the approval of both Mr. Secretary Robertson and yourself.

I have, &c.,

THE SURVEYOR GENERAL.

C. F. GORTON.

[*Enclosure in No. 8.*]

Surveyor General's Office,

Sydney, 10 August, 1858

Sir,

In obedience to the instructions contained in your blank cover memorandum of the 31st ultimo, of which I have this day been informed, I have the honor very respectfully to withdraw my letter of the 26th July last, and at the same time, whilst expressing great regret that my correspondence should have been considered by you to have been written in an insufficiently temperate style, to beg that you will have the goodness to take my case, from its being one of extreme hardship, into your favorable re-consideration.

In the Estimates for this department just voted by the Assembly, there are four clerks placed on it for a salary of £300 per annum each; one of them was given to Mr. Underwood, and, as I was the next senior to him; I made application to the Surveyor General for a like salary of £300, as I thought it was placed on the Estimates for me from my having been placed in charge of a Branch of the duties of this department since the 18th August, 1857, (as will be seen in the departmental returns forwarded through your office for the Retrenchment Committee on the 5th ultimo, No. 236, as also from the annexed copy of instructions which I received from the Chief Clerk on the subject, the original document forming an appendix to my evidence before the Select Committee on the Management of the Survey Department,) and from the Surveyor General having stated his willingness to consider my claim for an increase of salary for this year in his blank cover memo. of the 20th March, No. 57-64, (57-612.)

I have worked to the utmost of my ability in order to obtain the promotion sought for, and the manner of discharging my official duties had never in the slightest degree been censured since my being placed in charge. I omitted to mention that I have had charge also of all official stores, postage accounts, &c., and I, therefore, trust that my services may be accounted worthy of a salary of £300, which would then be £75 lower than the payment for the performance of similar though less onerous duties in the next department.

Mr. Thomas, who has been recommended to be placed over me, and who was only put on the fixed Establishment on 1st January, 1857, received an increase of £35 last year, whilst I, on the contrary, lost £40, and by being nominated to £300 he will have obtained an increase of £90 in two years.

I sincerely hope, therefore, that as no charge has been brought against me, your minute on the Surveyor General's blank cover No. 58-282, 58-1667 of the 10th June, recommending Mr. Pretious' promotion, may be allowed to influence my case, and that I may still be permitted to retain my position in this department according to seniority, and to receive the salary voted by the Assembly for such position.

I have, &c.,

C. F. GORTON.

It will be the duty of Mr. Gorton, as letter record clerk, to see that all letters, &c., are duly entered, indexed, and despatched, day by day; and that if by staying the ordinary hours, with occasional over hours under pressure, the work cannot be kept up, to report that

to

to me officially. He will see, however, that effort is made to accomplish this with the present means—by the exercise of diligence and energy. He is to understand that I hold him personally responsible.

H. HALLORAN.

19 August, 1857.

No. 9.

MR. C. F. GORTON to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

*Surveyor General's Office,
Sydney, 17 August, 1858.*

SIR,

On the 10th instant, the day on which I was informed of the decision in my case conveyed to the Surveyor General by your blank cover memorandum of the 31st ultimo, I had the honor to address another letter to you on the subject (copy enclosed) through the head of this department, but as I am fearful that it may have either been mislaid or overlooked since that period, will you pardon my thus begging that some inquiry may be made as to the cause of its detention.

I have, &c.,
C. F. GORTON.

THE HONORABLE THE SECRETARY FOR
LANDS AND PUBLIC WORKS.

No. 10.

THE SURVEYOR GENERAL to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

(No. 58-285.)

*Surveyor General's Office,
Sydney, 21 August, 1858.*

SIR,

In transmitting for the consideration of the Honorable the Secretary for Lands and Public Works the accompanying letters from Mr. Gorton, clerk in this department, on the subject of his salary and position in this office, I beg to refer to the correspondence which has lately passed on this subject, and with which Mr. Secretary Robertson is fully conversant. I have, however, to draw attention to the correspondence which passed last year on the same subject, and which was conducted in the same insubordinate character. I need only to allude to the circumstance that Mr. Gorton had to withdraw his correspondence, and to request Mr. Secretary Robertson's perusal of the letter from the Department of Lands and Public Works, dated 29th April, 1857, (herewith); the latter part of paragraph 4 is as follows,—“any further attempt to open the matter up on Mr. Gorton's part will be taken as indicating an insubordinate spirit, and will compel Mr. Secretary Hay to advise his dismissal.” Now in the face of this communication Mr. Gorton has again opened the matter up, in the same insubordinate spirit, which will be more distinctly observed on perusal of a memorandum marked A herewith. Without occupying further the time of Mr. Secretary Robertson, I must express my opinion, that Mr. Gorton's claim should not be considered, and that neither his merits nor his conduct entitles him to be placed in a better position than he is at present. Under the circumstance of the case I would recommend that Mr. Gorton be desired to seek other employment, either by exchange or in any other way he may think fit.

I have, &c.,
GEO. BARNEY,
Surveyor General.

THE UNDER SECRETARY FOR
LANDS AND PUBLIC WORKS.

Laid before the Executive Council, 6th September, 1858. Min. No. 58-36.

Submitted.

24.

I quite concur in the views herein stated.

Ex. Council.

W. D.
2 Sept., 58.

Mr. Gorton has not only continued to act insubordinately notwithstanding Mr. Hay's intimation to him that such conduct would involve his dismissal from the public service, but he, as it appears to me from the instance alluded to in this letter, has shewn that insubordination in another and an additional form, for it appears that he went to the Select Committee to give evidence without informing the head of his department of his having been called

called upon to do so, and also that he took the highly improper course of removing from the office an original document without first having the permission of the officer above him.

Mr. Gorton's continued transmission of letters direct to myself, notwithstanding it having been frequently pointed out to him that they should be sent through the head of his department, is in this his last letter peculiarly blameable, for I am assured by Mr. Fitzpatrick that he warned Mr. Gorton of the proper mode of action in this matter, and that he nevertheless persevered.

As to the general question of the proper course to be followed in the matter of promotions, I entirely concur in the views expressed by Mr. Hay.

It must be clear that Mr. Gorton cannot be continued in the Survey Department. I am, therefore, of opinion that the mildest mode of disposing of his case that would meet with its requirements would be to give Mr. Gorton notice that at the end of the current year his services will not be required.

JOHN R.

27 Augt.

Having submitted this case to my colleagues, and obtained their approval of the views above stated, it may be referred to His Excellency the Governor General and Executive Council

JOHN R.

30 Augt.

Clerk of the Council,
B. C. 31 Augt. M. F.

No. 11.

PROCEEDINGS of the Executive Council on the 6th September, 1858, with respect to the removal of Mr. Gorton from the Survey Department.

Minute No. 58-36. Confirmed 16th September, 1858.

His Excellency the Governor General lays before the Council a letter from the Surveyor General, forwarding certain letters from Mr. C. F. Gorton, a clerk in his office, and bringing under notice repeated instances of insubordination on the part of that gentleman, whose removal from the Department he strongly recommends.

2. From previous correspondence and other documents which accompany this letter, it appears that in the early part of last year Mr. Gorton, conceiving that he had not received the promotion either as regards salary or position to which, according to his own view, he was entitled by his merits and services, addressed to the Surveyor General a somewhat intemperate letter, which, by direction of Mr. Secretary Hay, he was subsequently required to withdraw; he was at the same time severely reprimanded, and informed that the head of his department was held responsible for the efficiency of the gentlemen employed therein, and that any further attempt on his part to open the matter would be taken as indicating an insubordinate spirit, and would compel Mr. Hay to recommend his dismissal.

3. Upon the Estimates for the department being passed this year, Mr. Gorton again pressed his claims for promotion upon the Surveyor General, who, however, again declined to recognize them, whereupon, notwithstanding the previous warning, Mr. Gorton addressed to him another intemperate letter; by direction of Mr. Secretary Robertson an opportunity was afforded him of withdrawing this letter, also, with an intimation that he should put forward his claim in a more temperate way. Mr. Gorton then addressed the Secretary of Lands and Public Works, through the head of his department, and not receiving an answer as promptly as he expected, wrote directly to Mr. Secretary Robertson, enclosing a copy of his communication to the Surveyor General. This course he had adopted on a previous occasion, and he was then informed that it was an improper one, and must not be repeated; upon his again resorting to it, he was warned by the Under Secretary of Land and Public Works of the proper mode of bringing his complaints under notice, but disregarding this further caution he nevertheless persisted in communicating directly with Mr. Robertson.

4. Having carefully considered all the circumstances of this case, as disclosed by the present and previous correspondence, the Council are of opinion that it is very undesirable to retain in the Public Service a gentleman who evinces such a decided determination to disregard, not only the instructions of his superiors, but also the Regulations of the Government, and they accordingly advise that he be informed that his services will not be required in the Survey Office after the 30th instant.

Sydney, 13 October, 1858.*

(No. 58-1045.)

SIR,

With reference to the request preferred in your letter of the 20th ultimo, I now enclose, for your information, a copy of the Minute of the Proceedings of the Executive Council on the 6th September, containing the grounds on which the Council were pleased to advise your removal from this department.

I have, &c.,
GEO. BARNEY,
Surveyor General.

C. F. GORTON, Esq.

1858-9.

Legislative Assembly.

NEW SOUTH WALES.

PRE-EMPTIVE RIGHT—PORT CURTIS.

(PETITION IN FAVOR OF.)

Ordered by the Legislative Assembly to be Printed, 14 January, 1859.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales
in Parliament assembled.

The humble Petition of the undersigned Occupants of Crown Lands within the
Settled Counties of the District of Port Curtis,—

MOST RESPECTFULLY SHEWETH:—

That your Petitioners are the occupants of land in the District of Port Curtis,
thrown open to colonization by the Government of New South Wales in January, 1854.

That your Petitioners have been under a very considerable expenditure of capital
upon the lands they have thus occupied.

That, notwithstanding the invitation of the date above mentioned given by Govern-
ment to occupy, and the expenditure of capital your Petitioners have been under in so doing,
no possible method of requiring a fee simple value in the land they have taken up has been
extended to your Petitioners.

That it is from the want of any survey of the lands occupied they have not been
open to purchase by your Petitioners, the said land being within the proclaimed Counties
of Clinton, Deas Thomson, and Livingstone, or as they are termed, the Settled Districts.

That from the time which elapsed since your Petitioners first located themselves on
their Stations, there has been a considerable increase given, by the expenditure of their
capital, and by their labor, to the value of their occupancies.

That from the attraction of population, created by late discoveries of Gold in the
District of Port Curtis, your Petitioners are apprehensive that the very improvements they
have themselves made may be a source of insecurity to their tenures.

That your Petitioners are anxious now to purchase certain portions of the land they
occupy, and pray they may be allowed so to do without being subjected to competition at
auction.

That your Petitioners respectfully beg they may have extended to them the same
right of pre-emption which protects the improvements of other Squatters in the Intermediate
and Unsettled Districts.

[Here follow 15 Signatures.]

1858-9.

Legislative Assembly.

NEW SOUTH WALES.

MR. JOSEPH ROWSELL.

(PRAYING REDRESS FOR ENCROACHMENT ON RIGHT OF ROAD.)

Ordered by the Legislative Assembly to be Printed, 25 March, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Joseph Rowsell, of the Upper Wilson River, in the District of Port Macquarie,—

MOST HUMBLY SHEWETH :—

That your Petitioner is a leaseholder of 1,109 acres of land, which was purchased from the Government by Magnus McLeod, the proprietor being now in England for the benefit of his health. That from recent purchases made from the Bank of Australasia, the parties so purchasing have so encroached upon the right of road, by building and slip rails, which from Petitioner's residence to the proclaimed road, a distance of only four miles, there are (eleven of the latter), thereby rendering it utterly impossible to drive cattle to or from the said proclaimed road, and this being the only means that your Petitioner has for support.

Being impressed with the conviction that all lands are sold subject to a right of road, which your Petitioner cannot believe the Government would sell without that right, and he has been for the past twelve months in correspondence with the Minister for Lands and Public Works and the Surveyor General, from neither of which departments has any redress as yet been obtained.

Your Petitioner therefore humbly lays the case before your Honorable House, trusting it will cause the immediate removal of the said encroachments; it being fifteen months since your Petitioner has been able to drive any cattle to market, and having property, is consequently involved in distress, so much so, that your Petitioner will soon be compelled to sell his property, and give up possession of the land he occupies.

It will require no outlay from the Government for cutting or repairing, other than the Surveyor being instructed to proclaim it.

And your Petitioner, as in duty bound, will ever pray.

J. ROWSELL.

NEW SOUTH WALES.

ASSESSMENT ACT.

(INTERPRETATION OF CLAUSE 2.)

Ordered by the Legislative Assembly to be Printed, 7 April, 1859.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 5 April, 1859, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table of this House,—

“ A Copy of the opinion of the Crown Law Officers respecting
“ the interpretation of the second Clause of the Assessment
“ Act.”

(Mr. Hay.)

ASSESSMENT ACT.

No. 1.

THE CIVIL CROWN SOLICITOR to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Civil Crown Solicitor's Office,
Sydney, 14 March, 1859.*

SIR,

In acknowledging the receipt of your letter of the 2nd instant, in which you forward to me some correspondence respecting claims to a remission of assessment under the Increased Assessment and Rent Act of 1858, I have the honor to inform you that I have laid your letter, as also the correspondence above referred to—and which I now return to you herewith—before Mr. Solicitor General Hargrave, and that he has written an opinion thereon, of which the following is a copy:—

“ I am of opinion that the 2nd section of the Increased Assessment and Rent Act of 1858 has no retrospective operation beyond the year 1858—that is, during the operation of the Act with respect to the rent under the 1st section. All the provisions of the section seem to me to point exclusively to runs the right to which shall be, or shall have been acquired by tender during the operation of the Act.

“ The 2nd and 3rd require no answer—(referring to questions in your letter.)

“ I am also of opinion that the Commissioner should require a declaration, or such other evidence as the Governor will be satisfied with, as the ground of the Commissioner's certificate. Departmental arrangement under the 1st section of the Act 9th Vict., No. 9, to the above effect should be made, and the parties falsely making such declaration as may be so required will be liable to the penalties of the Act.”

I have, &c.,

W. W. BILLYARD.

THE UNDER SECRETARY FOR
LANDS AND PUBLIC WORKS.

No. 2.

THE CIVIL CROWN SOLICITOR to THE COLONIAL SECRETARY.

*Civil Crown Solicitor's Office,
Sydney, 23 March, 1859.*

SIR,

By direction of Mr. Solicitor General, I have the honor to transmit to you herewith the accompanying papers (which have reference to certain claims to remission of assessment under the “Increased Assessment and Rent Act of 1858,”) and to inform you that that officer has only to add to his opinion as stated in my letter to the Under Secretary for Lands and Public Works, dated the 14th instant, that in the first sentence (that the retrospective operation of the Act would not extend beyond the year 1858) the words “1st January” might have been inserted, but that the opinion is quite clear without such insertion.

I am also directed to say that the Honorable the Attorney General quite concurs in the opinion given by Mr. Solicitor General.

I have, &c.,

W. W. BILLYARD.

THE HONORABLE
THE COLONIAL SECRETARY.

1858-9.

Legislative Assembly.

NEW SOUTH WALES.

DISEASES IN SHEEP AND CATTLE.

(REPORT OF R. MESTON UPON)

Ordered by the Legislative Assembly to be Printed, 27 January, 1859.

R. MESTON, ESQ, J.P., to THE HONORABLE THE SECRETARY FOR LANDS AND PUBLIC WORKS.

SIR,

In compliance with the Commission issued to me on the 4th day of October last, empowering me to institute some inquiry into the nature and probable causes of disease, or diseases, reported as prevalent amongst sheep and cattle in various localities, and more especially in the Western Districts, I immediately left Sydney; and being soon after joined by Mr. Moore, Director of the Botanic Gardens, who had been appointed, at my particular request, to bear me company as botanist,—I now submit, for the information of Government, a concise report of our progress and investigations.

2. In course of our travelling by the way of Merton, Merriwa, Cassilis, Mudgee, Bathurst, Carecar, Canowindra, the Lachlan and Castlereagh Rivers, in parts, and through those portions of Liverpool Plains District said to have been visited by disease of an unknown type, I found that not one malady alone, but several, had at various times cut off numbers of Colonial live stock, and a great confusion of ideas on the subject of Pathology had naturally blended the whole under the name of Cumberland Endemic, or, *the disease*. Indeed, from the numerous conflicting opinions and vague ideas expressed, from the humble shepherd and mounted stockman to the wealthiest settler or squatter, I found that their evidence tended more to embarrass than to elucidate, and thus compelled me to rely on the botanical and topographical aspects of the various stations, in many instances, and occasionally, on the truths disclosed by the dissecting knife, with physiological facts from thence deduced, rather than upon bare conjecture and hypothetical conclusions, which proved nothing.

3. Few Colonists will soon forget the extensive grass burning over a vast area of New South Wales during the month of February last. No rain fell from that time until the end of April. But the young grass no sooner began to spring up than the night frosts nipped it in the bud. No food, no fat—is a too true adage. Many cattle died from sheer want and dire poverty of condition. In fact, a majority became—not skin-fulls of bones, but skeletons with skins around them. Anon came the October rains. A sudden flush of spongy grasses and weeds rapidly shot up, which scoured, not a few, but great numbers so severely, that either they died of inanition and exhaustion, or, on the more exuberant and rank pastures, they became *blown*, and so perished from hoove. The loss among working bullocks must have been severe.

4. Hoove, so called by farmers and veterinarians, is produced when spongy and succulent matter, especially in a moist state, is subjected to heat in the animal paunch. Fermentation rapidly ensues, gases are evolved, the chief of which may be recognized as carburetted hydrogen. The paunch swells up, more particularly on one side, and if not relieved, the animal is technically said to burst.

5. Chloride of lime administered is a good remedy, and many animals have been saved by a pint of milk plentifully commingled with soot poured down the hoven animals' throats. The marvellous effects of both these prescriptions I have frequently seen. But the best and readiest remedy is the trochar and canula, of which every farmer in Britain possesses two or more, but the only one which could be found during my peregrinations was in the possession of Mr. Icely, Coombing, near Carcoar.

6. On the near side, at the intersection of a span or thereby from the spinal column down the rib to where a span length measured from the high hip bone to said section points, is the safe place to pierce the paunch and blow off the gases.

7. A pointed knife is too often used, but the incision, if it does not rupture wider, too often fills up, and some of the stomach's contents get between paunch and skin, forming, in consequence, an ulcerous sore which refuses to be healed.

8. The principal herbage which occasion hoove are the *Malva sylvestris*, or common marsh-mallow; the *Medicago polymorpha*, *medick trefail*, belonging to the lucerne family but erroneously denominated the Scotch burr in vulgar phrase, and a species of *Stellaria* not so common as the others. They abound chiefly on rich alluvial soils, and act most fatally on or before flowering.

9. Some prudent men endeavour to keep their stock on the eminences and ridges until solar heat evaporates the dews, and their cattle and sheep have got hard stuff in their stomachs, then about mid-day they may be permitted to descend to the richer pastures, and allowed to feed without any danger. The sum total, of cattle especially, which must have perished of hoove on the Macquarie and Lachlan, with their tributaries, during the past spring, must be considerable without doubt—many of these fine animals; but the unfeeling coolness which some stock-owners exhibited when their swollen beasts were pointed out, testified indifference thoroughly callous—"Oh, we never mind them, let them take their chance."

10. It has often fallen to my lot, in times past, when hungry animals were imprudently turned on abundant pastures, or sheep had been brought from poor to richer feeding, and allowed to gorge themselves too freely, to observe that twenty or thirty (of the latter more markedly) have suddenly dropped down and expired. Of course the verdict was returned of *poisoned*, or else died of *the disease*—false conclusions, however. The intestinal machinery had got clogged; the mill had been fed too fast, and so stood still, for, on dissection, half masticated matter would be found sticking in the triturating plates and papillæ of the third stomach, and eke so firmly that it required great strength to tear them asunder; and let me add, that more sheep and droved cattle perish from this cause, or from drinking too much water when very dry, than men generally imagine. Half water, when the living subject is hot, should only be permitted to man or beast at first draught.

11. A very peculiar sort of disease is generated by the awn or beard of *Hordeum murinum*, a species of barley grass very common around Bathurst, and it seems to be widely spreading. When young it produces plenty of excellent foliage; as soon, however, as the seed stalks are fully developed, its beard presents a most formidable appearance, for the awn is sharply serrated indeed. Few animals venture to eat these seed ears, unless hard hunger drives them to it, or else when the whole is made into hay. Under such conditions a conglomeration of saliva and barley awns too frequently collects betwixt the horse's or cow's cheeks and tongue, which none can of themselves remove. The aid of a human hand is required, or else the beast seems to lose all appetite; in short, the creature cannot eat—ulcers break out on the glands of the neck near the jaws—an effort of nature to get rid of the irritant substance, which first occasions inflammatory action, then festering, and afterwards suppuration; nay, often terminates, if let alone, in loss of life by gangrene.

12. At the solicitation of several esteemed and courteous friends, I have been induced to make a few remarks regarding ovine catarrh. While various maladies have cut short the lives of too many flocks by hundreds, ovine catarrh has immolated its victims in thousands, particularly over the superficies of Wellington, Bligh, and other districts. It is impossible to avoid denouncing the mud-holes of confined, low-situated, wet and dirty yards, which too often yet offend the eye, in spite of reason, common sense, and experience. These render their due rewards, and mete out their full measures of death and destruction, of losses and crosses, of waste complete, and of ruin triumphant.

13. Next to improper folding, it has been my decided opinion for years past, that idiopathic catarrh is generated more frequently at the time of sheep washing and shearing than

at any other period or under any other secondary conditions. To say nothing about washing, let us refer to shearing: on the previous night some hundreds of washed sheep are crowded into anarrow space, termed the sweating pen, in order to raise what men term *the yolk*—rather erroneous however. After this heating process, they are stripped naked next day and contemptuously turned out, if not kicked out, into the open air. Should the weather prove warm, no bad results may possibly follow; but if the temperature falls from 90° to 54° in a few hours, no uncommon declension, accompanied with wind and cold rain, mark what follows, the miserable animals crowd together for warmth—a double blanket would cover a thousand; and a severe shock is given to the system, by means of the skin and its connection with the respiratory functions. Rudimentary disease lurks in a latent state, until cold weather again sets in; catarrhal symptoms become painfully manifest, and whole flocks must be prematurely sacrificed; all because thoughtless man neglected to protect the helpless sheep with a few nights of shelter in their need. We ought to learn lessons, if capable of learning, from analogy, and act accordingly.

14. On some stations it is evident that hydropsy must have been the prevalent scourge. The fact is indisputable that, when the colonial pastures were first occupied in their virgin state, wherever a superficies could be got, wherever runs could be obtained, good, bad, or media, no matter, they were all deemed equally capable of growing short wool and long wool and middle wools, with sound fat mutton to boot. Overstocking for a time seemed unlimited, and the squatting regulation, requiring 4,000 sheep, &c, on every station, tended not to mitigate the evil. But, in course of time, the discovery was made by some squatters more sagacious than others that sheep had been placed on runs where cattle only should be grazed; while the less discriminating blindly wrought on, and were punished by the diseases of liver rot and fluke, or else of hydropsy, which closed the account of sheep tallies with a vengeance. On the nature and qualities of subsoils depend more the qualities of vegetation and the health of animals than on the superstrata; a truism almost totally overlooked by Colonists in general; yet, not new.

15. From the report of Mr. Smith, Molong, I was informed that a malady very sudden in its operation at one period had seized on many of his lambs, for which effects he was unable to account. It attacked them chiefly during hot weather, in the earlier part of the day, and always proved most fatal during the prevalence of hot winds. These lambs died of apoplexy, a disease to which sheep are more subject than either horses or cattle, and it cuts off all the best of the flock. They appear to be suddenly taken ill, begin to stagger—they perhaps jump about, soon fall, and suddenly die. Prevention is the anchor of hope. Instead of allowing the flocks to lie about watering places where the heat is greatest, and where there is, probably, no shade except what the poor over-warm animals find by hiding their heads under one another, where they stand panting for half a day—their shepherd himself reposing *sub tegmine fagi*—the shade of a gum or box tree, and where often not a breath of air moves their leaves; let the sheep be removed as soon as their thirst is sated to the nearest ridge on which trees grow to be used for shade, and where the cool breeze may be expected to impart its health-giving freshness. This apoplexy is most common in warm countries, and during hot seasons, cutting off the strongest lambs and fattest sheep.

16. A novel disease, according to Mr. Lardner, of Grafton, lately visited his own and other cattle on the banks of the Clarence, adjoining that township. The animals had acquired a taste for the bean of the *Castanospermum*, or Moreton Bay chestnut, so called; many of the young stock had died suddenly—on opening their stomachs, he found them quite full of these beans. Mr. Lardner thinks, that after partaking of the beans the cattle had drunk freely of water, and the expansion of these beans had swelled them to bursting.

17. He also says, that another ailment attacked working bullocks and other strong cattle. It was first apparent in violent purging and straining, with the passing of half masticated portions of beans; the animals drank to excess, and, occasionally, boils broke out on the legs, or shoulders, which produced relief.

18. What is singular, these cattle preferred drinking brackish water instead of fresh, but were of little subsequent value—even if they recovered. It is plain that removal only, or seclusion from the scrubs, cedar brushes, and chesnut beans, will save Mr. Lardner's cattle hereafter.

Another subject comes out before us.

19. In the month of June, 1852, a paper was given by me to the Honble. E. Deas Thomson, on the Cumberland Endemic, then recently broken out in several places of that county

county, and having all the characters of a new Colonial malady. As I find little to alter in that communication, persons wishing to obtain further information are referred on this head unto that paper.

20. Another type appears to have been too prevalent in some of the Western Districts, which, while it resembles its precursor in some respects, possesses indications dissimilar in others. By the first, these animals were chiefly its victims which had been newly introduced from other quarters. But the other observes no such nice distinctions, all victims that fall into its net.

21. When studying the etiology of disease amongst live stock, it is impossible for any one who understands a little of animal physiology, and who possesses the hardihood requisite for making minute autopsical inspection, not to be struck with the evidences that irritants of no mild action have exerted their powers on the mucous coats of the stomach and intestines, in both these forms of disease. Wholesome food and pure water are indispensable to healthy vitality. Physiology and botany are intimately connected, and in ruminant and most other animals digestion mainly depends on chemical action.

22. In confirmation of my first proposition, a passage is quoted from a lecture delivered by the eminent Professor Simmonds before the London Royal Veterinary College.

“ Every day’s experience must convince us more fully that disease and death are to be referred *directly* unto the food partaken by animals. How could we expect it otherwise? seeing that we have chiefly to do with graminivorous live stock, and that many plants spring up with their ordinary food not merely injurious but decidedly poisonous. If instinct did not teach them to avoid the latter, their baneful effects would be increased in tenfold degree. It may be that nature, seemingly over-wise, teaches by the free dispersion of plants, that we possess a ready means of removing disease from different animals, on the oft-repeated principle, that what is *food for one is poison to another*. Be this as it may, we see enough to prove that Botany is intimately connected with Pathology.”

23. In a subsequent part of this treatise it will be shown, by Mr. Moore’s Report, that the *ordinary* food of live stock is rarely to be found; that British weeds, and acrid, indigestible, nay, poisonous plants, usurp the places of salutiferous herbage; and that what ought to be food for other species is most reluctantly partaken by one continued species of the same kind, whereby, as the shepherds express themselves, the pasturage does them little good, perhaps much harm.

24. ’Tis no matter whence or where this form of disease originated. Mr. Busby, of Cassilis, found it commencing amongst his flocks in 1854. He exhibits a table to demonstrate that the mortality increases in a ratio corresponding to the increase of temperature, and also decreases in a similar gradation. Hot weather produces a tendency to excite inflammatory disease, where predisposition is too ready, and to this class of diseases the two Colonial endemics are referable.

25. Denudations of the primitive pastures, although comparatively new in Australia, are not without precedents. Weeds follow in the walks of man, as a testimony of the first anathema, and the buffalo grass of America’s prairies is said to be nearly exhausted, as the mighty herds remove towards the far west; and so would many a starved flock of sheep, if men and dogs did not prevent them. Thirty years occupation of one station with the same kind of animals is a pitch too far, oh! ye flock-owners, when a sixpenny-worth of fresh seeds has never been sown thereon. No wonder if *disease and death* visit your runs—that burrs and thistles spring up, and nature, in revenge for human neglect, grows you weeds and poisonous herbage.

26. The chief distinctions on dissection consist of the very diseased state of the urinary organs, of the blood being all found coagulated in the region of the thorax; urine if not discharged immediately before death, of a thick inky colour, and the inner or glandular coats of paunch and the alimentary canal in general partially, sometimes wholly decomposed. Often, portions of the small intestines are completely destroyed and gangrenous.

27. In the enteritis of Cumberland, the spleens are always engorged with black blood. This condition forms no general rule for the other case. The spleens of sheep are comparatively larger naturally, and their paunches of greater capacity than those of other graminivorous animals. I found no preterenlargement worthy of notice; the gall bladder was full,
in

in consequence of suspended digestion, and in the small intestines a thin fluid matter was only observable. The disease bears considerable relation to what is known as Dry Braxy, and extinguishes life in a few hours; so suddenly does the inflammatory action prostrate the powers of life. *Post mortem* appearances are not always satisfactory, on account of the rapid fermentation and decomposition of animal substance and evolution of very deleterious gases; not to mention the danger incurred by inoculation of virus, through the absorbents; more readily by abrasion; and soonest of all by cut, scratch, or sore in the dissector's hand, &c. Few will hazard a minute inspection, and fewer still are competent. For instance, enlarged spleens are no positive proof of any one specific disease, as many believe; they are common to several, as chronic rot, and so of others. The liver will sometimes be found in unhealthy states, the results perhaps of previous disease. In such cases, plain sense, and much more readily ignorance, is apt to go astray in their unsatisfactory conclusions.

28. I have thus far stated the nature of this and some other diseases, and now proceed to inquire into the proximate causes of this new endemic.

29. Having set out in the certain belief of Professor Simmonds' opinion, I have found too good reasons confirmatory of the learned gentleman's statements in New South Wales. Acquainted with a wide portion of this vast Colony, while traversing its superficies I have not failed, during my experience of seventeen years, to mark the various changes of vegetation which have taken place over many early settled districts, and to note that these changes are progressive. The box-wooded regions, the gum-clad country and stringy barks, the apple-tree flats and pine covered ridges, the myall scrubs, or open plains, all present so far varied botanical plants, shrubs, weeds, or grasses, more or less salutiferous or unwholesome, yet not widely diversified. The old original Kangaroo grass, *Anthistiria australis*, can be seldom met with except in remote places, and the native oat grass only presented itself on one or two stations, and there scantily. The *Medicago polymorpha* or Bur Medick occupies nearly all the alluvial soils of the Macquarie, Lachlan, and Castlereagh; and is fast spreading towards the Hunter, as well as Liverpool Plains. It grows the small burr so depreciating to the values of Australian wools, and flourishes vigorously in moist weather, but withers under two weeks of hot sunshine. Then, however, horses and sheep prefer it, and when nought else can be found to eat, they devour the trailing stalks and roots. It is the black clover of the British farmers who hold this species of lucerne in detestation.

30. There is now produced on too many sheep stations a tall grass well known by the general name of silky grass, a species of *Stipa*, a most injurious and fatal plague in itself, for the sharp awns enter the skins of sheep especially, pierce into the flesh, and not seldom through the interstices of the ribs into the vitals, and infallibly terminate life. On some places there grows little else in its season than this said silky grass. Varieties after varieties have arisen and disappeared, and in many places is the *Xanthium spinosum* or large burr wearing out. Animals have an adaptation to these changes, yet some herbs they constantly refuse, amongst these, the *Swainsonias* stand unmolested. According to the illustrious Linneus, in his part of the world, horses were found to eat 262 herbs or grasses, cattle 276, sheep 387; refusing 212, 218, and 141 respectively. Goats feed on a few refused by all. The lesson tells volumes; sheep would feed on 387 kinds of vegetation, if they could find them; but the ovine grasses are all extinguished, and trashy weeds of all kinds, qualities, and hard names, usurp their places. These conditions are especially applicable to the levels, plains, straths, and along river banks; and, in producing so intense disease in the urinary organs, it might be worthy of notice, if bad water may not have injurious effects as well as acrid, indigestible, or poisonous weeds.

31. During the past ten years there have been exported from the product of Australian pasturage one hundred and fifty-one millions pounds of wool, and about one hundred and four millions pounds of tallow; then if we take into account the amount of beef and mutton consumed in Sydney and Colonial towns, the debris of which is swept into the harbours, bays, rivers, or creeks of these crowded places, and compute the amount just as uselessly wasted at Bouilliant establishments, then may we form some idea of the drain on our Colonial pastures without one tithe of any return.

32. To my fellow traveller, Mr. Moore, Director of the Sydney Botanic Gardens, I am indebted for much valuable information. He remarks that plants of the *Compositæ* family greatly increase on all sheep stations; the *Xanthium* is not increasing, but the milk thistle, erroneously called the Scottish thistle, rapidly spreads. *Ranunculi* are common, so is *Goodenia*; the *Anguillaria dioeca* multiplies on many stations depastured by cattle, and was denounced

by the late Revd. Mr. Walker of Liverpool as unwholesome years ago. *Polygonums* and *Chenopodiums* abound also. The *Compositæ* second only in number to the *Graminæ*, have succeeded almost entirely to the latter. Mr. Moore states, that in many paddocks in Cumberland County and elsewhere, all the vegetation consists of British weeds only, some effects of extensive commercial intercourse. A kind of *Monotaxis*, belonging to the *Euphorbia* tribe, is a very suspicious plant, and also a very acrid *Oxalis*, in all of which family, as some chemists record, pure oxalic acid is very abundant. The shepherd's purse, and various other British herbs hitherto unnoticed, occasionally presented themselves. It would be a statement of voluminous size to specify all the weeds and herbs which came under the notice of Mr. Moore, besides shrubs and trees of characters hitherto little known; certainly few of the former constitute the *natural* food of sheep or cattle; and herein the seeming enigma of some Colonial diseases among stock may be readily solved. Many herbs were pointed out by settlers supposed by them to be poisonous; amongst these may be noticed the *Alternanthera*, one of the *Amaranthaceæ*, but a few they could not find, notwithstanding their expressions of very positive opinions on the subject.

33. It is impossible, however, to overlook a concomitant cause. While deteriorations of our pastures are too manifest, man himself—in his not great wisdom—has endeavoured to hasten the evil by a most injudicious and heterogeneous medley of breeding pursued for many years past.

34. The most energetic attempts have been made in general to upset the good work of Captain McArthur, justly called the first. Every petty State of Germany was hunted over for the purpose of obtaining sheep with fine wool and weakly constitutions further to corrupt the remaining true merino blood of this Colony. Fresh blood quotha! There were neither skill, nor sense, nor judgment in these selections—all, all left for the most part to chance, luck, or (mis-) fortune, with too few exceptions. A first principle for pastoral managers to adopt is, undoubtedly, to adapt their stock to the quality of the pastures, and to the mild or cold temperature of the climate, not overlooking the habits of the animals and the practice of the Colony in its several details. No part of his business requires more deep consideration than the experiment of cross breeding—hence few eminently succeed. The Colony at this moment is thus reduced to the degraded condition of having no breed of sheep at all. Bastards every one, with small frames and impaired constitutions.

35. Men of all trades, professions, degrees, and callings, jump into the management of pastoral avocations with as seeming readiness as some raw gold diggers jump into the claims of better miners. The results are too painfully manifest.

36. The avocation of live stock superintendence, however, requires as long an apprenticeship as do those of law, medicine, or surgery; and it is a fact which cannot be overlooked, that whenever men of experience are found conducting station affairs, whether as their own or the property of others, even there will be found the best management and fewest traces of disease; the rule may be also held true—inversely.

37. The worst epidemic among Colonial live stock is the malady of mismanagement. The pastoral interest and the Colony have lost not a little by Sydney Clubbism theories, and ledger (demean) calculations; too many of these were considered wild or impractical by practical men; for it is easy dictating from the capital, but not so easy to fulfil in the country.

38. A Professorship of Agriculture and Pastoral Pursuits would greatly benefit the Colony. Animal hygiene will press itself more and more on discerning minds. The country is undergoing marked changes, yet these slow progressions are noticed by few. If sheep and cattle are fed upon unwholesome food, men cannot reasonably expect healthy conditions, nor the meat itself in a fit and wholesome state. Many men in Britain, eminent for intellect, are of opinion, that the prevailing system of forcing by artificial manures is productive of disease both in man and in beast.

39. In my opinion, notwithstanding the decrease in some districts, and falling off in breeding in others, no fears need be entertained of the general diminution of live stock. But this impending danger threatens, that the supply of *fat sheep and beeves* will not be adequate to the demand, and recent Legislative proceedings will have a direct tendency to precipitate oppidan population into that dilemma of paying higher prices for beef and mutton than they have done hitherto, and thus will the burden return indirectly on their own shoulders.

40. I have thus endeavored, Sir, to give as concise an account of the natures and proximate causes of disease, or diseases, said to be prevalent amongst sheep and cattle, as the limits of such a report can reasonably admit, and now consider that the purport of my commission is thus far accomplished. I am, however, well aware, that remedial or preventive measures are anticipated at the same time. These would of themselves demand a lengthy treatise, but might form a fit appendix to this Report, as plaster to a sore. For the land of my choice I feel the deepest interest, anxious, as far as in me lies, to aid in advancing the prosperity of my country.

41. Prevention, then, is the first and readiest of measures which ought to be followed up speedily by remedial, or else the preventive will soon become irremedial. It is impossible to find a general rule applicable to all cases; but both are to a considerable degree in our power, if proper means are pursued.

Bis dat qui cito dat—if it is to be done at all, then " 'twere well it were done quickly."

I have, &c.,

ROBERT MESTON.

Sydney, 7 December, 1858.

APPENDIX.

Botanic Gardens,
December, 1858.

SIR,

In obedience to your instructions to furnish, as an *Appendix to Mr. Meston's Report on the nature and proximate causes of the disease or diseases so prevalent among Sheep and Cattle* in various districts in the Colony, I have the honor to transmit a brief notice of such plants as appeared to me to come within the scope of that inquiry.

During the progress of the investigation my attention was particularly called to the following plants by the various settlers in those parts of the country through which I passed, viz. :—

- Alternanthera denticulata*, a plant allied to the Cockscomb family.
- Blitum glandulosum*, a small kind of Strawberry blight.
- Medicago polymorpha*, Burr Medick or Trefoil.
- Chenopodium murale*, Wall Goosefoot, allied to the plant called fat hen.
- Anthericum bulbosum*, a plant of the Lily family.
- Oxalis corniculata*, a diminutive kind of Sorrel.
- Cotula Australis*, a little plant allied to the Daisy.
- Stellaria graminea*, a kind of stitchwort allied to the Chickweed.
- Monotaxis sp.*, a spreading kind of the Spurge family.
- Polygonum plebium*, allied to the Sorrels.
- Lobelia inuidata*, Swamp Lobelia.

These, as well as the green slimy substance—the embryo state of some cryptogamic plant—found on rocks in creeks, were supposed to be in a greater or lesser degree the possible cause of the disease.

Spreading over large tracts of country generally, they more particularly abound in the neighbourhood of sheep stations, both where disease exists and where it has never been known. Under these circumstances, the cause can scarcely be ascribed to any one or more of these plants, although some are supposed to possess acrid and even poisonous qualities. *Monotaxis*, which belongs to the *Euphorbiaceæ* order, might, from its abundant milky secretion—a quality peculiar to the family, and in many instances very venomous—be attributed by botanists to be the most detrimental to animal life; and yet, on one of the largest sheep stations on Liverpool Plains I found that it was greedily eaten by sheep, and pronounced by the owner of the run to be of a very fattening nature. There are other plants than these growing in various districts in considerable abundance, which would appear as yet to have escaped the notice of the settlers, but against which I would caution all stockowners. These are *Burchardia umbellata*, *Anguillaria dioica*, and *Schelhammera undulata*, small lily-like plants belonging to the family of *Melanthaceæ*, which is almost universally poisonous; according to Professor Lindley, the poisonous properties of this Order are owing to an alkaline principle, called veratria, which acts with singular energy on the membrane of the nose, exciting violent sneezing, and when received internally produces excessive irritation of the mucous coat of the stomach and intestines. The same authority states that a Mexican plant of this family, called by the natives *Savoja*, is a well known poison, and stupifies all horses that feed upon it; and that in North America, another plant of the Order, *Amianthium muscatoxicum*, or fall poison of the settlers, destroys all cattle, &c., which feed upon its foliage in the autumn. This information of the properties of some of the plants of *Melanthaceæ* is sufficient to cause all who are interested in stock to make themselves acquainted with the indigenous plants of this family to which I have referred, and to take immediate measures for extirpating them from their stations. It is well known, however, that great quantities of stock die annually in this Colony from other causes than the mere deleterious quality of the herbage; poverty at one season, and too great abundance at another, is perhaps the principal. It must be manifest to the most superficial observer that the pasturage of all the long settled districts has undergone a great change, and

and that change for the worse; in the high grounds the few kinds of tufty grasses, which originally formed the principal food of all kinds of stock, have nearly, if not wholly disappeared, and in their place are now found other grasses and plants of a most inferior character—plants, in fact, of that herbaceous nature which in the early season spring as it were into existence after rain, and if the weather permit, flower, ripen their seed, then die back, and are of no more service until the following season, excepting under the most favourable circumstances; nor is this the only bad quality which some of these plants possess. One of the grasses, called by the colonists silky grass (*Stipa crinita*),—the fatal effects of which has been referred to by Mr. Meston—is spreading everywhere rapidly, and unless it is prevented from ripening its seed, it will ere long overrun and destroy whole districts. In other places the vegetation is almost wholly of an introduced character, and nearly all British; this is more particularly the case on the plains of Merriwa, Cassilis, Bathurst, the rich alluvial soils of the Lachlan, the Macquarie, the Castlereagh, and the Hunter; in these places such as the following will be found occupying the ground, viz. :—

Malva sylvestris, common mallow.
Medicago polymorpha, burr medick.
Sisymbrium officinale, hedge mustard.
Rumex acutus and crispus, two kinds of dock.
Carduus marianus, milk thistle.
Sonchus oleraceus, sow thistle.
Polygonum aviculare, snake weed.
Alsine media, common chickweed.
Capsella bursa pastoris, shepherd's purse.
Poa annua, annual meadow grass.

These plants, although generally of a trivial character, appear to be greedily eaten while in a young state, but many of them after a short continuance of hot dry weather shrivel up, and soon cease to be of any use; others, again, do not appear to be affected by any variation of the climate; one of these last, *Carduus marianus*, the milk thistle, commonly, but most erroneously called the Scotch thistle, is held to be most objectionable; it may not be generally known however, that this plant can be turned to good account. It makes excellent hay if cut and properly dried just as it is coming into flower; the seed when ripe is readily eaten by fowls; in Europe the young stalks are used as salad, or, if peeled and steeped in water for some time, in order to take off the bitterness, may be either made into puddings or pies, after the manner of rhubarb. I was surprised to find that of all the plants of British origin observed throughout the journey only two were grasses, and these of annual growth; yet, there can be no doubt—at least from the experiments which have already been tried there ought to be no doubt—that nearly if not all of the English perennial grasses would flourish in this Colony, if a little care were taken with them in the first instance. *Hordeum murinum*, the wall barley or wild rye of English agriculturists, one of the two annual grasses referred to, grows in considerable quantities in the Western Districts about Bathurst, and also near Canowindra, on the Lachlan—whole paddocks were observed to be entirely occupied with this, and, although its nutritive properties are considered in England to be so inferior as to cause it to be looked upon as a useless weed, yet so wretchedly poor are our native pastures, that this grass even, possessing as it does the bad qualities represented of it in Mr. Meston's Report, is esteemed by many stockowners as a most valuable acquisition. The annual meadow grass of England is everywhere abundant, and, in moist seasons, a very useful plant; but, as it is liable to be scorched up by a few days of dry weather, no dependence can be placed upon it, and it is, therefore, of little value.

As a summary of the observations made by me I would state,—

1. If the sheep and cattle disease, commonly called the Cumberland Disease, be caused by any one or more plants, it is not as yet possible to determine with accuracy what these plants are.
2. The pasturage in general is greatly deteriorated, not only in quantity but in the quality of the herbage.
3. On sheep stations, on soils not alluvial, about one-half of the plants are grasses of a very inferior description, one-third members of the *Composita* order, the nutritive properties of which are questionable, and the remainder of a miscellaneous kind, the most frequent belonging to the *Genera* of *Sicuinsonia*, *Ranunculus* and *Goodenia*.
4. In the plains and alluvial flats the plants are two-thirds, British weeds, and the remainder indigenous plants of little value.

In conclusion I may state, that as no definite opinion on the subject of this inquiry had been expressed by any of the colonists throughout the country, I hoped that I should have been able, reasoning from that analogy which the qualities of one individual plant of a natural family bear to others which are well known, to have arrived at some satisfactory solution of the question, and I have only now to express my regret that I have been considerably disappointed in this expectation. The journey was not, however, without its advantages to the Institution over which I have the honor to preside, inasmuch as while affording Mr. Meston all the information in my power, I was enabled to make myself acquainted with the *Flora* of the districts through which I passed, and to secure large and valuable acquisitions to the public Herbarium.

I have, &c.,

CHARLES MOORE.

THE HONORABLE
 THE SECRETARY FOR LANDS AND WORKS.

1858.

Legislative Assembly.

NEW SOUTH WALES.

IMMIGRATION.

(REPORT FROM AGENT FOR 1856 AND 1857.)

Ordered by the Legislative Assembly to be Printed, 9 December, 1858.

THE AGENT FOR IMMIGRATION to THE PRINCIPAL SECRETARY TO THE GOVERNMENT,
submitting his Report on Immigration for the years 1856 and 1857.

*Government Immigration Office,
Sydney, 7 December, 1858.*

SIR,

In submitting my Report on Immigration to this Colony for the years 1856 and 1857, I have the honor to inform you that, owing to circumstances over which I had no control, a difficulty arose which prevented the completion of the Statistics of this Department for 1856 until a late period in the following year; and I then suggested to you the propriety of blending the Returns for the two years, seeing, as I did, that no practical result could be arrived at, or any course adopted calculated to alter or amend the system of Emigration then in force, more particularly as it was desirable that a fair opportunity should be afforded for the development of the Remittance Regulations but then recently modified by Government, and I now therefore beg to lay before you a statement of the proceedings of the Government in connection with Immigration to this Colony during those years, including more especially its operations under the Regulations above referred to.

2. In the Appendix will be found the usual Returns which for a series of years have been compiled in the Department, and which will, I trust, illustrate in a comprehensive manner most of the important details deserving of interest.

3. In the first place, it will be seen that the Returns marked A shew the names and tonnage of the vessels which arrived in this Colony during the years 1856 and 1857; the dates of their departure from the United Kingdom, and their arrival in the Colony; the number of births and deaths during the voyage and in Quarantine; the numbers landed alive, distinguishing adults from children; the contract price at which each vessel was chartered; the additional cost of gratuities payable to the Surgeons, Masters, Officers, and Immigrant Petty Officers; the amount of demurrage chargeable on the Government for the detention of the vessels beyond the authorised lay days; the cost to the Government of victualling, &c., incidental to the detention of ships in Quarantine, and on demurrage; the total cost of the Immigrants' introduction into the Colony; and the amount contributed towards Immigrants' passages under the Remittance Regulations. They also give the number of days occupied by each ship on the passage.

2 REPORT FROM IMMIGRATION AGENT FOR 1856 AND 1857.

4. From these Returns it will also be observed that the mortality during the year 1856 was at the rate of $1\frac{1}{3}$ per cent., and during 1857, at $1\frac{2}{3}$ per cent.

Immigrant ships arrived in 1856 and 1857.

5. It will further be observed on reference to these Returns that 54 vessels employed by the Commissioners during the past two years arrived in the Colony, including 9 which landed their Immigrants at Moreton Bay.

Number of Immigrants embarked and arrived.

6. The number of Emigrants originally embarked was 17,423; the births on the voyage were 205; the deaths on the voyage, as well as in Quarantine, were 213; and the number landed alive were 17,415.

Deaths and Births on the voyage.

7. Of the deaths 43 were adults, 105 were between the ages of 1 and 12 years, and 65 were infants,—making the mortality $1\frac{2}{10}$ per cent. in the two years.

Tonnage of vessels employed.

8. The average tonnage of the vessels employed was 1,008 $\frac{1}{2}$ N.M., and 927 $\frac{5}{16}$ O.M., and the average length of the passage to the Colony was 102 $\frac{1}{2}$ days.

Gross cost of introduction of Immigrants.

9. The cost of the introduction of each Immigrant, taking the average of the 54 vessels, was £15 3s. 8 $\frac{1}{2}$ d., being a reduction of £2 13s. 5 $\frac{1}{2}$ d. on the preceding year, 1855.

Vessels placed in Quarantine.

10. Sickness of a contagious or infectious character having existed either during the voyage or at the time of arrival on board the following vessels, viz.:—in 1856, “David M’Iver,” “Sultana,” “Ben Nevis,” “Bermondsey,” “Herald,” and “Lloyds”; and in 1857, “Mary Ann,” “Regina,” “Golconda,” “Boanerges,” and “Admiral Lyons,”—they were placed in Quarantine.

Mortality in Quarantine.

11. The diseases amongst the Immigrants for which those vessels were so detained not being of a serious character, but merely such as an infantile population is ordinarily liable to, the detention of most of the ships was only for a few days, and the deaths while they were so detained in Quarantine consisted of 2 adults and 1 infant.

Appendix B. Native Counties of Immigrants.

12. The next Return, marked B, shews the native counties of the Immigrants introduced at the public expense during the past two years to have been as follows:—

1856.—ENGLAND AND WALES.				1857.—ENGLAND AND WALES.			
Northern Counties	476	Northern Counties	514
Southern	„	...	1,198	Southern	„	...	2,995
Midland	„	...	672	Midland	„	...	1,114
Eastern	„	...	1,143	Eastern	„	...	2,395

Other Countries, and Births at Sea				Other Countries, and Births at Sea			
Sea	117	Sea	29
Grand Total			7,210	Grand Total			10,205

13. From this Return it will be seen that the selection of the Emigrants from the three subdivisions of the United Kingdom has been very fairly apportioned.

14. The next three Returns, marked C, D, and E, exhibit the ages, amount of education, and religious persuasions of the Immigrants; and on reference to those Returns the following results will be found to be shewn by them:—Of 7,210 Immigrants who arrived in 1856, 3,669 were males and 3,541 were females; of the adults, 3,570 could read and write, 1,001 could read only, and 1,084 could neither read nor write; of those under 12 years of age, 200 could read and write, 259 could read only, and 1,096 could neither read nor write; and of 10,205 Immigrants who arrived during the year 1857, 5,543 were males, and 4,662 were females; of the adults, 5,328 could read and write, 1,448 could read only, and 1,238 could neither read nor write; of those under 12 years of age, 250 could read and write, 437 could read only, and 1,504 could neither read nor write.

Appendices C, D, and E.—Ages, Education, and Religion of Immigrants.

15. Their religious persuasions were as follows:—

	1856.		1857.	
	Males.	Females.	Males.	Females.
Church of England	1,997	1,846	3,551	2,808
Church of Scotland	358	287	352	339

Other Protestants	129	115	479	413
Roman Catholics	1,074	1,200	938	908
Jews	3	1
Other Persuasions	1
Total	3,669 + 3,541 = 7,210		5,545 + 4,660 = 10,205	

16. Return F shows the trades and callings of the adult males and unmarried adult females, which are as follows:—

Appendix F.—Trades or Callings of Immigrants.

	1856.		1857.	
	Males.	Females.	Males.	Females.
Agricultural laborers	1,634	2,111
Shepherds	34	64
Other laborers employed in pastoral or agricultural pursuits	482	956
Domestic servants	32	1,580	65	2,061
Mechanics engaged in erecting buildings, &c., &c.	373	617
Tradespeople engaged in preparing or selling articles of food	34	32
Tradespeople engaged in making articles of clothing.....	19	63	104	81
Other tradespeople, &c.	276	20	346	24
Total	2,884	1,663	4,295	2,166

17. The entire cost of introduction of the Emigrants sent to the Colony by the Land and Emigration Commissioners, according to the contract price at which each vessel was chartered, amounted in 1856 to £93,477 1s. 3d., and in 1857 to £141,709 11s. 8d. This amount is exclusive, however, of the proportion of expense borne by the Colony for the support of the Land and Emigration Commissioners' Establishment; the amount paid to the several selecting Agents; the cost of bringing the Emigrants to the place of embarkation, and maintenance there prior to departure; and the expense of bedding and mess utensils. The expenses of the beds, bedding, and mess utensils, as well as the cost of embarkation, have, however, been considered to be balanced by the contributions made by the Emigrants prior to their receiving embarkation orders, and, in the absence of data to shew the contrary, it appears only reasonable to consider that such is the case. From the cost of introduction, as stated above, has to be deducted, in 1856, a sum of £10,125 15s. 5d., and in 1857 a sum of £9,788 5s., being the amounts shewn in the Returns marked A to have been contributed by depositors under the Remittance Regulations, towards the passages of their nominees, who arrived

4 REPORT FROM IMMIGRATION AGENT FOR 1856 AND 1857.

arrived during those years, which, deducted from the gross cost, as stated above, will reduce the actual cost of introduction of each statute adult, in 1856, to £12 3s 0½d., and in 1857 to £13 14s. 7½d.

Description of
Immigrants.

18. In adverting to the class and qualifications of the various Immigrants introduced into the Colony by the Land and Emigration Commissioners during the period referred to, I have thought it might be considered invidious to report on those by each vessel separately, and have, therefore, deviated from the ordinary course in this respect, and propose to deal with them as a whole, and in so doing it is gratifying to me to say that to individualize them is unnecessary, as the same remarks would be applicable to all. In short, the Immigrants sent to our shores at the expense of our funds have been composed of laborers, mechanics, and domestic servants. Some who obtained passages at the instance of their relatives, under the Remittance Regulations, proceeded to their friends, and thereby made their services at once available in aiding the pursuits or occupations of those by whose assistance they emigrated; the others in almost every instance obtained remunerative employment—evincing, as most of the Emigrants of late years have done, an anxiety to accommodate themselves to the various occupations to which they had been brought up, and, manifesting in a considerable degree their appreciation of the prospect of an improved social position in this their adopted country. They have thereby in benefiting their individual positions in like manner benefited the colony into which they have been introduced, and while Immigration has been a relief to the overburthened labor markets of the United Kingdom, it has also been instrumental in developing the hidden resources of this great Colony.

Appendix G.
Unassisted
Immigration.

19. The Return marked G shews the Unassisted Immigration during the years 1856 and 1857, but the information contained therein, from the mode of its collection, is very deficient of what is necessary to classify it in any effectual way, so as to afford the means of deciding on the character of this description of Immigration, or the extent of its effect on the labor market.

Appendix H.
Assisted and
Unassisted
Immigration.

20. The Return H shews the amount of the Assisted and Unassisted Immigration to the Colony, from 1st January, 1838, to 31st December, 1857; the sums paid for their introduction and superintendence on the voyage.

21. The number of Immigrants who have arrived in the Colony since that period appears to be—

Assisted.....	112,945
Unassisted.....	41,146
Total	154,091

22. The amount paid by the Colony in furtherance of this object is £1,697,007 3s. 1½d.

IMMIGRANTS' DEPÔTS.

23. The Depôts which were maintained at the public expense during the year 1856 were those of Maitland, Parramatta, and Newcastle, but they were discontinued in the beginning of 1857.

24. In speaking of these establishments, I cannot avoid bearing testimony to their great usefulness, not only as affording suitable protection to those persons who have been introduced under the Remittance Regulations by their relatives or friends residing in the interior, but also as at times being the means of at once relieving Sydney of a superabundance of labor which will occasionally occur by the arrival of several vessels together, and of facilitating the employment of large families of small children, who are difficult to dispose of where there is an expensive land conveyance, as must be the case in the vicinity of a great metropolis like Sydney.

CURRENT WAGES OF IMMIGRANTS.

Appendix I.
Average rates of
Wages.

25. The Return marked I shews the average rates of wages current in the Colony, during the period from 1st January, 1848 to 31st December, 1857.

26. It will be perceived that since the year 1855 a uniform reduction has taken place in the wages of all classes of labor,—in those of mechanics about 20, and in those of other classes of about 5 per cent.

REMITTANCE REGULATIONS.

27. From the Return maked J it will be seen that the amount paid for passages under the Remittance Regulations in 1856 was £11,509, and in 1857, £14,567, and that £2,009 5s. was also deposited on account of outfit in the former, and £2,287 5s. 10d. in the latter of those years. Appendix J.
Amount deposited under
Remittance
Regulations.

28. These amounts were capable of providing passages for 5,720 souls, and although in several instances the wishes of the depositors could not be carried out in consequence of the illness, death, or domestic disarrangements of the persons sent for, still it will be found that a large number did avail themselves of the passages so provided for them, and formed, I am glad to observe, a most useful acquisition to the Colony.

29. These Regulations underwent a considerable revision in 1856, and the privileges to depositors were further extended in August and September, 1857. They may now be considered as affording all the facilities that can possibly be required, not only to the employers of labor for the introduction of such persons as they may require for their respective occupations, but also to laborers and mechanics, of rendering assistance to their relatives and friends, who are thus enabled to escape from an already overburthened field to one calculated to improve their social position, and in which they can by honest industry maintain their families in respectability. Appendix K,
Appendix L, and
Appendix M.

30. In analysing the class of persons availing themselves of these Regulations, it will be seen that the greater portion of the money is deposited by the Irish population for the introduction of relatives, a feature in their character deserving of the highest commendation, and one which I should be most glad to see imitated by the natives of the other portions of the United Kingdom.

31. This anxiety on the part of the Irish to avail themselves of the advantages held out by these Regulations does not arise from their being in a better position than their fellow laborers, but from a wish to again unite themselves to the relatives left at home, and at the same time to give their friends the means of participating in the advantages of their own altered condition.

32. With the view of aiding as much as possible the wishes of the laboring classes in this respect, I caused a pamphlet to be prepared, setting out fully the course to be adopted by persons wishing to avail themselves of the Regulations, and forwarded copies thereof to the several Clerks of Petty Sessions throughout the Colony for circulation in their respective districts, and I am in hopes that the information so promulgated will be of some service.

33. Thus far it will be seen that these Regulations have produced the benefits contemplated by their framers, and it only remains to extend their operation further by affording similar facilities in the United Kingdom; and I feel convinced that when such a course is adopted many valuable persons who cannot now emigrate will find their way to our shores, and be an acceptable addition to our labor market.

34. It may be as well here to mention, that the opportunities offered to depositors for bringing out their friends in private merchant ships have not been taken advantage of to any extent. This may be attributed to the excellent arrangements made by the Commissioners for the management of the vessels dispatched by them, and to the protection provided for single females on the voyage, which it would be impossible to secure on board ordinary merchant ships.

35. It is, therefore, clear to me that the prejudices formerly supposed to attach to Government Emigrant Ships have vanished; and we shall not again hear that, because Emigration is conducted by the Government instead of by private individuals, that it must necessarily be considered as eleemosynary in its character.

36. In the 95th paragraph of my Report of the 10th July, 1856, I quoted from a Parliamentary paper, printed by order of the House of Commons, and taking the charges made for the selection of Emigrants as therein expressed, I assumed that the cost of selection of the Emigrants who had been despatched by the Land and Emigration Commissioners and had arrived in the Colony in the year 1855, would have amounted to £3,500.

37. I find, however, that by a communication which I have received from Mr. Walcott, that this calculation was made in error, and I take, therefore, the first opportunity which has occurred of correcting the mistake in question, and I conceive that in doing so I cannot do better than quote his own words, which are as follows:—

“ Without entering here on the various points of interest mentioned in your Report, I may notice a slight error in calculation into which you were led from not having all the facts before you.”

“ I allude to the statement in paragraph 95, page 12, that the charge entailed on the Colony for Agency in the selection of Emigrants amounted to about £3,500 for the year. In point of fact, the payments to Agents for the Emigrants in the 47 ships comprised in the period to which your Report relates, amounted only to about £1,860. You, doubtless, calculated the Agency on *all* the Emigrants sent out according to the rates given in the Parliamentary paper which you quote. But I may explain that we send out a great many Emigrants not selected by Agents, in respect of whom, consequently, no fees are paid, and that we do not pay any fee to Agents on persons under 14 or above 50 years of age.”

38. From a Return received from the Commissioners at the commencement of this year it appears that at the beginning of 1857 there was a balance in their hands to the credit of the Colony of about £16,000; that they received during that year the sum of £165,000; that they despatched during that period to Sydney and Moreton Bay 25 ships, at a cost, inclusive of incidental expenses, of £138,000, and that they had consequently at the commencement of the present year, exclusive of the amount voted by Parliament to be remitted to them, the sum of £43,000.

39. It will thus be seen that there is apparently nothing to prevent a steady stream of Emigration being despatched to our shores during the present year; and as there has been, and will be for years to come, a continued demand for all descriptions of agricultural and mechanical labor, I cannot but recommend that the Government should make a liberal provision for the continuance of a plentiful supply thereof during the ensuing year.

I have, &c.,

H. H. BROWNE,

Agent for Immigration.

1858.

Colonial Secretary's Office,
Sydney, 18 September, 1856.

IMMIGRATION REMITTANCES.

HIS Excellency the GOVERNOR GENERAL, with the advice of the Executive Council, has been pleased to direct the publication of the following Regulations, for facilitating the introduction of eligible Emigrants, and for the remittance of any sums of money which persons settled in the Colony may desire to send to their relatives or friends, or others, in the United Kingdom, for the purpose of enabling them to emigrate to this Colony.

1. In Sydney, sums intended to be deposited in pursuance of these Regulations will be received at the Colonial Treasury at any time during the usual official hours, on the production of a statement of the amount to be paid in from the Agent for Immigration, to whom application in the first instance should be made.

2. In the Country Districts, the Clerks of Petty Sessions throughout the Colony will also receive sums intended to be deposited with them for a similar purpose, on every day (Sundays excepted).

3. The Clerks of Petty Sessions, on receiving any sums under this notice, will enter in the printed form annexed (Schedule A) the name and address of the depositor, the name, age, calling, and residence of the person or persons in the United Kingdom for whose benefit the money is to be applied, and the names and residences of such persons of note as the depositors may refer to, for the purpose of answering any inquiries which the Land and Emigration Commissioners may have to make; but should the deposit be intended to be applied for the introduction of persons not nominated, they will enter in the printed form annexed (marked Schedule B) the number and class of persons the depositor is anxious to introduce, taking from every such depositor, at the same time, an undertaking, in the form set forth at foot of said Schedule B, which undertaking they will transmit to the Immigration Agent in Sydney, in conjunction with the printed form before alluded to, and will write at the foot of the same receipts for the amounts paid into their hands. These forms will, in each case, be filled up in triplicate, of which one will be handed to the depositor; and the three copies having been certified by one or more of the Magistrates present, one of them will be forwarded, with as little delay as possible, to the Agent for Immigration, and the third will be retained as a record in the office of the Clerk of Petty Sessions, who will also remit by the same post to the Colonial Treasurer the sums received, with a list of the same, made out in the form hereunto annexed (Schedule C.)

Applications for the deposit of moneys under these Regulations, made either in Sydney or to the Clerks of Petty Sessions, must be in the forms annexed (marked D and E).

4. Passage Certificates will be prepared by the Agent for Immigration in accordance with the forms marked A and B, as the nature of the deposit may require, (should the returns forwarded to him be found correct), on the report of the Colonial Treasurer of the receipt of the money deposited, and will be transmitted to the Clerks of Petty Sessions, to be delivered to the depositors. Similar certificates will also be issued by the Agent for Immigration, on the production by the depositors of the Treasurer's receipt for sums paid in Sydney.

5. The Passage Certificates it will be necessary for the depositors to forward to their friends or agents in the United Kingdom, and they must in every case be produced within twelve months from their date to the Land and Emigration Commissioners in London, who will provide passages to the Colony for the parties named therein.

6. In cases in which it may be expected that the parties intending to emigrate may be enabled themselves to raise, from their own resources, or by the assistance of others, a portion of their passage money, their friends in the Colony may not consider it necessary to remit a sum sufficient to pay the whole cost of the passage. In all such instances, it must be understood that the Commissioners will only undertake to apply to the best advantage, for the benefit of the parties, such sums as may be furnished to them, either by remittances from the Colony, or by contributions in the Mother Country, and not to provide passages in cases where the money placed in their hands is insufficient for the purpose. It must, however, be distinctly understood, that when once a payment is made by the Commissioners on account of a remittance, under these Regulations, the Government will not be liable to any further claim.

7. Residents in this country may secure passages to the Colony in the vessels chartered by the Commissioners, for their relatives or friends, if of the following descriptions, and otherwise qualified under the Regulations in force in the Colony at the time of making the deposit, by remitting in the manner above provided for, the undermentioned sums, viz. :—
Mechanics of every description, and all other persons of the working classes, and (if married) their wives and families, and male and female domestic servants.

				£	s.	d.
For each person between	1	and	12 years of age...	...	2	0 0
"	"	12	and 40 "	...	4	0 0
"	"	40	and 50 "	...	8	0 0
"	"	above	50 "	...	12	0 0

and for persons not coming strictly within the above classes, such as shopmen, and other persons of educational attainments, and their families, by paying the full amount of passage money, which has for the present been fixed at £12 per statute adult.

8. The remainder of the cost of the passage will be defrayed by the Government, but the expense of reaching the port of embarkation, as well as the cost of bedding and other articles required for the passage, must be paid by the Emigrant.

9. Passages may in like manner be secured for persons of the laboring classes, as well as mechanics and other persons mentioned in the preceding paragraph, on payment of similar amounts, provided that the persons who may be nominated by such depositors or their agents, in the United Kingdom shall be in all respects eligible under the Regulations in force in the Colony at the time the deposit is made.

10. Before the issue of a Passage Certificate under this last paragraph of the Regulations, the depositor will be required to sign an undertaking to pay to the Government any such additional amount as may be required for the passage of any child or children of the depositor's nominee, whose passage may not previously have been provided for prior to such nomination.

11. Depositors must also undertake to provide for their relatives or nominees on their arrival in the Colony, within ten days after the arrival of the vessel, or pay to the Government for their subsistence at the rate of 1s. per day for each adult, or half that amount for each child under the age of 12 years, so long as they may be maintained at the public expense after the expiration of that period.

12. For the information of persons who may desire to make Remittances under these Regulations, it is hereby notified, that the cost of a Steerage Passage to this Colony will, for the purposes thereof, be estimated at Twelve Pounds for each person of 12 years of age and upwards. For persons under the age of 12 years, half-price only is charged. The cost of outfit for the voyage, besides the expense of reaching the port of embarkation, is estimated as follows:—

	£	s.	d.
For a single man, about	3	0	0
For a single woman, about	3	0	0
For a married couple, about	6	0	0

The cost of an outfit for children varies with their size—generally speaking, three children under 7, or two between that age and 12, may be clothed for about £4; but a well grown boy or girl of 13 years of age will cost nearly as much as an adult. In order, therefore, to prevent inconvenience to intending Emigrants on account of the want of a sufficient outfit in clothing, it will be advisable, whenever practicable, to receive from the applicant such amount as he may find convenient to remit for the purchase of the same. This amount will be paid, through the Commissioners, to the persons nominated in the United Kingdom.

13. In any case in which the amount remitted may exceed that required for the payment of the intending Emigrant's passage, the balance will either be paid to the Emigrant or returned to the person who made the remittance, according to the directions which may be given by the latter; but in order to prevent this arrangement being used for the purpose of making remittances unconnected with Emigration, it is necessary to state, that the Commissioners will not undertake to make payments of money in England to any persons but those for whom they have provided passages to this Colony.

14. Passages will not be granted under these Regulations to children under 15 years of age, unless forming part of a family, or unless their parents be resident in the Colony, or unless under special authority from the Governor General.

15. The full passage money, viz., £12, will be required for persons whose husbands or wives are resident in the Colony, but their children, if accompanying them, will be allowed passages on payment of the sums which would be required under these Regulations for the children of persons following the same trades or callings as the parents of the children referred to.

16. Persons emigrating in pursuance of these Regulations will be forwarded to the Colony in Government Emigrant Vessels, and their arrival in Sydney will be duly notified in one or more of the public journals, for the information of their relations or friends.

17. No moneys deposited in the Treasury in pursuance of these Regulations can be refunded, until instructions to that effect are received in the Colony from the Colonial Land and Emigration Commissioners.

18. These Regulations will take effect from the 1st October, 1856; and the Government Notice of the 20th January, 1854, headed "Emigration Remittances," is hereby cancelled from that date, excepting with reference to applications already made under it.

By His Excellency's Command,

CHARLES COWPER.

SCHEDULE A.

EMIGRATION REMITTANCE.

District of _____

DESCRIPTION OF THE PERSON OR PERSONS FOR WHOSE BENEFIT THE REMITTANCE IS MADE.								
Christian Name and Surname at full length.	Age.	Whether Husband or Wife resident in the Colony.	Trade or Calling.	Where living, in 'Great Britain' or Ireland. To the Agent for Immigration at _____
or
Clerk of Petty Sessions, District of _____

Colonial Secretary's Office,
Sydney, 19 September, 1856.

REGULATIONS FOR THE SELECTION OF EMIGRANTS UNDER THE REMITTANCE REGULATIONS.

HIS EXCELLENCY the GOVERNOR GENERAL, with the advice of the Executive Council, has been pleased to direct, that the following are to be the Regulations under which persons holding Passage Certificates under the Government Notice of the 18th September, 1856, headed "Immigration Remittances," will obtain passages for their nominees, from the Land and Emigration Commissioners, in vessels chartered by them for the conveyance of Emigrants to this Colony.

QUALIFICATIONS OF EMIGRANTS.

1. The Emigrants must be mechanics, or other persons of the working classes, their wives or families, or male or female domestic servants. They must be sober, industrious, of general good moral character, and have been in the habit of working for wages; of all of which certificates will be required. They must also be in good health, free from all bodily or mental defects; and the adults must, in all respects, be capable of labor and going out to work for wages, at the occupation specified in their application forms.

2. The separation of husbands and wives, and of parents from children under 15, will in no case be allowed.

3. Single women under 15 cannot be taken without their parents, unless they go under the immediate care of some near relatives. Single women over 35, and single men over 40 years of age, are ineligible.

4. Families in which there are more than two children under seven, or than three under ten years of age; widowers or widows with young children, or persons who are in the receipt of parish relief, or who have not been vaccinated or not had the small-pox, cannot be accepted. This Regulation will be upheld as far as possible. Families, however, having relations in the Colony, will be accepted, notwithstanding that the children exceed the number specified above, and who are in no other way ineligible; but in each such case special application must be made to the Agent for Immigration, who, if he considers the application deserving of the relaxation applied for, will grant it, on payment of such an additional amount as he may determine, not to exceed, in the case of any additional children, the sum of £4 for each such child.

APPLICATION AND REMOVAL.

5. Applications must be made to the Commissioners, in the forms annexed, marked A. and B. The filling up of the form is to bring the applicant's case fully before the Board.

If approved of, the applicants will receive a printed "Approval Circular," calling for the contributions required by the following scale, for which sum they will be supplied with the requisite bedding and mess utensils for the use of the voyage:—

- | | |
|---|------|
| 1. For each Married Mechanic, and other Married person of the working classes | £1 |
| 2. For each Single Man | 10s. |
| 3. For each Single Woman | 10s. |

N.B.—No payments are required for wives, or for children under 12 years of age accompanying their parents.

The Circular will also point out how the money is to be paid. After it is paid, they will, as soon as the Commissioners' arrangements will permit, receive an Embarkation Order, (*which is not transferable*), naming the ship in which they are to embark, and the time and place of joining her. *Applicants must not leave their homes before the receipt of this Order.*

6. No additional payment will be required by the Commissioners for the persons sent for, beyond that mentioned in the preceding Table; but the intending Emigrants will be required to defray their own expenses to the port of embarkation notified to them in their Embarkation Order, and to find their own clothing, which will be inspected at the port by an officer of the Commissioners; and they will not be allowed to embark unless they have a sufficient stock for the voyage, not less for each person than—

<i>For Males.</i>	<i>For Females.</i>
Six shirts.	Six shifts.
Six pairs stockings.	Two warm and strong flannel petticoats.
Two warm flannel or Guernsey-shirts.	Six pairs stockings.
Two pairs new shoes.	Two pairs strong shoes.
Two complete suits of strong exterior clothing.	Two strong gowns, one of which must be warm.

But for each child nine shirts or shifts, four warm flannel waiscoats, and one warm cloak or outside coat, six pairs of stockings, two pairs of strong shoes, and two complete suits of exterior clothing are required. There must be also, at least, three sheets for each berth, and four towels, and two pounds of marine soap, for each person. The necessary brushes and combs and clothes-brushes, for cleanliness, must be provided by the Emigrants. Emigrants must not have less than the above outfit; but the larger the stock of clothing, the better for health and comfort during the voyage, which usually lasts about four months; and as the Emigrants have always to pass through very hot and very cold weather, they should be prepared for both. Two or three colored serge shirts for men, and an extra supply of flannel for women and children, are strongly recommended.

7. The whole quantity of baggage for each adult must not measure more than 20 cubic or solid feet, nor exceed half a ton in weight. It must be closely packed in one or more strong boxes or cases, but no box must exceed in size 15 cubic feet. Large packages and extra baggage, if taken at all, must be paid for. Mattresses and feather beds will in no case be taken.

CAUTION TO APPLICANTS.

8. Should any signatures attached to any of the applicant's papers prove to be not genuine, or any personation be attempted, or any false representations be made in the papers, not only will the application be rejected, and the contributions forfeited, but the offenders will be liable, under the Passengers' Act, to a penalty not exceeding £50.

9. Should any applicants be found, on personal examination at the Dépôt, or on board, to have made any mis-statement in their papers, or to have omitted to state any material fact, or to have any infectious disorder, or otherwise not to be in a fit state of health for the voyage, or to have any mental or bodily defect likely to impair their usefulness as laborers, or to have brought with them more children than are mentioned in their application form, or expressly sanctioned by the Commissioners, or to have attempted any deception whatever, or evasion of these rules, they will be refused admission on board the ship, or, if embarked, will be landed without having any claim upon the Commissioners. If, after embarkation, Emigrants are guilty of insubordination or misconduct, they will be relanded, and forfeit their contributions and passage.

10. If applicants fail to attend at the appointed time and place for embarkation, without having previously given to the Commissioners timely notice and a satisfactory reason, or if they fail to proceed in the ship, or are rejected for any of the reasons specified in the preceding article, they will forfeit their contributions and will have no claim to a passage at any future time.

11. Should the applicant wilfully misrepresent the particulars of the persons nominated, the deposits towards the passage will be liable to forfeiture.

By His Excellency's Command,

CHARLES COWPER.

SCHEDULE (A) REFERRED TO.

[To be used when persons are nominated in the Colony.]

NEW SOUTH WALES.

EMIGRATION REMITTANCE CERTIFICATE.

This form, when filled up, is to be separated from the other page, and forwarded as a letter, prepaid, directed to S. Walcott, Esq., Park-street, Westminster.

The Names of the parties whose passages are arranged for are to be inserted here. If married, the names of all the children under 12 must also be inserted.	Age of each person at last birthday.	Day and year when each person was born. N.B.—The extract of the Register of Birth, or the Certificate of Baptism for each person must be sent with this Form.	State whether married or single.	Trade or Calling.
Place of Residence.	Post Town.	County.		

I do hereby declare that all the above statements are true; and I engage to conform during the voyage to such Regulations as may be established for the good government and welfare of all on board the ship in which I may receive a passage; and I further pledge myself not to leave the ship until she reaches her destination.

IMMIGRATION REGULATIONS.

WITH a view to facilitate and encourage the introduction of Immigrants by Settlers and others, for employment in their own hired service, their selection by means of private Agency, and their passage in private ships, as well as in those chartered by the Government, and also with the intention of holding out inducements to persons resident in the Colony to send for their relatives or friends, His Excellency the Governor General, with the advice of the Executive Council, has been pleased to direct the publication of the following Regulations.

2. Any person resident in the Colony, who may be desirous of introducing from the United Kingdom Immigrants of any of the classes hereinafter enumerated, will be permitted to do so on the following terms and conditions:—

(1st.) By making the following Deposits, viz. :—For each Immigrant between 1 and 12 years of age, £2; between 12 and 40 years of age, £4; between 40 and 50 years of age, £8. But single women above 35, and single men above 40 years of age, and persons whose husbands or wives are resident in the Colony, will not be deemed eligible under these Regulations, unless upon payment of a deposit of £12 for each. Such deposits must be made, if in Sydney, at the Government Immigration Office, on any lawful day, between the hours of 10 a.m. and half-past 2 p.m., and if in the Country Districts, with the Clerks of Petty Sessions during the usual office hours; and at the time of making the deposit, the depositor must declare whether he intends to bring out the Immigrants in a ship chartered by the Government or in a private ship, and will afford all such other information respecting the Immigrants he proposes to introduce, as may be necessary to enable the Immigration Agent or Clerk of Petty Sessions to comply with his application, and the requirements of these Regulations. (2nd.)

- (2nd.) The persons eligible under these Regulations are mechanics of every description, domestic servants, and all persons of the laboring class. They must be of sound mental and bodily health, and of good moral character. But no advantage will be allowed in respect of any person brought out as a cabin or intermediate passenger.
- (3rd.) The Immigrants, on arrival in the Colony, will be subjected to the examination of the Immigration Board, who will require proof of their eligibility under these Regulations.
- (4th.) The Board will also require proof that the Immigrants, if brought out in private ships, have been properly found during the voyage with an outfit of suitable clothing, bedding, mess utensils, provisions, water, medical comforts, medical attendance, and suitable accommodation. As a general rule, the outfit of clothing and dietary scale required under the annexed extract from the Regulations of the Land and Emigration Commissioners, will be adopted as the criterion in judging of the fulfilment of the requirements under these heads.
- (5th.) In the case of single females, they must (unless accompanying their parents) be between the ages of 15 and 35; and proof will be required that they have been placed during the voyage under proper and *effectual* protection.
- (6th.) The separation of husbands and wives, and of parents from children under 15 years of age, will in no case be allowed.
- (7th.) Passages will not be granted under these Regulations to children under 15 years of age, unless forming part of a family, or unless their parents be resident in the Colony.
- (8th.) Families in which there are more than two children under 7, or three under 10 years of age, will be deemed ineligible, as well as all persons who have not been vaccinated or had the small-pox.
- (9th.) Emigrants, however, having relations in the Colony, will not be excluded from the benefit of these Regulations, notwithstanding that the number of children in the family exceed that specified above, provided they be not otherwise ineligible; but in every such case an additional payment will be required of £4 for each child in excess of the regulated number.
- (10th.) Depositors must undertake to provide for the Immigrants they introduce after the expiration of ten days from the time of their arrival, or pay to the Government for their subsistence at the rate of 1s. per day for each adult, or half that amount for each child under the age of 12 years, so long as they may be maintained at the public expense after the expiration of that period.
- (11th.) In any case in which the amount deposited shall exceed that required for the number of Immigrants actually introduced by the depositor, the excess will be returned to him at the expiration of the period fixed for their introduction, on the return to the Immigration Agent of the Passage Certificate, or Bounty Ticket, as the case may be. But if the deposit has been made with a view to obtain a passage in a vessel chartered by the Government, it will not be refunded unless instructions to that effect are received in the Colony from the Land and Emigration Commissioners, and on proof that the Passage Certificate has not been used.
- (12th.) The arrival of all persons emigrating in pursuance of these Regulations will be duly notified in the newspapers, for the information of their relatives, friends, or employers.
3. The Clerks of Petty Sessions on receipt of any deposit under these Regulations, will immediately remit the amount to the Immigration Agent at Sydney, with a statement of the number and description of Immigrants whom the depositor wishes to introduce. The Immigration Agent will thereupon prepare and forward to the Clerk of Petty Sessions, for delivery to the depositor, a Passage Certificate, if it be intended to bring out the Immigrants in a ship chartered by the Government, or a Bounty Ticket if they are to be introduced in a private ship. Similar Certificates or Bounty Tickets will be issued to depositors in Sydney on payment of their deposits to the Agent for Immigration.
4. The Passage Certificate must be forwarded by the depositor to his friends or agents in the United Kingdom, and it must in every case be produced within *twelve months* from the date of it to the Land and Emigration Commissioners in London, who will accordingly provide passages to the Colony for the Immigrants proposed to be introduced.
5. The Bounty Tickets for the introduction of Emigrants in private ships will not be available beyond the period of eighteen months from the date of their issue.
6. If, on arrival of the Immigrants introduced in private ships, in pursuance of any Bounty Tickets issued under these Regulations, the Immigration Board shall be satisfied that the several conditions hereby imposed have been faithfully observed, they will grant to the person authorized to introduce the Immigrants, or to his Assign, being the commander, owner, or agent of the ship by which such Immigrants shall have arrived, a certificate to that effect, endorsed on the Bounty Ticket, and on presentation thereof at the Colonial Treasury, the authorized holder will be entitled to receive the sum of twelve pounds for every Immigrant between the ages of 12 and 50, and half that sum for every Immigrant between 1 and 12 years of age.
7. Forms of application, as well as all other information for the guidance of depositors, can be obtained from the several Clerks of Petty Sessions in the Country Districts, or in Sydney at the Office of the Agent for Immigration.
8. These Regulations will take effect from the 1st October next, and the Government Notices of the 18th and 19th September, 1856, will be cancelled from that date, excepting with reference to applications already made under the same.

By His Excellency's Command,

H. WATSON PARKER.

EXTRACT FROM THE REGULATIONS OF THE LAND AND EMIGRATION COMMISSIONERS REFERRED TO.

OUTFIT OF CLOTHING.

For Males.

For Females.

- Six shirts.
- Six pairs of stockings.
- Two warm flannel or Guernsey shirts.
- Two pairs new shoes.
- Two complete suits of strong exterior clothing.

- Six shifts.
- Two warm and strong flannel petticoats.
- Six pairs stockings.
- Two pairs strong shoes.
- Two strong gowns, one of which must be warm.

But for each child nine shirts or shifts, four warm flannel waistcoats, and one warm cloak or outside coat, six pairs of stockings, two pairs of strong shoes, and two complete suits of exterior clothing, are required. There must be also, at least, three sheets for each berth, and four towels, and two pounds of marine soap, for each person. The necessary brushes and combs and clothes-brushes, for cleanliness, must be provided by the Emigrants. Emigrants must not have less than the above outfit; but the larger the stock of clothing the better for health and comfort during the voyage, which usually lasts about four months; and as the Emigrants have always to pass through very hot and very cold weather, they should be prepared for both. Two or three colored serge shirts for men, and an extra supply of flannel for women and children, are strongly recommended.

6. Rations, according to the following Scale, are to be issued during the voyage, and until disembarkation, to each male and female passenger of twelve years of age and upwards;—to children of one year and under twelve years of age, one half of such Rations.

DIETARY SCALE.

WEEKLY TOTALS	20	16	16	8	4	42	56	16	1/4	8	8	1	2	6	1	2	12	8	21

- Mixed Pickles One gill
 - Mustard Half an ounce
 - Lime Juice 6 ounces
- } Weekly
- Salt Two ounces
 - Pepper Half an ounce

Children between one and four years of age are to receive preserved meat instead of salt meat every day, also a quarter of a pint of preserved milk, and every alternate day one egg, or two teaspoonfuls of condensed egg. Children under one year old are to be allowed 3 pints of water daily; and if, above four months old, a quarter of a pint of milk daily; also 3 ozs. of preserved soup, and one egg, or two teaspoonfuls of condensed egg, every alternate day, and 12 oz. of biscuit, 4 oz. of oatmeal, 8 oz. of flour, 4 oz. of rice, and 10 oz. of sugar weekly. To infants under four months old, the Surgeon may issue such nutriment as he may, in any case, think necessary. The Surgeon may draw an additional quart of water daily for the use of each person sick in the Hospital.

While in any port of the United Kingdom, or in any port into which the vessel may put before completing the voyage, and, if practicable, for one or two days after sailing, two-thirds of a pound of fresh meat, one pound and a half of soft bread, and one pound of potatoes, per statute adult, are to be issued daily, with a suitable supply of vegetables, in lieu of all the other Rations, except tea, coffee, sugar, and butter.

Colonial Secretary's Office,
Sydney, 16th September, 1857.

IMMIGRATION REMITTANCES.

WITH reference to the Notice published in the *Government Gazette* of the 10th August last, headed "Immigration Regulations," in which it is provided that "persons, whose husbands or wives are resident in the Colony, will not be deemed eligible" for passages under the Regulations unless upon payment on their account of a deposit of twelve pounds each, His Excellency the Governor General, with the advice of the Executive Council, has been pleased to direct that so much of the aforesaid Regulations be repealed, and that from and after the 1st October next, passages may be secured for the persons herein alluded to (if not otherwise ineligible) on the same terms and conditions as are provided in the Regulations for other persons.

1858-9.

Legislative Assembly.
NEW SOUTH WALES.

IMMIGRATION.

(REPORT FROM AGENT FOR 1858.)

Ordered by the Legislative Assembly to be Printed, 5 April, 1859.

THE AGENT FOR IMMIGRATION to THE PRINCIPAL SECRETARY TO THE GOVERNMENT,
submitting Report on Immigration for the year 1858.

*Government Immigration Office,
Sydney, 31 March, 1859.*

SIR,

I have the honor to submit, for the information of the Government of New South Wales, a Report on the Immigration to this Colony for the year 1858, together with the usual Statistical Returns in the Appendix, comprising the information on which the Report is based.

2. The subjoined Table will shew, in a comprehensive form, the number of Assisted Immigrants who have arrived, and the several Ports at which they have been landed.

PORT OF ARRIVAL.	NUMBER OF SHIPS.	PASSENGERS.		TOTAL SOULS.
		Male.	Female.	
Sydney	17	2,913	2,976	5,889
Moreton Bay	3	588	439	1,027
TOTAL.....	20	3,501	3,415	6,916

3. The highest contract price per statute adult was £16 3s., and the lowest £12 18s. 11d. The average on the 20 ships being £14 15s.

Appendix A.

4. On reference to Table A in the Appendix will be seen the names and tonnage of the vessels which were chartered by the Commissioners, the time of their departure from the several Ports in the United Kingdom and date of arrival in the Colony, the number of days occupied in making the voyage, the number of births and deaths which occurred during the voyage and in Quarantine, the expenses incidental to the detention of vessels in Quarantine, and the total cost of the introduction of the immigrants, including the gratuities paid to Surgeons Superintendent, Masters, Officers, and Immigrant petty officers of the ships after arrival.

Number of immigrants embarked and arrived.
Births.
Deaths.

5. The number of immigrants originally embarked was 7,009. The births on the voyage were 58; the deaths on the voyage as well as in Quarantine were 93, equivalent to $1\frac{1}{4}$ per cent.; and the number landed alive were 6,916 souls, being the smallest immigration to the Colony under the auspices of the Government for the last five years.

6. Of the deaths, 28 were adults, 35 were between the ages of 1 and 12, and 30 were infants.

Tonnage of vessels employed.

7. The average tonnage of the vessels employed was 976 tons old measurement, and 962 $\frac{1}{2}$ new.

Gross cost of introduction of immigrants.

8. The total cost of the introduction of the 6,916 immigrants was £96,402 0s. 6d., at an average cost for each statute adult of £15 14s. 3d.

Appendix B.
Native Counties of immigrants.

9. Table B shews the divisions of the several portions of the United Kingdom in which the immigrants were born to be as follows:—

ENGLAND AND WALES.	
Northern Counties	291
Southern „	1,497
Midland „	667
Eastern „	1,144
Wales	99
	3,698
SCOTLAND.	
Northern Counties	257
Southern „	347
	604
IRELAND.	
Ulster	546
Leinster	437
Connaught	205
Munster	1,389
	2,577
Other Countries	37
	Total..... 6,916

10. The selection of emigrants in the proportions in which they ought to be obtained from the several divisions of the United Kingdom, in accordance with the original intention of the Secretary of State for the Colonies, must now, to some extent, be affected by the increasing demand for passages under the Remittance Regulations in the Colony; but, notwithstanding this, the Commissioners appear during the past year to have maintained as satisfactory a balance as circumstances would enable them to preserve. According to the existing extent of the population of the United Kingdom, the result of the immigration to the Colony should have been as follows:—England, 4,519; Scotland, 724; Ireland, 1,686. But, looking to the mixed population of the Colony as now existing, I consider that the numbers as shewn to have arrived, although differing in some respects with the correct proportions of the divisions of the United Kingdom, are very satisfactory.

Appendices C, D, and E. Ages, Education, and Religion of immigrants.

11. The Tables following, marked C, D, and E, shew the ages, extent of educational attainments, and religious persuasions of the immigrants, with the following results:—Of 6,916 persons who arrived during the past year, (of whom 3,501 were males and 3,415 were females,) 3,776 could read and write, 1,170 could read only, 1,970 could not read at all.

12. Their religious persuasions were :—

	Males.	Females.
Church of England	1,619	1,736
Church of Scotland	299	271
Wesleyan Methodists	152	137
Other Protestants	117	177
Roman Catholics	1,303	1,084
Jews	10	9
Greek Church	0	1
Other Persuasions	1	0
TOTAL	3,501	3,415

13. Table F shews the trades and callings of the adult males and unmarried adult females, which are as follows :—

	Males.	Females.
Agricultural Laborers	1,655	...
Shepherds	29	...
Other laborers employed in pastoral or agricultural pursuits	604	...
Domestic servants	25	1,543
Mechanics engaged in erecting buildings, &c., &c.	104	...
Tradespeople engaged in the sale or preparation of articles of food	32	...
Tradespeople engaged in the preparation of articles of clothing	46	50
Other tradespeople	198	15
TOTAL	2,693	1,608

Appendix F.
Trades or Callings of immigrants.

14. No other immigrants have been introduced into the Colony during the past year at the public expense, but a considerable immigration of Chinese has taken place, and three vessels have arrived in Sydney with German laborers, all of whom paid their own passages.

15. The Unassisted Immigration (exclusive of Chinese), therefore, as will be seen on reference to Table G, amounted to 12,603 males and 5,220 females.

Appendix G.
Unassisted Immigration.

16. As the subject of Foreign Immigration is specially alluded to in another part of this Report, it is only necessary for me here to remark upon the description of the immigrants introduced at the public expense; of whom (taking them on the whole), both in respect to males and females, I consider the Colony has no cause to complain, but, on the contrary, that the nominations in the Colony, and the selections made by the Commissioners at Home, have been instrumental in bringing to our shores a useful and industrious addition to our population.

Description of immigrants.

17. Immigration has now been conducted either with the assistance, or under the auspices, of the Government, with only two or three slight interruptions, for a period of 21 years, commencing in the year 1838. Since which period no less than 178,830 souls have been introduced into the Colony, at a cost to the public revenue of £1,850,229 13s. 9½d.

Appendix M.
Assisted and Unassisted Immigration.

18. During the same period 37,748 males and 19,517 females have also arrived who received no assistance from the Government.

19. The total immigration, therefore, both of Assisted and Unassisted Immigrants, has during the 21 years amounted to 178,830 souls.

SURGEONS SUPERINTENDENT.

20. Whilst bearing testimony to the excellent arrangements as now so satisfactorily matured by the Emigration Commissioners for procuring the most efficient and trustworthy officers as Surgeons Superintendent in their vessels, it is a matter of deep regret that I am called upon to record the misconduct of no less than four of the Surgeons who had been appointed during the past year to the charge of emigrants on board of the following ships, viz. :—“ Stebonheath,” “ Joshua,” “ Alfred,” and “ Mary Pleasants.”

Conduct of Surgeons Superintendent arrived during the year 1858.

21. The case of the "Stebonheath" having been so fully inquired into by the Immigration Board, and the proceedings laid before Parliament, it is unnecessary for me to make further allusion to the subject, but merely to report that the late Surgeon Superintendent of that vessel, Dr. Rowland, was deprived of his gratuity, and declared undeserving of re-employment in the service.

22. Dr. Arpthorpe, the Surgeon Superintendent of the "Joshua," was found to be addicted to habits of intemperance, received only a small portion of his gratuity, and was also deemed ineligible for re-employment in a similar capacity.

23. Drs. Brownfield of the "Alfred," and Philip Beal, of the "Mary Pleasants," both died during the voyage from *delirium tremens*, which appeared to have been brought on by habits of intemperance.

24. Fortunately it is not frequently my duty to be obliged to record so many instances of the unhappy results of misconduct on the part of the medical men entrusted with the charge of emigrant ships; I have usually been able to bear the highest testimony to the laudable exertions of those gentlemen, of whom many are ornaments to their profession, and persons whom, by the efficient discharge of their duties, have fully earned the confidence of the Government.

25. The results of the misconduct illustrated in respect to the surgeons of the "Joshua," "Alfred," and "Mary Pleasants," at once shew the necessity that exists for affording sufficient remuneration in order to secure the services of respectable and trustworthy men, and I am glad therefore to be able to report that the Commissioners have recommended, and the Government have acceded to, a proposal to continue to increase the gratuities to which surgeons may become entitled to 20s. a head, according to the following scale, thereby extending the limit, which has hitherto been restricted to 16s. :—

1st and 2nd voyages	10s.
3rd and 4th "	12s.
5th and 6th "	14s.
7th and 8th "	16s.
9th and 10th "	18s.
11th and subsequent voyages	20s.

CURRENT WAGES AND PROSPECTS OF IMMIGRANTS.

Appendix I.
Average rates of wages.

26. The Return marked I gives the rates of wages current in the Country Districts, as well as in Sydney, during the period from 1st January, 1848, to 31st December, 1858. The average wages from this Return will be found to be as follows :—

MALE.

Smiths.....	10s. 6d. per diem.
Carpenters	10s. "
Wheelwrights.....	10s. "
Bricklayers.....	10s. 6d. "
Masons.....	10s. 6d. "
Farm Laborers.....	£40 per annum.
Shepherds	£30 "

FEMALE.

Cooks	£26 per annum.
Housemaids.....	£23 "
Laundresses.....	£26 "
Nursemaids.....	£19 "
Farm Servants	£25 "
General House Servants.....	£25 "

27. In the wages current during the past year there has at times been a greater variation than is usual from the ordinary operations of the Colony. This is to be attributed to the extraordinary excitement consequent on the discovery of the Fitz Roy Gold Fields, which for a time paralyzed the efforts of employers either to obtain such labor as they required, or to retain that with which they were at the time supplied.

28. The reaction which took place, and the great ingress of persons who were suddenly thrown upon our shores in an unprotected state, owing to the sudden failure of this much exaggerated gold field, at once affected the labor market, and for a time it was difficult to foresee what would be the result of that wide spread disappointment, for it must not be forgotten that many mechanics and small farmers, in the excitement to seek what appeared to them to be an almost certain independence, readily disposed of their farms and holdings, and thus on their return to Sydney had no alternative but to seek employment as laborers.

29. With a view to alleviate the immediate necessities of those so suddenly thrown back upon our shores, and to afford them opportunities of obtaining employment, a Committee was formed of some of the leading mercantile men of Sydney, and subscriptions raised, the amount of which was most liberally supplemented by the Government, and thus many hundreds of the unemployed were assisted in proceeding to the several Gold Fields, there to develop the extensive mineral resources of the Colony, which have hitherto been so imperfectly brought to light.

30. These proceedings had the desired effect, and the labor market soon recovered its ordinarily healthy condition, and has since continued to afford ample and ready employment to the newly arrived immigrant.

31. The present and almost continued demand in this Colony is for farm laborers, shepherds, and mechanics employed in the erection of buildings, and there is also an increasing demand for female domestic servants of every description.

32. The readiness with which persons of this class settle in the Colony, and soon become themselves employers of labor, tends to a constant and large withdrawal of domestic servants from the labor market, and as a great scarcity now exists, it behoves the Government to make some additional provision for a larger introduction of single females than can with the funds now provided (the greater portion of which will be absorbed by the introduction of persons under the Remittance Regulations,) be accomplished.

33. The selection of female domestic servants has, during the last year, been very fairly performed; and as it would appear from a report made by Dr. Duncan, the Agent for Immigration at South Australia, that he finds no difficulty in procuring an ample supply of that class of labor from the Mother Country, it is to be hoped that the Commissioners will be able to provide for any increased demand from the Colony should the Government decide on calling upon them to do so.

34. Notwithstanding that the wages of both laborers and mechanics have ruled lower during the last two years as compared with those paid during the first few years of the gold discovery, it will be seen that there is here an ample and remunerative field of employment still open, affording every encouragement to the industrious and thrifty, more particularly as the reduction in wages has been productive of a like diminution in the cost of house rent.

35. To illustrate the position of the working classes in the Colony, it is only necessary to refer to the balance sheet of the Savings Bank for the past year, as published by order of the Government. This document shews that there is now deposited in that Bank to the credit of 11,205 depositors a sum of £547,402 4s. 4d., being equal to £48 16s. 10d. per head, or, as shewn in the accompanying Table, the depositors of £20 and under amount to 4,564; £20 to £50, 2,309; £50 to £100, 1884; £100 to £200, 2,169; £200 to £300, 194; and above £300, 85; and as this Bank is secured by a Government guarantee of £50,000, and is carefully restricted in the investment of its funds through trustees appointed by the Government, ample security is afforded to the industrious laborer or mechanic to invest his small savings in an institution, where also for the last two years the deposits have been supplemented at the end of each year by an addition of interest at the rate of 5 per cent.

Appendix J.
Savings Bank
Deposits.

36. The Colony likewise affords to immigrants advantages not only for the speedy settlement of the female branches of their families, but, at the same time, holds out ready means for the education of their younger children, who are thus sooner fitted to assist in earning their own livelihood, towards which, from the dearth of labor, they are at an early age required to contribute; and the Savings Bank (branches of which are established in all the principal inland towns) offers inducements to them to lay by from time to time their savings, and thereby

acquire a competency, which may ultimately enable them to live in comparative comfort during the remainder of their lives.

REMITTANCE REGULATIONS.

Appendix K.
Amount deposited under
Remittance
Regulations.

37. The Table marked K in the Appendix shews the amount which has been contributed by depositors in the Colony, under the Immigration Remittance Regulations, to secure passages for their friends or relations, and it exhibits a marked increase in the amount of the deposits as compared with previous years.

38. The amount deposited for passages is £19,283, being £4,716 in excess of that deposited in the previous year, and will provide passages to the Colony for 4,723 souls.

39. The whole of this money has been paid to provide passages in the Commissioners' ships, with the exception of £56 deposited for bounty tickets.

40. The progress made in the gradual adoption of these Regulations by the working classes is most satisfactory; and had not a slight check been experienced in the course of the year, from the excitement and consequent exodus to the Fitzroy Gold Fields, I anticipated that a much larger amount would have been deposited.

41. A sum of £3,800 was deposited under these Regulations by the Committee of the Donegal Relief Fund, and a passage certificate was authorized by the Government to be issued to their agent, to enable him to procure passages to the Colony for such persons as he might nominate and were eligible under the Regulations.

42. The result of this experiment has not as yet been tested; but I assume that vessels will shortly be despatched with a part of the laborers selected under the auspices of this Society.

43. The number of persons who arrived under the Regulations during the past year is 3,677; and I am glad to be able to bear testimony to the respectability and probable usefulness of a large majority of them.

44. In my Report on the immigration of the two previous years I expressed an opinion that it would be advisable to extend the benefits of these Regulations to persons of an equally eligible class who might seek for passages in the Mother Country. I have seen nothing that will induce me to alter my views on this subject, which indeed are somewhat strengthened by the fact that persons have, in several instances, remitted money from England to their friends here to enable them to deposit it in the Colony, and thus obtain passages; and on many occasions the money has been repaid to depositors here, in consequence of their friends at Home having been enabled to emigrate in the ordinary way, without availing themselves of such contributions.

45. To work such a system as this, with a due regard to the interests of the Colony, it would necessitate the appointment of an agent in the United Kingdom, similar to the one appointed by the neighbouring Province of South Australia, whose successful selections of a most suitable class of emigrants, particularly single females, is prominently alluded to by Dr. Duncan, the Immigration Agent there, in his Report for the last quarter of 1858.

Appendix L.
Return of
ordinary and
Remittance
Immigrants
since 1842.

46. The Table marked L, which is a continuance of a Return called for by Parliament during the late Session, gives a comprehensive illustration of the several countries from which nominations have been made under the Remittance Regulations, and fully bears out the remarks which I made upon this branch of immigration in my Report for 1856 and 1857.

IMMIGRANT DEPÔTS.

Immigrant
Depôts.

47. The difficulty of obtaining suitable servants in the country districts has occupied the attention of some of our leading colonists, and the economical course somewhat injudiciously adopted in the year 1856 for the abolition of these useful establishments is now about to be reconsidered.

Appendix M.

48. None of the depôts have as yet been re-opened, but a correspondence, of which copies will be found in the Appendix, was opened, at the instance of the Government, with the Police Magistrates of Bathurst, Goulburn, and Maitland, and a sum of £500 has been placed

placed on the estimates for this year to enable me to forward into the interior such persons as may be suitable to the particular requirements of the several districts, so far as the prudent expenditure of the funds so placed at my disposal will admit.

49. This is certainly a step in the right direction, and the re-opening of depôts in these localities will, while affording facilities for the introduction of labor, much assist the operation of the Remittance Regulations, and offer protection to the nominees of depositors resident in the interior, who are now in many instances subject to pecuniary losses in having to leave their occupations for the purpose of escorting their friends home from Sydney.

GERMAN IMMIGRANTS.

50. Amongst the Unassisted Immigrants who arrived during the past year, have been 739 Germans, brought in three vessels. These persons came here at their own expense, or under engagement with the charterers of the vessels in which they arrived to take employment in the Colony, and to repay, out of their accruing wages, the amount of their passage money. They consisted of laborers, mechanics, and other tradesmen, and I have no doubt many of them will become useful additions to the labor market of the Colony. German Immigration. Appendix N.

51. A great defect exists in the arrangements for the passage of emigrants on long voyages on board ships sailing from German ports, and the circumstances as brought under notice in respect to one of these vessels, the "Wilhelm Kirchner," shew a reckless disregard on the part of the authorities in Germany of the health and comfort of the emigrants, or a negligence in upholding some system of morality less prominently depraved than that tolerated on board this vessel.

52. To correct the abuse of overcrowding in ships bringing passengers to the United States of America, Congress, in the year 1855, passed a law applicable to all vessels, of whatever nation, employed in bringing passengers to any ports of the Union, and the result has, I am given to understand, been most beneficial.

53. To pass such a law in this Colony would be obviously futile, as it could not provide for the punishment of offenders out of the immediate jurisdiction of their country; but considering the large and increasing trade which now takes place from foreign countries to our Colonies, and particularly to those in Australasia, it appears to me that it is worthy of consideration by the Land and Emigration Commissioners, who control the emigration of Great Britain, whether such an enactment as the one passed by Congress should not be introduced into Parliament.

CHINESE.

54. An almost new feature in the immigration to this Colony has been the arrival of a large body of Chinese. 10,691 of these persons arrived here during the last year, in 23 vessels, and at their own expense, with the view of occupying themselves in the pursuit of gold digging, an employment for which the Celestials are particularly adapted, in consequence of their moderate expectations as contrasted with those of our own countrymen, and their great patience and forbearance in the delicate manipulations incidental thereto. Chinese Immigration.

55. On reference to the Return marked O in the Appendix, it will be seen that the immigration of these persons was confined almost exclusively to the male sex; that of those who arrived the average age was about 27, and the mortality during the voyage about $\frac{1}{4}$ per cent. Appendix O.

56. The vessels conveying these persons to the Colony were despatched from Hong-Kong, in terms of the Act of Parliament, 18 & 19 Vict., cap. 104, and although many of them made unusually long passages, in some instances exceeding the time prescribed by the local Proclamation, no case of deficiency of provisions, want of medical attendance, or ill-usage on the part of the master or officers of the vessel, was brought under my notice.

57. I may, however, remark, that the Act of Parliament under which these vessels are fitted only limits the number of persons to be carried in each vessel to the superficial space that may be available on which to berth them, and, therefore, a ship fitted with an orlop deck has been, in some instances, made available for carrying passengers far in excess of the limit as to tonnage prescribed by the Passenger Act, and thus no available space was left for exercise or recreation.

58. Although differing from the opinions expressed by many persons in the Colony, that it is advisable as well as beneficial to encourage the introduction of these persons, I must nevertheless bear testimony to the orderly and quiet demeanor of those who came particularly under my notice; and one good feature is observable, that within a few days after arrival they moved off in large detachments to the vicinity of the gold fields, so as at once to commence operations.

59. It is well also to observe that a systematic and well-organized scheme exists in the immigration of these persons—the vessels in which they were conveyed having in most instances been chartered and provisioned by their own countrymen of wealth and intelligence, and in some cases laden with freight suited to their requirements during their sojourn here, as well as with goods intended for disposal in the markets of this and the neighbouring Colonies.

PROBABLE AMOUNT OF FUNDS AVAILABLE FOR IMMIGRATION DURING 1859.

Funds available
for Immigration
during 1859.

60. From a communication received from the Colonial Land and Emigration Commissioners, it appears, that after providing for the cost of the ships "Daphne," "British Empire," and "Hornet," which have arrived since the commencement of this year, and of the "Wellington" and "Nimroud," which are daily expected, there would remain a balance in their hands, on the 31st December, 1858, of £29,000.

61. The Parliament of the Colony have voted the sum of £75,000 for emigration purposes during the present year, and should freights rule at the same reasonable rate, it is probable that the sum left at the disposal of the Commissioners, viz., £104,000, will be sufficient to provide passages for about 7,000 statute adults.

I have, &c.,

H. H. BROWNE,

Agent for Immigration.

THE HONORABLE

THE PRINCIPAL SECRETARY.

APPENDIX TO REPORT FROM IMMIGRATION AGENT.—1858.

A.

RETURN OF THE ASSISTED IMMIGRATION FROM THE UNITED KINGDOM TO NEW SOUTH WALES DURING THE YEAR 1858.

Table with columns for SHIPS, IMMIGRANTS, and EXPENDITURE. SHIPS includes Name of Vessel, Tonnage, Date of Departure/Arrival, Name of Master/Surgeon-Superintendent. IMMIGRANTS includes Births on the Voyage, Deaths (On the Passage, In Quarantine), and Number Landed (Above/Under 12 years, Total Soles, Statute Adults). EXPENDITURE includes Contract Price, Total Passage Money, Amount of Gratuities, Demurrage, and Total Cost of Conveyance.

* These vessels landed their immigrants at Moreton Bay.

† Died on the voyage.

APPENDIX No. 1.

A RETURN shewing the number of Depositors and the amount of Deposits in the Savings' Bank of New South Wales, on 31st December, 1858, distinguishing the number of Depositors of sums under £20, between £20 and £50, between £50 and £100, between £100 and £300, between £300 and £500, and upwards, and the Rate of Interest payable to Depositors.

Number of Depositors of £20 and Under.	Number of Depositors between £20 and £50.	Number of Depositors between £50 and £100.	Number of Depositors between £100 and £200.	Number of Depositors between £200 and £300.	Number of Depositors upwards of £300.	Total Number of Depositors.
4,564	2,369	1,884	2,169	194	85	11,205

Total amount of Deposits in the Savings' Bank of New South Wales, is £574,312 4s. 4d.
 A fixed Rate of Interest is payable to Depositors, at the rate of 2½ per cent. per annum, on such Deposits as are wholly withdrawn during the year; and on Deposits remaining in the Bank up to 31st December, the Rate of Interest is fixed by the Trustees when the Yearly Accounts are made up.
 The Rate paid on 31st December, 1858, for the year ended, was 5 per cent. per annum.
 When Deposits made by any one individual exceed the sum of £100, no interest is allowed on such excess.

Approved,
 W. DENISON.

GEO. O. ALLAN,
 Managing Trustee.

APPENDIX No. 2.

COMPARATIVE STATEMENT shewing the Increase and Decrease of the Deposits, and of the number of Depositors, with the number of New Accounts opened, and Old Accounts closed, in the Savings' Bank of New South Wales, for the year ending 31st December, 1858.

Government Immigration Office,
 Sydney, 31st March, 1859.

H. H. BROWNE,
 Agent for Immigration.

M.

(No. 58-65.)

Colonial Secretary's Office,
Sydney, 26 August, 1858.

Sir,

I am directed to draw your attention to the Resolution passed by the Legislative Assembly on the 20th ultimo, recommending that immigrants should be forwarded to the Country Districts, and to request that you will report what steps you would recommend should be taken, if any, to carry into effect the expressed wish of the Assembly.

The Immigration Agent.

I have, &c.,
W. ELYARD.

CIRCULAR Letter addressed to Police Magistrates, Maitland, Goulburn, and Bathurst.

Sir,

Government Immigration Office,
Sydney, 30 August, 1858.

I have the honor to inform you that, with the view of meeting the wishes of the Legislative Assembly, as expressed in a Resolution passed by them on the 20th ultimo, I should be glad, if it were practicable, to forward to Goulburn, and other districts in the interior, any of the surplus labor arriving by immigrant vessels, whenever the necessity might arise, from a dearth of employment for it in Sydney, provided that no expense was likely to be entailed by the reopening of country depôts.

2. Before, therefore, I submit any proposition on the subject to the Government, I beg to request that you will have the goodness to favor me with any information in your power as to the expense which would have to be incurred before immigrants forwarded to your district could be disposed of, and as to the probability which exists therein for the employment of agricultural laborers and their families.

I have, &c.,
H. H. BROWNE.

THE POLICE MAGISTRATE AT BATHURST to THE AGENT FOR IMMIGRATION, respecting the transmission of unhired Immigrants to the District.

Police Office, Bathurst,
7 September, 1858.

Sir,

I do myself the honor to inform you that, having laid your letter of the 30th ultimo, on the subject of the demand for labor in this district, and the cost likely to be incurred before the engagement of immigrants who might be forwarded hither from Sydney, before the Bench of Magistrates, at a Special General Meeting,—it is their opinion that almost every description of labor likely to be available in a country district would meet with ready employment here.

The only expense which I am aware would be likely to be necessarily incurred would be those of transit hither, and the rations of the immigrants until they might be hired, as the "Immigrants' Quarters" here might very readily be rendered available for use without (unless a very trifling) expenditure.

The Agent for Immigration,
Sydney.I have, &c.,
W. HALL PALMER, P.

Sir,

Court House, Maitland,
20 September, 1858.

In reply to your letter of the 30th ultimo, I beg to state that accommodation for from forty to fifty immigrants, or families containing about that number of individuals, is ready here, in the old stockade, without any expense beyond a few panes of glass or so; but cooking utensils and bedding, to some extent, if the immigrants cannot bring their own bedding with them from the ships, would be required.

The expense of rationing these people here would, I presume, be the same as in Sydney, or nearly so; but probably the cartage of their luggage would be a little higher than in Sydney, as the distance is somewhat greater.

The wages of the Matron, the general superintendence, the issuing of rations, and filling up of agreements, were all provided for by the Police Magistrate, who was allowed for these purposes £100 a-year. This arrangement, I presume, would be still desirable, and would also, I consider, be beneficial to the Government.

By keeping constantly here the number of immigrants I have named, and by giving the Superintendent power to discharge from the depôt any person who refused to accept reasonable wages, I consider that a very large number of immigrants would be required, and the Government would be relieved from a very heavy expense.

But I beg to add, that it would be most desirable that the immigrants should be sent direct from their ships.

The Agent for Immigration,
Sydney.I have, &c.,
EDW. D. DAY, J.P.,
Police Magistrate.

Sir,

Police Office, Goulburn,
28 October, 1858.

In reply to your letter of the 30th August last, requesting information as to the probable expense that would be incurred before immigrants forwarded to this district could be disposed of, and as to the probability that exists therein for the employment of agricultural laborers and their families, I have the honor to inform you that, after due consideration, and having made all necessary inquiries, I am of opinion that the opening of an Immigration Depôt at Goulburn would entail an expense of at least from £300 to £400 per annum; and I would further state that, at present, there does not appear to be a demand for labor of any kind in this district.

The Agent for Immigration,
Sydney.I have, &c.,
H. ZOUCH, J.P.,
Acting Police Magistrate.

THE AGENT FOR IMMIGRATION to THE PRINCIPAL UNDER SECRETARY, forwarding copies of Reports from Police Magistrates, and replying to the letter of the Principal Under Secretary (No. 58-65) of 26 August, 1858.

Sir,

Government Immigration Office,
Sydney, 3 November, 1858.

I have the honor to acknowledge the receipt of your letter of the 26th of August ultimo, drawing my attention to the Resolution passed by the Legislative Assembly on the 20th July, recommending that immigrants should be forwarded to the Country Districts, and requesting me to report what steps I would recommend should be taken, if any, to carry into effect the expressed wish of the Assembly.

In reply thereto, I have now the honor to state that, having considered it desirable before reporting on the subject to place myself in communication with the three principal Police Magistrates to the North, South, and West, I am now enabled to submit the replies I have received from those officers.

The depôts at Maitland and Bathurst not having been discontinued many years, the buildings before occupied might still be made available, without much expense; at Goulburn, however, there is no building available, neither does it appear that there is any present demand for labor.

Under all the circumstances I do not consider that it is necessary at present to open any of the depôts; but I would recommend that the sum of £500 be placed on the estimates for 1859, with a view of forwarding to the Country Districts such persons as may from time to time be most in demand, and for whom there may not be on the arrival of a vessel immediate opportunity for obtaining employment.

The Principal Under Secretary.

I have, &c.,
H. H. BROWNE,
Agent for Immigration.

This Report has been delayed in consequence of no reply having been received from the Police Magistrate, Goulburn, until the 1st instant.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

1858.

VOTES No. 36. FRIDAY, 28 MAY, 1858.

6. Irish Female Immigrants:—Mr. Thornton moved, pursuant to notice:—
- (1.) That the Petition of certain citizens of Sydney, complaining of the statements made by the Immigration Agent in regard to Irish Female Immigrants, be referred to a Select Committee, to investigate and report upon the allegations contained in the said Petition.
- (2.) That such Committee consist of the following Members, viz., Mr. Deniehy, Mr. Donaldson, Mr. Faucett, Mr. Owen, Mr. Parkes, Mr. Murray, Mr. Williamson, Mr. Rotton, and the Mover.
- Debate ensued.
- Question put and passed.

VOTES No. 61. TUESDAY, 20 JULY, 1858.

7. Attendance of Member of Legislative Council:—Mr. Thornton moved, That the following Message be carried to the Legislative Council:—
- MR. PRESIDENT,
- The Legislative Assembly having appointed a Select Committee to inquire into Irish Female Immigration, and that Committee being desirous to examine the Honorable J. R. Wilshire, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee
- Legislative Assembly Chamber,*
Sydney, 20th July, 1858. Speaker.
- Question put and passed.
13. Irish Female Immigration:—Mr. Thornton moved, pursuant to notice, that Copies of the undermentioned Documents be referred to the Select Committee on Irish Female Immigration, now sitting, viz:—
- (1.) Report of the Immigration Board, dated 5 February, 1855, on the Evidence taken before them in respect to the irregularities alleged to have occurred on board the Immigrant ship "Lady Kennaway.—Ordered to be printed, 24 June, 1858.
- (2.) Return shewing the number of Immigrants who arrived in the Colony of New South Wales during the several years from 1851 to 1856 inclusive, and the proportion in which they were selected from each division of the United Kingdom.—Ordered to be printed, 28 May, 1858.
- Question put and passed.

VOTES No. 62. WEDNESDAY, 21 JULY, 1858.

4. Messages:—The Speaker reported that whilst the House was in Committee the following Messages were received from the Legislative Council:—
- * * * * *
- (2) Attendance of Member of Legislative Council:—
- MR. SPEAKER,
- In answer to the Message from the Legislative Assembly, dated the 20th instant, requesting leave for the Honorable J. R. Wilshire, a Member of the Legislative Council, to attend and be examined before a Committee of the Legislative Assembly, appointed to inquire into "Irish Female Immigration," the Council acquaints the Legislative Assembly that leave has been granted to Mr. Wilshire to attend and be examined by the said Committee, if he think fit.
- Legislative Council Chamber,*
Sydney, 21 July, 1858. W. W. BURTON,
President.

VOTES

VOTES No. 114. THURSDAY, 4 NOVEMBER, 1858.

4. Attendance of Member of Legislative Council:—Mr. Thornton moved, That the following Message be carried to the Legislative Council:—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into Irish Female Immigrants, and that Committee being desirous to examine the Honorable F. L. S. Merewether, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

Legislative Assembly Chamber,
Sydney, 4 November, 1858.

Speaker.

Question put and passed.

VOTES No. 116. TUESDAY, 9 NOVEMBER, 1858.

3. Attendance of Member of Legislative Council:—The Speaker reported the following Message received to-day from the Legislative Council:—

MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated the 4th instant, requesting leave for the Honorable F. L. S. Merewether, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly appointed to inquire respecting "Irish Female Immigrants," the Council acquaints the Legislative Assembly that leave has been granted to Mr. Merewether to attend and be examined by the said Committee, if he think fit.

Legislative Council Chamber,
Sydney, 4 November, 1858.

W. W. BURTON,
President.

[*Further Proceedings stopped by Prorogation.*]

1858-9.

VOTES No. 5. WEDNESDAY, 15 DECEMBER, 1858.

6. Irish Female Immigrants:—Mr. Thornton moved, pursuant to notice,—
- (1.) That the Petition of certain Citizens of Sydney, complaining of the statements made by the Immigration Agent in regard to Irish Female Immigrants, be referred to a Select Committee, to investigate and report upon the allegations contained in the said Petition, and that all Proceedings of the Committee of last Session upon this subject be referred to such Committee.
 - (2.) That such Committee consist of the following Members, viz., Mr. Denichy, Mr. Donaldson, Mr. Faucett, Mr. Owen, Mr. Jenkins, Mr. Murray, Mr. Williamson, Mr. Rotton, and the Mover.
- Question put and passed.

VOTES No. 26. WEDNESDAY, 2 FEBRUARY, 1859.

Irish Female Immigrants:—Mr. Thornton, as Chairman, brought up the Report from, and laid upon the Table the Evidence taken before, the Select Committee to whom was referred, on the 15th December last, the Petition of certain Citizens of Sydney, complaining of the statements made by the Immigration Agent in regard to Irish Female Immigrants, with an instruction to investigate and report upon the allegations contained in the said Petition,—

And moved, That the same, together with the Appendix and Minutes of Proceedings, be printed.

Debate ensued.

Question put and passed.

Ordered to be printed.

1858-9.

IRISH FEMALE IMMIGRANTS.

(Petition of Celtic Association.)

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 15th December last, "to investigate and report upon the allegations contained in the Petition of certain "Citizens of Sydney, complaining of the statements made by the Immigration Agent, "in regard to Irish Female Immigrants," and to whom at the same time were referred "all Proceedings of the Select Committee of last Session upon this subject," have agreed to the following Report:—

Your Committee deem it expedient, in the first place, to call the attention of your Honorable House to the fact, that the * Report which is particularly complained of by the Petitioners, in the final allegation of their Petition, and therein attributed to the Immigration Agent, is a "Report of the *Immigration Board* on the Evidence taken before "them in respect to the Irregularities alleged to have occurred on board the immigrant ship "Lady Kennaway;" that Captain Browne is only *one* of the Members of that Board, and that two other Members thereof have actually signed the Report complained of.

* *File Enclosure*
No. 2 to Sir W.
Denison's
Despatch of
2nd March, 1858.

Moreover, it will be found, although the Petitioners complain of an expression used in this Report on the ground of its referring to "Irish Female Immigrants," that that particular expression in the said Report refers specially to one section, viz., "Irish *Orphan* Immigrants."

The Petitioners appear also to have understood the words used by the Immigration Board in their Report of 5th February, 1855, and complained of by them as conveying an imputation on the moral character of the Irish Female Immigrants. On this point it is due therefore to the Immigration Agent to say that, at the commencement of the inquiry by your Committee, he distinctly stated that he did not intend to convey any such imputation— which statement your Committee fully believe.

Indeed the evidence brought before your Committee conclusively establishes that there was no ground for such an imputation, even if it had been made, and that the character of the Irish Female Immigrants in general is equal to that of any other class of female immigrants ever introduced into this Colony.

Your Committee are of opinion, from the evidence adduced before them, that a large number of the Irish Female Immigrants were not on their arrival in the Colony suited to the higher branches of urban domestic service, but that many of them, with care and training on the part of their employers, have learned to discharge even the duties of these higher branches with satisfaction. Your Committee, however, consider that Irish Female Immigrants in general, with the exception just mentioned, have not been "unsuitable to the requirements of the Colony" or "distasteful to the majority of the people," but, on the contrary, that they have been found most useful, more especially in the rural districts, in every department in which hardwork, industry, and good conduct, are desired. On these points, indeed, the evidence appears abundant.

Your Committee nevertheless feel bound to remark, that their observations as to the unsuitableness of some of the Irish Female Immigrants for urban service refer more particularly

to one special section of the immigrants, consisting of Irish Female *Orphans*. These orphans were sent out mainly with an eleemosynary view, at a season of peculiar want and affliction in Ireland, and were in point of fact forwarded to, and accepted by, the local Government, as apprentices to the vocation of domestic servants, and in pursuance were specially indentured to employers at a much lower rate of wages than that ordinarily paid to servants, part of the consideration of the contract being, in point of fact, the fitting the females eventually for the discharge of the duties of effective and fully qualified servants.

It must also be borne in mind, that the orphan girls being under indenture to employers, every case of complaint became necessarily a matter of official record with the Board before their indentures could be cancelled, and thus appears more prominently than is the case in regard to the ordinary immigrants, against whom, from their not being under indenture, no such record exists.

Your Committee would venture to suggest the advisability of forming depôts in the Southern, Western, and Northern Districts, to be placed under the management of officers responsible to the Government; and that immigrants of a character suitable to the requirements of each of these districts should be forwarded to such depôts; and that a classification of immigrants should be made in the metropolis, and in any country depôts that may, in terms of your Committee's suggestion, be established, into town and country servants, and should be introduced to employers, and hired as belonging specifically to either class, as your Committee feel that an arrangement of this kind would have gone far towards preventing much of the dissatisfaction hitherto expressed by employers in the matter sent for investigation to your Committee, and would at all times enable employers to know generally the character of labor for which the immigrant was best fitted.

GEORGE THORNTON,
Chairman.

*Legislative Assembly Chamber,
Sydney, 2 February, 1859.*

PROCEEDINGS OF THE COMMITTEE.

1858.

TUESDAY, 6 JULY, 1858.

MEMBERS PRESENT:—

Mr. Thornton,		Mr. Faucett,
Mr. Murray,		Mr. Denichy,
Mr. Parkes,		Mr. Rotton.
Mr. Donaldson,		

Mr. Thornton was called to the Chair

Committee deliberated as to their course of procedure.

The Chairman stated that he had requested the Clerk to summon the Venerable Archdeacon M'Encroe, J. V. Gorman, Esquire, and James Curtis, Esquire, before the Committee, as witnesses, for *this day*, and desired the opinion of the Committee as to the expediency of immediately informing the Immigration Agent of their intention to take evidence *this day*, and of *previously* apprising him on all future occasions of the days on which the Committee will meet for the purpose of examining witnesses, in order to enable him to be present on such days, should he think fit.

Committee deliberated, and it was *Resolved*:—

- " 1. That the Clerk of Select Committees do forthwith dispatch a letter, informing
" the Immigration Agent of the intention of the Committee to proceed to
" take evidence *this day*.
- " 2. That Captain Browne be in future *previously* apprised of any meeting of the
" Committee convened for the purpose of taking evidence, in order that he
" may be present thereat, should he think fit.
- " 3. That in the meantime the examination of the witnesses then in attendance
" be proceeded with, upon the understanding that Captain Browne be
" permitted to see a copy of such portion of the evidence as may be taken
" previous to his presence in the Committee Room, should he so desire."

Letter thereupon dispatched to Captain Browne, informing him in the terms of the *first* Resolution.

Letter from J. V. Gorman, Esquire, excusing his attendance before the Committee as a witness for *this day*, read by the Chairman.

Mr. J. Curtis and the Venerable Archdeacon M'Encroe then examined.

During the examination of the witnesses Captain Browne entered the room, and at the close of the examination of the Venerable the Archdeacon by the Committee, requesting permission to put certain questions to that gentleman—

Committee deliberated, and it was *Resolved*:—

- " That it is expedient that any questions which Captain Browne may be desirous
" of putting, from time to time, to witnesses before the Committee, should be
" put through the Chair."

Captain Browne thereupon stated, and the Chairman put, *seriatim*, certain questions to the Venerable the Archdeacon.

Witness then withdrew.

Committee further deliberated.

[Adjourned till Thursday, 15th instant, at *Eleven* o'clock.]

THURSDAY, 15 JULY, 1858.

MEMBERS PRESENT:—

George Thornton, Esquire, in the Chair.

Mr. Parkes,		Mr. Rotton.
-------------	--	-------------

Captain Browne present in the room during the examination of witnesses.

Mr. John Dalley, Mr. W. H. Aldis, and Mr. J. V. Gorman, severally examined.

Committee deliberated.

[Adjourned till Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 21 JULY, 1858.

MEMBERS PRESENT:—

George Thornton, Esquire, in the Chair.

Mr. Rotton,		Mr. Owen.
-------------	--	-----------

Captain Browne present in the room during the examination of witnesses.

By direction of the Chairman, Resolution of the House referring to the Committee on the 20th instant, the following papers, viz.:—

- (1.) Report of the Immigration Board, dated 5 February, 1855, on the evidence taken before them in respect to the irregularities alleged to have occurred on board

board the Immigrant ship "Lady Kennaway."—Ordered to be printed, 24 June, 1858.

- (2.) Return shewing the number of Immigrants who arrived in the Colony of New South Wales during the several years from 1851 to 1856 inclusive, and the proportion in which they were selected from each division of the United Kingdom.—Ordered to be printed, 28 May, 1858—read by the Clerk.

Mr. *Daniel Egan*, M.P., and Mr. *A Stanger Leathes*, examined.

[Adjourned till Tuesday next, at *Eleven o'clock*.]

TUESDAY, 27 JULY, 1858.

MEMBERS PRESENT :—

George Thornton, Esquire, in the Chair.

Mr. Deniehy,

Mr. Rotton.

The Honorable *J. R. Wilshire*, attending by permission of the Legislative Council, examined.

Witness withdrew.

The other witness summoned before the Committee for this day, at eleven o'clock—Mr. Edward James—not being in attendance, and Committee having waited the prescribed time ;—

[Adjourned.]

THURSDAY, 19 AUGUST, 1858.

MEMBERS PRESENT :—

George Thornton, Esquire, in the Chair.

Mr. Owen,

Mr. Faucett,

Mr. Parkes,

Mr. Rotton,

Mr. Deniehy.

Captain Browne present in the room during the examination of the witnesses.

Mr. *J. Hart*, solicitor, examined—

And during the examination of the witness a question having been put tending to obtain his opinion as to the suitability as domestic servants of Irish female immigrants generally—

Committee deliberated as to whether their inquiry was not confined, by the allegations of the Petition, to Irish *Orphan* Immigration.

Mr. Hart's examination concluded.

Mr. *Jeremiah Moore*, Mr. *William Davis*, Secretary to the Celtic Association, and Mr. *Robert Jones*, severally examined.

Committee then deliberated as to the necessity of taking further evidence in support of the Petition.

Motion made (Mr *Deniehy*) and Question—"That in the opinion of the Committee " it is expedient, prior to closing the examination of witnesses in support of the allegations " of the Petition, to take the evidence of one or more Registry Office Keepers, with reference " to the suitability as domestic servants, and general character, of Irish orphan immigrants"—*agreed to*.

[Adjourned.]

TUESDAY, 31 AUGUST, 1858.

MEMBERS PRESENT :—

Mr. Thornton,

Mr. Donaldson.

Mrs. Pawsey and Mrs. Capps were in attendance, as witnesses, but a quorum of the Committee was not present.

[Adjourned.]

FRIDAY, 29 OCTOBER, 1858.

MEMBERS PRESENT :—

Mr. Thornton,

Mr. Rotton.

Mrs. Pawsey, Mrs. Capps, and Captain Browne, were in attendance as witnesses, but a quorum of the Committee was not present.

[Adjourned till Thursday next, at *Eleven o'clock*.]

THURSDAY,

THURSDAY, 4 NOVEMBER, 1858.

MEMBERS PRESENT :—

George Thornton, Esquire, in the Chair.

Mr. Murray, | Mr. Faucett,
Mr. Rotton.

Captain Browne present in the room during the examination of the witnesses.

The Chairman brought under the notice of the Committee the evidences given by Mr. J. Moore and Mr. W. Davis on the 19th August last, to the former of which an Addendum had been attached, and in the latter extensive interpolations made, when such evidences were sent to them for *verbal* and *grammatical* revision,—and desired the opinion of the Committee as to the course it was expedient to pursue in such matters.

Committee deliberated, and it was *Resolved* :—

“ That as the substance of the Addendum and interpolations referred to are not in
“ contravention to the substance of the evidences given by Mr. Moore and
“ Mr. Davis during their examination before the Committee, it is expedient
“ to permit the printing of the same with their evidences.”

Mrs. Capps and Mrs. Pawsey, Registry Office Keepers, examined.

And it appearing from the evidence of Mrs. Capps that certain of the Irish orphan female immigrants had at one time been confined, by way of punishment, for several days at a time in a room at the Immigration Barracks, Hyde Park—

Committee deliberated, and it was *Resolved* :—

“ 1. That the Chairman do *this day* move in the House, that a Message be sent
“ to the Legislative Council, requesting that leave may be given to the
“ Honorable F. L. S. Merewether, Esq., to attend before the Committee for
“ the purpose of being examined, on such day and days as shall be arranged
“ between him and the said Committee.

“ 2. That the Committee do forthwith adjourn for the purpose of personally
“ inspecting the room in the Immigration Barracks, Hyde Park, referred to
“ in Mrs. Capps' evidence.”

[Adjourned till to-morrow, at *Eleven o'clock*.]

FRIDAY, 5 NOVEMBER, 1858.

MEMBERS PRESENT :—

Mr. Murray, | Mr. Rotton.
Mr. Faucett.

The Honorable T. A. Murray, in the absence of the Chairman, was called to the Chair—
Captain Browne present in the room during the examination of the witness.

The Honorable F. L. S. Merewether, Esq., attending by permission of the Legislative Council, examined.

[Adjourned till Tuesday next at, *Eleven o'clock*.]

TUESDAY, 9 NOVEMBER, 1858.

MEMBERS PRESENT :—

Mr. Thornton, | Mr. Rotton.

Captain Browne was in attendance as a witness, but a quorum of the Committee was not present.

[Adjourned till Thursday next, at *Eleven o'clock*.]

THURSDAY, 11 NOVEMBER, 1858.

MEMBER PRESENT :—

Mr. Thornton.

Captain Browne was in attendance as a witness, but a quorum of the Committee was not present.

[Adjourned till Tuesday next, at *Eleven o'clock*.]

TUESDAY, 16 NOVEMBER, 1858.

By direction of the Chairman, the meeting of the Committee convened for *this day*

[Postponed until Thursday next, at *Eleven o'clock*.]

THURSDAY, 18 NOVEMBER, 1858.

MEMBER PRESENT :—

Mr. Thornton.

Captain Browne was again in attendance as a witness, but a quorum of the Committee was not present.

[*Further Proceedings stopped by Prorogation*.]

1858-9.

WEDNESDAY, 22 DECEMBER, 1858.

MEMBERS PRESENT:—

Mr. Thornton,
Mr. Rotton,Mr. Jenkins,
Mr. Denichy.

Mr. Thornton was called to the Chair.

By direction of the Chairman, Resolution of the House, of the 15th instant, appointing the Committee, and referring thereto "all Proceedings of the Select Committee of last Session upon this subject," read by the Clerk.

Motion made (Mr. Rotton) and Question—

"That these Proceedings be adopted as part of the Proceedings of this Committee"—
agreed to.

Committee then considered their course of procedure.

The Chairman informed the Committee that he had requested the Clerk to summon Captain Browne, as a witness, for this day, with a view, if possible, to close the inquiry, and had caused a printed copy of the evidence taken before the Committee of last Session to be previously transmitted to him for his information.

Committee deliberated.

Captain *H. H. Browne*, Immigration Agent, examined.

Committee deliberated, and it was Resolved:—

- "1. That sufficient evidence has now been taken for the purposes of this inquiry.
- "2. That as soon as possible after the printing of Captain Browne's evidence, and the transmission of a copy thereof to each member of the Committee, the Chairman do convene a meeting to consider certain Resolutions to form the basis of a Report."

[Adjourned.]

THURSDAY, 27 JANUARY, 1859.

MEMBERS PRESENT:—

George Thornton, Esq., in the Chair.

Mr. Denichy,

Mr. Faucett,

Mr. Jenkins.

The Chairman informed the Committee, that having been apprised that a complete copy of the evidence taken had been transmitted to each member of the Committee, he had convened the present meeting to consider the heads of a Report.

Committee deliberated.

Motion made (Mr. Faucett), and Question proposed:—

- "1. That the Petitioners appear to have understood the words used by the Immigration Agent in his Report of 5 February, 1855, and complained of by them, as conveying an imputation on the moral character of the Irish female immigrants. On this point it is due to the Immigration Agent to say, that at the commencement of the inquiry by your Committee, he distinctly stated that he did not intend to convey any such imputation; and the evidence brought before your Committee conclusively establishes that there was no ground for such an imputation, even if it had been made, and that the usual character of the Irish female immigrants is equal to that of any other class of female immigrants ever introduced into this Colony."
- "2. That the purport of this Resolution be embodied in the Report."

Committee deliberated.

Question put and agreed to.

Motion made (The Chairman) and Question,—

- "1. That, although the Petitioners complain of the expression used by the Immigration Agent in his Report of the 8th February, 1858, on the ground of its referring to Irish female immigrants generally, it will nevertheless be found on reading that particular Report, that Captain Browne therein specially refers to one section, viz.:—Irish orphan immigrants."
- "2. That the purport of this Resolution be embodied in the Report."

—agreed to.

Motion made (Mr. Faucett) and Question proposed,—

- "1. That, from the evidence adduced before your Committee, they are of opinion that a large number of the Irish female immigrants were not, on their arrival in the Colony, suited to the higher department of urban domestic service, but that many of them, with care and training on the part of their employers, have learned to discharge even the duties of this department with satisfaction. The Committee, however, are of opinion that Irish female immigrants in general (with the exception just mentioned) have not been unsuitable to the requirements of the Colony, or distasteful to the majority of the people; but, on the contrary, that they have been found most useful, more especially in the rural districts, in every department in which hard work, industry and good conduct are desired. On these points the evidence appears abundant."
- "2. That the purport of this Resolution be embodied in the Report."

Committee

Committee deliberated.

Question put and agreed to.

Motion made (Mr. Denichy) and Question.

- “ 1. That the Committee feel bound to remark that the observations as to the
“ unsuitableness of some of the Irish female immigrants for urban service
“ refer more particularly to one special section of the immigrants, consisting
“ of Irish female orphans. These orphans were sent out mainly with an
“ eleemosynary view, at a season of peculiar want and affliction in Ireland,
“ and where, in point of fact, forwarded to, and accepted by, the local
“ Government as apprentices to the vocation of domestic servants, and in
“ pursuance, were specially indentured to employers at a much lower rate of
“ wages than that ordinarily paid to servants, part of the consideration of
“ the contract being, in point of fact, the fitting the females eventually for
“ the discharge of the duties of effective and fully qualified servants.”

- “ 2. That the purport of this Resolution be embodied in the Report”

—agreed to.

Motion made (The Chairman) and Question proposed,—

- “ 1. That it must, however, be borne in mind, that the orphan girls being under
“ indenture to their employers, every case of complaint became necessarily a
“ matter of official record with the Board before the indentures could be
“ cancelled, and thus appears more prominently than is the case in regard to
“ ordinary immigrants, against whom, from their not being under indenture,
“ no such record exists.”

- “ 2. That the purport of this Resolution be embodied in the Report.”

Committee deliberated.

Question put and agreed to.

Motion made (The Chairman) and Question,—

- “ 1. That it is expedient to recommend that depôts should be formed in the
“ Southern, Western, and Northern Districts of the country, for the purpose
“ of enabling the Government to forward immigrants of a character suitable
“ to such places, to be placed under the management of some officer responsible
“ to the Government.

- “ 2. That the purport of this Resolution be embodied in the Report”

—agreed to.

Motion made (Mr. Denichy) and Question proposed,—

- “ 1. That a classification of the immigrants should be made in the metropolis and
“ in any country depôts—that may in the terms of your Committee’s suggestion
“ be established—into *town* and *country* servants, and should be introduced
“ to employers and hired as belonging specifically to either class. An arrange-
“ ment of this kind, your Committee feel, would have gone far towards
“ preventing much of the dissatisfaction hitherto expressed by employers in
“ the matter sent for investigation to your Committee, and would at all
“ times enable employers to know generally the character of labor for which
“ the immigrant was best fitted.”

- “ 2. That the purport of this Resolution be embodied in the preceding Resolution
“ agreed to by the Committee, and form part of the Report.”

Committee deliberated.

Question put and agreed to.

Motion then made and Question,—“ That the Chairman do prepare a Report, embody-
“ ing the purport of these Resolutions, for the consideration of the Committee,”—agreed to.

[Adjourned till Tuesday next, at half-past Eleven o’clock.]

TUESDAY, 1 FEBRUARY, 1859.

MEMBERS PRESENT:—

George Thornton, Esquire, in the Chair.

Mr. Rotton,

Mr. Denichy.

Mr. Jenkins,

The Chairman laid before the Committee a Draft Report, embodying the purport of certain Resolutions agreed to by the Committee at their last meeting, as the basis of their Report.

Committee deliberated:—

And Mr. Rotton desiring the opinion of the Chairman as to whether it was in the power of any member of the Committee to *substantially* alter the paragraphs of the Draft Report now submitted for their consideration,—

The Chairman stated, that inasmuch as the paragraphs of the Draft Report simply embodied the purport of certain Resolutions agreed to at a meeting of the Committee summoned specially to consider and determine the heads of Report, he was of opinion that it was not in the power of any member of the Committee to make *substantial* alterations therein, without a special meeting of the Committee being convened for the purpose of reconsidering the Resolutions themselves.

Draft Report then read 1^o.

Committee deliberated.

Motion made, and Question—“ That this Report be now read 2^o, and considered
“ paragraph by paragraph”—agreed to.

Introductory paragraph read, and agreed to without amendment.

Paragraph 1 (*now* 3) read.

Motion

Motion made (Mr. Jenkins) and *Question proposed*,—

“ That this paragraph be amended, by the addition of the words ‘ which statement
“ ‘ your Committee fully believe, ’ at the end thereof.”

Committee deliberated;—

And Mr. Deniehy having stated that he objected to the motion proposed by Mr. Jenkins being put from the Chair, without a special meeting of the Committee being convened to reconsider the particular Resolution embodied in this paragraph which such motion sought to amend, inasmuch as the proposed addition to such paragraph would tend *substantially* to alter the same,—here withdrew.

Committee further deliberated.

Question put and agreed to.

Words added accordingly.

Paragraph *verbally* amended.

Paragraph, as amended, then read, and agreed to.

Paragraph 2 (*now* 4) read, and agreed to without amendment.

Paragraph 3 (*now* 2) read, *verbally* amended, and agreed to.

Paragraphs 4 (*now* 5), 5 (*now* 6), and 6 (*now* 7), read, and agreed to without amendment.

Paragraph 7 (*now* 8) read, *verbally* amended, and agreed to.

New Paragraph (*now* 1) *proposed* (Mr. Rotton),—

“ Your Committee deem it expedient, in the first place, to call the attention of
“ your Honorable House to the fact, that the Report, which is particularly
“ complained of by the Petitioners in the final allegation of their Petition,
“ and therein attributed to the Immigration Agent, is a Report of the
“ *Immigration Board* on the evidence taken before them, in respect to the
“ irregularities alleged to have occurred on board the immigrant ship ‘ Lady
“ ‘ Kennaway; ’ that Captain Browne is only *one* of the members of that
“ Board, and that two other members thereof have actually signed the Report
“ complained of.”

Motion made and *Question proposed*,—“ That this paragraph, as read, stand part of
“ the proposed Report.”

Committee deliberated.

Question put and agreed to.

New paragraph *proposed* (Mr. Jenkins).

“ Your Committee would further suggest the inexpediency of again resorting to
“ Orphan Immigration.”

The Chairman, however, declined to put the said paragraph to the Committee, and stated as his reason for so declining that he considered its purport to be beyond the scope of the inquiry referred for their consideration and report.

Committee further deliberated, and altered the order of arrangement of certain of the paragraphs in the proposed Report.

Motion then made and *Question*—“ That this Draft Report, as amended, be the
“ Report of the Committee”—*agreed to.*

Chairman requested to Report to the House.

LIST

LIST OF APPENDIX.

1858-9.

(To Evidence given by Captain Browne, on 22 December, 1858.)

APPENDIX A.

Report from the Orphan Immigration Committee, dated 6 December, 1848, relative to the Female Orphans who arrived per "Earl Grey," covering Extract from Minute of 21 October, No. 48-3, showing the general rules acted upon by the Committee in placing the females in service 54

APPENDIX B.

Minute of the Orphan Immigration Committee, dated 13 February, 1849, relative to a Special weekly sitting of two Magistrates at the Water Police Court, to adjudicate in cases of complaints between masters and servants 57

APPENDIX C.

Letter, dated 26 April, 1849, from the Chairman of the Orphan Immigration Committee to the Colonial Secretary, transmitting a Report respecting the proposed emigration of Orphans from the workhouses in England, covering an Extract from Minutes of Proceedings, on 23 February, 1849 57

APPENDIX D.

Extract from Minute of Orphan Immigration Board, dated 8 December, 1849, stating their concurrence with the Melbourne Board, in the opinion expressed by them that ordinary Female Immigrants are much more serviceable than the Orphans 58

APPENDIX E.

Letter, dated 8 November, 1849, from the Superintendent of Port Phillip to the Colonial Secretary with reference to Orphan Immigration, together with enclosure.. .. . 58

APPENDIX F.

Minute of the Orphan Immigration Committee, dated 18 March, 1850, relative to the expediency of discontinuing Orphan Female Immigration for the present 59

APPENDIX G.

Letter, dated 27 April, 1850, from the Immigration Agent to the Colonial Secretary, forwarding Minute of the Orphan Immigration Committee, representing the expediency of discontinuing for the present Female Orphan Immigration 60

APPENDIX H.

No. 1.

Letter, dated 21 May, 1850, from the Superintendent of Port Phillip to the Colonial Secretary, respecting Orphan Immigration to Port Phillip—covering 60

No. 2.

Letter, dated 21 May, 1850, from the Chairman of the Orphan Immigration Committee at Melbourne to the Colonial Secretary, upon the same subject 62

No. 3.

Tabular statement showing the different periods of the hiring of Female Orphan Immigrants, from the 15th December, 1848, to 30th April, 1850.. .. . 63

APPENDIX I.

Letter, dated 14 June, 1851, from the Immigration Agent to the Colonial Secretary, reporting on Letter from the Superintendent of Port Phillip, relative to the expediency of discontinuing Irish Female Orphan Immigration at the entire cost of the Colony 64

APPENDIX J.

Return, shewing 254 cases of Orphan Female Apprentices whose indentures were cancelled by the Court of Petty Sessions at the Water Police Court, during the period from 16 March, 1849, to 3 May, 1851 65

APPENDIX K.

No. 1.

Letter, dated 2 December, 1849, from Mr. F. McArthur to the Immigration Agent, Sydney, respecting the bad conduct of the Female Orphans forwarded to the Goulburn Immigration Depôt—together with 73

No. 2.

List of Immigrants, who arrived per ships "Inchinnan," "Lady Peel," "Digby," "Earl Grey," and "Diana," and were afterwards forwarded to Parramatta by the Government 73

APPENDIX L.

No. 1.

Letter, dated 7 September, 1849, from Mrs. Elinor Magrath, of Seone, to the Bench of Magistrates at that place, relative to the conduct of Mary Littlewood, an Irish Female Orphan girl, in her service 73

No. 2.

Copy of Depositions in the case of Magrath v. Mary Littlewood, dated 14 Sept., 1849 74

APPENDIX M.

No. 1.

Letter dated 12 Dec., 1849, from Superintendent of Parramatta Immigration Depôt to Agent for Immigration, Sydney, relative to the conduct of Betsy M'Cormick, per ship "Inchinnan," and forwarding 75

No. 2.

Copy of Depositions in case of Arthur Barker v. Betsy M'Cormick, dated 12 Dec., 1849 75

APPENDIX N.

Letters complaining of the conduct of Orphan Female Immigrants in service :—

No. 1.	
From the Honble. E. Deas Thomson, dated 6 July, 1850	76
No. 2.	
From Mr. William M'Kee, Port Macquarie, dated 14 October, 1851	76
No. 3.	
From Mr. Henry Chatto, dated 4 January, 1850	76
No. 4.	
From Mr. Gilbert Wright, dated 14 July, 1849	77

APPENDIX O.

Statement of the Sub-Matron in reference to the girls who came to this Colony under her charge per ship "Lady Kennaway"	77
---	----

APPENDIX P.

Letter, dated Sept., 1852, from Capt. Browne to the Right Honorable Sydney Herbert, M.P., relative to the conduct of the English Needlewomen dispatched to this Colony under his auspices	77
---	----

APPENDIX Q.

No. 1.	
Memo. from His Excellency Sir C. Fitz Roy to Capt. Browne, inquiring as to the hiring of the Isle of Skye laborers who arrived per "Ontario"	78
No. 2.	
Memo. from Capt. Browne to Sir C. Fitz Roy in reply, stating their unsuitableness to the requirements of the Colony	78

1858.

Legislative Assembly.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

IRISH FEMALE IMMIGRATION.

TUESDAY, 6 JULY, 1858.

Present:—

MR. THORNTON,
MR. PARKES,
MR. DENIEHY,

MR. DONALDSON,
MR. ROTTON,
MR. FAUCETT,

MR. MURRAY.

GEORGE THORNTON, Esq., IN THE CHAIR.

James Curtis, Esq., called in and examined:—

1. *By the Chairman:* What is your name? James Curtis.
2. Have you been long resident in Sydney? Yes.
3. Were you born in Sydney? No; I was born in Parramatta. I have been in Sydney thirty-four years.
4. I believe you are an undertaker, living in Hunter-street? I am.
5. Have you been in the habit of employing labor, especially of the class of female servants? Yes; we generally have about four, for a number of years past.
6. Have you at any time employed that description of servants known as Irish orphans? Well, I think generally.
7. Irish immigrant girls? Yes, generally; for the last few years we have about four at a time. We occasionally change them for some cause—some getting married, or something of the kind.
8. *By Mr. Deniehy:* Have a large number married from your house, Mr. Curtis? One married the other day—the cook—whom we had had three or four years.
9. *By Mr. Rotton:* Did you say you were born at Parramatta, Mr. Curtis? Yes.
10. *By the Chairman:* What is your opinion of the character and abilities of these girls as servants? Well, they are generally very good girls; respectful in their manners, and very willing to learn; and, generally speaking, so far as I am able to judge, I think they turn out very well.
11. Are they honest? I think remarkably so. They are honest, and have other good qualities—they are virtuous.
12. I think you stated you generally found them remarkably honest? Yes, very honest, and respectful in their manner, and willing to learn, and I think well suited to the middle classes of society. They accommodate themselves to circumstances. Some servants wish to examine the kitchens, and see if there are comfortable apartments; these girls accommodate themselves to circumstances.
13. You say they are a description of servants suitable to the middle classes, because they accommodate themselves to circumstances? Yes: they are more respectful in their manners. Some servants, if they get employed in the upper classes of society, are very well; but if in the middle class, they think they know more than their mistresses. These girls don't pretend to much generally, but are willing to learn, and pretty soon become useful servants, and do plain cooking and house-work.
14. You find them useful, respectful, and honest? Yes, I think almost without exception, so far as my experience goes.

James Curtis,
Esq.
July, 1858.

- James Curtis, Esq.
6 July, 1858.
15. And you have been a constant employer? Yes. We generally keep four, and of course there are some changes; some get married, some go with their friends, and some get better wages; they leave for various causes.
16. How long have you been a citizen of Sydney? I scarcely understand what you mean by citizen; I served my apprenticeship in Sydney.
17. How long have you been resident in Sydney? I have been resident for 34 or 35 years, since I first came to Sydney.
18. Have you had any conversation with other citizens in respect to this matter before the Committee? Oh! yes, many times, various times. For years I have heard remarks about the girls; I have heard some persons find fault that they are not quick servants, and I have heard other persons speak of the girls turning out well, and keeping them for years.
19. From your experience as an employer and as a citizen, and from your conversation with other people in Sydney, do you think these girls are as stated, "as being most unsuitable to the requirements of the Colony, and at the same time distasteful to the majority of the people?" Certainly not. I think they are remarkably suitable. They are willing to learn, and another great reason is, they are willing to take less wages. At present we have a very good girl at 8s. per week; I don't say but what she is as good as one we are paying 13s. a-week to. We have one at 8s., two at 10s., and one at 13s. a-week. I find that these girls, not professing to know or do a great deal, take 8s. a week, when another girl would ask 12s. or 13s., and for the middle class this is very high wages. Some of these girls take 7s. a week: at first they take less, but a girl soon finds out that wages are higher. I raise my wages by way of encouragement. I have always done this. If you get a good girl she is worth more, and I give her the same as the others are getting, although I always first agree at about £20 a year.
20. *By Mr. Rotton*: What is your parentage, Mr. Curtis? What do you mean?
21. Of what country is your father and mother? My father was an Englishman—West of England. I may say, in engaging a servant I never look for a particular country or religion, I generally make them agree one with another. The laundress is a Scotch girl and a Presbyterian, whom we have in our employment now, for a second time, in all two or three years.
22. The girls that you have given evidence concerning now are those that are alluded to in this petition, are the same class of immigrants, Irish orphan immigrants? I imagine they are the same; they are the girls I have been in the habit of employing some three or four years generally. Now, this girl I was speaking of, she is not Catholic, but has a Scotch accent. I am not sure whether she is not North of Ireland. Several of the girls I have been speaking of are not Catholics; they are Irish girls, I think, from the North of Ireland. Some are Catholics; I think the majority are.
23. Are you aware they are of this particular class of immigrants. Many of the Irish girls, immigrants, are not of this particular class complained of? I could not speak of that, whether they are orphan girls. I have known some of them to have been orphan girls, but I have known that by chance.
24. *By the Chairman*: Does your evidence refer to orphan girls? We have had some of them, perhaps half of them. I heard they were orphans by chance entirely, as I never asked the girls; very likely they would admit it to me if asked. I hardly know some of them what they are.
25. *By Mr. Rotton*: Are not these Irish orphan girls apprenticed always? I am not aware of it.
26. Are you one of the subscribers to the petition presented to the Legislative Assembly? No, I think I did not sign the petition—that was by mere chance; it did not come in my way, or I should have signed it.
27. You cannot distinctly state whether these questions that you have answered now have been in reference to the girls of this particular class—Irish orphan immigrants—or Irish female immigrants generally? I have understood Mrs. Curtis to say, after we have had some of the girls some weeks, she has said, "Oh! she is one of the orphan girls." It is in that way I have been guided. We have had none indentured to us; we have had some under an agreement. I don't remember the time Captain Browne has been speaking of. Friends of mine have had very excellent girls indentured, and were very sorry to part with them. I have heard of five or six of my neighbours having had orphan girls; I have heard this from themselves. The only distinction I draw is by hearsay. If we had any of them they were not indentured; if they were, of course I should know it beyond doubt.
28. They were not indentured to you? No. I am not prepared to draw that distinction. I understood some of them were orphan girls.
29. You don't know of your own knowledge that they were so? No; I have no means of knowing. They have never been indentured to me or to Mrs. Curtis, or I should have known it.
30. Do you know anything generally of the character of the Irish female orphan immigrants? No, except in the way I have stated. I am sure I have heard certain girls were called orphan girls; my friends have mentioned it, and said, "Oh! that is one of the orphan girls," when they came to wait at table, or were in the shop. I know at first there was a good deal of talk against them by some. Some said they were not good servants; others defended them, and said they did become good servants,—that is in speaking of the lot that first came out. Since then I was not aware whether more such girls, understood as orphans, came out in a particular ship—whether it is understood they were orphan girls I don't know. Some have no father and mother, and are spoken of as orphan girls by their friends.

The Venerable the Archdeacon M'Encroe, Archdeacon of Sydney, called in and examined:—

1. *By the Chairman*: Have you seen the petition which was presented to the Legislative Assembly with regard to the Irish Orphan Immigrant Girls? Yes.
2. Turning your attention to the quotation in the first paragraph, commencing with the words "as being most unsuitable to the requirements of the Colony"? In the first place, I don't think the despatch was confined merely to Irish orphans, but to Irish immigrants generally. The Irish orphans came out here some years ago, and all were not suitable as house servants; some were, others were not.
3. But the language of the despatch complained of is, that "orphan immigration having been so distasteful to the inhabitants of the Colony, the Board did not contemplate the arrival of any fresh drafts of that class of immigrants"; it confines itself to orphan immigration, and not to Irish girls generally? I understood from the despatch that they were not to send as many female Irish immigrants as hitherto; that they were to exclude the usual proportion of Irish female immigrants. The number of immigrants that are really orphans are very few.
4. The paragraph quoted in this petition—has it given offence? Yes, it has.
5. Of what character and to what section of the community? It has given great offence to the Irish portion of the community. In the despatch it was stated they were "most unsuitable to the requirements of the Colony,"—I deny it,—and at the same time distasteful to "the majority of the people" I deny that also. I demand the evidence on which that statement was founded; because a man's *ipse dixit* will not suffice, but there must be evidence taken at that time to justify it.
6. In respect either to Irish orphan immigrants, or Irish female immigrants, you have no doubt had good opportunities of judging of their character? Yes, many opportunities.
7. What is your opinion generally of them? My opinion is, that these female immigrants are equal to any description of servants, and suitable to the middle classes of society. Some are not so well adapted for the higher classes of servants, they never have had an opportunity of being trained to that sort of service; and when servants were scarce, people were glad to get them. But when a larger number of immigrants arrived, of course they looked out for more competent servants, and were inclined to pick a quarrel with the orphan girls, and turned them off for little or no reason.
8. *By Mr. Deniehy*: As the Catholic Archdeacon, and spiritual adviser of a great body of Catholics, you have had abundant opportunities of knowing the moral character of the Irish female immigrants? Yes: they are generally very honest, moral, and attentive to their religious duties, so far as they have the opportunities of attending them. I may be allowed to remark, that one cause of complaint which many masters and mistresses had, was when the orphan girls were desirous to attend, on Sunday mornings, a place of worship, there was an unwillingness on the part of some masters and mistresses to allow them to do so, and this was a frequent cause of complaint among them.
9. Have you had opportunities of seeing their fitness for service? Some of them turned out quite efficient as domestic servants, if their mistresses were kind in teaching them domestic service. They were very pliable and very hard working, and I can safely say that some of them have had to do the work of two servants, on farms and in places where there is a good deal of work to be done.
10. Have you ever heard from any body any objection to them? The only objection I have heard is that they were not at first thrifty servants.
11. Was that a general objection, or a particular objection? A particular objection. I should not expect these poor girls to become finished servants all at once. I have no doubt that where some trouble was taken with them they became good servants.
12. Although they are all not first-class servants, they are all fit for some work? No doubt of it; much depends on the patience and kindness of the persons to whom they are hired.
13. Have you at any time heard any report, from any section of society, that there was a distaste to this class of immigrants amongst the colonists? Certainly not from the majority of persons. Some persons did not like them, and called them offensive names, such as "dirty Irish" and "ignorant Irish Papists." This annoyed them very much, and they then got angry, and answered their mistresses in, perhaps, offensive language.
14. *By Mr. Rolton*: The evidence you have given, Mr. Archdeacon M'Encroe, does it refer to this particular class of female Irish immigrant orphans, or to Irish female immigrants generally? It refers to both. My attention was particularly directed to the orphan girls, because they came in great numbers, and arrived at a time when it was difficult to get employment for them. A very great number of the orphans made as good servants as any other class.
15. I think you said you were under the impression that the despatch referred to female Irish immigration generally? Yes; for the despatch took occasion from the report on the "Lady Keenaway's" girls to draw that unfavorable conclusion. That is my impression; for if they were so bad, why not get rid of them all. There was no case made out, or any occasion for drawing such a sweeping conclusion as would tend to exclude Irish female immigration.
16. Your evidence has been with regard to Irish female immigrants generally? Not entirely. I can give you more extended evidence on their behalf. It was in the case of the orphan girls particularly that this document was drawn up, and from the misconduct of a few, conclusions are drawn to the detriment of female immigrants from Ireland generally. A similar attempt was made about the same time in Melbourne and Geelong, but it failed.
17. How long ago was it since you had occasion to remark the complaints that you stated just now you heard made against them? There were not many complaints made against them. A great many orphans were sent out too quickly. The Government were to blame for sending them out in too quick succession. After the gold discovery the Government were
anxious

The Ven.
Archdeacon
M'Encroe.
6 July, 1858.

The Ven,
Archdeacon
M'Encroe.

6 July, 1858.

anxious to introduce a number of female immigrants, and the agents of the Government, seeing that wish, sent out, in quick succession, a large number of them, so that it was difficult to get employment for them in Sydney, and too many, I may say, were consequently thrown on the streets. Disagreements then arose between the girls and some masters, who got rid of them, and got new servants.

18. Are you of opinion that particular class were suitable to the requirements of the Colony, and were not distasteful to the majority of the people? I think they were very suitable for the country districts. And with regard to the statement that they are unsuitable and distasteful to the majority of the people, I deny it, and call for the evidence that should have been taken before that despatch was penned, because it ought not to have been written on the mere report of a few persons.

19. Are you one of the subscribers to this petition? Yes.

20. In the prayer of the petition I see these words, "and that the proposed Committee should also take into consideration what further steps ought to be taken to render the Immigration Department in Sydney more efficient in supplying the inhabitants of the interior with female servants, than it is found at present to be"—can you offer any suggestions to the Committee how to carry out that object? Yes. I have all along spoke of the propriety of conveying these orphan girls out of Sydney. I was quite averse to have them in Sydney at all, where the best servants were required, and where these girls were exposed to great temptations when out of service.

21. Are you aware that the wishes of many of them were to be distributed in the interior? Some of the most sensible would go into the country, but others imagined that going into the interior of the country was like going to a barren desert.

22. If they had the means? Yes. They were more required in the country, and were more fitted for the country than town service.

23. What means would you suggest? The means in existence in former years. Look at that good and energetic woman, Mrs. Chisholm; see what she did; and what a single individual did the Government might easily do the same. The Government would better employ a sum of money in sending them up the country rather than throw them on the streets of Sydney, and send them to perdition, for that is the result of this neglect. It is penny wise and pound foolish policy. It would be better to throw the passage-money into the sea than leave these girls unemployed in Sydney, while a few pounds for each would get them to Bathurst or Goulburn, where their services would be useful, and where they would be saved from infamy.

24. I think you stated generally they were more fitted for the country service than town service? No doubt of it.

25. Have you any knowledge, Mr. Archdeacon, whether the Unions in Ireland referred to are Orphan Institutions exclusively? No, they are not. Some are for poor persons who get into the workhouses; a great many of them are not orphans at all. Several girls were sent out from the English workhouses. I recollect, some time ago, asking whether the Government selected the females from the workhouses, and I heard that the Commissioners would not select any of them because they were generally contaminated at an early age. Not so in Ireland, and that is one reason why these poor orphan girls were sent in preference, because the morals of those in the English workhouse could not be depended on.

26. *By Mr. Faucett*: I understand you to say there are two classes, one known as orphan immigrants, and the other under the general designation of female immigrants? Yes. It is almost a misnomer to call them orphans, it is. The first ship that brought out the so called orphans was the "Earl Grey," and many of them were taken from the workhouses. Some were very indifferent, and were sent to Moreton Bay, where they turned out well. Some were considered to be very worthless; but I heard that nearly all turned out well, from a gentleman who had inquired particularly into the matter in that district.

27. Do I understand you to say, that of the orphans known particularly as the orphan immigrants, a large number made very passable servants? No doubt of it, by the kindness and instruction of their masters—but more particularly of their mistresses. Others were not so good at first, but were capable of becoming good servants. They were very willing to learn, and hard working.

28. Of the rest of the other female immigrants a large number were fitted for the service of the higher classes? Yes.

29. Are you aware in what way the female immigrants generally conducted themselves in the country parts? From what I have heard, they were very fair servants and did very well. No doubt some of them were seduced by their masters and masters' sons, and these servants had not sufficient care taken of them. The parties who were really guilty were not punished as they deserved, and these poor girls were thrown on the world with nobody to look after them.

30. Are you aware that a large number of these female immigrants that have gone to the country parts have turned out most respectable women? I am of opinion that seven-eighths have.

31. Have you any reason to suppose that Irish female immigrants through the country parts are at all distasteful to the majority of the inhabitants? I never heard an insinuation of the sort.

32. Had you any reason to suppose that they were at all distasteful to a great number of the inhabitants? There might be some few who did not like them—who did not approve of them.

33. Taking the Irish female immigrants as a body, have you any reason to suppose they were inferior in respectability or general conduct to any other class of female immigrants? No, on the contrary. I am of opinion they were equal to the usual body of hard working servants brought from any part to this Colony.

34. With respect to conveying them into the interior, do you think the Government might

as well afford to spend a little more money in sending them to the country after bringing them out here? Yes; a good deal of the immigration fund is thrown away by their being kept in Sydney. Some of the girls get ruined in Sydney who would have made good servants, and got well married, if sent up to the country.

35. Are you aware that there is a great demand for servants of that kind in the country? Yes; far more than there is in Sydney.

36. Would it not be a mere matter of justice towards the country parts to send them in the country, instead of keeping them in Sydney? Yes; because the immigration fund is raised from the sale of land in the country, and those who increase that fund ought to have the benefit of it.

37. *By Mr. Parkes:* It appears from the records, that in 1850, 1851, and 1852, about 4,000 girls came out who were known in the Colony as orphan girls, whether they were orphans or not? Yes, they were known so, chiefly in Sydney.

38. With the exception of the immigrants by the "Lady Kennaway," they were all of that description? I think so.

39. The report before the Committee which contains the words complained of in the petition, and which caused the appointment of this Committee, refers exclusively to these female Irish immigrants? I am inclined to think it applied to nearly all who came from Ireland here.

40. This fact is stated, that we could get information from the experience of persons with reference to this particular portion of the Irish immigrants? Yes.

41. You have been in communication with many of them, individually, when they arrived here? Yes.

42. Have you any knowledge of the manner they were hired out during the years 1850, 1851, and 1852? Yes; for three years.

43. Did you visit any of the ships particularly? Yes.

44. Did they ask your advice before they were hired? I said when a person was applying for a servant, not to give these girls as servants to persons who were not known—that they should not be hired to persons who were not respectable people.

45. Did many of these girls who were engaged in Sydney attend to their religious duties? Yes, when they were allowed to do so.

46. Did it come under your knowledge, as their religious instructor, whether many of them left their situations before their time expired, for any reason? I believe they did.

47. Could you form any opinion of what was the reason of their leaving? Yes: Sometimes the complaint of the employers was that they were not useful servants; and sometimes the masters were not willing to let them come on the Sunday morning to Divine Worship, but they might go in the evening. I could not advise them to come in the evening, as they might meet bad characters and idlers. This caused many of the disputes between the masters and servants.

48. Did you follow many of these persons through the circumstances of their lives for three or four years, from one situation to another? Yes.

49. Are you aware whether many of them married respectably? Yes.

50. Some of them known to you as heads of families? Yes.

51. Is the proportion of these particular girls, who either married or remained in service, so far as your knowledge goes, to be relatively compared with other young women? I think so. No doubt some of these orphans were very young, and had not much sense or knowledge of the wicked ways of the world,—they were sometimes entrapped in the Registry Offices.

52. You frequently visit the members of your own congregation—have you frequently visited the homes of these Irish girls that had settled? Yes.

53. Are they discharging all the duties as heads of families? Yes; many of them very respectably.

54. You said just now in evidence, that these young women were accused of being dirty Irish and ignorant Papists? No doubt of it.

55. Did you mean this was said as a reproach by their employers? Yes.

56. Did any instance come to your own knowledge? Yes: that was the cause of much of the disputes.

57. Of these precise words, or words synonymous, being used? When they asked to go to their place of worship in the morning they got this answer.

58. These girls complained to you that their masters or mistresses called them dirty Irish and low Papists when they wished to go to a place of worship? Yes.

59. You said this was felt by the females as an injustice on account of their masters refusing to allow them to absent themselves early in the morning to go to mass? Yes.

60. Don't you think that it may have been a reason for this injustice that in Protestant families it is contrary to arrangement to get leave for more than every second Sunday? I think that may be so.

61. Have you known, Mr. Archdeacon, any instances of these girls being in the service of Protestant families, who were well treated? Yes, a great many were. There is not a doubt of that.

62. I suppose you have known some instances where the girls turned out badly? Yes; but not so great a number as of other classes. I believe some of these poor girls were seduced.

63. So far as your opinion goes, do you think there were a greater number of instances than among the other classes of young women? No: some few were sent to the "House of the Good Shepherd" from time to time.

64. You said you were of opinion that this cry was got up to exclude Irish immigration? Yes, that is my opinion.

65. Have you any data, or fair ground to rest such an opinion on? I have, from the despatch complained of, and the despatch sent from England.

66. Have you seen the return laid on the Table of the Legislative Assembly, by which it

The Ven.
Archdeacon
M'Encroe.

6 July, 1858.

The Ven.
Archdeacon
M'Encroc.

6 July, 1858.

appears that the excess of immigrants from Ireland is very great, whilst there a very great deficiency of Immigrants from England? That is owing to the Assisted Immigration system, not to the working of the Immigration Board.

67. Is that owing to the Assisted Immigration system being extended? Yes; when they could not get females from England they had to get them from Ireland.

68. So far as that return goes it does not prove any disposition to exclude the Irish? No; but I think a new system has been introduced after that despatch was written. I have heard the correctness of that return called in question. I think it would be well to examine Mr. Cashman, the first clerk of the Immigration Office, about that return.

69. Upon the whole, you are deliberately of opinion, after considerable intercourse with these girls, that this opinion expressed by the Immigration Agent is unjust? Yes, I think so. I have seen no evidence to justify the conclusion he has come to. There may be evidence, and I should be glad to see it.

70. That is applying only to this class of immigrants, because the Immigration Agent said he only had reference to this particular class? I am glad that explanation has been given.

71. *By Mr. Denichy*: Your reason for believing this is a cry got up for their exclusion is the absence of any evidence to substantiate the assertion made in this despatch? Yes. I should be glad to see the evidence, with the names of the colonists who repudiated any further immigration of this sort.

72. *By Mr. Parkes*: I think you stated, whilst you denied they were distasteful to the colonists, you almost in the same breath said, that when other immigrants came into the Colony people got rid of them for the others? Yes, the people in Sydney.

73. Would not that prove a desire to get other immigrants? They like to change, because they think they may get better servants.

74. Would not that go to prove the accuracy of the Immigration Agent's statement? They availed themselves of the opportunity to get rid of them; they are very fond of change.

75. *By Mr. Denichy*: These instances you refer to are those who have the inferior portion of the immigrants? Yes. I know gentlemen that have had these girls for years, and would not part with them on any account.

76. *By Mr. Faucott*: A great many were in Protestant families? Yes, who paid great attention to them, and treated them kindly and made them comfortable. It depended very much on the temper and feelings of the employer how they turned out.

77. Some were in the employ of the first families in Sydney? Yes; and these were the most likely to pay more attention to them.

78. *By Mr. Rotton*: You stated just now that many of the girls complained of being called dirty Irish Papists? Yes.

79. Did you ever inquire into the truth of this statement? No; for I had no doubt of the truth of the statement. In some cases I told them not to notice it, but to go on with their work. If the masters or mistresses forgot themselves, I could not institute inquiries into private families.

80. Are you not aware that many of the girls were put out at low wages, and when they found they could get better wages were dissatisfied with their situations—might they not make this complaint to you for the purpose of trying to get away from their situations? No; they would not tell me a lie in the matter; besides, I could not get them removed from a situation, or interfere to get them another.

81. Were you aware of the cause for their wishing to leave their service? Some got better wages, or had the expectation of getting more considerate and kind employers, and where they would have the opportunity of being allowed to go to their place of worship. They were very much thwarted in that matter.

82. Are you at all aware of the class of employers these girls had, who treated them in that way, and called them opprobrious names? They were generally of an inferior class and position in life; generally persons who had got suddenly rich, and never had servants before. They were persons of no consideration.

83. You don't think this conduct was at all general? No. The cause of dissatisfaction was with some vulgar masters who had got up in the world. Those who had got money by the gold discovery are the most overbearing towards their servants.

84. *By Mr. Faucott*: You would not say this term was used by many people? No, only by some masters; but this was the occasion of many complaints.

85. It was by a small number these opprobrious terms were used? Yes. I told them no respectable person would use this language.

86. Did you not generally find that these terms being used to the servants caused an unpleasant feeling to exist? Yes.

At the request of Captain Browne, who was present during the examination, the following questions were put to the witness:—

87. *By the Chairman*: Were you, Mr. Archdeacon, a member of the Orphan Immigration Committee? Yes.

88. You attended, I believe, very regularly? Pretty much so.

89. Were you one of those persons of that Board who, after eighteen months' experience, came to the conclusion that orphan immigration should be discontinued? I don't recollect it. If I concurred in that opinion, it was owing to these girls being kept in Sydney, where they were much exposed, and for not being sent up the country. I say they came in too great numbers.

90. After eighteen months' experience, you were one of those persons who were of opinion that orphan immigration should be discontinued? I don't recollect that.

91. Were you one of those persons who agreed that in all cases of cancelling of indentures, the cases should be tried before the Police Magistrate or Water Police Magistrate? I concurred

curred in that through the necessity of the case, after an expression of opinion that the Board should employ some attorney to inquire into their cases, without bringing them up continually before the police office. I thought it better for the proper authorities to adjudicate the cancelling of the indentures. If I had my way, I should have appointed some magistrate attached to the Board to decide these cases.

The Ven.
Archdeacon
M'Encroe.

6 July, 1858.

92. Are you aware that in the depositions it was stated there was a hard labor department, at which eighty or a hundred immigrants were continually employed under punishment, picking oakum? Sometimes there were. I highly approved of their being kept at some useful labor.

93. As a punishment? Yes.

94. Were you a member of the Board, Mr. Archdeacon, when it was ordered that such orphan girls whose indentures had been cancelled in consequence of misconduct in Sydney it was recommended they should not be again sent out to employment in Sydney, because they brought a disgrace on the class of orphan immigrants? Yes; that was carrying out one of my views—of sending them in the country as fast as possible.

95. Were you present when the first inquiry was made as to the conduct of the girls by the first ship—the “Earl Grey”? It was that I referred to. Those who bore a bad character, and were sent into the country, turned out well. Nearly every immigrant who was sent—and there was some sixty or eighty sent to Moreton Bay—turned out well.

96. Was it not proved distinctly, that out of these girls by this ship, forty or fifty of them had been taken out of the streets? I did not see it proved; I heard it was so—the doctor of the ship told me so. I don't know whether this was given in evidence.

97. They were taken off the streets? Yes, from Belfast, I think.

98. In what year? In 1850 or 1851.

99. The ship was the ship “Earl Grey”? Yes, the first ship that came with them.

100. Would you state, if you know, how those girls who arrived by the “Lady Kennaway” have turned out? Some of them did not turn out well. But this despatch was written before it could be ascertained how they turned out.

101. And what proportion of them by that ship turned out badly? I cannot say; perhaps twenty or thirty.

102. *By Mr. Denichy*: Out of how many? Out of one hundred and fifty, I cannot state precisely—perhaps twenty or thirty, that was the most out of that number.

103. *By the Chairman*: Were you aware that of these girls two of them were brought out of the Penitentiary, and put on board ship? What Penitentiary?

104. In Cork? No, I never heard it.

105. You never heard that two girls in Cork were taken from the Penitentiary and put on board this ship, the “Lady Kennaway”? I did not hear of it.

106. Are you aware that in 1854 there were four hundred or five hundred girls already in the depôt—are you aware at the time of the arrival of the “Lady Kennaway” there were some four hundred or five hundred girls unemployed and in the depôt, and that it was rendered almost impossible to accommodate them; and also with the fact, that it was difficult to find employment for them, either in the town or country? The depôt was very full, owing to too many ships coming in. If some had been sent to Bathurst, Goulburn, or Yass, they would have got employment, and the depôt would not be so crowded. They could not have got employed in town.

107. Were not hundreds sent to the depôts at Moreton Bay, Newcastle, and Parramatta? Yes; the more the better, and there were no complaints made of them, as far as I could hear.

THURSDAY, 15 JULY, 1858.

Present:—

MR. THORNTON, | MR. PARKES,
MR. ROTTON.

GEORGE THORNTON, Esq., IN THE CHAIR.

John Dalley, Esq., called in and examined:—

1. *By the Chairman*: You have been for many years a citizen of Sydney and a landholder, I think? Yes, for nearly 30 years. John Dalley,
Esq.

2. And an employer of female servants generally? Yes.

3. Have you ever employed that description of servant known as the Irish orphan girl? Yes; I have had two or three of them in my service—three of them, I think. 15 July, 1858.

4. And in respect to them as servants, what does your experience of them enable you to state of them? I looked upon them as being among the best servants that were ever sent to the Colony—that is, the best kind of servants that could possibly be sent to the Colony. I had three of them, whose names I believe I have got here, and can give you, and three better behaved females, I think, were never in any gentleman's service. There were two of them married from my service. Esther Martin is the name of one of the girls. She lived two years with us. I was very sorry to part with her, for she was a very kind and good servant.

5. She was with you two years and upwards? She was two years with me, and then she was married. She married a person of the name of Cavanagh. I believe she is now living at Port Phillip.

6. Has she become respectable as a married woman? They are now in affluent circumstances. The other one was Bridget Dwyer: she was a very well conducted girl.

7. What makes you say they were the best kind of servants that could be sent? If you recollect the wages were very low, and they were very kind, docile, good women; all they wanted was good treatment; and I believe, if the women had all had kind treatment, they would

John Dalley, Esq. would have all turned out good and faithful servants. That was my opinion of them. I was very sorry when they were cried down in the public press.

15 July, 1853. 8. Because, by kind treatment on the part of the masters and mistresses, these, in your opinion, would become good servants? I am sure they would.

9. From their kind dispositions and temper? Yes. They were perfectly willing to do all they could do. All they wanted was to be treated kindly, and a mistress that would take a little pains in teaching them.

10. Then you are of opinion, Mr. Dalley, that this description of servants, if kindly treated, are suitable to the requirements of the Colony? I am sure they would benefit the country very much if they had continued to be sent here. It was a very great mistake, I think, to put a stop to it. You could then have a servant for £10 or £12.

11. It was a very great mistake, you state, to put a stop to Irish orphan immigration? I think so.

12. And you think, in the case of failure on the part of these girls, the blame was more on the part of their employers than on the part of the girls? I think if they had been treated with any species of kindness they would have turned out good and faithful servants—the whole of them. They only wanted instruction. In fact, you cannot get servants out in any shape—not thorough servants; they all want instructing. I found these girls—perhaps from the circumstance of their being bound for any length of time—more willing to learn than the others.

13. Are you able to form an opinion of the female immigration that occurred some years ago—it is scarcely a matter for this Committee, but by way of comparison it may be excusable, perhaps—can you inform the Committee, from circumstances that have come under your own knowledge, and are within your recollection, of the characters of the girls who came from England in a number of ships a few years ago. The “Bussora Merchant,” the “David Scott,” and some other vessels, brought ship loads of English girls; and there was another ship, the “Red Rover,” brought Irish girls. Can you state, for the information of the Committee, the general impression of the state of things as regards those immigrant girls? I know we had one—out of the “Bussora Merchant,” I think it was; we only had her a fortnight in our service; she behaved very badly.

14. Do you recollect what was the character of the girls who came by those ships—the English girls, more especially, what were their characters? Well, I do not believe they gave general satisfaction to any one scarcely; I do not think they did. I think some of them were girls of loose habits—quite different from these orphan girls. I recollect we had one of them—I think from the “Bussora Merchant.” She was hired, and she went out one day with my youngest child, and did not return till about nine o'clock in the evening; and, in fact, when she brought in the child she had frightened it out of its senses almost; so I begged of Mrs. Dalley to send her about her business—to get rid of her. We kept her about a week, and then discharged her.

15. Did not a great many (I dare say your knowledge of the place will enable you to give an answer) of the girls by the ships I have named become prostitutes? Some did—there is no question about it. The girl I have been speaking of went on the town directly. The orphan girls were the best class of women for servants that ever have come to this Colony. I am sure it was a mistaken notion when they were cried down in the way they were. I was very much grieved at it, for they would have made most valuable servants.

16. *By Mr. Parkes:* Are you aware that there has been a petition, signed by upwards of three thousand citizens of Sydney, presented to the Legislative Assembly with reference to Orphan Emigration? I have heard something of the matter. I did not sign that petition: I merely heard of it through the prints.

17. Do you know the purport of that petition—what it referred to? I cannot say. I never saw the petition. I merely heard that there was a petition.

18. Are you aware of the purpose for which this Committee was specially appointed by the Legislature? Well, I believe it has originated from what was supposed to have been said by Captain Browne. But at the time I am alluding to—when those orphan girls came—Captain Browne was not in his office.

19. Well, there has been such a petition presented, and the petitioners complain that the character of the Irish female immigrants has been misrepresented by the Immigration Agent describing them as “being unsuitable to the requirements of the Colony, and distasteful to the majority of the people.” This Committee has been appointed to inquire into the validity of that allegation? I never signed that petition, neither did I see it.

20. And the Immigration Agent states that this remark alludes to a particular number of Irish female immigrants who arrived during the years 1848, 1849, 1850, and 1851 to 1854: I think there was one ship load in 1854, by the “Lady Kennaway”? I think that Ann Allen came in the “Lady Kennaway.”

21. You said you had three girls, whose names were Martin, Dwyer, and Allen? Yes.

22. Were all these girls of the description known as Irish orphan immigrants, and were they all articulated to you—did they all enter your service under an indenture of that kind (*copy produced*)? One, I believe, for three years, was indentured to me, and one for twelve months.

23. Did each of these girls remain with you the full time stipulated in their indentures? All but one—Ann Allen.

24. Would you be kind enough to state the reason of her leaving before the proper time? It was not the fault of the girl.

25. She left from no fault of her own? No; quite the contrary.

26. All these girls turned out well? They did.

27. Even the one who left before her engagement expired left from no fault of her own? Yes; she stayed with me about fifteen or eighteen months.

28. Are you aware whether all these girls are comfortably settled? I am aware of two being comfortably settled—married, and doing very well. 29.

John Dalley,
Esq.

15 July, 1858.

29. Have they families? Yes.
30. As the heads of families do they conduct themselves properly? They are well-conducted women.
31. Have you had any opportunity of observing the character of this particular class of immigrants beyond the precincts of your own household? Yes; my son-in-law had also one of them. She is now married in this city, and doing remarkably well. She is a most well-conducted woman.
32. I should imagine that most of these girls belong to the Catholic Church? They do, most of them. I believe they are mostly Catholics.
33. You, I believe, are a member of the Catholic Church? Yes.
34. Have you had opportunities, as a member of that religious body, of meeting with many of them in the exercise of their religious duties? Yes, with a great many of them.
35. And their characters, as members of society, as you have met with them, in that respect has generally appeared good? They have.
36. Have you frequently conversed with other people on the subject of the character of these girls generally? I have.
37. Have you heard, at any time, expressions of opinion derogatory to any portion of them? I have heard from different masters and mistresses that, where they have had them—at least, when I say “different,” I have heard it probably second hand; but I have heard them spoken of very slightly as being very badly behaved, and I have always taken their part. I believe it all rests with the masters and mistresses they engage with—if they would only take a little pains with them. I do not mean to say they were the best instructed people in the world.
38. In those instances where you heard them spoken slightly of by their masters and mistresses, did you take the trouble of making any inquiry as to the truth of the case? I did not take the trouble. I have always spoken of them as I have found them, and I have always found them, as I said before—those three—well-behaved and well-conducted. My wife spoke very highly of them.
39. Do you know of any of these young women who have settled in Sydney, and have now become the heads of families? There is one my son-in-law had in his service: She is married, and is now, I believe, keeping an inn, in this city.
40. I should gather from what you say that they are certainly not worse than the same number of young women from any other country? I have always looked upon them as better, and a great deal more innocent. There were what they called needle-women; but the orphan girls are very much before those needle-women.
41. Did you have any needle-women in your service? I had.
42. Did you have the same number? We kept two women and one man.
43. How many needle-women have you had? I have had three or four of them.
44. Did they stop long? A very short time.
45. Are they married and comfortably settled now? I cannot say that I know of any of them; but I do not always have Irish girls. I have now one Irish girl and one English girl; the man servant I have is English also. Therefore, I do not think any person will fancy I am swayed by country. I am not an Irishman myself.
46. *By Mr. Rotton:* You are quite positive, Mr. Dalley, as to the three girls that you have named having been of that particular class of immigrants that we are now met to inquire about? I am quite positive about it.
47. Are those three you have spoken of the only three of that class of immigrants you have had? We have always had, as I said before, two female servants in the Colony; but I recollect these three particularly being what are called Irish orphan girls.
48. But what I want to know is, if those three were the only ones of that particular class? We had four, I think; but I cannot now bring the fourth to my recollection. I said so to Mrs. Dalley, and I overhauled my papers to see if I could find the indentures.
49. You have spoken generally as to the character of these girls, but are you not aware that there may be some other objections against them, which would render them, as stated in this report, “unsuitable to the requirements of the Colony”—that is, as regards a knowledge of their work, and so on? I shall always be of the opinion I have already expressed,—that they were perfectly suited to the requirements of the Colony. Girls could never be better suited. They were innocent and virtuous, and those are two great qualities for a servant to be possessed of.
50. *By Mr. Parkes:* You admit, I think, that they require a little teaching? They required teaching. It all depended upon the masters they would get over them: they wanted directing: they were not practical servants: they were not particularly conversant with household duties, but they were as obedient as any females in the world could be: they would do everything they could do.
51. *By Mr. Rotton:* The needle-women you spoke of just now—are you aware that they did not come out to this Colony as ordinary immigrants? I am not aware of that.
52. Not at the expense of the Colony? They were hired from the barracks, a good many of them.
53. You are aware that they were not introduced here at the expense of the Colony—that we had, in fact, no control over them? I was not aware that they came out under any different system from the others, that is, any more than I thought that they were assisted immigrants.
54. This class of immigration has been put, by the evidence which has been given now, somewhat in contrast with the Irish orphan immigration; but it would be only fair to show that the Colony had nothing to do with the introduction of these needle-women? I think we bore the expense of them also.
55. They were sent out by a charitable company in England? I thought the Government here bore the expense.

- John Dalley, Esq.**
15 July, 1858.
56. Those other immigrants that the Chairman asked you about, and which were also put in contrast with the Irish orphan girls,—are you aware how long it is ago since those immigrants came to this Colony—the “Red Rover,” the “Bussora Merchant,” and so on? I think they came in the year '38—'37 or '38.
57. More than twenty years ago? Yes, I think it was; I think that was about the time. It may have been some little later; it may have been 1839 or 1840.
58. Are you aware also, that the same immigration regulations were not in force then that are now in force? No, Sir, I was not. I am not aware of anything of that kind.
59. I suppose you must have been aware, from general report, that those emigrants were very carelessly selected at home, and that many of them, it was well known, were prostitutes in the streets at home before they came out here? They were represented as virtuous girls when they came first, but we very soon found the difference. I think many of them were picked up in the streets.
60. Then your own experience generally of the Irish orphan immigration is favorable towards that class? I have always had that opinion, from the very manner of the girls. I found them to be more docile, more willing, and more obliging in every sense of the word than English girls. They wanted teaching, and I believe that if they had fallen into good hands they would have made good women and servants.
61. But you have heard from neighbours and others, in whose service they have been, that in various instances complaints have been made? Oh! yes. I have heard them spoken of as being such stupid things that they could do no good with them; but if you take a little trouble with them, there is no doubt in my mind that they would have made excellent servants.
62. Are you aware, Mr. Dalley, what was the impression on the public mind with regard to this particular class of immigrants, and also what was stated in the press of the day with regard to them, towards the close of the year 1851? Well, I think if the people had been canvassed, that the greater bulk would have been in favor of the orphan girls. There certainly was an oration made in the papers against them, but I think it was really false, and that there was no foundation for it whatever.
63. The objections that you have heard urged against this particular class of immigrants, I think I understand you to say, have been more against their ability than against their character? All against their ability, as being such stupid creatures that they could do nothing. There are some masters in this Colony who would take no pains with them—who think, if they can get a girl into their house, they have a right to get hold of a thorough servant.
64. Have you any objection to state, Mr. Dalley, with regard to the girl that you named as having left her service before her time expired, whether her indentures were cancelled by the Police? No, they were not; it was merely a voluntary act on the part of myself, and on the part of the servant. We kept her until she could get another place.
65. It appears that you must be under some misapprehension in regard to that, because Captain Brown states that, in accordance with the regulations in force at that time, and according to the indentures, no emigrant of that class could be allowed to leave your service without the permission of the authorities? Well, that may have been the case, but there is many a thing of that kind which is not carried out in full; that is, no doubt, the strict letter of the law.
66. And it was not done? No.

Mr. W. H. Aldis called in and examined:—

- Mr. W. H. Aldis.**
15 July, 1858.
1. *By the Chairman*: You are a merchant and tobacconist of Sydney? Yes.
2. You have been resident in Sydney many years? About 30 years.
3. Have you during that period been an employer of that description of labor known as Irish orphan immigrants (females)—say those who arrived here from 1848 to 1851? Oh! yes.
4. You have been an employer of those girls? Yes, up to the last 18 months, I think, or thereabouts.
5. And during the years referred to? And during the years referred to—indentured Irish girls. I know that we entered into some sort of indenture for their service—I forget what it was—at least, we signed a document of some kind different to the ordinary engagement, as far as I remember.
6. Can you state, Mr. Aldis, how many girls, according to your recollection, of that description you employed during that number of years commencing in 1848? The first one of that class you speak of I had for about six years. She was between five and six years in my service.
7. Only one? I had another afterwards, since the one I referred to. It might be about 18 months since she left my service.
8. Then your answer will be, that you had one in your employ for six years? Yes, and—
9. You had another? Yes. I think one took the place of the other. Mrs. Aldis was so very well pleased with the first, that she got another one of the same class.
10. Then what is your opinion, based upon the experience you have had in respect to these girls as servants, as to their suitability to this community as domestic servants? Most excellent they are. We have found the Irish girls generally the best servants, after 22 years housekeeping.
11. A petition has been presented to the Legislature, which has been referred to this Select Committee. The petitioners complain that the Immigration Agent has stated that the Irish orphan immigrants are “most unsuitable to the requirements of the Colony, and at the same time

"time distasteful to the majority of the people." These are the particular expressions the petitioners complain of: does your experience confirm you in the view of the Immigration Agent, or to the contrary? The contrary, decidedly. We have got two Irish girls in our service now: we always get them if we can; they are the most useful. I think their utility is entirely contingent upon the families with which they become associated. I think there ought to be a classification—some that ought to go up the country, and others might remain in Sydney—those suitable for domestic service, for instance. My wife never found any difficulty with these two girls, nor, in fact, speaking generally, with those that we have had in our service. In fact, the last one was such an excellent servant that she was inveigled away by a family living near the domain. By going to the domain with my child she became associated with some other servants, and induced by them to leave my service. I spoke to the party about it, and said it was not right to take away my servant without the regular discharge from me. I believe she is in their service still. The girl that I had for six years is since married respectably, and when she left my service she went as cook in a respectable boarding-house on Church Hill, where she received very high wages, and, I believe, had twenty or thirty persons to cook for every day, and she is now somewhere out in the same district as myself, at Newtown.

Mr. W. H.
Aldis.

15 July, 1858.

12. Is she a well-conducted member of society? Yes, very excellent.

13. *By Mr. Parkes:* How many servants of this class have you had altogether, do you suppose? You speak of indentured servants?

14. I don't care about their having been indentured: I mean those girls who came out here in an orphan condition, or who are generally supposed to have come out as such? When I was Shipping Reporter to the *Herald*, from 1830 to 1837, or '39, or thereabouts, I had an opportunity of forming an opinion of these girls' characters, better than any other person, perhaps, in the Colony, having observed them in all the various departments of life since that period.

15. How many of those servants have you had in your own family? We have had many.

16. You have had six or eight, perhaps? Yes, more: we have two now—two Irish girls—living with us at Newtown, and very excellent servants they are.

17. Have you had many opportunities of judging of the character of this class of girls in other families—any of your friends, for instance, having the same description of servants? I have always understood they were very good servants.

18. You have had some opportunities beyond your own household of forming an opinion? I think so.

19. Have you heard of any instance of misbehaviour on the part of these girls? I speak generally about them. When I say that they are the best servants we have had, I mean the Irish servants generally.

20. Do you know, of your own knowledge, of any instance in this Colony on the part of any of them? Yes.

21. But not more than the ordinary run of the same servants? No, certainly not.

22. On the contrary, you think they are better? Yes.

23. You found them more obedient, probably? Oh! yes.

24. Did you meet with any inconvenience on account of their belonging to a particular church—inconvenience to your own family arrangements? Not at all. I found it very beneficial to let them attend their church regularly. I found, generally speaking, they were more contented, and better servants: they were mostly Catholics. I am not a Catholic. I am a member of St. James' Church, and have been for more than twenty-five years.

25. Did the circumstance of their belonging to another church, and therefore having to attend to their religious duties at a time when you had not to attend to yours, create any unpleasantness or inconvenience? No.

26. So far as your experience goes, you would not think them unsuitable on that account? No.

27. Simply because they wanted to go out before eight o'clock in the morning to mass? No. This is an arrangement always understood in my family, when engaging Catholic servants.

28. You made such arrangements as to meet their wishes in that respect? Yes, invariably.

29. You say that this young woman who was six years in your family is since married and comfortably settled? Yes. Mrs. Aldis met her the other day, at Newtown, and such was her opinion.

30. Are you aware if any of the other girls are married and settled? Yes: we have had several Irish girls married very well from my family.

31. You have seen them sometimes, or had means of forming an opinion after they had left you? Yes. They make excellent wives and mothers, and business women. Of course, I do not allude particularly to these Irish girls who came here during the last nine years; I mean those that came into the Colony during the last twenty-five years.

32. *By Mr. Rotton:* The evidence you have given, does it refer to female Irish immigration generally? Yes. I ought to be competent to give an opinion in such a matter, if that opinion is any worth.

33. *By the Chairman:* You see the views of the Committee refer to Irish orphan female immigration, and Mr. Rotton is desirous to ask you upon that point, whether your remarks have had reference to Irish girls generally, or to orphan girls particularly? I speak generally. Those two instances I have related in my own family are orphan girls, I am certain, inasmuch as we had to engage them in a different form to what we had originally—taking them for a definite period—I believe two years.

34. *By Mr. Rotton:* Will you look at that indenture. (*Indenture of Apprenticeship handed to witnesses.*) Are you aware whether the two girls you spoke of were engaged under a similar indenture to that? I am almost certain that they were; the records in the Immigration Office should test my assertion.

35. Are you not aware that all immigrants who come to this Colony are first of all engaged under

Mr. W. H. Aldis. under indentures, not exactly the same as this apprentice indenture—that you always get, in hiring a servant at the barracks, an agreement? There is always a form there, but I am under the impression that the two girls I allude to—I should know better if I were to ask Mrs. Aldis on the subject—I am under the impression that that was the document we had to subscribe to.

15 July, 1858.

36. Do you remember the names? I could get you the names.

37. You do not recollect them now? No. One girl, I believe, lives here, close by. They took her without any character from me; they had seen her in the domain with my child for a couple of years. This girl had the entire care of my youngest child.

38. Do you recollect the time you engaged those girls—how long ago it was? I should say that the first one—all I remember of the name is "Little Nora," I forget her other name—I think Nora must have been engaged eight or nine years ago—about the time you speak of. I think so, perhaps I can ascertain correctly.

39. Then, the one you spoke of just now as having been inveigled away from your family, did you not make any complaint about it at all? I complained to the party whose service she had gone into. She had been with us her full time, so that she could do as she liked; she had served the full period of her engagement, as far as I remember, and left very abruptly. We would not think of bringing her to the Police Office because she had left us prematurely: she had gone into respectable service. They had taken her without any character, having, no doubt, seen the girl almost every day with my family in the domain. I could mention the name of the party, but I do not think proper to do so. We were very much annoyed at her leaving us in such a manner.

40. You spoke, in answer to a question from Mr. Parkes, I think, and said that you had nearly always had Irish girls as servants, and by those, I think, I understood you to mean not these particular class of Irish girls—not the female orphan immigrants—but those who came out under the general regulations? I speak of Irish immigrant girls generally. This I know, that generally we have had Irish girls as servants, and prefer them. They have been very excellent servants, speaking generally.

41. We wish you to understand now that our inquiry is directed to a particular class of immigrants—Irish female immigrants who came out under particular regulations, and were indentured in a particular way. Our inquiries now are not extended to general immigration—to the immigration of Irish girls generally—but those who have come out under these regulations, and the evidence we want from you is to bear upon that class. I think I must have understood from the general way in which you have given your evidence, that it applied to Irish girls generally? Yes, and to those two girls, "Irish orphan girls," as they were called, in particular.

42. You can state positively that those were excellent girls, and suited to your service? Yes.

43. These are the only two you recollect of that particular class? Yes; I believe them to be of that particular class. I believe they are all of the same class of persons that have come out here for the last twenty years and more, although under different designations.

44. But they are not—there is a difference. You said that you had generally obtained Irish girls as servants—was it in preference to taking English servants? I found Irish girls the best servants, and cannot have any prejudice against my own country women.

45. Are you not aware that it is more difficult to procure English girls as servants than Irish? Sydney is more plentifully supplied with Irish girls, it is true.

46. Are you not aware that there is generally a considerable difference in the rate of wages that is asked and paid between Irish and English servants? I do not know any difference. There is none in my family. Our rule is to engage servants at as low rate as possible, and if they behave well and answer our purpose, to raise their wages without solicitation on their parts. The two orphan girls referred to were placed upon an equality with the other servants immediately they were found of the same utility.

47. I do not speak of what you would pay yourself, but if you were to go to any of the Registry Offices—I mean after they have left the Government—do not you generally find that you can procure Irish servants cheaper than English? No; we do not know any distinction at all. You have to pay more for a good servants than bad; that is the only distinction I know.

John Valentine Gorman, Esq., called in and examined:—

J. V. Gorman, Esq. 1. *By the Chairman:* You are a merchant and auctioneer of Sydney, I believe? I am now.

15 July, 1858. 2. You have been resident in Sydney many years? My family and myself have been residing in Sydney, on and off, for the last nineteen years.

3. You have been an employer of female servants? Yes.

4. Have you ever employed any of that description of female servants known as the Irish orphan girl? For the last seven or eight years, at least—indeed longer—I have hardly had any but Irish girls in my service. I give them the preference, as I find them more tractable and of better moral character.

5. Those girls who arrived here from 1848 up to 1851, and came here as servant girls, those are the girls you speak of as being in your employ? Yes; during that period, and since then, as I have said, I give the Irish girls the preference.

6. Were those girls indentured to you, do you recollect? Now that you have drawn my attention to this form of indenture, I can speak positively as to having had *Irish orphan girls* in my service. I remember it particularly, because two of them married from my service, and I tried to prevent them getting married. I had taken them up the country—it was inconvenient to lose their services—and, from their being indentured to me, I looked upon them more in the light of apprentices, and thought, therefore, I could stop their marriages, and

and wrote the Immigration Agent on the subject. In one of these cases I did not approve J. V. Gorman, Esq. of the match.

7. You have no doubt that these were Irish orphan girls that were indentured to you? I have no doubt of it. I have had both; but that particular circumstance confirms me. 15 July, 1858.

8. What does your experience of these girls, as servants, lead you to state in respect to them—do they make useful, honest, and good servants? I have always found them so.

9. Do you believe them to be suitable to the requirements of the Colony? Most decidedly. They are, I believe, generally suitable to the requirements of the Colony. I will explain myself, if you like.

10. Go on? For instance, on their arrival in the Colony they are not generally girls you would select as ladies' maids, or girls to go into a fashionable family to wait at table, but I have found them generally, for domestic use in small families of moderate means, tidy, tractable, and teachable, where properly taken care of and properly treated. For up-country servants I consider them, if anything, to have the preference, because they will do work up the country which other servants will not do. They will milk, for instance, and adapt themselves more to the circumstances of bush life, and perhaps the inferior accommodation of a country house, than an English servant will. That I know from what I have heard. Even since the orphan immigration, as it is called, has ceased, the assisted female immigration brings out exactly the same class of girls, or as nearly so as possible, and when my relatives or friends in the country send to me for servants, they generally ask for Irish girls, for the reasons I have just stated. You cannot always get them to go where they are not within access of a clergyman of a church of their own. At the present moment I have three female servants, and it happens all three are English girls, and all three are Protestants.

11. You are a member of the Catholic Church, I believe? Yes, and an Irishman.

12. But, at the present moment, you have three female servants, and they are all English girls, and Protestants? Yes; latterly I have not been able to get any of the Irish girls.

13. Do you know of a petition which has been presented to the Legislative Assembly, in reference to Irish Female Immigration, asking for an inquiry? Yes, I do.

14. *By Mr. Parkes*: Did you sign it? I did.

15. *By the Chairman*: Do you know that these petitioners, yourself included, complain that the Immigration Agent has mis-represented Irish female immigrants as being most unsuitable to the requirements of the Colony, and, at the same time, distasteful to the majority of the people? Yes.

16. Do you believe, from your experience as a colonist, that that expression is just or unjust? I certainly thought it unjust, or I would not have signed this petition.

17. *By Mr. Rotton*: Did you think it had reference to that particular class only? I thought, as I read it, that it applied to Irish Female Immigration generally.

18. *By the Chairman*: Your impression was, when you signed the petition, that it referred to Irish female immigrants generally? Yes; to Irish female immigrants of all classes. I looked upon it as a stigma and a slur cast upon all Irish women.

19. Do you know that this expression has given great offence to a section of this community? I do, and I know that the feeling is strong on the matter. I move a good deal among the Irish people; my business leads me into it, and my position in society leads me to hold some consideration among them, and I know pretty well, from the opinions they have expressed to myself upon the matter, that they are very sore upon the subject.

20. But, supposing that this expression was not only intended to be applied, but was really applied to that description of immigrants known as the Irish orphan immigrants, would it still be of the same offensive character? I think, certainly, so; because, I think, they did not deserve it. I have explained what sort of occupation I considered them fitted for: I said that they (the Irish orphans) did not make first-rate household servants until they were taught. I have had as good a household servant of this class as possible, but she required a little teaching: she was six years in my service.

21. Then, you think with kind treatment on the part of their employers—? I think, with some people there is a prejudice against Irish girls, and that such people would not give them the same opportunities, or the same fair play, as they would to girls from the sister country; such people would taunt them. Generally speaking, I give it as my honest and conscientious opinion that, where they may have turned out badly, had they fallen into kinder hands they would have been better.

22. I was about to put that to you: By kind treatment on the part of their employers, and some encouragement, they would generally become useful servants? Yes. I have had them not exactly suited to household purposes in the first instance; but they have made good servants after a little time and teaching. With reference to the remark I made about their not being properly treated by some employers, I would mention, that some of them who have been in my service, and left, have come back to my family, and complained of the manner in which they had been fed and treated elsewhere. One reason why so great offence has been taken at the Immigration Agent's report is, that such a statement from one in so high a position is likely to have great weight, and act very much to the prejudice of these girls.

23. What part of the country do you speak of as having resided in? The Liverpool Plains District: my family was up there for between two and three years.

24. Do you know whether any of these orphan girls who have been in your employ have become married and settled, and if so, what has been their character since? Well, I have never heard of any one who has been in my employ turning out badly. I do not mean to say that it is universally the case: I only speak from my own knowledge.

25. I only ask you for your own experience? I cannot of my own knowledge speak of them after marriage; but as long as they have been in my service they have, without an exception, been well conducted.

26. You do not know that they have become married and settled? No. With the exception
of

J. V. Gorman,
Esq.
15 July, 1858.

of the two I have mentioned up the country, and one who married very well in Sydney, I cannot at this distance of time tax my memory. There are, however, some half dozen Irish girls, servants in this City at the present time, who have been in my service, and who came to me from the ship. Some of them remained eighteen months and two years, one three years, another nearly six years. I have heard of instances where some have turned out badly; but that has not been my experience of them.

27. *By Mr. Parkes:* When you stated just now that these girls in many instances were taunted, will you have the kindness to explain what you meant exactly? Well, it is a very common term, "Oh! they are Irish"; and there is nothing more taunting to an Irish girl than that.

28. *By Mr. Rotton:* What did you say? "Oh! they are Irish; what can you expect!" When those girls arrive in this country they have heavy shoes and thick woollen stockings, and all that sort of thing, and they require a little management and kindness; that is, when required for household purposes.

29. *By Mr. Parkes:* But it is necessary, in reference to this remark of yours, to know exactly in what manner this taunt is used—do you mean to say that employers, after entering into an engagement with them, would provoke these girls, and wound their feelings by allusions to their poverty or their country? No, I would not say that; but I mean this, that where they are not found quite what they are looked for, they will be taunted with the words, "Oh! they are Irish; what can you expect!"

30. Have you known any instance of that being the case? Only generally. I have heard that said generally amongst the class of people who mix with them. It is a complaint that is made by some of them.

31. Because, your opinion would lead us into something of a dilemma of this kind: that if the girls are generally so good that if properly treated they would turn out well, it must, as a logical and natural inference, be supposed that the employers are to blame—the blame must rest upon one or the other in that case? I should be sorry to say that in every instance the employer is to blame. That is an opinion which no man of common sense would give. No man possessing the commonest regard for truth or honesty would give such an opinion as that. On the contrary, I say there are cases where they have turned out badly.

32. But you stated that in most instances if they were well treated they would turn out well? Mine have turned out well.

33. But if we arrive at that conclusion, the inference would be inevitable—the blame would rest with those who treated them badly? I do not put it in so strong a manner as that.

34. I think it is a very fair inference? I think, *generally*, if well managed, that they would turn out well.

35. Have you had opportunities, as a member of society, both when you resided in the interior and since your residence in Sydney, of forming an opinion of the character of these girls in various relations of life: For instance, to shew what I mean—in your attendance upon your religious duties, have you been thrown into contact with them as members of the same church; or have you been thrown in contact with those who have conversed of their religious character; or in any other relation;—have you had opportunities of seeing them as the heads of families in Sydney, or up the country? I cannot speak so particularly. I merely speak of my own experience, extending to my own family and friends.

36. It is limited to that? Yes; when you ask for particular or individual instances, it must be limited to that.

37. In reference to the statement complained of, of this class of immigrants being most unsuitable to the requirements of the Colony, and at the same time distasteful to the majority of the people—might not that arise from the very character which you admit these young women possess: that is, being inexperienced in household duties, unless they fell into the hands of considerate and kind people who would teach them. We will suppose a small family, where only one servant is kept, and where the moment a servant enters upon her duties she is required to discharge them, and where the limited means of the family would not enable it to go on a week or a month teaching the servant the duty she was required to perform. In some families of comfort and ease, the lady at the head of the house could give the time, if she had the disposition, to teach the girl those duties; but in another family, where perhaps the person at the head of the house had a family to attend to herself, or in some other capacity to assist in making up the income of the family, she would not have the time, however desirous she might be, to afford this instruction? I think you have mistaken me in the matter, because I think your position would assume that they are *totally* unacquainted with anything and everything. I never understood that charge to be brought against them at all. I think, from some little knowledge I have of the matter—although perhaps I cannot describe it closely—that in this Colony, where parties' means are so limited as only to allow of their having one servant, in such service the servant is more of the character of a drudge, and the Irish girl much more likely to suit. But it is very different with the better class of educated servants, who are so scarce in the Colony; they would not enter such service. For instance,—any girl from England who has been in service at home can get very much higher wages than a girl who comes out under the ordinary class of immigrant. I will give you a case in point, why I consider the Irish girl equal to the general run of *them* even from England. I have hired lately, from the Immigration Barracks, two or three plain cooks—English girls—and I have found them not a bit better than any Irish girls, from whatever part they might come; so that I think, in the character of a general servant in a family of limited means, where they would have to attend to anything and everything, they would form more the class of drudges than household servants; and for such service the Irish girls would be found more suitable.

38. I do not think you have paid close attention to my question. I started from the allegations of this petition, where it is said that this class of immigrants are "most unsuitable to
" the

"the requirements of the Colony, and at the same time distasteful to the majority of the people"; and what I wished to elicit was, (confining myself strictly to the text of the petition,) whether this might not arise from their not being adequate to what is demanded from them, in a large number of instances where they were wanted in families of limited means, and where I think a servant is not necessarily a drudge, as you stated, but must be supposed to know the run of common household duties, such as cooking, for instance, and cleaning a house? Well, you may get cooking done, and a house cleaned; that is, as far as mere cleaning, or the boiling of a piece of beef and a pot of potatoes are concerned; but my assumption of cooking where I hired a cook, and of cleaning where I hired a housemaid, would be probably different. If you will allow me to explain why I think that passage wrong—where I think that passage bears unjustly upon the Irish girls—I will do so. Had it been worded that they were unsuited for domestic or household servants of the higher class, then I would say it was right, perhaps; but to say that they were "*most unsuitable to the requirements of the Colony, and at the same time distasteful to the majority of the people,*" is widely different (p. 39). We are not to inquire what is the actual condition of these girls, so much as to whether this particular expression was justified by the facts within the Immigration Agent's knowledge. I should imagine that he made this statement upon the great number of reports made to him from employers—I should imagine so—that he would not cause it to be made haphazard, but that it was made from information furnished him in his intercourse with those who sought to employ servants; and what I wish to arrive at is this: what was the cause which led to these supposed complaints being made to him—which led him to make this statement; whether it might not arise from persons of limited means, who only kept one servant, finding this particular class of young women were not suited to them, and very likely, very unreasonably sometimes requiring what they never ought to have required from these girls. I can easily conceive, whether they did or did not expect too much, that the result would be just the same: they would find them unsuitable to them, and would make these complaints at the Immigration Office, and that a number of cases arising there would lead the Immigration Agent to make this statement? I could not imagine that Captain Browne would wilfully state that they were unfitted, unless he had had some complaints for such an assertion.

39. Just so: what my question goes to get elicited is, how those complaints arose, if they did arise—which I have no doubt they did—and what was the cause of their arising? I can only speak from my own experience, and what has come to my knowledge, and these lead me to consider them well suited to the general wants of the Colony.

40. I think you stated that the servants you had of this class were during the time of their arrival here from 1848 to 1851? I have had them then and since.

41. Those you had then you would have had under a regular indenture? The present agreement is a very different document from the indenture then used. Now, I think the agreements are only for three months. The orphan girls were indentured or apprenticed for much longer periods.

42. This particular class of immigrants alluded to have not arrived since 1851? I can speak positively as to having had orphan girls in my service. I fix that point from my recollection of the two marriages which I mentioned having tried to stop. In one of those instances a clergyman of the Church of England obtained permission for the marriage without my knowledge, and I did not know of his having done so until two or three days before it was to take place, and I naturally complained.

43. How long did these particular girls remain in your service, as far as you recollect: did they fulfil their agreements in most instances? In most instances.

44. *By Mr. Rotton:* You stated just now, that when you signed this petition you were under the impression that this expression made use of by Captain Browne referred to Irish female immigrants generally? I looked at it as going that length.

45. You stated, also, that you were aware that that expression had given a wide-spread offence? It has.

46. Do you think that the majority of the people who have taken offence at this expression were also under the impression that it referred to Irish female immigrants generally? Well, I would rather incline to think that they did take the same view as myself.

47. They were not aware that the expression was confined to one particular class? I will not say that they were not aware. I looked upon it as a slur upon all Irish immigrant women.

48. In comparison with the whole number of Irish female immigrants, are you not aware that this particular class has been very limited? Well, I really cannot say that I do know, because I am not very well aware when that class of emigration exactly ceased.

49. Are you not aware that the period over which these particular immigrants that we are now inquiring about—these orphan female immigrants—arrived, was only a space of two years? I was not aware of the particular period that it extended over, nor the number that were introduced.

50. I wish you now to confine yourself, as nearly as you possibly can, to the particular class that we are inquiring about, that is, the Irish orphan immigrants, and not to Irish females generally. I do not want you to mention anything with regard to others, but confine yourself to them alone—those that you have had in your service, and those that you may know of that your friends and acquaintances may have had. I think you admitted just now that they were not, when they first entered service, very clever as household servants? For the better class of household servants, I distinctly explained that. I meant, as I said before, that they were not girls you could put to wait at table—that they did not make good ladies' maids. I took objection to this, that they are alluded to as being most unsuitable to the requirements of the Colony, and at the same time distasteful to the majority of the people. It is that sweeping clause which has given offence—it is the extent of the clause.

51. Do you think that they would have been more suitable for the country districts of the Colony

J. V. Gorman,
Esq.
15 July, 1858.

J. V. Gorman, Esq. Colony than for the towns? I know that my country friends generally ask for them when they send from the country, for the reasons I have stated before.

52. I wish to know whether you think they were not more suited to the requirements of the country than to the town? Well, I would not even say that, because I only except them from the higher class of household servants.

16 July, 1858.

53. Then, any person engaging one of this particular class of immigrants, expecting at the time to get a servant capable of doing the work that was required of her, and finding when they had engaged her that she was not so clever as they expected—that she was not up properly to the household duties—would not that be liable to cause dissatisfaction, and cause persons to say that they were not suitable to the service? I think that is a natural consequence. If you hire a servant, supposing her to be fitted for certain duties, and afterwards find that she is not suitable, it follows as a natural consequence; but that would not apply more strongly whether she came from England, Scotland, or Ireland.

54. In any case where a servant was not up to what was expected of her, she would give dissatisfaction? No doubt of it; but I do not see how this is to have a national application.

55. Do you know the circumstances under which these immigrants came to the Colony? Well, I can hardly say that I am perfectly read up in the matter. No, I do not: I do not know any particular circumstances, excepting that I understood they were sent out at the expense of the country. Even that point I am not sure of.

56. Do not you know that this particular class of immigrants came from the Irish Unions—from the workhouses and charitable institutions of Ireland—that they were, in fact, orphans, kept by charity at home, and sent out here as immigrants to this country? They were supposed to come from the unions and workhouses?

57. Yes? I have heard also that although they did come out through that channel they were not always orphans; that some had only been recently inmates, and had been put in so that they might be passed off to this Colony—that it was a sort of ordeal, a matter of form, to put them in order to forward them out. I have heard that stated constantly.

58. You have heard that, but do not know it of your own knowledge? I do not know it, but I have heard it said so. I have heard of girls coming out here as Irish orphans—I cannot mention individual instances—whose fathers and mothers were living, who were not orphans at all, so that you see the term “orphan” was a misnomer to begin with.

59. With regard to your communication with friends and acquaintances, and so on, or any conversation or correspondence you might have had concerning these girls, what has been the general impression concerning this particular class of Irish orphans: I want to confine myself to this class, because I consider we are bound to that inquiry, and not to the general matter? The petitioners say, “Irish female immigrants (we have not said any particular class) are “most unsuitable to the requirements of the Colony and distasteful to the majority of the “people.” We have not said here Irish orphan immigrants. That was the view with which I signed this petition.

60. Would you have signed that petition if you had been aware at the time that it was confined to that particular class? I would.

61. *By Mr. Parkes*: That would be quite consistent with your knowledge of that particular class? It would be quite consistent with my knowledge of that class.

62. *By Mr. Rotton*: I think you said you had a recollection of only two of that class in your own particular service? I have a distinct recollection of two, from the causes I have stated. Nearly all my servants are taken from the barracks.

63. In the latter part of this petition it is said, “and that the proposed Committee should “take into consideration [this petition you will observe, prays the House to grant a Select “Committee to make inquiry into this matter] what further steps ought to be taken to “reuder the Immigration Department in Sydney, more efficient in supplying the inhabitants “of the interior with female servants than it is found at present to be.” Now, can you offer any suggestions with regard to that? Well, I can only say that I have always found the gentlemen of that department most attentive to me. I have no individual cause of complaint whatever against the department.

64. But it suggests that female servants should be distributed into the interior? Well, I should imagine that that might be done. I have, however, always understood that there were local homes, or places from which these immigrants might be employed, at Maitland, Moreton Bay, Bathurst, and other leading places.

65. *By Mr. Parkes*: Are you aware that during the time of this kind of immigration, which is here characterised as orphan immigration, that there was a large number of young women who could not be possibly got into service—a very large number—I think about 500 at one time were in the Immigration Depôt that could not be hired? I am not aware of it.

66. *By the Chairman*: Are you aware that in the year 1851, or thereabouts, whether any prejudice did exist against this description of immigration? I myself was absent from Sydney in that year.

67. Well, then, in the country? My family were residing in Sydney. I was absent, except at very limited periods, from 1847 to 1854. I was at home only occasionally, so that I can only speak from my own individual knowledge, and from my own friends. I am not aware of any prejudice, and was not aware of any prejudice. There is with some people a national prejudice, but that is less applicable in New South Wales, perhaps, than in any other part of the world.

68. I would ask you whether, under the difficulties which these girls labored on going into service—not being accustomed to household work before they came here—they did not become more open to temptation, and thus became easier led into mischief and the streets, ultimately, than girls who were suited for domestic service? I should answer that question that I do not think so; certainly not within my own knowledge.

69. *By Mr. Rotton*: Are you aware that during this period, when these Irish orphan immigrants were introduced into the Colony, that other immigration ceased; and have you never

never heard that in consequence of that, and in consequence of these girls not being particularly suitable for household employment, a general dissatisfaction prevailed? I am not aware of it; in fact, I was not aware until I came here this morning of the exact time of the ceasing of the one, and the commencing of the other; and my connection with this matter arises out of this, that I consider this report, as I have stated already, a slur upon the Irish women who have been sent to the Colony, generally speaking.

J. V. Gorman,
Esq.
15 July, 1858.

70. Your time, I think I understood you to say, was so much occupied in business, that you have not had time to inquire into the matter, and you can only speak of those who passed into your service? I did not say that. A man in business finds time, in some degree, to inform himself on other matters beside those in which he is more particularly engaged; but as I have not been engaged as Immigration Agent, I, of course cannot be supposed to possess so much information as a man who had given his whole time to a particular subject. As a man of business, I hear right and left what is said upon various topics, and I think myself still as well qualified to give an opinion as any man, except one who has studied it for a particular object. I have not read up the subject, but I have my own ideas and my own experience in reference to the matter. I did not go about to make any inquiries, in order to make up a case, or come here with any information other than that which I have obtained generally.

71. Do you know anything of them, independently of those that were in your own service, as to their character or ability, whether it was good or bad? Well, in point of character, I have always understood them to be quite equal to any other immigrant girls.

72. I think I heard you repeatedly say that you knew nothing about them, except the girls in your own family? I would not speak positively as to individual cases.

73. *By Mr. Pecks:* I understand that you wish your evidence to stand upon your own experience? Upon individual cases. When you ask for particular cases I look upon my evidence, now given, in the same light as sworn evidence. Generally, I have no hesitation in stating my own impression, and the impression of those amongst whom I have mixed, that these Irish girls are considered to be quite equal to the immigrants we get from any other country. I do not believe we get the best from any.

74. *By Mr. Rotton:* Now, again, you are speaking of the Irish generally? Yes, in the terms of this petition. It is that I signed.

ADDENDA.

In returning this, I beg to attach the following rider to it.

Having signed the petition to the Assembly in this matter, I naturally concluded when requested to give evidence before the Committee, that the subject of inquiry would be in terms of the petition—"Irish Female Immigration"—generally, and not any particular class of it. That class known as "Irish Orphan Immigration" having ceased so far back as 1851, I could not immediately recal to memory the particular features of it; but since my examination the following circumstances have recurred to my memory, which bear particularly upon questions Nos. 37, 38, 39, 40, and 54, and which questions appeared to me to go to establish a case against the Irish orphan girls. It is this:—

The rate of wages given to them was very low, even for that period, being only from about £6 to £8 per year, and they were indented for long periods—I believe two and even three years—and, excepting in case of marriage, could be compelled to fulfil the term of agreement. It was well known to every one hiring them that they got them at this low rate, and for the long period, to compensate them for any teaching that might be necessary; and it was also equally well known that they were not trained domestic servants of the better class. No dissatisfaction could have followed the engagement of them, as implied in the questions referred to.

J. V. GORMAN.

WEDNESDAY, 21 JULY, 1858.

Present:—

MR. THORNTON, | MR. OWEN,
MR. ROTTON.

GEORGE THORNTON, ESQ., IN THE CHAIR.

Daniel Egan, Esq., M.P., called in and examined:—

1. *By the Chairman:* You are a Member of the House of Assembly? I am.
2. I think also you are a native of this Colony? I am.
3. And resident in Sydney a great many years? Yes.
4. You were Mayor of the City in the year 1851 or 1852? 1853, I think.
5. I would like to be certain on this point, was it 1852 or 1853? In 1853.
6. You sat pretty regularly on the Police Bench during the year of your mayoralty? I think almost every day during the year, with the exception of one or two days; every lawful day, except Sunday.
7. During the year you so presided as Chief Magistrate, did anything in the shape of complaints against the immigrants known as the Irish orphan girls come under your notice? Yes.
8. Will you state, for the information of the Committee, the nature of them, and your opinions upon them? There were some brought before me during my mayoralty, on the complaints of those who had engaged them, that they had engaged them as servants, and that they knew nothing at all about their duties as such, in consequence of which they

Daniel Egan,
Esq., M.P.
21 July, 1858.

Daniel Egan, Esq., M.P. begged to be released from the engagement they had entered into. It was complained that they knew nothing about the duties of which they anticipated they were able to perform.

21 July, 1858. 9. Does your recollection of these matters enable you to inform the Committee whether these complaints, generally, on the part of the employers, were well grounded or otherwise? *I believe that a great portion of them arose through disappointment. They

* Vide Addenda to Evidence.

got servants at a very low rate of wages, and presumed they were able to perform all the duties of proper servants, and when they found that this was not the case they were disappointed, and wished to get rid of them. I presume they paid from £27 to £30 for good servants, and they were paying for these girls only from £10 to £15, and yet they appeared to expect these servants to be as competent to discharge their duties as well as those to whom they were paying a higher rate of wages.

10. Have you at any time been an employer in your household of this description of immigrants, Irish orphan girls? I had one, "Tippoo Saib."

11. Is that the name of the girl? No; the name of the ship, I think. She had been five years with us. I cannot positively say; it is a very long time ago, it is nearly five years.

12. What were her habits and character? One of the best servants I ever saw in my life.

* Vide Addenda to Evidence.

13. Have you ever employed other Irish orphan girls besides her? *I cannot say that I employed any other. I recollect, in many instances, where they had been returned after being taken from the emigrant ship. They were engaged by some persons who, after having them, in a little time discovered what I have described,—brought them up to the Police Office, and turned them away as useless. They were sent to us by persons; some were sent by Bishop Davis to the late Mrs. Egan, begging her to try and get them some employment; she kept them some time, five or seven weeks, endeavouring to get them some employment, and keeping them till she could get something for them; ultimately she got them employment.

14. How did they turn out usually afterwards? I think one or two got very well married afterwards. After a little instruction and kindness they soon learned their duties. I may tell you the one we got knew nothing about her business at first; now there is no better servant, none superior to her.

15. Your description would be, that they were awkward and inexperienced, but ready and willing to learn? They were very awkward, and knew nothing about their duties as house-servants until taught. I did not ask the question whether the second servant I had was an orphan or not; I was afraid to ask her. We got another servant who came with her, and she was the best cook I ever had.

16. You say you were afraid to ask her whether she was an orphan? I did not like to ask her whether she was an orphan. I believe she is one of the best servants I ever saw in my life, not only for the performance of the duties required, but for decency of conduct.

17. As to her sobriety? She never takes any intoxicating liquors. Everything in the house is left under their management and control, and this was chiefly the case when Mrs. Egan was here.

18. You say some of these orphan girls did not suit the places they went to; they were in the habit of being sent to Mrs. Egan, who kept them for a few weeks and gave them advice and instruction, and afterwards provided situations for them? Yes.

19. Did they afterwards turn out well? Those I knew did; I know several who turned out well and got married respectably.

20. Your impression is that they turned out well? Some of them were sent to Binalong, and every one of them turned out well, and gave satisfaction to their employers. A gentleman told me that a number of them were sent to Binalong, in the Lachlan District, and that they turned out the best servants they had there; and the gentleman said he hoped that a similar number would be sent by the next vessel, because those they had before turned out the best servants in the whole district.

21. Do you think if these orphan girls had had kind employers who would have borne with their inexperience for a time and taught them, that they would generally have turned out good servants? Not a question about it. They were awkward; they got low wages, and still it was expected that they would be as competent as persons who got higher wages: when it was found that this was not the case, they were, of course, useless creatures and unfit for service.

22. You said that in your experience as an active magistrate and employer of these orphan girls, they were usually sober, honest, and well disposed? Particularly so.

23. *By Mr. Owen:* What was the reason of the difference in the wages between these particular servants and others? I presume it was chiefly on account of their being sent here without any protection except that which they received from the Government, and being unacquainted with the duties they had to perform. I believe they were apprenticed, or rather I fancy so, for a period: they were not like other servants; other servants could go and engage for a considerable amount of wages.

24. So that these girls were engaged at little more than half the amount? Yes. I cannot say exactly the amount, but I know that it was considerably less.

25. Did it form a part at all of your duties, or feelings, as Chief Magistrate, to watch the apportioning of these girls out of the depôt? No; I had nothing to do with the depôt, or the way in which it was conducted. I had no interference with it.

26. It appears from what you state, as to their being recommended by Bishop Davis, and other dignitaries of the church, that there was evidently some hesitation on their mind of their fitness? I believe they had been employed, and in consequence of the treatment they received, and it being said that they did not give satisfaction, they applied to them to know if they could get them any employment; they would then refer them to the late Mrs. Egan, to see if she could get them employment.

27. Were they as many as six or seven weeks with you? I think I said five or six weeks; some were less.

28. Then it appeared that the late Mrs. Egan sought to teach them their work? They were particularly willing to learn. 29.

29. It was a sort of school for teaching them? It was not for that they were sent there; it was to get employment. There was a prejudice against them, and it took some time to get employment for them. I do not say they got employment in consequence of what they learned with the late Mrs. Egan. Daniel Egan, Esq., M.P. 21 July, 1858.

30. There was a prejudice against them? Yes, there was a prejudice with a number of persons who would not take the trouble to teach these girls; therefore, because they were unable to do the duties which servants usually do, they would not take any trouble with them.

31. Ultimately many got situations? Yes, and turned out very well. In fact, I believe, if it could be ascertained, many of this class of girls turned out better throughout the country than any other class of girls.

32. *By Mr. Rotton*: You stated a minute or two ago, in answer to a question from Mr. Owen, that there were prejudices against these girls? Yes.

33. From what cause? The chief cause was being unacquainted with house work.

34. Were there any complaints made of their unfitness for service, of their being unsuitable? Yes; they required to be taught. I do not know whether they took that trouble. Every mistress and master ought to take, under the circumstances, some trouble—whether they did take it, or not, I am not prepared to say.

35. You were alluding to a ship load sent to Binalong? Not a ship load—forty or fifty; and one of the oldest inhabitants of the district informed me that they turned out excellent servants.

36. You don't know when that was? I don't know the year this was stated to me, but it was with reference to the Irish orphan girls—that they were the best servants they ever had in the district.

37. These girls we were speaking of, the Irish orphan girls particularly, were generally supposed, when they came here, not to be particularly up to their work? They were not supposed to be.

38. Were they more adapted for country employment? I think they were adapted for any employment, if people took a little trouble with them; they were willing, which is a great thing in a servant.

39. Do you think if more were distributed in the country it would have been better than retaining them in Sydney—would the same complaints have prevailed against them? I don't believe they would. I think if a large number went into the country we would not have heard anything about this from persons who might be prejudiced against them.

40. *By Mr. Owen*: Do you mean they were called orphan girls from whence they came? I do not know why they were called orphan girls.

41. *By Mr. Rotton*: The time that these orphan girls were coming into the country, you say they were engaged at a very low rate of wages: are you not aware, at that particular time that wages ruled very low for every description of servants? I do not believe that any comparison could be made between what these girls were apprenticed at and what proper servants got.

42. *By Mr. Owen*: The difference of wages arose from the difference of qualifications? I have no doubt.

43. *By Mr. Rotton*: I think, if my recollection serves me, that the ordinary rate that female immigrants were hired at was from £12 to £15 a-year? I think that was in 1848 and 1850, not 1853; they ranged then from £26 to £30 a-year.

44. At the actual time of the gold discovery I never paid more than £18? I don't believe that any of these girls were engaged at any higher rate than £12, and they were apprenticed for five years; and, under these circumstances, I think their mistresses should have taken some trouble to teach them.

45. Were they not provided with clothing as well? No, I think not.

46. The dissatisfaction which prevailed arose more in consequence, you believe, of their inability to perform household duties efficiently, than in consequence of their characters; this would have been likely to induce some persons who were dissatisfied with them to express themselves to the fact that they were unsuitable to the requirements of the Colony? That may have been, that they appeared unsuitable for their requirements, not for the requirements of the Colony: they may have been unsuitable to these individuals.

47. That would have been an individual opinion then? Yes, a person may say so, and say anything else; you know it is very evident that it would not be a ground of unsuitability because these persons were not good servants.

48. People engaging servants expect them to be proficient, to be able to perform what is required of them, and would naturally say, if disappointed, that they were not suitable? They ought not; for that description of servants who received such low wages, and were apprenticed for a long period, they could not expect such a thing.

49. If they have done as you stated, apprenticed for five years, their employers would be naturally expected almost to teach them their duties? Not a doubt of it: of course they could not expect them to be competent servants, for they had them at low wages, and for five years.

50. Did you, in your magisterial capacity, or as Mayor, have any cases brought before you as to the conduct of the girls by the "Lady Kennaway"? I cannot say of any particular ship.

51. You have no particular recollection of the immigrants by the "Lady Kennaway"? No. I am alluding to the Irish orphan girls generally, not to any particular shipment.

52. Do you recollect the period over which this immigration extended? No, I do not.

53. Do you recollect the number that came? No; I know that 101 came by the "Tippoo Saib."

54. *By Mr. Owen*: Did they come by themselves, or were there any married couples? I presume they had only a few married couples with them.

55. *By Mr. Rotton*: The petitioners ask the Assembly that the proposed Committee should also

Daniel Egan, also take into consideration what further steps ought to be taken to render the Immigration Department in Sydney more efficient in supplying the inhabitants of the interior with female servants than it is found at present to be : can you offer any suggestions? I am not aware of the course adopted at present, and cannot know of any mode of improvement in it.

21 July, 1858.

56. There is no course adopted now? There was a system carried on at one time from the Immigration Office that I thought very injurious to the country districts; that was in this way—that persons should themselves go on board to engage the servants, and information was sent, as I am informed, that wages were ruling to such an extent—£30 and £40 a-year, and the consequence was, these persons would not hire unless they got the highest amount of wages; many were, therefore, frequently left on board. Persons would not hire a man as a farm servant who did not understand his work, and therefore could not expect the same amount as other servants who did.

57. Could you offer any suggestion as to what course ought to be adopted to carry out the wishes of the petitioners in distributing female immigrants in the interior. I may state that one witness in particular, the Very Reverend Archdeacon M'Eworce, stated that very great dissatisfaction prevailed against these girls, particularly on account of their being unsuitable for service in Sydney, and that they were more suitable for the country districts, and that if sent to the interior these complaints would not have prevailed against them, and in many instances prostitution would have been prevented? I believe that that is the amount of my statement: I think it most desirable that a large number of these girls should be sent into the interior. I stated that the number that were sent into the country answered well, and that the inhabitants lamented that more were not sent.

58. *By Mr. Owen*: Could you suggest the mode by which they could be distributed in the country, or would it be better to leave them in Sydney? I think it would be better to distribute them from the ship coastwise into the interior.

59. *By Mr. Rotton*: Before they learn too much in Sydney? Yes.

At the suggestion of Captain Browne, the following questions were put:—

60. *By the Chairman*: Are you aware that the cost of the introduction of these immigrant girls is greater than that of the usual immigrants? I am not aware of it; I don't see why it should.

61. Even if they cost but the same to introduce them into the country, do you think it would be desirable to introduce this class in preference to the usual emigrant servants? Not in preference, but I would say that it would be impossible to introduce a better class.

62. Will your experience enable you to state to the Committee positively, in any terms you may qualify, that these orphan girls were considered suitable or unsuitable to the wants of the Colony? I think they have been very suitable to the wants of the Colony.

63. *By Mr. Owen*: That is your opinion? I may go farther. I never heard they were unsuitable till I saw it in the report. I don't believe one word of it, that they were ever considered unsuitable to the wants of the Colony.

64. *By Mr. Rotton*: I do not wish you to state what would be the opinion now with reference to these girls, being a considerable time in the Colony, and better acquainted with their duties—more experienced and more acceptable—but what is your opinion of the impression there was of them on the minds of people at the time the despatch was written, in 1855. Are you of opinion that opinion was not on account of their character, but on account of their ignorance of household duties and unsuitableness? I think they were considered unsuitable but by very few indeed, although, till I saw the despatch, I never heard a word that they were unsuitable, further than that they were unaccustomed to household duties: of course they did not suit some persons, who would not take the trouble to teach them.

ADDENDA.

In explanation, I beg to say, with reference to wages, in question 9, that the rate of wages for the Irish orphan girls was £7 to £9 per annum, and they were apprenticed for a period of five years, which clearly shows that at that rate of wages, and for that period, they could not be considered as competent servants. With regard to the time that elapsed before they got employment, when sent to the late Mrs Egan, spoken of by me in question 13, this was entirely owing to sickness and change of diet.

Alfred Stanger Leathes, Esq., examined:—

A. S. Leathes,
Esq.

21 July, 1858.

1. *By the Chairman*: You have been a merchant in Sydney? I have been manager of public companies.

2. You were a merchant? No, I have never been a merchant.

3. You were a resident? Yes, for several years, as manager of a public company.

4. Have you ever employed that description of servants called Irish orphan girls? No, never.

5. Your name was suggested to us as having employed them? I am not aware of having employed them. They may have been employed on stations belonging to the company of which I was then the manager in Sydney, but I cannot speak positively.

6. *By Mr. Owen*: Were you in Sydney at the time that the Irish orphan immigration existed? Yes.

7. Have you any knowledge at all of the nature of it? I have received an impression, but have had no practical experience.

8. *By Mr. Rotton*: Do you know the time that this particular description of immigration was carried on to the country? During a few years prior to the gold discovery in 1851.

9. Have you had an opportunity of ascertaining the opinions of any of your acquaintances who

who may have employed these girls, with reference to them—as to their sobriety, and so on? A. S. Leathes, Esq.

10. What is your general impression of them? I always looked upon them as exceedingly unsuitable to the wants of the Colony, generally, and particularly unserviceable for domestic purposes. They may in some situations have proved themselves efficient servants. 21 July, 1858.

11. Not having employed any of them yourself, you have no particular experience? No; I am only speaking from hearsay, from the opinions I have heard expressed by friends.

12. Can you speak, when that system of immigration was carried on, whether there was any impression against them, or prejudice in the public mind? In my opinion there was a strong impression against them—I am speaking merely of the Irish orphan girls.

13. That is the particular class I am alluding to: will you give the reason of this prejudice? The reasons were—their uncleanly habits, unfitness for domestic employment, and their low ideas of moral obligations.

14. Do you think they would be more suitable for country employment than town service? Most decidedly—in the bush.

15. Have you heard any reports from persons you may have been connected with in business from the country parts how they turned out there? My actual knowledge is limited; I know that in some instances, and I believe that in many, their employers were glad to cancel their engagements, or otherwise get rid of them.

16. You are speaking of the country? My reply to the last question refers to friends residing in some of the provincial towns and in the interior, but not in what is generally known as the "bush." My own feeling with regard to them would have raised the question in my mind whether, as a resident in Sydney, it would not have been preferable to take the chance of getting other or no labor to employing them as house servants.

17. Are you of opinion that prejudices prevailed against them more on account of their ignorance of household duties than private character? I think that there was a combination of causes to create this prejudice—1st, Their ignorance of household duties; 2nd, The absence of habits suitable for domestic employment; 3rd, The general laxity of their moral conduct, which I am of opinion was more conspicuous in them than in any other class of female emigrants that had been introduced from Great Britain and Ireland.

TUESDAY, 27 JULY, 1858.

Present:—

MR. DENIEHY, | MR. ROTTON,
MR. THORNTON.

GEORGE THORNTON, Esq., IN THE CHAIR.

The Honorable James Robert Wilshire, M.L.C., called in and examined:—

1. *By the Chairman:* I think it is right to state to you that your name has been suggested to this Committee by the petitioners, as being able to give evidence on the subject now before them:—Have you ever been an employer of that description of servants known as Irish Orphan Immigrants? I am not aware that I ever employed any one of them at all. I have never engaged but one servant from the Immigration Barracks, and I am not sure she was an Irish orphan. I never had one under indenture. I may state that all my servants but one are Irish, and Roman Catholics, and they are the best servants I have ever employed. The Hon. J. R. Wilshire, Esq., M.L.C. 27 July, 1858.
2. You can give the Committee no information then with respect to Irish orphan girls? No.

The Chairman then stating that the scope of the Committee's inquiry was restricted to Irish Orphan Immigration, with respect to which subject Mr. Wilshire's name had been sent to him as able to give the Committee information, apologized to him for the unnecessary trouble to which he had been put, and Mr. Wilshire withdrew.

THURSDAY, 19 AUGUST, 1858.

Present:—

MR. DENIEHY, | MR. PARKES,
MR. FAUCETT, | MR. ROTTON,
MR. OWEN, | MR. THORNTON.

GEORGE THORNTON, Esq., IN THE CHAIR.

James Hart, Esq., called in and examined:—

1. *By the Chairman:* You are a Solicitor in the City of Sydney? I am. James Hart, Esq. 19 Aug., 1858.
2. You are one of the parties who were instrumental in getting up a petition to the Legislative Assembly, upon the subject of Irish Female Immigration? I am.
3. The petitioners complain of the "conduct of H. H. Browne, Esquire, Immigration Agent, regarding his communications to the Colonial Secretary"? I complain more of the tenor of Mr. Browne's communication to the Colonial Secretary than of any personal conduct of his own.
4. Do the petitioners complain of Captain Browne's despatches in reference to Irish Female Immigration generally, or do you think they refer more particularly to Irish Orphan Female Immigration?

James Hart, Esq.
19 Aug., 1858. Immigration? I can only speak as to my own impression; and, as I have just stated, I complain more of the tenor of Mr. Browne's communications on the subject of Irish Female Orphan Immigration.

5. I would take you back to the petition itself, which complains of these remarks as having reference to Irish Female Immigration? The Irish Orphan Immigration I consider to be Irish Female Immigration? I would in the first place refer to the Report, dated 5th February, 1855, to which Captain Browne's signature is appended. The 13th paragraph is in these words:—"Orphan Immigration having been so distasteful to the inhabitants of this Colony, the Board did not contemplate the arrival of any fresh drafts of that class of immigrants. This feeling against them still exists; and the Board feel that they should ill perform their duty were they not to bring this fact pointedly under the notice of His Excellency the Governor General, with a recommendation that instructions be given to the Commissioners not to continue this description of immigration; it being most unsuitable to the requirements of the Colony, and at the same time distasteful to the majority of the people."

6. That is one paragraph of which the petitioners complain, and you quite understand that it has reference only to Irish Orphan Immigration? I so understand it. There is another letter, to which I would wish to refer the Committee, bearing Mr. Browne's signature; it is a letter from him, as Immigration Agent, to the Colonial Secretary, submitting his Report for 1855, and is dated 10 July, 1856. In his general remarks upon immigration he says:—"In reference to single females, the Commissioners say—(that is, the Emigration Commissioners in England)—"Trained female domestic servants, of good character, especially those of English and Scotch origin, it is impossible to obtain in any numbers, as the supply scarcely equals the demand for them in this country, and the difference of their wages here and in Australia is not sufficient to constitute a temptation to encounter the discomfort of a long sea voyage; and the uncertainties, and the breach of family ties, attending a removal to colonial life." And in the next paragraph, 90, Captain Browne goes on to say, "The Commissioners therefore considered it advisable (seeing that the feeling of the Colony was much against the continued introduction of rough country Irish girls) to modify the then existing regulations, by requiring a less payment from single females prior to embarkation, which regulation was made alike applicable to all the Australian Colonies." The words (seeing that the feeling of the Colony was much against the continued introduction of rough country Irish girls) are in a parenthesis, and appear to me to be a remark or commentary of Captain Browne's, which is quite unwarranted by any facts that have taken place, or any evidence that has been given before the Council, or any Board on Immigration.

7. Are they not quoting the language of the Commissioners in England? The parenthesis appears to me to be Captain Browne's.

8. *By Mr. Parkes*: It appears to be the summing up—the substance of what the English Commissioners say—is it not so? It appears to me to be a deduction of his own. I complain of the words in the parenthesis as being unfounded. I wish to draw the attention of the Committee also to Captain Browne's Report for 1854, at paragraph 46, as follows:—"The single females were, I regret to say, the most inferior that have, since the orphan immigration, come under my observation. They were for the most part unaccustomed to any of the occupations of domestic servants; and their conduct, in some instances, on board the vessels during the voyage, as well as in the depôt here, was such as to lead any observer to entertain grave doubts as to their former habits, and therefore such was the disinclination on the part of employers to engage their services, that had not the Governor General, Sir Charles FitzRoy, freed them from the operation of the Assisted Act, they would have remained a burden upon the Government to this day." If these remarks are made to apply exclusively to orphan immigration, it is quite clear that they are unfounded; because, if these girls were orphans, and taken from the Union Workhouses and other places of protection to come here, it is quite impossible they could have followed the occupation alluded to by Captain Browne, which is evidently of an improper character. The reference to their "former habits" I understand as alluding to a want of chastity.

9. *By the Chairman*: To whom do you understand these remarks to apply? To orphan immigrants.

10. *By Mr. Fucett*: The words are—"The single females were, I regret to say, the most inferior that have, since the orphan immigration, come under my observation"? Yes; and that being the Report for 1854, refers to past circumstances.

11. At all events, this sentence of which you complain refers to single females, whether orphans or not? Yes.

12. It would also appear to me that there is an inference drawn from their conduct, in some instances, as to their character as a class—"Their conduct, in some instances, on board the vessels during the voyage, as well as in the depôt here, was such as to lead any observer to entertain grave doubts as to their former habits." It seems to be a general observation made in consequence of the particular conduct of some individuals? It so appears to me.

13. Then, do I understand you to say that you believe the statement is also without foundation? I believe that to be unfounded, from my extensive knowledge of the class of immigrants alluded to.

14. Have you much knowledge of that particular class of persons, and the way in which they live? A great number have come under my notice.

15. In Sydney? In Sydney, and in other parts of the Colony.

16. *By the Chairman*: Have you ever employed, as servants, any of the class known as Irish orphan girls? I have.

17. What is your opinion of the character of these girls as domestic servants? At first they were inexperienced, but with a little instruction they became most excellent servants, well qualified to fulfil their duties; their character for honesty and integrity could not be surpassed, and after they left my service some of them, I believe, have married, and are now

most

- most estimable members of the community. I can speak of one in particular, whom I had under indenture of apprenticeship.
18. *By Mr. Parkes*: Had you more than one under indenture? I think not. The period was very short, to the best of my recollection, within which that form was followed.
19. *By the Chairman*: What is your reference to this one in particular? I allude to her as having been in my employ, and borne a strict character for honesty and integrity, and a cheerful willingness to perform her duties.
20. *By Mr. Parkes*: Have you, in your intercourse with society, had opportunities of judging of the character of these girls in the service of others, or in the various relations of life? I have.
21. To what extent—in ten, twenty, or thirty instances—have you been able to form a deliberate opinion as to their conduct? The instances have been numerous; I could not undertake to say how many.
22. And in most of those cases you have formed an opinion favorable to their general character? I have; more favorable than I have of the English or Scotch servants who have come under my notice.
23. Have you known any of them after they have removed from the position of servants, and married, and been at the head of families? I have seen them, both in Sydney and in the interior of the Colony, particularly in the country towns; they have become a most useful class, and are now rearing families.
24. In what towns have you more particularly observed them? In Maitland, Ipswich, Brisbane, and Drayton.
25. You have met these young persons after they have become matrons? I have.
26. And in that relation of life you consider them good members of society? I do.
27. Does your remark apply to them in that relation, that you form a more favorable opinion of them than of any other class? No.
28. But you consider them equal to any other class? Yes.
29. In your experience of these young women in your own service, or in the service of friends, or in other relations of life, as wives and mothers, have you met any instances of decidedly bad conduct—any single instance? I cannot specify any particular instance; but I am aware there have been such instances from general report.
30. But not more numerous than among the other classes of society? Certainly not.
31. Does this good opinion of this particular class of persons embrace their attention to their religious duties as well as their natural duties in relation to their own families? From the obligations of those girls, who, I believe, were generally Roman Catholics, their attention to their religious duties were much more strict than that of other females. Although some of these girls who came under my notice were inexperienced and awkward when they first entered service, were tractable, willing to be taught, and rapidly improved. They readily adapted themselves to every position of society, as far as my experience has gone.
32. In all cases? In all cases; whether in the hut of the shepherd, or the mansions of the more wealthy.
33. You say that you have had one of these girls under indenture? Yes.
34. Do you know whether the others who did not come under indentures were originally indented orphans—you did not have them direct from the ship? No, I did not.
35. So that they might have served the period of their indentures before they came to you? I think in some instances the indentures had been cancelled with the consent of the immigration Board.
36. Have you heard of any instances where these young girls, who were orphans, and who belonged to the Roman Catholic Church, suffered petty persecution in Protestant families? None whatever; the instances I am aware of are to the contrary, and I have known them to have been compelled to attend to their religious duties.
37. You have, of your own personal knowledge, no complaint to make of any undue interference with them, religiously, by their employers? I have not.
38. I should gather from your evidence that any attempt to stigmatize these young women as more reprobate than any other young women who have come to the Colony is unfounded? The imputation I would consider quite unfounded.
39. *By Mr. Denihy*: Have you had other females in your service besides Irish—have you ever had English or Scottish? With a single exception, I do not think I have; although I have never asked a girl what country or what religion she belonged to.
40. Have you had opportunities of seeing English or Scottish females in service? Yes.
41. Is there any marked inferiority in the capacity, as servants, of Irish girls to English or Scottish? No I think not.
42. You are acquainted with a very large number of the citizens of Sydney? I am.
43. Do you know of any reluctance on the part of any section of citizens to receive Irish girls as servants? The contrary is the fact; they have been most anxious to have Irish servants. The great fault appears to have been that these girls were imported in such numbers that the Colony could not absorb them. I believe upwards of 5,000 females were imported to the Colony in one year—I refer to the year 1841.
44. *By Mr. Owen*: Females generally? Assisted immigrant females.
45. *By Mr. Rotton*: That is of all countries? Of all countries.
46. *By Mr. Denihy*: From your experience, do you know whether any of these orphan girls went on the streets? Of course in passing through the streets at night I have seen females whom I should judge to be of that class of immigrants.
47. You did not observe a predominancy of what you would have taken to be of that class over others? No. In making any comparative statement of the adaptability of Irish females as servants with any other females, I do not wish to draw any invidious distinction; but I believe the Immigration Commissioners have been grossly imposed upon with respect to some of the English females, who have turned out to be most improper characters.

James Hart,
Esq.
19 Aug., 1859.

James Hart, Esq. 48. What was the demeanour of those Irish females you have had in your own service? Very good. As an instance of the adaptability of these girls to the situations in which they were placed, I may allude to one young woman, who was at first in domestic service; she was removed thence to be an assistant in a school. She is now at the head of that school. After her appointment she was instructed in music, and now she is a teacher of music herself.

19 Aug., 1858.

49. That is one of the Irish girls? Yes.

50. *By Mr. Owen:* Orphans? I believe her to have been an orphan girl.

51. *By Mr. Faucett:* You were asked about the treatment of these girls in Protestant families—as a general rule, how have these girls been treated by Protestant families in Sydney? As far as my general experience goes, they have been treated very well.

52. Do you know any instances of their having been in families of the wealthier classes? Only from hearsay.

53. Have you any means of forming an opinion as to their general treatment by the wealthier classes? In what respect?

54. Whether they have ever shown a dislike to them arising from religion? I think not.

55. *By the Chairman:* During the years 1848, 1849, and 1850, about the time of the Orphan Immigration, had you not, in pursuance of your professional duties, either as an articulated clerk or as an attorney, occasion frequently to attend at the Water Police Office? Not at that period; I do not think I have been in the Water Police Office since the year 1845.

Before concluding my evidence, I wish to observe, that in a pecuniary point of view these girls have proved of great advantage to the Colony. Their wages, to the best of my recollection, ranged from £10 per year. Since the cessation of that class of immigrants, general female servants cannot be obtained for less than from £20 to £25 per annum, and with difficulty even at that sum. I wish the Committee to understand that I have confined my evidence strictly to Irish Orphan Immigration, and have not spoken of the advantage conferred by them upon the Colony with reference to immigration or colonization generally.

Mr. Jeremiah Moore called in and examined:—

Mr. J. Moore. 1. *By the Chairman:* You are a bookseller and stationer in Sydney? Yes.
2. You have been many years resident in Sydney? Seventeen years, nearly.
3. You are one of the petitioners to the Legislative Assembly on the subject which has been referred to this Select Committee? Yes.

19 Aug., 1858.

4. You, in common with the petitioners, complain of the conduct of the Immigration Agent, as having aspersed the character of the Irish orphan girls? Yes. We complain that there has been an unfounded charge laid against these girls—that they have been represented in an unfair manner; they have been represented as distasteful to the majority of the people, with which statement I, as one of the petitioners, join issue. I deny it *in toto*. I believe that the introduction of these girls has been one of the greatest boons ever conferred on this Colony.

5. The particular statement of which you complain is that within inverted commas in your petition, which represents these girls “as being most unsuitable to the requirements of the Colony, and at the same time distasteful to the majority of the people”? That is the particular statement of which I complain—I speak, myself, advisedly. I complain of that particular paragraph. I complain, also, of the *animus* that pervades all the various communications of the Immigration Agent to the Home Government. I complain that he has never lost an opportunity to slander the characters, not only of Irish orphan girls, but also of Irish female immigrants—

6. That is your impression? It is my strong impression that he has shewn an unfair animus to Irish orphan girls in particular, and to Irish female immigrants in general. These are my charges, specifically made, and which I am ready to support. I have been at great pains in looking into this matter. I have got the Blue Book, and read it over, and the various papers bearing upon this subject; and I have never seen, from the time the present holder of the office took office until the present time, that he has lost an opportunity to slander these girls. Furthermore—when I take into account the inquiry made previous to the present holder of the office taking charge, and the evidence given by Dr. Savage, and other parties, it does appear somewhat strange to me that these girls could have been pronounced as unsuitable to the requirements of this and the neighbouring Colonies. The document to which I refer is dated 19th July, 1855, and is an enclosure from the Commissioners in answer to the Committee. This document of the English Commissioners bears out my view; and, in fact, it is upon their view of the case, partly, and upon facts—observations of my own—that I ground this charge. These gentlemen were removed to a distance; they had the evidence before them, and, upon his own shewing, they did not place a particle of reliance upon the present Immigration Agent's statement, for they twit him here, and quote the evidence of Dr. Savage, the Health Officer; and also quote against him the despatch of the present Governor General, then Governor of Van Diemen's Land, who stated—and it is upon record—that this class of immigrants was of a very superior character. Now, in examining into these things, it will be seen that on one occasion, when a ship came here under the charge of a clergyman, the general conduct of the girls was reported to be bad. The girls had, many of them, previously been inmates of the Cork Union Workhouse, of which the clergyman had been Chaplain. The conduct of some of the gentlemen on board had been reprehensible, and some dispute had arisen with the clergyman; and because the girls had shewn a devotion and veneration to their own priest, this was twisted into a crime by the Immigration Agent; proving, if proof were wanting, the *animus* of that gentleman; shewing that that which should have been esteemed a virtue was by him, because of their religion, regarded as a crime. Upon this and other reasons I base my charge. Furthermore, I base my charge of unfairness against

against Mr. Browne from my own observation. I may mention that few men in this Colony Mr. J. Moore. enjoy the opportunity I enjoy of knowing the wishes of the great majority of the people upon this and other subjects, because I have a connexion with nearly every town and district in the Colony—indeed I may say with every district in the Colony; and I would not go beyond the truth if I said every town, village, and hamlet in this Colony; and I know these females have been always regarded as a great blessing to the community. I was speaking some short time since to a gentleman who was formerly resident in Sydney, who was well known as a highly intelligent and respectable man—Mr. Armstrong, of Appiu; and I asked him what he knew of the Irish female immigrants up the country. I mention this to shew that I have been at some pains to make the inquiry, for I would not wish to condemn any man unjustly. I asked him what he thought of Irish orphans in particular, and of Irish female immigrants in general; and he said he thought as a class of immigrants they were most suitable to the Colony, particularly as they were mostly acquainted with agricultural pursuits. He said that many of them had married round Campbelltown and that district, and were the mothers of large families, and as such a great blessing to the community. I asked him if he would be willing to give evidence before the Committee, and he said if it were thought necessary he should be most happy to do so. I wished to leave this matter in the hands of other gentlemen. I did not wish to give evidence myself, being satisfied with the general good feeling towards these girls that pervaded the great mass of the people; and I would have been willing to have left the matter to any six, twelve, or twenty persons who had employed these girls, as I am certain they would have come out scathless. Their characters would have come out in such a way as to satisfy the gentlemen of this Committee of the unfairness of Mr. Browne's charge. I may mention another reason that has moved myself and others to take any steps in this matter: there is a paper, the principal newspaper in England, and I may say in the world, which it is well known to myself, and to every person who has taken the trouble to inquire into the matter, is the enemy of the creed and of the race of these poor girls; and in a series of articles, with reference to immigration, they take the opportunity of slandering these poor girls, and they found their slander upon the Report of the Immigration Agent. I have seen it myself.

7. *By Mr. Deniehy*: Do you mean to say that the *Times* founded some remarks upon Mr. Browne's Report? Yes.

8. Does it allude to this particular Report? Yes; this particular extract was given.

9. *By the Chairman*: The extract of which you in the petition complain particularly? Yes. I know it has been attempted lately to narrow this question as one relating merely to orphan girls, but to show that Mr. Browne does not mean orphan girls only, I would refer the Committee to page 146 of the Blue Book, 1854; there is an extract from a letter of the Honorable C. D. Riddell, then Colonial Secretary, alluding to the regulations with reference to females under a certain age. He says—"In the case of single females under the age of eighteen years the concurrence of the parents will be obtained by the Immigration Agent in respect to situations in which he may propose to place them." This is a regulation that occurs in 1854, at the time Mr. Browne wrote this infamous Report on which the Governor General founded the despatch; and to shew that the Report must have reference to more than orphan girls, it says,—"Thirdly, the class of female domestic servants who have lately arrived are not at all suitable for the wants of the Colony, being principally composed of persons from the southern counties of Ireland, and from their entire ignorance of domestic duties suited only for dairy and farming pursuits, a description of females for which there is only a limited demand." And then he alludes in very disparaging terms to their dirty habits.

10. *By Mr. Deniehy*: Have you those allusions? You will find them in Mr. Browne's Report, dated 27th October, 1854, at page 5 of the Blue Book. I have spoken to several of my friends upon the subject, and they have all expressed their entire concurrence of opinion as to the faithfulness of these girls, and their desirableness as immigrants. I have had some myself in my employment, and I would not desire better or more faithful servants. Any person who goes to my place knows the immense amount of property lying about, and if my servants were dishonest they could rob me to any extent, as I have been frequently in the habit of leaving money and property about, but I never lost to the value of that bit of paper, to my knowledge, and I never had the slightest distrust of their want of honesty. It is true that some were raw and inexperienced, but they always had a desire to learn; it is also true that they might not be suited for ladies' maids, or to undertake some fine offices, but for hard work and useful employment, such as is necessary in a new country, they were well adapted.

11. For ordinary domestic purposes in towns? Yes. I have yet to learn whether they are not, beyond all comparison, the most suitable characters that could arrive, more particularly in a new country like this, where colonization ought to be our primary object, for as to their virtuous conduct, Irish females are particularly remarkable for that, especially those from the rural districts. If a few, from the bad treatment of their mistresses, or from other causes, have gone bad, I emphatically state, as a man of the world, as one who knows the world, the matter of surprise has been, not that there have been so many, but that there have been so few. Not one in twenty turned out bad. Some of them were badly treated by their mistresses, who, when these girls were indentured to them, look upon them as assigned servants, and attempted to treat them as such; and no doubt when they were bound to various mistresses, other girls tampered with them and gave them bad advice. No doubt also, some of them became very troublesome, and having twice the ordinary work they ought to do, being overburdened with work, became listless and discontented; but I have known girls taken up to the Immigration Agent by their mistresses and complained of, who have, after their indentures have been cancelled, become very good servants. From general inquiries I have made, I am convinced that these girls have given general satisfaction; and furthermore, I arrive at this conclusion, from my own personal observation in my own business. The mistresses of many of these girls, educated ladies, have come to me—and this

Mr. J. Moore. has been a very frequent occurrence—and bought Catholic Bibles and Catholic Prayer Books to give to these girls.

19 Aug., 1858. 12. Protestant ladies? Protestant ladies. It has been a very frequent occurrence. They have come to me and said, "Mr. Moore, I have a very good Irish orphan in my employ; she has been very good and faithful, and I wish to make her some little present, as her wages are small. I think the best thing I can do is to give her a Bible, as she will not read ours; if you will let me have a nice Bible, I do not care about the expense." In other cases, where the servant has had a Bible, they have asked me to select a Catholic Prayer Book.

13. *By Mr. Owen*: At the time of the orphan immigration going on, did you hear any disinclination expressed on the part of the public to take these girls? That is a question I wish to touch upon. I would not myself take any of the girls out to have them bound, and I did hear objections on the part of the public to the indentures. They did not like to have the girls bound to them, for they thought if they did happen to get a bad girl they would be saddled with her.

14. From anything that was known of the character and ability of these girls, was there any disinclination to take them? There was, at first, a doubt expressed as to their fitness for cooking, and other domestic duties, but I have often known that doubt to be removed; and I have heard, where ladies have taken the trouble of instructing them, that they were docile and easily instructed.

15. Were they ultimately taken very much into service? They were very much taken into service, and very well liked, so far as my observation went.

16. *By Mr. Faucett*: When was Captain Browne appointed to the office of Immigration Agent? I think about the middle of 1851.

17. You knew some of the girls who came out before that time? Yes.

18. And since? And since.

19. Do you know whether the class sent since then were, in point of character, equal to the class that came out before? I have had one in my employ for four years since then, and I think her a model of a servant.

20. I am speaking of the entire class? Speaking of the entire class, and looking at the amount of money they get—and, mark you this, gentlemen—I have an opportunity of knowing this, for, being a stationer, many of these girls come to me for what they call "covers for letters," (envelopes); then they will buy a stamp, and then have their letters weighed, and upon inquiry I find that they are sending remittances home to their friends. That, I think, is conclusive about the fitness of these girls for the Colony, when they have money to send home to their friends, and they do this in multitudes of instances.

21. I ask you whether the class of girls who have come out since 1851 has been superior or inferior to that which came out previous to that time? I really cannot state further than this:—that I have noticed females visiting my place who were friends of my servants, and I have observed them to be a very superior class of girls; they have seemed to be very comfortable.

22. I wish to know whether the class that has come out since has been superior to that which came out before Mr. Browne's appointment? I do not think they were superior.

23. You mean that they are a good class? Yes, a suitable class.

24. You do not mean superior by comparison with the others? No.

25. You have spoken of instances of young women who came out shewing great regard for their clergyman? Yes.

26. When did that occur? In 1854; the Revd. Mr. Parker was the clergyman.

27. Was there an investigation about that? Yes; it was with reference to the "Lady Kennaway"—I refer to Captain Browne's Report.

28. What is the particular passage of the report to which you refer? It is this:—"In the particular instance under consideration, it was natural to expect that in consequence of the previous connection that had existed between the Revd. Mr. Parker and the female immigrants by the 'Lady Kennaway' in the Union Workhouse at Cork, wherein he had filled the office of Chaplain for a period of four years, he should have been able to exercise a much greater control over these girls than had he been a perfect stranger to them upon receiving his appointment on board the vessel; and seeing, moreover, as they did, that no cordiality of feeling existed between him and the surgeon, they very naturally supported their own priest, and took every opportunity of annoying the surgeon, and showing him that they had no esteem for his person or respect for his authority." I object to that; there is something very insidious in that.

29. The objection you make is, that there is a statement in that report of Mr. Browne that the girls took every opportunity of annoying the surgeon? Yes; I think it is not at all borne out by the evidence.

30. *By Mr. Parkes*: Did you read the evidence taken before the Board of Inquiry? Yes.

31. Did you read it at the time? Yes.

32. *By Mr. Faucett*: You have spoken of an extract from the *Times* containing an extract from Mr. Browne's Report—this Report that is complained of in the petition—do you know the date of that? No; my attention was called to it by a friend, at first, who had seen the *Times* and noticed it.

33. How long ago? About the beginning of 1857, I think.

34. Where did you see the extract? In one of the Port Phillip papers—it was extracted from the *Times*—I think it was in the *Argus*.

35. *By Mr. Owen*: Can you state positively whether that article was based upon Captain Browne's Report, or did it refer to any other document? I believe it quoted Captain Browne's words.

36. *By Mr. Faucett*: Do you recollect whether the article alluded to South Australia and a despatch from Sir William Macdonell? I do not. I saw two extracts: one was a newspaper extract cut out, and, of course, if you see the text without the context you cannot tell the bearing of it. I certainly did think, and I think now, that these girls were unfairly treated.

37. You have spoken of the kind treatment of some Protestant ladies—had you the means of forming an opinion of the treatment of these girls by Protestant females generally? My general impression, so far as it could be formed from speaking to any of my Protestant friends was, that they were well treated. I have always heard them spoken of in kind terms. I have heard that in some cases there has been an unjust prejudice raised against them, but that has been mere rumour; what I have positively known has been that they have been kindly treated.

Mr. J. Moore.
19 Aug., 1858.

38. Where the girls have actually lived have you formed a general opinion as to their treatment? I will, if I am allowed, give one instance to illustrate the thing: An English gentleman, a Protestant, had an Irish girl, who had sent home all her savings to bring out her family. When the intelligence of the wreck of the "Dunbar" first reached Sydney, it was generally suspected that the vessel lost was an immigrant ship, and this gentleman called at my place, and I never saw any man in greater trouble. He said, "I have a little 'Irish orphan girl'—these were his words—"who has sent home all her savings to bring out her family, and if I cannot return home with good news of them, poor girl! I think she will break her heart." I never saw any one more upset.

39. You have no reason to suppose that they have to any extent been unkindly treated? I have heard rumours of that kind, but I do not like to give evidence upon mere rumour.

40. *By Mr. Owen:* You know of acts of kindness, but you do not know of any acts of unkindness? I believe they have been most cruelly treated, and frequently by people of their own country. I have heard ladies express some little annoyance that they could not go out to service at night instead of in the morning, they have felt a little irritation in that way, but when I have explained the Catholic usage, they have no longer felt annoyance.

41. Then, taking this particular expression—"as being most unsuitable to the requirements of the Colony, and at the same time distasteful to the majority of the people"—is it your belief that this statement is unfounded? Yes, I think it is unfounded; I think a more unfounded charge was never made; it is unfounded in all its particulars.

42. Both as to being unsuitable to the requirements of the Colony and distasteful to the majority of the people? Yes; if they were "distasteful" they would not be employed, and if they were "unsuitable" they would not have money to send home to their friends.

43. Have you known many instances of their sending home money to their friends? The instances have been so numerous that I could not enumerate them; in fact, it is an almost daily occurrence.

ADDENDUM.

In attending the Committee, and giving the above evidence, and in taking the active part I did, in connexion with other gentlemen, in bringing this matter under the attention of the local legislature and country, we were moved thereto by no personal hostility to Mr. Browne, neither had we any party or personal interest to serve, but simply a sense of duty urged us to this line of action, as being the best means of bringing the whole subject before the country, more particularly as those orphan girls were, in a more especial manner, the subject of Mr. Browne's misrepresentations. As these poor girls were, for the most, orphans, and, from their peculiar and isolated position, unable to defend themselves, we felt it to be our imperative duty to institute this investigation, so that full and ample justice might be done to all parties concerned, knowing the cause that led these girls to leave their own country—the Irish famine of 1847-48—to seek a home in this favored land, where they expected to get fair play and a proper remuneration for their industry, denied them in their own country. I am happy to say many, very many, have fully realized their fondest expectations, being now wives and mothers, some of them of large families, partaking largely of the fruits of their honest industry in all parts of the Colony where they found their way.

As a colonist, and one having a deep and abiding interest in all that affects the welfare of this community—deeply sensible of the many blessings we enjoy in this glorious, free, and favored land of ours, where, thanks to our liberal and free institutions, together with that fine friendly spirit that pervades all classes of society, class distinction is almost unknown—I cannot but deplore that any person could be found anxious to stir up causes of ill feeling amongst us.

It is gratifying to find that fine healthy feeling of liberality that pervades all classes of society, brought about by a happy amalgamation of the various races, without that sickening heartburning and distrust which caused many a man to leave the old European countries in disgust, and seek a home and resting place in our midst.

Being moved by these and other considerations, I have been at considerable pains in making inquiries among those parties who employed these girls, and, if such evidence were admissible, I could have given their names, and the result of the conversation, when I was examined before the Select Committee. On this account much valuable, and, to my mind, conclusive evidence was left out. I think I have proved—if proof were wanting in this matter—that the description of immigrants so unfairly slandered by Mr. Browne were amongst the very best class of immigrants that arrived in this Colony, without wishing to disparage others infinitely superior to many drafts of immigrants of whom no unkind word has been mentioned by Mr. Browne. As my object is not to asperse any one, I shall not further allude to this subject.

From the strong manifestation of feeling expressed by many parties in this community, I, in common with the other petitioners, felt it a duty we owed to ourselves as well as to those so unjustly slandered, to appeal to the representatives of the people, feeling confident that full and ample justice would be done in the matter, and thus prevent for the future any official from attempting to throw the apple of discord in the midst of our peaceful and happy community by unjustly assailing any particular class. It should rather be the duty of every good citizen to endeavour to bind and cement the people together, and as far as possible bury their differences, and by this means assist to build up a great, prosperous, happy, and united Australian Nation.

JEREMIAH MOORE,
Bookseller, George-street.

25 August, 1858.

Mr.

Mr. William Michael Davis called in and examined:—

Mr. W. M.
Davis.
19 Aug., 1858.

1. *By the Chairman*: Are you Secretary to the Celtic Association? I am.
2. Your name has been suggested to the Committee. Can you furnish us with any evidence, from your own knowledge, of the character of the Irish orphan girls—have you ever employed any of them? I have never employed any of them, and I do not know whether those I have seen at my sister's, and at other places where I have been living, have been orphans, but they have been single females from Ireland.
3. You cannot say expressly whether they have been orphans or not? I cannot.
4. From your own knowledge, can you give the Committee any evidence as to the character of the class of girls referred to by the petitioners? I can. I have seen a great number of them in employment where I have been living at various times, and I have always observed them to be as good as, and, generally speaking, more hard working and industrious than other female servants. As to some of them not being acquainted with domestic duties, they soon learn. I remember a girl—an Irish girl—whom my sister got from the Barracks, and although she could not do anything at all when she was first hired, before three months was past she was able to do everything about the place required of her, the same as a trained servant, and was getting the highest wages. Many similar instances have come under my observation, which convince me that the objection urged by the Agent for Immigration against those he is pleased to call “rough country Irish girls,” on the ground of their not being acquainted with domestic service, is frivolous.
5. *By Mr. Owen*: Are you speaking of an orphan girl? I am speaking of a single Irish female; and I may add, that the Immigration Agent, in his evidence before the Select Committee of the Legislative Council on the “Immigration Department” in the year 1855, (see question 40 and answer thereto), did not confine himself to “orphan girls,” but referred generally to Irish females from the farming counties of Ireland as being unsuitable for “almost any employment.”
6. You do not know whether she was an orphan or not? I do not. I can state that among those with whom I have mixed for many years I have heard the orphan girls receive a very good character, generally speaking; indeed I scarcely know a single exception, and I have heard them spoken of by all parties—by people of various religious sects and countries. The great objection to them upon their arrival was, that they were not trained domestic servants; but I think that was of little matter, for they soon learn. In saying the great objection to them was their presumed ignorance of household duties, I mean to say that that was the only objection that could possibly be urged against them; but I believe that even that objection did not prevent their being employed. The payment of the immigrants' bonds formerly required from the employers was, in a great measure, the cause of so many girls remaining so long in the depôt during the Irish orphan immigration.
7. You do not know anything of these girls of your own knowledge—you only speak from the statements of others? Perhaps I have seen orphan girls in service, but it is some time ago, and I did not take much interest in these matters at that time.
8. *By Mr. Faucett*: You speak more with reference to the character of Irish female immigrants generally—are you aware of the distinction made between Irish orphan females and other Irish female immigrants? I do not believe that a distinction was intended to be made in the petition. The words in the petition between inverted commas were selected, I believe, by the petitioners for the purpose alone of shewing the nature of Mr. Browne's attacks upon Irish female immigration. The petitioners by so doing did not for one moment intend to confine the inquiry merely to orphan immigration; for in Mr. Browne's Report for 1855, paragraph 90, he refers to “rough country Irish girls” as being distasteful to the Colonists; and in his Report for 1854 he speaks of “single females,” most of them, if not all, being Irish, as “being unaccustomed to the occupations of domestic servants,” and alludes to a disinclination on the part of employers to engage them. He even in this Report, paragraph 46, throws a doubt, though indirectly, upon their virtue. It is these general and continued attacks of Mr. Browne which has induced the petitioners to seek redress from the Legislative Assembly.
9. Are you aware that the community at large understood a distinction of that kind to be made? No. I know well the general feelings of the petitioners with reference to the aspersions of Mr. Browne. They consider that he has assiduously and needlessly labored to tamper with Irish female immigration; that is my candid opinion, in support of which I beg to refer you to paragraph 46 in his Report for 1854, and to paragraphs 23, 24, 25, 26, 27, 29, and 30 in his Report for 1855, and to his answers to questions 25, 31, 32, 33, 36, 37, 38, and 40, given in evidence before a Select Committee of the Legislative Council on the “Immigration Department,” ordered to be printed 19 December, 1855, and to his evidence before the Select Committee on Immigration, ordered to be printed 29 November, 1855. In fact almost every document from his hands concerning immigration bears the same *animus* in reference to “Irish female immigrants.”
10. *By Mr. Rotton*: When you signed the petition, were you not under the impression that the words used by Captain Browne in his Report referred to Irish girls generally? Yes; for the same statements had been made in other reports and letters.
11. *By Mr. Owen*: Have you read this petition? I have. The words quoted in the petition referred to Irish female orphans; but similar expressions are used in other reports which refer to female immigrants from Ireland generally.
12. *By Mr. Parkes*: Did you take an active part in getting up this petition? I acted in my capacity of Secretary to the Australian Celtic Association.
13. The petition was adopted by the Association, who obtained the signatures to it? Yes.
14. Whether that passage from the Agent's Report refers to orphans or to Irish female immigration generally, have you had any opportunity of forming an opinion, based upon facts, in direct opposition to this. It is to be inferred that the Agent based his statement upon the complaints made at his office from time to time—? I have heard a great number of contrary statements.
- 15.

15. You have never employed them? No.

16. You have never met them, except accidentally in your intercourse with your friends? Yes.

Mr. W. M.
Davis.

17. *By Mr. Rotton:* Have you ever heard any complaints against these girls on account of their ignorance of household duties generally? That is the only complaint I ever heard from any one about them; but I have also heard that they have very soon become acquainted with every part of household duties.

19 Aug., 1858.

18. *By Mr. Deniehy:* Have you heard anything of immorality on the part of Irish orphan girls—have you heard of any of them turning out bad and going on the streets? No. I am aware that has been stated.

19. Do you know nothing of the kind? I have heard such accusations made use of, but with no just reason, as far as I am aware. I know of no instance by which such remarks could be at all justified, although very probably some of these girls may have fallen. As a class they were virtuous.

20. *By Mr. Rotton:* What meaning do you attach to the words of which the petitioners complain? That the Irish female immigrants are not at all pleasing to the great majority of the people, and that they are unsuitable altogether to the Colony.

21. That is stated distinctly in the petition, but I want you to say in what way you understand these words—do they, in your opinion, refer to their ignorance of household duties, to the services that would be required of them, or to their general character? I do not understand them to refer to their general character.

22. But to their not being conversant with domestic and household duties, and that in consequence they are not sought after, but are considered rather unsuitable? That is the way I understand this statement.

23. *By Mr. Deniehy:* As Secretary to the Celtic Association, you were present at the meeting when that petition was prepared? Yes.

24. Was it the impression of those who prepared the petition that Captain Browne had aspersed the moral character of these girls; their character for chastity, or fitness for service, or both? I have known some to understand the matter as referring to the moral character of the girls which has indeed been, though in an indirect manner, aspersed by Mr. Browne, as may be seen by a reference to paragraph 46 in his Report for 1854, and in the latter part of his answer to question 31, in the Progress Report from the Select Committee of the Legislative Council on the Immigration Department, ordered to be printed, 19 December, 1855; but, generally speaking, I think the statement in the petition was understood to refer to their unsuitableness for service.

25. On the ground of ignorance, not of immorality? On the ground of ignorance.

Mr. Robert Jones called in and examined:—

1. *By the Chairman:* You are a tailor and draper? I am.

2. How long have you been resident in Sydney? Twenty-nine years.

3. Have you ever been an employer of the description of female servants known as Irish orphan girls? Yes.

Mr. R. Jones.

19 Aug., 1858.

4. Can you give the Committee the result of your experience as to the suitableness of these girls as domestic servants? We had two in 1850 or 1851, at the time I was in Broughton's house, at the London Chartered Bank. They were apprenticed, I think, for twelve months, or were under some agreement for twelve months, and behaved uncommonly well. One was house servant, and the other cook and laundress. They served their time; one got married afterwards, and the other went to Mr. Farrell's as laundress. She sent home for her sister, and had her apprenticed to a dressmaker here. These are the only orphan girls I have had; but I have had other Irish girls; one has been with me for the last five years; and by the last ship she had her brother and sister out, whose passage was paid by the money she sent home out of her savings.

5. *By Mr. Owen:* Do you know whether there was any disinclination on the part of your neighbours, or of the public generally, to take these girls? I cannot say; I think there used to be a talk about that. They did not like them about the town, but we found them uncommonly good. They required training; they required leading; and Mrs. Jones is a person who would take them in hand for a month or so and teach them.

6. She took pains with them, and succeeded in teaching them? Yes, and they were excellent servants after that. They are truly honest, and attend well to their church.

7. *By Mr. Rotton:* If they were placed with ladies who would not take so much pains to teach them, would you consider them rather unsuitable for domestic service? Many ladies did not like the trouble. I prefer them, after they are taught, to the English, for they are not so flighty as the English.

8. *By Mr. Owen:* You think the English are more flighty? Yes.

9. Are not you an Englishman? Yes.

10. *By Mr. Rotton:* You stated at the commencement of your evidence that these girls have been under engagement to you for a year—were they bound for a year? Yes.

11. Are you not aware that the Irish orphan girls were indentured under regular indentures for a longer period than a year? I do not know. One of them is now with Mr. George Hill.

12. *By Mr. Faucett:* Will you be good enough to say whether you have reason to suppose that Irish orphan girls were distasteful to the majority of the people of this Colony? I could not say; that is a very difficult question to answer; I can only speak as I find.

13. As far as your experience goes? We used to like them.

14. Had you any opportunity of forming an opinion of the general feeling? My opinion is that people were generally rather against them. The public, generally, found great fault. I have reasoned with parties when they have complained of them; I have said, "Perhaps you do not behave properly to them—you must not bounce them, you must lead them."

Mr. R. Jones. 15. *By Mr. Owen*: Did you know them to be "bounced" or ill-used? No; but I used to say so to persons.

19 Aug., 1858. 16. *By Mr. Rotton*: You have understood from general report that there was a prejudice against them? There is a prejudice against them.

17. *By Mr. Faucett*: Does that prejudice continue? I do not know; the thing has been dropped.

18. *By Mr. Rotton*: Do you know the reason of the prejudice? They are sometimes stubborn, and when you speak to them they do not know what you mean; and if you fly at them they get obstinate, but if you try to explain things to them you can manage them. They are ignorant of household duties, and many of them can hardly understand you when you speak to them.

THURSDAY, 4 NOVEMBER, 1858.

Present:—

MR. THORNTON,
MR. MURRAY,

MR. ROTTON,
MR. FAUCETT.

GEORGE THORNTON, ESQ., IN THE CHAIR.

Mrs. Capps called in and examined:—

Mrs. Capps. 1. *By the Chairman*: I think you keep a Female Servants' Registry Office in Sydney? Yes.

2. For how long have you kept it? For nearly four years.

4 Nov., 1858. 3. Do you know anything of that description of immigrant known as the Irish Orphan Immigrant? Yes—whilst I was at Hyde Park Barracks.

4. You were formerly Matron of the Hyde Park Barracks? Yes.

5. How long were you there? About five years.

6. Were you Matron during the time that those girls arrived in the Colony? Yes.

7. I wish to ask you now, whether in your position as Matron of the female immigrants, or as Registry Office Keeper, you will inform the Committee in respect to the character of these girls? The orphan girls?

8. Yes: What was their character amongst the community as to being servicable—as servant girls? I should be sorry to say anything against the orphan girls. Some of them were unsuitable and not well selected, but the greater part of them turned out very well. They had not many opportunities in their own country of becoming acquainted with domestic duties.

9. In what way did you consider them unsuitable—because they had not received that necessary education or experience to qualify them for their service? They were not sent to service in their own country. Irish fathers and mothers do not send their children to service so early as they are sent in England or Scotland; therefore a great many of them were not acquainted with domestic duties, such as cooking, washing, or house work. They had not the same opportunities of learning as the English or Scotch had; but still the greater part of the Irish orphans turned out very well indeed.

10. You mean to say that after a little teaching or experience they turned out very well? Yes. A few days ago I had an orphan girl who had a seven years' character. I have known some of them with five years' character, and with wages from 2s. 6d. to 3s. per week they were enabled to send home some of that to their friends.

11. What was the character, generally, of these girls—taking a view of the whole lot—were they generally speaking well-conducted or ill-conducted? Well-conducted.

12. Do you consider them as a description of immigrants likely to be useful to the community, or otherwise? I think that they will be likely to be useful. With proper management they turn out very well; their expectations are very humble when they come out first.

13. *By Mr. Murray*: As far as you have had an opportunity of judging, Mrs. Capps, did you think that they were hard working? Yes.

14. Industrious? Yes.

15. And did you find them as well-conducted as the other girls—do they bear a favorable or an unfavourable comparison with them? I think they were better conducted. At one time I had the management of six hundred of them, without an assistant, and I had no trouble with them.

16. Did I understand you to say just now that they hired out for wages so low as 2s. 6d. or 3s. a week? Yes; they were apprenticed.

17. At 2s. 6d. or 3s. per week? Yes; at £6 to £10 a-year.

18. And nevertheless out of that pittance saved money, which they sent home? Yes.

19. Did you know many instances in which savings were made in that way? Yes.

20. Many instances? Yes. I could name the parties with whom they served their apprenticeship, and gave satisfaction. Dr. Forster, of Parramatta, had a girl for seven years; Mr. Rattray, of Bathurst-street, had one for seven years; but of course I cannot remember all.

21. Have you known many instances of the kind on the part of other girls of other countries? It was a different affair altogether—the Government immigrants coming out were hired by the month, and so on. I think they did not remain very long in their places, so that I could not say.

22. Do you know many instances of the Scotch girls or English girls sending home money to their friends? Not so many.

23. Then that would appear to indicate some high traits of character on the part of these Irish girls? Yes.

24.

24. Now, from what you have observed of them, do you think you could say that they were a class of people most unsuitable to the requirements of the Colony, and at the same time distasteful to the majority of the people? Certainly not. Mrs. Capps.
4 Nov, 1858.

At the request of Captain Browne, the following question was put to the witness by the Chairman:—

25. *By the Chairman:* During the period that this immigration was going on, do you know of some hundreds of instances of those girls being returned to you as unsuitable for their engagements? Yes; but in some instances it was the fault of the employers; they were very hard upon them. There was always some explanation; and besides, there were 2,000 orphan girls altogether—perhaps more.

26. Arrived in the Colony you mean? Yes, whilst I was there. There was the "Earl Grey," "Inchinnan," "Digby," "Lady Peel," "William and Mary," "Lismoyne," "Maria," "Thomas Arbuthnot," "Panama," "John Knox," and the "Tippoo Saib." I think there were about 250 arrived in each ship; and if more pains had been taken in selecting them they would have done very well.

27. *By Mr. Rotton:* What were the reasons usually given for the return of those girls to the depôt? Some of them were very young; but I believe that with proper management and a little patience they would turn out very well. Some mistresses expected that they could cook and wash well at first; but it was impossible, because they had had no opportunities of learning.

At the request of Captain Browne, the following questions were put to the witness by the Chairman:—

28. *By the Chairman:* Were not some of them so excessively bad that they were placed under the charge of a sergeant of police, in a sort of hard labor department in the building adjoining the depôt? Yes; a few of them were very unmanageable—about twelve altogether.

29. Did they not amount sometimes to upwards of a hundred, who were occupied in picking oakum to keep them employed? I never knew that there were so many as a hundred; there might have been fifty or sixty.

30. Were those girls so under punishment employed picking oakum so as to keep them employed? Yes.

31. Were not those girls, after they were returned from service with their indentures cancelled by the Benchets, usually forwarded in drafts up the country, and not allowed to hire out again in the town? Yes.

32. *By Mr. Rotton:* Did I understand you to say that you were not aware of the reasons given for the return of the girls from their indented service, usually? From incompetence.

33. If so many were returned for incompetency, without any reference whatever to their conduct—moral or otherwise—would not that be one sufficient reason for saying that they were unsuitable to the requirements of the Colony? Yes, a few of them; but if they were better selected they would be more suitable than any other description, because they were very humble in their expectations. They were satisfied with reasonable wages, and were willing to learn; but some people expected them to perform all the duties the moment they were engaged.

34. But at the time you refer to I think you will recollect that wages for female servants were very low generally in the Colony? When a ship of Government immigrants arrived at the time the orphan ships arrived they had higher wages.

35. Yes; but not anything like the present rate of wages? Up to £25 per annum, or from £20 to £25, whilst the others only got £6, £8, or £10.

36. But then the others, had not they to be clothed as well as the other remuneration they got? The orphan girls?

37. Yes? No.

38. *By Mr. Faucett:* Have you had many other classes of females in the depôt? Yes.

39. In large numbers? Yes; English and Scotch.

40. What numbers of English and Scotch have you had there? A great many.

41. Had you as many as eighteen hundred? No; I should think about half that number.

42. Were these bound out in the same way as the Irish girls? No; an agreement was drawn up for three months or one month.

43. Were any of these girls returned, do you know? Yes. Some of them came back, and requested admission again into the barracks.

44. Did any of them require, while they were in the depôt, to be kept to this hard labor you speak of? No.

45. You had no power to treat the other girls in that way? I had no control over them; and for the great number of orphan girls I had under my charge, I had very little trouble with them.

46. The Irish girls? Yes.

47. Have you any means of judging whether the English and Scotch girls you spoke of turned out well? I think the Scotch girls turned out very well; but the English needlewomen were not at all what we expected.

48. The needlewomen came out by the "Diana"? No; there were five ships—the "Malacca," "Tartar," "City of Poonah," "Euphrates," and the "Carnatic."

49. How did those five ships turn out? They did not turn out well at all.

50. Now, comparing the conduct of the whole of the Irish girls with the conduct of the Scotch girls and of the English girls, do the Irish girls bear at least as good a character as the others? I think the Irish girls were the best conducted girls; the Scotch girls next.

51. Can you say on the whole that they have become as serviceable in the Colony, as servants, as either of the other classes, taking the body? Do you mean that they stayed longer in service, or that they were better servants?

Mrs. Capps. 52. Taking the length of service and everything of the kind into consideration, do you think that they have given as much satisfaction as the English and Scotch? I think so.

4 Nov., 1858.

At the request of Captain Browne the following question was put to the witness:—

53. *By the Chairman:* Was there not a strong prejudice against the Irish orphan girls towards the latter part of their introduction, amongst the employers generally? I think there was a slight dissatisfaction amongst the people.
54. Of course you cannot say whether it was general or partial? No.
55. *By Mr. Murray:* It was stated just now that some of the girls were put to work picking oakum in the hard labor department of the barracks? Yes.
56. Under what authority was that done? I could not say; I got an order for them to do so, and attended to it.
57. But it was by the order of the committee—whichever had the management of the depôt? Yes.
58. Did the girls make any objection to be employed so? No.
59. What was the description of labor they were employed at? Picking oakum.
60. Then there was some allusion made to a sergeant of police that was over them at the time? Yes.
61. Was that the case? Yes.
62. Placed over them? Yes, in a separate building.
63. Where they were thus employed? Yes.
64. What led to this—could you explain to the Committee? The girls were returned by their employers, and, of course, they should have some employment, and it was thought best to give them the oakum to pick.
65. But did you see any necessity for having a sergeant of police over them during the operation? I have never been in the place.
66. But you know as a fact that they were so employed? Yes.
67. Did you hear any complaint of this practice having been resorted to? No; they did not grumble about it.
68. But, so far as you can judge, are you aware of any necessity for having a sergeant of police brought in for the purpose—? He was not brought in; he was living in that establishment at the time, and he got the control of them.
69. Were any of them put in custody and confined? Yes; they were in that place, and there was not much ventilation.
70. How were they put into confinement? They were shut in.
71. Were they locked in? Yes; but there were certain hours of the day for exercise.
72. But while employed they were put under lock and key? Yes.
73. And in the custody of a sergeant of police? He had the keys of the place, and the management.
74. What were the ages of these girls—how did they range? The average was about 18—perhaps 16 or 17.
75. But you are not aware at all of the circumstances which led to their being employed and confined in this way? No; I do not know much about that department; I believe it was those who returned from their service.
76. And how long had they to be kept in this sort of durance? A long time, until some ladies visited the place, and protested against it.
77. Who were the ladies? The Sisters of Charity.
78. They found that this sort of confinement—? They visited them, and found that there was not proper ventilation—that the place was becoming unwholesome, and I think they spoke to the Immigration Agent about it.
79. And then those girls were liberated? Not immediately. They were sent off in drafts up the country.
80. How long did the process of liberation last? A month or six weeks.
81. How many were kept there at any one time? About fifty.
82. How did they sleep at night? They all slept in this long room.
83. How many individuals could you mention as having slept there during the night? I could not say.
84. They were all confined in the same apartment? Yes.
85. And amounted to fifty or sixty at times? Yes; this was the highest number.
86. And was this system carried on with the knowledge of the Managing Committee at the time? I suppose it was.
87. And how long was the room? I should think it was about 24 yards long.
88. And how wide do you suppose? About quarter that width.
89. And fifty or sixty persons were employed in it during the day picking oakum, and had to sleep there at night? Yes.
90. And what was the size of the yard? It was not much larger than the room. The yard and the room are the same length.
91. Who was the Immigration Agent at that time? Captain Browne was for part of the time.
92. *By Mr. Faucett:* Who do you say was the Immigration Agent during the time these people were in confinement? Mr. Merewether, and then Captain Browne.
93. Was Captain Browne, according to the best of your recollection, Immigration Agent part of the time that they were confined in this way? Yes.
94. Can you say how long he was Agent? About three or four months, I think.
95. *By the Chairman:* This sort of punishment appears to have been in full working at the time Captain Browne joined the establishment? The Irish orphans were nearly all gone at that time. There were not many left.
96. When Captain Browne joined? Not many.

97. Was this a part of the discipline of the establishment when Captain Browne did join? *Mrs. Capp's.*
Yes.
98. *By Mr. Faucett:* Did Captain Browne continue or stop that system when he became Agent? The orphan girls were all disposed of, and sent away as fast as they could be disposed of. *Nov., 1853.*
99. But have you any recollection at all whether Captain Browne interfered in any way with that system so as to put a stop to that punishment? I cannot say.
100. Did this system continue until all the girls were disposed of? Whilst the girls were in this place called the penitentiary, they were made to work—picking oakum—until they were all disposed of.
101. *By Mr. Faucett:* As long as they were there? Yes.
102. *By Mr. Murray:* With regard to the confinement in this room, did that continue until they were all liberated? Until the Sisters of Charity spoke of it to the Immigration Agent it continued.
103. Did continue? Yes.
104. And, no matter what the number might have been, they all slept in the same room? Yes.
105. How did they take their meals? I do not know. I had no connection with that place. I never saw how they had their meals; but I know that there was no separate apartment to sleep in. They all had one apartment.
106. Who had the management of that one particular branch of the establishment? Inspector Holmes. His wife looked after them sometimes.
107. Did Sergeant Holmes remain there all the time—was he on duty day and night? He was supposed to be there when he was called for.
108. Always there in attendance? I think he was not there always at night. One of these girls took ill one night, and they broke off the gate leading to the institution I was in, and came to apprise me of it.
109. They broke the gate in order to give notice of one of the girls that was ill? Yes.
110. Was there no arrangement made for providing for accidental illness under such circumstances? I believe not.
111. Was she dangerously ill? No. She was subject to fits.
112. Have you had any knowledge of any of these girls since they left—have you traced them at all in after life? Those that were in this place?
113. Those orphan girls? They were sent away up the country.
114. You do not know anything about them? I could not point to any single instance.
115. I think you did not understand my question. The question I wanted to put to you was, whether you knew of any of them having become wives and mothers? Yes, I know of many instances.
116. Have you formed any opinion at all as to whether they have made good wives and mothers? I am quite satisfied that they have made excellent wives and mothers.
117. As good as the women of any other country? Yes.
118. That is your opinion? Yes.
119. *By Mr. Rotton:* Did I understand you to say that the employment of oakum picking was ordered as a punishment for those girls? I cannot say.
120. Then they must have committed some offence before they could have been put to that employment? Yes; there were complaints lodged against them by their employers when they were turned in.
121. By whom, or by what authority were they put to that employment? I suppose the Immigration Agent.
122. Then it was not merely as an ordinary means of employment to keep them out of idleness, but as a punishment? I could not say; but the order was given for them to pick this oakum, and it was attended to.
123. Were these exclusively girls that had been returned from service, or were the whole of the Irish orphans whom you had under your charge at that time so employed? The Immigration Agent thought that it would be better for them to have some employment, and I think the order was to pick oakum.
124. All of them? Yes.
125. Then it was not as a punishment? I suppose not.
126. These that you speak of who were confined—(I have understood from the answers you made to Mr. Murray's questions, numbers of them were confined in a certain room and employed picking oakum)—were they under punishment exclusively? There were some who picked oakum in the institution who were not under punishment at all.
127. But those confined in this room that you speak of were under punishment? Yes.
128. Have you any recollection of the number—what would the number average? That were picking oakum and in punishment?
129. Yes? The numbers varied much, but not under twenty.
130. What was the most you can recollect? About fifty.
131. That would be then from twenty to fifty under punishment? Yes. I think fifty was the highest number.
132. You spoke of the Sisters of Charity having interfered—was it on account of the nature of the employment they interfered, or on account of the unwholesomeness of the apartment? The air was so bad and vitiated. I think it was on account of the unwholesomeness of the air.
133. No complaints, I think you said, were made by the girls themselves who were not under punishment of the nature of the employment? Oh! no. They did it very willingly.
134. You have had from twenty to fifty then, I think I understand you, under punishment employed in picking oakum? Yes.

- Mrs. Capps.* 135. During what period? I think it continued for better than twelve months—that system.
- 4 Nov., 1858, 136. *By Mr. Murray:* These refractory girls then were thus confined in a room of the size you have specified during the greater portion of the day, and allowed a little exercise occasionally in the yard of the size you have stated, and employed picking oakum—with a sergeant of police watching them, for no other offence that you are aware of than not agreeing with their masters and mistresses? Yes.
137. Was there not a Committee—did not ladies go there to visit those girls? The Sisters of Charity.
138. Only the Sisters of Charity? Yes, only them.
139. Which of the Sisters of Charity? Mrs. De Lacy and another.
140. *By the Chairman:* I think you stated that those girls were put into this room because of their bad behaviour—that they were incorrigible? No; most of them were returned from incompetence, not because they were incorrigible.
141. *By Mr. Rotton:* Have you had occasion at any time to make complaints of the conduct of any of the girls who were under your control? The Irish orphans?
142. Yes? Not often of the Irish orphan girls.
143. We are speaking of the Irish orphans—we are alluding to those who were specially under your charge? Yes.
144. You had occasion sometimes to complain of their conduct? Yes; but very seldom indeed.
145. On such occasions were they subjected to any punishment—were any of the girls put into the room you spoke of to pick oakum as a punishment? Not that I remember; only those who were returned to the institution.
146. Only those that were returned? Yes.
147. You are not aware by what authority those girls were so punished? No; I cannot tell.

At the request of Captain Browne the following questions were put to the witness by the Chairman:—

148. *By the Chairman:* Was it not one of the first steps taken by Captain Browne to abolish the house of correction or penitentiary, or whatever it might be, and to bring all the girls then in charge of Sergeant Holmes under your charge? I think so; it was abolished, and Inspector Holmes left the place.
149. Soon after Captain Browne came? Yes.
150. This system was abolished, and the girls were brought under your charge? Yes. In fact the orphan immigration discontinued about that time.
151. Did you not express some doubts as to the propriety of the step Captain Browne was taking—did you in your capacity as Matron remonstrate or suggest to Captain Browne the impropriety of introducing some of those confined girls amongst the other immigrants and abolishing the penitentiary? I do not recollect suggesting anything of the kind to Captain Browne.
152. *By Mr. Faucett:* Can you say after that system was abolished—of confining them in the penitentiary—whether the girls were easily manageable by you? I had no trouble with them at all.
153. At any time? No.
154. Before or after? No.
155. There were very few that remained after, I believe? Very few.
156. In fact the immigrants had been nearly all drafted off before it was abolished? Yes.
157. *By Mr. Murray:* The Sisters of Charity were the first persons who drew your attention to the unhealthfulness of the place? Yes.
158. How long was that before the practice was discontinued? I think it was very nearly towards the close of the orphan immigration.
159. That they drew attention to it? Yes.
160. Do you know if they remonstrated at all against it? They went into the Immigration Agent, and Mrs De Lacy told him of it.
161. Did you hear any probability of the practice being discontinued until they interfered? No.
162. That was the first you heard of the probability of any change—the remonstrance of the Sisters of Charity? Yes.
163. *By Mr. Faucett:* Who was the Immigration Agent at the time they remonstrated? I think it was Captain Browne.
164. Was there any Agent before Mr. Merewether while you were there? No.
165. All the time you were there—he was the first and Captain Browne after him—there was no other during your time? No.

Mrs. Pawsey called in and examined:—

1. *By the Chairman:* You keep a Registry Office in Sydney, do you not, Mrs. Pawsey? Yes. Mrs. Pawsey.
2. You have kept one for some years? Yes—since 1848.
3. For the last ten years? Yes. 4 Nov., 1858.
4. It is a registry for female servants, is it not? Yes.
5. Then your knowledge of female servants will be pretty good—you have a pretty good knowledge of them? I have.
6. Will you inform the Committee, in reference to that description of servant known as the Irish Orphan Immigrant, whether you found them suitable to employers or otherwise? Many were found suitable, and preferred to those arriving by the other class of emigrant ships. The greatest objection to hiring them was their being so ignorant of their duties as household servants.
7. Did you know much of that description of girl yourself? I did.
8. What was their general character, apart from that of ability? Their moral character?
9. Their moral character? I think upon the whole that their characters were good.
10. Do they bear a favorable comparison, or otherwise, with girls of other countries? A very favorable comparison.
11. You will excuse the question—are you an English woman? I am a Scotch woman.
12. Do you find a great many of the girls now in service at Sydney, or in the country, are girls who have come here—? Under the Orphan Immigration system?
13. Yes? There are a few, and most of them have married and left service; others have gone out of the Colony.
14. But those of that class now hiring—what is their character in regard to ability as servants? They are generally considered good servants.
15. *By Mr. Murray:* Have you been able to trace the career of any of these Irish orphans in after life? I have.
16. Do you know any of them married? Yes.
17. And mothers? Yes.
18. Can you form any opinion as to whether they make good wives and mothers? I could not say; taking them as a whole, a few of them—I dare say many of them—but in the interior of the Colony they have gone beyond my observation.
19. I mean this—do they make as good wives and mothers as the generality of wives and mothers you meet with? Quite as good.
20. *By Mr. Rotton:* The answers you have given, do they refer particularly to the class known as the Irish orphan immigrants? I am speaking of the Irish orphan immigrant.
21. Not to Irish immigrants generally? No; of the Irish orphans I speak.
22. Have you passed many of them through your office? Some hundreds of them.
23. That must have been subsequent to their having performed their first engagements? I think there were many of them that did not perform their first engagement.
24. They did not? No.
25. Are you aware of the cause? I think many of them were very cruelly treated.
26. From your own knowledge of them, when they first came to the Colony were they particularly suitable—I do not mean in regard to their private or moral character, but in their capacity as servants—were they in fact knowledgeable as servants? Not at the time of their arrival; the great majority were completely ignorant of their duties as domestic servants, but they were engaged at a low rate of wages, and those who would take the trouble of teaching found them capable of learning, and generally made them thorough servants.
27. They were not, then, on their first arrival very competent to fill situations? No; I should say that not more than one-third were competent to fill the situation of domestic servants at the time of their arrival in the Colony.
28. Would not that be a means of creating some dissatisfaction and causing some prejudice against them? It was.
29. Generally speaking, so far as you know, their moral character has been pretty good? Yes, I think their moral character has. There were many that did not behave properly; but, considering the great number that came out under that system, I think their characters and conduct quite as good as those that came out under the other system, or even the recently arrived immigrants.
30. Do you know how many Irish orphan girls came out to the Colony altogether? I do not.
31. Do you remember the periods within which they arrived here? I think it commenced in 1850, and continued about three years. At present I could not answer that question correctly, but could tell from the entries in my books.
32. I suppose most of those who passed through your office—that is, who made engagements through you—were those who had served their time or had been discharged from the employers Government had provided for them? Yes.
33. You, in no instance, I believe, made original agreements? No original engagements were made through my office; all original engagements were made from the depôt.
34. Amongst the parties wishing to hire servants from your office, was there any disposition shewn to avoid hiring this particular class of servant? There was.
35. Would they willingly pay much higher rates of wages for other classes of female immigrants? No. The high rate of wages has been much objected to during the last five years.
36. Would employers have been willing to pay more for other classes of female immigrants than the Irish orphan immigrants? It would depend much on their qualifications and general character, and on their efficiency as servants.
37. You stated just now that there was great indisposition shewn to engage these girls at all? I meant if they had broken their agreement, or it had been cancelled for misconduct, not when they had completed their original engagement and left with a good character.

Mrs. Pawsey. 38. When they could produce satisfactory recommendations? Yes.

39. *By Mr. Faucett:* Who were those who shewed a disposition to avoid hiring these people
4 Nov., 1858. —what class of persons? Generally the higher class

40. Did any of the country ladies and gentlemen—the country employers? No. I never found them much objected to in the country.

41. Then it was none but some of the higher class in Sydney? Yes.

42. They wished to have accomplished servants? Competent servants.

43. They did not consider this class of servants sufficiently accomplished? Yes.

44. Was there any other reason? No other.

45. Did these people that objected form anything like a majority of the employers? No.

46. Not even of Sydney? Not generally.

47. Did anything like a majority of employers object? Do you mean in Sydney?

48. Yes? I think there was a majority in Sydney.

49. And through the country was there a majority? No.

50. Those who did object were principally of the higher class? Yes.

51. Will you tell us what you mean by the higher class in Sydney—I really do not know what it is? There are different ranks in society; and, I think, you can form an idea of what is termed the higher class.

52. *By Mr. Rotton:* May I ask when you engage servants for the country is it not in very many instances left to your own discretion? It is.

53. Parties from the country frequently send down to you to send them up such and such description of servants, and you exercise your own discretion in the matter? I do.

54. Then they have no opportunity of either seeing or questioning a girl personally before they receive her at their establishment? No. It is impossible that they can have any opportunity of doing so.

55. *By Mr. Faucett:* You send persons to the country to various classes of employers? I do.

56. You send different classes of immigrants—English, Irish, and Scotch? Yes.

57. Have you had any more complaints from the country about the Irish girls than about the English or Scotch girls? I do not think I have; it is more on account of the great distance from chapel, in many parts of the interior, that employers are put to inconvenience.

58. Then you think the complaint arises on the part of the servants that they have not an opportunity of attending to their chapels? Yes, in the country parts.

59. And that is one of the causes of disagreement between them and their employers? It is the principal cause.

60. The principal cause? The principal cause.

61. And that cause exists much more in the country than in Sydney? Much more.

62. Do you know whether that cause prevails to any extent in Sydney? I think it does.

63. Does that prevail in the families of the higher classes you have spoken of? It does.

64. Have you not found amongst the higher classes that you speak of a general willingness, or have you not found a general willingness to allow their servants to attend their places of worship—the Irish girls as well as any others? I have not. I do not say they would not be allowed to attend church, but I mean to early morning, or forenoon service.

65. Have you found among what we have called the higher class of employers an unwillingness to allow the Irish girls to attend their places of worship on Sunday? I have stated that morning service is objected to; on Sunday evening they are allowed to go.

66. No objection in the evening; but have you found any objection to allow them to attend in the day time—I mean the forenoon service? I have. The hours I meant in my last answer are from early morning until three o'clock.

67. Has there been a general unwillingness to allow them to attend before that time? Yes.

68. And has that been one of the great causes of complaint? It has been a great cause of complaint.

69. Do you know whether those girls considered it incumbent on them, as a matter of conscience, to attend church in the morning—before two o'clock? Yes, I think they do.

70. And their attending church in the afternoon after that hour, or the evening service, is not with them the same thing as attending the morning service? They tell me so.

71. And that is one of the causes of disagreement? Yes.

72. And do you find that cause of disagreement general in Sydney? I do.

73. Do you find that the same class of persons object to allow their English servants to attend church in the morning? Yes. There are few employers allow their servants out to forenoon service—it causes great inconvenience. I do not understand the services either of the Church of England or the Roman Catholic Church, therefore cannot say which of the services are considered incumbent on the members of those churches to attend.

74. Merely as a matter of fact, do you know whether the employers of the higher class you spoke of object to allow Church of England servants to attend service before two o'clock? Very few are allowed that privilege in the morning; they go at three o'clock.

75. Do you find that a cause of complaint on the part of that class of servants? No.

76. They do not complain? No.

77. They are allowed to go to service in the afternoon? Yes, at least each alternate Sunday.

78. *By Mr. Rotton:* But have not those Irish orphans an equal cause of complaint, for the same reason, if they happen to be in the employment of any of their own creed—are they allowed more privileges with those of their own creed than they are with others? Certainly. There is no Roman Catholic family keeping servants of that persuasion but would allow them to go to church.

79. *By Mr. Faucett:* In the morning? I have never found them object to their going at the proper hours appointed for service.

FRIDAY, 5 NOVEMBER, 1858.

Present:—

MR. MURRAY, | MR. ROTTON,
MR. FAUCETT.

THE HON. T. A. MURRAY, ESQ., IN THE CHAIR.

Present in the room—H. H. Browne, Esq., Immigration Agent.

The Honorable Francis Lewis Shaw Merewether, Esquire, M.L.C., attending by permission of the Legislative Council, examined:—

1. *By the Chairman*: You were for a long time Immigration Agent? I was.
2. When did you first take that office? In 1841.
3. When did you give it up? In 1851.
4. Had you, while in that office, any experience at all of the character of Irish Orphan Immigration? Yes; the Irish Orphan Immigration commenced during my tenure of office, and the original regulations under which the orphans were disposed of were framed by a Board of which I was chairman.
5. When did Irish Orphan Immigration commence? I think it was in 1849.
6. It commenced some time before you gave up your appointment? Yes.
7. Do you know how long it continued? I think the large immigration of that description lasted for about eighteen months or two years. It took place in the years 1849 and 1850.
8. From your experience of that immigration while in office, what was your opinion of that class of immigrants? My opinion was, that as respects their moral character they would bear a very favorable comparison with any immigrants ever brought out, but a very small proportion of them had been used to domestic service, and consequently there was a difficulty in disposing of them, and many did not give satisfaction. Having been chiefly taken from the rural population of Ireland, they were not used to domestic service.
9. You were a long time in the former Legislative Council of this Colony? Yes.
10. And are now a member of the present Legislative Council? Yes.
11. Your attention then, as a statesman, has been directed to immigration to this Colony, as a thing altogether apart from the mere consideration of the introduction of labor? Yes; I have paid close attention to the subject.
12. Has it occurred to you at all that men and women are brought to these colonies to serve even higher purposes than those connected with the immediate supply of labor? No doubt they are. One of the great objects is to people the country.
13. We are laying the foundations of a people—of a nation—here? Yes.
14. Then, I presume, under such circumstances, the moral character of the immigrants introduced is a matter deserving of great consideration? Yes, the highest consideration.
15. Do you think, then, that the use of such expressions as these, in regard to that particular class of immigrants, is or is not justifiable:—that they are “most unsuitable to the requirements of the Colony, and at the same time distasteful to the majority of the people”? Those expressions, I imagine, had reference to their immediate usefulness, and to the demand which was found to exist for their services.
16. As servants? As servants.
17. Is this language which you yourself, as Immigration Agent, would have felt you were justified in using with regard to these persons? If it were true that they were unsuitable to the requirements of the Colony, I think it would have been my duty as Immigration Agent to state distinctly the fact. If females were brought out who, as a matter of fact, found a difficulty in obtaining employment, or who were of a description inferior to that which the Colony ought to have received in return for its outlay, it would have been my duty to state it.
18. You were in office during a large portion of the time when these people were coming out, and you have a very considerable knowledge of their general character? Yes.
19. Did you, during that period, make any report at all on the subject of immigration? Yes, I reported frequently, on the several ships as they came out, and on the character of the immigrants.
20. Did you, in any of those reports, make use of language at all similar to this? If I remember right, the general tenor of the language used by me was in accordance with that which I have made use of before this Committee—that their moral character was good, but that they were not acceptable to employers of labor, particularly in town, as they had not been used to domestic service.
21. To whom did you make your reports? To the Colonial Secretary.
22. Did you make any to the Commissioners for Emigration in England? No; my reports were forwarded to the Commissioners through the Colonial Secretary.
23. What has been the general character of the female immigrants brought out here from all parts of the United Kingdom? I think upon the whole good. There have been exceptions, but I think not more than might be reasonably expected, particularly considering the unfavorable circumstances under which females must be placed during the long voyage to this Colony.
24. There were some ships, I believe, very strongly objected to? Yes. Much depended on the management on board ship.
25. Do you remember what were the rates of wages at which Irish orphan immigrants were engaged, generally speaking? I think the rates of wages fixed were from £7 to £14 a-year for the orphan girls.

The Hon.
F. L. S.
Merewether,
Esq., M.L.C.
5 Nov., 1858.

- The Hon.
F. L. S.
Merewether,
Esq., M.L.C.
5 Nov., 1858.
26. And for other girls at the same period? I think they ranged from £10 to £20.
27. How do you account for the difference? The orphan girls, generally speaking, were of inferior qualifications for domestic service, and the greater part of them were apprenticed.
28. At these rates of wages? Yes.
29. £7 to £14? Yes.
30. Does it come within your knowledge that the owners of these very fine houses about Sydney are or are not hard to please in regard to servants of any description? I do not know that they are particularly hard to please. If they were, they would find but few immigrants who would satisfy them. A large proportion of the females who come to this Colony as immigrants are inferior as domestic servants, from want of experience and training, although the order of the Colonial Government, if it may be so termed, is for trained servants, and the full passage-money is paid in the expectation of receiving them.
31. How were these girls treated in the Immigration Barracks when they came out here? With the greatest possible care and consideration.
32. Who were the parties who had the management of them? A Committee was appointed, consisting of clergymen of different persuasions, the members of the Immigration Board, and some other gentlemen.
33. How often did these gentlemen attend at the barracks to see how these girls were treated? Once a week. The clergymen attended daily, and the Health Officer visited them daily, also.
34. Who were the clergymen? Mr. Allwood, Dr. Gregory or Mr. M'Enroc, and Dr. M'Garvie.
35. Did they attend generally to the immigrants? No; they were specially put on this Board upon my recommendation, for the purpose of superintending this Irish orphan immigration. There was also a chaplain to the immigrants.
36. How many of these Irish girls were received altogether? I cannot state the number from recollection, but about 2,300 I think.
37. We heard yesterday of these girls being put under some sort of *duresse* in Hyde Park Barracks, when returned from service—by what authority were they confined? They could scarcely be said to be confined. They were put in a room by themselves, by the authority of the Board, who were appointed their guardians.
38. It was given in evidence here that a sergeant of police was put over them? A sergeant of police was not put over them as such. A superintendent of the barracks was in fact a sergeant of police; he had been connected with the department before he was appointed to the police, and was continued. His being in the police was considered an advantage, but he was not placed over them in his capacity as a sergeant of police, but as superintendent of the barracks.
39. Used he to dress in uniform? Yes.
40. Where used he to remain in attendance on these girls? About the premises. He and his wife lived in rooms adjoining the room in which the girls were.
41. How were the girls employed? In picking oakum.
42. Who used to give them the oakum to pick? I think it was issued by Holmes, the man referred to.
43. Who used to see that they picked it? They were watched.
44. Who watched them? This sergeant of police and his wife, if I remember right. I do not now distinctly recollect the details of their management. It was, of course, very undesirable that these girls should be left idle, particularly those returned from service, and that was the only employment which could be found.
45. Was this sergeant of police, who gave them the oakum to pick, assisted occasionally by his wife, under the direction of the Managing Committee? Yes.
46. What was the size of the room in which these girls were kept at this sort of work? About 100 feet long by 20 feet wide.
47. When did they begin to pick the oakum—at what hour of the day? They were supposed to be regularly employed at picking oakum during the working hours of the day, but at what hour they began I do not remember. Certainly they were not oppressed with work.
48. Where used they to have their meals? In the same room.
49. And what hours of recreation had they? I do not recollect the arrangements made for the distribution of their time. Returns would shew the quantity of oakum picked, and the number of girls who were there.
50. But it might have been that picking oakum was not an amusement in which they particularly delighted? The object was not to afford them agreeable employment, rather the contrary.
51. A disagreeable employment? An employment if possible less acceptable than the work which they would have to do in service, so that no inducement might be offered to them to seek a release from their engagements in order to return to the barracks.
52. What was done with the oakum when it was picked? It was sent to the Colonial Storekeeper, I think, and sold.
53. Do you remember that any remonstrance was made at all against the manner in which these young women were subject to confinement? I do not.
54. It was given in evidence here yesterday that the Sisters of Charity interfered? I do not recollect it.
55. How many girls did you know to be kept in confinement at any one time? That I cannot say from recollection—thirty, perhaps.
56. How many of these Irish girls have you had in the barracks at any one time? I think at one time we had as many as eight or nine hundred.
57. At the time that these girls who had been returned from service were kept in confinement in that long room were there other Irish orphans in the barracks? Yes. As far as I remember the arrangements, those who were returned from service, under sentence of the Court, in which it had been proved that they had been guilty of misconduct, were placed in this separate apartment.
- 58.

58. What was the misconduct? Misconduct formally charged against them by their employers, and decided upon in the Police Court. Mr. Browne, who was at that time Water Police Magistrate, was a member of the Committee of Guardians, and for that reason an arrangement was made that the cases generally should be heard at the Water Police Office, where they were taken by themselves; and when the orphans' indentures were cancelled for misconduct on their part they were received back into the barracks, but placed in this room separate from the others.
59. Then no girls were received back from their employers except those who had been brought before the Police Court, and whose indentures had been cancelled? No, unless in exceptional cases—I think there were one or two—in which the Board found it necessary to interfere and take away servants. I have not any particular case in my recollection, but I have an impression that there were a few cases of that sort. The general rule was that they were taken to the Police Court, where their indentures were cancelled, and they were returned.
60. Was any sentence passed upon them with regard to confinement? No; that was the act of the Committee—their duly constituted guardians.
61. On their own responsibility? Yes.
62. Of what age were these girls generally? From fourteen to seventeen. They were apprenticed up to seventeen, but above that age they were not apprenticed.
63. Do you know at all whether any of these girls, even out of the pittance allowed them as wages—£7 to £14 a-year—saved money to send home to their friends? I am not aware of it, but I can readily believe it, from cases which have come under my own observation.
64. That would indicate a high trait of character? Yes. I think their feeling of attachment to their friends, and their desire to serve them, are very strong indeed.
65. They were also well conducted in other respects—chaste? Their moral character was in general very good.
66. But they were not such good household servants as English or Scotch? No, they were not; it was not to be expected that they should be under the circumstances under which they came out, and for that reason they were sent into service as apprentices. The English and Scotch, and also the Irish immigrants of a different character, are supposed to be trained servants. They were not supposed to be such.
67. I find that this is what you say of these girls in your Report to His Excellency Sir Charles Fitz Roy, dated Sydney, 31st May, 1849:—"The female orphans who have arrived up to the present time have been taken entirely from the workhouses in Ireland, and in consideration of their mature age, and their being regarded as not inferior to the ordinary female emigrants, Her Majesty's Government has accepted from the parochial authorities, as their share of the expense, the females' outfit and conveyance to the port of embarkation, and, I believe, though I am not precisely informed on the subject, the payment of the schoolmaster and matron appointed for their instruction and supervision during the passage. Intimation has, however, been given to the Local Government, that this plan of orphan immigration will be extended to England, and that, as in the workhouses there, few females whom it would be desirable to send would be found above the age of 14 years. A contribution of £4 towards the passage money, in addition to the outfit and other incidental expenses, will be made out of the parochial funds. As respects the female orphans who have arrived up to the present time, I am happy to be able to report that the number of those who did not bring good characters from the authorities placed over them in the ships was comparatively small; that the conduct of the whole of them, whilst inmates of the building provided for their reception here, was orderly to a degree which could scarcely have been expected; and that a large majority of them have given satisfaction to the employers in whose service they were placed, both at Melbourne and here. In very few instances indeed have I heard complaints respecting them of a more serious nature than ignorance of the duties of domestic service and inaptitude for learning them?" Yes; that corresponds with what I have stated to the Committee.
68. This was, I believe, the last Report you made? The last general Report.
69. Do you know if there was a subsequent one in which this class of immigrants was at all alluded to? I do not remember any particular Report; but as I only received a notice to attend the Committee yesterday evening, and have had no opportunity of making reference to documents, I cannot speak with certainty. A Report was made on every individual ship.
70. At that time you did not deem it necessary to say anything further on the subject than what is stated here? No.
71. You are not aware of your having done so at any subsequent period? No.
72. When you wrote this Report you evidently did not think these Irish female immigrants "most unsuitable to the requirements of the Colony, and distasteful to the majority of the people?" That was not my experience of them. At that time they went off very much more rapidly than might have been expected.
73. Your impressions with respect to them were then rather favorable than otherwise? Yes; as I have stated, favorable as regards their moral character.
74. *By Mr. Fanelet*: What was the number of these immigrants that had been disposed of at the date of that Report? There must have been a considerable number disposed of at that time, but I have no documents before me to show how many.
75. *By Mr. Rotton*: That must have been almost at the commencement of orphan immigration? At the first commencement a very large number came out; I am not able to state the number, having no figures before me, but several hundreds, I have no doubt.
76. *By the Chairman*: How long after you made this Report did you remain in office as Immigration Agent? About twelve months.
77. You never deemed it necessary to make any other Report on the subject? The tenor of my Reports throughout was, as far as I recollect, very much in accordance with that which has been cited by the Chairman.

The Hon.
F. L. S.
Merewether,
Esq., M.L.C.

5 Nov., 1853.

The Hon.
F. L. S.
Merewether,
Esq., M.L.C.

5 Nov., 1858.

78. You saw no reason to change your opinion? No.
79. To revert to the picking of oakum—you do not remember that any remonstrance was made with regard to the confinement of these girls? I do not.
80. Were all the arrangements made for their personal comfort, treatment, and decency, such as were approved by the medical officer in particular, as well as by the other members of the Committee? Yes.
81. Do you remember that the Sisters of Charity visited there? Yes, constantly.
82. Did they ever make any report on the subject to you? None, that I remember.
83. Did the girls themselves ever remonstrate against being kept in this sort of duress? No, I do not think they did.
84. Perhaps they liked it? I do not suppose they liked it. It was not intended they should like it. The general complaint at that time was that they were treated with more consideration than they were entitled to, and rather unduly encouraged to remain in the building.
85. How were they ultimately disposed of? They all ultimately found employment. Immigration partially ceased, and people were glad to take even those who had been previously rejected. I think it right to repeat that the utmost possible consideration was shewn to them throughout, and that in all the arrangements the object was to provide for their comfort, their health, and their moral and religious welfare. The Clergymen and the Medical Officer visited them daily.
86. *By Mr. Rolton*: Apart from the high consideration involved in the question of immigration, as adverted to by Mr. Murray in prefacing his first question to you, if it were the fact that at that time these particular immigrants were not qualified as household servants, and were objected to on that account by their employers, would not the Immigration Agent, or whoever framed the report in which these objectionable expressions were contained, have been justified on those grounds in using such an expression? Although the introduction of immigrants serves the higher object of providing for the peopling of the country, yet the immediate purpose for which they are provided with passages at the public expense is that they should supply the demand in the labor market; and if those who are sent out are found not to supply that demand, it is the duty of the Immigration Agent so to report. I always did so myself with respect to any class who were not wanted, or who were not possessed of the qualifications which the Colony had a right to expect in consideration of its large outlay.
87. You have no doubt read the Report, and are aware of the exact terms of the expression complained of—"unsuitable to the requirements of the Colony, and distasteful to the majority of the people"—What interpretation would you put on those terms? What I have understood by them was, that they were not a class of people that employers wanted, and that they would not take them off the hands of the Government.
88. You would not infer that their moral character, or their religion, was at all adverted to, or impugned in any way? Certainly not. It may be right for me to mention, that the Female Orphan Immigration from the Irish workhouses, of which I had experience, was of an unusually favorable character, owing to the circumstances of Ireland at that period. There were then a great number of very respectable young women who had been reduced from circumstances of comparative, and in some cases actual affluence, to the necessity of going into the workhouses. I have no hesitation in saying that I am myself strongly opposed to workhouse immigration of any sort, either from England, Ireland, or Scotland.
89. Do you think an inferior class of that description of immigrants came out subsequently? I do not know that. I merely state the fact, that at the time I was in office a very large number of highly respectable people had been driven to seek workhouse subsistence—a much better class than are ordinarily to be found in workhouses.
90. You have stated that you were in office while this immigration was going on, from 1849 to 1851; you must therefore have had great experience of the working of the system—was it then generally acceptable to the employers of these immigrants? The only answer to be given to that question is the fact that they were disposed of, and disposed of more rapidly than I had anticipated. They came out in very large numbers at once, and many of them were unquestionably very unfit for domestic service when they first left the barracks.
91. There were many of them returned to the barracks from the services in which they had been engaged—are you aware what was generally the cause of their being returned? I think the general cause was a violent use of the tongue, and a good deal of obstinacy.
92. *By Mr. Faucett*: At the time that Mr. Browne heard these cases he was one of the Board of Management of these persons whose cases he was hearing? Yes.
93. Was not that a strange proceeding, that a gentleman should sit on the Bench as a Magistrate, deciding cases over persons he had under his control—would you consider that as fair or common justice that a gentlemen should sit to hear a case against a servant woman who was directly under his control? It might not be fair as regards the employer, but it was decidedly in favor of the servant; and it was with that object the arrangement was made. It was for the protection of the females, and in order that they might not be subject to the annoyance of the general Police Court, that an arrangement was made that the cases should be heard by some of their guardians sitting as Magistrates.
94. *By Mr. Rolton*: There was a room, we have been informed, set apart for the reception of those immigrants who had been returned from their services, which was styled the "penitentiary"? I did not know it by that name.
95. Mrs. Capps, who was at one time Matron, told us yesterday that it bore that designation? That was not the official designation.
96. There was a room set apart? Yes.
97. Have you any recollection how the number ranged that were kept in that room? No, I have not; but I think I am able to state that the number were much fewer in proportion to the accommodation than in other parts of the building.
98. We have it in evidence that the number ranged from twenty to fifty? That would be about the average.

The Hon.
F. I. S.
Merewether,
Esq., M.L.C.

5 Nov., 1868.

99. Did you consider that room in which they were kept by any means unwholesome or too small for the purpose? Certainly not. It was a fine large airy room, and much more than sufficient for any number that were ever in it. As far as my recollection serves, that room would accommodate one hundred persons—that it would hold one hundred beds.

100. Were they made to pick oakum as a means of punishment, or to keep them employed? As a means of employment. There was no other employment we could give them. Very few of them could use their needle; and if they could, no needle-work could have been undertaken by the establishment, as the girls were being daily withdrawn into service.

101. Was the employment considered at all degrading? I never heard it called so.

102. Were not some of the immigrants in other parts of the building so employed? Yes; I think it was made a general employment, as being the only employment that could be devised for them.

103. The general management of these girls was ordered by regulations of the Board you have spoken of? Yes.

104. Can you state the names of the gentlemen composing that Board? It appears from a list placed before me that they were as follows:—Mr. George Allen, Mr. Allwood, Mr. Browne, Mr. Cheeke, Major Christie, Dr. Gregory—for whom I think Mr. M'Enroe acted—Mr. Gregory, Prothonotary of the Supreme Court, Captain Innes, Superintendent of Police, Dr. M'Garvie, Sir Charles Nicholson, Dr. Savage, who was then Health Officer, and myself.

105. Those are gentlemen who would not be at all likely to promulgate regulations which would be revolting to society for the management of these girls? Certainly not. They were very carefully selected, with the view of representing all interests, and particularly with a view to have persons upon the Board who might be able to give accurate information as to the character of employers, so that no female, as far as the Board could prevent it, should be placed in an unsuitable service.

106. During the time you had charge of the Immigration Department were any regulations made by the Board that were considered at all objectionable? I do not remember to have ever heard of any.

107. Do you remember any complaints whatever having been made by the public or by individuals? No; the only complaints I remember were the general complaints of the public at that time that these women were being pampered at the public expense; that was a common complaint then.

108. Your Report quoted by the Chairman was dated in 1849, and as you did not retire from the office of Immigration Agent till 1851, you must have had nearly two years subsequent experience of the system—had you reported at a later date, would your Report have been as favorable to that description of immigrants, and would you still have recommended their introduction? I certainly should not have recommended it if others were to be had, because, as I said before, I object to any immigrants being introduced from workhouses in any part of the United Kingdom. But there has always been a great difficulty in obtaining the required number of female servants of any description.

109. *By Mr. Faucett:* From any country? From any country.

110. *By Mr. Rutton:* Have you ever had any complaints made by any of these girls during your tenure of office of any indignities that were cast upon them on account of their religious persuasion, or of refusals on the part of those who employed them to permit them to attend to their religious duties? I do not now remember any case. There was an express provision in their indentures that they should be allowed to attend their religious duties.

111. Can you recollect whether these girls were freely taken by employers of different persuasions from that which they themselves professed? They were.

112. No objection was offered to them on the score of their religion? No. The intention in the first instance, if I remember right, was to apprentice them as far as possible to persons of their own creeds; but that was found to be impracticable, and was given up.

113. I think you said that 2,300 Irish orphans had been brought out during your tenure of office—can you state how many were returned from service during the same period whose indentures were cancelled by the Bench for misconduct? No, I cannot; but the numbers can doubtless be ascertained from the records of the office. It did not, I think, bear any large proportion to the total number.

114. The burden of the complaints against them, I think I understood you to say just now, was generally for incompetency? Yes, and in some cases want of capacity, as well as indisposition to learn.

115. *By Mr. Faucett:* With respect to Mr. Browne sitting as a Magistrate to decide these cases, I understood you to say he was requested by the Board to do so, for the protection of the girls? Yes.

116. To take care of their interests? Yes. The Board determined that they would not cancel indentures themselves, but leave cases of complaint to be decided according to the ordinary course of law; and in order that the girls might not be exposed to the annoyance of a public Court this special arrangement was made.

117. Do you recollect whether many were returned from the country districts in consequence of misconduct of any kind? I think there were some returned, but not so large a proportion as in Sydney. But arrangements were made that some of the girls should be sent to depôts in the country towns, and when returned they were sent to these depôts. A large proportion of them were much more suited to rough country employments than to employment in town.

118. You say you think one of the acts of misconduct charged against these girls was a violent use of the tongue—did you ever hear that some of their employers in Sydney have sometimes exercised their tongues with some little indiscretion? I have heard of such cases. No doubt there were many such; and when the fault was on the side of the employer, the case was decided against him and in favor of the girl.

119. And was the result in these cases that the indentures were cancelled? Yes.

120. When the indentures were cancelled on account of indiscretions on the part of employers

The Hon.
F. L. S.
McCreuther,
Esq., M.L.C.
6 Nov., 1858.

employers —? They were received back again, and not put in the place which has been called the "penitentiary"?

121. There was a clause in the indentures that they should be allowed to attend their places of worship? Yes.

122. We had it in evidence yesterday that they complained that they were not allowed to attend morning service, on Sundays more particularly—were you aware of any such complaints? I do not remember any. If there were any, they were so few as to have left no impression on my memory.

123. It was stated that that was one of the principal causes that led to differences between them and their employers? As far as I recollect having heard of any such complaints, they proved to be nothing more than that the employers could not allow their servants to go out at eleven o'clock. The girls were not disposed to go at an earlier hour of the morning.

124. The employers themselves wished to go to places of worship at eleven? Yes.

125. Have you any reason to say from your experience, taking town and country together, that these people were "distasteful to the majority of the people"? On the whole, taking that batch of immigrants, I think I may say they were of great service to the country; but, as I said before, the people who came out at that time did not fairly represent ordinary workhouse inmates, because circumstances had thrown amongst them, at that particular period, many who were of a much superior class.

126. Without reference to their being from workhouses at all, would you say they were distasteful to the majority of the people—understanding "the people" as the people of the country as well as of the town? No. As a batch, I should say that the orphan immigrants who came out during my tenure of office were on the whole acceptable; but there were no doubt a great number of them who were far from refined, and not at all suited to ordinary domestic service.

127. I believe you have known remittances to have been sent from Moreton Bay to the Immigration Agent, for the purpose of assisting friends at home? Yes, remittances have been made from different parts of the Colony.

128. Do you recollect whether the people who have been brought out by the assistance of these remittances were brought to Sydney, or sent directly to Moreton Bay? That I do not remember; in fact it scarcely occurred in my time.

129. Have you had any knowledge of the conduct and character of these orphan girls in after life? I only know from what I have casually heard, that a great number have turned out well. We took a great deal of pains at that time to ascertain what proportion of them were to be found about the streets of Sydney, and we ascertained that the number was very small indeed in proportion to the whole.

130. With respect to that point, would they bear a favorable or unfavorable comparison with the females from England or Scotland? I think in that point of view they would bear a favorable comparison.

131. Do you know that many of them who have gone into the country have married most respectably, and turned out remarkably well? Yes; I have heard so from many quarters.

132. Many of them are in very comfortable circumstances now? Yes; so I have heard.

133. *By Mr. Rotton:* We are assembled here in consequence of a petition presented to the House, requesting the appointment of a Committee to inquire into this question; and the petitioners, amongst other things, pray "that the proposed Committee should also take into consideration what further steps ought to be taken to render the Immigration Department in Sydney more efficient, in supplying the inhabitants of the interior with female servants, than it is found at present to be." Are you able to offer any suggestions as to the means to be adopted to carry out that distribution? It would be a very desirable thing, no doubt, to have females conveyed into the interior, but it is, I conceive, a question of expense; the expense of conveying them to the interior would be so enormous that, if not now, it would at one time have amounted to half as much as the cost of bringing them out from England; otherwise it would be desirable to have depôts in the country towns.

134. *By Mr. Faucett:* Do you not think the people in the country districts are not treated fairly, unless these people are sent into the country instead of being retained in Sydney? I do not think that at all.

135. Are not the people of Sydney at least at an advantage in that respect, by these people being placed within their reach? No doubt they have an advantage, but it is only the same advantage that a person has in buying any article of merchandize—he has not to pay carriage to the interior.

136. *By Mr. Rotton:* There are higher considerations, as the Chairman explained just now, in asking you a question, involved in the question of immigration, than the mere supply of the labor market; as he said, we wish to get a good class of immigrants to this Colony, for the purpose of peopling it with those who will ultimately give the nation, when it so becomes, a permanent and good character: would it not then be better that these immigrants, when they arrive here, should be distributed in such parts of the Colony as they would be likely to do themselves some good in—to get on in fact in the world—than that they should be shut up in Sydney where they are frequently not required—where their services are not accepted—and where, consequently, they are almost obliged to become prostitutes on the town. Is it not a well known fact that many of those who are prostitutes in the City of Sydney have been driven to it from necessity, arising from the difficulty of obtaining employment here, and the impossibility of getting to the interior? I do not think that is the case at all; I do not believe a single woman has been driven to prostitution in this Colony for want of employment, even in those times when there was a very large female immigration.

137. I think we have it in evidence, on very high authority, that they have? Well, I do not credit it myself. It may be so represented, and no doubt any woman who had erred in that way would so represent it; but I do not believe it myself.

138. Do you not think it would be desirable that immigrants should be, at any rate, proportionally distributed in the interior? I do think it extremely desirable; but it is a question of expense. I should suggest that the employers of labor in the interior should form associations, and raise funds to bring the people up.

139. We have had it in evidence that these girls were objected to because they were "dirty Irish, and ignorant Irish papists,"—have you ever heard such objections? I have heard many objections on the score that they were dirty and ignorant, but I do not think their religion was an objection, or that any objection was taken to them on that ground by people in general who were in search of servants; on the contrary, even protestant clergymen have taken them.

140. Have you ever heard any cry got up in the Colony to exclude Irish immigrants? I have not heard anything of the sort of late years. I think that all classes are perfectly satisfied if they get a fair proportion from the different portions of the United Kingdom; that is the general feeling of the Colony, as far as I know it.

141. *By the Chairman, at the suggestion of Mr. Browne:* Will you state the number of Irish orphan immigrants that had arrived up to the time when you made the Report in 1849, which has been alluded to by the Chairman? I find from the document placed in my hands that the number was 618, by three ships.

142. With the exception of the first vessel, the "Earl Grey," from which there were a large number removed at once to Moreton Bay, were not the majority of those who subsequently arrived, in the "Inchinnan" and "Digby," of a better class? Yes; and there were also a considerable number in the "Earl Grey" who were of a most respectable character.

143. Do you remember that in the early part of 1849 a resolution was come to by the Committee, of which you were Chairman, to the effect that Orphan Immigration should not be continued, excepting on the condition that some contribution was made from the unions or parishes, to the extent of £5, or of half the passage money? Yes, I do; a proposition was made that females from some of the workhouses in England should be sent to the Colony, on the condition that the workhouse funds should be charged with a portion of the expense. The Committee recommended that the same condition should be imposed in respect to those from Ireland. As I before stated, I have always objected to workhouse emigrants; but if they are to be taken, the Colony ought certainly not to bear the whole expense of their introduction.

144. Was not a similar recommendation made by the Orphan Committee at Melbourne, and sent through you as Chairman of the Orphan Committee here? I think it was.

145. Was not the cost of these girls, who were not in all respects suited for domestic service, as great, in consequence of the expenses of management after arrival, or in some respects greater, than the cost of the introduction of suitable domestic servants? The expense to the Colonial Government for the maintenance and supervision of these girls after their arrival was unquestionably greater than in the case of the ordinary female immigrants who are expected to be trained servants, and accompanied by their natural protectors, or of an age to take care of themselves.

146. Was there not latterly a great prejudice existing against them on the part of the public generally. When the orphans available for engagement were reduced to those who had been left unhired, on account of their inferior capacities, and to those who had been returned for misconduct, a prejudice naturally arose against a class which was then represented by none but the worst members of it.

147. In consequence of the bad conduct of some of the girls that were forwarded into the country, did not the Orphan Immigration Committee come to a resolution that no more of them should be forwarded into the interior who were returned from service, as they were bringing by their conduct disgrace upon the whole batch? Yes; a rule had been established by the Committee that girls returned from service in Sydney for misconduct should be forwarded into the country districts; but as the removal had not the anticipated effect of improving their course of conduct, the opinion formed from their misbehaviour was found to produce in the country districts a strong prejudice against the whole class, whilst to the individual girls no benefit resulted; this arrangement was accordingly discontinued.

The Hon.
F.L.S.
Merewether,
Esq., M.L.C.

5 Nov., 1853.

1858-9.

WEDNESDAY, 22 DECEMBER, 1858.

Present:—

Mr. DENIEHY,
Mr. JENKINS,Mr. ROTTON,
Mr. THORNTON.

GEORGE THORNTON, Esq., IN THE CHAIR.

Hutchinson Hothersall Browne, Esq., called in and examined:—

- H. H. Browne, Esq.
22 Dec., 1858.
1. *By the Chairman*: Are you prepared to offer to the Committee your explanations upon the subject which has been referred to them? I am.
 2. You are aware that the petitioners complain—and I direct your attention particularly to the words—that you have “misrepresented *Irish Female Immigrants* ‘as being most unsuitable ‘to the requirements of the Colony, and at the same time distasteful to the majority of ‘the people.’” I emphasized the words “*Irish Female Immigrants*,” for it is the impression that your so-called misrepresentation has referred to Irish females generally? My intention, as Chairman of the Immigration Board, in writing that Report, which has been the primary cause of the complaint in this instance, was in consequence of an inquiry instituted before that Board, on complaints made by the clergyman in charge of the immigrants by the “*Lady Kennaway*,” and also in consequence of reports which had reached that Board and the Government, that irregularities had existed on board that ship, compromising, to a certain extent, the character of some of the officers, and also of some of the immigrants. That inquiry was a very lengthy one, and lasted some days, and the result was, that the Report, which was approved by myself and my two colleagues, sitting as a Board, was forwarded to the Government as the Report upon that ship. I may state, that the conclusions at which the Board arrived with reference to that particular ship I believe were fully borne out by the evidence, and the conclusions which were arrived at with reference to the particular class of immigrants who were introduced in that ship, were arrived at in consequence of what was known to myself, and the other members of the Board, to have existed with reference to previous orphan immigration. You, sir, are perhaps not aware that the “*Lady Kennaway*” brought out 150 orphan girls from the Cork Union Workhouse. This description of immigrants had been prohibited by order of this Government, in consequence of representations made by the Orphan Boards, both in this Colony and in Melbourne. The Commissioners had no authority to deviate from those instructions, or to send out any class of persons but ordinary selected immigrants, not being inmates of any workhouse, or other eleemosynary asylum; they deviated from that course in this instance, and the information the Board received respecting the conduct and character of some of the girls in this ship being prejudicial to their future employment in the Colony—the barracks being at that time filled with females, although but a few months had elapsed from the re-commencement of immigration. I think the first shipment arrived in the month of July, and at the end of November the barracks were filled with females from the country districts of Ireland, entirely unaccustomed to domestic service—and having at that time a premium on their head of £12 each, which the Act then in force obliged each employer to deduct out of their wages—it was felt by myself, and represented strongly to the Government, that the Government would be saddled with the expense of the maintenance of a large number of girls, which the community would not take off their hands. The importation of the girls by the “*Lady Kennaway*” appeared rather to increase that difficulty; for, on reference to the printed paper you will see that from the “*Lady Kennaway*”—all of whose immigrants were under the same regulations, namely, that the single females were to pay out of their wages £12, their employers, in the first instance, paying that amount for the passage—for several days nobody would hire immigrants from the ship; and you will see from a return before the Committee, printed in the Parliamentary Papers, at page 15, that although the date of her arrival was the 8th of December, by the 12th of January, up to which period the return is made up, only £164 was received on account of immigrants by that ship. It is perhaps impossible for gentlemen not connected with the department over which I preside to call to memory the precise state of circumstances which existed at this particular time; but I remember it distinctly. There was at that time a great disinclination and strong feeling on the part of people with whom I came in contact against the orphan system about to be reverted to, and it was feared that we should be inundated with a class of persons who would not be employed. I therefore felt it to be my duty—not from any feeling against the class to which these people belonged, because I have striven in the discharge of my duty to act with the impartiality which is so necessary in a department where people of all classes and of various religious persuasions are brought together—to represent emphatically, in the language I then employed, that Government should take steps to prevent the sending of any more females from the Cork Union Workhouse, or any other workhouse, while girls of a suitable description for domestic service could be found. These were my reasons. I had no wish to give offence to the particular class to which these females belong. I had no wish in the slightest degree to reflect upon their virtue, although it may be, that in the course of my examination I shall shew there were some who deviated from the path of virtue. I believe it will be fully borne out that, on the score of virtue,

virtue, Irish immigrants have been quite equal to any who have been imported to the Colony of any description whatever, therefore I could have no object in making any such representation; but my duty was to introduce such a class as would be most likely to be useful to the employers of labor, in the future improvement of the Colony; and I did consider, when I had from five to six hundred girls at one time remaining unemployed in the Government Barracks at Hyde Park, that I was justified in making the strong representation I did, that that particular class, which I considered to be inferior to any that had been introduced as a body—I refer to the workhouse servants—was unsuitable. The returns before this Committee will shew, that if I had wished to prominently bring under the notice of the Government the great disproportion that has all along existed in the introduction of immigrants from Ireland, I could have done so, by a formal despatch on the subject of immigration, and not by a side-wind, as is imputed to me in the case of the "Lady Kennaway." But I have never done that. I believe none of the reports alluded to by Mr. Davis and others will justify the conclusion that I have commented upon the immigrants unfairly on account of their nation. I have freely remarked upon their conduct, whether they were English, Irish, or Scotch. I commented without fear upon the conduct and character of the English needlewomen; and I did the same in the case of the immigrants from the Isle of Skye, and of those from Paisley—the Paisley weavers. I trust therefore that the Committee will absolve me from entertaining any feeling against a particular class, and if they differ from me in the opinion I have expressed, I trust they will at all events give me credit for honesty of purpose. I will allude at some future time as to the particular character of the girls by the "Lady Kennaway,"; of course their subsequent misconduct did not come under my notice till afterwards, and therefore I shall not mention it as justifying the Board in the conclusions expressed in their report; but it will shew that the apprehensions entertained as to their subsequent conduct were well grounded. Now, with reference to the unsuitableness of these girls for domestic service. I will shew if I can the grounds on which they were unsuitable to the requirements of the Colony, looking to the demand that had existed, that did exist, and that still exists for domestic servants; I will also give my particular views with reference to the degree of distaste manifested for this particular class, and the causes of it. The females most in demand here are domestic servants, to which occupation very few Irish orphans had been brought up. There being only a limited demand for farm servants—for which they are best suited—a few only could be disposed of as domestic servants, with any prospect of satisfaction to their employers, or ultimate benefit to themselves; their entire ignorance of duties appertaining to domestic service, their disinclination to learn, their dirty and idle habits, coupled in some instances with a morose and ungovernable temper. The expense they entailed upon the Government for having to maintain costly institutions, to receive back from service such as may have their indentures cancelled; thereby not only entailing an equal cost to the Colony as that of a trained and useful servant, but also a lasting expense of management, which does not attach to ordinary female immigrants. The disinclination of employers to take these persons if others can be obtained. Then, again, one of the most important objections to them, and which I have had personal opportunities of observing, not only as a member of the Orphan Board, but also as Water Police Magistrate, which office I held at this time, is this, that from their ignorance of domestic service they were more liable to be treated unkindly by employers, and thereby not infrequently forced into habits of vice, and thus became burdens to the Colony. I had many opportunities of becoming acquainted with the cases of these unfortunate girls; very many of them were very distressing, and I believe that had not the Orphan Committee insisted upon having all cases connected with these girls tried at the Water Police Office upon one particular day in the week—one of the guardians being present to protect their interests—they would have been to a very much larger extent turned adrift on the town. I believe that during my career as Water Police Magistrate, sitting with another magistrate, I must have tried some three or four hundred of these cases. You will see by some letters I shall presently put in that the Committee distinctly refused to allow any girl to be returned from service, however unsuitable she might be, except upon the adjudication of a Police Bench. The letters that came in from people who were anxious to get rid of their servants were very numerous. The parties in many cases did not care what became of the girls, and the Orphan Board decided that they would not receive back, or relieve from the indentures they had entered into, any servant, unless the indentures had been previously cancelled at a Police Court. The causes of distaste, I think, may be summed up in a few sentences. They are as follows:—The responsibility which attaches to an apprentice as compared with ordinary servants. The employer having once taken them, having had them bound to them for three or five years, they could not discharge them for any amount of misconduct or incompetency as they could do in the case of an ordinary servant, and the consequence was that great difficulty arose, and great dissatisfaction was manifested in many families. Another reason for this distaste was the difficulty of dispensing with the services of an apprentice, except through the intervention of Courts of Petty Sessions, and the necessity which such a course entailed upon employers to prove such an amount of misconduct as would justify the magistrate in cancelling the indentures, which might in many cases be impossible, although during the time the employer might be subjected to the greatest inconvenience, in consequence of a dogged and morose disposition on the part of the apprentice and a disinclination to please her employers. You may easily understand, as magistrates and gentlemen who have tried cases of this kind, that unless there was some distinct proof of misconduct, such as would justify the cancelling of an apprentice's indentures, the Bench would not adjudicate, but would dismiss the case, with an intimation that the employer and employed had better make up the disagreement. Still, many of the disagreements were of such a character as to lead the Bench to make orders that finally terminated in the cancelling of the indentures. Then, again, there was the disinclination on the part of the employers to have their domestic arrangements made the subject of a discussion in a public Police Court, and the disinclination of the ladies of the families, between whom and the apprentices-

H. H. Browne,
Esq.
22 Dec., 1853.

H. H. Brown, Esq., 22 Dec., 1858. apprentices the difficulties usually arose, to attend at those places, thereby making themselves conspicuous. I need hardly tell you that very many of these girls when called upon for explanations of their conduct did not hesitate to condemn their masters and mistresses in no measured terms. Then, again, the majority of these girls were dirty in their persons, and slothful in their habits. There is another matter which has been alluded to in the evidence given before this Committee,—the difference in religious opinion,—and I think it right I should state that when any of these girls had any difference with their masters or mistresses they generally sought out the clergyman of their own particular denomination, generally either Dean M'Encroe or Dr. M'Garvie, and the consequence was, that the clergy did, to a certain extent, interfere with the arrangement of family matters, which caused distaste; parties did not like the intervention of clergymen in their domestic affairs. In illustration of what I have stated with regard to the female orphans, I will refer the Committee to the proceedings of the Orphan Board at the time of their introduction, and the course pursued by that Board. The papers which I produce, from the records of the office, will, I think, justify the conclusions at which I have arrived. It was about the month of September, 1848, that the Orphan Board was appointed, in consequence of a Despatch from Earl Grey, stating that it was the intention of the Commissioners to send out from the workhouses of England and Ireland orphan girls, who, from their age and qualifications, might be regarded as trained servants suitable for the requirements of the Colony. The names of the members of the Board have already been stated to the Committee. At this time Port Phillip formed part of this Colony; and as a portion of the orphan girls were to be landed there as well as here, a similar Board was appointed at Port Phillip—consisting of gentlemen belong to the several religious persuasions—to that which was nominated here by Sir Charles Fitz Roy. About 2,200 orphans came to this Colony, and about 1,600 or 1,700 went to Melbourne. I beg to hand in the first Report of the Board. (*The witness read the portions printed in Italics, and handed in the Report. Vide Appendix A.*) Fortunately there were no other ships to be compared with that. I merely put in this Report to justify my proceedings with regard to the "Lady Kennaway," and to shew that my predecessor, and a body of gentlemen, among others clergymen of the same persuasion and country as these girls, thought it necessary to make a very much stronger report than I have ventured to make. The "Earl Grey" was the only ship that arrived in 1848. In 1849 we had the "Inchinnan" with 176, the "Digby" 245, the "William and Mary" 174, "Lismoyne" 178, "Lady Peel" 183—making altogether 956 in 1849. Now, you will see how very soon it was necessary the Orphan Committee should take steps to a certain extent to protect, and sometimes to punish these girls. In a very short time they became so troublesome that their employers were dissatisfied with them. I have here a minute of the Board, dated 13th February, 1849, which I will read. (*The witness read the same. Vide Appendix B.*) That will shew that in 1849, after the arrival of about three of these ships, it was necessary to appoint a particular day in the week for the adjudication of complaints made by masters and servants. With the view of protecting these girls as far as possible from any frivolous and vexatious complaints, the Board requested me to attend on a particular day, and on that day Captain Innes, Mr. John Campbell, or myself sat, and the business connected with these orphan girls took precedence of other matters; perhaps from fifteen to twenty cases were adjudicated upon in the day. On the 26th April, 1849, the Chairman of the Orphan Committee addressed the following letter to the Colonial Secretary, in consequence of a Despatch which had been received from the Secretary of State, proposing that Orphan Immigration should be commenced from the English as well as from the Irish workhouses, on certain conditions, namely, that they should contribute some £4 or £5 towards the payment of the passage of these girls as a premium to the Colony in consequence of their not being such an efficient class of immigrants as could be sent out at the same money as their passage would cost. This was never done; for all these girls—as they were above twelve years of age—cost the same price to bring out as trained domestic servants, and to the expense of their passage must be added the cost of the expensive establishment maintained in Sydney in their behalf, as well as of the depôts in the interior. (*The witness handed in the letter—Vide Appendix C—having read the portions printed in Italics.*) Then, on the 8th December, 1849, I find the following minute. (*The witness read the same and handed it in. Vide Appendix D.*) The next paper which I shall lay before the Committee is dated 8th November, 1849, and is a letter from Mr. La Trobe, forwarding a Report from the Orphan Committee of Melbourne to the Colonial Secretary. From this it appears that in Melbourne there were the same difficulties in disposing of, and the same expense in retaining these girls, as here. (*The witness read the same and handed it in. Vide Appendix E.*) Then, on Monday, 18th March, 1850, about eighteen months from the commencement of Orphan Immigration, the following minute was entered upon the proceedings of the Committee. Had these people been of so useful a class, or likely to become good servants, and valuable members of society as some have said, I do not think this would have been written. (*The witness read and handed in the same. Vide Appendix F.*) This is the letter from Mr. Merewether, the then Immigration Agent, to the Colonial Secretary, enclosing the minute. (*The witness read and handed in the same. Vide Appendix G.*) Before the recommendations contained in that Despatch could be carried out, nearly a thousand additional female immigrants of this class had been received; and I have here a letter upon the same subject from Mr. La Trobe, the Superintendent of Port Phillip, who was a very cautious man in writing. (*The witness read and handed in the same. Vide Appendix H, No. 1.*) The Report of the Board enclosed in this communication goes rather more fully into the objections to this species of immigration. (*The witness read the passages printed in Italics and handed in the Report. Vide Appendix H, Nos. 2 and 3.*) Then, to close the documentary evidence upon this point, I will shew the views entertained by Mr. Merewether and the Orphan Board here. On the 14th June, 1851, Mr. Merewether addressed this letter to the Colonial Secretary, and no one who knows the former gentleman will for a moment suppose that he would say what was not fully borne out by facts. (*The witness read and handed*

in the same. Vide Appendix I.) Now, it has been stated before the Committee, and I think some Honorable Members are under the impression, that these particular girls were found fault with only by the higher class of employers; but I think they will be convinced, from the documents I shall lay before the Committee, that that is not the case. The papers which I now lay before the Committee are the reports of the adjudications at the Water Police Office in connection with the orphan girls and their employers: they were ordered to be furnished by the Orphan Committee, and they set out the name of the employer, the name of the girl, and the offence committed. It will be seen by a reference to these papers that in some cases there were complaints made by the girls against their employers, but that the large majority were complaints against the girls, and in many instances the employers were in the humbler walks of life. The number of reports amounts to 254, between 1848 and the month of May, 1851. I will prepare an abstract of these cases, and append it to my evidence. (*Vide Appendix J.*) The cases which came before me and the other magistrates who sat with me were frequently of a very painful description. When they were heard, a number of charges and counter-charges were heard; and I can unhesitatingly say, that the feeling against coming before the Court was so strong on the part of the employers, that if the Orphan Committee had not threatened to prosecute any one who turned out an orphan without an adjudication, hundreds of these girls would have been displaced and thrown upon the streets. The department at Hyde Park was broadly charged by some of these employers with assisting to keep these girls for the purpose of annoying the public; and, although I cannot lay my hands upon any of the daily papers of the time, I remember that it was stated by the press, that the whole time of the Water Police Bench, which was instituted for the purpose of hearing seamen's cases, was occupied with the cases of the orphan girls, which lasted sometimes throughout the whole day. With regard to the strong feeling of distaste which existed on the part of the public, I have found sixty-one letters which were received from various persons, many of them in very humble circumstances. I will leave these letters with the Committee, and they will see that although some are from persons in high estate, there are others from those in low estate. I have one here from a person at Parramatta, who is evidently of the lower class. She says—"I believe if some steps is not taken with them, to prevent such conduct," [referring to the conduct of which she complains on the part of her servant] "they will prove an awful curse to the country. If they are allowed to leave their place when and where they please, Sydney streets will soon be crowded." (*The witness read a letter from Mr. Francis Macarthur, and handed in the same. Vide Appendix K, Nos. 1 & 2.*)
