Answers for industry.

Integrated technologies, vertical market expertise and services for greater productivity, energy efficiency, and flexibility.

The Siemens Industry Sector is the world's leading supplier of innovative and environmentally friendly products and solutions for industrial companies. End-to-end automation technology and industrial software, solid market expertise, and technology-based services are the levers we use to increase our customers' productivity, efficiency and flexibility. With a global workforce of more than 100 000 employees, the Industry Sector comprises the Industry Automation, Drive Technologies, and Customer Services divisions, as well as the Metals Technologies Business Unit.

We consistently rely on integrated technologies and, thanks to our bundled portfolio, we can respond more quickly and flexibly to our customers' wishes. With our globally unmatched range of automation technology, industrial control and drive technology as well as industrial software, we equip companies with exactly what they need over their entire value chain – from product design and development to production, sales and service. Our industrial customers benefit from our comprehensive portfolio, which is tailored to their market and their needs.

Market launch times can be reduced by up to 50% due to the combination of powerful automation technology and industrial software from Siemens Industry. At the same time, the costs for energy or waste water for a manufacturing company can be reduced significantly. In this way, we increase our customers' competitive strength and make an important contribution to environmental protection with our energy-efficient products and solutions.

Efficient automation starts with efficient engineering.

Totally Integrated Automation: Efficiency driving productivity.

Efficient engineering is the first step toward better production that is faster, more flexible, and more intelligent. With all components interacting efficiently, Totally Integrated Automation (TIA) delivers enormous time savings right from the engineering phase. The result is lower costs, faster time-to-market, and greater flexibility.

Totally Integrated Automation
Efficient interoperability of all automation components

A unique complete approach for all industries

As one of the world's leading automation suppliers, Siemens provides an integrated, comprehensive portfolio for all requirements in process and manufacturing industries. All components are mutually compatible and system-tested. This ensures that they reliably perform their tasks in industrial use and interact efficiently, and that each automation solution can be implemented with little time and effort based on standard products. The integration of many separate individual engineering tasks into a single engineering environment, for example, provides enormous time and cost savings.

With its comprehensive technology and industry-specific expertise, Siemens is continuously driving progress in manufacturing industries – and Totally Integrated Automation plays a key role.

Totally Integrated Automation creates real value added in all automation tasks, especially for:

- **Integrated engineering**
Consistent, comprehensive engineering throughout the entire product development and production process
- **Industrial data management**
Access to all important data occurring in productive operation – along the entire value chain and across all levels
- **Industrial communication**
Integrated communication based on international cross-vendor standards that are mutually compatible
- **Industrial security**
Systematic minimization of the risk of an internal or external attack on plants and networks
- **Safety Integrated**
Reliable protection of personnel, machinery, and the environment thanks to seamless integration of safety technologies into the standard automation

Making things right with Totally Integrated Automation

Totally Integrated Automation, industrial automation from Siemens, stands for the efficient interoperability of all automation components. The open system architecture covers the entire production process and is based on end-to-end shared characteristics: consistent data management, global standards, and uniform hardware and software interfaces.

Totally Integrated Automation lays the foundation for comprehensive optimization of the production process:

- Time and cost savings due to efficient engineering
- Minimized downtime due to integrated diagnostic functions
- Simplified implementation of automation solutions due to global standards
- Better performance due to interoperability of system-tested components

Totally Integrated Power We bring power to the point – safely and reliably.

Comprehensive answers for power distribution in complex energy systems – from Siemens

Efficient, reliable, safe: These are the demands placed on electrification and especially power distribution. And our answer – for all application areas of the energy system – is Totally Integrated Power (TIP). It's based on our comprehensive range of products, systems, and solutions for low and medium voltage, rounded out by our support throughout the entire lifecycle – from planning with our own software tools to installation, operation, and services.

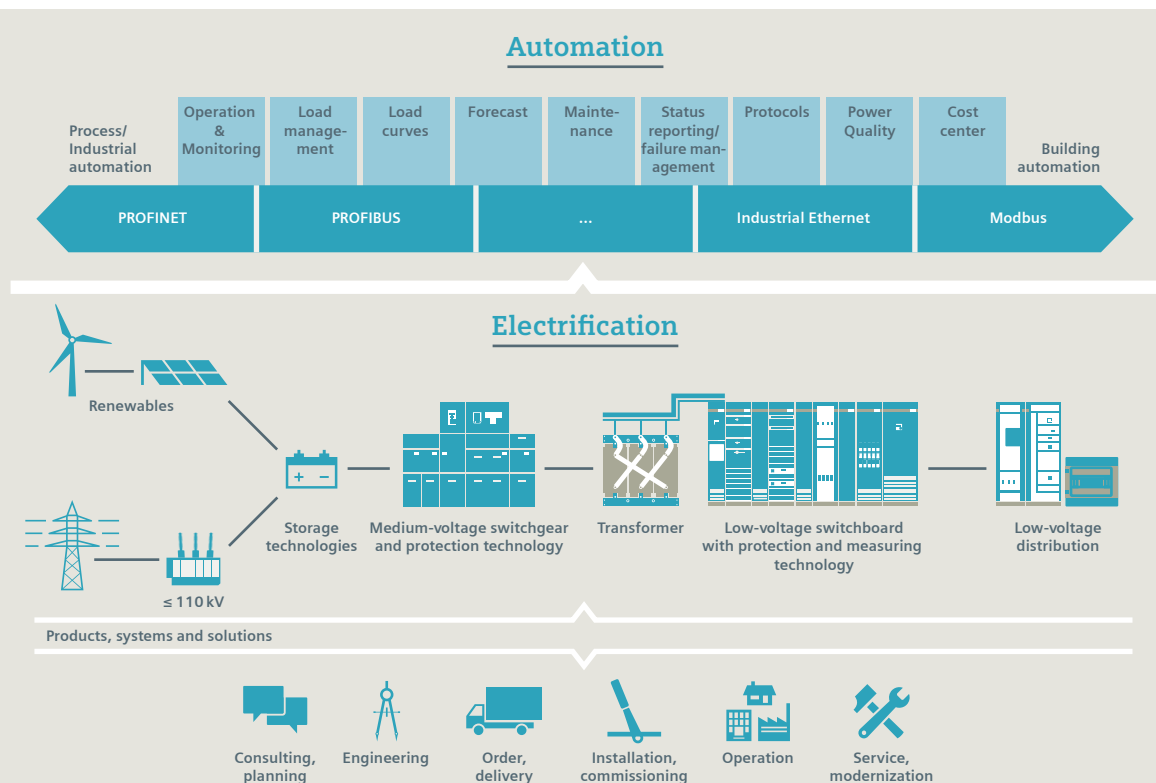

Smart interfaces allow linking to industrial or building automation, making it possible to fully exploit all the optimization potential of an integrated solution. This is how we provide our customers around the world with answers to their challenges. With highly efficient, reliable, and safe power distribution, we lay the foundation for sustainable infrastructure and cities, buildings, and industrial plants. We bring power to the point – wherever and whenever it is needed.

More information: www.siemens.com/tip

Totally Integrated Power offers more:

- **Consistency:**
For simplified plant engineering and commissioning as well as smooth integration into automation solutions for building or production processes
- **One-stop-shop:**
A reliable partner with a complete portfolio for the entire process and lifecycle – from the initial idea to after-sales service
- **Safety:**
A comprehensive range of protection components for personnel safety and line and fire protection, safety by means of type testing
- **Reliability:**
A reliable partner who works with customers to develop long-lasting solutions that meet the highest quality standards
- **Efficiency:**
Bringing power to the point means greater plant availability and maximum energy efficiency in power distribution
- **Flexibility:**
End-to-end consistency and modular design of Totally Integrated Power for any desired expansions and adaptation to future requirements
- **Advanced technology:**
Reliable power distribution especially for applications in which supply is critical, continuous refinement of the technology

Challenges are our speciality

Introduction

Gain transparency and lower costs

SIMATIC HMI operator control and monitoring systems

1

Overview

The human machine interface products are the intelligent response to increasingly complex processes and stringent requirements for the functionality of machines and plants.

SIMATIC HMI is optimally tailored to special operator control and monitoring requirements.

The individual components can be perfectly integrated into your automation system due to the consistent use of open, standardized hardware and software interfaces.

Overview (continued)

HMI panels – Perfect for use in harsh industrial environments

The SIMATIC Panel portfolio offers the right solution for every application: From simple key control panels via mobile and stationary HMI devices all the way to the all-rounder for sophisticated applications — always robust, compact and with manifold connection options.

You will get even more value with the brilliant displays and safe, ergonomic operation, either with keypad or touch screen.

<http://www.siemens.com/hmi-panels>

SIMATIC HMI - Always the right hardware

SIMATIC HMI offers industry-specific designs for smooth and proper use – through modified standard devices.

For the food and beverages industry we supply, for example, devices with stainless steel fronts, and for industries facing particularly harsh environmental conditions, we offer fully enclosed devices with dust and splashwater protection in a robust aluminum enclosure with high degree of protection IP65.

<http://www.siemens.com/customized-automation>

HMI software – Visualization software from a single source

With the product families SIMATIC WinCC (TIA Portal), SIMATIC WinCC and SIMATIC WinCC Open Architecture, SIMATIC HMI covers the entire engineering and visualization software spectrum for the human machine interface.

With SIMATIC WinCC (TIA Portal), the successor of SIMATIC WinCC flexible, almost the entire range of SIMATIC HMI devices can be configured. The functionality covers both visualization tasks on the machine level and SCADA applications on PC-based multi-user systems. The current version 7.2 of SIMATIC WinCC is available for extremely complex process visualization tasks and SCADA applications, e.g. taking account of redundant solutions and vertical integration all the way to plant intelligence solutions. And last but not least, WinCC Open Architecture addresses applications with high customer-specific demand for adaptation and specialized functional scope, even on non-Windows platforms.

<http://www.siemens.com/wincc>

Introduction

A whole world of operator control and monitoring

SIMATIC HMI operator control and monitoring systems

SIMATIC® HMI®

HMI devices

SIMATIC HMI Key Panels

Pre-assembled and ready for installation, for conventional operator panels.

<http://www.siemens.com/key-panels>

SIMATIC HMI Basic Panels

The entry level series for simple HMI applications.

<http://www.siemens.com/basic-panels>

SIMATIC HMI Comfort Panels

High-end functionality for demanding HMI applications.

<http://www.siemens.com/comfort-panels>

SIMATIC HMI Mobile Panels

Portable HMI devices for mobile deployment on site.

<http://www.siemens.com/mobile-panels>

HMI devices for special requirements

Fully enclosed HMI devices for SIMATIC

The fully enclosed SIMATIC HMI devices (MP 377 PRO, HMI IPC477C PRO, Flat Panel PRO and Thin Client PRO) are ideal for industrial applications in harsh environments due to their extremely robust design. They are, for example, specially designed for mounting on a support arm/stand.

<http://www.siemens.com/ip65-hmi-devices>

Devices with stainless steel fronts

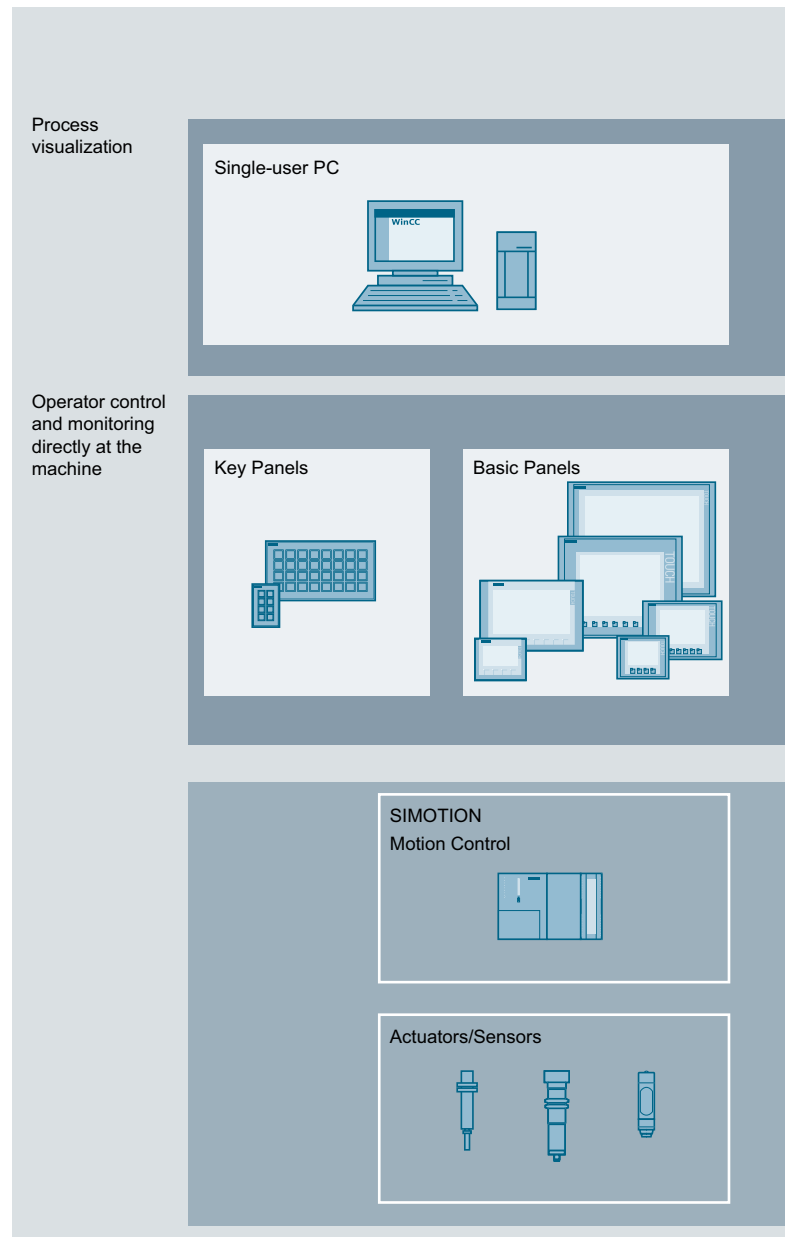

Panels and Panel PCs with touch screens and stainless steel fronts are designed for machine-level operator control and monitoring in the food, beverages and tobacco industry.

<http://www.siemens.com/inox-hmi-devices>

HMI devices for hazardous areas

Intrinsically safe Panel PCs and Thin Clients that were specifically developed for hazardous areas.

<http://www.siemens.com/simatic-hmi-ex>

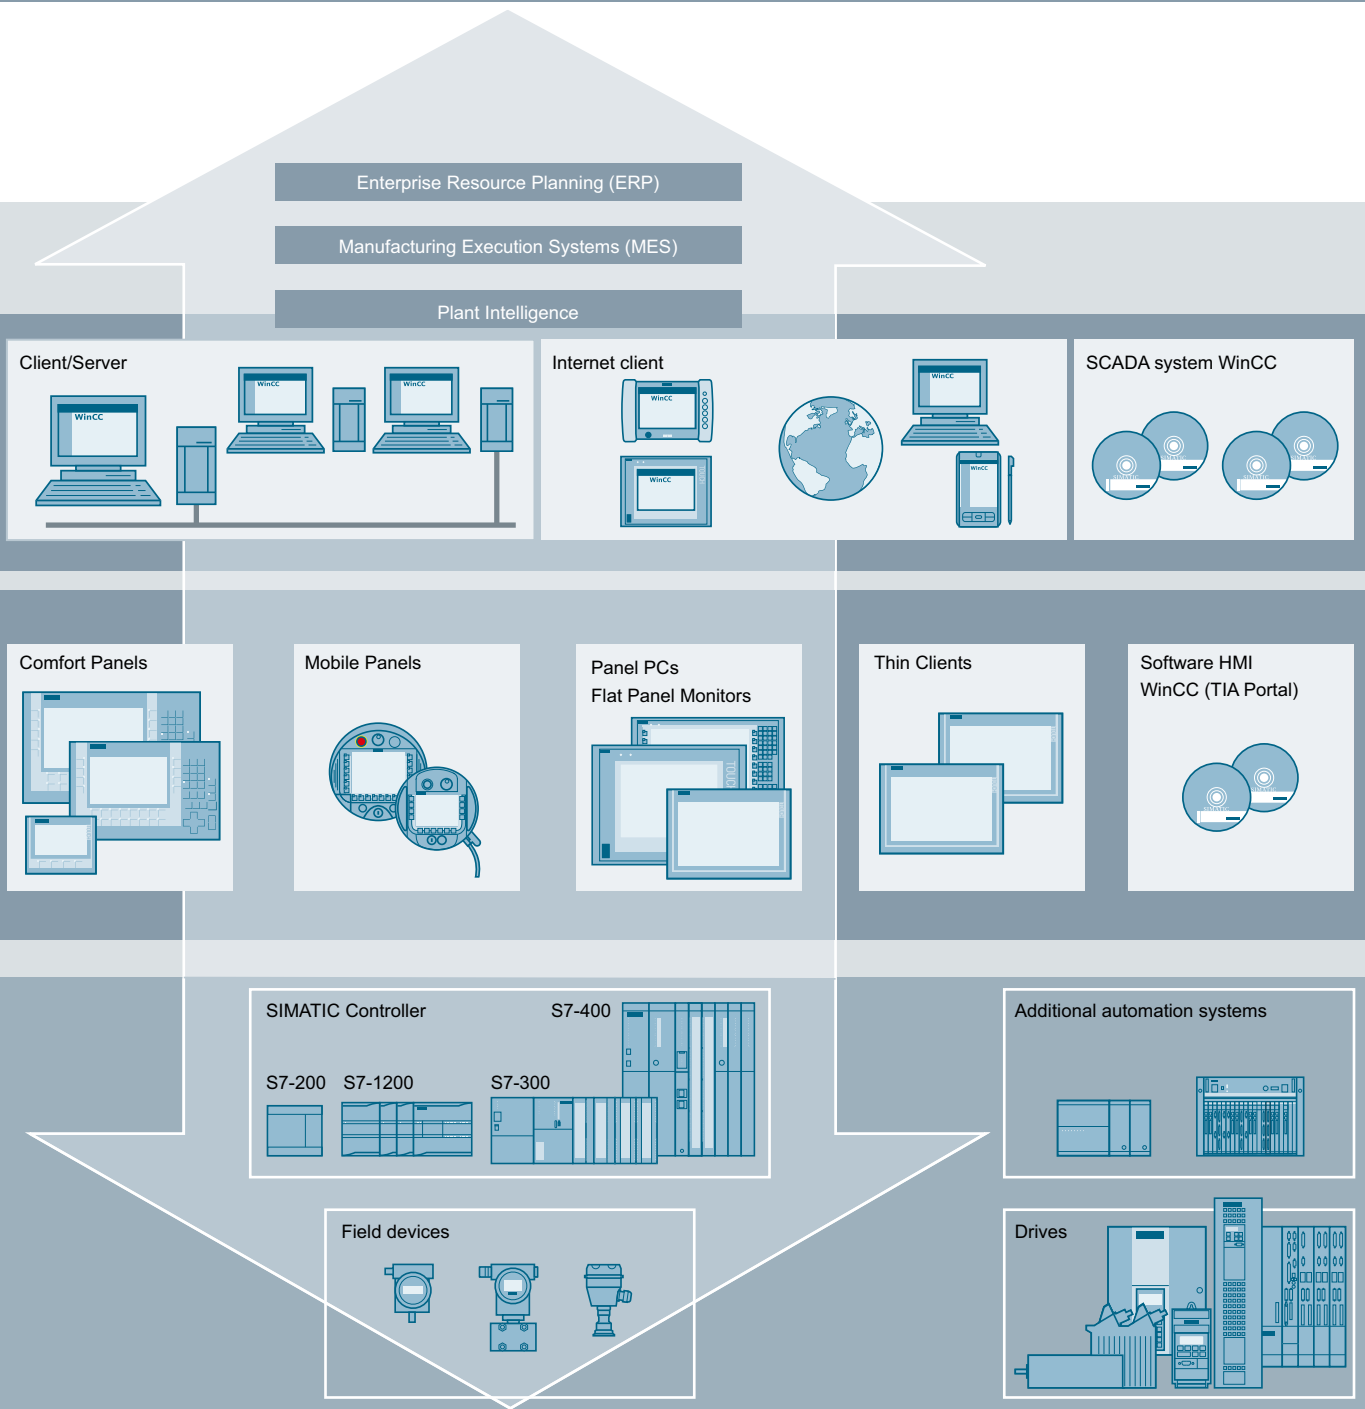

HMI software

SIMATIC WinCC in the TIA Portal (Totally Integrated Automation Portal) is part of the new, integrated engineering framework which offers a uniform engineering environment for programming and configuration of control, visualization and drive solutions.

WinCC in the TIA Portal is the software for all HMI applications, ranging from the simplest HMI solutions with Basic Panels to PC-based single-user and multi-user systems.

<http://www.siemens.com/tia-portal>

G_STB0_XX_00365

SIMATIC WinCC V7 is available for highly complex applications with Plant Intelligence solutions, integrated archive servers, or redundant architectures.

<http://www.siemens.com/wincc>

WinCC Open Architecture addresses applications with high customer-specific demand for adaptation – even on non-Windows platforms.

<http://www.siemens.com/wincc-open-architecture>

Customized Automation

With Customized Automation, field-proven SIMATIC, SIMATIC IPC and SIMATIC HMI standards are transferred to individual products and systems – tailored precisely to the customer's requirements. The portfolio covers the hardware and software range, as well as support and logistics.

SIMATIC PC-based Automation

Introduction

1

Overview

G_STT70_XX_00169

Overview (continued)**SIMATIC PC-based Automation**

<http://www.siemens.com/pc-based>

Industrial PC

The optimum PC hardware platforms for PC-based Automation from Siemens are our reliable and innovative SIMATIC IPC industrial PCs.

<http://www.siemens.com/simatic-ipc>

PC-based Controllers

Siemens has developed a wide range of coordinated hardware and software components for PC-based Automation. Focal point: SIMATIC PC-based Control with SIMATIC WinAC, the open, flexible and reliable software controller for your PC-based automation solution, also approved by the German Technical Inspectorate and fail-safe.

<http://www.siemens.com/winac>

Embedded controller

SIMATIC S7-mEC is a modular controller in S7-300 design with the latest embedded PC technology. It comprises the EC31 (CPU) and optionally available expansion modules.

<http://www.siemens.com/simatic-s7-mec>

Embedded bundles with industrial PCs

Embedded bundles based on the embedded industrial PCs are extremely compact, robust, and maintenance-free systems for use at machine level. The functions of PC-based Control (also fail-safe) and/or visualization are already pre-installed and ready to use.

<http://www.siemens.com/simatic-embedded-bundles>

Software packages for SIMATIC IPC

SIMATIC industrial PCs are offered with low-cost software packages. For the runtime versions with the visualization software products SIMATIC WinCC or WinCC Runtime Professional, WinCC flexible or WinCC Runtime Advanced, as well as the software controller SIMATIC WinAC RTX (F). The simultaneous purchase of industrial PC and software package results in the price advantage.

<http://www.siemens.com/simatic-ipc-packages>

Industrial monitors and thin clients

Flexible distributed operating concepts can be implemented via Flat Panel monitors and thin clients. They are industry-standard LCD monitors with high-luminance displays that can be placed up to 30 m away from the PC, or high-performance industrial thin clients. SIMATIC ITC, for one or even several operator stations, can be placed as far away as required via Industrial Ethernet.

<http://www.siemens.com/simatic-itc>

SIMATIC PC-based Automation

Introduction

Overview (continued)

Application examples

<http://www.siemens.com/pc-based-applications>

Unit-type cogeneration unit

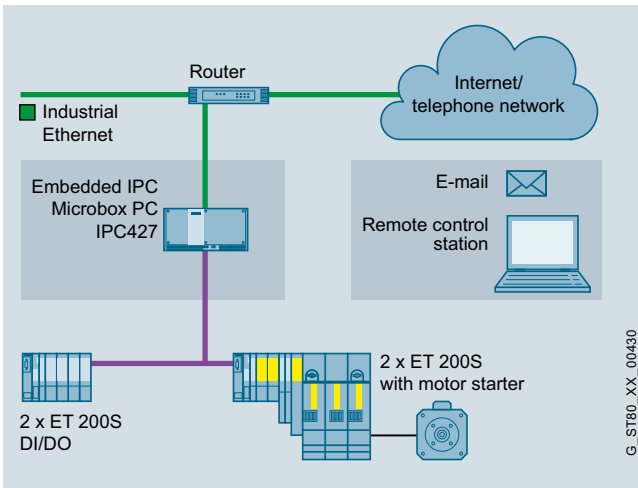

When redesigning unit-type cogeneration units, the automation approach should also be re-structured. The objective was to execute all control, visualization and archiving tasks which were previously handled by a PLC and a PC on a compact unit. Space was to be saved in the control cabinet, and the administration and training requirements reduced. At the same time a rugged, maintenance-free device was

required which can also be easily connected over the Internet.

The advantages of the solution with SIMATIC PC-based Automation:

- Microbox PC IPC427C as a rugged, compact embedded system
 - Control, visualization and archiving of the process parameters in one device
 - Space and cost savings thanks to integration of several tasks on a single embedded industrial PC
- Previously: one PLC and one visualization PC
- Easy and quick access to the embedded IPC over the Internet

The plant concept

Measurement of foil thickness

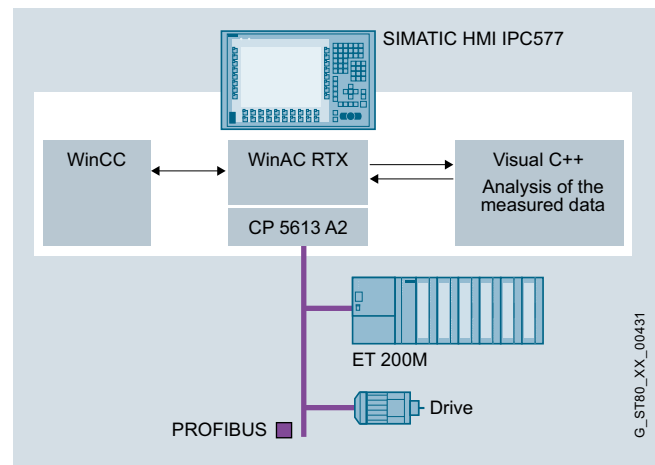

During the manufacture of plastic films, a highly accurate and uniform foil thickness over the entire width is a decisive quality criterion. For this purpose, a measuring head with radio-active source moves back and forth above the film and perpendicular to the continuously transported reel, and a sensor moves underneath the foil.

From the attenuation of the radiation, the foil thickness can be determined exactly at each position by extensive mathematical calculations, and deviations from the reference thickness can be compensated.

The advantages of the solution with SIMATIC PC-based Automation:

- Visualization is performed using WinCC, and control using WinAC RTX on a PC.
- Complex mathematical algorithms are required for evaluation of the extensive measured data.
- These are meaningfully implemented in the high-level language C++. Seamless and high-performance integration of these algorithms into the STEP 7 program is via the ODK (Open Development Kit).
- Data exchange between WinAC RTX and WinCC, for visualization of the extensive measured curves, takes place very quickly via the hard drive cache. This functionality was also implemented via the ODK.
- Interconnection of the standardized technology function is via CFC (Continuous Function Chart).

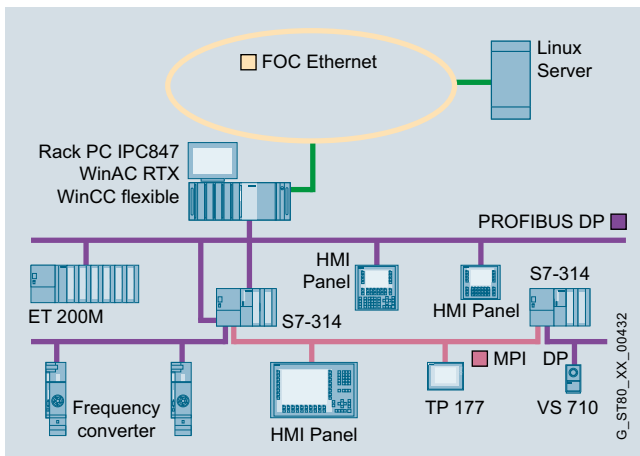

The plant concept

Overview (continued)PC-based control of paint shops for plastic automotive parts

For reasons of quality assurance and product liability, paint shop manufacturers are obliged to use a host computer for archiving the process data of a paint shop for flat parts, but this quickly developed into a PC-based automation system with control tasks.

The advantages of the solution with SIMATIC PC-based Automation:

- Performance of the SIMATIC WinAC PC-based control
- Coupling to Linux servers through an Industrial Ethernet fiber-optic network
- Open and flexible for expansions
- Possibility of integration into the existing automation concept
- Archiving and backup of process data, as well as production data acquisition

The plant concept

Innovative PC-based solution with safety for solar panel production

For a new plant for the production of solar panels, the existing highly heterogeneous concept is to be replaced by a new, state-of-the-art automation solution which can cover the comprehensive demands in a compact and integrated way.

There are increased performance and memory requirements due to the increased complexity of the system. The PLC should also be able to provide the specified safety functions (emergency stop, access protection to hazardous areas).

Various bus systems must be linked in plant 3. Also a customer-specific Windows application is to be used on the selected systems and therefore the connection to a higher-level MES system has to be implemented.

The system is designed for high throughput and three-shift operation.

The advantages of the solution with SIMATIC PC-based Automation:

The advantages of the solution with SIMATIC PC-based Automation:

- Very high performance and available memory with the SIMATIC Modular Embedded Controller EC31-RTX F. In the RTX F version (worldwide the first software PLC with safety functionality), the EC31 offers full coverage of all safety requirements in the plant. This system is integrated seamlessly in Totally Integrated Automation and enables effective, plant-wide engineering.
- Thanks to its openness (Open Development Kit), WinAC RTX on the host SCADA industrial PC offers the possibility for integrating a Windows customer application with very little effort, and is thus used as a data concentrator (process quality/diagnostic data), and communication with the host MES system is also implemented in combination with WinCC (SCADA).
- Industry-standard products from the SIMATIC range offer maximum quality for 24/7 round the clock operation.

SIMATIC PC-based Automation

Introduction

Overview (continued)

Safe transfer at sea

For transferring persons at sea to wind energy plants or oil platforms, a Dutch company has developed a six-legged platform on hydraulic cylinders.

This platform is basically an upside-down flight simulator, and allows safe transfer from a ship even in bad weather.

A SIMATIC S7 modular embedded controller (S7-mEC) with fast I/O cards measures the movements of the ship and

controls the extending or retracting of the cylinders so that all movements are compensated.

The advantages of the solution with SIMATIC PC-based Automation:

- Fault-tolerant SIMATIC S7-400H in redundant design for general control tasks
- Two lower-level SIMATIC S7 modular embedded controllers which meet the requirements for high speeds, integration of fast I/O cards, and a flexible, modular and rugged design.
- An integrated programming environment with SIMATIC STEP 7
- Automation products from Siemens comply with the stringent requirements of the offshore sector

PC-based machine data acquisition optimizes the production of farming machinery

To introduce more efficient, resource-saving and therefore cost-effective production processes in the factory, a leading farming machinery manufacturer has integrated a central, plant-wide machine data acquisition system using Panel PCs. Due to the need for retrofitting in the existing environment, flexible and space-saving installation of the Panel PCs was paramount.

More than 200 fully enclosed SIMATIC HMI IPC477C PRO Panel PCs for central machine data acquisition with communications interfacing to the production machines and the production planning computer. Mounting of the Panel PCs directly at the machine without additional control boxes on stand-alone columns.

The advantages of the solution with SIMATIC PC-based Automation:

- Enhanced efficiency by optimizing the complete production organization through a high degree of uniformity.
- Minimized use of resources (less paper is required in production)
- Simple, low-cost retrofitting of the Panel PC directly in production on a stand, without the installation of an additional operator console.

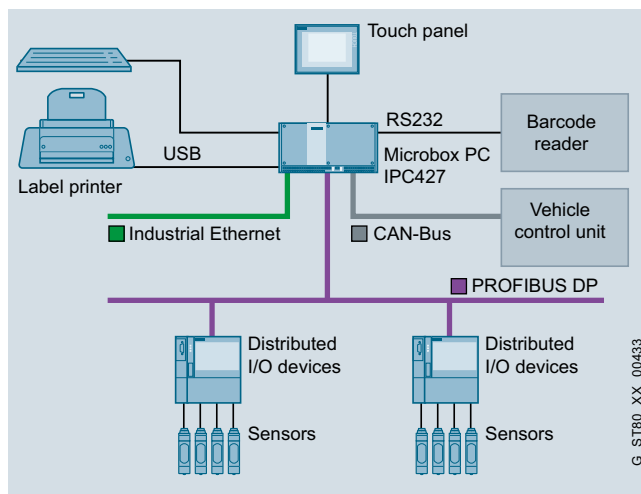

Overview (continued)PC-based control in automotive test rigs

Test rigs in the automotive industry require trouble-free operation and high quality.

A high-performance system is required in the control, processing, archiving and visualization of measured data which can also provide openness and flexibility for connection to different bus systems and for the use of software.

The advantages of the solution with SIMATIC PC-based Automation:

- Flexible, easy-to-service and maintenance-friendly system with Windows XP Embedded in conjunction with SIMATIC WinAC
- Reduction in integration overhead thanks to integral interfaces such as PROFINET, PROFIBUS, Ethernet, CAN, and the flexibility when using modules for different bus systems, e.g. PC/104
- System availability concept ensures round-the-clock operation and reduced downtime costs
- Fan-free, temperature-resistant operation up to 50°C saves additional cooling measures
- High investment security through long-term availability of the components

The plant concept

PC-based control in the semiconductor industry

In the semiconductor industry, high quality and fault-free operation round-the-clock are decisive criteria. A high-performance system that guarantees fast and precise production of the semiconductors is required for controlling the machines, monitoring the production system, and processing the production data.

High flexibility and openness are also required for connecting to the production control system and machine engineering system.

The advantages of the solution with SIMATIC PC-based Automation:

- Compact, rugged industrial PCs with powerful processors and the latest technology enable high processing performance
- Pre-installed systems save time and costs when integrated into the overall system
- WinCC ToolLink-EDA (equipment data acquisition) enables diagnostics of process and machine data in real time
- System availability concept with integral RAID1 functionality and remote monitoring with SIMATIC PC DiagMonitor ensures fault-free 24-hour operation
- High investment security through long-term availability of the components
- International certification and worldwide support guarantee global use

The plant concept

SIMATIC PC-based Automation

Introduction

1

Overview (continued)

Track & trace line controller for tobacco industry

In order to comply with new legal regulations, a track & trace system in an existing plant has been extended. The requirement is to test 100 cartons per minute in three-shift operation and to save the data in an SQL database for traceability reasons.

The automation system should be characterized by high ruggedness, but also offer the openness required to connect

additional components such as printers and the Machine Vision system.

The advantages of the solution with SIMATIC PC-based Automation:

- Compact automation solution consisting of embedded industrial PC Microbox PC IPC427, PLC with preinstalled and ready-to-use software PLC WinAC RTX, and visualization with WinCC flexible
- Control of the entire track & trace system and interfacing to the control system
- Open solution with the help of the WinAC ODK (Open Development Kit) thanks to a link to an SQL database for managing the serial numbers and other data
- Additional openness and flexibility by connecting printers and vision system

Retrofit of a woodworking machine – safe!

In the past, machines and plants for wood-working were equipped with specially developed, proprietary controllers. Today, future-oriented standard components are used for retrofit projects. The customer decided in favor of integrating standard automation and safety technology in a single unit with the SIMATIC WinAC RTX F software controller in a fan-free and maintenance-free IPC, the SIMATIC IPC427C Microbox PC.

PROFINET as an innovative fieldbus connects distributed I/O, safety and operator panels quickly and easily.

The advantages of the solution with SIMATIC PC-based Automation:

- The compact PC-based automation solution multiplies the performance and precision of the plant.
- Implementation of PROFINET resulted in a series of additional advantages such as the diagnostics capability.
- Integration of standard and fail-safe automation in a single unit achieved component savings. The size of the cabinet was reduced by 20 percent and the wiring by 50 percent. The customer benefited from a high level of operating convenience and minimized machine downtimes.

<http://www.siemens.com/reference-video-kuper>

Overview (continued)Image processing with data backup

In image processing applications, high performance computers are required due to the large volume of data to be processed. The image data must be recorded, processed and saved quickly. Frame grabber cards with a high data throughput, for example, are used for recording image data. The interfaces for the expansion cards must not become bottle-necks in this case. To ensure continued problem-free processing of the acquired data, you need a state-of-the-art system with up-to-date processor and memory technology.

Lots of data is produced again during the subsequent data backup. Thus the available storage medium must be fast and fail-safe at the same time. An open system is required for connecting to existing plants.

The advantages of the solution with SIMATIC PC-based Automation:

- Rugged SIMATIC PC with state-of-the-art processor performance and the latest technology
- Current interfaces such as PCI Express for applications with a high data throughput rate, e.g. frame grabber cards for recording image data
- Visualization on up to two monitors with an optional, high-performance graphics card
- Onboard communication interfaces such as Ethernet and PROFINET, e.g. for connecting to EPS systems or integration in existing systems
- International certifications and global support facilitate the worldwide use of the image processing solution

High-performance industrial PC for reliable control and monitoring of wind power plants.

All Siemens turbines for offshore wind power plants feature special technical characteristics that ensure long-term, low-maintenance operation. In contrast to sites on land, offshore wind farms are not always accessible to service teams. The basic quality requirements and standards for all components used in terms of absolute fail-safety and reliability, are therefore extremely high.

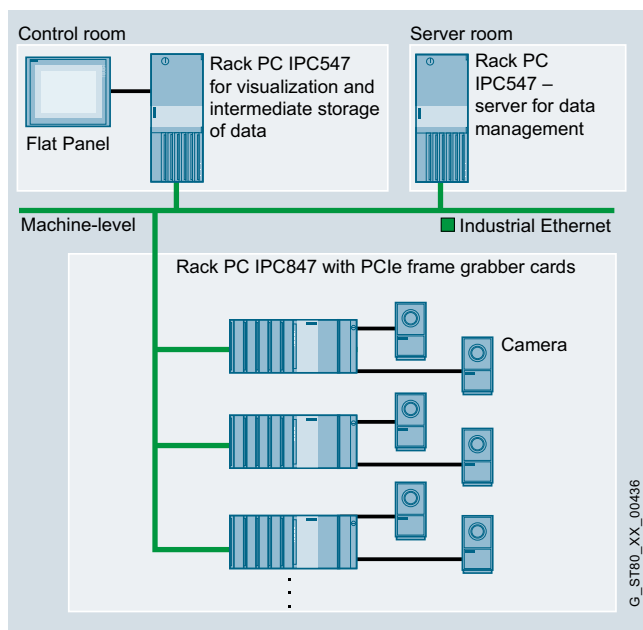

The SIMATIC Box PC of the 627 series that has been implemented matches the requirements of the solution provider all the way down the line. The rugged industrial PC is designed for 24-hour continuous duty at ambient temperatures up to 55 °C. For reliable operation, the Box PC is installed in a solid metal enclosure that is resistant to shock and vibration and that demonstrates a high degree of electromagnetic compatibility (EMC). For a high level of data security, the option of a mirror disk system with two hard disks (RAID1) was selected. The RAID1 controller is already onboard, and does not occupy a PCI slot.

The rugged, reliable hardware with extremely compact dimensions in durable industrial design also stands up to the demands of continuous operation in a harsh environment.

The advantages of the solution with SIMATIC PC-based Automation:

- The mounting dimensions of Box PCs remain identical over several device generations and mounting solutions can be simply reused for the next generation.
- Furthermore, when a new device generation is used, any front-accessible interfaces and function elements can be retained. For example, the Siemens Wind division already utilized a complete lifecycle of a Box PC generation and no adjustments to a new hardware platform were required when the successor product was introduced.
- Through compliance with international standards, such as CE and UL, and worldwide service, the Box PC can be implemented round the globe.

Operator panels

Introduction

Overview

SIMATIC Panels overview

A finely graded range of HMI devices is available for local operator control and monitoring: From Key Panels and Basic Panels to Comfort Panels and Mobile Panels. HMI devices with all-round IP65/NEMA 4 protection for distributed configurations are available for applications with especially high requirements with regard to ruggedness.

Key Panels

Key Panels (KP) are the innovative alternative to conventionally wired operator keypads. Supplied pre-assembled and ready for installation, the bus-compatible operator panels are the key to drastically reducing wiring times when compared with conventional methods.

Basic Panels

The 2nd generation Basic Panels offer basic HMI functionality for small machines and applications. The device family offers panels with 4", 7", 9" and 12" high-resolution widescreen displays, as well as combined key and touch operation. Variants can be selected for connection to PROFINET/Ethernet or PROFIBUS DP/MPI.

1st generation devices remain available in parallel with the 2nd generation Basic Panels.

Comfort Panels

Comfort Panels offer high-end functionality for demanding applications. They offer high-resolution widescreen displays in sizes from 4" to 22", alternatively for touch screen operation (TP) or key operation (KP). In size 4" also with touch screen and additional keys (KTP).

The Comfort Panels are equipped with PROFINET/Ethernet as well as PROFIBUS DP/MPI interfaces.

Mobile Panels

The portable operator panels facilitate operator control and monitoring at the actual scene of the event with direct access and visual contact to the process. They provide simple and safe reconnection during operation (Mobile Panel 177 and Mobile Panel 277) or wireless freedom (Mobile Panel 277 (F) IWLAN) and can therefore be used flexibly on a machine or system.

Overview (continued)**Rugged and compact for use at machine level**

With IP65/NEMA 4 degree of protection at the front, high EMC and extreme vibration resistance, the SIMATIC HMI operator panels are ideally suited for use at machine level in rough industrial environments. Thanks to their compact design with a shallow mounting depth, the stationary HMI devices can be fitted anywhere, even where only restricted space is available. For distributed configurations, there are also devices available with all-round IP65/NEMA 4 protection.

The extremely rugged and shock-proof enclosure with degree of protection IP65 makes the Mobile Panels especially suitable for industrial applications. Their low weight and ergonomic design means that they are user-friendly and easy to operate.

One configuration software for everything

SIMATIC WinCC (TIA Portal) is a tool for the uniform configuration of all SIMATIC HMI Panels as well as PC-based systems. Graded variants are available for every task. The software permits simple and efficient configuration. Programming experience is not required.

Once created, configurations can be reused within the family.

Component of Totally Integrated Automation

Siemens provides the complete modular system of matched components for automation solutions from one source and — with Totally Integrated Automation — one of the most globally successful automation concepts. SIMATIC WinCC (TIA Portal) is an integral component of this world. It offers crucial advantages. Thanks to the triple uniformity in configuration/programming, data management and communication, automation solution engineering costs are significantly reduced.

Open for a wide variety of automation systems

Despite being consistently incorporated into the SIMATIC world, the panels are nevertheless open for connection to PLCs from many different vendors. The standard delivery includes a comprehensive range of user-friendly drivers.

Innovative operator control and monitoring

The SIMATIC HMI Panels facilitate innovative operator control and monitoring combined with ruggedness, stability and simplicity. On the Comfort Panels in particular, standard hardware and software interfaces, e.g. the Multimedia Card/SD Card, USB, Ethernet, PROFIBUS DP and Visual Basic scripts, provide more flexibility and openness as well as access to the office world.

Worldwide application

The SIMATIC HMI Panels are ideally equipped for global use. Online language switching permits selection of up to 32 languages during operation simply by pressing a button. The wide variety available also includes, for example, Asian logographic languages (Chinese, Taiwanese, Korean, Japanese) or Russian.

The configuration interface of WinCC (TIA Portal) including the online help and the complete documentation is also multilingual. Up to 32 languages can be used in one project. And all this is complemented by global service and support from Siemens.

SIMATIC HMI Key Panels

SIMATIC HMI KP8/KP8F/32F

Overview

SIMATIC HMI KP32F and HMI KP8

Empty front

SIMATIC HMI Key Panels

- Optimum operability thanks to large mechanical keys and multi-colored LED backlighting (daylight readable)
- Over 60% time savings for wiring and installation (Plug&Play)
- More than 30% savings in material costs compared to conventional keypad operator panels
- 2 PROFINET ports (incl. switch) already integrated for setting up line and ring topologies
- Freely configurable digital I/Os on the rear for connecting key-operated switches, indicator lamps, etc.
- Connection of fail-safe emergency stop buttons or other fail-safe signals with KP8F and KP32F (in SIL2 or SIL3)
- Functionally compatible with all standard PROFINET master CPUs, also non-Siemens
- KP8 and empty front design, also optimized for installation in IPC Extension Units in IP65
- Maximum flexibility due to parameterization
- Empty front design for standardized assembly of flexible operator panels

Operator panels

SIMATIC HMI Basic Panels

SIMATIC HMI Basic Panels (2nd Generation)

Overview

SIMATIC HMI Basic Panels, 2nd Generation

With their fully developed HMI basic functions, 2nd generation SIMATIC HMI Basic Panels are the ideal entry level series for simple HMI applications.

The device family offers panels with 4", 7", 9" and 12" widescreen displays, as well as combined key and touch operation.

The innovative high-resolution widescreen displays with 64 000 colors are also suitable for upright installation, and they can be dimmed down to 100 %.

The innovative operator interface with improved usability opens up a diverse range of options thanks to new controls and graphics.

The new USB interface enables the connection of keyboard, mouse or barcode scanner, and supports the simple archiving of data on a USB stick. The integrated Ethernet or RS 485/422 interface (version-specific) enables simple connection to the controller.

Operator panels

SIMATIC HMI Basic Panels

SIMATIC HMI Basic Panels (1st Generation)

Overview

- Ideal entry-level series from 3" to 15" for operating and monitoring compact machines and systems
- Clear process representation thanks to use of pixel-graphics displays
- Intuitive operation using Touch and tactile function keys
- Equipped with all the necessary basic functions such as alarm logging, recipe management, plots, vector graphics, and language switching
- Simple connection to the controller via integral Ethernet interface or separate version with RS 485/422
- Faster commissioning thanks to integrated diagnostics viewer and IP setting for SIMATIC S7-1200 and S7-1500 PLCs

More information

Additional information is available on the Internet at:

<http://www.siemens.com/simatic-basic-panels>

Note

Do you require a specific modification to or supplement for the products described here? Look under "Customized products". We provide information there about additional and generally available sector products, and about the customer-specific modification and adaptation options.

Overview

- Ideal entry-level series of 3.8 inches to 15 inches for operating and monitoring compact machines and systems
- Clear process representation through the use of full-graphic displays
- Intuitive operation via touch and tactile function keys
- Equipped with all the necessary basic functions such as reporting, recipe management, curve representation, vector graphics, and language selection
- Easy connection to the controller via integrated Ethernet interface or a separate version with RS485/422

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme specific information was added.

For technical documentation on SIPLUS, see:

Operator panels

SIMATIC HMI Comfort Panels

SIMATIC HMI Comfort Panels – Standard

Overview

Comfort Panel family, KP, TP, KTP

- Excellent HMI functionality for demanding applications
- Widescreen TFT displays with 4", 7", 9", 12", 15", 19" and 22" diagonals (all 16 million colors) with up to 40% more visualization area as compared to the predecessor devices
- Integrated high-end functionality with archives, scripts, PDF/Word/Excel viewer, Internet Explorer, Media Player and Web Server
- Dimmable displays from 0 to 100% via PROFlenergy, via the HMI project or via a controller

- Modern industrial design, cast aluminum fronts for 7" upwards
- Upright installation for all touch devices
- Optimal selection option: seven touch and five key versions are available
- Data security in the event of a power failure for the device and for the SIMATIC HMI Memory Card
- Innovative service and commissioning concept through second SD card (automatic backup)
- Easy project transfer via standard cable (standard Ethernet cable, standard USB cable)
- Maximum performance with short screen refresh times
- Suitable for extremely harsh industrial environments thanks to extended approvals such as ATEX 2/22 and marine approvals
- Wide range of communication options: PROFIBUS and PROFINET onboard; 2 x PROFINET with integrated switch for 7" models or larger; plus 1 x PROFINET with Gigabit support for 15" models or larger
- All variants can be used as an OPC UA client or as an OPC DA server
- Key-operated devices with LED in every function key and new text input mechanism, similar to the keypads of mobile phones
- All keys have a service life of 2 million operations
- Configuring with the WinCC engineering software of the TIA Portal

Note

Do you need a specific modification or extension to the products described here? If so, refer to "Customized Automation". There you will find information about additional and generally available sector-specific products as well as options for customer-specific modification and adaptation.

Operator panels

SIPLUS HMI Comfort Panels

SIPLUS HMI Comfort Panels

Overview

- Excellent HMI functionality for demanding applications
- Widescreen TFT displays with 4", 7", 9", 12", 15", 19" and 22" diagonals (all 16 million colors) with up to 40% more visualization area as compared to the predecessor devices
- Integrated high-end functionality with archives, scripts, PDF/Word/Excel viewer, Internet Explorer, Media Player
- Dimmable displays from 0 to 100% via PROFlenergy, via the HMI project or via a controller
- Modern industrial design, cast aluminum fronts for 7" upwards
- Upright installation for all touch devices
- Optimal selection option: seven touch and five key versions are available
- Data security in the event of a power failure for the device and for the SIMATIC HMI Memory Card
- Innovative service and commissioning concept through second SD card (automatic backup)
- Easy project transfer via standard cable (standard Ethernet cable, standard USB cable)
- Maximum performance with short screen refresh times
- Suitable for extremely harsh industrial environments thanks to extended approvals such as ATEX 2/22

- Wide range of communication options: PROFIBUS and PROFINET onboard; 2x PROFINET with integrated switch for 7" models or larger; plus 1 additional PROFINET with Gigabit support for 15" models or larger
- All variants can be used as an OPC UA client or as an OPC DA server
- Key-operated devices with LED in every function key and new text input mechanism, similar to the keypads of mobile phones
- Key-operated devices with stamped keys for optimum tactile feedback
- All keys have a service life of 2 million operations
- Configuring with the WinCC engineering software of the TIA Portal

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

Overview

SIMATIC Mobile Panel

- Mobile operator panel for direct operator control of the plant and machine from any point
- Supports an optimum view of the workpiece or process and, at the same time, direct access and visual contact with the operator panel
- Versatile use thanks to easy unplugging and replugging during normal operation (Mobile Panel 177 and Mobile Panel 277) or
- Wireless freedom (Mobile Panel 277(F) IWLAN)
- Pixel-graphics, high-luminance color display with touch screen (analog/resistive)
- PROFIBUS or PROFINET communication, PROFINET over WLAN for Mobile Panel 277(F) IWLAN
- Freely-configurable function keys with customized labels (with LED) (not for Mobile Panel 277 10")

SIMATIC Mobile Panel 177 and SIMATIC Mobile Panel 277

- Two three-stage acknowledgement buttons; Optional versions include:
 - STOP button
 - STOP button, handwheel, key-operated switch and illuminated pushbutton (not for Mobile Panel 277 10")
- Communication is supported via a serial link, MPI/PROFIBUS or PROFINET
- Connection point recognition for local identification of the device based on the connection point ID
- Fast system availability after plugging into the connection boxes
- Connection to the controller and power supply is made via the connection box and the connecting cable

SIMATIC Mobile Panel 277(F) IWLAN

- Wireless, mobile operator panel for flexible and location-independent system and machine operation
- WLAN communication in accordance with IEEE 802.11 (a/b/g/h) and PROFINET support
- Powerful batteries and flexible concept for changing permit battery replacement "on the fly" without interrupting operation
- Effective range limitation and the local identification of the device by using transponder technology
- Low-cost, safety-related mobile operator control and monitoring via RFID technology (MOBY D) for plants with pre-installed safety resources (e.g. robot cells)
- Optional variants with: Handwheel, key switch and illuminated pushbutton
- Fail-safe operator controls of the SIMATIC Mobile Panel 277F IWLAN using PROFI-safe:
 - Two three-stage acknowledgment buttons
 - Emergency stop button

IWLAN Access Points SCALANCE W for SIMATIC Mobile Panel 277(F) IWLAN

- SCALANCE W700 Access Points are ideal for setting up Industrial Wireless LAN (IWLAN) radio networks for 2.4 and 5 GHz with data rates of up to 450 Mbit/s; they can be used for any application requiring a high degree of operational reliability, even under extremely harsh ambient conditions.
- Suitable for any application:
 - for cabinet-free installation (W788 M12),
 - for cabinet-free installation also with integral antennas (W786), or for cabinet installation or integration in machinery (W788 RJ45, W774, W761)
- Wireless communication suitable for use in applications with high real-time and reliability requirements such as PROFINET and PROFI-safe (thanks to KEY-PLUG W780 iFeatures)
- Standard-compliant thanks to IEEE 802.11 support, additional functional expansions especially for use with increased reliability
- Effective encryption mechanisms protect against unauthorized access, spying, tapping, and corruption
- Fast commissioning of the Access Points and faster device replacement in the event of a fault thanks to the optional C-PLUG/KEY-PLUG removable media
- Accessories such as antennas, connectors, cables incl. RCoax cables (radiating cables) that are tuned to one another for a reliable radio link

Battery				
Backup battery				
• Battery operation	maximum buffer time 10 min	maximum buffer time 10 min	maximum buffer time 10 min	maximum buffer time 10 min
- Charging duration				5 h
- Number of loading cycles, min				500
Time of day				
Clock				
• Type	Hardware clock, battery backup, synchronizable	Hardware clock, battery backup, synchronizable	Hardware clock, battery backup, synchronizable	Hardware clock, battery backup, synchronizable
• Hardware clock (real-time clock)	Yes	Yes	Yes	Yes
• Software clock	No	No		No
• battery-backed	Yes	Yes	Yes	Yes
• synchronizable	Yes	Yes	Yes	Yes
Interfaces				
Interfaces	1 x RS422, 1 x RS485, 1 x Ethernet (RJ45) (max. 12 Mbit/s)	1 x RS422, 1 x RS485, 1 x Ethernet (RJ45) (max. 12 Mbit/s)	1 x RS422, 1 x RS485, 1 x Ethernet (RJ45) (max. 12 Mbit/s)	1 x RS422, 1 x RS485, 1 x Ethernet (RJ45) (max. 12 Mbit/s)
Number of USB interfaces	1	1	1	1
USB port	1 x USB	1 x USB	1 x USB	1 x USB
Multimedia card/SD card slot				combined
Multimedia Card slot	1 MMC/SD card slot	1 MMC/SD card slot	1 MMC/SD card slot	
Industrial Ethernet				
• Industrial Ethernet interface	1 x Ethernet (RJ45)	1 x Ethernet (RJ45)	1 x Ethernet (RJ45)	1 x Ethernet (RJ45)
Protocols				
PROFINET	Yes	Yes	Yes	Yes
PROFINET IO	Yes	Yes	Yes	Yes
PROFIsafe	No	No	No	No
Degree and class of protection				
IP65 enclosure	Yes	Yes	Yes	Yes
Standards, approvals, certificates				
Certifications	CE, cULus, C-TICK, SIBE	CE, cULus, C-TICK, SIBE	CE, cULus, C-TICK, SIBE	CE, cULus, C-TICK, SIBE
CE mark	Yes	Yes	Yes	Yes
cULus	Yes	Yes	Yes	Yes
RCM (former C-TICK)	Yes	Yes	Yes	Yes
Highest safety class achievable in safety mode				
• Performance level according to EN ISO 13849-1:2008	d	d	d	d
Ambient conditions				
Drop height	1.2 m	1.2 m	1.2 m	1 m
Operating temperature				
• Operation	0 °C to +40 °C	0 °C to +40 °C	0 °C to +40 °C	0 °C to +40 °C
Storage/transport temperature				
• Transport, storage	-20 °C to +60 °C	-20 °C to +60 °C	-20 °C to +60 °C	-20 °C to +60 °C
Relative humidity				
• Operation, max.	80 %	80 %	80 %	80 %
Operating systems				
Operating system	Windows CE	Windows CE	Windows CE	Windows CE

Operator panels

System components

System components for SIMATIC Mobile Panels

Overview

System components for SIMATIC Mobile Panels are perfectly matched to the SIMATIC Mobile Panels. Charging stations, transponders, and diverse connection boxes are available for various applications.

Accessories for SIMATIC Mobile Panels can be found under "SIMATIC HMI accessories".

Only the latest SIMATIC HMI accessories are listed in this section; the full range of SIMATIC HMI accessories is available in the Mall and in our other online media.

Overview

The SIMATIC Basic Panel, Comfort Panel and Mobile Panel offer HMI functionality for the control systems:

- SIMATIC S7
- Non-Siemens controllers:
 - Allen Bradley
 - Mitsubishi
 - Modicon
 - Omron

For more detailed information, refer to the WinCC (TIA Portal) user manual, the "Windows-based systems communication" manual, or the WinCC (TIA Portal) online help.

OPC communication and HTTP communication are offered for all Panels with an integrated Ethernet interface. Both OPC and HTTP communication can be used in parallel with the process links to SIMATIC S7 or non-Siemens PLCs.

Note:

Interface options for HMI devices: See the individual device descriptions.

OPC communication

OPC Data Access is an open standard for exchanging both local and remote variables between various applications via Industrial Ethernet.

HTTP communication for variable exchange between SIMATIC HMI systems

Communication based on HTTP message frames enables variables to be exchanged between SIMATIC HMI systems.

Communication standard	SIMATIC HMI

SIMATIC S7

Overview

The following types of interface are differentiated in respect of the link between the SIMATIC Panels and SIMATIC S7 controllers:

- **PROFINET interface:**
Coupling of SIMATIC Panel to SIMATIC S7 controllers via Industrial Ethernet TCP/IP using the integrated PROFINET interface of the CPU or, alternatively, a PROFINET interface module.
- **MPI/PROFIBUS interface:**
Coupling of SIMATIC Panel to SIMATIC S7 controllers via MPI/PROFIBUS using the integrated MPI/PROFIBUS interface of the CPU or the integrated PPI interface of the CPU in the case of S7-200 or, alternatively, a PROFIBUS interface module in the case of S7-1200, S7-1500, S7-300 and S7-400.
- **PPI interface:**
Coupling of SIMATIC Panel to SIMATIC S7-200 via PPI network using the integrated PPI interface of the CPU.

The maximum possible number of S7 connections of one CPU is determined by its performance capacity (see Catalog ST 70); from the point of view of SIMATIC Panel, the following restrictions apply:

- Basic Panel, Comfort Panel 4",
Mobile Panel 177: max. 4 connections
- Comfort Panel 7" - 22": max. 8 connections
- Mobile Panel 277: max. 6 connections
- PC with WinCC Runtime Advanced: max. 8 connections

PPI interface

The PPI interface is a point-to-point connection between a SIMATIC Panel (PPI master) or alternatively a PG (PPI master) and an S7-200 (PPI slave).

MPI/PROFIBUS interface or PROFINET interface

The corresponding multipoint-enabled communication interfaces of SIMATIC Panels and SIMATIC S7 are used. The following are possible:

- Interface between one or more SIMATIC Panels (MPI master) and one or more S7-1200/S7-1500/S7-300/S7-400s or WinAC (MPI master) (possible network topology: MPI/PROFIBUS or Industrial Ethernet, TCP/IP)
- Interface between one or a number of SIMATIC Panels (MPI master) and one or a number of S7-200s (MPI slave)¹⁾ (possible network topology: PPI, MPI/PROFIBUS)

Unlike PPI connections, MPI connections are static connections that are set up during booting and then monitored.

The original format of a master/master link has been joined by a master/slave link, which has enabled integration of the S7-200 (except CPU 212).¹⁾

In principle this type of information exchange between SIMATIC Panels and SIMATIC S7 is independent of the network used, PPI, MPI/PROFIBUS or Industrial Ethernet: SIMATIC Panels are S7 clients and SIMATIC S7 CPUs are S7 servers.

¹⁾ With regard to restricted baud transmission rates for S7-200, see Catalog ST 70.

- System interface possible
- System interface not possible

- ¹⁾ Mobile Panel connection via special connecting cable and junction box (see Mobile Panel), see Manual for cable layout
- ²⁾ Controllers can be combined as desired
- ³⁾ Basic Panel PN and Mobile Panel 177 PN only
- ⁴⁾ Basic Panel DP and Mobile Panel 177 DP only
- ⁵⁾ Connection via integrated MPI/PROFIBUS interface; in the case of a standard PC, a communications processor (CP) is to be used (e.g. CP 5611 A2)
- ⁶⁾ Only on passive S7-200
- ⁷⁾ Can be interfaced via PPI to max. 1 x S7-200 (PPI); network operation (parallel PG, etc.) is possible

Note:

Detailed information regarding cable layout can be found in the online help for WinCC.

Operator panels

System interfaces with WinCC (TIA Portal)

Controllers from other manufacturers

Overview

The SIMATIC Basic Panel, Comfort Panel and Mobile Panel, and the SIMATIC HMI software package for PC WinCC Runtime Advanced support the following protocols for linking the control systems of other manufacturers:

- Allen Bradley
 - Ethernet IP protocol
 - DF1 protocol
- Mitsubishi
 - MC TCP/IP protocol
 - FX protocol
- Modicon
 - Modbus TCP/IP protocol
 - Modbus RTU protocol
- Omron
 - Link/Multi-Link protocol

The following table contains more detailed information.

Overview of interfaces

Controller Target hardware (PROTOCOL) (physics)	SIMATIC HMI				
	Basic Panel	Comfort Panel	Mobile Panel 177 DP ¹⁾ Mobile Panel 177 PN ¹⁾	Mobile Panel 277 ¹⁾	WinCC Runtime Advanced
Allen Bradley (Ethernet IP) via Ethernet TCP/IP network to max. 4 x controllers ²⁾ • ControlLogix 1756-L6x, -L6xS with Ethernet module 1756-ENBT • Guard Logix System • CompactLogix 1769-L2xE, -L3xE • CompactLogix 1769-L4x with ETHERNET module 1768-ENBT • SLC 5/05 • MicroLogix 1100, 1400	• ³⁾	•	• ³⁾	•	•

Overview

SIMATIC HMI accessories can also be used in non-Siemens devices; see the technical specifications for more detailed information.

General SIMATIC HMI accessories for all currently available Panels are listed in this chapter; the full range of SIMATIC HMI accessories is available in the Mall and in our other online media.

Overview Industrial USB Hub 4

- The Industrial USB Hub 4 is used as a USB port extender (4 in 1) for the connection of peripheral devices to USB 2.0 interfaces of Comfort Panels, Multi Panels, IPCs, and standard PCs.
- The Industrial USB Hub 4 (IP65 degree of protection on the front, service kit may be required) can also be mounted directly in a control cabinet.
- With the USB Hub 4, the USB port can be moved forwards to the control cabinet door, making it accessible without opening the cabinet door
- The USB Hub 4 can also be mounted on a standard mounting rail in the control cabinet, in which case it serves as a simple interface multiplier

General HMI Accessories

Industrial USB Hub 4

Technical specifications

	6AV6671-3AH00-0AX0 Industrial USB Hub 4
Installation type/mounting	
Rail mounting possible	Yes; Standard - DIN rail
Mounting in landscape format possible	Yes
Supply voltage	
Type of supply voltage	24 V DC
Rated value (DC)	24 V
permissible range, lower limit (DC)	20.4 V
permissible range, upper limit (DC)	28.8 V
Interfaces	
Number of USB interfaces	4; Type USB 2.0, 500 mA each; e.g. connection of mouse, keyboard, printer, USB stick, USB IPC flash drive
Degree and class of protection	
IP (at the front)	65
IP (rear)	20
Standards, approvals, certificates	
CE mark	Yes
Ambient conditions	
Operating temperature	
• Operation (vertical installation)	0 °C to +50 °C
- in vertical mounting position, minimum	0 °C
- in vertical mounting position, maximum	50 °C
Storage/transport temperature	
• min.	-20 °C
• max.	60 °C
Relative humidity	
• Operation, max.	90 %
Mechanics/material	
Type of housing (front)	
• Plastic	Yes
Dimensions	
Width of the housing front	212 mm
Height of housing front	156 mm
Overall depth	50 mm
Weights	
Weight without packaging	460 g
Scope of supply	
Delivery unit in items	1; Content: 1 X USB Hub 4, 10 x plastic mounting clip, 1 x female 2-pin connector
Other	
Note:	for access to the USB interface of a built-in device without having to open the control cabinet, mounting on standard rail possible, suitable for standard USB interfaces

Ordering data

Industrial USB Hub 4
4 x USB 2.0, IP65, for control cabinet door or standard rail, for use with MP 177/MP 277/MP 377, Panel PCs, HMI IPCs and standard PCs

Service set for Industrial USB Hub 4 (incl. IP65 expansion)

Article No.

6AV6671-3AH00-0AX0

See HMI accessories service sets

More information

Note for SIMATIC Panel PCs

The Industrial USB Hub 4 is approved for the Windows CE/2000/XP/Windows 7 operating systems. The appropriate drivers are supplied with the operating system software.

Overview

Optional package: Touch stylus and touch pen

If you are working with gloves, touch pens are often extremely useful when operating touch displays. They protect the display from dirt and scratching during operation and use. They are also useful for operating small buttons or input fields accurately.

Ordering data

Article No.

Touch stylus

6AV7672-1JB00-0AA0

Specially designed for Mobile Panel 277 10", but also other touch displays, incl. attachment cord, 1 unit

Touch pen

6AV6645-7AB14-0AS0

For Panels, Panel PC, Touch Monitor, and other touch applications, incl. screw-on wall holder, 5 units

Note:

This catalog only includes accessories for current products. A comprehensive range of accessories can be found in the Mall:

<https://eb.automation.siemens.com>

or on our SIMATIC Support pages:

Connecting cables

Overview

You can find order numbers for the connecting cables required to link SIMATIC Panels under selection and ordering data.

Example - connecting cables

Connecting cable PN (PROFINET) for Mobile Panels

Connecting cable DP (PROFIBUS) for Mobile Panels

Key

P = PROCESS COUPLING

K = optional process coupling (option required)

D = DOWNLOAD (update operating system, project, ...)

U = booting (factory setting in the case of a missing or damaged operating system)

MBP = Mobile Panel

Operator panels

General HMI Accessories

Memory media

Overview

Memory media

SIMATIC HMI memory media are suitable for industry and optimized for the requirements in industrial environments. Special formatting and write logarithms ensure fast read/write cycles and a long service life of the memory cells.

- Push Button Panels
- Operator Panels
- Touch Panels
- Multi Panels
- Comfort Panels
- Mobile Panels
- Industrial USB Hub

Operator panels

General HMI Accessories

Protective covers

Overview

Protective covers with IP65 degree of protection provide complete frontal protection of the panel against dirt and scratches; the protective covers can be kept clean using high-pressure cleaning equipment. Ready-made templates can be downloaded to help you create and print out your own low-cost frame designs between panel and protective cover.

Adhesive protective membranes are available for simple display protection.

Protective covers are available for the following SIMATIC HMI Panels:

- Touch Panels
- Operator Panels
- Multi Panels

Operator panels

General HMI Accessories

Protective films

Overview

Protective films for:

- Touch Panels
- C7 devices
- Multi Panels
- Thin Clients
- Touch Panels
- Basic Panels
- Comfort Panels
- Mobile Panels

Protective films protect the display from dirt and scratching during operation and use.

For complete protection of the front side in harsh environments, protective covers are available for some devices.

Note:

During installation, the protective films must completely cover the display. For compatibility reasons, not all protective films extend as far as the edge of the enclosure. This does not, however, affect the protective function.

Overview

All parts required to install a SIMATIC HMI Panel are listed here. Mounting frames enable compliance with device-specific degrees of protection IP65, NEMA4x and NEMA12 (indoor only) if the thickness of the mounting plate is less than the minimum plate thickness specified in the operating instructions. The mounting frame has been specially developed for plate thicknesses of less than 2 mm.

Depending on the device, different mounting clips are available for attaching the panel.

Memory card locks (snappable and slideable) are also available to secure memory cards in the SIMATIC HMI Comfort Panels.

- Push Button Panel
- Key Panel
- Text Display
- Operator Panel
- Touch Panel
- Multi Panel
- Basic Panel
- Comfort Panel

Note regarding Industrial USB Hub 4:

The mounting frame is only available in the service pack 6AV6671-3EA01-0AX0.

Overview

Labeling strips

Protective cover for labeling strips for Mobile Panel 170,
Mobile Panel 177

Labeling strips and membranes are available for:

- Text display
- Multi Panel
- Mobile Panel

The labeling strips, blank membranes, and protective films should be printed at a printing works.

Templates can be used to create labeling strips for SIMATIC HMI devices. Alternatively, a tool for the creation of labeling strips is available.

Overview

The external power supply for the Mobile Panel IWLAN is intended for laboratory and office operation.

Suitable SITOP power supplies are available for use with machinery and plants.

Overview

Connectors/converters/adapters

Components for the connection of SIMATIC HMI Panels

The range comprises connectors, adapters, converters, and transducers.

An adapter can be used, for example, to mechanically rotate the connector of a 9-pin panel plug by 90°. This may be beneficial in confined spaces in the control desk or installation cabinet, and is an easy way to provide additional flexibility.

A converter can be used to simulate a connection type that is missing at the panel. In this way, for example, a TTY (20 mA) can be generated from an RS422 signal, which is required for connection to various types of PLC. Connectors are required for power supply and I/O.

- 2-pin to n-pin connectors
- Converters
- Transducers
- Adapters for changing the cable outlet direction
- Bus connector

SIMATIC HMI accessories can also be used on non-Siemens devices; see the technical specifications for more detailed information.

General SIMATIC HMI accessories are listed in this subsection; the full range of SIMATIC HMI accessories is available in the Mall and in our other online media.

Operator panels

SIMATIC HMI accessories – connectors/converters/adapters

RS485 bus connector

Overview

- Used for connecting PROFIBUS nodes to the PROFIBUS bus cable
- Easy installation
- FastConnect plugs ensure extremely short assembly times due to their insulation-displacement technology
- Integrated terminating resistors (not in the case of 6ES7972-0BA30-0XA0)
- Connectors with Sub-D socket permit PG connection without the additional installation of network nodes

Overview

- Implementation of direct device connections over distances of up to 100 m with Industrial Ethernet FC installation cable 2 x 2 without patching
- Easy connection (insulation displacement contacts) for 4-core Twisted Pair installation cables (100 Mbit/s) without the need for special tools
- Error-preventing connection technique thanks to visible connection area as well as colored blade terminals
- Industry-compatible design (rugged metal housing, no easily lost small parts)
- Excellent EMC shielding and deflection (metal housing)
- Integrated strain-relief for installation cables
- Compatible to the EN 50173 (RJ45) / ISO IEC 11801 standard
- Additional strain and bending relief of plug connector possible through latching of plug on device housing, e.g. with SCALANCE X, SCALANCE S, ET 200S.

HMI devices for special requirements

Introduction

Overview

Fully enclosed HMI devices

The fully enclosed SIMATIC HMI devices (MP 377 PRO, HMI IPC477C PRO, Flat Panel PRO and Thin Client PRO) are specially designed for mounting on a support arm/stand. Thanks to their extremely rugged design, the devices are ideal for industrial applications in harsh environments.

Devices with stainless steel front

For special requirements, SIMATIC HMI Comfort Panels and the HMI IPC677C INOX with stainless steel front for use in the food and beverages industry are offered.

HMI devices for hazardous areas

The SIMATIC HMI Ex devices (HMI Panel PC Ex and HMI Thin Client Ex) are intrinsically safe Panel PCs and Thin Clients that have been specially developed for hazardous areas "Zone 1" and "Zone 2". Further SIMATIC HMI devices are also available for the hazardous area "Zone 2" and can be found in the chapter "Operator panels".

Overview

The SIMATIC HMI PRO (PRO = protected) devices have been designed for mounting on a support arm/pedestal. Thanks to their rugged aluminum enclosures, the SIMATIC HMI PRO devices offer overall IP65 protection and are also suitable for use in harsh environments. The separation of HMI and control cabinet allows flexible design concepts. The SIMATIC HMI PRO devices are used wherever the HMI device cannot be installed direct in the control cabinet due to restricted space, or whenever an operator control unit is required direct at the machine. All the devices are fan-free, and only standard connecting cables are used.

The SIMATIC HMI PRO devices can be mounted direct on the support arm head of the desired support arm system using the basic adapter supplied. The adapter set can be ordered separately. The basic adapter can be attached to the top or bottom of the device. The connecting cables are run through the support arm.

With the extension units, the range of possible on-site operations can be expanded.

The extension units can be mounted on the right and/or left side of the SIMATIC HMI PRO device and can be equipped individually with, for example, illuminated pushbuttons, emergency stop buttons, RFID readers, etc.

The following are available as SIMATIC fully enclosed HMI devices:

- SIMATIC MP 377 PRO 15" Touch:
Multi Panel for operator control and monitoring of machines and plants
- SIMATIC HMI IPC477C PRO 15"/19" Touch:
Compact, high-performance and maintenance-free embedded IPC
- SIMATIC Flat Panel PRO 15"/19" Touch:
Industrial monitor with touch functionality, can be located up to 30 m from the operator control unit (as with Flat Panel Extended)
- SIMATIC Thin Client PRO 15" Touch:
HMI device for terminal and web client applications

SIMATIC MP 377 PRO

Overview

SIMATIC MP 377 PRO 15"

Technical specifications

MP 377 PRO	6AV6644-2AB01-2AX0
Display	
Size	15" (304.1 mm x 228.1 mm)
Display type	TFT, 65536 colors
Resolution (pixels)	
• Resolution (WxH in pixel)	1024 x 768
Backlighting	
• MTBF backlighting (at 25 °C)	about 50,000 hours
Control elements	
Control elements	Touch screen
Connection for mouse/keyboard/ barcode reader	USB / USB / USB
Touch operation	
• Touch screen	analog, resistive
Supply voltage	
Type of supply voltage	DC
Input current	
Rated current	1.8 A
Memory	
Type	Flash / RAM
Usable memory for user data	12288 KB usable memory for user data / 12288 KB additional memory for options
Time of day	
Clock	
• Type	Hardware clock, battery backup, synchronizable
• Hardware clock (real-time clock)	Yes
• battery-backed	Yes; via Goldkap for at least 6 weeks
• synchronizable	Yes
Interfaces	
Interfaces	1 x RS422, 1 x RS485, 2 x Ethernet (RJ45)
USB port	2 x USB
CF card slot	1 x CF card slot
Industrial Ethernet	
• Industrial Ethernet interface	2 x Ethernet (RJ45)
Protocols	
Protocols (terminal link)	
• Sm@rtService	Yes
Degree and class of protection	
Front	IP65, NEMA 4, (when installed)
IP (rear)	IP65
Standards, approvals, certificates	
Certifications	
CE, cULus, C-TICK, NEMA 4	
cULus	Yes
Suitable for safety functions	No
Use in hazardous areas	
• EX zone 22	No
• FM Class I Division 2	No

Technical specifications (continued)

MP 377 PRO	6AV6644-2AB01-2AX0
Ambient conditions	
Mounting position	vertical
maximum permissible angle of inclination without external ventilation	+/- 45 °
Operating temperature	
• Operation	0 °C to +45 °C
Storage/transport temperature	
• Transport, storage	-20 °C to +60 °C
Relative humidity	
• Operation, max.	85 %
Operating systems	
Operating system	Windows CE
Configuration	
Configuration software	
• Configuration tool	WinCC flexible Standard Version 2008 or higher (to be ordered separately)
Languages	
Online languages	
• Number of online/runtime languages	5
Functionality under WinCC (TIA Portal)	
Libraries	Yes
Task planner	Yes
Message system	
• Number of messages	4 000
• Bit messages	Yes
• Analog messages	Yes
Recipe administration	
• Number of recipes	500
• Data records per recipe	1 000
• Entries per data record	1 000
• Recipe memory	128 KB integrated Flash, expandable
Variables	
• Number of variables per device	4 096; Configuration with WinCC flexible 2008 and higher
• Limit values	Yes
• Multiplexing	Yes
Images	
• Number of configurable images	500
Image objects	
• Text objects	30000 text elements
• Graphics object	Bit maps, icons, vector graphics
Complex image objects	
• Status/control	With SIMATIC S7
• dynamic objects	Diagrams, bar graphs, sliders, analog display, invisible buttons

MP 377 PRO	6AV6644-2AB01-2AX0
Lists	
• Number of text lists per project	500
• Number of graphics lists per project	500
Archiving	
• Number of archives per device	50
• Number of measuring points per project	50
• Number of entries per archive	50 000
• external evaluation	Readable, e.g. with MS Excel, MS Access, etc.
• Size of archive	depending on free memory on ext. card/stick or on free hard disk space via network drive
Security	
• Number of user groups	50
• Number of user rights	32
• Password export/import	Yes
Data carrier support	
• CF card	Yes
Logging through printer	
• Recording/Printing	Alarms, report (shift report), color print, hardcopy
Transfer (upload/download)	
• Transfer of configuration	MPI/PROFIBUS DP, serial, USB, Ethernet, by means of external storage medium, automatic transfer recognition
Process coupling	
• Connection to controller	S5, S7-200, S7-300/400, TI 505, Win AC, PC (TCP/IP), SINUMERIK, SIMOTION, Allen Bradley (DF1), Allen Bradley (DF485), Mitsubishi (FX), OMRON (LINK/Multilink), Modicon (Modbus), further non-Siemens drivers, see chapter "System interfaces"
• S7-1200	Yes
• S7-1500	Yes
Expandability/openness	
• Open Platform Program	Yes
I/O/Options	
I/O devices	Printer, card reader, barcode reader
• Multimedia Card	Yes
Dimensions	
Width of the housing front	400 mm
Height of housing front	310 mm
Weights	
Weight (without packaging)	7.25 kg

Adapter sets

Overview

Adapter sets

- The adapter sets are required for connecting the SIMATIC HMI PRO device with the support arm head of the respective support arm system
- By directly connecting the support arm head to the device, there is complete flexibility in the choice of support arm components
- Adapter sets are available for the VESA 75 and VESA 100 systems.
- Further adapter sets can be obtained directly from the respective supporting bracket manufacturer: Bernstein, Rittal, Rose, Haseke, and Rolec

Extension Units

Overview

With the Extension Units, the range of possible on-site operations can be extended. They are mounted on the SIMATIC HMI PRO device and can be equipped individually, e.g. with Key Panel (KP8), 3SB elements, emergency stop buttons, key switches, RFID reader, etc.

- They can be mounted on the left or right side of the PRO device, as required
- Direct installation of up to 2 Key Panels KP8 / KP8F
- IP65 - cable routing
- Can be equipped individually
- For all 15"/19" PRO devices

The combination of HMI PRO device and KP8 PN offers the following advantages:

- No control cabinet required
- Low cabling overhead
- Optimally coordinated design

IP65 keyboards, USB interface

Overview IP65 keyboard

It is possible to extend the range of possible on-site operations with the stainless steel IP65 keyboard. It is mounted on the SIMATIC HMI PRO device below the base adapter.

- Anti-twist and non-removable stainless steel key caps
- Abrasion-resistant laser labeling (depth engraving with annealing marking)
- Secure, pleasant key feel
- Maximum user-friendliness thanks to withdrawable long-stroke key
- Windows layout (EN/US) with two additional keys (left and right mouse key function) via cursor block
- USB interface
- Angle-adjustable connection for optimal ergonomics
- Water and dust protection in accordance with degree of protection IP65
- For all 15"/19" PRO devices

HMI devices for special requirements

Devices with stainless steel front

Introduction

Overview

For special requirements, the following HMI devices with stainless steel front (DIN EN 1672-2), e.g. for use in the food, beverages and tobacco industries, are offered.

SIMATIC HMI TP700 Comfort INOX

- 7" TFT widescreen display
- Optimized frame profile with a slight projection to the cabinet
- IP66K degree of protection at the front
- Stainless steel surface ground with 240 grit hairline finish
- Minimal grooves and gaps
- Decorative membrane tested against chemicals, over whole display
- Display splash protection
- Food-standard seals
- Rear clamping frame for even application pressure of the seal

SIMATIC HMI IPC677C INOX

PC platform with high degree of industrial compatibility for demanding tasks in the area of PC-based automation.

Rugged construction:

The PC is resistant to the harshest mechanical stress and is reliable in operation.

- Compact design
- High degree of investment protection
- Fast integration capability
- 15" TFT Touch, stainless steel/INOX
- All interfaces such as PROFIBUS or PROFINET onboard

Further SIMATIC HMI Flat Panels INOX

You will find further INOX industry products, as well as customer-specific product variants, in the "Customized Automation" section, e.g.

- SIMATIC HMI Flat Panel 15" Touch INOX
- SIMATIC HMI Flat Panel 19" Touch INOX
- SIMATIC HMI Flat Panel 19" Touch INOX fully enclosed

Note:

Do you require a specific modification to or option for the products described here? Then look up "Customized products", where you will find information about additional generally-available industry-specific products that can be ordered, as well as about options for customer-specific modifications and adaptations.

HMI devices for special requirements

Devices with stainless steel front

SIMATIC HMI TP700 Comfort INOX

Overview

SIMATIC HMI TP700 Comfort INOX

Panels with touch screen and stainless steel front are designed for use in the food and beverage industry, the pharmaceutical industry, fine chemicals and in other hygiene areas for machine-level operator control and monitoring.

For this reason, the devices with stainless steel front have been developed in compliance with DIN EN 1672-2 "Food processing machinery – Safety and Hygiene Requirements".

Technical specifications

SIMATIC HMI TP700 Comfort INOX (the other specifications correspond to the SIMATIC HMI TP700 Comfort Panel)

General features	
Display	7" TFT widescreen display
Resolution (pixels)	800 x 480
MTBF of backlighting (at 25 °C)	approx. 80 000 h
Power supply	24 V DC
Front	
Material	Stainless steel 1.4301, polyester-based membrane
Surface	Hairline finish, 240 grit abrasive grain
Device seal	EPDM, molded part
Special features	Decorative membrane drawn across the display
Ambient conditions	
Degree of protection	on the front: IP66K, enclosure type 4 and 4x (indoor use only) At the rear: IP20
Ambient temperature during operation	0 ... 50 °C
Relative humidity	max. 85% (no condensation)
Transport/storage temperature	-20 °C to +60 °C
Approvals	CE, C-Tick, KC, cUL, CFM, EX, HAZ.LOC.:CL.I, DIV.2
Sector	Food & beverages, pharmaceuticals industry, other hygiene areas
Dimensions	
External dimensions (W x H x D in mm)	214 x 158
Installation cutout (W x H x D in mm)	197 x 141
Mounting depth, in mm	67
Weight	approx. 1.88 kg
Special features	INOX clamping frame, cast aluminum mounting clamp

More information

Customer-specific modifications

- Customized design (logo, type designation and membrane color)
- Protection against condensation and corrosive gases

Quotation preparation

SIMATIC HMI specialists define the product modifications precisely in accordance with customer requirements.

The quotation is then prepared with

- Non-recurring costs
- Prototype costs
- Serial device prices and
- the general conditions in the form of a product agreement (e.g. minimum quantity).

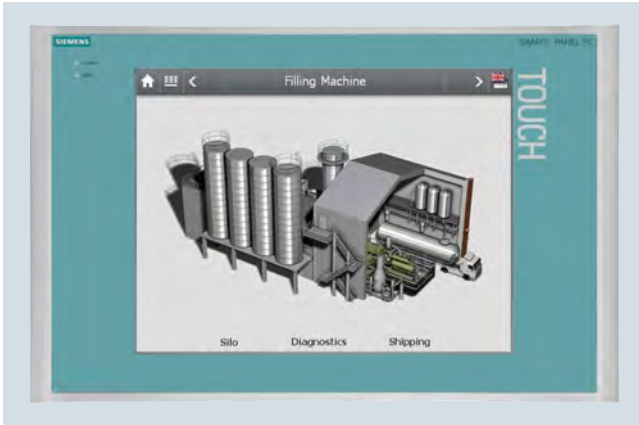

The defined device can then be ordered easily using this product agreement and a customized article number.

HMI devices for special requirements

HMI devices for hazardous areas

SIMATIC HMI Panel PC Ex

Overview SIMATIC HMI Ex devices

The SIMATIC HMI Ex devices are intrinsically-safe Panel PCs and Thin Clients which have been specially developed for hazardous areas. The intrinsically-safe design allows simple installation on site. The variety of certification allows use in many parts of the world without further approvals.

The devices are fanless and permit completely maintenance-free installation without batteries or rotating parts.

Available as HMI devices for hazardous areas "Zone 1" and "Zone 2" are:

- SIMATIC HMI Panel PC Ex
- SIMATIC HMI Thin Client Ex

Further SIMATIC HMI devices are also available for the hazardous area "Zone 2/22" and can be found in the chapter "Operator panels":

- SIMATIC HMI Comfort Panels

Overview SIMATIC HMI Panel PC Ex

SIMATIC HMI Panel PC Ex with international approvals for operation and monitoring in hazardous areas.

HMI devices for hazardous areas

SIMATIC HMI Thin Client Ex

Overview

SIMATIC HMI Thin Client Ex with international approvals for operation and monitoring in hazardous areas.

Technical specifications

SIMATIC HMI Thin Client Ex	
General features	
Design	
Front	Thin Client built-in unit, available in protective enclosure as an option
Operation	15", 19", and 15" sunlight readable display
MTBF backlight	Touch with 8 function keys
Operating system	
	50 000 h
Operating system	
	Closed system on Windows XP Embedded basis
Mass storage	
	Integrated
Power supply	
	24 V DC, max. 2.1 A (19")
Interfaces	
Ethernet	100 Mbit Ex e, or alternatively fiber-optics 100 Mbit (SC) Ex op is
USB 2.0	2 x Ex i, 2 x Ex e (Zone 1) or 2 x Ex nA (Zone 2)
Serial	1 x RS232 or 1 x RS422/485
Ambient conditions	
Degree of protection	IP66 at front, IP65 at rear, IP66 in protective enclosure
Ambient temperature during operation	- 20 °C ... + 50 °C, cold start -10 °C, with optional additional heating down to -30 °C
Relative humidity during operation	90 % at 40 °C, no condensation

SIMATIC HMI Software

Introduction

Overview

With the product families SIMATIC WinCC (TIA Portal), SIMATIC WinCC flexible, SIMATIC WinCC and SIMATIC WinCC Open Architecture, SIMATIC HMI offers visualization and configuration software for the entire HMI spectrum:

- **SIMATIC WinCC (TIA Portal)**
Creation of applications in the machine-level area and of process visualization or SCADA systems
- **SIMATIC WinCC flexible**
Creation of applications in the machine-level area:
- **SIMATIC WinCC**
Creation of process visualization or SCADA systems
- **SIMATIC WinCC Open Architecture**
Creation of applications with a high demand for customer-specific adaptations, large and/or complex applications, as well as projects that demand special system requirements and functions.

SIMATIC WinCC (TIA Portal)

WinCC (TIA Portal) is based on the new central engineering framework Totally Integrated Automation Portal (TIA Portal), which provides users with an integrated, efficient and intuitive solution to all automation tasks. SIMATIC WinCC (TIA Portal) covers applications in the machine-level area and applications in the process visualization or SCADA environment. WinCC (TIA Portal) offers the uniform and scalable configuration tools WinCC Basic, Comfort, Advanced and Professional for configuring the current SIMATIC HMI devices:

- SIMATIC Basic Panels
- SIMATIC Comfort Panels
- SIMATIC Mobile Panels
- SIMATIC Panels 77/177/277 series
- SIMATIC Multi Panels of the 177/277/377 series
- PC-based systems
 - SIMATIC WinCC Runtime Advanced
 - SIMATIC WinCC Runtime Professional

In addition, WinCC (TIA Portal) offers:

- Intuitive user interface with maximum degree of operator friendliness
- Clear configuration of devices and network topologies
- Shared data management and uniform symbols via controller and HMI
- Optimum interaction with the controller and HMI in a working environment
- Powerful editors for efficient engineering
- Integrated mass data operations for efficient configuration
- System diagnostics as an integral component
- Comprehensive library concept

Overview (continued)**SIMATIC WinCC flexible**

Covers applications in the machine-level area. WinCC flexible offers the integrated and scalable configuration tools WinCC flexible Micro, Compact, Standard and Advanced for configuring SIMATIC HMI devices:

- SIMATIC Basic Panels
- SIMATIC Mobile Panels
- SIMATIC Micro Panels
- SIMATIC Panels of the 70/170/270 series as well as C7-635 and C7-636
- SIMATIC Multi Panels of the 170/270/370 series
- PC-based systems
 - SIMATIC WinCC flexible Runtime
- Runs under Windows XP Professional / Windows 7 Professional, Ultimate, Enterprise
- Expanded integration into STEP 7 and SIMOTION
- Optionally expandable with functions for version administration and logging changes (WinCC flexible /ChangeControl)
- Modular PC-based HMI solution for single-user systems directly at the machine level
- Basic package for visualization, reporting and logging; can be expanded by implementing option packages
- Flexible expansion possible with VB scripts and customized ActiveX controls created with OPP (Open Platform Program)

SIMATIC WinCC

The process visualization or SCADA system for visualizing and operating processes, production flows, machines and plants in all sectors – from the simple single-user station through to distributed multi-user systems with redundant servers and cross-location solutions with web clients. WinCC is the information hub for company-wide, vertical integration (process visualization and platform for IT & business integration).

- For universal use thanks to solutions for all sectors, e.g. conforming to FDA 21 CFR Part 11, and multiple languages for worldwide use
- All HMI functions on-board with industry-standard functions for signaling and acknowledging events, archiving of messages and measured values, logging of all process and configuration data, user administration and visualization (WinCC basic software).
- Company-wide, flexible client/server structures with operator stations on the Web, distributed servers and data integrity thanks to redundancy
- Easy to integrate over standard interfaces such as OPC (OLE for Process Control), WinCC OLE-DB, VBA (Visual Basic for Applications), VB script, C-API (ODK)
- Integration platform in the company thanks to the Historian functionality integrated into WinCC based on the Microsoft SQL Server, standard and programming interfaces and tools and clients for evaluation
- Modular expansion with options and add-ons as well as individual functional expansions with VB Script, Visual Basic for Applications, C-API (ODK) and integration of ActiveX elements.

SIMATIC WinCC Open Architecture

The SCADA system SIMATIC WinCC Open Architecture addresses applications with high demand for customer-specific adaptations, large and/or complex applications, as well as projects that demand special system requirements and functions.

SIMATIC WinCC Open Architecture demonstrates its high performance in networked and redundant high-end control systems in particular. From the field level to the control station, from the machine to the company headquarters – integrated, high-performance communication is ensured. In every situation, a high level of availability, reliable information, fast interaction and user friendliness are guaranteed. Applications can also be changed without interrupting the process. Profitability, efficiency and safety are therefore always in equilibrium.

With its disaster recovery system and SIL3 certification, SIMATIC WinCC Open Architecture demonstrates its reliability in a wide range of critical applications. SIMATIC WinCC Open Architecture can be used on any platform and is available for Windows, Linux and Solaris.

SIMATIC WinCC Open Architecture is open for independent in-house developments, which means that ideas can be turned into new applications quickly and easily.

- Object-orientation supports efficient engineering and flexible plant expansion
- For large, distributed systems with up to 2048 servers
- Scalable – from a small single-user system up to a networked, redundant high-end system
- WinCC OA can be used on any platform and is available for Windows, Linux and Solaris
- Hot-standby redundancy and disaster recovery system assure maximum fail-safety and availability
- WinCC OA offers a platform for customer-specific solutions
- Extensive driver and interfacing options: S7, SINAUT, OPC, OPC UA, Modbus, IEC 60870-5-101/104, DNP3, BACnet, and many others.
- Flexible logging of data either in file-based value archive or in a relational database (ORACLE)
- Modular expansion is possible using options and add-ons as well as individual functional expansions by means of own script language CONTROL, API(C++) and integration of ActiveX elements

SIMATIC HMI Software

HMI Software in the TIA Portal

Introduction

Overview

SIMATIC WinCC (TIA Portal) engineering software

- Family of configuration systems with WinCC Basic, Comfort, Advanced and Professional for SIMATIC operator panels, as well as for the PC-based visualization systems WinCC Runtime Advanced and WinCC Runtime Professional

SIMATIC WinCC Runtime Advanced visualization software

- PC-based HMI solution for single-user systems directly at the machine
- Basic package for visualization, reporting and logging, user administration, can be expanded flexibly with VB scripts
- Basic package expandable by means of option packages
- Integration of customer-specific ActiveX Controls created with WinCC ControlDevelopment
- Can be integrated into automation solutions based on TCP/IP networks
- Expanded service concepts with remote operation, diagnostics and administration over the Intranet and Internet in combination with e-mail communication

SIMATIC WinCC Runtime Professional visualization software

- PC-based operator control and monitoring system for visualization and operator control of processes, production flows, machines and plants in all sectors – from the simple single-user station through to distributed multi-user systems and cross-location solutions with web clients. WinCC Runtime Professional is the information hub for corporation-wide vertical integration.
- Industry-standard functions for signaling and acknowledging events, archiving of messages and measured values, logging of all process and configuration data, user administration, can be expanded flexibly with VB and C scripts
- Basic package expandable by means of option packages
- Also included are APIs for the Runtime to utilize the open programming interfaces
- Integration of customer-specific ActiveX Controls created with WinCC ControlDevelopment

Overview

- Integrated family of engineering tools for configuring SIMATIC HMI operator panels, as well as for the PC-based visualization systems WinCC Runtime Advanced and WinCC Runtime Professional.
- WinCC (TIA Portal) is based on the new central engineering framework Totally Integrated Automation Portal (TIA Portal), which offers the user a uniform, efficient and intuitive solution to all automation tasks.
- WinCC (TIA Portal) also offers uniform engineering from the Basic Panel through to the SCADA application.
- Together with the STEP 7 (TIA Portal) products, WinCC (TIA Portal) forms the optimum solution for integrated, efficient engineering.

Current version:

- SIMATIC WinCC Basic V13
- SIMATIC WinCC Comfort V13
- SIMATIC WinCC Advanced V13
- SIMATIC WinCC Professional V13

Benefits

- The integrated configuration software reduces training, maintenance and service overhead and protects the customer's investments.
- Minimized engineering overhead and reduction of lifecycle costs thanks to Totally Integrated Automation (TIA)
- Minimized configuration overhead due to reuse of scalable and dynamizable objects
- Intelligent tools for efficient and simple configuration:
 - Wizard for defining the basic structure of the HMI project
 - Table-based editors simplify the generation and processing of similar types of object, e.g. for tags, texts, or alarms.
 - Complex configuration tasks such as the definition of paths of motion or the creation of the fundamental operator prompting are simplified by means of graphical configuration.
- Comprehensive support of multi-language configurations for worldwide use
 - Selectable views for entering configuration data in several languages
 - System and user-specific text lexicons
 - Export/import of language-dependent texts
- Investment protection due to
 - Import of the configuration from WinCC flexible 2008 SP2 and 2008 SP3
 - Transfer of the configuration from WinCC V7.0 SP3

Application

SIMATIC WinCC in the editions Basic, Comfort, Advanced and Professional are innovative engineering tools for configuring SIMATIC HMI operator panels, as well as for the PC-based visualization systems WinCC Runtime Advanced and WinCC Runtime Professional.

Depending on the selected product, various target systems can be configured:

WinCC Basic

- Basic Panels (1st Generation): KP300 Basic, KTP400 Basic, KTP600 Basic, KTP1000 Basic, TP1500 Basic
- Basic Panels (2nd Generation): KTP400 Basic, KTP700 Basic, KTP900 Basic, KTP1200 Basic

WinCC Comfort

As WinCC Basic, plus:

- Comfort Panels
- Mobile Panels: Mobile Panel 177, Mobile Panel 277
- Panels of the 70 series: OP 73, OP 77A, OP 77B
- Panels of the 170 series: TP 177A, TP 177B, OP 177B
- Panels of the 270 series: TP 277, OP 277
- Multi Panels: MP 177, MP 277, MP 377

WinCC Advanced

As WinCC Comfort, plus:

- SIMATIC PCs with WinCC Runtime Advanced:
 - SIMATIC Rack PC: Rack PC 547B, IPC547C, IPC547D, IPC547E, Rack PC 647B, IPC647C, IPC647D, Rack PC 847B, IPC847C, IPC847D
 - SIMATIC Box PC: IPC227D, Box PC 427B, IPC427C, IPC427D, Box PC 627B, IPC627C, IPC627D, Box PC 827B, IPC827C
 - SIMATIC Panel PC: IPC277D, Panel PC 477B, IPC477C, IPC477D, Panel PC 577B, IPC577C, Panel PC 677B, IPC677C, IPC677D
 - SIMATIC modular Embedded Controller: EC31
 - Industrial Flat Panel (Multi Touch)
- Standard PC with WinCC Runtime Advanced
- SINUMERIK PC: PCU 50.3, PCU 50.5

WinCC Professional

As WinCC Advanced, plus:

- SIMATIC PCs with WinCC Runtime Professional:
 - SIMATIC Rack PC: Rack PC 547B, IPC547C, IPC547D, IPC547E, Rack PC 647B, IPC647C, Rack PC 847B, IPC847C, IPC647D, IPC847D
 - SIMATIC Box PC: IPC427C, IPC427D, Box PC 627B, IPC627C, IPC827C, IPC627D
 - SIMATIC Panel PC: IPC477C, IPC477D, Panel PC 577B, IPC577C, Panel PC 677B, IPC677C, IPC677D
 - Industrial Flat Panel (Multi Touch)
- Standard PC with WinCC Runtime Professional

SIMATIC HMI Software

HMI Software in the TIA Portal

SIMATIC WinCC (TIA Portal) Engineering

Design

The functionalities of the engineering tools of the SIMATIC WinCC family are based on each other. The available editors are largely determined by the respective configurable target systems and their function. A more comprehensive engineering tool such as WinCC Advanced can always be used to configure lower-level target devices as well (e.g. Basic Panels)

A Powerpack can be used to upgrade from a smaller edition to a larger one. This does not apply to WinCC Basic.

The functionality of WinCC engineering tools already contains the configuration support of the available Runtime options for SIMATIC Panels, WinCC Runtime Advanced or WinCC Runtime Professional, irrespective of the purchased RT licenses. A separate license is required for the target system when using the configured Runtime options.

Function

Integration into automation systems

Integration into the SIMATIC Totally Integrated Automation Portal (TIA Portal)

- Shared data management and uniform symbols via the controller and HMI
- Optimum interaction between the controller and HMI in a working environment
- System diagnostics as an integral component
- Shared use of communication settings and process point definitions
- Simple dragging and dropping of tags from STEP 7 to an HMI device, e.g. onto a screen
- Excellent support for the new SIMATIC S7-1500 controller
 - With symbolic addressing
 - Access to the new memory-optimized data blocks
 - New alarm and diagnostics concept

Configuration interface

- Intuitive user interfaces with maximum degree of user friendliness
- Comprehensive and fast access to editors and project data
- Adaptive user interface of engineering tools depending on configured target system
- User-definable user interface settings, e.g. layout, toolbars
- Integrated mass data operations for efficient configuration

Project handling

- Device-independent configuration data can be used on a variety of target systems without the need for conversion. The interface adapts itself to the functional possibilities of the target device.
- Cross-device utilization of common configuration data (e.g. alarm classes, text library) in multi-device projects
- Wizard-assisted definition of basic structure of HMI projects (e.g. display layout, operator prompting)

Screen editor with comprehensive options for efficient and fast screen configuration

- Generation of interconnected screen objects via Drag&Drop, e.g. tags for the creation of input/output fields with process interfacing or buttons with screen selection function
- Definition of screen templates and functions (comparable with the Slide Master in MS PowerPoint)
- User-friendly editor for the creation of faceplates with defined external interface from screen objects
- Graphics-based configuration of motion paths
- Layer technology with up to 32 layers
- Tools for the Align, Rotate and Mirror functions

Import/export

- Of tags, links, text lists, and alarms

Tabular editors

- Quick and easy generation and modification of configuration objects of the same type, e.g. tags, texts or messages, in tabular editors
- Intelligent default settings depending on previously configured data, e.g. automatic incrementing of addresses when generating consecutive tags
- Simple access to the properties of an object without superfluous user intervention
- Simultaneous modification of common object properties

Object-based data management with user-friendly search and edit options

- Configuration of alarms and logs directly on the HMI tag, no switching between different editors
- Cross-reference list with direct access to all objects, e.g. for editing or selection
- Search for objects in entire project
- Text search and replace functions

Project documentation

- Selective project documentation, the following contents can be printed:
 - An entire project
 - One or more project-associated devices
 - Contents of an editor
 - Libraries

Libraries for predefined/user-defined configuration objects

- Storage of all configuration objects in the library, e.g. blocks and even entire screens or tags
- Faceplates can be constructed from simple screen objects on a customer-specific or project-specific basis. Changes to these faceplates can be made centrally (block definition).
- A large number of scalable and dynamizable screen objects is included in the scope of delivery
- Size-scalable graphics for industrial applications are included in the scope of delivery
- Preview function for library objects

Function (continued)**Language support**

- Multilingual project creation (max. 32 languages) in editors thanks to selectable views
- Central management of language-specific texts and graphics in libraries
- Edit, export and import of texts for translation
- Language-specific graphics

Visual Basic and C-Script Support

- IntelliSense function for fast programming of access to runtime objects
- Simple creation of control sequences in script code
- Visual Basic Script debugging in simulator and WinCC Runtime Advanced and WinCC Runtime Professional

Test and commissioning support

- Simulation of HMI projects on engineering PC
- Marking of incomplete or incorrect configuration directly in the respective editor
- Jump to error cause based on alarm messages in the Compiler

Migration of existing HMI projects

- Data transfer in projects from WinCC flexible
- Data transfer in projects from WinCC

System prerequisites

	WinCC engineering software
Processor type (recommended)	Core i5; 3.3 GHz or comparable
RAM (recommended)	8 GB
Free hard disk space	2 GB on system drive "C:."
Operating systems	32-bit operating systems <ul style="list-style-type: none"> • Windows 7 Home Premium SP1 (only WinCC Basic) • Windows 7 Professional SP1 • Windows 7 Enterprise SP1 • Windows 7 Ultimate SP1 64-bit operating systems <ul style="list-style-type: none"> • Windows 7 Home Premium SP1 (only WinCC Basic) • Windows 7 Professional SP1 • Windows 7 Enterprise SP1 • Windows 7 Ultimate SP1 • Windows 8.1 (only WinCC Basic) • Windows 8.1 Professional • Windows 8.1 Enterprise • Windows Server 2008 R2 StdE SP1 (not WinCC Basic) • Windows Server 2012 R2 StdE
Screen resolution	1920 x 1080 recommended
Optical drive	DVD-ROM

Note:

Opening several instances of WinCC on your engineering PC at the same time may result in more demanding hardware requirements.

In addition to WinCC, Windows also requires space on the hard disk; e.g. free disk space should be available for the swap file.

The following formula has proven itself in the past:
Size of swap file = 3 x size of RAM.

For further information, refer to your Windows documentation.

More information

Further information can be found in the Internet at:

<http://www.siemens.com/tia-portal>

Overview

SIMATIC WinCC Runtime Advanced visualization software

- PC-based HMI solution for single-user systems directly at the machine
- Basic package for visualization, reporting and logging, user administration, can be expanded flexibly with VB scripts
- Basic package expandable by means of option packages
- Can be integrated into automation solutions based on TCP/IP networks
- Expanded service concepts with remote operation, diagnostics and administration over the intranet and Internet in combination with email communication

SIMATIC WinCC Runtime Professional visualization software

- PC-based operator control and monitoring system for visualization and operator control of processes, production flows, machines and plants in all sectors – from the simple single-user station through to distributed multi-user systems and cross-location solutions with web clients. WinCC Runtime Professional is the information hub for corporation-wide vertical integration.
- Industry-standard functions for signaling and acknowledging events, archiving of messages and measured values, logging of all process and configuration data, user administration, can be expanded flexibly with VB and C scripts
- Basic package expandable by means of option packages
- Also included are APIs for the Runtime to utilize the open programming interfaces

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) Runtime

WinCC Runtime Advanced

Overview

PC-based HMI solution for single-user systems directly at the machine. SIMATIC WinCC Runtime Advanced is configured with the SIMATIC WinCC Advanced or SIMATIC WinCC Professional configuration software.

Benefits

- Functions for all visualization tasks:
 - Operator functions
 - Graphics and trend displays
 - Alarm logging
 - Report system
 - Archiving (option)
 - Recipe management (option)
 - Audit Trail (option)
- Flexible runtime functionality due to Visual Basic scripts
- Innovative service concepts with remote operation, diagnostics and administration via intranet and Internet as well as e-mail communication to increase availability (option)
- Support for simple distributed automation solutions based on TCP/IP networks at the machine level (option)
- Part of the Totally Integrated Automation Portal
 - Direct access to the tag and message configuration of the SIMATIC controller
 - Excellent support of the new SIMATIC S7-1500 controller
 - With symbolic addressing
 - Access to the new memory-optimized data blocks
 - New alarm and diagnostics concept
 - Integrated diagnostic functions for increasing productivity

Application

SIMATIC WinCC Runtime Advanced is the high-performance visualization software for simple, machine-oriented visualization tasks. It can be used as a single-user solution for all automation applications in production automation, process automation and building services automation.

SIMATIC WinCC Runtime Advanced can be used in combination with the following HMI devices:

- SIMATIC Panel PC: IPC277D, Panel PC 477B, HMI IPC477C, IPC477D, Panel PC 577B, HMI IPC577C, Panel PC 677B, HMI IPC677C
- SIMATIC Box PC: IPC227D, Box PC 427B, IPC427C, IPC427D, Box PC 627B, IPC627C, Box PC 827B, IPC827C
- SIMATIC Rack PC: Rack PC 547B, IPC547C, IPC547D, Rack PC 647B, IPC647C, Rack PC 847B, IPC847C
- SIMATIC modular Embedded Controller: EC31
- SINUMERIK PC: PCU 50.3, PCU 50.5
- Standard PCs with resolutions (W x H in pixels) of:
 - 4:3 format:
 - 640 x 480, 800 x 600, 1 024 x 768, 1 280 x 1 024, 1 600 x 1 200
 - Widescreen format:
 - 800 x 480, 1 280 x 800, 1 366 x 768, 1 440 x 900, 1 680 x 1 050, 1 920 x 1 080, 1 920 x 1 200, 1 980 x 1 080

Design

SIMATIC WinCC Runtime Advanced is available as a software package with 128, 512, 2 048 or 4 096 PowerTags. The term PowerTags is used to identify process variables and area pointers that have a process link to the controller. Variables without process link, constant limit values of variables, and messages (up to 4 000 bit-triggered messages) are also available for additional system performance. The range of functions of WinCC Runtime Advanced includes the centralized HMI components for visualizing and reporting, and it can be expanded to suit requirements and costs by using optional packages.

SIMATIC WinCC Runtime Advanced is configured with the SIMATIC WinCC Advanced or SIMATIC WinCC Professional configuration software.

Function

Visualization via Windows-compliant user interface

Made up of parameterizable screen objects and faceplates created on a project-specific basis:

- Numeric and alphanumeric input/output fields
- Static text and graphic display plus vector graphics
- Dynamizable graphics from HMI symbol library
- Bar graph, trend curve graph with scroll and zoom function as well as read line
- Signal-specific text and graphic lists
- Buttons and switches for operator-process communication
- Editing fields for process values (signals)
- Analog display, slider as example for further screen objects
- Project-specific faceplates created from basic objects of the system
- Graphic displays for various standard graphic formats, e.g. bitmaps, .jpg, .wmf

Alarms and messages

- Discrete alarms and analog alarms as well as event-driven Alarm-S/Alarm-D message procedure with SIMATIC S7
- The new alarm and diagnostics concept of the S7-1500 controller is also supported
- Freely-definable alarm classes for definition of acknowledgment response and display of alarm events

Logging of alarms and process values ¹⁾

- Logging in files (e.g. CSV or TXT file) and Microsoft SQL databases
- Online evaluation of process value and alarm logs
- Evaluation of process value and alarm logs using standard Microsoft tools such as Excel

Function (continued)

Recipes ¹⁾

- Generation of data records for machine data or production data
- Display or entry of data records via a configurable screen object or via process screens distributed within the project
- Transmission of data records from or to the controller
- Import/export of data records from/to CSV files for further processing with other tools (e.g. MS Excel)

Documentation of process data, alarm events, and recipes

- Time or event-driven report output
- User-definable layout

Flexible expansion of integrated system function using Visual Basic script

Language support for multilingual projects

- Up to 32 online languages
- Language-dependent texts and graphics
- Language selection during runtime

User-oriented access protection according to requirements of regulated sectors

- Authentication with user ID and password
- User group-specific rights
- Central system-wide user administration based on SIMATIC Logon¹⁾
- Monitoring of changes by operators in runtime operation¹⁾
- Recording of operator actions in an Audit Trail ¹⁾

Onboard controller connection to many different controllers

- Communication via native drivers and standard OPC channel
- Simultaneous connection using several protocols: OPC Client and SIMATIC HMI HTTP protocol are additive, i.e. they can be used in conjunction with other controller connections

Open communication between HMI systems and with higher-level systems

- OPC server
 - Use of the visualization system as a data server (OPC Server) for higher-level automation components, e.g. control systems or systems in the office area
 - OPC-DA-Server: tags, e.g. process values
- Communication between HMI systems is established on the basis of Ethernet networks, or via the Intranet/Internet
 - Read and write access to tags. The WinCC Runtime Advanced or SIMATIC Panels provide other SIMATIC HMI systems or office applications with data (variables)
- Sending of e-mails on demand or event-driven
 - e.g. to maintenance personnel via SMTP server (Simple Mail Transfer Protocol)
 - The optional use of e-mail/SMS gateways enables access to standard networks (external service provider required)
- System diagnostics via device-specific HTML pages; the following functions are available:
 - Starting and stopping the HMI runtime for maintenance
 - Remote access to recipe data records, passwords and information specific to the HMI system
 - Access to the HMI system files via a file explorer
 - Download of configuration data via the Intranet/Internet
 - Supplement with own HTML pages

WinCC Sm@rtServer for the remote control via the Intranet and Internet ¹⁾

- Display and control of process screens on remote PC or Panel
- A SIMATIC HMI system can be used to control or monitor another system remotely; entry level for client/server configurations for distributed operator stations or for solutions with head end or control room

WinCC ControlDevelopment for extending the functionality by adding own Controls ¹⁾

- Development of proprietary VB.net or C# Controls for integration in SIMATIC WinCC Runtime Advanced

¹⁾ Option for SIMATIC WinCC Runtime Advanced, runtime licenses must be purchased separately. For further information, refer to "WinCC options".

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) Runtime

WinCC Runtime Advanced

Function (continued)**System prerequisites**

SIMATIC WinCC Runtime Advanced	
Processor type (min.) ¹⁾	All processors of the SIMATIC IPC, Pentium III or processor running at 500 MHz or comparable
RAM (min.) ²⁾	512 MB
Free hard disk space ³⁾	2 GB on system drive "C:"
Operating systems	32-bit operating systems <ul style="list-style-type: none"> • Windows 7 Professional SP1 • Windows 7 Enterprise SP1 • Windows 7 Ultimate SP1 64-bit operating systems <ul style="list-style-type: none"> • Windows 7 Professional SP1 • Windows 7 Enterprise SP1 • Windows 7 Ultimate SP1 • Windows 8.1 Professional • Windows 8.1 Enterprise • Windows Server 2008 R2 StdE SP1 • Windows Server 2012 R2 StdE • Windows 7 Home Premium SP1 (only WinCC Basic) • Windows 7 Professional SP1 • Windows 7 Enterprise SP1 • Windows 7 Ultimate SP1 • Windows 8.1 (only WinCC Basic) • Windows 8.1 Professional • Windows 8.1 Enterprise • Windows Server 2008 R2 StdE SP1 (not WinCC Basic) • Windows Server 2012 R2 StdE
Optical drive	DVD-ROM

¹⁾ In combination with options, more powerful systems may be required

²⁾ The required RAM is determined primarily by the size of the graphics used.

³⁾ Without taking archives into account.

Note:

In addition to WinCC, Windows also requires space on the hard disk; e.g. free disk space should be available for the swap file. The following formula has proven itself in the past:
Size of swap file = 3 x size of RAM.

For further information, refer to your Windows documentation.

Technical specifications

The following tables of system limitations provide assistance in estimating whether a specific project is still within the system limitations for WinCC Runtime Advanced.

The stated maximum values are not additive.

We cannot guarantee proper functioning of configurations that make full use of all system limits on the HMI devices. In addition to the limitations specified, allowances must be made for restrictions in configuration memory resources.

SIMATIC WinCC Runtime Advanced	
Tags	
Number of tags in the project	6 144
Number of PowerTags	128 –4 096
Number of elements per array	1 600
Number of local tags	2 048
Alarms	
Number of alarm classes	32
Number of discrete alarms	4 000
Number of analog alarms	500
Length of an alarm in characters	80
Number of process values per alarm	8
Size of the alarm buffer	1 024
Number of queued alarm events	500
Screens	
Number of screens	500
Number of fields per screen	400
Number of tags per screen	400
Number of complex objects per screen ¹⁾	40
Recipes	
Number of recipes	999
Number of elements per recipe ²⁾	2 000
User data length in KB per data record	256
Number of data records per recipe	5 000
Logs	
Number of logs	100
Number of entries per log (including all log segments) ³⁾	500 000
Number of log segments	400
Cyclical trigger for tag logging	1 s
Number of tags that can be logged per log	6 144

¹⁾ Complex objects are: Bars, sliders, symbol library, clock, and all objects from the Controls area.

²⁾ When using arrays, each array element represents a recipe element

³⁾ For the "segmented circular log" logging method, the number of entries for all sequence logs is valid. The product derived from the number of circular logs times the number of data records in this log may not be exceeded.

Technical specifications (continued)

SIMATIC WinCC Runtime Advanced	
Trends	
Number of trends	800
Text lists and graphics lists	
Number of graphic lists	500
Number of text lists	500
Number of entries per text or graphic list	3 500
Number of graphic objects	2 000
Number of text elements	30 000
Scripts	
Number of scripts	200
Communication	
Number of connections	8
Number of connections based on "SIMATIC HMI HTTP"	16
Maximum number of connected Sm@rtClients (including a service client)	4 ¹⁾
Help system

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) Runtime

WinCC Runtime Professional

Overview

PC-based operator control and monitoring system for visualization and operator control of processes, production flows, machines and plants in all sectors – from the simple single-user station through to distributed multi-user systems and cross-location solutions with web clients.

SIMATIC WinCC Runtime Professional is the information hub for corporation-wide vertical integration. SIMATIC WinCC Runtime Professional is configured with the SIMATIC WinCC Professional configuration software.

Benefits

- Functions for all visualization tasks:
 - Operator functions
 - Graphics and trend displays
 - Alarm logging
 - Report system
 - Archiving (option)
 - Recipe management (option)
- Universally scalable
 - Expandable from single station to client-server configurations
 - Process visualization via the web with the WinCC WebNavigator
- Open standards for easy integration
 - Efficient real-time database MS SQL Server
 - Open for application modules with ActiveX controls
 - Visual Basic for Applications for individual expansions
 - OPC for cross-vendor communication
- Part of the Totally Integrated Automation Portal
 - Direct access to the tag and message configuration of the SIMATIC controller
 - Excellent support of the new SIMATIC S7-1500 controller With symbolic addressing
 - Access to the new memory-optimized data blocks
 - New alarm and diagnostics concept
 - Integrated diagnostic functions for increasing productivity

Application

SIMATIC WinCC Runtime Professional is designed for visualization and operation of processes, manufacturing cycles, machines and plants. With its powerful process interface, especially to the SIMATIC family, and the secure data logging, WinCC Runtime Professional enables solutions for the process control.

The sector-neutral basic system enables universal usage in all automation applications.

SIMATIC WinCC Runtime Professional can be used in combination with the following HMI devices:

SIMATIC PCs:

- SIMATIC Panel PC: HMI IPC477C (Client), IPC477D (Client), Panel PC 577B, HMI IPC577C (Client), Panel PC 677B, HMI IPC677C
- SIMATIC Box PC: IPC427C, IPC427D, Box PC 627B, IPC627C, IPC827C
- SIMATIC Rack PC: PC 547B, IPC547C, IPC547D, PC 647B, IPC647C, PC 847B, IPC827C
- Standard PC

Design

SIMATIC WinCC Runtime Professional is available as a software package with 128, 512, 2 048, 4 096, 8 192, 65 536 PowerTags. PowerTags are data points that are connected to controllers or other data sources via a WinCC Runtime Professional channel. Up to 32 alarms can be obtained from one data point. Moreover, internal tags without coupling are available for additional system performance. WinCC Runtime Professional also contains 500 archive tags. Additional archive licenses can be obtained for greater quantity structures.

Licenses for a multi-user configuration

The system software with the required number of PowerTags and additionally the SIMATIC WinCC Server for Runtime Professional option must be installed on the server. For the clients in the basic configuration, a SIMATIC WinCC Client for Runtime Professional license is sufficient.

Function

Visualization via Windows-compliant user interface

Made up of parameterizable screen objects and faceplates created on a project-specific basis:

- Numeric and alphanumeric input/output fields
- Static text and graphic display plus vector graphics
- Dynamizable graphics from HMI symbol library
- Bar graph, trend curve graph with scroll and zoom function as well as read line
- Signal-specific text and graphic lists
- Buttons and switches for operator-process communication
- Editing fields for process values (signals)
- Analog display, slider as example for further screen objects
- Project-specific faceplates created from basic objects of the system
- Graphic displays for various standard graphic formats, e.g. bitmaps, .jpg, .wmf

Function (continued)

Alarms and messages

- Discrete alarms and analog alarms, as well as event-driven Alarm-S/Alarm-D message procedure with SIMATIC S7
- The new alarm and diagnostics concept of the S7-1500 controller is also supported
- Freely-definable alarm classes for definition of acknowledgment response and display of alarm events

Logging of alarms and process values ¹⁾

- Signaling system for detecting and archiving events with display and control options according to DIN 19235
- Process logging for the acquisition, compression and storage of measured values
- Online evaluation of process value and alarm logs

Recipes ¹⁾

- Generation of data records for machine data or production data
- Display or entry of data records via a configurable screen object or via process screens distributed within the project
- Transmission of data records from or to the controller
- Import/export of data records for further processing with other tools (e.g. MS Excel)

Documentation of process data, alarm events, and recipes

- Time or event-driven report output
- User-definable layout

Flexible expansion by means of Visual Basic Script and ANSI-C

- Programming interfaces for individual access to data and functions of WinCC Runtime Professional and for the integration in user programs with VBA, VB Script, C-API, C-Script (ANSI-C)

Language support for multilingual projects

- Language-dependent texts and graphics
- Language selection during runtime

Onboard controller connection to many different controllers

- Communication via native drivers and standard OPC channel
- For communication with subordinate controls (SIMATIC protocols, PROFIBUS DP, PROFIBUS FMS, DDE and OPC server included in the scope of delivery)

Open communication between HMI systems and with higher-level systems

- OPC-Server
 - Use of the visualization system as a data server (OPC Server) for higher-level automation components such as control systems or systems in the office sector
 - OPC-DA-Server: tags, e.g. process values
 - OPC-HDA-Server: logged process values
 - OPC-A&E-Server: Alarms
 - OPC-XML-DA-Server: tags, e.g. process values
 - OPC-UA-DA Server: tags, e.g. process values
- OLE DB Server
 - Standardized and user-friendly access to WinCC log data (MS SQL Server 2005).
 - Access is via the OLE-DB Provider supplies all WinCC log data available along with the accompanying process values, as well as alarm and user texts.
 - The WinCC OLE-DB provider also supports analysis functions such as minimum, maximum, alarm hit list, etc.
- WinCC WebNavigator for Runtime Professional ¹⁾
 - Option for SIMATIC WinCC Runtime Professional for operating and monitoring plants over the Internet, company Intranet or LAN.
 - Configuration from a web server with the SIMATIC WinCC Runtime Professional software as a single-user, client or server version and a web client that enables operator control and monitoring of a current WinCC Runtime Professional project via an Internet browser with ActiveX support. The WinCC basic system does not have to be installed on the client computer.
- WinCC DataMonitor for Runtime Professional ¹⁾
 - The WinCC DataMonitor is used for displaying and evaluating current process states and historical data on office PCs using standard tools such as Microsoft Internet Explorer or Microsoft Excel. The DataMonitor Client is supported by a web server with current and historic process data and alarms. All staff ranging from machine operators to corporate managers can use the DataMonitor to obtain information.

WinCC ControlDevelopment for extending the functionality by adding own Controls ¹⁾

- Development of proprietary VB.net or C# Controls for integration in WinCC Runtime Professional

¹⁾ Option for SIMATIC WinCC Runtime Professional; runtime licenses must be purchased separately. For further information, refer to "WinCC options".

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) Runtime

WinCC Runtime Professional**Function** (continued)

System prerequisites	SIMATIC WinCC Runtime Professional
Processor type (min.) ¹⁾	<ul style="list-style-type: none"> Windows 7 (32-bit): 3.5 GHz P4 or comparable, dual core Windows Server 2008: 3 GHz P4 or comparable, dual/multi core
RAM (min.) ²⁾	2 GB
Free hard disk space ³⁾	2 GB on system drive "C:"
Operating systems	32-bit operating systems <ul style="list-style-type: none"> Windows 7 Professional SP1 Windows 7 Enterprise SP1 Windows 7 Ultimate SP1 64-bit operating systems <ul style="list-style-type: none"> Windows 7 Professional SP1 Windows 7 Enterprise SP1 Windows 7 Ultimate SP1 Windows 8.1 Professional Windows 8.1 Enterprise Windows Server 2008 R2 StdE SP1 Windows Server 2012 R2 StdE
Graphics card	32 MB RAM, 24 bit color depth
Network	Ethernet 10 Mbit/s or higher
Optical drive	DVD-ROM

¹⁾ In combination with options, more powerful systems may be required

²⁾ The required RAM is determined primarily by the size of the graphics used.

³⁾ Without taking archives into account.

Note:

In addition to WinCC, Windows also requires space on the hard disk; e.g. free disk space should be available for the swap file. The following formula has proven itself in the past:
Size of swap file = 3 x size of RAM. For further information, refer to your Windows documentation.

Integration**Integration in company-wide solutions (IT and business integration)**

WinCC Runtime Professional is strictly based on Microsoft technology, which provides for the greatest possible compatibility and integration ability.

ActiveX and .net Controls support technology and sector-specific expansions.

Cross-manufacturer communication is also a simply exercise. The reason: WinCC Runtime Professional can be used as an OPC client and server, and in addition to access to current process values, it also supports standards such as OPC HDA (Historical Data Access), OPC Alarm & Events, OPC UA Data Access and OPC XML Data Access.

Just as important:

Visual Basic Scripting (VBS) as an easy-to-learn, open Runtime language. If desired, professional application developers can also use ANSI-C.

WinCC Runtime Professional integrates a powerful and scalable Historian function based on the Microsoft SQL Server in the basic system. Thus the user is given all possibilities: from high-performance archiving of current process data, to long-term archiving with high data compression, through to a central information turntable in form of a company-wide Process Historian. Open interfaces form the basis for an effective IT and business integration.

Technical specifications

The following tables of system limits provide assistance in estimating whether a specific project is still within the system limitations for WinCC Runtime Professional. The stated maximum values are not additive.

We cannot guarantee proper functioning of configurations that make full use of all system limits on the HMI devices. In addition to the limitations specified, allowances must be made for restrictions in configuration memory resources.

SIMATIC WinCC Runtime Professional	
Alarms	
Configurable alarms per server/single user	20 000
PowerTags per alarm line	10
User text blocks per alarm line	10
Alarm classes (incl. system alarm classes)	18
Alarm types	16
Alarm priorities	17 (0...16)
Alarms in Runtime	
Alarms per alarm log	Unlimited ¹⁾
Alarms per short-term log list	1 000
Alarms per long-term log list	1 000 ²⁾
Alarms per alarm display	5 000 ³⁾

¹⁾ Limited by system resources.

²⁾ On single-user station or server or on client per server if "LongTimeArchiveConsistency" is set to "No". On single-user station, server, or client if "LongTimeArchiveConsistency" is set to "Yes".

³⁾ On single-user station or server or on client per server.

Technical specifications (continued)

	SIMATIC WinCC Runtime Professional
Screens	
Objects per screen ⁴⁾	3 000 ⁵⁾
Levels per screen	32
Screens per project	1 000 ⁵⁾
Instances of fixed faceplates in a process screen	31 instances of the same picture type
Screen size in pixels	10 000 x 10 000
Nesting levels of screen objects	20
Recipes	
Number of recipes	1 000 ⁵⁾
Number of recipe elements	500 ⁶⁾
Number of recipe data records	3 000 ⁶⁾
Number of views	Unlimited ⁵⁾
Logs	
Trend views per screen	25
Trends per trend view	80
Tables per screen	25
Columns per table	12
Values per table	30 000
Logs per single-user station/server	100
Log tags per single-user station/server ⁷⁾	8 000
Trends	
Trend views per image	25
Trends per trend view	80
User administration	
Number of user groups	128
Number of user rights	999
Number of users	128
Configurations – Quantity structure in a multi-user system	
WinCC clients in a system	32 ⁸⁾ ⁹⁾
Web clients in a system	50 ¹⁰⁾

⁴⁾ The number and complexity of the objects affect the performance.

⁵⁾ Limited by system resources.

⁶⁾ The sum of the number of recipe elements and number of data records must not exceed a value of 320,000.

⁷⁾ Dependent on the Logging PowerPack used for the log tags. 500 log tags are contained in the basis version.

⁸⁾ If the server is also used as an operating unit, the number of clients for this server is reduced to four.

⁹⁾ Mixed configuration: 32 Clients + 3 Web Clients

¹⁰⁾ Mixed configuration: 50 Web Clients + 1 WinCC Client

Further information can be found in the Internet at:

<http://www.siemens.com/tia-portal>

Overview

Communication – SIMATIC WinCC Runtime Advanced

WinCC Advanced is an open visualization system and offers the option of connecting the most diverse control systems.

Number of connectable controllers

WinCC Advanced permits the parallel coupling of up to 8 controllers.

Connection to third-party controllers

The following "Coupling overview" table lists third-party protocols and controllers which are directly supported by WinCC Advanced. Generally it is also possible to connect third-party controllers via OPC (OLE for Process Control).

Current notes and information about OPC servers from many different suppliers can be found at:

<http://www.opcfoundation.org/>

WinCC Advanced supports the standards:

- OPC Data Access 2.05a
- OPC UA Data Access 1.01
- OPC XML Data Access 1.00 (client via DCOM/XML gateway)

Coupling overview for WinCC Runtime Advanced

Protocol	Description	PC interface
SIMATIC HMI		
Ethernet TCP/IP (HTTP communication)	HTTP communication for data exchange between SIMATIC HMI (client + server) ¹⁾	CP 1612 A2
SIMATIC S7		
Ethernet TCP/IP (S7 communication)	Channel for communication via Ethernet TCP/IP with max. 8 x SIMATIC S7 controllers S7-1200, S7-1500, S7-300, S7-400, S7-200 with CP 243-1	CP 1612 A2 CP 1613 A2 CP 1623
MPI, PROFIBUS (S7 communication)	Channel for communication via MPI, PROFIBUS with max. 8 x SIMATIC S7 controllers S7-1200 with CM 1243-5 (DP master), S7-1500, S7-300, S7-400, S7-200 (passive S7-200 only)	CP 5611 A2 CP 5612 CP 5621 CP 5622 CP 5711 CP 5613 A2 CP 5613 A3 CP 5623
PPI (PPI protocol)	Channel for communication via PPI with 1 x SIMATIC S7-200 (network operation, e.g. parallel PG possible)	CP 5611 A2 CP 5612 CP 5621 CP 5622 CP 5711 CP 5613 A2 CP 5613 A3 CP 5623

MPI (S7 communication)	Channel for communication via MPI with SINUMERIK 840D sl	CP 5611 A2 CP 5612 CP 5621 CP 5622 CP 5711 CP 5613 A2 CP 5613 A3 CP 5623

Protocol	Description	PC interface
Third-party controllers (from WinCC V11.0) ³⁾		
Allen Bradley Ethernet IP	Channel for communication with max. 4 x Allen Bradley controllers via Ethernet TCP/IP with Allen Bradley Ethernet IP protocol. The controllers ControlLogix / CompactLogix, SLC500 / MicroLogix and PLC5 are supported.	CP 1612 A2
Allen Bradley DF1	Channel for communication with Allen Bradley controllers via DF1 protocol. The controllers SLC500 / MicroLogix and PLC5 are supported ³⁾	COM1/COM2
Mitsubishi MC TCP/IP	Channel for communication with max. 4 x Mitsubishi controllers via Ethernet TCP/IP with Mitsubishi MC TCP/IP protocol. The FX3, Q, and iQ/QnUD controller series are supported.	CP 1612 A2
Mitsubishi FX	Channel for communication with Mitsubishi controllers via FX protocol. The FX1N, FX2N controllers are supported.	COM1/COM2
Modbus TCP/IP	Channel for communication with max. 4 x Modicon controllers via Ethernet TCP/IP using the Modbus TCP/IP protocol. The Quantum, Momentum, Premium, TSX Micro, Compact and M340 controllers are supported.	CP 1612 A2
Modbus RTU	Channel for communication with Modicon controllers via the Modbus RTU protocol. The Quantum, Momentum, and Compact controllers are supported.	COM1/COM2
Omron Link / Multi Link	Channel for communication with Omron controllers via the Link/Multi protocol. The CP1x, CJ1x, CJ2H, CS1x, and CP2MC controllers are supported.	COM1/COM2
Cross-manufacturer		
OPC client ^{1) 4)} for OPC DA, OPC UA DA, XML DA	Channel for OPC communication, WinCC can acquire data from OPC server applications.	CP 1612 A2
OPC server for OPC DA	Server applications for OPC communication; WinCC provides process data to OPC clients.	CP 1612 A2

¹⁾ HTTP and OPC communication can be used in combination with the other couplings; regarding SIMATIC Panels that support HTTP or OPC communication, see the overview under "System interfaces (WinCC V11)".

²⁾ "SINUMERIK Operate WinCC RT Advanced" license required; for further information, see NC 60 Catalog.

³⁾ For detailed information regarding supported controllers, see "System interfaces (WinCC V11)".

⁴⁾ Application note: Parallel use of the OPC client channel allows, for example, connection to an SNMP OPC Server for visualization of the data present there. The SNMP OPC Server enables monitoring of any network components (e.g. switches) that support the SNMP protocol. Further information can be found under SIMATIC NET communications systems/SNMP OPC Server.

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) Runtime

WinCC Runtime Communication

Overview (continued)**Communication – SIMATIC WinCC Runtime Professional**

WinCC Professional is an open process visualization system and offers the option of connecting the most diverse control systems.

Released communication software

Only communication software with the listed (or higher) product versions should be used. Corresponding SIMATIC NET upgrades are available for the upgrading of older versions.

Number of connectable controllers

With CP 1613/CP 1623, a maximum of 64 S7 controllers can be connected via Industrial Ethernet; with CP 5612/CP 5622 a maximum of 8, and with CP 5613 A3 a maximum of 44 S7 controllers can be connected via PROFIBUS. With approx. 10 or more controllers, the use of Industrial Ethernet is recommended.

Client-server communication

Communication between the clients and the server is implemented using the TCP/IP protocol. The construction of a separate PC-LAN is recommended. For small projects with correspondingly small message frame advent, a SIMATIC NET Industrial Ethernet can be used for both process communication (WinCC/server ↔ PLC) and for PC-PC communication (WinCC/client ↔ WinCC/server)

Connection to third-party controllers

The following "Coupling overview" table lists third-party protocols and controllers which are directly supported by WinCC Professional. Generally it is also possible to connect third-party controllers via OPC (OLE for Process Control).

Current notes and information about OPC servers from many different suppliers can be found at:

<http://www.opcfoundation.org/>

WinCC Professional supports the standards:

- OPC Data Access 2.05a
- OPC Data Access 3.00
- OPC UA Data Access 1.01
- OPC XML Data Access 1.00
- OPC HDA 1.20
- OPC A&E 1.10

Overview

Options for SIMATIC Panels, SIMATIC WinCC Runtime Advanced and SIMATIC WinCC Runtime Professional

SIMATIC WinCC Recipes for SIMATIC WinCC Runtime Advanced and SIMATIC WinCC Runtime Professional

- Generation and management of data records for machine or production data
- Display or entry of data records via a configurable screen object or via process screens distributed within the project
- Transmission of data records from or to the controller
- Import/export of data records for further processing with other tools (e.g. MS Excel)

SIMATIC WinCC Logging for SIMATIC WinCC Runtime Advanced and SIMATIC WinCC Runtime Professional

- Logging of alarms and process values
- Online evaluation of process value logs and alarm logs
- Evaluation of process value and alarm logs using standard MS tools such as Excel

SIMATIC WinCC Audit for SIMATIC Panels and SIMATIC WinCC Runtime Advanced

- Recording of operator actions in an Audit Trail
- Electronic signature for important operator actions relevant to production
- Audit supports users in meeting special quality requirements, e.g.
 - Production plant requiring validation according to 21 CFR Part 11 (Food Drug Administration law)
 - In respect of traceability according to EU 175/2002 (EU directive)

SIMATIC Logon for SIMATIC Panels and SIMATIC WinCC Runtime Advanced and SIMATIC WinCC Runtime Professional

- Creates user administration on a central computer to which one or more WinCC stations can be connected over Ethernet.
- With each logging-on/off of a user on one of the connected stations, SIMATIC Logon checks whether a user password has been created and that the required privileges exist.
- SIMATIC Logon supports the user in combination with the Audit option in meeting requirements in accordance with FDA 21 CFR Part 11 and EU178.

SIMATIC WinCC Sm@rtServer for SIMATIC Panels and SIMATIC WinCC Runtime Advanced

- Flexible solution for remote access to HMI systems
- Remote maintenance of machines and plants via the Internet/ Intranet
- Reduced downtimes for machines and plants due to direct remote access
- Flexible solution for remote access to machines and plants

SIMATIC WinCC Server and SIMATIC WinCC Client for SIMATIC WinCC Runtime Professional

For setting up a high-performance client-server system

- A number of coordinated HMI stations can be operated in a single group with networked automation systems
- Client/server solution:
 - One server can supply up to 32 connected clients with process and archive data, alarms, screens and reports
 - Depending on the size of the plant, up to 12 servers and 32 clients can be employed.

SIMATIC WinCC Redundancy for Runtime Professional

For configuring a high-performance, fail-safe client-server system. One WinCC/Redundancy package is required for each redundant pair of servers.

SIMATIC WinCC WebNavigator for SIMATIC WinCC Runtime Professional

- Operator control and monitoring of plants via the Internet or the in-house intranet or LAN
- Web Client permits the operator control and monitoring of a current WinCC Runtime Professional project via an Internet browser with ActiveX support.

SIMATIC WinCC DataMonitor for SIMATIC WinCC Runtime Professional

- Display and analysis of current process states and historical data on office PCs with standard tools.
- Information can be compiled online individually during runtime via the Internet/Intranet.

SIMATIC WinCC ControlDevelopment for SIMATIC WinCC Runtime Advanced and SIMATIC WinCC Runtime Professional

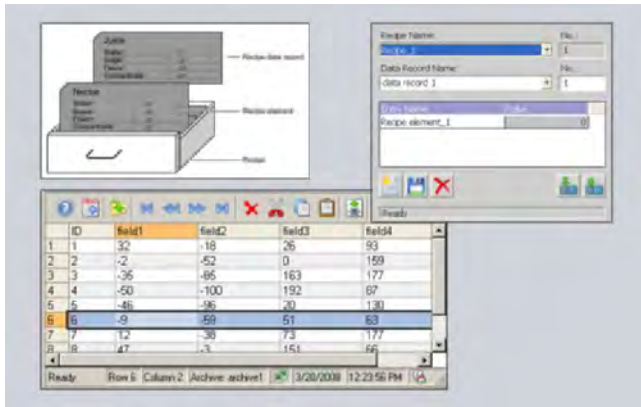

- Expansion of the basic functionality with proprietary controls.
- Development of proprietary VB.net or C# Controls for integration in WinCC Runtime Advanced and WinCC Runtime Professional

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) options

WinCC Recipes

Overview

- Option for SIMATIC WinCC Runtime Advanced and WinCC Runtime Professional for managing data records in recipes that contain related machine or production data
- The data in a data set can be transferred, for example, from the control unit to the PLC to switch production to a different product variant
- Licensing:
 - SIMATIC Panels / Multi Panels / Comfort Panels:
No license is required.
 - WinCC Runtime Advanced:
One license is required per operator station
 - WinCC Runtime Professional:
A license is only required on the server (or single-user system).

Benefits

- Generation and management of machine parameters and production data on the basis of data records, and exchange with the automation device, e.g. with the machine.
- Clear tabular representation of the data elements with the aid of a configurable screen object, or depiction in technological relationships across several process screens.
- Simple operator guidance through standard functions.
- Export/import of data records for further processing with other tools (e.g. MS Excel)

Function

- Input of data records (e.g. operating parameters of a machine, production data for a plastics machine) on the HMI device as well as their storage and transfer to the control
- Display or entry of data records via a configurable screen object or via several process screens distributed within the project
- The data record elements are coupled with the process via a direct tag connection
- Transmission of data records from or to the controller
- Powerful interfaces enable a synchronized data exchange with the controller.
- Storage of data records on local data carriers or on remote data servers via networks
- Logging of data records, e.g. as batch report/shift report
- User-friendly and flexible management of data records by powerful standard functions

The recipes and the associated data records are created using a separate, user-friendly WinCC Engineering editor and data is pre-assigned to them.

A configurable table object is used for displaying the data at runtime. Furthermore, the individual data record elements can also be displayed directly based on standard input/output fields across several process screens. In this way, the data in technological views can be presented clearly to the operator.

Import and export functions support the importing and exporting of data via external applications (e.g. MS Excel).

Technical specifications

	WinCC Recipes for Runtime Advanced
	The values specified are maximum values
Number of recipes	999
Number of elements per recipe ¹⁾	2000
User data length in KB per data record	256
Number of data records per recipe	5000

¹⁾ When using arrays, each array element represents a recipe element

	WinCC Recipes for Runtime Professional
	The values specified are maximum values
Number of recipes	1000 ²⁾
Number of elements per recipe ¹⁾	500 ³⁾
User data length in KB per data record	3000 ³⁾
Number of data records per recipe	3000 ²⁾

¹⁾ When using arrays, each array element represents a recipe element

²⁾ Limited by system resources.

³⁾ The sum of the number of recipe elements and number of data records must not exceed a value of 320,000.

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) options

WinCC Logging

Overview

- Option for SIMATIC WinCC Runtime Advanced and WinCC Runtime Professional for logging process values and alarms
- Logging of process values and alarms supports the acquisition and processing of process data from an industrial plant or machine. Evaluation of the logged process data provides information about the operating states of the plant or machine
- Licensing:
 - SIMATIC Panels / Multi Panels / Comfort Panels: No license is required.
 - WinCC Runtime Advanced: One license is required per operator station
 - WinCC Runtime Professional: 500 Logging Tags are already included in the basic package. The number of Logging Tags can be increased by means of additional licenses

Benefits

- Alarm and process value logs enable predictive diagnostics, which avoids downtimes
- Early detection of danger and fault conditions
- Increase of the product quality and the productivity thanks to regular analysis of the alarm and process value logs

Application

- Transfer of the logs for evaluation and long-term archiving
- Detection of recurring error states
- Optimization of maintenance cycles
- Ensuring the quality standard
- Quality assurance and checking the utilization of production sequences
- Documentation of process sequences

Function

- Time-controlled as well as manual or process-controlled swapping out of process data and alarms for long-term archiving
- During runtime, swapped out data are read in and selectively analyzed using WinCC Runtime Professional
 - Presentation and evaluation of archived process data based on a configurable trend display. Reading of the values is facilitated by a read line.
 - Presentation and evaluation of archived alarms based on a configurable alarm view.
 - User-friendly navigation in the logs
- External evaluation of the logs using MS standard tools
- Various log types are supported: sequence and circular logs
- Logging of process values and alarms on external, Windows-supported storage media
 - SIMATIC Panels and WinCC Runtime Advanced: CSV files, RDB files, Microsoft SQL Server via ODBC
 - WinCC Runtime Professional: Microsoft SQL Server 2005
- Powerful standard functions permit user-friendly and flexible utilization of the logs

Technical specifications

	WinCC Logging for Runtime Advanced
	The values specified are maximum values
Number of logs	100
Archivable data	Process values, alarms
Cyclical trigger for archiving process values (variables)	1 s
Max. number of entries per log (incl. sequence log)	500 000 ¹⁾
Log types	Circular logs, sequence logs (max. 400 per log)
Data storage format	CSV (Comma Separated Variable), RDB (Runtime Data Base), Microsoft SQL database (database not included in scope of delivery)

¹⁾ Dependent on memory medium used

	WinCC Logging for Runtime Professional
	The values specified are maximum values
Number of logs per single-user station/server	100
Archivable data	Process values, alarms
Measured values per second, max.	Server/single-user station: 5 000 per sec.
Log tags per single-user station/server	8 000 ²⁾
Log types	Circular log with and without long-term logging
Data storage format	Microsoft SQL 2008 database

²⁾ Dependent on the Logging PowerPack used for the log tags. 500 log tags are contained in the basis version.

¹⁾ One license is required for each operator console. A license is not required for the engineering system for configuring the runtime option.

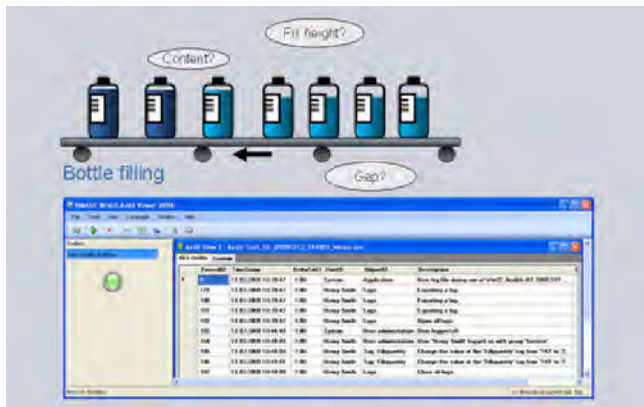

²⁾ Current information and availability regarding the new delivery package can be found at: <http://www.siemens.com/tia-online-software-delivery>

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) options

WinCC Audit

Overview

- Option for SIMATIC WinCC Runtime Advanced as well as SIMATIC Panels for recording operations in an audit trail, and electronic signature
- The audit trail is furnished with a security mechanism that displays subsequent manipulations.
- A user-friendly configuration function, which is included as standard in WinCC, is used to define the following:
 - Which user actions should be recorded in the audit trail during runtime
 - Which important operator actions during execution time require electronic signature/comments
- Available for the following SIMATIC HMI systems:
 - Comfort Panels
 - Mobile Panels
 - TP/OP 277
 - MP 277
 - MP 377
 - WinCC Runtime Advanced
- Licensing:
 - A license is required for every operator control unit (panel or PC).

Benefits

- Audit supports the user in meeting special quality requirements, e.g.
 - Production plant requiring validation according to 21 CFR Part 11 FDA ¹⁾
 - In respect of traceability according to EU 175/2002 ²⁾
- The entries in the audit trail are uniquely assigned to users. This means that responsibilities are clearly identifiable.
- The audit trail, stored as a CSV file ³⁾, can be checked via a security mechanism to find out if subsequent changes have been made.
- For particularly important user actions, e.g., starting production or loading new recipes, electronic signatures and comments can be configured and then called up and logged during runtime.

¹⁾ The FDA (Food and Drug Administration) is the American public health body

²⁾ 21 CFR Part 11- law on plant validation

³⁾ CSV Comma Separated Values

WinCC Audit for Runtime Advanced

Single license, license key download only
E-mail address required for the delivery

6AV2107-0RA00-0BH0

¹⁾ Current information and availability regarding the new delivery package can be found at: <http://www.siemens.com/tia-online-software-delivery>

Overview

- Option for connecting SIMATIC Panels and PCs with SIMATIC WinCC Runtime Advanced as well as WinCC Runtime Professional to a central user administration.
- Creates user administration on a central computer to which one or more panels or WinCC stations can be connected over Ethernet.
- With each logging-on/off of a user on one of the connected stations, SIMATIC Logon checks whether a user password has been created and that the required privileges exist.

SIMATIC Logon for Panels and WinCC Runtime Advanced

- All users of the SIMATIC Panels or WinCC Runtime Advanced stations can be managed plant-wide from a central location
- Supports the user in combination with the Audit option in meeting requirements in accordance with FDA 21 CFR Part 11 and EU178.
- Licensing:
SIMATIC Logon (basic license) and SIMATIC Logon Remote Access (3-pack license) for the connection of 3 panels or WinCC Runtime Advanced stations to a central user administration. Additional stations can be connected by using further SIMATIC Logon Remote Access licenses (3-pack/10-pack).

SIMATIC Logon for WinCC Runtime Professional

- All users of WinCC Runtime Professional can be managed plant-wide from a central location.
- The central user management with SL utilizes Windows mechanisms and must be installed on all participating WinCC Runtime Professional stations.
- Licensing
SIMATIC Logon (basic license) is included in the basic package of WinCC Runtime Professional

Benefits

- Centralized configuration of all access authorizations of a distributed system avoids unnecessary travel times. Time-consuming multiple configurations for each individual local station become unnecessary. Accordingly, users can be easily configured from a central location.
- All access data apply throughout the plant on every connected station. Additional access data on local subsystems is no longer necessary.

Design

SIMATIC Logon for Panels and WinCC Runtime Advanced

SIMATIC Logon and SIMATIC Logon Remote Access are installed on a central station.

The following Runtime stations are connected to the central station via the Ethernet network:

- PCs with WinCC Runtime Advanced
- SIMATIC Panels from the 177 series or higher (with Ethernet interface)
- SIMATIC Mobile Panels from the 177 series or higher (with Ethernet interface)
- SIMATIC Multi Panels
- SIMATIC Comfort Panels

SIMATIC Logon for WinCC Runtime Professional

The SIMATIC Logon can be used for the central user management of several WinCC Runtime Professional stations. Operation in a Windows Workgroup or even in a domain is possible.

Function

Users receive a unique user ID, user name and password. This information is encrypted and stored at a central point (for SIMATIC Logon in the Windows user management). Functions such as changing the password, automatic log-off after a predefined time and lockout after several incorrect entries of a password ensure maximum security of operation. In addition, SIMATIC Logon allows setting up new users online, plant-wide and across applications, or blocking of existing users. SIMATIC Logon also supports electronic signature.

¹⁾ SIMATIC Logon V1.5 included in scope of supply of WinCC Runtime Professional.

Overview

G_ST80_XX_00071

- Option for SIMATIC WinCC Runtime Advanced plus SIMATIC Panels for communication between various SIMATIC HMI systems.
- Available for the following SIMATIC HMI systems:
 - Comfort Panels
 - Mobile Panel 177 PN, Mobile Panel 277
 - TP 177B PN/DP, OP 177B PN/DP
 - TP 277, OP 277
 - MP 177, MP 277, MP 377
 - WinCC Runtime Advanced
- A SIMATIC HMI system can be used to control or monitor another system remotely; entry level for client/server configurations for distributed operator stations or for solutions with head end or control room
- Local operation, visualization and data processing are as possible as plant-wide access to information. Integrated information flows ensure an overview of the status of all processes.
- Licensing:
The "SIMATIC WinCC Sm@rtServer for Panel" or "SIMATIC WinCC Sm@rtServer for WinCC Runtime Advanced" license must be installed on the server HMI device. A license is not required for the engineering system for configuring the runtime option.

Note:

When accessing the operator stations via the Sm@rtServer option, suitable protective measures (including IT security such as network segmentation) should be taken in order to ensure safe operation of the system.

You will find more information on the topic of Industrial Security on the Internet at:

<http://www.siemens.com/industrialsecurity>

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) options

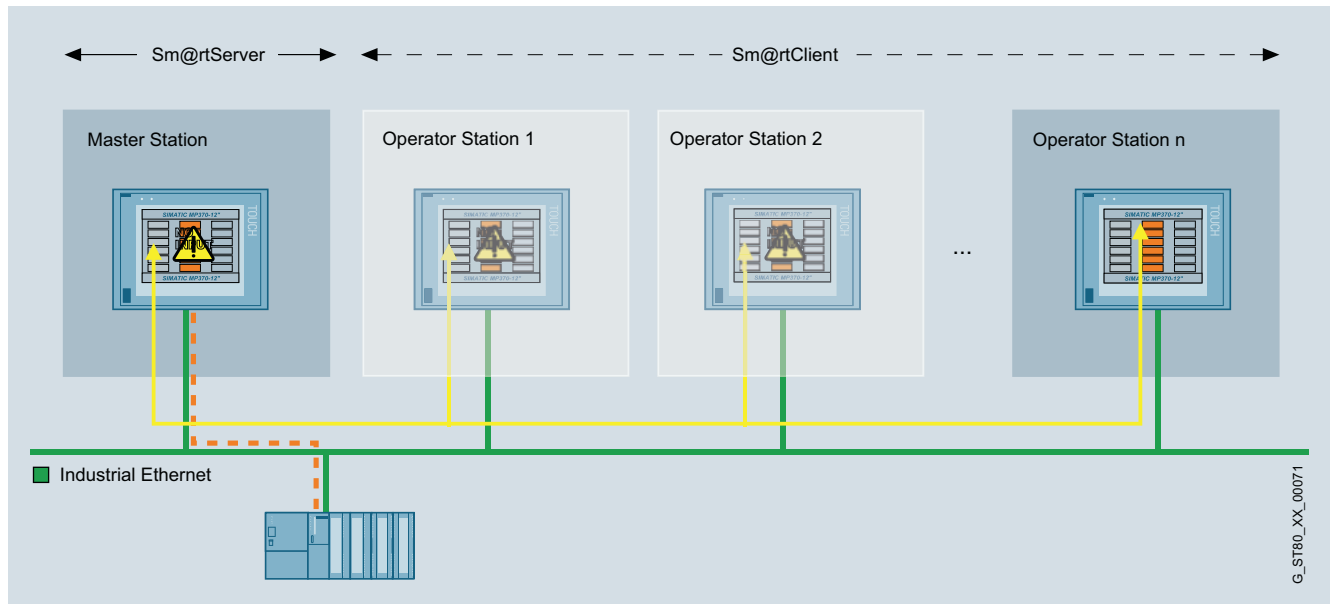

WinCC Sm@rtServer

Benefits

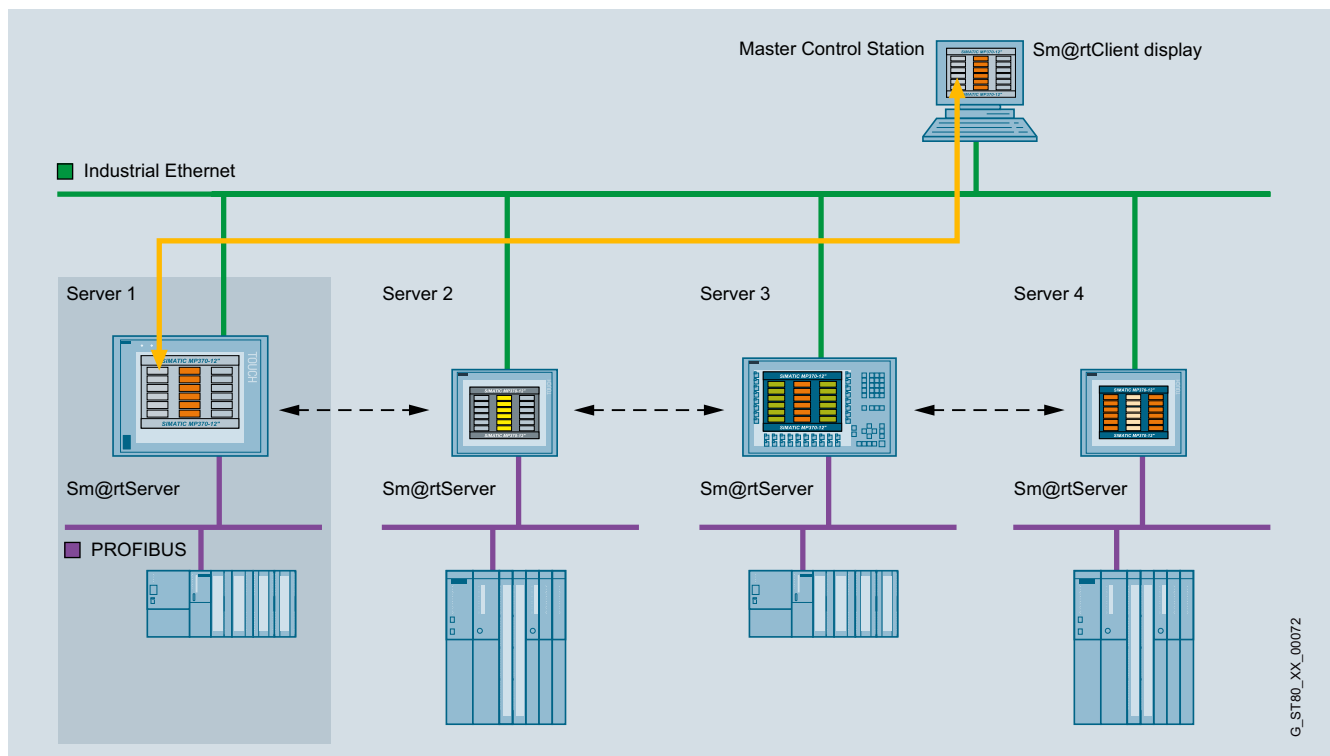

- Flexible solution for remote access to HMI systems
- Quick elimination of malfunctions or downtimes – thus increasing the productivity – through global access to machines/plants by the service and maintenance personnel.
- Avoidance of on-site service calls.

Application

- Operator control and monitoring of machines covering large areas with several operator stations by one operator.
- Operator control and monitoring of machine-level HMI systems from one central station (e.g. head-end station of a production line or from a control room)
- Remote maintenance and servicing of machines/plants over the Internet/Intranet

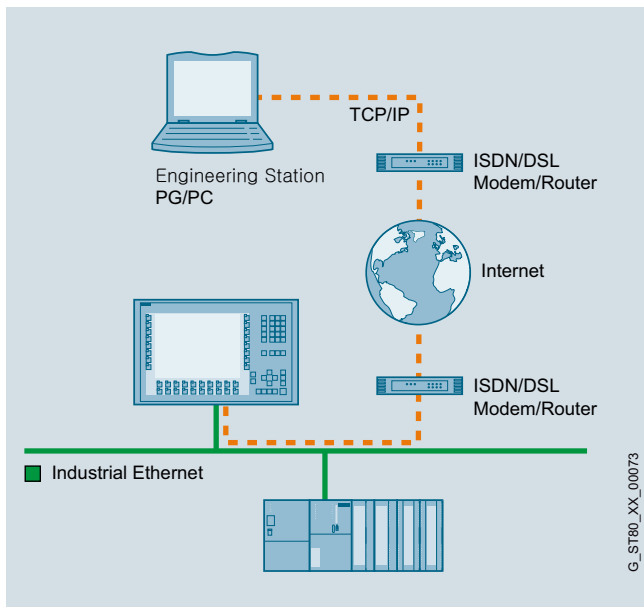

Application of the Sm@rtClient concept: Coordinated operation of several operator stations

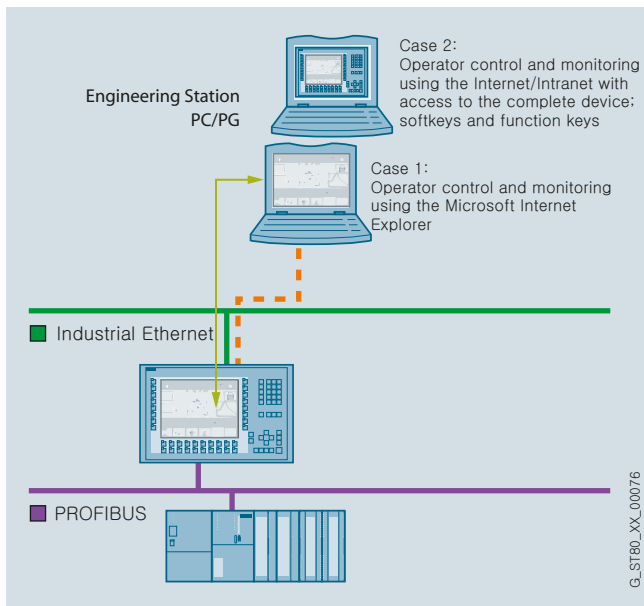

Use of the Sm@rtClient display: Operator control and monitoring of machine-level HMI systems from one central station

Application (continued)

Remote operator control and monitoring of SIMATIC HMI systems using Industrial Ethernet and/or via the Intranet/Internet

Remote operator control and monitoring of SIMATIC HMI systems using Industrial Ethernet and/or via the Intranet/Internet

Function

Coordinated operation of several operator stations:

- The HMI application and communication with the controller takes place via the master station. "Sm@rtClients" can be activated from here in the case of machines/plants with larger dimensions which require a larger number of HMI devices. The Sm@rtClients are then provided with access to the master station and thus to the process. Access procedures guarantee that only one operator system can actively access the process at any given time.
- Embedded in process screens, a configurable screen object (Sm@rtClient display) represents the screen of the relevant HMI system (Sm@rtServer)
- Powerful standard functions permit user-friendly and flexible operation of the display

Remote control of an operating station:

- The HMI application and communication with the controller takes place via the HMI system. Using the Sm@rtServer, the HMI systems in the machines/systems can be serviced remotely. An access process ensures that only one operator (either locally at the machine or remotely via Internet Explorer) can actively access the process at one time.
- Microsoft Internet Explorer V6.0 SP1 or higher is sufficient for accessing an HMI system.

Technical specifications

WinCC Sm@rtServer	
	The values specified are maximum values

Overview

G_ST80_XX_00472

- Option for SIMATIC WinCC Runtime Professional, which permits the configuration of a powerful client/server system
- One of the following operating systems must be available to install the option on the server: Windows Server 2003 R2 SP2, Windows Server 2008 SP2 or Windows XP Professional. When using Windows XP Professional, max. 3 clients can be connected.
- A number of coordinated HMI stations can be operated in a single group with networked automation systems
- Client/server solution: One server can supply up to 32 connected clients with process and archive data, alarms, screens and reports
 - Requirement: Network connection (TCP/IP) between the server PC and the connected clients
- Licensing:
 - A WinCC Runtime Professional license on the server with the appropriate number of PowerTags and the "WinCC Server for RT Professional" license.
 - The "WinCC Client for RT Professional" license on the clients.

Benefits

- Integrated scalability from the single-user system to the client/server solution
- Considerably expanded quantity structure, relieves the load on the individual servers, and thus better performance through the distribution of the overall application or of the tasks among several servers

Application

In a complex plant, WinCC Runtime Professional can be configured as a distributed system depending on the requirements:

- Functional distribution (e.g. alarm server, log server, etc.), or
- Distribution corresponding to the physical plant structure (e.g. body-in-white, paint shop, etc.).

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) options

WinCC Server / WinCC Client

Function

All process data of a WinCC project is stored in different Runtime databases, e.g. alarms, trend values, etc. These Runtime databases are located on a central computer, the WinCC Server, instead on each HMI device. The operator stations, i.e. the WinCC Clients, then access the WinCC Server.

WinCC Clients and WinCC Server are independent systems. You can also connect WinCC Clients subsequently. Alternatively, you can activate and deactivate a project from a WinCC Client.

A license is not required for the engineering system for configuring the runtime option.

Overview

Option for SIMATIC WinCC (TIA Portal), supporting the parallel operation of two interfaced WinCC single-user systems or process data servers for mutual monitoring

If one of the two server PCs or one of the two WinCC stations fails, the second one will take over control of the entire system. Once the failed server or station is restored to operation, the contents of all the message and process value archives are copied to it.

One WinCC Redundancy package is required for each redundant pair of servers.

Benefits

- Increased system availability with gap-free data integrity
- Automatic switchover of the client when a server fails or the communication to the server fails
- Continuous operation and visualization through automatic switchover of the clients to the intact server
- Automatic synchronization of all archives in the background after a fault is cleared

Function

Normally, two WinCC stations or process data servers run in parallel. Each station has its own process connection and its own data archives. WinCC Redundancy ensures automatic matching of system and user archive data.

If one of the two server computers or WinCC stations fails, the second will take over the archiving of messages and process data, thereby ensuring seamless data integrity. In client/server mode, the clients are automatically switched from the failed server to the redundant partner. This ensures continuous plant visualization and operation on every operator station.

When the failed partner resumes operation, all process values, messages and data archived during the fail period are automatically matched with the partner. This process runs in the background and does not affect plant continuity. Once this is complete, two equivalent servers/stations will be available again.

Communication with the SIMATIC S7 PLC can also be configured with redundancy (an H Series SIMATIC S7 is required) by plugging in two communication modules and configuring two communication paths (S7-REDCONNECT software package). The use of failsafe H Series SIMATIC S7 PLCs can, if required, further increase availability at control level.

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) options

WinCC WebNavigator**Overview**

G_STB0_XX_00556

- Option for SIMATIC WinCC Runtime Professional for operating and monitoring plants over the Internet, company Intranet or LAN.
- Configuration from:
 - A web server with SIMATIC WinCC Runtime Professional as single-user or server version and a web client that permits operator control and monitoring of a current WinCC Runtime Professional project using the Internet Explorer.
- Licensing:
 - A license is required for using the Web server.
 - Server-based licenses are available for access to the web server by 3, 10, 25 or 50 clients.
 - Client-based licenses are available for guaranteed access to the web server (Diagnostics Client)

Note:

When accessing the operator stations via the WinCC WebNavigator option, suitable protective measures (including IT security such as network segmentation) should be taken in order to ensure safe operation of the system.

You will find more information on the topic of Industrial Security on the Internet at:

<http://www.siemens.com/industrialsecurity>

Benefits

- Operator control and monitoring across long distances and on different platforms (PC, local panel, mobile PDA)
- Large configurations with up to 50 operator stations
- Fast update rates due to event-driven communication
- Optimally tailored clients for operating and monitoring, analysis, service and diagnostics
- Acceptance of configuration data for the web, generally without changes
- Minimum maintenance costs due to central software administration
- High security standards and availability
 - Support for commonly used security mechanisms (routers, firewalls, proxy servers)
 - WinCC access authorizations and user administration
- Support of Microsoft Internet Explorer, including "tabbed browsing". A new license is not required for separate tabs.
- With the WinCC Web Viewer (WinCC Viewer RT), the process screens can be displayed on the web client independently of the Internet Explorer. Settings for the client are made on the client itself. The WinCC Web Viewer can also be used in conjunction with the MS Terminal Service.
- The SIMATIC WinCC WebNavigator can also be operated in "view only" mode and is thus used as tool for monitoring and navigating using Internet Explorer or WinCC Web Viewer (WinCC Viewer RT).
- Web server logins and logouts are recorded in the alarm and audit log.

Benefits (continued)

- There is a gadget available for the Windows 7 operating system in which selected WinCC process screens can be displayed. No additional WebNavigator license is required for the gadget. The WebNavigator server can be selected directly via the gadget.
- Security is increased by adjustable automatic logout. If an automatic logout is to take place, an absolute or inactive time period can be set.

Highlights:

- Multiple Web servers can be accessed from a single Web client
- User-friendly services and tools for distributing customized objects (controls, files) to web clients can be supplied for use as an integration platform. These components can then also be integrated into cross-web/server navigation.
- Both Internet Explorer and the supplied, browser-independent WinCC Web Viewer (WinCC Viewer RT) can be used as a front end
- Access to WebNavigator Server of the WinCC V7.x series.

Application

In addition to the typical use of the WebNavigator in WANs (Wide Area Networks), the WebNavigator can also be used to implement especially low-cost applications. This especially includes applications that have a pronounced distributed structure (water/wastewater, oil and gas), or in which access to process information is only sporadic (building management).

The WebNavigator also permits vertical integration, i.e. a networked IT landscape with integrated data flow between the planning and operating level of a company. Only a standard browser is required for direct access to current process information.

In addition to the standard WebNavigator licensing, there is the "Diagnostics Client" with identical functionality but different licensing. It is especially suitable for the following applications:

- Remote diagnostics/operation of several unmanned WinCC Runtime Professional stations
- Central control rooms that monitor several web servers via one user interface
- Maintenance personnel who require guaranteed access to the server at any time, regardless of the number of users already logged on to the server. On the server side, only one WebNavigator Diagnostics Server license or, alternatively, one Standard WebNavigator license is required.

Design

Licenses for the WebNavigator

The WebNavigator Client software can be installed as many times as required without the need for a license.

- Server-based licensing
 - A license is required for using the WebNavigator Server.
 - Licenses are available for simultaneous access to the Web server by 3, 10, 25 or 50 clients.
- Diagnose Client licensing
 - For cost-optimized access by one or a small number of WebNavigator clients to numerous Web servers (e.g. for diagnostic purposes). This client license provides guaranteed access to Web servers at any time. In respect of function there is no difference compared with regular WebNavigator clients and the two can be mixed.

WebNavigator Clients are capable of accessing several different Web Servers.

Thin client solutions

The WebNavigator can also run under Windows Server 2003 or Windows Server 2008 terminal services. A Windows Server 2003 or Windows Server 2008 (or higher) operating system is required. This makes it possible to connect SIMATIC Thin Clients as visualization stations to WinCC Runtime Professional, for example.

For this purpose, the Windows terminal services must be installed on the PC on which the Web Client is installed. A Windows Server 2003 or Windows Server 2008 (or higher) operating system is required. Up to 25 thin clients can be connected to one terminal server.

Applications:

- Mobile devices
- Handhelds
- Rugged on-site visualizations

Hybrid configuration

System requirements: WinCC WebNavigator – Server V12

- Windows 7 SP1 (32- and 64-bit) Business, Enterprise and Ultimate (max. 3 Clients)
- Windows XP Professional Service Pack 3 (max. 3 clients)
- Windows Server 2003 SP2
- Windows Server 2008 SP2 32-bit
- Windows Server 2008 R2 SP1 64-bit
- Internet Explorer V7.0, V8.0, V9.0
- Microsoft SQL Server 2008 R2 SP1 32-bit (included in the WinCC product delivery)
- WinCC Basic System V12

System requirements: WinCC WebNavigator – Client V12

- Internet Explorer 7, IE 8, IE9

System requirements: WinCC WebNavigator – Server V11

- Windows 7 (32-bit) Business, Enterprise and Ultimate (max. 3 clients)
- Windows XP Professional Service Pack 2 (max. 3 clients)
- Windows Server 2003 SP2 and Windows Server R2 SP2
- Windows Server 2008
- Internet Explorer 7 as well as Internet Explorer 8
- Microsoft SQL Server 2005 SP2 (scope of supply of WinCC)
- WinCC Runtime Professional V11

System requirements: WinCC WebNavigator – Client V11

- Internet Explorer 7 as well as Internet Explorer 8

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) options

WinCC WebNavigator

Function

WinCC Professional makes setting up and configuring a WebNavigator server very easy. WinCC process screens to be visualized via the Internet are created as usual in WinCC Professional and the web access is activated via a process screen option. To display WinCC process screens on the web client, the Microsoft Internet Explorer or browser is used independent of the supplied WinCC Web Viewer (WinCC Viewer RT).

The operator on the Web Client is integrated in the central WinCC user administration and can operate and monitor the system according to the configured access rights. The WebNavigator supports all standard security mechanisms that can be used for applications on the Internet, e.g. routers, firewalls and proxy servers.

Overview

WinCC TIA WebNavigator

- The WinCC DataMonitor is used for displaying and evaluating current process states and historical data on office PCs using standard tools such as Microsoft Internet Explorer or Microsoft Excel. In doing so, the DataMonitor client is supplied by a Web server with current and historic process data and alarms. All staff ranging from machine operators to corporate managers can use the DataMonitor to obtain information.
- DataMonitor is a suite of Internet-capable tools:
 - **Process screens**
Tool exclusively for monitoring and navigating via WinCC Runtime Professional screens using the WinCC Web Viewer (WinCCViewerRT) in the "view only" mode
 - **Excel Workbooks**
Logging tool that integrates WinCC Runtime Professional Archive and online values into Microsoft Excel and supports online analysis
 - **Published Reports**
Event or time-driven implementation of Excel or PDF reports for the output of process data and analysis results
 - **Webcenter**
Individual configuration of Internet pages and summary of information within a portal with reference to WinCC Runtime Professional applications
 - **Trends and Alarms**
(tables and graphs) are preconfigured Webcenter pages
- DataMonitor does not require manual client installation because it loads the required components from the DataMonitor server
- There is no installation required on the client for the Webcenter and Trends and Alarms functions
- Licensing:
 - Licenses for access by 1, 3, 10, 25, or 50 DataMonitor clients are available
 - Any combination of DataMonitor and WebNavigator licenses can be used in an application

Note:

When accessing the operator stations via the WinCC DataMonitor option, suitable protective measures (including IT security such as network segmentation) should be taken in order to ensure safe operation of the system.

You will find more information on the topic of Industrial Security on the Internet at:

SIMATIC HMI Software

SIMATIC WinCC (TIA Portal) options

WinCC DataMonitor

Benefits

- Information can be compiled online individually during runtime via the Internet/Intranet.
- Efficiently monitor and analyze production lines.
 - Display and evaluation of current process states and historical data on remote office PCs with standard tools such as Microsoft Internet Explorer or Excel.
 - Easy access to production data via the Intranet or Internet
 - Quick ascertainment of the production situation
- Easily collect and distribute information.
 - Automated report creation
 - No additional configuration effort through direct use of screens from the WinCC project
 - No training required for standard products
 - Easy exchange of configuration data
- Substantiate decisions with reports.
 - Evaluation via ready-made templates for special analyses of the business processes (e.g. reports, statistics)
 - Display bottlenecks transparently
 - Individual views for user and situation
 - Relative and absolute timeframe for information generation
- View production status anywhere and anytime.
 - Individual views of information in production
 - View the process and system operation
 - Historical data can be compiled online individually

Highlights:

- With the Webcenter function, WinCC Runtime Professional archive tags can be accessed without changing the configuration system.
- Dedicated Internet pages can be created for displaying data with the Webcenter. For this purpose, the following tools, which can be integrated in the Internet sites, are available.
 - Bar chart, pie chart, trend curve display
 - Process value table and statistics functions for the process values
 - Alarms, hit list for alarms
 - Message text display for individual message texts, message display, selection list of created reports,
 - Links to internal and external pages
 - Display of graphics in jpg format
 - Representation of the WinCC Runtime Professional process screens converted into jpg
- The analyses can be made with relative or absolute time specification. This enables comparisons of identical time periods on different days.
- Reports generated with Excel or with WinCC Professional can be made available on the DataMonitor server or e-mailed automatically to the relevant group of people based on time intervals or triggered by events.
- Connections to WinCC Runtime Professional and to swapped out archives can be established
- Support of Microsoft Internet Explorer version, including "tabbed browsing".

Function

- All tools are fully Internet-compatible and, therefore, support access via any type of connection (LAN, GSM, radio, modem, Internet, etc.).
- All popular security mechanisms such as login/password, firewalls, encryption, etc. are supported.
- Users can combine the available tools at will. Licensing only takes into account simultaneous access to one Web server.
- For display purposes, screens from the WinCC project can be used or special overview displays configured. Animations, scripts, navigation and access rights remain valid.
- The WinCC DataMonitor has purely a display function
- Company-wide Excel reports, which contain historical and current process values, can be stored centrally for general access (reports, statistics). However, local queries to meet individual requirements can be compiled and executed online. Plot and tabular representation are supported for archive data already swapped out.
- Data can be automatically entered into created report templates and distributed by e-mail.
- Pre-made elements make the assembly of individual web pages easier for evaluating information.
- Individual information compilation on one or more Internet pages with the option of branching to other detail pages.
- Pre-made Internet pages for trend and alarm display enable an ad-hoc entry to Internet data evaluation.
- An higher-level navigation feature provides a common framework for the various tools.
- Enhanced user management for WebCenter in order to assign individual Internet pages and created reports to specific user groups
- A search function simplifies the management of connections to the WinCC server
- Swapped out archives can be connected and evaluated in the DataMonitor WebCenter.
- Excel reports created offline can be loaded onto the DataMonitor server and are thus made available to selected user groups or for automatic distribution.

SIMATIC WinCC (TIA Portal) options

WinCC ControlDevelopment

Overview

You use the ControlDevelopment option to create your own .net controls for controlling and monitoring processes. You can use the controls in screens for WinCC Runtime Advanced and WinCC Runtime Professional.

You create the controls based on the standard controls from Visual Studio 2005/2008 Professional .net.

Application examples

- Special trend views
- Own recipe managements
- Complex display objects

Benefits

The ControlDevelopment option enables user-specific software solutions based on a proven building block principle:

- Lower development overhead by using standards (Visual Studio 2005/2008 Professional .net)
- Very short "Time-to-Market" resulting in a competitive advantage
- Utilization of tried components and proven industrial functionality

The development of proprietary controls for WinCC Runtime Advanced and WinCC Runtime Professional does not require expensive, special hardware.

Overview

SIMATIC offers numerous reasons for corporate energy management in industrial plants. However, there is one in particular: It makes an important contribution towards improving plant productivity.

This results in enhanced competitiveness.

Energy management with SIMATIC makes energy flows transparent in production plants. This supports the analysis and derivation of energy saving potential.

The result: Permanently increased efficiency, higher productivity and an improved cost situation.

SIMATIC HMI Software

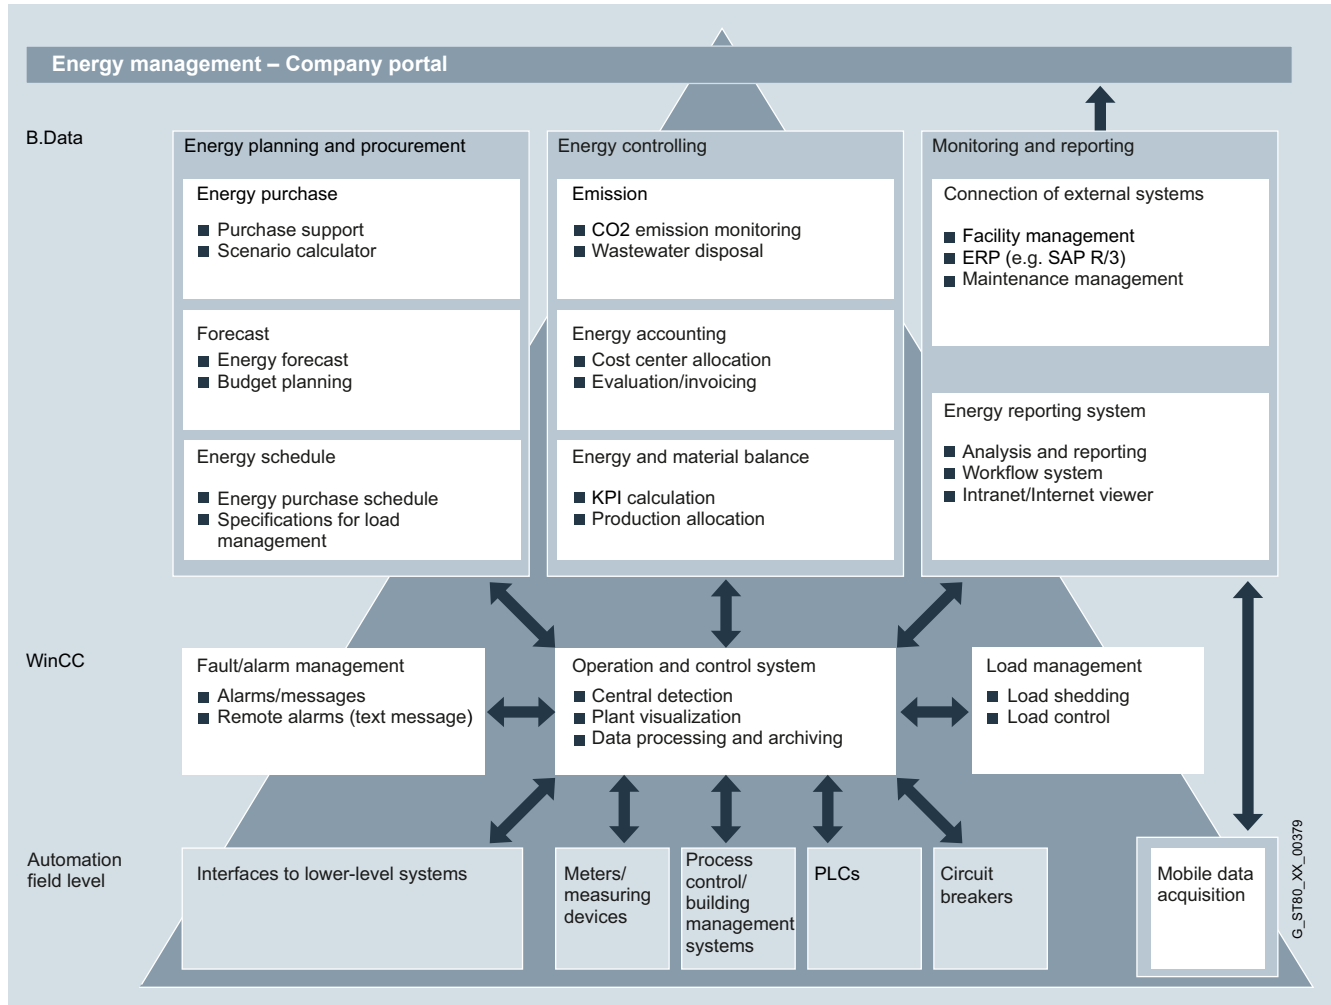

Software for energy management

SIMATIC B.Data

Overview

SIMATIC B.Data V6.0 Energy Management System

SIMATIC B.Data is a modular, cross-sector energy management system for industrial firms.

Benefits

The option SIMATIC B.Data forms the basis of a cost-effective energy management system for reducing energy costs and increasing energy efficiency, and it confers the following immediate benefits:

- It creates company-wide transparency, thanks to continuous energy balancing and materials balancing for the power generation systems and loads
- It allows energy costs to be allocated according to the costs-by-cause principle and permits transfer to the billing system (e.g. SAP R/3 CO)
- It generates characteristic values for well-informed suggestions for increasing the efficiency of power generation systems and loads
- It provides planning reliability thanks to production-related load and demand forecasts
- It supports purchasing with cost-optimized energy procurement
- It fulfills the legal obligations for monitoring and reporting on greenhouse gas emissions (CO2 emissions)
- It relieves personnel of extra work through automatically updating internal and external energy reports
- It supports customers in the continuous improvement of energy efficiency (e.g. ISO 50001) by integrated project management for energy efficiency measures

Design

SIMATIC B.Data V6.0

SIMATIC B.Data is available in Professional and Enterprise editions:

- **Professional**
 - Incl. 50 tags, 1 B.Data acquisition component, 1 B.Data Client, 1 Web Client
 - Can be dynamically expanded with Tag Packages (50, 100, 250, 500, 1 000, 5 000)
 - ERP interface
 - Reporting, trender, dashboards, document management, matrix, KPI, profile
 - Recommended for systems with up to around 10 000 tags
- **Enterprise**
 - Available in variants for 30 000 tags and 60 000 tags
 - Incl. 1 B.Data acquisition component, 1 B.Data Client, 20 Web Clients
 - Database designed for the higher performance range
 - Reporting, trender, dashboards, document management, matrix, KPI, profile
 - Recommended for systems with more than 10 000 tags

SIMATIC B.Data Software Update Service (SUS)

For each B.Data System there is a corresponding SUS (Software Update Service), which is dependent on the number of tags.

The SUS is valid for 1 year. The contract is automatically extended by 1 more year unless canceled 3 months prior to expiration.

SIMATIC B.Data V6 expansions

The scope of B.Data can be extended by purchasing add-on packages:

- B.Data Web Client
- B.Data Client
- B.Data Acquisition Component
- B.Data Energy Forecasting and Planning

Function

Acquisition and pre-processing of energy and operating data

- In addition to an interface to WinCC, SIMATIC B.Data also offers the latest interface standards such as OPC DA, OPC HDA, MODBUS TCP, ODBC, ASCII or XML
- Preprocessing of energy data in a real-time calculation core that can be freely modeled including a formula editor for defining and configuring new calculation functions (heat calculations for boilers, quality for cogeneration plants, etc.)
- B.Data Mobile for mobile recording of energy data including route planning for meter reading operations
- Management and analysis of energy data
- Automatic plausibility check and generation of simulated values
- Long-term archive with versioning, compression and consolidation functions
- Measured value editor for entering and processing energy and operating values
- Trender for presenting up-to-date (online) and historical load curves (trends), also for setpoint/actual value analyses
- Energy management dashboards for creating cross-company transparency through visualization of performance indicators and display of Sankey diagrams.

B.Data - Full Client

Energy and material balance

Freely parameterizable balancing of the energy flows of various media such as electricity, heat, gas, steam, and emissions (CO₂) in the B.Data Plant Explorer

- Calculation of characteristic values (KPIs, efficiency coefficients, etc.) with direct reference to production (batches, quantities, etc.).

B.Data - Web Client

SIMATIC HMI Software

Software for energy management

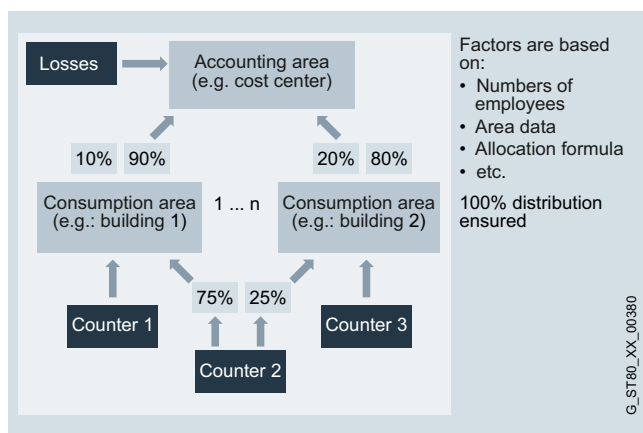

SIMATIC B.Data

Function (continued)

Energy accounting (costs and revenue accounting)

Calculation and allocation/assignment of energy costs to plants and/or customers/cost units in accordance with the costs-by-cause principle. The bottom up (measurement) and top down (allocation) procedures are supported here

- Flexible modeling of the hierarchic accounting structures in the Plant Explorer
- Tariff allocation of quantities, flexible price assessment with tariff and price time series
- Transfer of costs/revenues to the ERP system (e.g. SAP R/3 CO)

Energy planning

- Generation of requirement forecasts based on production-dependent factors (production planning) and basic load profiles (typical days)

Energy reporting

- Generation of energy schedules for registering with the energy suppliers. Energy reporting
- Freely parameterizable report generator for creating balances, protocols, shift logs, bills
- Fully automated reporting with task management, e-mail dispatch and document management
- B.Data Intranet/Internet viewer (web client) for company-wide viewing of reports and results
- Information about discrepancies from specified parameters through KPI warning system

SIMATIC B.Data upgrades	
• Upgrade from systems with up to 100 tags ⁶⁾	6AV6372-2DF06-0DX4
• Upgrade from systems with up to 500 tags ⁶⁾	6AV6372-2DF06-0FX4
• Upgrade from systems with up to 5 000 tags ⁶⁾	6AV6372-2DF06-0HX4
• Upgrade from systems with more than 5 000 tags (Enterprise) ⁶⁾	6AV6372-2DF76-0XX4

- ¹⁾ B.Data V6.0 Professional is delivered with Oracle Database Standard Edition Embedded. For larger quantity structures (starting with approx. 250 million stored measured values), you need Oracle Database Enterprise Edition with the Partitioning Option.
- ²⁾ The tag packages dynamically expand the number of tags. The total number of tags is incremented by the value of the tag package in each case.
- ³⁾ The SUS contract runs for 1 year. The contract is automatically extended by a further year unless canceled 3 months prior to expiration.
- ⁴⁾ This version of SIMATIC B.Data V6.0 Enterprise is supplied with an Oracle Database Enterprise Edition Embedded. This is designed for larger quantity structures (starting with approx. 250 million saved measured values).
- ⁵⁾ This version of SIMATIC B.Data V6.0 Enterprise is supplied without a database. It is recommended to use the Oracle Database Enterprise Edition, which must be ordered separately from Oracle.
- ⁶⁾ The upgrades are supplied without Oracle Database Enterprise Edition Embedded.

www.siemens.com/simatic-bdata

SIMATIC HMI Software

Software for energy management

SIMATIC powerrate

Overview

SIMATIC powerrate, as an option for WinCC / PCS 7, ensures transparency in energy consumption from the infeed to the load.

SIMATIC powerrate is used in all sectors in which WinCC or PCS 7 are deployed and energy efficiency considerations play a major role. Total integration into WinCC or PCS 7 means that there is no need for a special system environment. Predefined modules and symbols give you the assurance of building on tested product components, with interfaces that support customized expansion.

SIMATIC powerrate therefore provides a solution that you can use to obtain an overview of the energy consumption of a plant easily and cost-effectively through integration in an existing SIMATIC SCADA system.

Benefits

- Identification of energy-intensive equipment and processes to develop measures for improving energy efficiency.
- Comparison of consumption profiles for more efficient processes.
- Optimization of the company according to energy parameters, based on an evaluation of consumption and costs.
- Compliance with the contractually agreed power limits, thus preventing higher power supply costs or penalty payments.
- Integration of the 7KM PAC3200/4200 measuring devices for a clear overview of selected measured values and alarms.
- Integration of switches with an overview of the switch status and the switching possibilities.
- Accurate assignment and comparison of the consumption data of specific work processes or batches

Design

SIMATIC powerrate comprises the following components:

- Blocks for acquiring and conditioning energy data
- Faceplates for displaying and editing energy data
- Blocks for implementing load management (calculating the trend, monitoring the limit, releasing/inhibiting loads), batch-related consumption recording and for integrating measuring instruments and switches
- Additional blocks – for example, for time synchronization, data backup, data exchange with archives
- Faceplates for displaying results and entering values (e.g. for configuration, or manually measured values)
- Excel-based reports for allocating energy data to cost centers, for batch-related evaluation and for determining and displaying the load duration curve
- Exporting data to Excel

Function

Acquiring and conditioning energy data

Using ready-to-use function blocks, energy data can be acquired by any PROFIBUS-capable devices. The data can be input to the function blocks in the form of counter pulses, count values or power values. Count values can also be entered manually.

From this data, the function block calculates the power averages and the work values for a predefined period. This calculated data is subsequently saved in the WinCC archive. In addition, a final value forecast is extrapolated for the power values for each period.

A sample function (heat calculation) that can be adapted to the needs of the customer at any time by means of open interfaces has been implemented for the purpose of visualizing customized calculations.

Data from manually read counters can be entered directly into the system and used for further analysis. Absolute numerical values (entry of an absolute value instead of the difference from the previous value) can also be recorded and used in further processing.

Displaying energy data

The up-to-date, acquired energy data is displayed as power averages/work values for each time interval (total value for the previous interval, current value of the current interval, extrapolated value for the end of the current interval). A load trend display enables analysis of archived energy data as well as its representation in tables.

Further processing of data

The archived data can be exported to Excel directly from WinCC using the export functions. The exported energy data can also be included in further customized processing. WinCC tools can be used to access the data from the WinCC archive.

Function (continued)

Reports

For this purpose, selected energy data is read from archives (Tag Logging archive, user archives) from the WinCC Runtime database; using Microsoft Excel the following reports can then be generated:

- **Cost center report**
Here the consumption can be allocated to different cost centers and the costs can be calculated on the basis of predefined tariffs. The results can be output by means of 2 reports in the form of tables or diagrams.
- **Load duration curve**
An analysis is carried out on the basis of the archived power averages to establish how often a certain power average has occurred in a given period. It can be quickly detected from this characteristic curve whether temporary power peaks exist which can represent a possible starting point for cost savings by means of load management.
- **Batch report**
This is used to allocate consumption to batches, whereby the data can be presented in chronological order or in order of batch name.

The generation of exports or reports can be initiated manually or automatically time-controlled (daily, weekly or monthly).

Load management

Contractually agreed power limits (in the case of electricity, normally the 15-minute average power value) must be observed, otherwise significantly higher supply prices or even penalty payments may become due to the energy supply company. The load management feature of SIMATIC powerrate carries out cyclic trend calculations in order to issue warnings/alarms if violation of the limit is likely and to switch off loads in accordance with the given configuration should this be required. If a limit is exceeded despite this, the latest load management data is archived to enable future evaluation or analysis.

To prevent unnecessary switching operations, numerous parameters are available for adapting the load management to the current process conditions - and all this can be done conveniently via the faceplate.

For loads that are distributed over different PLCs, SIMATIC powerrate contains appropriate PLC-to-PLC communication blocks which can be used to integrate these loads into the load management system. Load management is scalable, according to the maximum number of loads to be integrated or monitored, for up to 10, 25, 50, 75 or 100 loads. Load management can be performed for different media (e.g. electricity, gas) simultaneously.

Batch-related consumption recording

A batch comprises all the units of a product that have been produced in one production cycle, i.e. under identical conditions. Batch-related consumption recording allows accurate recording of energy consumption for each batch. Batch-related consumption recording is possible for five types of energy each with up to 10 loads. Appropriate reports can be generated for analysis of the data (see also the batch report).

Integration of measuring devices 7KM PAC3200/PAC4200

If the 7KM PAC3200/PAC4200 measuring devices are integrated, selected measured values can be displayed and alarms (current, voltage, pulse frequency too high) can be generated from the digital status information and displayed.

Integration of switches

Switch integration via digital inputs/outputs (DI/DO) supports display of the switch status (On, Off, tripped, unplugged).

With the appropriate authorization, switching is also possible via the faceplate. Switching takes place in a 2-step operation (switch command is issued, followed by a prompt for repeated confirmation; the switch command is not forwarded to the switch until confirmation has been received).

WinCC Web Navigator support

Makes the powerrate functionality available over the Web.

Special functions

To avoid data loss in the event of a communication fault, the data is stored temporarily in a circulating buffer on the S7.

Overview

SIMATIC WinCC flexible ES engineering software

- Family of configuration systems with WinCC flexible Micro/ Compact/Standard/Advanced for SIMATIC operator panels, the HMI part of SIMATIC C7 as well as for the PC-based visualization software WinCC flexible Runtime
- Runs under Windows XP Professional / Windows 7 Professional, Ultimate, Enterprise
- Can be expanded by the option "WinCC flexible /ChangeControl" for version management and change logging

SIMATIC WinCC flexible Runtime visualization software

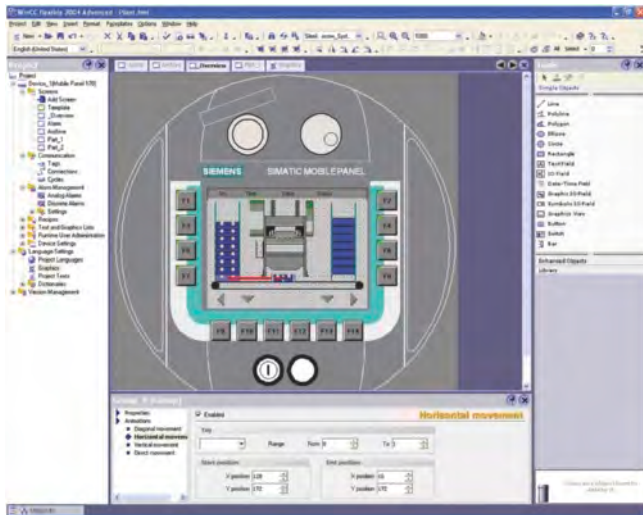

- Modular PC-based HMI solution for single-user systems directly at the machine (further development of ProTool/Pro RT)
- Runs under Windows XP Professional / Windows 7 Professional, Ultimate, Enterprise
- Basic package for visualization, reporting and logging; can be expanded by implementing option packages
- Flexible expansion possible with VB scripts and customized ActiveX controls created with OPP (Open Platform Program)
- Can be integrated into automation solutions based on TCP/IP networks
- Expanded service concepts with remote operation, diagnostics and administration over the intranet and Internet in combination with email communication

SIMATIC HMI Software

SIMATIC WinCC flexible HMI system

SIMATIC WinCC flexible ES

Overview

- Uniform family of engineering tools for configuration SIMATIC HMI Operator Panels, the operator control part of SIMATIC C7 units, SIMOTION/SINUMERIK Panel PCs as well as the PC-based visualization software WinCC flexible Runtime.
- Runs under Windows XP Professional / Windows 7 Professional, Ultimate, Enterprise
- Current version:
 - SIMATIC WinCC flexible 2008 SP3 Micro
 - SIMATIC WinCC flexible 2008 SP3 Compact
 - SIMATIC WinCC flexible 2008 SP3 Standard
 - SIMATIC WinCC flexible 2008 SP3 Advanced

Benefits

- The integrated configuration software reduces training, maintenance and service overhead and protects the customer's investments
- Minimized configuration overhead due to reuse of scalable and dynamizable objects
- Tools for efficient and simple configuration:
 - Wizard for defining the basic structure of the HMI project
 - Table-based editors simplify the generation and processing of similar types of object, e.g. for tags, texts, or alarms.
 - Complex configuration tasks such as the definition of paths of motion or the creation of the fundamental operator prompting are simplified by means of graphical configuration.
- Comprehensive support of multi-language configurations for worldwide use
 - Selectable views for entering configuration data in several languages
 - System and user-specific text lexicons
 - Export/import of language-dependent texts

Application

SIMATIC WinCC flexible Micro/Compact/Standard/Advanced are engineering tools for configuring SIMATIC HMI devices, the operating component of SIMATIC C7 devices, the SIMOTION/SINUMERIK Panel PCs as well as the PC-based visualization system WinCC flexible Runtime.

Depending on the selected product, various target systems can be configured:

WinCC flexible Micro

- Micro Panels: OP 73micro, TP 170micro, TP 177micro

WinCC flexible Compact

In addition to the target systems that are configured using WinCC flexible Micro:

- Basic Panels: KTP400 Basic, KTP600 Basic, KTP1000 Basic, TP1500 Basic
- Mobile Panels: Mobile Panel 170, Mobile Panel 177
- 70 series Panels: OP 73, OP 77A, OP 77B
- 170 series Panels: TP 170A, TP 177A, TP 170B, TP 177B, OP 170B, OP 177B
- 170 series Multi Panels: MP 177
- C7 devices: C7-635 (Touch/Key)

WinCC flexible Standard

In addition to the target systems that are configured using WinCC flexible Compact:

- Mobile Panels: Mobile Panel 277
- 270 series Panels: TP 270, TP 277, OP 270, OP 277
- 270 series Multi Panels: MP 270B, MP 277
- 370 series Multi Panels: MP 370, MP 377
- C7 devices: C7-636 (Touch/Key)

WinCC flexible Advanced

In addition to the target systems that are configured using WinCC flexible Standard:

- Standard PC
- SIMATIC Panel PC: Panel PC IL 70, Panel PC IL 77, Panel PC 477/477B, Panel PC 577/577B, Panel PC 670, Panel PC 677/677B, Panel PC 870, Panel PC 877
- SIMOTION Panel PC: P012K, P012T, P015K, P015T, PCR, PCR-Touch
- SINUMERIK Panel PC: HT8, OP08T, OP010, OP012, TP012, OP015, TP015, OP015A

For configuring panels released after the start of delivery of WinCC flexible 2008, an HSP (Hardware Support Package) is required that can be downloaded free of charge via the following link:

<http://www.siemens.com/wincc-flexible-hsp>

Design

The engineering tools of the SIMATIC WinCC flexible range are based on one another. The available editors largely depend on the respectively configured target systems and their functions. A more comprehensive engineering tool such as WinCC flexible Standard also offers the facilities of the smaller engineering tools, e.g. WinCC flexible Compact or Micro.

Upgrading of a smaller engineering tool to a larger one is possible using a Powerpack. An exception is WinCC flexible Micro.

The scope of functions of the WinCC flexible engineering tools already includes project support for the Runtime options available for SIMATIC Panels or WinCC flexible Runtime, independent of the RT licenses purchased. Separate licensing is required for the target system in order to use the configured Runtime options.

Function

Integration into automation systems

- Integration into SIMATIC STEP 7 V5.x and Simotion
 - Management of HMI projects within the SIMATIC Manager
 - Shared use of communication settings and process point definitions, i.e., symbols and messages
 - Display of the HMI configuring objects in the SIMATIC Manager
 - Transfer of configuring data via MPI/PROFIBUS/Ethernet using routing

Configuration interface

- Comprehensive and fast access to editors and project data via Workbench applications
- Adaptive user interface of engineering tools depending on configured target system
- User-definable user interface settings, e.g., layout, toolbars, object defaults

Project handling

- Device-independent configuration data can be used on a variety of target systems without the need for conversion; the interface adapts to the functional possibilities of the device currently configured.
- Cross-device utilization of common configuration data (e.g., text library) in multi-device projects
- Wizard-assisted definition of basic structure of HMI projects (e.g., display layout, operator prompting)

Screen editor with extensive options for efficient and fast screen configuration

- Generation of interconnected screen objects via Drag&Drop, e.g., tags for the creation of input/output fields with process interfacing or buttons with screen selection function
- Template for the definition of global screen objects and functions (comparable with the Slide Master in MS PowerPoint)
- User-friendly editor for the creation of image blocks with defined external interface from screen objects
- Graphics-based configuration of motion paths
- Layer technology with up to 32 layers
- Tools for the Align, Rotate and Mirror functions

Import/export

- of texts for translation
- of tags, links, text lists, and messages
- Generation of variable lists for importing from controller programming tools

Object-based data management with user-friendly search and edit options

- Cross-reference list with direct access to all objects, e.g. for editing or selection
- Search for objects in entire project
- Central reassignment of variables
- Text search and replace functions

Libraries for predefined/user-defined configuration objects

- Large number of scalable and dynamizable screen objects included in scope of delivery
- Size-scalable WMF-format graphics for industrial applications included in scope of delivery
- Preview function for library objects
- Storage of all engineering objects in library, e.g., blocks and even entire displays or variables; picture blocks can be created on a customer- or project-specific basis by combining simple screen objects. Changes to these picture blocks can be made centrally (block definition).

SIMATIC HMI Software

SIMATIC WinCC flexible HMI system

SIMATIC WinCC flexible ES

Function (continued)**Language support**

- Multilingual project creation (max. 32 languages) in editors thanks to selectable views
- Automatic translation on basis of system- and user-specific dictionaries in central text library
- Central management of language-specific texts and graphics in libraries
- Edit, export and import of texts for translation
- Language-specific graphics

Visual Basic Script support

- IntelliSense function for fast programming of access to runtime objects
- Simple creation of control sequences in script code;
- Script debugging in Simulator and WinCC flexible Runtime

Test and startup support

- Simulation of HMI projects on engineering PC
- Jump to error cause based on alarm messages in the Compiler
- Advanced ProSave service tool for all operating systems supported by WinCC flexible

ChangeControl (option)

- Version management of project versions with rollback
- Logging of configuration changes, e.g., for regulated industries

Note:

For further information, refer to "WinCC flexible options".

Default runtime data in engineering tools

- Users and passwords
- Recipe data records

Technical specifications

System requirements (minimum requirements)	WinCC flexible Engineering Software
Operating system	Windows XP Professional SP3 (32 bit), Windows 7 Professional, Ultimate, Enterprise (32 and 64 bit) Additionally for SIMATIC WinCC flexible Micro: Windows XP Home SP3
Processor	Pentium 4 (or comparable) processor running at 1.6 GHz or faster
Resolution	1024 x 768 or higher
Main memory (RAM)	≥ 1 GB, ≥ 512 MB for WinCC flexible Micro
Hard disk (free memory space) ¹⁾	≥ 2 GB ²⁾ ≥ 1.2 GB for WinCC flexible Micro ³⁾
DVD drive	for software installation

¹⁾ In addition to the space needed by WinCC flexible, Windows also requires space on the hard disk; e.g. for the swap file. The following formula has proven itself in the past: The size of the swap file = 3 x the size of available RAM. For further information, refer to your Windows documentation

²⁾ When installing one language. An additional 200 MB are required for each further language. In the case of different partitions for system and configuration: System partition approx. 700 MB, project partition approx. 1.3 GB.

³⁾ When installing one language. An additional 80 MB are required for each further language. In the case of different partitions for system and configuration: System partition approx. 600 MB, project partition approx. 600 MB.

More information

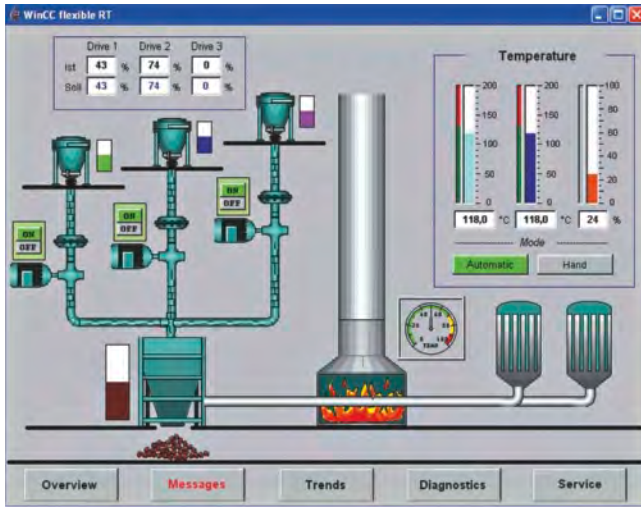

Additional information is available in the Internet under:

<http://www.siemens.com/wincc-flexible>

Note

Do you require a specific modification or extension to the products described here? You will find information about the Open Platform Program for the creation of user-specific functions and controls for WinCC flexible under "Customized Products".

Overview

PC-based visualization software for single-user systems directly at the machine.

- Runs under Windows XP Professional and Windows 7 Professional, Ultimate, Enterprise
- Current version: SIMATIC WinCC flexible 2008 SP3 Runtime

SIMATIC WinCC flexible Runtime is configured with the SIMATIC WinCC flexible Advanced configuration software.

Benefits

- Optimum price/performance ratio thanks to individually scalable system functionality
- Functions for all visualization tasks: Operator functions, graphical and trend displays, signaling system, log system, archiving (option), recipe management (option), Audit Trail (option), process fault diagnostics (option)
- Flexible runtime functionality thanks to Visual Basic scripts
- Innovative service concepts with remote operation, diagnostics and administration via intranet and Internet as well as e-mail communication to increase availability (option)
- Support for simple distributed automation solutions based on TCP/IP networks at the machine level (option)

Application

SIMATIC WinCC flexible Runtime is the high-performance visualization software for simple visualization tasks at machine level. It can be used as a single-user solution for all automation applications in factory automation, process automation and building services automation.

SIMATIC WinCC flexible Runtime can be used in combination with the following operator panels:

- SIMATIC Panel PCs
 - PC IL 70/77
 - Microbox 420
 - Panel PC 477
 - Panel PC 577
 - Panel PC 670/677
 - Panel PC 870/877
- SIMOTION Panel PCs
 - P012, P015
 - PCR, PCR-Touch
- SINUMERIK Panel PCs
 - HT8; OP08T
 - OP010, OP012, OP015
 - TP012, TP015, OP015A
- Standard PCs with resolutions (W x H in pixels) of:
 - 4:3 format: 640 x 480, 800 x 600, 1024 x 768, 1280 x 1024, 1600 x 1200
 - Widescreen format: 800 x 480, 1280 x 800, 1366 x 768, 1440 x 900, 1680 x 1050, 1920 x 1080, 1920 x 1200, 1980 x 1080

Design

SIMATIC WinCC flexible Runtime is available as a software package with 128, 512, 2048 or 4096 PowerTags. The term PowerTags is used exclusively to identify process variables and range pointers that have a process link to the controller. Variables without process link, constant limit values of variables, and messages (up to 4000 bit-triggered messages) are also available for additional system performance.

The range of functions of WinCC flexible Runtime includes the centralized HMI components for visualizing and reporting, and it can be expanded to suit requirements and costs by using optional packages.

SIMATIC WinCC flexible Runtime is configured with the SIMATIC WinCC flexible Advanced configuration software.

Function

Visualization via Windows-compliant operator interface

Made up of parameterizable screen objects and image blocks created on a project-specific basis:

- Numeric and alphanumeric input/output fields
- Static text and graphic display plus vector graphics
- Dynamizable graphics from HMI symbol library
- Bar graph, trend curve graph with scroll and zoom function as well as read line
- Signal-specific text and graphic lists
- Buttons and switches for operator-process communication
- Editing fields for process values (signals)
- Analog display, slider as example for further screen objects
- Project-specific image blocks created from system basic objects
- Graphic displays for various standard graphic formats, e.g., bitmaps, .jpg, .wmf

SIMATIC HMI Software

SIMATIC WinCC flexible HMI system

SIMATIC WinCC flexible RT

Function (continued)Alarms and messages

- Discrete alarms and analog alarms as well as event-driven Alarm-S/Alarm-D message procedure with SIMATIC S7 and SIMOTION
- Freely-definable message classes for definition of acknowledgment response and display of message events

Logging of alarms and process values ¹⁾

- Archiving in files (e.g. CSV or TXT file) and Microsoft SQL databases
- Online evaluation of process value archives and alarm logs
- Evaluation of process value archives and alarm logs using standard Microsoft tools such as Excel

Recipes ¹⁾

- Generation of data records for machine or production data
- Display or entry of data records via a configurable screen object or via process images when distributed within the project
- Transmission of data records from or to the PLC
- Import/export for data records from/to CSV files

Documentation of process data, alarm events and recipes

- Time- or event-driven report output
- User-definable layout

Flexible expansion of system function

- Thanks to Visual Basic Script

Language support for multilingual projects

- Up to 16 online languages (incl. Asian and Cyrillic)
- Language-dependent texts and graphics
- Language selection during runtime

User-oriented access protection according to requirements of regulated sectors

- Authentication with user ID and password
- User-group-specific rights
- Central system-wide user administration based on SIMATIC Logon ¹⁾
- Monitoring of changes by operators in runtime operation ¹⁾
- Recording of operator actions in an Audit Trail ¹⁾

PLC link for a wide variety of PLCs on-board

- Simultaneous connection using several protocols: OPC Client or SIMATIC HMI HTTP protocol are additive, i.e. can be used in conjunction with other PLC links
- Communication via native drivers and standard OPC channel

Open communication between HMI systems and with higher-level systems ¹⁾

- OPC server
- Sm@rtAccess for communication between HMI systems based on Ethernet networks, or via the intranet/Internet:
- Read and write access to variables; WinCC flexible Runtime or SIMATIC Panels make data (variables) available to other SIMATIC HMI systems or Office applications.
- A SIMATIC HMI system can be used to control or monitor another system remotely; entry level for client/server configurations for distributed operator stations or for solutions with headend or control room.

Sm@rtService for remote control, diagnostics and administration via intranet and Internet ¹⁾

- Display and control of process images on remote PC or Panel
- Sending of e-mails on demand or event-driven
- System diagnostics visualized via device-specific HTML pages

¹⁾ Option for SIMATIC WinCC flexible Runtime; runtime licenses must be purchased separately. For further information, refer to "WinCC flexible options".

System requirements	WinCC flexible Runtime
Operating system	Windows XP Professional SP3 (32 bit) Windows XP Embedded ¹⁾ Windows 7 Professional / Ultimate / Enterprise (32 bit and 64 bit)
Processor ⁴⁾	
• Minimum	Windows XP: 300 MHz Windows 7: 1 GHz
• Recommended	Windows XP: ≥ Pentium III, 500 MHz Windows 7: ≥ 1 GHz
Graphics	
• Minimum	SVGA
• Resolution	640 x 480 to 1600 x 1200 or 800 x 480 to 1980 x 1080
RAM ²⁾	
• Minimum	Windows XP: 128 MB Windows 7: 1 GB
• Recommended	Windows XP: ≥ 512 MB Windows 7: ≥ 1 GB
Hard disk (free memory space) ³⁾	≥ 250 MB

¹⁾ Only for enabled platforms (e.g. Panel PC 477). You can get information from your Siemens contact.

²⁾ RAM requirements are determined primarily by the size of the graphics used.

³⁾ Without taking archives into account. In addition to the space needed by WinCC flexible, Windows also requires space on the hard disk; e.g., for the swap file. The following formula has proven itself in the past: The size of the swap file = 3 x the size of the RAM. For further information, refer to your Windows documentation

⁴⁾ More powerful systems (Pentium 4 and higher) may be required in order to use options

Integration

SIMATIC WinCC flexible Runtime supports linking to:

Protocol	PC interfaces

- ¹⁾ WinCC flexible Runtime is passive (DP slave); the function block required for the link is included in the scope of delivery of WinCC flexible
- ²⁾ For Microbox 427 and Panel PC 477/577/677 via internal MPI/DP interface
- ³⁾ Only point-to-point to S7-200; no configuration download, operating systems: Windows XP; Article number: 6ES7901-3CB30-0AX0
- ⁴⁾ Constraint with regard to baud rate for S7-200; see Catalog ST 70
- ⁵⁾ WinCC flexible RT is active; communication with S7 functions
- ⁶⁾ Only point-to-point to S7-300/-400; no configuration download, operating systems: Windows XP or higher; article number: 6GK1571-0BA00-0AA0 (USB)
- ⁷⁾ For Microbox 427 and Panel PC 477/577/677/877 via internal Ethernet interface
- ⁸⁾ For further information, see Catalog PM 10
- ⁹⁾ "SINUMERIK HMI copy license OA" option required; for further information, see Catalog NC 60
- ¹⁰⁾ OPC Client is included in scope of delivery, the "WinCC flexible /OPC-Server for WinCC flexible Runtime" license is required for the OPC Server option
- ¹¹⁾ "WinCC flexible /Sm@rtAccess for WinCC flexible Runtime" license required
- ¹²⁾ OPC and HTTP communication are additive, i.e. can be used in conjunction with the PLC links listed above
- ¹³⁾ Via PC cable with integrated level converter RS 232/TTY; Article number: 6ES5734-1BD20

For information about SIMATIC Panels that support OPC/http communication, see the overview under "System interfaces".

Application note

In parallel with each and every PLC link, WinCC flexible Runtime supports the use of the OPC Client channel; this enables, for example, connection to an SNMP OPC Server for the purpose of visualizing the data stored there. The SNMP OPC Server provides a means of monitoring network components of any type (e.g. switches) which support the SNMP protocol. For further information, see Catalog IK PI.

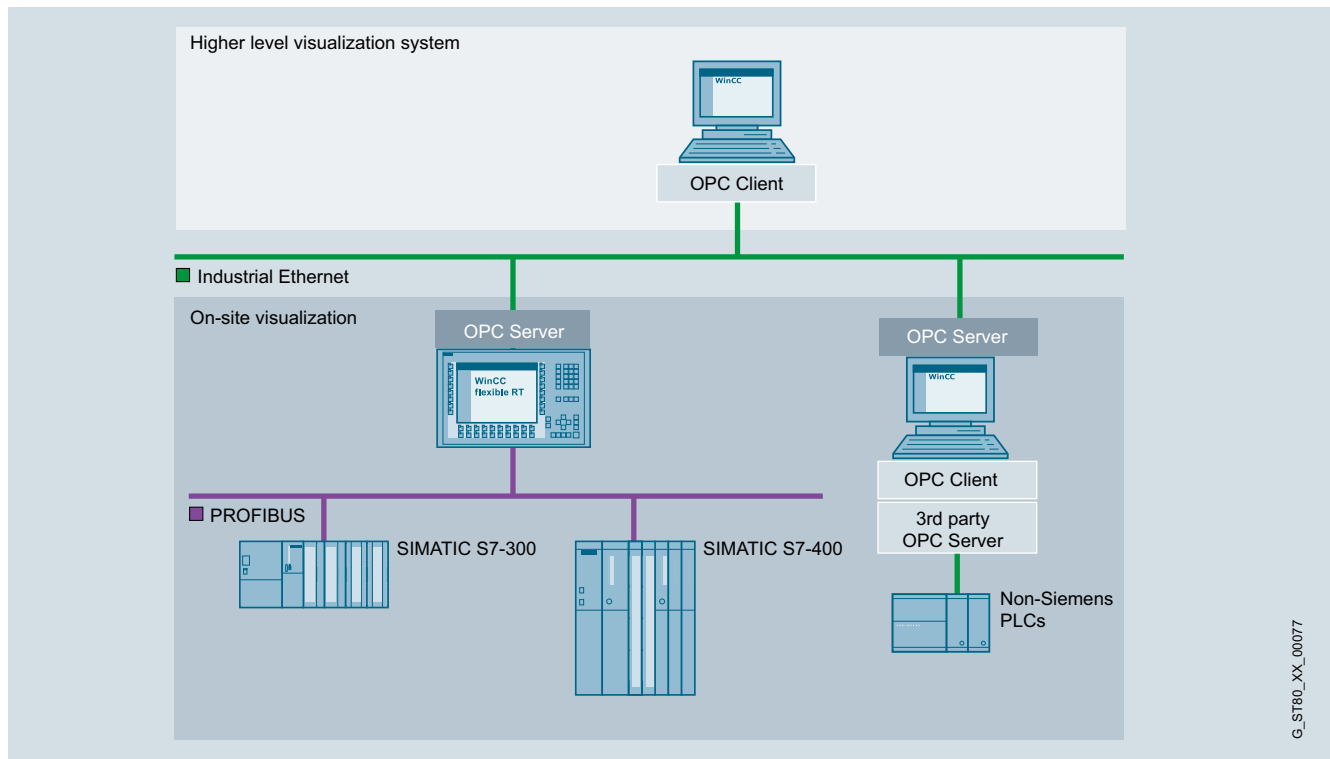

Note:

For further information, see "HMI devices/System interfaces"

More information

Additional information is available in the Internet under:

<http://www.siemens.com/wincc-flexible>

Note

Do you need a specific modification or option for the products described here? You will find information about the Open Platform Program for the creation of user-specific functions and controls for WinCC flexible under "Customized Products".

Overview

Option for SIMATIC WinCC flexible Engineering

SIMATIC WinCC flexible /ChangeControl

WinCC flexible /ChangeControl enables consistent backup of configuration data. The history of changes can be verified down to the last detail for applications requiring interruption-free proof for the complete life cycle of a product.

- Delivered customer projects, approved reference states or development stages are managed in a database.
- Changes to project data can be integrated without problem into the version management using new versions.
- A rollback is possible at any time.

Options for SIMATIC Panels/Multi Panels and SIMATIC WinCC flexible Runtime

SIMATIC WinCC flexible /Archives

Archiving of alarms and process values

- Archiving in files (e.g. CSV file) and Microsoft SQL databases
- Online evaluation of process value archives and alarm logs
- Evaluation of process value archives and alarm logs using standard MS tools such as Excel

SIMATIC WinCC flexible /Recipes

Generation and management of data records for machine or production data

- Display or entry of data records via a configurable screen object or via process images when distributed within the project
- Transmission of data records from or to the controller
- Import/export of data sets as CSV files

SIMATIC WinCC flexible /Audit

Recording of operator actions in an Audit Trail

- Electronic signature for important operator actions relevant to production
- The ChangeControl option supports users in respect of tracking modifications to projects.
- Audit supports users in meeting special quality requirements, e.g.
 - Production plant requiring validation according to 21 CFR Part 11 (Food Drug Administration law)
 - In respect of traceability according to EU 175/2002 (EU directive)

SIMATIC Logon for WinCC flexible

Option for connecting PCs with SIMATIC WinCC flexible Runtime and SIMATIC Panels to central user administration.

- Creates user administration on a central computer to which one or more WinCC flexible stations can be connected over Ethernet.
- With each logging-on/off of a user on one of the connected stations, SIMATIC Logon checks whether a user password has been created and that the required privileges exist.
- SIMATIC Logon for WinCC flexible supports the user in combination with the /Audit and /ChangeControl options in meeting requirements in accordance with FDA 21 CFR Part 11 and EU178.

SIMATIC WinCC flexible /Sm@rtAccess

- Flexible solution for access to HMI systems and process data from any location
- Communication between different SIMATIC HMI systems

SIMATIC WinCC flexible /Sm@rtService

- Remote maintenance and servicing of machines and plant via Internet/intranet
- Reduced downtimes for machines and plant with direct remote access
- Flexible solution for remote access to machines and plant

SIMATIC WinCC flexible /OPC Server

- Incorporation of automation components from different vendors into a single automation concept
- Communication for data exchange between HMI systems and/or higher-level control system
- Communication with applications from different vendors, e.g. MES, ERP or applications in the office sector

SIMATIC WinCC flexible /ProAgent

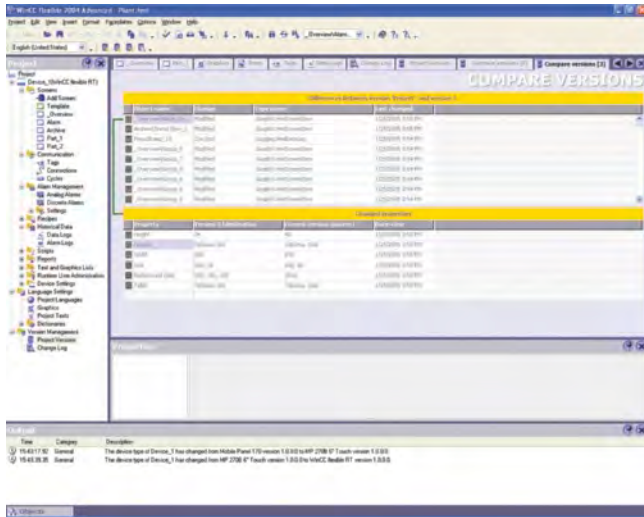

- Precise and rapid process fault diagnostics in plant and machines for SIMATIC S7 and SIMATIC HMI
- Standardized diagnostics concept for various SIMATIC components
- No further configuration overhead for diagnostics functionality
- Frees up PLC capacity with regard to memory and program execution time

SIMATIC HMI Software

SIMATIC WinCC flexible options

WinCC flexible /ChangeControl

Overview

- Options for the versioning of configuration data and for tracing configuration changes (e.g. as verification in regulated sectors)
- For the engineering tool SIMATIC WinCC flexible Compact/Standard/Advanced
- One license is required for each configuration computer

Benefits

- Consistent backup of configuration data
 - Delivered versions, approved reference states or development stages are managed in a database.
 - Changes to project data can be integrated without problem into the version management using new versions. A rollback is possible at any time.
- Tracing of configuration changes
 - The history of changes can be verified down to the last detail for applications requiring interruption-free proof for the complete life cycle of a product.

Application

- In machine/special machine construction for project management, e.g. delivered customer versions and their modifications
- For saving of intermediate states during complex new developments or expansions, with rollback facility
- During work for specific orders as basis for calculating costs for modifications
- In regulated sectors as proof of state of plants or machines and any modifications made to them

Function

- Integral GUI for management of project versions (version tree with main line and secondary lines for modified project versions)
- Modification log can be activated/deactivated and shows who carried out modifications, and when/which. Modification reasons can be entered as comments

WinCC flexible /ChangeControl for WinCC flexible 2008 Compact/Standard/Advanced ¹⁾

Floating License, option, license key only

6AV6613-6AA01-3AB5

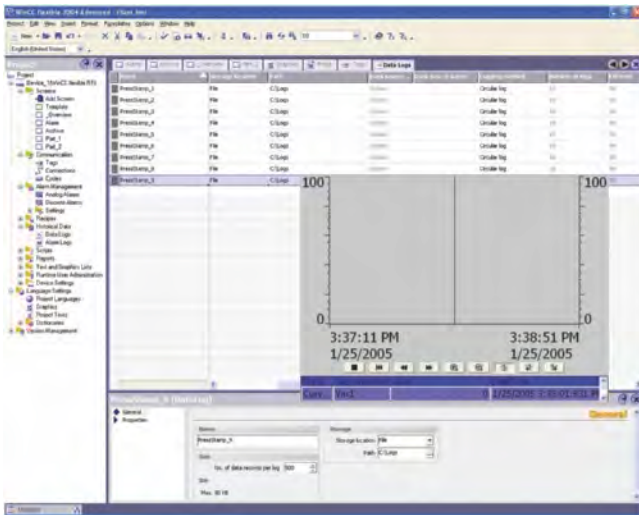

¹⁾ The ChangeControl option has not been released for integrated operation with STEP 7.

More information

Note

Do you need a specific modification or option for the products described here? Then look up "Customized products", where you will find information about the Open Platform Program for the creation of user-specific functions and controls for WinCC flexible.

Overview

- Option for SIMATIC WinCC flexible Runtime for archiving process values and messages
- Archiving of process values and messages supports the acquisition and processing of process data from an industrial plant or machine. Evaluation of the archived process data provides information about the operating states of the plant or machine
- One license is required per operator station (no license is required for SIMATIC Panels/Multi Panels)

Benefits

- Message and process value archives permit foresighted diagnostics which prevents downtimes
- Early detection of danger or fault states
- Increase in product quality and productivity thanks to regular evaluation of process value and message archives

Application

- Further use of archives for evaluation and long-term archiving
- Record of repeated fault states
- Optimization of maintenance cycles
- Ensured quality standards
- Control of quality as well as production capacity utilization
- Documentation of process sequence

Function

- Time-controlled as well as manual or process-controlled swapping out of process data and messages for long-term archiving
- During runtime, swapped out data are read in and selectively analyzed using WinCC flexible Runtime
 - Presentation and evaluation of archived process data based on a configurable trend display. Reading of the values is facilitated by a read line.
 - Presentation and evaluation of archived alarms based on a configurable alarm view.
 - User-friendly navigation in the archives
- External evaluation of the archives using MS standard tools
- Various archive types are supported: sequence and short-term archives
- Archiving of process values and messages on external, Windows-supported storage media
 - CSV files
 - RDB files
 - Microsoft SQL server via ODBC
- Power standard functions permit user-friendly and flexible utilization of the archives

Technical specifications

Type	WinCC flexible /Archives
	The specifications are maximum values
Execution platform	SIMATIC WinCC flexible Runtime
Archives	100
• Archivable data	Process values, messages
• Cyclical trigger for archiving process values (variables)	1 s

SIMATIC HMI Software

SIMATIC WinCC flexible options

WinCC flexible /Recipes

Overview

- Option for SIMATIC WinCC flexible Runtime for managing data records in recipes that contain related machine or production data
- The data in a data set can be transferred, for example, from the control unit to the PLC to switch production to a different product variant
- One license is required per operator station (no license is required for SIMATIC Panels/Multi Panels)

Benefits

- Generation and management of machine parameters and production data on the basis of data sets, and exchange with the automation equipment, e.g. with the machine
- Clear tabular representation of data elements with support of a configurable graphic object, or representation in technical relationships for several process graphics
- Simple operator prompting using standard functions
- Export/import of data sets for further processing with other tools (e.g. MS Excel)

Application

- Assignment of plant/machine parameters in the production industry
- Batch-oriented production, e.g. in the food or plastics industry

Function

- Input of data sets (e.g. operating parameters for a machine, production data for a plastics processing machine) in WinCC flexible Runtime, their storage, and passing on to the PLC
- Display and input of data sets using a configurable graphics object, or distributed among several process displays within the project
- Data set elements are coupled to the process using direct linking of the variables
- Transmission of data records from or to the PLC
- Powerful interfaces permit synchronized exchange of data with the PLC
- Saving of data sets on local media or on remote data servers via networks
- Import/export of data sets as CSV files
- Logging of data sets, e.g. as batch report/shift report
- Convenient and flexible management of data sets using powerful standard functions

WinCC flexible recipes and the associated data sets are conveniently created using a separate editor in the WinCC flexible Advanced engineering tool, and assigned default data. A configurable table object is used to display the data during runtime. Furthermore, the individual data set elements can also be directly output for several process displays on the basis of standard input/output boxes. The data can therefore be clearly presented for the operator in technological layers.

Technical specifications

Type	WinCC flexible /Recipes
	The specifications are maximum values
Execution platform	SIMATIC WinCC flexible Runtime
Recipes	1000
• Entries per recipe	2000 ¹⁾
• Data records per recipe	5000 ²⁾
• User data length in bytes per data record	8000 KB ²⁾

¹⁾ Dependent on number of licensed PowerTags

6AV6618-7GD01-3AB0

¹⁾ One license is required for each operator station. A license is not required for the engineering system for configuring the Runtime option.

More information

Note

Do you need a specific modification or option for the products described here? Then look up "Customized products", where you will find information about the Open Platform Program for the creation of user-specific functions and controls for WinCC flexible.

Overview

- Option for SIMATIC WinCC flexible Runtime as well as SIMATIC Panels for recording operations in an audit trail, and electronic signature
- The audit trail features a safety mechanism that indicates subsequent manipulation.
- An easy-to-use configuration option included as standard in WinCC flexible enables you to set:
 - The operator actions to be recorded in the audit trail during runtime
 - The important operator actions requiring electronic signature/comments during runtime
- The audit option combined with the WinCC flexible ES ChangeControl option supports the user with plant validation
- Available for the following SIMATIC HMI systems: TP/OP 270, TP/OP 277, MP 270B, MP 277, MP 370, MP 377, WinCC flexible Runtime
- A license is required for every operator control unit (panel or PC)

Benefits

- Audit supports the user in meeting special quality requirements, e.g.,
 - production plant requiring validation according to 21 CFR Part 11 FDA ²⁾
 - in respect of traceability according to EU 175/2002 ³⁾
- Entries in the audit trail are allocated to individual users. This ensures that responsibilities can be clearly identified.
- The audit trail, stored as a CSV file ¹⁾, can be checked via a security mechanism to find out if subsequent changes have been made.
- For particularly important user actions, e.g., starting production or loading new recipes, electronic signatures and comments can be configured and then called up and logged during runtime.

¹⁾ CSV Comma Separated Values

SIMATIC HMI Software

SIMATIC WinCC flexible options

SIMATIC Logon for WinCC flexible

Overview

- Option for connecting PCs with SIMATIC WinCC flexible Runtime and SIMATIC Panels to central user administration.
- Creates user administration on a central computer to which one or more WinCC flexible stations can be connected over Ethernet.
- With each logging-on/off of a user on one of the connected stations, SIMATIC Logon checks whether a user password has been created and that the required privileges exist.
- SIMATIC Logon for WinCC flexible supports the user in combination with the /Audit and /ChangeControl options in meeting requirements in accordance with FDA 21 CFR Part 11 and EU178.
- Licensing:
SIMATIC Logon (basic license) and SIMATIC Logon Remote Access (3-pack license) for connection of 3 WinCC flexible stations to a central user administration. Additional stations can be connected by using further SIMATIC Logon Remote Access licenses (3-pack/10-pack).

Benefits

- Centralized configuration of all access authorizations of a distributed system avoids unnecessary travel times. Time-consuming multiple configurations for each individual local station become unnecessary. Accordingly, users can be easily configured from a central location.
- All access data apply throughout the plant on every connected station. Additional access data on local subsystems is no longer necessary.

Design

SIMATIC Logon and SIMATIC Logon Remote Access are installed on a central station.

The following WinCC flexible stations are connected to the central station via Ethernet network:

- PCs with WinCC flexible Runtime
- SIMATIC Panels from the 177 series or higher (panels with Ethernet interface)

Licensing

The following licenses are required:

- SIMATIC Logon basic license
- SIMATIC Logon Remote Access license (3-pack license or 10-pack license); more than one SIMATIC Logon Remote Access license can be installed.

The number of connectable stations depends on the SIMATIC Logon Remote Access licenses used. This number is the total of the connections provided by the individual licenses.

As an example: Two installed licenses for 10 enable the connection of 20 stations to the central station.

Function

Configuration

In the first step, the following data must be saved in the user administration of WinCC flexible on every WinCC flexible station in the plant:

- Required user groups with associated user privileges
- IP address, port number, Windows domain of the central station on which the central user administration is stored.

All user groups are configured with the same names in the central user administration. All users are created here, and have automatic access to the connected WinCC flexible stations in accordance with the relevant user group.

If the connection fails between the central station with SIMATIC Logon and a WinCC flexible station, the operation is handled through an "emergency user" which must first be preconfigured locally.

Intervals for password aging and regulations for the structure of a password are defined according to the configuration on the central station and then also apply to all decentrally connected WinCC flexible stations or the respective users.

Technical specifications

SIMATIC Logon for WinCC flexible	
Execution platform	
SIMATIC Panels	Mobile Panel 177 PN; Mobile Panel 277, TP/OP 177B PN/DP, TP/OP 277
SIMATIC Multi Panels	MP 177, MP 277, MP 377
PCs	WinCC flexible Runtime

SIMATIC HMI Software

SIMATIC WinCC flexible options

WinCC flexible /Sm@rtAccess

Overview

- Option for SIMATIC WinCC flexible Runtime plus SIMATIC Panels for communication between various SIMATIC HMI systems.
- Available for the following SIMATIC HMI systems:
 - Mobile Panel 177 PN, Mobile Panel 277
 - TP 177B PN/DP, OP 177B PN/DP
 - TP 270, TP 277, OP 270, OP 277
 - MP 177, MP 270B, MP 277, MP 370, MP 377
 - WinCC flexible Runtime
- Communication between HMI systems is established on the basis of Ethernet networks, or via the intranet/Internet:
 - Read and write access to variables; WinCC flexible Runtime or SIMATIC Panels make data (variables) available to other SIMATIC HMI systems or Office applications.
 - A SIMATIC HMI system can be used to control or monitor another system remotely; entry level for client/server configurations for distributed operator stations or for solutions with headend or control room.
- Local operation, visualization and data processing is as possible as plant-wide access to information or central archiving of process data. Integrated information flows ensure an overview of the status of all processes.
- Licensing:

The license "WinCC flexible /Sm@rtAccess for Panel" or "WinCC flexible /Sm@rtAccess for WinCC flexible Runtime" must be installed on both the server and client HMI device. Server applications are the options Sm@rtServer, HTTP-Server and SOAP-Server. Client applications are the screen object Sm@rtClient display, and the utilization of the communication driver SIMATIC HTTP protocol.

No license is required on the client system for access to a Sm@rtServer using the application Sm@rtClient.EXE or the Microsoft Internet Explorer. A license is also not required for the engineering system for configuring the runtime option.

Note:

If the operator stations are accessed using the Sm@rtAccess option, suitable protective measures (including IT security such as network segmentation) should be taken in order to ensure safe operation of the system.

You will find more information on the topic of Industrial Security on the Internet at:

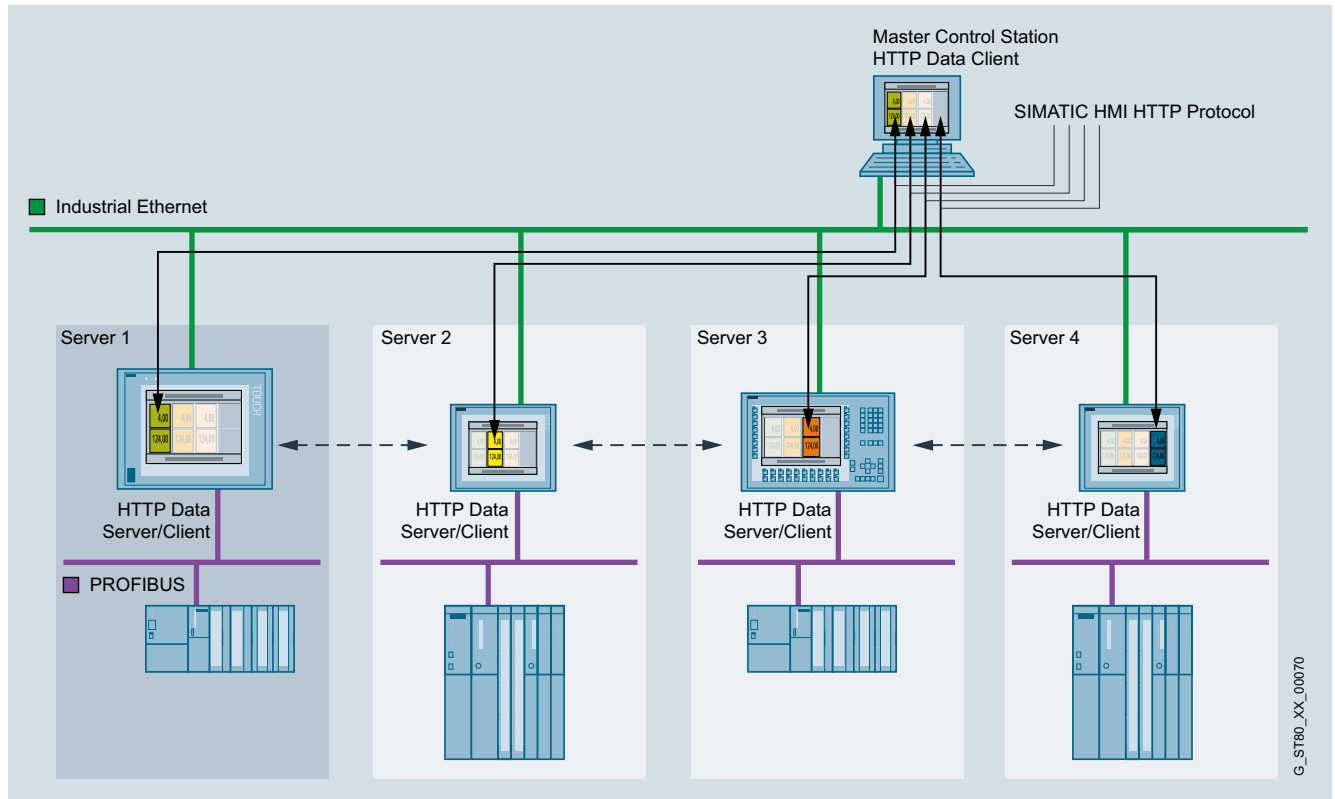

<http://www.siemens.com/industrialsecurity>

Benefits

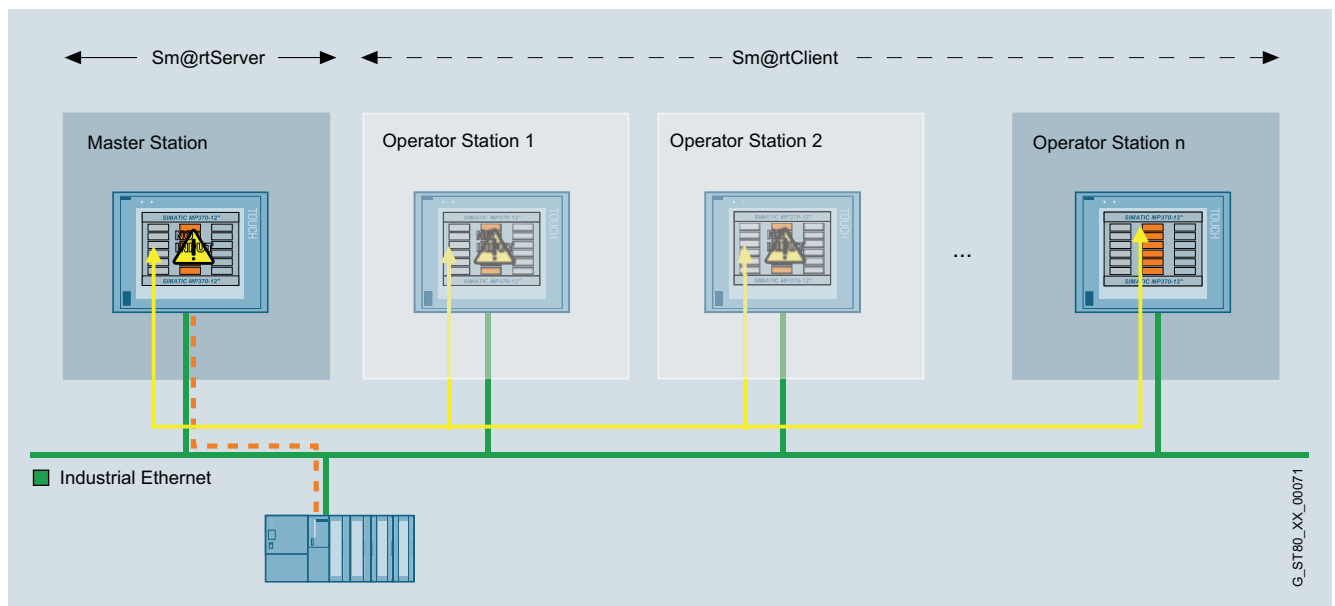

- Flexible solution for location-independent access to HMI systems and process data
- Reduction in load on fieldbuses: WinCC flexible Runtime as well as SIMATIC Panels permit a control system, for example, to access the process data. The sensitive field level is not loaded by the control level as far as the communications requirements are concerned. The requirements are processed by WinCC flexible Runtime and the SIMATIC Panels.
- Simple, fast configuration of communications relationships using the WinCC flexible engineering software

Application

- Use of machine-level HMI systems as data servers for higher-level automation components such as control systems or office systems. Process values from different machines, for example, are displayed on a process screen.
- Operator control and monitoring of machines covering large areas with several operator stations by one operator
- Operator control and monitoring of machine-level HMI systems from one central station (e.g. head-end station of a production line or from a control room)

Communication between HMI systems via Industrial Ethernet: Use of machine-level HMI systems as data servers for higher-level automation components

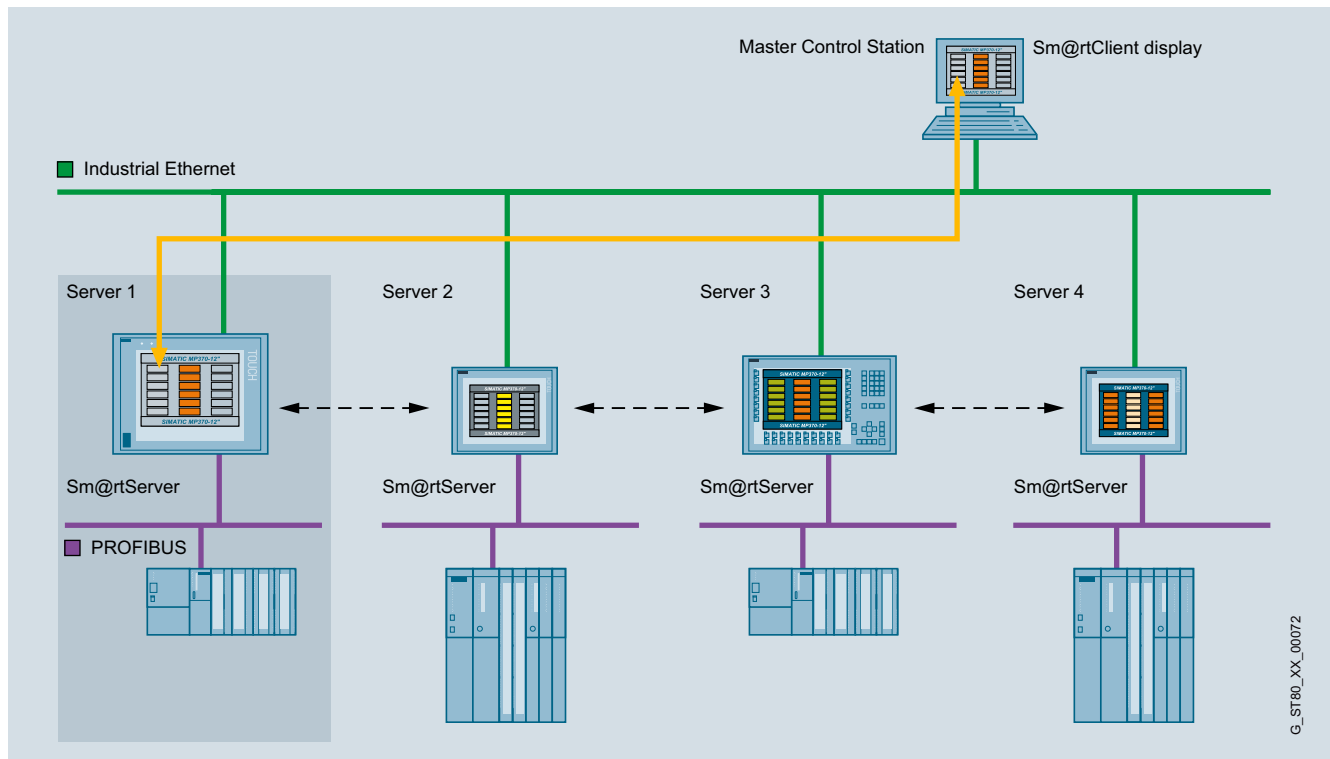

Application of the Sm@rtClient concept: Coordinated operation of several operator stations

SIMATIC HMI Software

SIMATIC WinCC flexible options

WinCC flexible /Sm@rtAccess

Application (continued)

Use of the Sm@rtClient display: Operator control and monitoring of machine-level HMI systems from one central station

Function

Communication between *different SIMATIC HMI systems* or between *the units of a machine or plant* is carried out via Industrial Ethernet or intranet/Internet on the basis of Sm@rtAccess

Possible communication relationships:

- Reading and writing the variables of a SIMATIC HMI system on the basis of an HTTP protocol
 - Reading and writing the variables of different HMI systems
 - Simple configuring of variables in the HMI client configuration using browsers in the WinCC flexible engineering tool
 - Reading and writing the variables of an HMI system using standard applications such as MS Excel. Communication is made possible by embedding a script in the application, on the basis of the SOAP protocol (Simple Object Access Protocol) superimposed by HTTP
- Remote control of an operator station; the HMI application and communication with the PLC are via the master station. In the case of spatially distributed machines/plants (which require a larger number of operator panels), so-called Sm@rtClients can be activated from here which are then assigned access to the master station and thus to the process. Access procedures guarantee that only one operator system can actively access the process at a time.
 - A configurable graphic object (Sm@rtClient display) embedded in process displays represents the screen of the associated HMI system (Sm@rtServers)
 - Powerful standard functions permit convenient and flexible operation of the display

Password protection can be optionally activated for access to variables or for remote operation of an HMI system.

SIMATIC HMI Software

SIMATIC WinCC flexible options

WinCC flexible /Sm@rtService

Overview

- Option for SIMATIC WinCC flexible Runtime and SIMATIC Panels for remote maintenance and servicing of machines/plant via the Internet/intranet
- Available for the following SIMATIC HMI systems:
 - Mobile Panel 177 PN, Mobile Panel 277
 - TP 177B PN/DP, OP 177B PN/DP
 - TP 270, TP 277, OP 270, OP 277
 - MP 177, MP 270B, MP 277, MP 370, MP 377
 - WinCC flexible Runtime
- Licensing
The "WinCC flexible /Sm@rtService for Panel" license or "WinCC flexible /Sm@rtService for WinCC flexible Runtime" license must be installed on the operator panels that use one of the following options/functions: Sm@rtServer, HTML pages (mini-Web server), e-mail.
The remote service PC and engineering system do not require a license for configuration the runtime option.

Note:

If the operator stations are accessed using the Sm@rtService option, suitable protective measures (including IT security such as network segmentation) should be taken in order to ensure safe operation of the system.

You will find more information on the topic of Industrial Security on the Internet at:

<http://www.siemens.com/industrialsecurity>

Benefits

- Fast elimination of faults or downtimes and thus increased productivity by means of global access to machines/systems by the service and maintenance personnel
- Avoids the need for site visits

Application

- Remote maintenance and servicing of machines and plants via Internet/Intranet
- Calling of system information, control of target systems, and updating of data sets via Internet/Intranet
- Automatic sending of emails to experts for fast elimination of faults

Function

Remote operator control and monitoring of SIMATIC HMI systems using Industrial Ethernet and/or via the Intranet/Internet

Microsoft Internet Explorer V6.0 SP1 or higher is sufficient for accessing an HMI system.

Remote control of an operating station

the HMI application and communication with the controller takes place via the HMI system. Using Sm@rtService, the HMI systems in the machines/systems can be serviced remotely. An access process ensures that only one operator (either locally at the machine or remotely via Internet Explorer) can actively access the process at one time.

Integrated Web Server

to process standard HTML pages

The following functions can be accessed from the homepage:

- Starting and stopping the HMI runtime for maintenance
- Remote access to recipe data sets, passwords and information specific to the HMI system
- Access the HMI system files via a file explorer
- Download configuration data via the Intranet/Internet
- Supplement with own HTML pages

Sending e-mails

to maintenance personnel via SMTP server (Simple Mail Transfer Protocol)

- Events that trigger an e-mail:
 - Reporting of a message class
 - Configurable standard functions: Changing the value of a variable, pressing a function key, scripts, etc.
- Possible e-mail content
 - Subject
 - Message text with process variables
 - Date/Time
- The optional use of e-mail/SMS gateways enables access to standard networks (external service provider required)

Standard functions make maintenance and service functionality easier. WinCC flexible allows you to quickly and easily configure maintenance and service functions.

Password protection can be activated as an option for accessing the HMI system. Different passwords may be configured for different functions.

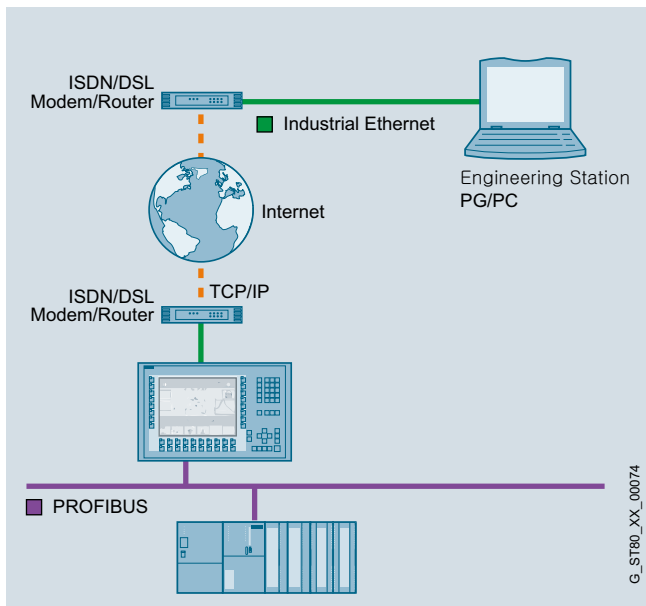

Function (continued)

Remote operator control and monitoring of SIMATIC HMI systems using Industrial Ethernet and/or via the Intranet/Internet

Remote operator control and monitoring of SIMATIC HMI systems using Industrial Ethernet and/or via the Intranet/Internet

Remote operator control and monitoring of SIMATIC HMI systems using Industrial Ethernet and/or via the Intranet/Internet

Sending e-mails to maintenance personnel via SMTP server (Simple Mail Transfer Protocol)

More informationNote

Do you need a specific modification or option for the products described here? Then look up "Customized products", where you will find information about the Open Platform Program for the creation of user-specific functions and controls for WinCC flexible.

Overview

- Option for SIMATIC WinCC flexible Runtime as well as Multi Panels for communication with applications from different vendors (e.g. MES, ERP, or applications in the office sector)
- Available for the following SIMATIC HMI systems:
 - Mobile Panel 277, MP 270B, MP 277, MP 370, MP 377 (use of OPC on XML basis)
 - WinCC flexible Runtime (use of OPC based on DCOM)
- One license is required for each operator station.

Benefits

- Incorporation of automation components from different vendors into an automation concept
- Saving of development costs through communication between automation systems based on a homogeneous, uniform protocol
- Reduction in load on fieldbuses: WinCC flexible Runtime as well as SIMATIC Panels permit a control system, for example, to access the process data. The sensitive field level is not loaded by the control level as far as the communications requirements are concerned. The requirements are processed by WinCC flexible Runtime and the SIMATIC Panels.

Application

OPC (OLE for Process Control) is a standardized, open, uniform and multi-vendor software interface. OPC is based on the Windows technology of COM (Component Object Model), DCOM (Distributed COM) or on XML.

Windows-based systems such as SIMATIC Panel PC or SIMATIC Multi Panels are used for tasks at the machine and process levels, and can communicate with all OPC-compatible applications via Ethernet using TCP/IP and OPC. WinCC flexible Runtime or the SIMATIC Multi Panel (OPC server) provide data for one or more OPC clients. As a result, local visualization and data processing are possible to the same extent as plant-wide calling of information or archiving of process data. Uniform flows of information guarantee an overview of the status of all processes.

Communication with OPC-compatible applications from different vendors (e.g. MES, ERP, or applications in the office sector) is possible.

OPC Foundation

<http://www.opcfoundation.org>

SIMATIC HMI Software

SIMATIC WinCC flexible options

WinCC flexible /OPC-Server

Function

- Use of a visualization system as a data server (OPC server) for higher-level automation components such as control systems or office systems
 - OPC-XML server for multi panels
 - OPC server (DCOM) for WinCC flexible Runtime
- The WinCC flexible engineering system can conveniently select a desired OPC item from the variables function of the OPC server using an OPC browser (component of the OPC server). To do this, the OPC server must be started and must be accessible for the engineering system.

More information

Note

Do you need a specific modification or option for the products described here? Then look up "Customized products", where you will find information about the Open Platform Program for the creation of user-specific functions and controls for WinCC flexible.

Overview**Comprehensive SCADA functionality for many industries**

WinCC is designed to be neutral with regard to technology and industry, and in terms of its software architecture, it is modular, flexibly expandable and consistently scalable.

WinCC not only facilitates demanding single-user applications in mechanical engineering, but also complex multi-user solutions or even distributed systems with several servers and clients – including internet-based ones – in plant engineering.

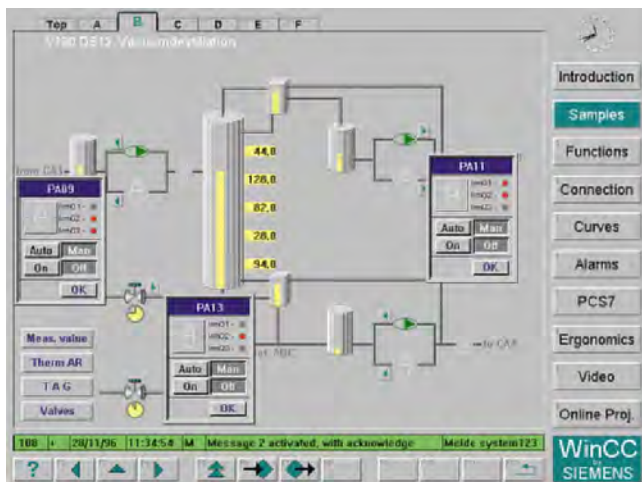

It combines production and process automation – numerous reference projects across all applications and industries are proof of this.

In the field of process visualization WinCC can be regarded as an industry standard, whether as a standalone SCADA system (Supervisory Control and Data Acquisition) or as an HMI component of control systems such as SIMATIC PCS 7.

With WinCC/Options or add-ons, the basic system can be adapted without any difficulty to industry-specific requirements, such as those that exist in the pharmaceutical or water industries.

SIMATIC HMI Software

SCADA system SIMATIC WinCC

SIMATIC WinCC**Overview**

- PC-based operator control and monitoring system for visualizing and operating processes, production flows, machines and plants in all sectors – from the simple single-user station through to distributed multi-user systems with redundant servers and cross-location solutions with Web clients. WinCC is the information hub for corporation-wide vertical integration.
- The basic system configuration (WinCC basic software) includes industry-standard functions for signaling and acknowledging events, archiving of messages and measured values, logging of all process and configuration data, user administration and visualization.
- The WinCC basic software forms the core of a wide range of different applications. Based on the open programming interfaces, a wide range of WinCC options (from Siemens Industry Automation) and WinCC add-ons have been developed (by Siemens-internal and external partners).
- WinCC can be operated with every PC that meets the given HW requirements. The SIMATIC IPC product range is available in particular for the industrial use of WinCC systems. SIMATIC IPCs impress with their powerful PC technology, are designed for round-the-clock operation, and can be operated in both office areas and harsh industrial environments.

Current versions:

SIMATIC WinCC V7.3

More information is available on the internet at:

<http://www.siemens.com/wincc>**SIMATIC WinCC V7.2**

Executable with:

- Windows 7 SP1 (32 / 64 bit) Professional, Enterprise, Ultimate
- Windows XP Professional SP3
- Windows Server 2003 SP2, Standard
- Windows Server 2008 SP2 (32 bit) Standard
- Windows Server 2008 R2 SP1 (64 bit) Standard
- contains the Microsoft SQL Server 2008 R2 SP1 (32 bit)

SIMATIC WinCC V7.0 SP3

Executable with:

- Windows 7 SP1 (32 / 64 bit) Professional, Enterprise, Ultimate
- Windows XP Professional SP3
- Windows Server 2003 SP2 and Windows Server 2003 R2 SP2 Standard
- Windows Server 2008 SP2 (32 bit) Standard
- Windows Server 2008 R2 SP1 (64 bit) Standard includes the Microsoft SQL Server 2005 SP4
- Use in virtual environments – for additional information, see <http://support.automation.siemens.com/WW/view/en/49370459>

Benefits

- All-purpose
 - Solutions for all sectors
 - Multilingual for worldwide usage
 - Can be integrated into all automation solutions
- All HMI functions on board
 - User administration
 - Operator control and monitoring
 - Reporting, acknowledging, and archiving of events
 - Acquisition, compression and archiving of measured values (incl. long-term backup)
 - Logging and documenting of process and configuration data
- Can be configured simply and efficiently
 - Configuration wizards let the user focus on the essentials
 - In the picture by means of cross-reference lists and screen property displays
 - Configuration of multilingual applications
 - Configuring tool for configuring bulk data
- Universally scalable
 - Expandable from single station to client-server configurations
 - Increased availability by means of redundant servers
 - Process visualization via the web with the WinCC WebNavigator
- Open standards for simple integration
 - Powerful real-time database Microsoft SQL Server 2008 R2 SP1 (32 bit)
 - Open for application modules with ActiveX controls
 - Visual Basic for Applications for individual expansions
 - OPC for cross-vendor communication
- Process visualization with Plant Intelligence
 - Integrated high-performance Historian on the basis of the Microsoft SQL Server 2008 R2 SP1 (32 bit)
 - Integrated evaluation functions for the online analysis (statistical process control)
 - Production optimization with the help of diverse options
- Expandable using options and add-ons
 - Options for scalable configurations
 - Options for increasing the availability
 - Options for IT & business integration
 - Options for SCADA expansions
 - Options for validation in accordance with FDA 21 CFR Part 11
 - Options for the use of telecontrol protocols
- Part of Totally Integrated Automation
 - Direct access to the tag and message configuration of the SIMATIC control system
 - Integrated diagnostic functions for increasing productivity
 - Options for the use of telecontrol protocols

New in V7.2

- Expansion into Graphic Designer
 - Know-how protection by means of password protection for PDL images and image blocks
- Unicode support
 - WinCC SETUP in 5 languages / up to 9 installed languages
 - Individual language selection for engineering and runtime, regardless of the language settings in the operating system
- Simplified configuration of the Tag Management by means of the innovative WinCC Configuration Studio
 - Configuration options similar to those in Excel
 - Simplified tags / structure tag management
- New communication channels
 - Communication channel to new CPU (S7-1200 / S7-1500) (absolute address only, no CPU alarming support)
 - Introduction of the OPC UA server (DA, HDA)
- Expansion into archive system
 - New archive recording (day, week, year)
 - New archiving methods (difference)

and more ...

SIMATIC HMI Software

SCADA system SIMATIC WinCC

SIMATIC WinCC

Application

SIMATIC WinCC is designed for visualization and operation of processes, manufacturing cycles, machines and plants. With its powerful process interface, especially to the SIMATIC family, and the secure data archiving, WinCC enables highly available solutions for the process control.

The sector-neutral basic system enables universal usage in all automation applications. Sector-specific solutions can, for example, be implemented using WinCC options (e.g. FDA options for the pharmaceutical industry) and sector-specific add-ons (e.g. for the water industry).

Design

SIMATIC WinCC is available as a complete package and as a runtime package with 128, 512, 2048, 8192, 65536, 102400, 153600, 262144 PowerTags ¹⁾.

PowerTags are data points that are connected to controllers or other data sources over a WinCC channel. Up to 32 alarms can be obtained from one data point. Moreover, internal tags without coupling are available for additional system performance. In addition WinCC also contains 512 archive tags. Individual archive licenses can be obtained for greater quantity structures.

Licenses for a multi-user configuration

The system software with the required number of PowerTags and additionally the option WinCC/Server must be installed on the WinCC server. In the basic configuration, an RT128 or RT client license is sufficient for the WinCC clients. In order to perform configuration on clients, an RC128 license is required. Remote configuration is possible if WinCC clients without their own project (UniClient) on the server project are configured.

¹⁾ V6: 128, 256, 1024, 8192, 65536 PowerTags

Function

The powerful configuration functions of SIMATIC WinCC contribute to a reduced engineering and training overhead and lead to a more flexible use of personnel and greater operational reliability. Whoever is familiar with Microsoft Windows can also operate the WinCC Explorer, the central switching point of WinCC.

In combination with other SIMATIC components, the system is also equipped with auxiliary functions such as process diagnostics and maintenance. All SIMATIC engineering tools work together in the configuration of the functions.

SIMATIC WinCC offers a complete basic functionality for process visualization and operation. To this end WinCC has a number of editors and interfaces that can be used to individually configure this functionality according to the respective application. Expansions of a WinCC station for control tasks are also possible with minimal engineering effort.

WinCC editors	Task or configurable runtime functionality
WinCC Explorer	Central project management for the quick access to all project data and central settings
WinCC Graphics Designer	Graphics system for user-defined visualization and operation via pixel-graphic objects
WinCC Alarm Logging	Signaling system for detecting and archiving events with display and control options according to DIN 19235; freely selectable message classes, message display and logging
WinCC Tag Logging	Process archiving for the acquisition, compression and storage of measured values, e.g., presentation in trend and table format as well as further processing
WinCC Report Designer	Reporting and logging system for time and event-controlled documentation of messages, operator inputs and current process data in the form of user reports or project documentation in an arbitrary layout
WinCC User Administrator	Tool for user-friendly administration of users and authorizations
WinCC Global Script	Processing functions with limitless functionality by means of the use of VBScript and ANSI-C

Interfaces

	Task or configurable runtime functionality
Communication channels	For communication with subordinate controls (SIMATIC protocols, PROFIBUS DP, PROFIBUS FMS, DDE and OPC server included in the scope of delivery)
Standard interfaces	For the open integration of other Windows applications via WinCC, WinCC-OLE-DB, ActiveX, OLE, DDE, OPC, etc.)
Programming ports	For the individual access to data and functions of WinCC and for the integration in user programs with VBA, VB Script, C-API (ODK), C-Script (ANSI-C)

Integration

Integration in company-wide solutions (IT and business integration)

WinCC is strictly based on Microsoft technology, which provides the greatest possible compatibility and integration ability. ActiveX and .net ¹⁾ controls support technology-specific and industry-specific expansions. Cross-manufacturer communication is also a simple exercise. The reason: WinCC can be used as an OPC client and server, and in addition to access to current process values, it also supports standards such as OPC HDA (Historical Data Access), OPC Alarm & Events, and OPC XML Data Access.

Just as important: Visual Basic for Applications (VBA) for user-specific expansions of the WinCC Graphics Designer and Visual Basic Scripting (VBS) as an easy-to-learn, open runtime language. If desired, professional application developers can also use ANSI-C. And access to the API programming interfaces is really simple with the Open Development Kit ODK.

WinCC integrates a powerful and scalable historian function based on Microsoft SQL Server 2005 into the basic system. As a result, users have every possibility: from high-performance archiving of current process data, to long-term archiving with high data compression, through to a central information hub in the form of a company-wide process historian. With the help of the Central Archive Server option, this can be set up within the framework of a WinCC solution. Versatile clients and tools for evaluation, the open interfaces, and special options (Connectivity Pack, Connectivity Station, IndustrialDataBridge) provide the basis for effective IT and business integration.

If external networks are accessed, suitable protective measures (incl. IT security measures, such as network segmentation) should be taken in order to ensure safe operation of the system.

You can find more information on the topic of Industrial Security on the Internet at:

<http://www.siemens.com/industrialsecurity>

¹⁾ Only supported in WinCC V7.0 or higher

Integration in automation solutions

WinCC is an open process visualization system and provides the option to connect the most diverse control systems.

Approved communication software

Only communication software with the listed product versions (or higher) should be used. Corresponding SIMATIC NET upgrades are available for upgrading older versions.

Number of connectable controls

For the number of controls connectable via Industrial Ethernet CP 1613, the following applies to a message frame length of 512 bytes:

Type of connection	Number of nodes
SIMATIC S5 Ethernet Layer 4 + TCP/IP	Up to 60
SIMATIC S7 Protocol Suite	Up to 64
SIMATIC 505 Ethernet Layer 4 + TCP/IP	Up to 60

Via PROFIBUS, a maximum of 8 controls can be connected with CP 5611, and a maximum of 44 controls with CP 5613. With approx. 10 or more controls, the usage of Industrial Ethernet is recommended.

Mixed operation with different controls

With their multi-protocol stack, the CP 1613 and CP 5613 communication processors allow parallel operation of two protocols, such as for the mixed operation of different controls, via a bus cable. WinCC supports the operation of two similar interface boards only in connection with the channels SIMATIC S5 Ethernet Layer 4 (2 x CP 1613), SIMATIC S7 Protocol Suite (2 x CP 1613, 2 x CP 5613) as well as PROFIBUS DP (4 x CP 5613; each CP 5613 max. 122 slaves). In addition to communication over industrial Ethernet CP 1613 or PROFIBUS CP 5613, one CP 5611 can be used in each case for communication with SIMATIC S7 via MPI.

SIMATIC HMI Software

SCADA system SIMATIC WinCC

SIMATIC WinCC

Integration (continued)

Client-server communication

Communication between the clients and the server is via TCP/IP protocol. Setting up a separate PC LAN is recommended.

For small projects with a correspondingly low incidence of message frames, SIMATIC NET Industrial Ethernet communication can be used for both process communication (WinCC/Server ↔ PLC) and PC-PC communication (WinCC/client ↔ WinCC/server).

Channel DLL PROFIBUS DP

In accordance with the PROFIBUS standard, DP/slaves are always permanently assigned to a DP master; i.e. a second WinCC station (DP/master) cannot access the same controls (DP/slave). This means that redundant operation of two WinCC stations is not possible using the PROFIBUS DP connection.

Connection to controls from other manufacturers:

OPC (OLE for Process Control) is recommended for the connection of controls from other manufacturers.

Current notes and information about OPC servers from various suppliers can be found at: <http://www.opcfoundation.org>

WinCC supports the standards:

- OPC Data Access 2.05a
- OPC Data Access 3.00
- OPC XML Data Access 1.00 (Connectivity Pack/Connectivity Station)
- OPC HDA 1.20 (Connectivity Pack/Connectivity Station)
- OPC A&E 1.10 (Connectivity Pack/Connectivity Station)
- OPC UA Client Data Access
- OPC UA Server Data Access, HDA (Connectivity Pack / Connectivity Station)

Connection overview

Protocol	Description
SIMATIC S7	
SIMATIC S7 Protocol Suite	Channel DLL for S7 functions via MPI, PROFIBUS or Ethernet Layer 4 + TCP/IP
SIMATIC S5	
SIMATIC S5 Ethernet Layer 4	Channel DLL for S5 Layer 4 communication + TCP/IP
SIMATIC S5 Programmer Port AS511	Channel DLL and driver for serial communication with S5 using AS511 protocol to programmers port
SIMATIC S5 Serial 3964R	Channel DLL and driver for serial communication with S5 using RK512 protocol
SIMATIC S5 PROFIBUS-FDL	Channel DLL for S5-FDL
SIMATIC 505	
SIMATIC 505 Serial	Channel DLL and driver for serial communication with 505 using NITP/TBP protocol to SIMATIC 535/545/555/565/575
SIMATIC 505 Ethernet Layer 4	Channel DLL for 505 Layer 4 communication
SIMATIC 505 TCP/IP	Channel DLL for 505 TCP/IP communication
SIMATIC S7-1200, S7-1500 (WinCC 7.2 or higher)	
SIMATIC S7-1200, S7-1500 Channel ¹⁾	Channel DLL for S7-1200 and S7-1500 communication
Controllers from other manufacturers (from WinCC V7.0 SP3)	
Allen Bradley Ethernet IP	Channel DLL and drivers for communication with Allen Bradley controllers via Ethernet TCP/IP using Ethernet IP protocol
Modbus TCP/IP	Channel DLL and drivers for communication with Modicon controllers via Ethernet TCP/IP using Modbus TCP/IP protocol
Mitsubishi MC TCP/IP	Channel DLL and drivers for communication with Mitsubishi controllers via Ethernet TCP/IP using Mitsubishi MC TCP/IP protocol
Cross-manufacturer	
OPC Client ^{2) 3)} for DA, XML DA	Channel DLL for OPC communication, WinCC can acquire data from OPC server applications.
OPC Server for DA, XML DA, A&E, HDA	Server applications for OPC communication; WinCC provides process data to OPC clients
OPC UA server for DA, HDA	Server applications for OPC UA communication
PROFIBUS FMS	Channel DLL for PROFIBUS FMS
PROFIBUS DP	Channel DLL for PROFIBUS DP
SIMOTION	Channel DLL for SIMOTION
¹⁾ WinCC version V7.2 or higher supports communication with S7-1200 / S7-1500 CPU. Restrictions: No symbolic address, type safe structure support (absolute address only) No CPU alarming support	
²⁾ Application note: Parallel usage of the OPC client channel allows, for example, connection to an SNMP-OPC server for visualization of the data contained there. The SNMP OPC server enables monitoring of any network components (such as switches) that support the SNMP protocol. You can find more information under SIMATIC NET Communications Systems/SNMP OPC Server.	
³⁾ WinCC V7.0 SP3 and later supports OPC UA (United Architecture) Client for DA.	

Integration (continued)

Only the license is to be used from the scope of supply of the above-listed SIMATIC NET PC software products. The licenses supplied with SIMATIC NET V8.2 SP1 are valid for all older versions up to and including Edition 2006.</p> <p>²⁾ Only for WinCC single-user system / supported operating systems: 32/64-bit Windows 7 Professional, Ultimate, 32-bit Windows XP Professional.</p> <p>³⁾ For further information on control technology options see Catalog ST PCS7</p>		

SIMATIC HMI Software

SIMATIC WinCC options

Overview

The universal WinCC basic software is the basis for modular expansions. These functional expansions can be obtained in the form of WinCC options and as WinCC Premium add-ons.

WinCC options are created by WinCC Development and are Siemens Industry Automation products. You can obtain support from our Advisory Services and via the central hotline.

Options for scalable plant configurations

- **WinCC/Server**
For configuring a powerful client/server system
- **WinCC/Web Navigator**
For controlling and monitoring plants via the Internet, in-house intranet or LAN
- **WinCC/TeleControl**
For connecting to outlying stations (remote terminal units = RTUs) via telecontrol protocols in a WinCC SCADA system
- **SIMATIC ProcessHistorian**
Central scalable long-term archive for the whole plant

Options for increasing the availability

- **WinCC/Redundancy**
For increasing system availability through redundancy
- **SIMATIC Maintenance Station**
For system-integrated diagnostics and plant asset management

Options for IT and Business Integration – Plant Intelligence

- **SIMATIC InformationServer**
Web-based, integrated reporting from production to management, based on archived data
- **WinCC/DataMonitor**
For displaying and evaluating current process states and historical data on office PCs with standard tools
- **WinCC/PerformanceMonitor**
Analysis and optimization of production on the basis of individual performance indicators
- **WinCC/Connectivity Pack**
Access to WinCC archives via OPC HDA, OPC A&E, OPC XML Server and WinCC OLE-DB /OLE-DB
- **WinCC/Connectivity Station**
Gateway to WinCC server data over OPC HDA, OPC A&E, OPC XML server and WinCC OLE-DB /OLE-DB from independent computers
- **WinCC/IndustrialDataBridge**
Configurable connection to databases and IT systems

Options for SCADA expansions

- **WinCC/User Archives**
For managing data records in user archives
- **WinCC/Calendar Scheduler**
Calendar-based planning of events
- **WinCC/Event Notifier**
For sending of notifications depending on specific events in the WinCC message system

Options for sector-specific expansions

- **WinCC/ChangeControl**
- Change and version management
- Generation of audit trails for engineering
- **WinCC/Audit**
- Change management
- Generation of audit trails for engineering and runtime
- **SIMATIC Logon**
- Central management of WinCC users, plant-wide (to CFR 21 Part 11)

Options for individual system expansions

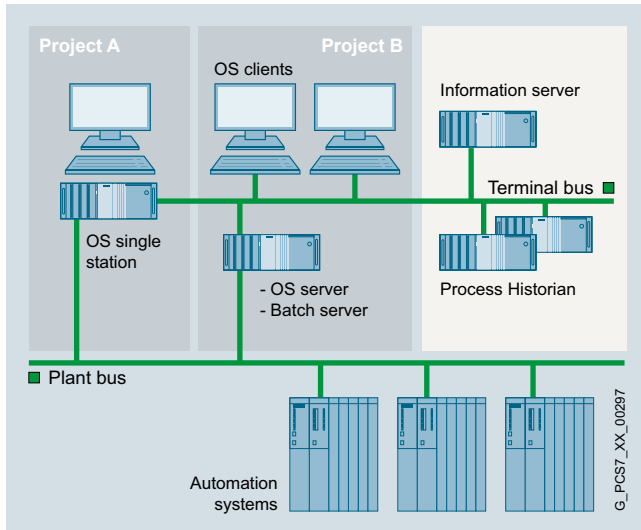

- **WinCC/ODK** (Open Development Kit)
For the use of open programming interfaces and the generation of customer-specific WinCC ActiveX objects

More information

WinCC options

Overview

The Information Server is the reporting system for WinCC and the Process Historian.

On the basis of the Microsoft Reporting Services the historical data (tags and alarms) are made available via a web client. The Information Server Client requires no client installation. It offers in a genuine web client the functionality for the administration, configuration and visualization of the reports. Further access options to the database of WinCC and Process Historian are offered by add-ins for Microsoft Office applications such as Word and Excel. Reports can be created automatically and cyclically and then sent by e-mail.

The Information Server can not only be used on a WinCC station and on a Process Historian, but also on a standalone basis. The basic package contains licenses for three clients and one data source. The available licenses are accumulative and refer to the simultaneous access to the client computer. Ready-made reports, such as those for trends and alarms, are included in the standard package.

Benefits

- Central, web-based reporting system as an interface for all corporate areas up to the management level.
- Easy handling thanks to the use of standard tools like Microsoft Word and Excel
- Provision of freely configurable reports via the web
- Automatic transmission of reports by e-mail
- Import of data from any number of WinCC applications
- Transparent access to WinCC tag and alarm archive and to the data of the SIMATIC Process Historian

Highlights

- Set of frequently used report templates for process values, messages and batches
- Open reporting system for creating any number of new report templates
- Storage of configured (parameterized) report templates for faster access
- Export of reports in common document formats
- Support of subscriptions for cyclic report generation including e-mail service
- Creation and storage of role-based dashboards
- Role management for Windows users; supports workgroups and Active Directory; user rights can be assigned for specific projects
- Generation of reports and inserting as graphics in Microsoft Office Word documents
- Creation of Microsoft Excel reports for historical process values and messages as well as storage of the Excel report templates on the Information Server
- Support of subscriptions for Excel report templates

Function

- Easy creation and individual design of own web pages
- No web page programming knowledge (html, asp) is necessary
- Creation of meaningful reports with Office knowledge
- Easy parameterization of predefined report templates
- Creation of your own report templates based on the Microsoft Reporting Services
- High flexibility due to access to numerous WinCC projects and the SIMATIC Process Historian
- Use of Microsoft Word and Excel for individual reports
- Consistent configuration of the access protection
- Executable in Microsoft Internet Explorer, and without installation on the web client

SIMATIC Process Historian

Overview

The Process Historian is a powerful long-term-archive server solution that stores the WinCC process values and messages in a central database. The system offers full scalability for performance and scope. It records and stores data from one or more WinCC and PCS 7 projects. The number of connected single stations, servers or redundant pairs of servers is not subject to any restriction. SIMATIC Process Historian is designed for use throughout the plant and is resident outside the corporate management level (ERP, MES).

Process Historian is the basis for the Information Server (IS) reporting system which accesses the central Process Historian database and ensures clear, user-friendly data visualization on WinCC stations and office PCs.

The central Process Historian database provides access to real-time data throughout the plant. This data is the key to sustainable plant optimization. Since the archive system can be fully integrated, no additional engineering is required.

SIMATIC Process Historian uses the integrated relational database, SQL Server from Microsoft®. No complex reconfiguration is needed because the archive system is integrated into WinCC. Selected process values or messages of WinCC are archived long-term on a time- or event-controlled basis.

Benefits

- Fully integrated archiving solution for large volumes of data and messages)
- Central, plant-wide long-term archive as corporate information hub
- Process data and messages from any number of subordinate WinCC systems can be archived
- Plant expansions can be implemented without interrupting the production process
- High availability in redundant mode
- High degree of security due to integrated backup system
- Database for analyses with the aim of optimizing the plant and thereby raising productivity

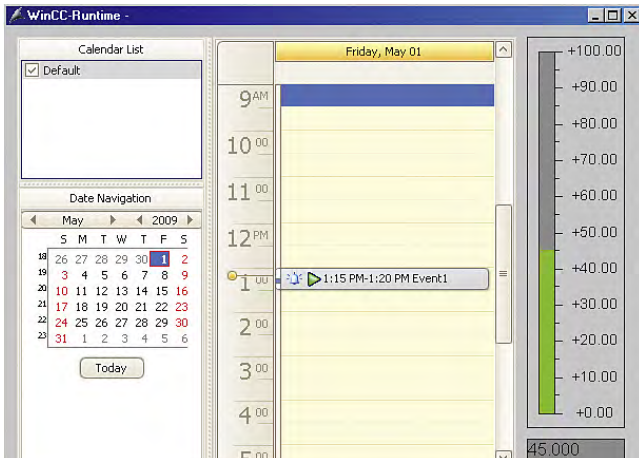

Function

- Real-time storage of the WinCC archive data (process values and messages) from any number of WinCC stations
- Visualization of the archive data on WinCC clients or WinCC single stations either directly or using the SIMATIC Information Server.Process Historian configuration tool for quick and easy engineering
- The redundant Process Historian is based on the Microsoft SQL Server Mirroring (3rd system for controlling the availability of the redundancy).
- During the initial configuration the database and the segmentation are set up.
- The PH-Ready component is installed on the WinCC server for the process of archiving to the PH
- The PH automatically detects all connected WinCC server projects (via the PH-Ready component)
- The "Process Historian Management" dashboard for diagnosis, display of the data sources, modifying the database, segmentation

Upgrade from CAS (Central Archive Server) V7.0 SP3 to Process Historian 2013	6AV6361-1AA01-3AE0

Overview

- Option for SIMATIC WinCC for managing events in a calendar.
- Setting WinCC variables or starting global scripts at defined times.
- A license is only necessary on the server (or single user system).

Benefits

- Simple operation, configuration and planning of events thanks to handling in the style of Microsoft Office Calendar
- Simple configuration of the actions by parameterization (execution of WinCC scripts or writing of WinCC tags at certain times)
- Configuration of recurring events taking account of configurable public holidays, vacation periods, and maintenance periods
- Secure operation of the plant taking account of different authentication levels
- Clear representation of events at runtime by means of Calendar Runtime Control
- Flexible use in all typical WinCC plant configurations, client/server, redundant systems, WebNavigator

Function

With the WinCC Calendar Scheduler, events and their associated actions can be configured in a user-friendly and clear way in an editor in WinCC Explorer.

The events are represented in a calendar. The period represented can be freely selected. Recurring events can be defined as serial events with any desired exceptions.

The events are displayed in a .Net control. The Calendar Scheduler is easy and intuitive to operate and supports drag & drop during configuration and runtime.

SIMATIC WinCC options

WinCC/Central Archive Server (CAS)

Overview

Central data management, reliable, high-performance archiving and central backup mechanisms form the basis of a Process Historian solution: Integration in the SCADA world, data interfaces for access to archived data and analysis functions are the component parts.

The option CAS was designed for this purpose and is used to export the archived data of all servers in the system to a computer and manage it. Integration of CAS in the WinCC world means that the data remains available for the WinCC clients as well as for the WinCC standard interfaces.

WinCC/CAS contains all licenses for the central archive server including 1500 archive tags. The number of archive tags can be increased to 120000 using Powerpacks or further WinCC archives.

Benefits

- Central data management of all archived alarms and process values
- Integrated back-up system for the archive data
- Transparent access to the data from all WinCC clients and over the open interfaces
- Integrated Web viewer for analyzing data

Function

Both the process value archive and alarm log are created on the separate WinCC servers and transferred to CAS when individual database segments have been closed.

With "Store&Forward", when the network is interrupted between the WinCC server and CAS, data will be reliably transferred as soon as the network is operating again.

Data access is transparent for display and analysis and is still possible through the standard WinCC clients. For the clients, it is of no consequence whether the data are on the WinCC server or already on CAS. Data saved in CAS can also be viewed using the Web viewer included in the package.

The data of the distributed WinCC system can also be accessed through the familiar interfaces (OPC DA, OPC A&E, OPC HDA and Ole-DB) with the help of the Connectivity Pack or the Connectivity Station. In this manner, the data saved in CAS can be efficiently transferred to higher-level systems or used for the purposes of analysis.

WinCC V7.2 is not supported.

The follow-on product is the "Process Historian" option for V7.2

Overview

- WinCC/ChangeControl** is used to **trace engineering changes** in a tamper-proof long-term audit trail database, called the audit trail for short. All changes are automatically entered in the engineering system in the audit trail. This enables all the changes to be traced that have been made, to deduce the causes and minimize downtimes on the system. To begin tracing at a defined project status, a project version definition is provided that contains all data and files of a WinCC project version. The project version definition naturally provides the ability to reactivate earlier project versions. Document management is also provided, which manages and archives intermediate status for system graphics, reports or user files and stores change information of the user. An audit viewer with helpful filter functions can be used for quickly and simply evaluating the audit trail, exporting it to an Excel sheet or printing it out.
- WinCC/Audit** Includes the full functionality of **WinCC/ChangeControl** and is also used for **tracing all operations**. All operations are automatically recorded in the audit trail at RT.
- Licensing** To configure which change information from the project should be recorded in the audit trail, the WinCC/ChangeControl RC or WinCC/Audit RC package is required. "RC" stands for Runtime and Configuration. It is required on the station that is to be configured and also includes an RT license. For recording an audit trail, one WinCC/Audit RT license is required per WinCC station (Client/Server).
- The WinCC/Audit or WinCC/ChangeControl and SIMATIC Logon options support users in respect of plant validation and meet the requirements of FDA CFR 21 Part 11. A declaration of conformity (White Paper) offers proof of this.

Benefits

- Quick and easy traceability configuration
- Gap-free and automated recording of engineering changes and operator actions in an audit trail
- Reduction in plant downtimes thanks to fast analysis of the gap-free recorded audit trail information
- Logging of defined WinCC project status with all database information and files of the application
- Gap-free documentation of the project version definition procedures with version number, user and comments
- Complete tracing support by WinCC single and multi-station systems, single and multi-project solutions, Client/Server architecture
- Extensive reduction in engineering outlay in order to meet the requirements of FDA 21 CFR Part11 & EU 178/2002
- Compliance with the requirements of the Food and Drug Administration (FDA) for the food, beverages and tobacco industries

Design

WinCC/ChangeControl and WinCC/Audit consist of five components:

- The audit editor for configuration the audit trail content
- The project version definition for logging WinCC projects
- Document management for automatic archiving and versioning of WinCC plant mimics, scripts, reports, and project-specific documents, and the recording of the associated change information
- The audit viewer for visualizing, exporting and printing WinCC and WinCC flexible audit trails. The viewer is available as an executable program under Windows, as well as OCX with WinCC Runtime.
- The audit trail, which tracks all changes in respect of both engineering and plant operation in a separate SQL database. The audit trail can be set up as a central audit trail for a number of projects or even just for a single project.

WinCC/ChangeControl and WinCC/Audit support both single-user and multi-user systems, client/server architectures and even the WinCC redundancy system. No redundant audit trail is created however.

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/ChangeControl & WinCC/Audit

Function

WinCC/ChangeControl

WinCC/ChangeControl is a functional subset of WinCC/Audit. WinCC/ChangeControl is for tracing engineering changes in the engineering phase or in online operation. All change data is recorded in an audit trail.

There are two types of engineering changes:

- those that change the WinCC database or are executed through the WinCC Explorer, such as e.g. changes to tag management or creating a user group,

and those

- limited to changing files, the so-called document administration.

The document management manages system images, scripts and log layouts and customer-specific documents and stores respective intermediate versions as backups. All of these documents or files are subject to a change process, i.e. documents can be booked out for processing, booked in for finalization and intermediate versions can be retrieved from backup storage with a rollback function.

The project version definition as a component of WinCC/ChangeControl archives WinCC projects and creates reproducible project status or defined start-time points for starting tracing. An audit trail is also provided with information on who has created which project version or which version has been reproduced or deleted.

Configuring the audit trail, the project version definition and the document management is simple, quick and comfortable.

The audit trail data is visualized from WinCC, as well as from WinCC flexible via the audit viewer, an executable program under Windows. The data can also be evaluated with the audit viewer OCX in Runtime by WinCC however. Users select the desired view of the audit trail information via filters or selection criteria and can export the data to an Excel file or print it on a printer. Audit trail information is tamper-proof and can thus not be modified or deleted. An export function can be used to swap out the audit trail to an XML file or to archive it.

WinCC/Audit

WinCC/Audit has all of the functionality of WinCC/ChangeControl and is also used for tracing user operations in RT operation. Tracing can be used for determining who, when and what conditions the machine has undergone. In addition to recording operator activities, the audit trail also records the starting and modifying of recipes or user logs. At specific objects or events, such as function buttons or sliders, the user can also record activities of an individual nature such as e.g., pressing a function button, moving sliders and other actions with a so-called audit entry function in the audit trail.

A WinCC/ChangeControl RC license or a WinCC/Audit RC license is required for configuring the audit trail. One RT license is required for each station (client/server) to be monitored. One RC license always includes one RT license.

More information

Information about FDA can be found in a White Paper: Declaration of conformity of SIMATIC WinCC to FDA21 CFR Part 11.

http://www.siemens.com/automation/hmi/html_76/products/software/wincc/fda01.htm

Overview

Cross-vendor communication in the automation sector has always been of primary importance for WinCC.

This is even more true for the release of preprocessed production data for higher-level information systems (e.g., MES = Management Execution System, ERP = Enterprise Resource Planning or Office packages = MS Excel, MS Access etc.). WinCC features integrated OPC Data Access and OPC XML DA servers for access to all online values in the system and makes open interfaces available for access to historical WinCC data.

- The Connectivity Pack includes OPC XML DA 1.00, OPC HDA 1.20 (Historical Data Access), OPC A&E 1.10 (Alarm & Events) as well as a WinCC OLE-DB interface, which also gives remote computers without installed WinCC access to WinCC archive and alarm data.
- The function of the OPC servers (XML DA, HDA and A&E) is assured by the WinCC/Connectivity Pack. In order to access data in the database via WinCC OLE-DB/OLE-DB, you will also need a license for the WinCC/Connectivity Pack.

- A Connectivity Pack license is required for every WinCC system to be accessed.
- If the Connectivity Station is used, an additional Connectivity Pack license does not have to be installed on the WinCC systems that are accessed. The Connectivity Station functions autonomously and does not require a WinCC installation on the computer.
- For versions below V7.0
Access to WinCC archive and alarm data from a computer without installed WinCC basic system license or WinCC option via the interfaces of the Connectivity Pack or Connectivity Station requires a WinCC/Client Access license on the client side (see also "WinCC/Client Access License").
- Connectivity Station Option for WinCC V6.2 and higher

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/Connectivity Pack & WinCC Connectivity Station

Benefits

- Access to variables, historical WinCC data, alarm data and user archives from any computer
- Options for analyzing and evaluating process data with specialist tools or user-defined applications (e.g., via VisualBasic)

Function

As an OPC HDA server, WinCC makes historical data from the WinCC archive system available to other applications. An OPC HDA client (e.g. a reporting tool) can define the time interval for the required data by entering a start and end time. OPC HDA servers also support the generation of a variety of aggregate functions on the server itself (e.g. standard deviation, variance, mean values, integral values, etc.), thereby helping to relieve the load on the network, as only preprocessed data are transmitted.

OPC A&E servers are used to forward WinCC messages (along with all associated process values) to any client at production or enterprise control level. Filter mechanisms and subscriptions ensure that only selected modified data are transmitted. Acknowledgement is of course also supported.

The WinCC OPC XML DA server makes cross-platform communication between Windows and non-Windows systems possible, even via the Internet. This enables read and write WinCC online values (external and internal WinCC variables) to be exchanged with non-Siemens systems.

WinCC OLE-DB makes standardized and user-friendly access to WinCC archive data possible (MS SQL Server 2005). In exactly the same way as access via the OPC HDA and OPC A&E interfaces, access via the WinCC OLE DB provider makes all WinCC archive data available along with the associated process values and message/user texts. The WinCC OLE-DB provider also supports analysis functions such as minimum, maximum, message hit list, etc.

The WinCC Connectivity Station was designed as a stand-alone gateway to WinCC server data. It supports access to WinCC server data over the OPC channels described as well as those for process values (not alarms) over OLE DB. Access to WinCC data is transparent, i.e. independent of which server of a redundant pair is active or whether data have already been transferred to the central archive server.

Connectivity Station

If no visualization is required at a station, any Windows computer with access to WinCC via OPC and OLE-DB can be configured via the Connectivity Station. This permits access to WinCC stations with server packages from a central computer without WinCC installation. The WinCC stations can be accessed via the following interfaces:

- OPC interfaces of the Connectivity Station
- OLE DB interface of the Connectivity Pack

The two access variants are autonomous access options with different ranges of functions.

OPC interfaces of the Connectivity Station

The Connectivity Station provides interfaces via which you can access the following using an OPC-Client.

- OPC-DA-Server: tags, e.g. process values
- OPC-HDA-Server: archived process values
- OPC-A&E-Server: alarms

Licensing

You require the "WinCC Connectivity Station" license in order to utilize the OPC interfaces of the Connectivity Station on a computer without WinCC installed.

If you only use the OPC interfaces of a WinCC installation, you only need the "Connectivity Pack" license.

The following table shows the combinations:

	New: WinCC-independent installation with Connectivity Station	Standard installation: OPC with WinCC
OPC DA	"WinCC Connectivity Station" license	No license required
OPC HDA	"WinCC Connectivity Station" license	"WinCC Connectivity Pack" license
OPC A&E	"WinCC Connectivity Station" license	"WinCC Connectivity Pack" license
OPC UA DA		"WinCC OPC UA HDA Connectivity Pack" license

The Connectivity Station is planned over NCM PC Manager or SIMATIC Manager. In Version 7, the Connectivity Station does not run as service.

SIMATIC WinCC options

WinCC/DataMonitor

Overview

- The WinCC/DataMonitor is a component of WinCC Plant Intelligence and is used for displaying and evaluating current process statuses and historical data on office PCs with standard tools such as Microsoft Internet Explorer or Microsoft Excel. The DataMonitor client is provided with current and historic process data and alarms by a DataMonitor server. All staff ranging from machine operators to corporate managers can use the DataMonitor to obtain information.
- DataMonitor is a suite of Internet-capable tools:
 - Process Builder - Tool for simple visualization and navigation with WinCC screens using WinCC Web Viewer (WinCC Viewer RT) in "view only" mode
 - Excel Workbooks - Protocol tool that integrates WinCC archives and online values into MS Excel and supports online analysis
 - Published Reports - Event- or time-driven execution of Excel or PDF reports for the output of process data and analysis results
 - Web center - Individual configuration of Internet pages and summary of information within a portal in terms of WinCC applications
 - Trends and alarms are preconfigured Web Center pages
- DataMonitor does not require manual client installation because it loads the required components from the DataMonitor server
- There is no installation required on the client for the Webcenter, Trends and Alarms functions.
- Licenses for simultaneous access by 1, 3, 10, 25 or 50 DataMonitor clients. Any combination of DataMonitor and Web Navigator licenses can be used for an application.
- Preconfigured Web Center pages permit ad hoc entry

Benefits

- Information can be compiled online individually during runtime via the Internet/intranet.
- Efficiently monitor and analyze production lines.
 - Display and evaluation of current process states and historical data on remote office PCs with standard tools such as Microsoft Internet Explorer or Excel.
 - Easy access to production data via the intranet or Internet
 - Quick ascertainment of the production situation
 - Use of standard products
- Easily collect and distribute information.
 - Automated report creation
 - No additional configuration effort through direct use of images from the WinCC project
 - No training required for standard products
 - Easy exchange of configuration data
- Substantiate decisions with reports.
 - Evaluation via ready-made templates for special analyses of the business processes (e.g. reports, statistics)
 - Make bottlenecks transparent
 - Individual views for user and situation
 - Relative and absolute timeframe for information generation
- View production status anywhere and anytime.
 - Individual views of information in production
 - View the process and system operation
 - Historical data can be compiled online individually

Highlights

- Access to the lower-level servers when installing the DataMonitor server on a WinCC Client with separate project (RT128 license)
- Tag logging archive tags can be accessed by means of the web center function without changing the WinCC configuration system.
- Installation of the DataMonitor web center function on a WinCC file server
- Dedicated Internet pages can be created for displaying data with the Webcenter. For this purpose, the following tools which can be integrated in the Internet sites are available.
 - Bar diagram, pie chart, trend curve display
 - Process value table and statistics functions for the process values
 - Alarms, hit list for alarms
 - Message text display for individual message texts, message display, selection list of created reports
 - Links to internal and external pages
 - Display of graphics in converted jpg format
 - Display of the WinCC process images
- The analyses can be made with relative or absolute time specification. This enables comparisons of identical time periods on different days.
- Reports generated with Excel or the WinCC Report Designer can be made available on the DataMonitor server or e-mailed automatically to the relevant group of people based on time intervals or triggered by events.
 - Connections can be established to WinCC Runtime, the central archive server, and the swapped-out archives

New in V7.2

- DataMonitor
 - In V7.2 or higher, the upgrade license is contained in the corresponding WinCC version
 - Supports Internet Explorer V 7.0, V8.0 and V9.0, including tabbed browsing.
 - Excel reports can be generated with Microsoft Excel version 2003 / 2007 / 2010

Function

- All tools are fully Internet-compatible and, therefore, support access via any type of connection (LAN, GSM, radio, modem, Internet, etc.).
- All popular security mechanisms such as login/password, firewalls, encryption, etc. are supported.
- Users can combine the available tools at will. Licensing only takes into account simultaneous access to one Web server.
- For display purposes, screens from the WinCC project can be used or special overview displays configured. Animations, scripts, navigation and access rights remain valid.
- The WinCC/DataMonitor has purely a display function.
- Company-wide Excel reports, which contain historical and current process values, can be stored centrally for general access (reports, statistics). However, local queries to meet individual requirements can be compiled and executed online. Plot and tabular representation are supported for archive data already swapped out.
- Data can be automatically entered into created report templates and distributed by e-mail or saved on the server.
- Pre-made elements make the assembly of individual web pages easier for evaluating information.
- Individual information compilation on one or more Internet pages with the option of branching to other detail pages.
- Pre-made Internet pages for trend and alarm display enable an ad-hoc entry to Internet data evaluation.
- An higher-level navigation feature provides a common framework for the various tools.
- The screens are displayed in the WinCC Web Viewer or in the Internet Explorer in the view only mode of the Web Navigator.
- Enhanced user management for the web center in order to assign individual Internet pages and created reports to specific user groups.
- Integrating WinCC process screens on Internet pages without installation download
- A search function facilitates the management of connections to the WinCC Server.
- Swapped out archives can be connected and evaluated in the DataMonitor Web center. Expansion of the display area in the Web center (Menu Hide function)
- Excel reports created offline can be loaded onto the DataMonitor server and are thus made available to selected user groups or for automatic distribution.

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/DowntimeMonitor

Overview

The entry point to SIMATIC Plant Intelligence can be through options for the SIMATIC WinCC process visualization system. The WinCC/DowntimeMonitor is a component of WinCC Plant Intelligence and is used for monitoring the efficiency and performance of individual machine modules, subsystems and production lines. The combined elements to be monitored are designated as equipment. Using the WinCC/DowntimeMonitor, the machine data management software, standstill time can be recorded and analyzed centrally in production. For individual devices, machines or entire production lines, the specific parameters can be determined this way. Integration into WinCC ensures complete transparency of all machine and plant data as a basis for optimizing the plant's productivity.

The process values are read directly from WinCC and are connected with the respective analysis function.

- The SIMATIC WinCC DowntimeMonitor can be installed on a WinCC single station, WinCC Server or WinCC Client with project (RT128 license), and consists of an Engineering Client as well as a Runtime User interface.
- All engineering operations are performed using a graphic Engineering Client. The Engineering Client is called up from the WinCC Explorer.
- SIMATIC WinCC DowntimeMonitor provides ActiveX control elements. These are used for displaying the determined parameters and the progress of the various status over a certain time period. These controls are integrated in WinCC process images for presenting results.
- The recorded data is stored in an online database set and can be moved to an offline database set.
- The basic package consists of the Engineering and Runtime software and 5 licensed equipment units. Other licenses are available for up to 25, up to 50, 100 and up to 200 equipment units.

Benefits

- Recording failure times, localizing causes and reasons for failure times, and monitoring of equipment efficiency.
- Weak-point analysis in production processes and recording of undesirable process activities.
- Basis for decision making based on performance indicators.
- Identification of the events that lead to cost-intensive failures.
- Entry point for an extended downtime analysis with upgrade options in the MES software SIMATIC IT.
- Identification of speed and quality losses.
- Complete transparency for all machines as basis for optimizing the plant's productivity. Faults and bottlenecks are prevented to increase availability.
- Derivation of specific parameters (KPI - Key Performance Indicators).
- Integration of respective display instruments (controls) in WinCC process images.
- Can be utilized for individual machines or even complete production plants.
- Distribution of evaluations to various people over the web.

Function

- Creation of a time model by defining various time categories as a basis for the KPI calculation for elements (equipment) to be evaluated.
- Creation of equipment, as central components for the evaluation by dividing the system into individual groups.
- Creation of a Reason Tree for detailed display of reasons for downtimes.
- Allocation of the system status in the controller to the time categories and Reason Trees defined in the DowntimeMonitor.
- Storing the system status for calculating and presenting Key Performance Indicators.
- The following pre-defined Key Performance Indicators are available: Availability, change-over, cycle time, failure time loss, duration, effective performance, maintenance, Mean Time Between Assist (MTBA), Mean Time Between Failures (MTBF), Mean Time To Assists (MTTA), Mean Time To Repair (MTTR), failure time frequency, Overall Equipment Effectiveness (OEE), performance rate, production duration, quality rate, speed loss, Total Efficient Equipment Performance (TEEP), utilization.
- Integration of three new controls Gant View, KPI View, and Table View in WinCC for the display of results for one or more equipment units.
- The WinCC DowntimeMonitor Gant View presents the equipment status development within a certain time period.
- The WinCC DowntimeMonitor KPI View shows the distribution of failure times and the Key Performance Indicators in a trend, bar, segmented bar charts or Pareto chart using historical data.
- The WinCC DowntimeMonitor Table View shows raw data for failure times and analyzes it in the selected time period. The user can utilize these control elements to enter, change, distribute or combine and comment on failure times manually.
- The controls can be displayed on intranet or Internet using the option WinCC/Web Navigator.

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/Event Notifier

Overview

- Option for SIMATIC WinCC for notifying selected persons by e-mail in specified time slots
- Notification depends on events occurring in the WinCC Alarm System.
- Escalation levels, i.e. Group 2 is only notified when nobody "on site" or from Group 1 has reacted within a specified time.
- Final notification of all persons previously notified in connection with the specific event about the reaction that has taken place

A license is only necessary on the server (or single user system).

Benefits

- Simple operation, configuration and planning of notifications thanks to handling like the Microsoft Office Calendar
- Easy configuration of the notifications including support of the WinCC Runtime languages by connecting to the WinCC alarm system
- Configuration of recurring events taking account of configurable public holidays, vacation periods, and maintenance periods
- Secure operation of the plant taking account of different authentication levels
- Clear display and intuitive operation at runtime by means of Calendar Control
- Flexible use in all typical WinCC plant configurations, single station, client/server, redundant systems, WebNavigator

Function

The WinCC Event Notifier enables the following to be configured in a clear and user-friendly manner via the Calendar Options Editor in the WinCC Explorer:

- The e-mail service for sending and receiving messages
- The messages by selecting configured messages in the WinCC Alarm System as well the setup and contents of the message by selecting the message blocks
- Contacts by selecting predefined persons from the WinCC user administration.

In a calendar it is then possible to select the persons to be notified within the opened time slot from the existing contacts. If several persons or groups of persons are set up for the same time slot, escalation levels can be implemented by assigning different escalation times (= dead time before notification). The period represented by the calendar can be freely selected. Recurring events can be defined as serial events with any desired exceptions.

The calendar can also be integrated as .Net Control in WinCC screens; the appearance of the calendar controls at runtime is configurable. Via the calendar control, you can create time slots during runtime with contacts who should be notified upon occurrence of the configured events in the WinCC Alarm System. In addition, the calendar control allows the creation of new contacts by means of selection from the WinCC user management.

The Event Notifier is easy and intuitive to operate and supports drag & drop during configuration and runtime.

6AV6372-1DD07-2AX0
6AV6372-1DD07-0AX0

Overview

- The WinCC/IndustrialDataBridge option uses standard interfaces in order to connect the automation world with the world of IT and ensure two-way information flow. Typical examples of such interfaces are OPC in the field of automation and SQL database interfaces in the world of IT.
- Using the SIMATIC WinCC/IndustrialDataBridge, communication links between different data sources and data targets can be created by means of simple configuration/programming. The IndustrialDataBridge can either be integrated into WinCC or used in stand-alone mode (not in conjunction with WinCC).
- For example, SIMATIC WinCC with its OPC DA server interface is the data source and an external database is the data destination.
 - Very flexible, due to the support of different database formats and standard interfaces
 - Fast and safe due to configuration instead of programming
- In addition to access to WinCC variables, access to messages, process values and user archive data (in the WinCC database) is also supported.
- WinCC/IndustrialDataBridge can be used as a standalone application with its standard interfaces.
- Option from WinCC V6
- For versions below V7.0
On a computer without a license for the WinCC basic system or a WinCC option, which is to be accessed in read/write mode by the option WinCC/IndustrialDataBridge, a WinCC Client Access License is required (see also "WinCC/Client Access License").

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/IndustrialDataBridge

Benefits

- Connection of the automation level to the IT world
- Integration of systems from different manufacturers via numerous standard interfaces (including OPC, OLE-DB, office formats, etc.)
- Simple configuration using standard software without programming which reduces costs
- High-performance data exchange between several systems at the same time

Highlights

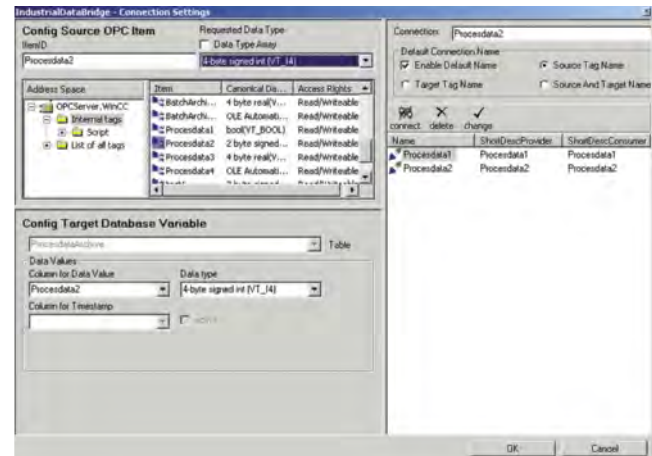

- No programming knowledge required
- Efficient due to transmission of individual data or block transfer (">", "<", "inside where...")
- Unicode support
- Support of Asian languages (Simplified Chinese, Japanese)
- OPC XML DA Provider / Consumer (data exchange over the Internet using http and SOAP)
- Web Navigator; support of the IndustrialDataBridge controls in WinCC images
- IndustrialDataBridge runs as system service or as an application in connection with WinCC or as a standalone application

Design

The software comprises a configuration environment and a runtime environment. The different data interfaces are integrated via software modules. In each case, one module is required as the data source and one module as the data destination. The different modules can be combined in any way.

The connections between data source and data destination are created in the configuration environment. In the runtime environment, the IndustrialDataBridge establishes the connection autonomously and transfers the data of the linked variables.

Function

- IndustrialDataBridge establishes a link between the source and destination interfaces and transfers data on the basis of a change in value, once a configurable period of time has elapsed or when a specific event occurs.
- IndustrialDataBridge exchanges data between automation systems from different vendors, e.g., via OPC. The connection of OPC servers via IndustrialDataBridge enables communication between a variety of devices, data sources and data destinations. The OPC international interface standard is the key to open systems both now and in the future. Thanks to IndustrialDataBridge, OPC data exchange can already be supported.
- WinCC supports access to variables, tag logging, alarm logging and user archive data.
- Storage of process data in Office formats such as Excel or Access. Databases can also be integrated for the archiving of larger aggregates.
- One of the features of IndustrialDataBridge is a Send/Receive interface supporting data transfer to SIMATIC S5/S7 stations or other Send/Receive-compatible devices.

Function (continued)

- IndustrialDataBridge enables SCADA and control systems from different vendors to be linked via the OPC interface. Communication via RFC1006 or Send/Receive is also supported.
- SQL databases are available as data destinations for production data acquisition. Data can be transferred from the data source on an event-driven basis with the OPC module or sent directly from the PLC with the Send/Receive module.
- Cyclic data archiving can be implemented via the OPC Data Access, WinAC ODK or Send/Receive data sources and the SQL database data destinations. On the database side, various transmission mechanisms are supported. Individual control during the runtime for every Industrial Databridge connection (Start, Stop, Connect and Disconnect).
- Integration of the IndustrialDatabridge runtime control into WinCC screens when installing the IDB on a WinCC station.
- Independent CSV files are created on reaching a programmable number of entries or if the value of a WinCC tag changes.
- Block transfer for databases through the support of the operators "<" and ">" in the Select instruction.
- Available providers (data sources) can be connected to any consumers (data targets)

New functions in Version 7.2

- Faster configuration thanks to new configuration interface
- OPC XML DA Provider / Consumer (data exchange over the Internet using HTTP and SOAP)
- Support of Asian languages (Simplified Chinese, Japanese)
- Unicode support
- Getting Started for the data exchange between User Archive and Microsoft Access
- When installed in combination with the WebNavigator Server, the IndustrialDatabridge can be controlled over the Internet.

Interfaces:

The table below shows the possible data sources and destinations

Provider (data sources)	Consumer (data destinations)
• Microsoft Access 2003, 2007, 2010	• CSV, TXT
• Microsoft SQL Server 2005, 2008, 2008 R2	• Microsoft Access 2003, 2007, 2010
• MySQL ODBC 3, 5, 5.1, 5.5	• Microsoft SQL Server 2005, 2008, 2008 R2
• Oracle 8i, 10g, 11g	• MySQL ODBC 3, 5, 5.1, 5.5
• OPC Data Access 3.0, OPC XML 1.0	• Oracle 8i, 19g, 11g
• Send/Receive	• MS Excel
• WinCC OLE DB V7.2	• OPC Data Access Server (internal)
• WinCC UserArchive V7.2	• OPC Data Access 3.0, OPC XML 1.0
	• Send/Receive
	• WinCC UserArchive V7.2

Overview

- WinCC/IndustrialX makes it easier to develop a solution for a visualization task by allowing customized objects to be standardized
- A license must be installed on each development computer (current version of Visual Basic must be installed on the development computer)

Benefits

- Easy creation using configuration wizards
- Quick entry due to the use of standards: ActiveX technology, creating with the aid of Visual Basic
- Central creating and changing of object displays of the same type (typing) saves time and money
- Configuring of intelligent, sector-specific objects (graphic illustration and logical processing) with know-how protection
- Can be used in versatile ways: in WinCC screens and other Windows applications (e.g. Internet Explorer, Excel)

New in V7.0

Support of Visual Studio 2005 (.NET)

Application

IndustrialX controls create standardized presentations and allow flexible customization to the requirements of a wide range of applications, e.g. applications in the chemical, glass or paper manufacturing industries.

Function

- Configuring intelligent, industry-specific objects (graphic illustration and logical processing) with know-how protection
- Automatic object supply with WinCC data structures (templates)
- Creation of Web Navigator-compatible, customer-specific ActiveX components with active process data supply
- Integration into WinCC via structure names

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/Open Development Kit (ODK)

Overview

WinCC/ODK (Open Development Kit)

- WinCC option for utilization of the exposed programming interfaces that can be used to access data and functions of the WinCC configuration and WinCC runtime system
- The interfaces are designed as "C-Application Programming Interface" (C-API)
- Scope of delivery:
 - CD-ROM with examples
 - Voucher for a one-day intensive workshop

Benefits

- Individual system expansions via an open standard programming language
- Access to data and functions of the WinCC configuration and runtime system
- Development of your own applications and add-ons for the WinCC basic system

New in V7.0

- Support for Visual Studio 2005 (.NET)

New in V7.2

- UNICODE support
- Support for Visual Studio 2008, 2012

Function

The API functions are configuration and runtime functions, and include:

- MSRTCreateMsg: Creates a message
- DMGetValue: Gets the value of a variable
- PDLRTSetProp: Sets the object properties in a display

They can be used in the following places:

- within WinCC, for example in global scripts or as part of C actions in the Graphics Designer,
- in Windows applications in the programming language C (the current version of Microsoft Visual C++ is necessary as a development environment for WinCC).

6AV6371-1CC07-2AX0

6AV6371-1CC07-0AX0

6AV6371-1CC07-0AX4

Overview**Analysis and optimization of production on the basis of individual performance indicators**

The WinCC/PerformanceMonitor facilitates flexible calculation and powerful analysis of plant-specific key performance indicators (KPIs). The indicators provide the basis for deriving optimization potential, thus enabling productivity enhancement.

They relate to individual machine groups, plant sections or production lines. The elements to be monitored are designated as equipment. Indicators are calculated based on operands which are derived from already configured WinCC tags. By combining them with associated values, more accurate production correlations can be highlighted, such as quality/supplier dependencies. The calculation formulas used are quick and simple to create in WinCC.

Analysis of the indicators and their operands can be carried out in the WinCC system at any time. Indicators, along with their associated values if required, can be clearly displayed in bar graphs, allowing easy comparison. In addition, the input values of each performance indicator can be shown via an integrated analysis function (drill-down). The Gantt chart illustrates the chronological sequence of the operands. The table display lists the archived values, allowing subsequent correction if required. Performance indicators calculated online, either cyclically or triggered by a tag, can be written to WinCC tags for further processing, and display in WinCC images, for example.

The PerformanceMonitor can be combined with the WebNavigator for distribution on the Internet, and with the Information Server for reporting purposes. Integration into WinCC ensures fast configuration and complete transparency across all machine and plant data as a basis for optimizing plant productivity.

- The WinCC/PerformanceMonitor can be installed on a WinCC stand-alone system, WinCC Server or WinCC client project (RT 128 license), and consists of an engineering client as well as a runtime user interface.
- The WinCC/PerformanceMonitor provides ActiveX control elements for embedding in WinCC images.
 - PerformanceControl: Bar graphs for displaying performance indicators in relation to context values, showing the operands for cause analysis in each case.
 - Gantt chart: Chronological sequence of time-based operands
 - TableControl: Tabular listing of operands with post correction option.

- With the help of the integrated configuration environment, operands are calculated (based on tags) which can be used to calculate key statistics at the set evaluation time.
- For analysis via intra- or Internet, the controls of the WinCC/PerformanceMonitor are available when using the WinCC/WebNavigators.
- The SIMATIC Information Server can be used for generating plant-specific, Web-based reports (predefined, expandable exports).
- The archived values (operands, context) form the foundation for the analysis and are one-by-one licensing relevant on an additive basis.
- The basic package comprises a configuration environment, runtime controls (bars, Gantt, tables) and a license for archiving 30 values. The logged values (operands, context) form the basis of the analysis.
- If more values are to be archived, the number of archive values can be increased in steps of 30, 100, 300 or 1 000.

Benefits**Management and quality assurance**

Complete transparency throughout the machine park as the basis for optimizing plant productivity.

- Recording of downtimes, localizing causes and reasons for failure times, and monitoring of equipment efficiency.
- Decision making based on performance indicators.
- Global availability of information server reports means they can be used by different user groups.
- Recognition of production correlations by combining associated values with indicators such as material used.

Service and maintenance

Support through cyclic and process-event triggered calculation of characteristics:

- Standardization of new plants by defining controller-based status information for key figure calculation
- Individual, targeted analysis using plant-specific performance indicators.
- Weak-point analysis in production processes and recording of undesirable process activities.
- Cause analysis by examining "drill down to operands" calculation basis.
- Identification of the events that lead to cost-intensive failures.

Line management and plant operator

The operator is always kept up-to-date by graphical display of the characteristics.

- Later modification of archived input values.
- Continuous information at the operator interface thanks to integration in the WinCC user interface.
- Alarm messaging of limit violations and trend recording through cyclic calculation of characteristics.
- Integration into the WinCC system means it is not necessary to train operating personnel
- Quick detection of weaknesses in the process using cyclic calculation of characteristics.

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/PerformanceMonitor

Benefits (continued)

WinCC Engineering

- Quick configuration of WinCC operator displays with WinCC and web-based reports from the Information Server.
- Minimal networking overhead by using the WinCC infrastructure in the local network as well as for the Internet.
- Short familiarization times and simple configuration using familiar tools for user interfaces and reports (WinCC, SIMATIC Information Server)
- Minimal configuration overhead due to the type-instance concept
- Minimal administrative overhead by using the WinCC infrastructure in the local network as well as for the Internet.

Highlights

Creation of performance indicators by the WinCC engineer with subsequent utilization by all user groups in the manufacturing company on WinCC stations or Internet clients.

Application

All user groups benefit from the PerformanceMonitor, from the application engineer to management-level evaluators. The engineer can use the application environment integrated in WinCC to derive individual formulas for calculating performance indicators.

Management uses Web-based reporting without the need for installation on standard computers. For maintenance, the web client of the WebNavigator can be used for analysis with the bar (for performance), progression (Gantt) and table controls. Performance indicators can be displayed on local user interfaces using standard WinCC resources to keep machine operators up to date. Performance indicators in the on-site WinCC system keep machine operators up to date. The service engineer can analyze the plant from his/her workstation using the WinCC Client, the Webclient of the WinCC/WebNavigator, for example. At the management level, it is possible to access Web-based reports without the need for installation on standard computers.

Function

- Structuring of the production plant in equipment units constituting central elements for evaluation
- Use of structured tags in order to facilitate implementation of machine status models
- WinCC tags are compressed to an operand using formulas
- Calculated operands are stored in the archive
- Archived operands are used as input values for calculating performance indicators
- Bar graphs for analyzing performance indicators and root cause determination (drill down)
Indicator input values (operands) can be displayed if required.
- Tabular presentation of all operands (input values)
- Progression diagrams (Gantt charts) of time-based operands
- Cyclic or event-triggered calculation results are written to WinCC tags
- WinCC Runtime, alarm logging and trend logging can utilize cyclically-calculated values
- Database information and evaluations can be displayed at every WinCC station
- Information server reports can be displayed on independent PC workstations

Packages	
SIMATIC WinCC Analyze and Reporting Starter Package Comprising: WinCC Performance Monitor V7.2, SIMATIC Information Server 2013 Basic Package	6AV6372-2DG77-2AA0

Overview

- Option for SIMATIC WinCC, supporting the parallel operation of two interfaced WinCC single-user systems or process data servers for mutual monitoring
- If one of the two server PCs or one of the two WinCC stations fails, the second one will take over control of the entire system. Once the failed server or station is restored to operation, the content of all the message and process value archives are copied to it.
- One WinCC/Redundancy package is required for each redundant pair of servers.

Benefits

- Increased system availability with continuous data integrity
- Automatic changeover of client in the event of failure of a server or failure of the communication to a server
- Continuous operator control and visualization thanks to automatic client changeover to the intact server
- Automatic updating of all archives in the background after rectification of the fault

Function

Normally, two WinCC stations or process data servers run in parallel. Each station has its own process connection and its own data archives. WinCC/Redundancy ensures automatic matching of system and user archive data.

If one of the two server computers or WinCC stations fails, the second will take over the archiving of messages and process data, thereby ensuring seamless data integrity. In client/server mode, the clients are automatically switched from the failed server to the redundant partner. This ensures continuous plant visualization and operation on every operator station.

When the failed partner resumes operation, all process values, messages and data archived during the fail period are automatically matched with the partner. This process runs in the background and does not affect plant continuity. Once this is complete, two equivalent servers/stations will be available again.

Communication with the SIMATIC S7 PLC can also be configured with redundancy (an H Series SIMATIC S7 is required) by plugging in two communication modules and configuring two communication paths (S7-REDCONNECT software package). The use of failsafe H Series SIMATIC S7 PLCs can, if required, further increase availability at control level.

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/Server

Overview

- Option for SIMATIC WinCC, which permits the configuration of a powerful client/server system
- One of the following operating systems must be available to install the option on the server: Windows Server 2003 (for V6) or Windows Server 2003 R2 (for V6.2 / V7.0 / V7.2) or Windows Server 2008 (for V7.0 with SP2 and higher or V7.2). When using Windows XP Professional and Windows 7 SP1, no more than 3 clients can be connected.
- A number of coordinated HMI stations can be operated in a single group with networked automation systems
- Client/server solution:
 - One server can supply up to 32 connected clients with process and archive data, messages, images and reports
 - Depending on the size of the plant, up to 12 servers (or up to 18 in version 7.2 or higher) can be used.
 - 32 clients (max. 12 or 18 redundant WinCC servers) possible per system
- Requirement: Network connection (TCP/IP) between the server PC and the connected clients. ¹⁾
- One license is required for each server.

¹⁾ One of the following operating systems is installed on one WinCC server: Windows Server 2003, Windows Server 2003 R2 or Windows Server 2008. Max. 3 clients with Windows XP Professional and Windows 7 SP1.

Benefits

- Plant-wide scalability from the single-user system to the client/server solution
- Significantly higher quantity framework, relieving the individual servers and better performance due to distributing the complete application or tasks over several servers
- Low-cost configuration on the client is possible (the minimum RC license is sufficient)

Application

In a complex plant, WinCC can also be configured as a distributed system according to requirements:

- Functional distribution (e.g. message servers, archive servers, etc.) or
- Distribution according to the physical plant structure (e.g. body-in-white, paintshop, etc.)

Function

Each client can access more than one server at a time. Clients can also be used for configuration on the server.

A configuration of WinCC clients as a central Web server – as a distributed system if required – with an overview of all server projects in the system is also possible.

For WinCC clients, only the smallest runtime license RT128 is required. In order to also configure on WinCC clients, the smallest complete license RC128 is required.

Remote configuration is possible if WinCC clients without their own project (Uniclents) on the server project are configured. This makes it possible to configure inexpensive operator and configuration stations in a network.

6AV6371-1CA07-0AX0

6AV6371-1CA06-2AX0

Overview

WinCC/TeleControl for WinCC V7.0 SP2 supports connection to outlying stations (Remote Terminal Units = RTUs) via telecontrol protocols.

Benefits

WinCC/TeleControl for WinCC V7.0 SP2 cannot only integrate newly configured RTUs, it can also integrate units which already exist in outlying areas by means of DNP3 or IEC 870-5-101/104 drivers.

For communication with the outstations, WinCC/TeleControl for WinCC V7.0 SP2 uses the SINAUT ST7 and DNP3 protocols (both via serial and TCP/IP communication connections) as well as IEC 870-5-101 (serial) and IEC 870-5-104 (Ethernet TCP/IP).

The serial RTU link is possible via the following components, which can be connected directly via WinCC (single station or server):

- SINAUT TIM communication modules (SINAUT ST7 telecontrol protocol)
- TCP/IP serial converter (telecontrol protocols DNP3, Modbus (not released for WinCC TC), IEC 870-5-101)

Equipment from MOXA or Lantronix, for example, can be used as TCP/IP serial converters.

By means of Ethernet TCP/IP, the RTUs can be connected directly or via TCP/IP WAN routers to the SIMATIC WinCC system bus (SINAUT ST7, DNP3, IEC 870-5-104 telecontrol protocols). When using the SINAUT ST7 telecontrol protocol, the SINAUT TIM communication module can be used in addition to the TCP/IP WAN router or as an alternative.

Application

Telecontrol communication over the wide area network is largely determined by the communication infrastructure which already exists. Various transmission media such as dedicated line, analog or digital telephone networks, wireless networks (GSM or private), DSL or GPRS can also be combined with each other.

SINAUT ST7 telecontrol protocol

Detailed information for implementing telecontrol applications with the SINAUT ST 7 telecontrol protocol via the Industry Mall.

IEC 870-5-101/-104 telecontrol protocols

Detailed information for implementing telecontrol applications with the IEC 870-5-101/-104 telecontrol protocols via the Industry Mall.

DNP3 telecontrol protocol

WinCC/TeleControl for WinCC V7.0 SP2 also supports the DNP3 telecontrol protocol. Widely distributed outstations (RTUs) can be controlled and monitored with the DNP3 telecontrol protocol via serial or Ethernet TCP/IP communication links by means of the telecontrol center in SIMATIC WinCC. The control center integrated with SIMATIC WinCC TeleControl into the SCADA system is the master during telecontrol communication. The slaves are represented by the outstations. SIMATIC S7-300/S7-300F and S7-400/S7-400F/S7-400H/S7-400FH controllers as well as third-party RTUs can be used as outstations.

Further hardware and software components round off the range of products:

- TIM communication modules
- TCP/IP converters – serial and MD modem modules
- GSM/GPRS components
- TCP/IP routers and switches
- SCALANCE S612 and S613 security modules
- Dedicated-line accessories
- Cables
- Engineering package for configuration of DNP3 data objects, stations, networks and connections as well as for diagnostics

In order to implement telecontrol networks, basic topologies including point-to-point, multi-point, star and ring can be configured using classic or TCP/IP-based media. These can be combined flexibly independent from existing infrastructure.

Classic WAN media:

- Dedicated line via modem, e.g. SINAUT MD2
- Private wireless networks
- Analog telephone network
- Digital ISDN network
- Mobile radio network GSM

TCP/IP-based WAN media:

- Ethernet networks, e.g. SCALANCE X with fiber-optic cables
- Industrial Wireless LAN with SCALANCE W
- Public networks and the Internet using DSL and/or GPRS

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/TeleControl

Function

Special characteristics of DNP3 communication

- Change-driven data transmission
 - Change-driven transmission of process data between RTU and control center
 - Signaling of RTU, control center or connection failure
 - Automatic data updating for all communication partners involved following troubleshooting and following the startup of the RTU or control center
- Chronological processing of process data
 - Time tagging of all data frames at the place of origin allows process data to be archived by the process control system in the correct chronological order
 - The time of the DNP3 stations in the WAN can be synchronized via SIMATIC WinCC (including summertime/wintertime switchover)
- Local data storage
 - The TIM communication module can temporarily store (for several hours or even days) message frames should the connection or the communication partner fail
 - Intermediate storage of message frames of lower priority in the case of priority-controlled data transmission (with dial-up networks or quantity-dependent data transmission costs)

Operating modes

The DNP3 telecontrol protocol supports the following operating modes:

- Polling
- Polling with time slot procedure
- Multi-master polling with time slot procedure
- Spontaneous mode in dial-up networks
- Spontaneous mode in the TCP/IP-based WAN

Integration

Integration of WinCC/TeleControl for WinCC V7.0 SP2 into the WinCC SCADA system offers particular advantages for the water and waste water sectors, as well as oil and gas sectors, especially in the case of the following types of plant:

- Freshwater treatment and distribution
- Wastewater treatment plants
- Oil and gas pipelines and water pipes
- Oil and gas drilling fields and the associated treatment plants

In these types of plant, remote outstations such as pumping stations, valve stations or automated stations for wellheads must be integrated.

Through the support of communication protocols for RTUs such as SINAUT ST7, WinCC/TeleControl for WinCC V7.0 SP2 supports the following advanced communication concepts:

- Reduction in the transferred data volume by means of event-controlled communication mechanisms for alarm and measured value information.
- Time-synchronization of RTUs and correct time stamping of all data in the RTU.
- Tolerance of lower bandwidth, high latency or lack of reliability of communication lines
- Prevention of data loss due to communications failure through data backup in the RTU
- Support of communication media with serial interface (dedicated lines, dial-up connections over analog telephone lines and ISDN lines), various radio devices (standard, spread spectrum modulation), microwave and GSM

- Support for TCP/IP-based WANs (Wide Area Networks) such as DSL, GPRS or Ethernet radio networks
- Support for redundant communication connections
- Expanded communication diagnostics functions for RTU communication links
- Remote programming of RTUs
- Support for different communication topologies – Point-to-point, multidrop (multistation mode) and hierarchic network structures
- High quality server redundancy scheme without data loss in the case of server failure

Through the support of communication protocols for RTUs such as IEC 60870-5 and DNP3, SIMATIC TeleControl for WinCC V7.0 SP2 supports the following advanced communication concepts:

- Reduction in the transferred data volume by means of event-controlled communication mechanisms for alarm and measured value information
- Time synchronization of RTUs and correct time stamping of all data in the RTU
- Tolerance of lower bandwidth, high latency or lack of reliability of communication lines
- Prevention of data loss due to communications failure through data backup in the RTU (not all non-Siemens RTUs support this)
- Support of communication media with serial interface (dedicated lines, dial-up connections over analog telephone lines and ISDN lines), various radio devices (standard, spread spectrum modulation), microwave and GSM
- Support for TCP/IP-based WANs (Wide Area Networks) such as DSL, GPRS or Ethernet radio networks
- Support for redundant communication connections
- Expanded communication diagnostics functions for RTU communication links
- Remote programming of RTUs
- Support for different communication topologies – Point-to-point, multidrop (multistation mode) and hierarchic network structures
- High quality server redundancy scheme without data loss in the case of server failure

Integration (continued)

Outstations/remote terminal units

WinCC/TeleControl for WinCC V7.0 SP2 supports the following preferred outstations for local distributed automation:

- Controller integrated into ET 200S (IEC 870-5-101/104 telecontrol protocols); for cost-sensitive applications, up to approx. 30 I/O signals or approx. 200 data points
- S7-300/S7-300F controller (SINAUT ST7, DNP3, IEC 870-5-101/104 telecontrol protocols); for extremely flexible configuration, up to 100 I/O signals or approx. 2000 data points
- S7-400/S7-400F controller (SINAUT ST7, DNP3, IEC 870-5-101/104 telecontrol protocols); up to 500 I/O signals or approx. 5000 data points
- S7-400/S7-400F redundant controller (IEC 870-5-101/104 and DNP3 telecontrol protocols); up to 500 I/O signals or approx. 5000 data points
- Third-party station with the IEC 870-5-101/104 and DNP3 telecontrol protocols (depending on type of station)

The following table provides an overview of the current options for connecting to these outstations:

Spectrum of outstations and integration versions							
Telecontrol protocol	SINAUT ST 7		DNP3		IEC 870-5-01	IEC 870-5-04

More information

For an overview of the complete performance spectrum on the Internet, visit:

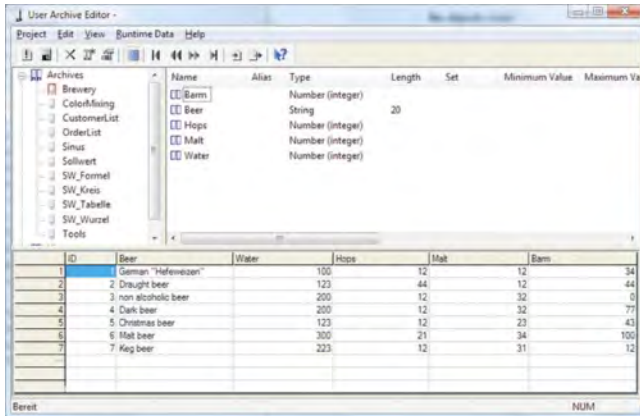

Service & Support:

http://www.siemens.com/automation/csi_en_WWW/service

Technical Support (hotline) for Automation & Drives:

http://www.siemens.com/automation/csi_en_WWW/support_request

Overview

- Option for SIMATIC WinCC for managing data sets in user archives that contain related data.
- WinCC and its automation partners (e.g. a SIMATIC S7 controller) write these data sets and exchange them if required.
- A license is only required for the server (or single-user system).

The WinCC/User Archives option can also be used in the context of the WinCC/Web Navigator (see also WinCC/Web Navigator option).

Benefits

- Storing and managing of any user data in data sets
- Flexible display using ActiveX controls
- Simple linking of data set fields to the process via direct tag linking
- Import/export functions for further processing with other tools (e.g. MS Excel)

Function

- Input of parameter sets (e.g. operating parameters of a machine) in WinCC, storage of the sets in the user archive, and forwarding to the automation level
- Continuous acquisition of production parameters by the automation system and forwarding of the parameters to WinCC at the end of the shift
- Acquisition of batch data
- Specification of production parameters
- Management of warehousing data

WinCC user archives are created and assigned data in a user-friendly way using a dedicated editor. Special ActiveX controls are used for displaying data from the user archives at runtime.

Data sets and fields from user archives are linked to the process via direct tag linking.

Import and export functions support read-in/out of data via external applications (e.g. MS Excel). Freely selectable filter criteria allow clear representation of data sets.

WinCC provides functions for free organization of the data storage in the user archives that affect archives, data sets and fields. Archives can thus be generated, opened, closed, or reset, and data sets or field contents can be read, written or overwritten.

Sequence archives can accommodate batch data, shift production data, or also product quality data, and meet legal obligations for verification thanks to gap-free recording.

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/Web Navigator

Overview

- Option for SIMATIC WinCC for operator control and monitoring of plants via the Internet, in-house intranet or LAN
- Configuration from:
 - a Web server with the SIMATIC WinCC software as a single-user, client or server version and a Web client that enables operator control and monitoring of a current WinCC project via an Internet browser with ActiveX support. The WinCC basic system does not have to be installed on the client computer. It is also possible to use the Web client without Microsoft Internet Explorer.
- Licensing:
 - A license is required in order to use the Web server.
 - Licenses are available for access to the Web server by 1, 3, 5, 10, 25, 50, 100 or 150 clients.
 - Low-priced Web Navigator diagnostics licenses are available for the remote diagnostics via multiple, distributed Web servers.

Overview (continued)**Highlights:**

- Installation of the Web server - in distributed systems - also on a WinCC Client;
 - Access to as many as 18 subordinate WinCC stations (servers) possible
 - Web clients offer common views of data on various WinCC Servers
 - If you are using WinCC/Redundancy, the Web clients will also transfer via the subordinate WinCC servers (requires WebNavigator server to be installed on the WinCC Client (RT128))
 - Separating the Web functionality from the WinCC data servers makes the overall system safer and more scalable in respect of load. Integrated user management with WinCC: The configured WinCC operator authorizations are taken into account on the Web client.
- Access to WebNavigator server from the WebNavigator TIA Portal series of products
- Access to user archives
- VB scripts are supported in the same way as the new objects and RT functions in WinCC V7.x
- User-friendly services and tools for distributing customized objects (controls, files) to Web clients can be supplied for use as an integration platform. These components can then also be integrated into cross-Web/Server navigation.
- Distribution of load across a number of Web servers in order to run several hundred Web clients in a single system; Web clients are distributed across Web servers automatically.
- Version 7.2 supports Microsoft Internet Explorer Version 8.0 and 9.0, including tabbed browsing. A new license is not required for separate tabs.
- With the WinCC Web Viewer, the process screens can be displayed on the Web client independently of the Internet Explorer. Settings for the client are made on the client itself.
- The WinCC Web Viewer can also be used in conjunction with the Microsoft Terminal Service.
- From version 7 on, the WebNavigator can also be operated in "view only" mode and is thus used as tool for operating and navigating only via WinCC screens by means of the Internet Explorer.
- The cursor for View only mode can be selected according to individual requirements.
- Web server logins and logouts are recorded in the alarm and audit archive.
- There is a gadget available for the Windows 7 operating system in which selected WinCC process screens can be displayed. The gadget does not require any additional WebNavigator license. The WebNavigator server can be selected direct using the gadget.
- Security is increased by adjustable automatic logout. If an automatic logout is to take place, an absolute or inactive time period can be set.
- Runtime in the Web client can be terminated by means of scripting.

Benefits

- Operator control and monitoring across long distances and on different platforms (PC, local panel, mobile PDA)
- Large configurations with up to 150 operator stations
- Fast updating rates thanks to event-driven communication
- Optimally tailored clients for operating and monitoring, analysis, service and diagnostics
- Acceptance of configuration data for the Web, generally without changes
- Minimum maintenance costs thanks to centralized software administration
- High security standards and availability
 - Increased security due to separation of WinCC server and Web server (Web server in secure environment)
 - Support for commonly used security mechanisms (routers, firewalls, proxy servers)
 - Access authorization and user administration

New in V7.2

- New license stages for 1, 5, 100, 150 clients and associated powerpacks 1/3, 3/5, 50/100, 100/150
- Unicode support
- PDL password protection with WebNavigator PDLPad
- Login / logout / register: log user in/out on the Web Navigator client
- Manual logout in the Internet Explorer by means of ODK C-Script (PWRTLogout function)
- Configurable logout/login in the WinCC RT Viewer

Application

In addition to the typical use of the Web Navigator in WANs (**Wide Area Network**), the Web Navigator is also suitable for solving especially low-cost applications. This especially includes applications that have a pronounced distributed structure (water/wastewater, oil & gas), or in which access to process information is only sporadic (building management).

The Web Navigator also permits vertical integration, i.e. a networked IT landscape with integrated data flow between the planning and operating levels within a company. Only a standard browser is required for direct access to current process information.

The Web Server can have its own dedicated direct process connection. An alternative is coupling via OPC or the use of a remote Web Server to a WinCC Client. This simultaneously increases security and reduces the communication load of the plant.

In addition to the Standard Web Navigator licensing there is the so-called Diagnostics Client, with identical functions in principle, but which is especially suitable for the following applications:

- Remote diagnostics/operation of several unmanned WinCC stations
- Central control rooms which monitor multiple Web Servers on one user interface
- Power Users that always require guaranteed access to the server regardless of the number of users already logged on to the server.

SIMATIC HMI Software

SIMATIC WinCC options

WinCC/Web Navigator

Design

Licenses for the Web Navigator

The Web Navigator Client software can be installed as many times as required without the need for a license.

- Server-based licensing; a license is required in order to use the Web Navigator Server. Licenses are available for simultaneous access to the Web server by 1, 3, 5, 10, 25, 50, 100 or 150 clients.
- Diagnostics client licensing; for optimum-cost access by one or a small number of Web Navigator Clients to numerous Web servers (e.g., for the purpose of diagnostics). This client license provides guaranteed access to Web servers at any time. In respect of function there is no difference compared with regular Web Navigator Clients and the two can be mixed.

Web Navigator Clients can:

- Access a number of different web servers or
- Access data on a number of higher-level WinCC stations simultaneously via a remote Web server

On the server side, only one Web Navigator Diagnostics Server license or, alternatively, one Standard Web Navigator license is required.

Alternatively, a number of Web Navigator Servers with the same WinCC project can be combined to create a "server farm". This means that it is possible for several hundred Web clients to have access to the same database. The service ensures that the clients accessing are distributed evenly across all servers. If a server fails the Web client is automatically forwarded to the next available server.

In order to use this functionality you will need to install a Web Load Balancing license on the Web servers involved. Each Load Balance package contains 2 licenses.

An inexpensive expansion option for Web Load Balancing is available for redundant WinCC stations on which the Web Navigator is also installed. For this purpose, you need to install a Web Load Balancing Step Up license on the web servers involved. Each Step Up package contains 2 licenses.

Thin Client solutions

The Web Navigator can also run under Windows Server 2003 or Windows Server 2008 terminal services. A Windows Server 2003 or Windows Server 2008 (or higher) operating system is required. This makes it possible to connect SIMATIC Thin Clients as visualization stations to WinCC, for example.

For this purpose, the Windows terminal services must be installed on the PC on which the Web client is installed. A Windows Server 2003 or Windows Server 2008 (or higher) operating system is required. Up to 25 ThinClients can be connected to one terminal server.

Applications:

- Mobile devices
- Handhelds
- Rugged on-site visualizations

Hybrid configuration

Web Navigator and DataMonitor clients can be mixed in a single system.

Function

The Web Configurator (Wizard) makes setting up and configuring a Web Navigator Server very easy. WinCC process screens to be visualized via the Internet are created as usual using WinCC Graphics Designer. Under normal circumstances the project can be worked on locally without modification. The Web Publishing Wizard optimizes the screens for transmission and display on the Internet. A standard browser is all that is required to display WinCC process screens on the Web Client. The MS Internet Explorer is used depending on the Web Navigator version used (tip: start the Internet Explorer in full-screen mode with the start parameter "-k").

The operator on the Web Client is integrated in the central WinCC user administration and can operate and monitor the system according to the configured access rights. The Web Navigator supports all standard security mechanisms that can be used for applications on the Internet, e.g. routers, firewalls and proxy servers.

More information

System requirements – Web server

For WinCC/Web Navigator V7.2

- Windows 7 SP1 (32- and 64-bit) Business, Enterprise and Ultimate (max. 3 clients)
- Windows XP Professional Service Pack 3 (max. 3 clients)
- Windows Server 2003 SP2
- Windows Server 2008 SP2 32-bit
- Windows Server 2008 R2 SP1 64-bit
- Internet Explorer V7.0, V8.0 and V9.0
- Microsoft SQL Server 2008 R2 SP1, 32-bit (included in the WinCC product delivery)

For WinCC/Web Navigator V7.0

- Windows 7 (32-bit) Business, Enterprise and Ultimate (max. 3 clients)
- Windows XP Professional Service Pack 3 (max. 3 clients)
- Windows Server 2003 SP2 and Windows Server 2003 R2 SP2
- Windows Server 2008 SP2
- Internet Explorer V6.0 SP1 or SP2 as well as Internet Explorer V7.0.
- Microsoft SQL Server 2005 SP2 (scope of supply of WinCC)
- WinCC Basic System V7.0 SP2

For WinCC/Web Navigator V6.2 SP3

- Windows 2000 Professional Service Pack 4 (max. 3 clients)
- Windows XP Professional or Service Pack 3 (max. 3 clients)
- Windows Server 2003 SP2 or Windows Server 2003 R2 SP2
- Internet Explorer 6.0 SP1, SP2 or 7.0 (without multitabbing)
- Microsoft SQL Server 2005 SP1 (scope of supply of WinCC)
- WinCC basic system V6.2 SP3

System requirements –Web client

For WinCC/Web Navigator V7.0

- Internet Explorer V6.0 SP1 or SP2 as well as Internet Explorer V7.0

For WinCC/Web Navigator V6.2 SP3

- Internet Explorer 6.0 SP1, SP2 or 7.0 (without multitabbing)

WinCC Web Navigator V6.2 SP3 ASIA

(requires SIMATIC WinCC V6.2 SP3 ASIA)

The functions included in this version differ from the standard version of WinCC/Web Navigator V6.2 SP3 as follows:

- This version does not allow an Asian Web Navigator client to access a non-Asian server and vice versa.

Overview

G_ST80_XX_00175

WinCC Premium Add-ons – Solutions for all sectors and technologies

The basic system is designed to be independent of any specific technology or industrial sector, to be modular and flexibly expandable and to permit not only simple single-user applications in machine construction, but also complex multi-user solutions or even distributed systems with several servers and clients in plant engineering. WinCC Premium Add-ons are supplementary products that have been created by competent partners working in the specific sectors and technologies and represent interesting expansions for WinCC.

WinCC Premium Add-ons are not IA (Siemens Industry Automation) products, but the products of partners who are committed to complying with certain quality features and boundary conditions. The Premium Add-ons are checked, for example, in the Siemens Test Center for their compatibility with the basic WinCC system and supported in the first instance by the central Hotline. As they are important application- and sector-specific add-on products for SIMATIC WinCC, they are marketed jointly by Siemens and the respective add-on suppliers. The WinCC Premium Add-on products can be found on the Internet (see Further Information) and in the "Online WinCC Premium Add-on Catalog".

Premium Add-ons for Connectivity:

- **PM OPEN IMPORT system software**
Importing WinCC flexible / Comfort / Advanced archives into the WinCC / WinCC Professional system.
- **PM OPEN EXPORT system software**
for exporting WinCC data to local storage media or storage media released in the network.
- **PM OPEN TCP/IP system software**
permits bidirectional exchange of WinCC data (tags, messages) with one or more computers that communicate using the TCP/IP protocol.
- **Historian CONNECT ALARM system software**
permits importing of messages and alarms from WinCC and WinCC flexible / Comfort / Advanced into the SIMATIC IT Historian
- **TOP Server/TOP Server UCON**
expands the connection capability for WinCC & WinCC flexible Advanced (PC based runtime) on an OPC basis

Premium Add-on for process management:

- **PM CONTROL system software**
is a recipe system for user-friendly generation and modification of recipes.
- **PM QUALITY system software**
is an archive system for the administration of job and batch-related production and process data.

Premium Add-on for sector products:

- **SENTRON PAC3200 library for SIMATIC WinCC**
permits seamless integration of the SENTRON PAC3200 multifunctional measuring instrument in WinCC.
- **Sm@rtlib function library**
provides function blocks for S7-300/400 as well as faceplates and icons for WinCC and WinCC flexible from the areas of process industry, HVAC, pharmaceuticals and energy.
- **ACRON for WinCC / PCS 7**
is used for long-term archiving and logging of process data for small to medium-sized plants, specifically in the water supply and treatment industry.

Premium Add-on for configuration tools:

- **DCC TranslationEditor**
for translating multilingual projects with in-built security, convenience and globalization features.

Premium Add-on for diagnostics and maintenance:

- **Management System Alarm Control Center**
for transmitting fault messages via various communication paths, such as GSM, LAN, e-mail.
- **PM MAINT system software**
is a tool for the maintenance of production plants.
- **PM ANALYZE system software**
for the analysis of fault and operating messages, as well as process values.

SIMATIC HMI Software

WinCC add-ons and partner management

Overview (continued)

Competent partners

With SIMATIC WinCC, you not only get excellent products to suit your requirements, but we will also support you with selecting a partner for your automation solution. In our global network of Siemens Automation Solution Providers you will always find competent partners in your neighborhood. In addition, we implement and support the Siemens-internal WinCC Competence Centers and the WinCC Professionals external system integrators on the basis of WinCC customer- and industry-specific and economic solutions.

WinCC Competence Centers

Mannheim

Emphasis on process management

- Sector-independent solutions and products in the fields: Production, environmental protection, maintenance and diagnostics
- Connectivity tools, system integration, connection to SAP R/3
- Support of FDA validation and WinCC ODK
- Support for advanced users with application of ODK and VBA
- Customer-specific software development for panels, PCs/IPC and servers
- Advice on web technologies, Web Server/Thin Client, DataMonitor
- Customer-specific workshops, e.g. VBS, VBA and all WinCC options, e.g. Process Historian, Information Server and additional WinCC topics as required by customer

Stuttgart

Emphasis on production technology

- Solutions for maintenance management
- Web-based solutions with WinCC

Nuremberg

Solutions in the Oil & Gas, Metal & Mining, Pulp & Paper sectors

- Network and security
- Microsoft Certified
- Migration from COROS to WinCC
- Customized expansions also for WinCC flexible
- Web solutions
- Customer-specific workshops, e.g. training courses for VBS, VBA, web technologies à Web Server/Thin Client, DataMonitor à Webcenter Reports, Excell Workbook, and all WinCC topics as required by the customer (the latter with lead time)

Overview

SIMATIC WinCC Open Architecture

SIMATIC WinCC Open Architecture is a SCADA system for visualizing and operating processes, production flows, machines and plants in all industrial sectors.

SIMATIC WinCC OA is built consistently on object-oriented structures. Due to this consistent and well-considered use of object-oriented structures, from process images to the database, the engineering costs improve for SIMATIC WinCC OA customers.

Distributed systems enable the connection of up to 2 048 autonomous SIMATIC WinCC Open Architecture systems via a single network. Each subsystem can be configured either as single-user or multi-user system, each of which may be redundant or non-redundant.

- Current version:
SIMATIC WinCC Open Architecture V3.12
- Runs under:
 - Windows 8.1 Enterprise (64-bit)
 - Windows 7 Ultimate/Enterprise/Professional SP1 (64-bit)
 - Windows Server 2012 (64-bit)
 - Windows Server 2008 R2 (64-bit)
 - Red Hat Enterprise Linux 6.4 (64-bit)
 - OpenSUSE 12.3 (64-bit)
 - Sun Solaris 10 SPARC (32-bit)
 - Sun Solaris 10 x86 (64-bit)
 - VMWare ESXi Version 5.1 and ESXi 5.5

Note:

Native 64-bit support.

Benefits

- Efficient engineering and flexible plant expansion
 - Object orientation
 - Unlimited number of data points
 - Mass engineering
 - Multilingual with UTF-8 support
- Object-oriented data model
 - Mapping of setpoint values and measured values for a physical plant object onto a structured data point
 - Data point comprises a tree structure with data point elements
 - The individual process values are mapped onto the data point elements
 - Any number of data points can be instanced from one defined data point structure (data point type), e.g. 20 pumps of the same type
 - Data point types can be embedded in other data point types, which enables more complex plant objects to be generated (e.g. one pump station comprises 2 pumps)
 - Graphical plant symbols can be linked with a data point type. They only need to be drawn once, but can be used for all instances of the linked type
 - Savings in engineering outlay
- Freely scalable
 - From a small single-user system up to a networked, redundant high-end system
 - Distributed systems of up to 2 048 servers
- Platform-independent
 - Available for Windows, Linux and Solaris
- Native 64-bit support
 - More system memory is usable, due to native 64-bit support
 - This means that larger data quantity structures per server can be processed
- Maximum fail-safety and availability
 - Hot standby redundancy
 - Disaster recovery system
 - SIL3 certification according to IEC 61508
- Platform for customized solutions
 - Quick and easy implementation of new processes
 - Swift adaptation of the control and visualization of the plant to current market requirements
 - Company-internal programming and in-house developments enable independence and protection of intellectual property
 - Structure of standardized solutions permits continuous use
 - Support of brand-labeling
 - Individual brand names for OEM developments
- Openness thanks to comprehensive driver and interface options:
 - SIMATIC S7 TCP/IP, Modbus TCP/IP, Ethernet/IP, SNMP, BACnet, OPC DA Client & Server, OPC A&E Client & Server, OPC UA Client & Server (DA, AC), SSI driver, IEC 60870-5-101, -104, DNP3, SINAUT, IEC 61850, RK512, TLS, Teleperm M, API, Cerberus
- Seamless traceability of system states by means of high-performance archiving:
 - Data archiving in value archives (internal database format)
 - Data archiving in an Oracle database
- Expandable by means of add-ons and solution frameworks:
 - Add-on for integration of video management systems (VIDEO)
 - Add-on for quick and easy engineering (ETool, AdvS7, etc.)
 - Add-on for increasing the availability (DRS, etc.)
 - Add-on for clarity in distributed systems (GIS Viewer, etc.)
 - Add-on for efficient maintenance management (AMS, Scheduler, etc.)
 - Add-on for mobile operability (Web Client, Ultralight Client, etc.)
 - Add-on for efficient building automation technology (BacNet, etc.)
- Mobile App SIMATIC WinCC OA Operator

SIMATIC HMI Software

SCADA system SIMATIC WinCC Open Architecture

SIMATIC WinCC Open Architecture

Application

The SCADA system SIMATIC WinCC Open Architecture addresses applications with high demand for customer-specific adaptations, large and/or complex applications, as well as projects that demand special system requirements and functions.

SIMATIC WinCC Open Architecture demonstrates its high performance in networked and redundant high-end control systems in particular. Integrated, high-performance communication is guaranteed from the field level to the control station, from the machine to the company headquarters. In every situation, high availability, reliable information, fast interaction, and user friendliness are guaranteed. Applications can also be changed without interrupting the process. Profitability, efficiency and safety are therefore always in equilibrium. SIMATIC WinCC Open Architecture displays its reliability in a wide range of business-critical applications.

With SIMATIC WinCC Open Architecture, ideas can be quickly and easily converted into new applications. SIMATIC WinCC Open Architecture is open for independent in-house developments and also enables own product branding.

Thanks to its special system properties, SIMATIC WinCC Open Architecture meets the highest demands especially in the case of traffic solutions, building management systems and supply systems (power, water, oil and gas, etc.).

Design

SIMATIC WinCC Open Architecture is available as a single-user runtime license, multi-user runtime license, Web Client license, and parameterization and development license. With SIMATIC WinCC Open Architecture the required license is determined, among other things, according to the number of inputs and outputs (I/O).

An "I/O" refers to a data point element (DPE) whose content is exchanged either by means of drivers (e.g. S7 driver communicates with a PLC), with other software systems. Internal data point elements, i.e. DPEs without communication to the outside, are not counted for licensing. The licenses are available either with an unlimited number of I/Os or with limitations of 500 to 250 000 I/Os.

The multi-user runtime license allows working simultaneously from different PCs, with the licensing taking place via the server. The active clients are then counted. The web client and the ultralight client enable the visualization and operation of process pictures over an exclusively HTTP connection between the server and the respective web client. The parameterization and development licenses extend a runtime license with the option of configuration and parameterization. They each require a server license.

Function

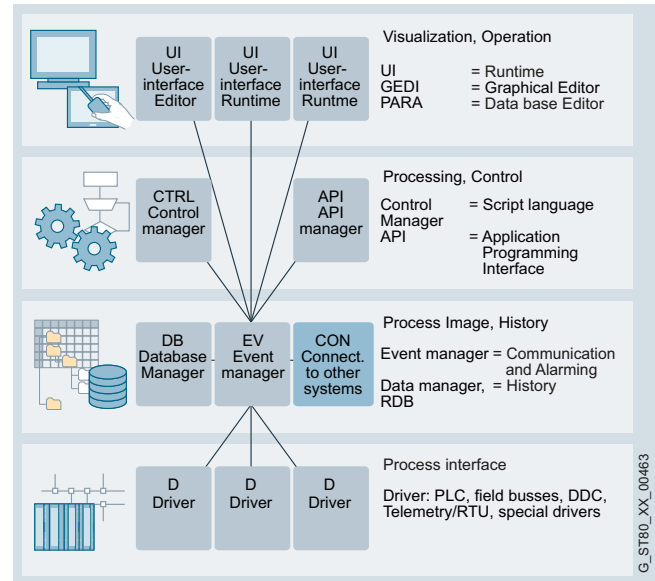

SIMATIC WinCC Open Architecture is a very modular SCADA system.

The required functionalities are realized by specific, functional entities created for various tasks. In SIMATIC WinCC Open Architecture these units are called "Managers" – they are also independent processes in software terms.

WinCC OA Manager	Task
Event Manager (EV)	The Event Manager (EV) is the processing center in WinCC OA. This unit provides a constantly updated image of all PowerTags in the memory. Each other functional unit (Manager) that wants to access the data receives it from the process image of the Event Manager and does not have to communicate directly with a controller. Conversely, a command from an operator station is initially set only as a value change in the process image of the Event Manager. The associated driver then forwards it to the corresponding target device (e.g. PLC) automatically. The Event Manager is a kind of central data distributor, in effect the communication center for WinCC OA. Furthermore, this Manager also carries out the alarm handling and can execute various arithmetic functions autonomously.
Driver Manager (D)	The lowest level in a WinCC OA System is represented by the process connections, referred to in WinCC OA as drivers (D). These are special programs that handle the communication with the control and field level. Since numerous different forms of communication are possible with the PLCs or telecontrol nodes, there are different drivers that can be selected. In very simple terms, the driver is a unit for converting a particular protocol into the internal communication form of WinCC OA. The driver reads the current states, measurement or counter values from the field and in the opposite direction it forwards commands and setpoints to the lower-level controllers (= the term "control" should be used here and below to represent all possible devices of the basic automation (PLC, DDC, telecontrol system, etc.)).
Data Manager (DB)	The Data Manager (DB) represents the link to database. On one hand, it involves the parameterization data of an application that is to be stored in such a database. On the other hand, it involves the historical recording of changes in values or alarms. If a user wishes to query historical data at a later date, then the Data Manager completes this request and not the database itself.

Function (continued)

WinCC OA Manager	Task
Control Manager (CTRL)	<p>WinCC OA has numerous options for implementing your own algorithms and processing. The two most important are the internal language control (CTRL) and the general application programming interface (API).</p> <p>Control is an extremely powerful scripting language. The processing is interpretative, so that no compilation is required. The syntax is almost identical with ANSI-C, with some modifications for simplification. This is a fully developed, procedural high-level language with multi-threading (= quasi-parallel processing of individual programs; the system itself carries out the processing check). The language offers a comprehensive function library for tasks of the control and visualization technology. Control can be used as a stand-alone process (Control Manager), for animation and user interface design or for standardized, data object-oriented processing functions.</p> <p>The API (WinCC OA API) represents the most powerful form of functional expansion. It is configured as a C++ class library and allows the software developer to implement individual functions as an independent, additional manager (forecast system, simulation, tools, proprietary databases, etc.).</p>
User Interface Manager (UI)	<p>The interface to the user is created by the User Interface Manager (UI). This comprises a graphics editor (GEDI), a database editor (PARA) or the general user interface of the application (Vision module). The User Interface serves to display values, issue commands or track alarms in the alarm list. Trends and reports are also usually part of the UI. From a programming viewpoint, the user interaction in WinCC OA is completely isolated from the background processing – this is merely a view of the data of the current process image or the history.</p>

A WinCC OA System consists of function-specific units, the managers. For special tasks such as redundancy, management for distributed systems, web server, reporting, simulation, COM etc., further managers are available.

The powerful configuration functions contribute to a reduction of engineering and training overheads and lead to increased flexibility and operational reliability.

SIMATIC HMI Software

SCADA system SIMATIC WinCC Open Architecture

SIMATIC WinCC Open Architecture**Function** (continued)

Special functions	Task
Access to external databases	The database interfaces offer the possibility of access to external databases. Under Windows, the link is established via the ADO Standard. ADO (ActiveX Data Objects) is an interface developed by Microsoft for vendor-independent access to data sources of all types, primarily databases. The data source for ADO is an OLE DB Provider, although ODBC-compatible databases can also be addressed via an internal wrapper. In Linux, the Qt library is used as an interface to relational databases. Access in this case is either direct via the native DB-API or via ODBC.
Application Programming Interface (API)	The API offers a series of functions that enable WinCC OA to be extended with special managers. A manager means a program that communicates with the system by via a protocol defined by WinCC OA.
COM (Component Object Model)	This is a specification for the development of modular software components that can be used by each COM-compatible application. COM components can easily be integrated into such applications and can even be removed from an application during runtime. COM components can be programmed in a host of different languages, even though C++ is usually used for this purpose. The specifications OLE, ActiveX and DirectX are based on the COM technology.
Control expansion	Expansion that allows C++ functions to be added to the programming language.
Panel topology/summation signal	Generation of panel hierarchies/topologies in existing or new projects and automatic creation of summation signals of the alarm data points that are located in the panels of the topology.
Redundancy	The failure safety in a redundant system is implemented by means of hot standby. Hot standby is a hardware-independent solution for high availability. This is a safety concept that consists of two interconnected server systems. Both servers are constantly in operation and are subject to the same functional loading (but only one server is ever active; the second compares the data with the primary unit at runtime). On the failure of one unit, an "on-the-fly changeover" takes place and the previously passive server assumes the leading role. This guarantees access to data or functions at all times.

Special functions	Task
SMS	Allows the sending and receiving of text messages with WinCC OA.
Encryption of panels and CTRL scripts/libraries	Allows your panels or scripts to be encrypted, thereby protecting your knowledge and work.
Script Wizard	Easy-to-use tool that simplifies the creation of animated, graphical plant symbols, which saves time during engineering.
Simple Symbols	Basic package of plant symbols that have been created using the script wizard. These can be adapted quickly and easily to the specific requirements of the customer.
Easy Faceplates	Simple parameter assignment of predefined pop-up windows that display details of the associated plant symbol. Without any additional drawing outlay, several standard functions per object can be activated for the detail view (alarm display, trend display, measured value table, setpoint value table, address table, notes).
Drag and Draw	Several representative graphical objects can be defined and configured for each plant object in the data model (data point type). These are pre-configured and need only be moved to the panel via drag-and-drop when the plant pictures are drawn. This saves valuable time during engineering.
Distributed systems (see the diagram below)	Permits the coupling of two or more autonomous WinCC OA systems via a network. Each subsystem of a distributed system can be configured either as a single-user or multi-user system, each of which may be redundant or non-redundant. A sub-system in this context means a server on which an Event Manager is running, whereby in case of redundancy both redundantly operating servers are considered as one system.

Function (continued)

The diagram shows a detailed representation of the two computers Server 1 and Server 2. Server 1 is in the management mode (active) and Server 2 is in hot standby mode (passive).

In the case of redundant operation, the UIs of both operator stations are connected to both Event Managers, however only the data of the active system is displayed on both UIs.

The Event Manager of the passive system is restricted exclusively to communication with the Event Manager of the active system for comparison of the process data (it sends no data to the connected UIs or it discards messages from the drivers – this can be seen in the figure with the switches on the UIs or on the passive Event Manager).

SIMATIC HMI Software

SCADA system SIMATIC WinCC Open Architecture

SIMATIC WinCC Open Architecture

Integration

Integration in automation solutions

SIMATIC WinCC Open Architecture is an open SCADA system with comprehensive drivers and flexible options for connection to other external systems.

Depending on the communications protocol and the bus physics used, specific drivers are used in each case:

- Serial protocols: RK512, 3964R, etc.
- Ethernet: Industrial Ethernet (S7), Modbus TCP (OpenModbus), Ethernet IP (AB), etc.
- Telecontrol systems: SINAUT, SSI (Ethernet), IEC 61850, IEC 60870-5-101, IEC 60870-5-104, ...
- Vendor-independent interfaces: OPC UA, etc.

Coupling overview

Protocol	Description
SIMATIC S7	via TCP/IP and MPI
OPC Client (Data Access)	<ul style="list-style-type: none"> • Compatibility with specifications DA 1.0 and 2.05a • Connection to inproc, local or remote server • Connection with up to 20 servers at the same time • Monitoring of the connection to the server and automatic reconnection if the connection is interrupted. • Address browsing if supported by the server. • Benefits of the CALL-R functionality for CALL-R servers (simplified parameter assignment)
OPC Server (Data Access)	<ul style="list-style-type: none"> • Corresponds to Data Access 2.05a specification (reading/writing of online values). • Is to be started as a manager just like other drivers. • The provided DPEs (server -> client) can be easily and quickly defined via data point groups. • DPEs can be declared as readable (read-only access is permitted; Group OPCRead) or as writable items (Group OPCWrite). • Clients can browse the WinCC OA OPC Server hierarchically.
OPC Alarms & Events	OPC Alarms & Events (abbreviated to OPC A&E) is, in addition to Data Access, a further standard for performing central alarm management on a cross-vendor basis. OPC A&E is used to ensure the link to other control systems and the display of alarms/events in a hierarchical system.
OPC UA (Unified Architecture)	<ul style="list-style-type: none"> • The OPC UA client supports the OPC UA standards Data Access and Alarms & Conditions. • The OPC UA Server supports the OPC UA standards Data Access and Alarms & Conditions.
Modbus TCP	Modbus/TCP is based on the serial Modbus protocol, which was adapted for TCP/IP. The Modbus/TCP driver can be used simultaneously for Modbus/TCP or UNICOS.
Ethernet/IP	Ethernet/IP is used for communication with several PLC generations and families from Rockwell Automation / Allen Bradley. The protocol is part of the application layer and is based on the standard TCP/IP network protocol.
S-bus	The WinCC OA S-bus driver is used to link SAIA PCD control devices to WinCC OA projects. Client mode of the SAIA S-Bus driver is used. Communication is carried out using the UDP; the serial version of the protocol is not supported.

In SIMATIC WinCC Open Architecture, several drivers can be operated in parallel. These can be of the same type or also of different types. It is possible in a SIMATIC WinCC Open Architecture system, for example, to establish connections via the S7 protocol to a SIMATIC controller, via IEC 60870-5-104 to a telecontrol system, and via OPC DA to any OPC server at the same time.

Protocol	Description
Serial: RK512/3964R	Is used for interfacing a PLC via the 3964R/RK512 protocol
Cerberus	Cerberus is a fire, intrusion and gas alarm system. The Cerberus driver guarantees communication to and from the central fire alarm systems and building security facilities in the event a fire, gas or intruder alarm.
SSI	Is used for the interfacing of SAT remote control systems. The data is exchanged via the LAN (Ethernet, IEEE 802.3); the frame formats used are the SSI formats defined by SAT. The SK 1703 telecontrol components with a suitable communication card (KE/ET) are supported.
IEC 60870-5-101, -104	IEC drivers are standardized telecontrol drivers that can process proprietary frames. IEC stands for International Electrotechnical Commission, the international standardization committee for electrical engineering. <ul style="list-style-type: none"> • IEC 60870-5-104 for data exchange via TCP/IP • IEC 60870-5-101 for serial connection
IEC 61850	IEC 61850 Client defines an architecture for satisfying the requirements of electrical station automation. It defines a data model and the communication services for interaction with and between the elements of a substation, such as power supply units, circuit-breakers, protective devices etc. A description language and a system configuration language (SCL) have been defined for technical purposes.
DNP3	The DNP3 (D istributed N etwork P rotocol 3) driver is an open, rugged and modern protocol which exhibits characteristics and strengths similar to the IEC driver. The transfer of any number of frames with different data types takes place between the WinCC OA System (Master) and the remote stations (Slave).
SINAUT	SINAUT (S iemens N etwork A UTomation) is a communication protocol for automated monitoring and control of remote process stations on the basis of SIMATIC S7. Communication takes place via TCP/IP.
SNMP Manager & Agent	SNMP (S imple N etwork M anagement P rotocol) is a protocol for monitoring network elements (servers, workstations, routers, switches, hubs, etc.) and their functions. <ul style="list-style-type: none"> • SNMP Manager supports SNMP V1, V2, and V3 • SNMP Agent supports SNMP V1 and V2

Integration (continued)

Protocol	Description
BACnet over IP – driver	BACnet (B uilding A utomation and C ontrol N etworks) is a standardized protocol for building automation and has been set by the ASHRAE (American Society of Heating, Refrigerating and Air-conditioning Engineers) as a guideline to provide a uniform and cross-company standard for data communication within and between building automation systems. The BACnet Standard 2004 is supported in accordance with the PIC list (see product documentation)
Dynamic Logic – driver	The Dynamic Logic driver communicates with different Dynamic Logic devices via the "FSK out-station protocol".
Applicom General Interface	Applicom is, among other things, a manufacturer of I/O cards and software tools, with a wide range of applications in automation engineering. The Applicom products are compatible with many common fieldbus systems and communications components.

Further drivers on request or via C++ API

Technical specifications

Type	SIMATIC WinCC Open Architecture V3.12
Operating system	<ul style="list-style-type: none"> Windows 8.1 Enterprise (64-bit) Windows 7 Ultimate/Enterprise/Professional with SP1 (64-bit) Windows Server 2012 (64-bit) Windows Server 2008 R2 (64-bit) Red Hat Enterprise Linux 6.45 (64-bit) openSUSE 12.3 (64-bit) Sun Solaris 10 x86 (64-bit) VMWare ESXi Version 5.1 & 5.5
PC hardware requirements ¹⁾	
Processor type	Intel Pentium or equivalent
Minimum	Intel Pentium IV 1.6 GHz (or better) ²⁾³⁾
Recommended	<ul style="list-style-type: none"> Client: Intel Pentium IV/Core2/i3, 2 GHz²⁾³⁾ Server: Intel Core i3 CPU Dual, 3 GHz²⁾ Server large system⁴⁾: Intel(R) Core(TM) i5/i7 CPU Dual / Quad, 3 GHz²⁾³⁾
RAM	
Minimum	2 GB ²⁾
Recommended	<ul style="list-style-type: none"> Client: 2 GB ²⁾³⁾ Server: 8 GB ²⁾³⁾ Server large system: 16 GB ²⁾
Hard disk (available memory for installation)	
Minimum	HD with 800 MB available ²⁾
Recommended	Server large system with local logging: SCSI LVD Controller, WIDE SCSI / LVD HDD or comparable storage system with at least 500 MB of available space ²⁾
Screen and graphics card (TrueColor)	
Minimum	1024 x 768 ²⁾
Recommended	1280 x 1024 ²⁾
Mouse and keyboard	Mouse, keyboard
DVD drive	for software installation
Local power user rights	<ul style="list-style-type: none"> for installation for operation

¹⁾ For actual use in plants, the hardware requirements are largely dependent on the project size and the dynamic response of the process variables. Whenever possible, use rugged, high-quality hardware with corresponding functionalities such as redundant power supply units or RAID hard disks. WinCC OA supports dual and multi-processor mode and benefits significantly from the fact that each WinCC OA Manager can be assigned to one processor core as a system process. At the same time, however, it is important that the individual cores offer the highest possible performance (high clocking), since load-critical core processes such as the event manager run on exactly one core (for this reason, multi-core machines with low-clocked cores are unsuitable for WinCC OA). As for RAM, CPU and HDD, the usual rule applies: more is better

²⁾ System requirements generally only refer to WinCC OA Version 3.11 under the supported versions of the Windows and Linux operating systems.

³⁾ A precondition for the minimum requirement is that the operating system used does not have any greater requirements itself

⁴⁾ With a large system it is essential that the system permits not only the highest data point numbers but also a high dynamic response.

WinCC OA is ideally suited for use in very large distributed systems. The optimum design of such systems demands corresponding system knowledge of WinCC OA. Due to the event-oriented processing, individual design parameters can be increased or reduced as necessary in actual applications.

SIMATIC HMI Software

SCADA system SIMATIC WinCC Open Architecture

SIMATIC WinCC Open Architecture**Technical specifications (continued)**

Type	SIMATIC WinCC Open Architecture
Functionality/quantity structure	
Number of messages	150 000 ²⁾
Message text (number of characters)	System-limited ¹⁾
Message archive	System-limited ¹⁾
Process values per message	1 process value + up to 32 alarm associated values per message
Constant load of messages, max.	500/s ²⁾
Message burst, max.	15 000/10 s every 5 min ²⁾
Archives	
Archive data points	Max. 250 000 per server ²⁾
Archive types	< 20 parallel logs, different retention period for each log
Data storage format	Oracle or file system
Measured values per second, max.	Server/single-user station: 7 000/s ²⁾ ³⁾
User archive	
Archives	System-limited ¹⁾
Type	SIMATIC WinCC Open Architecture
Table size	System-limited by ORACLE database
Graphics system	
Number of screens	System-limited ¹⁾
Number of objects per screen	System-limited ¹⁾
Number of controllable fields per screen	System-limited ¹⁾
PowerTags	< 750 000 per server ²⁾
User administration	
User accounts	< 4096

Multi-user system	
Server	< 2 048 ²⁾ ⁴⁾
Number of clients	< 244 per server ²⁾ ⁵⁾

¹⁾ Dependent on the available storage space

²⁾ Dependent on the system configuration and the system load (due to the event-oriented architecture, the system load is essentially determined by the change rates of the values to be processed)

³⁾ By means of high-performance hardware configuration (one archiving cluster and approx. 120 distributed systems that archive parallel values in the cluster): 200 000 archived value changes per second

⁴⁾ Physical limit: <2 048, in practice systems have already been implemented with up to 550 distributed systems

⁵⁾ Physical limit: < 244 clients per server, recommended: max. 100 clients per server

		WinCC OA OPC UA Server Driver for OPC UA DA and OPC UA AC Server	6AV6352-1CJ31-2AA0

More information

Further information can be found in the Internet at:

<http://www.siemens.com/wincc-open-architecture>

Overview

SIMATIC WinCC Open Architecture is a SCADA system for visualizing and operating processes, production flows, machines and plants in all industrial sectors.

SIMATIC WinCC OA is built consistently on object-oriented structures. Due to this consistent and well-considered use of object-oriented structures, from process images to the database, the engineering costs improve for SIMATIC WinCC OA customers.

Distributed systems enable the connection of up to 2048 autonomous SIMATIC WinCC Open Architecture systems via one network. Each subsystem can be configured either as single-user or multi-user system, each of which may be redundant or non-redundant.

- Current version:
SIMATIC WinCC Open Architecture V3.12

Runs under:

- Windows 8.1 Enterprise (64-bit)
- Windows 7 Ultimate/Enterprise/Professional SP1 (64-bit)
- Windows Server 2012 (64-bit)
- Windows Server 2008 R2 (64-bit)
- Red Hat Enterprise Linux 6.4 (64-bit)
- openSUSE 12.3 (64-bit)
- Sun Solaris 10 x86 (64-bit)
- VMWare ESXi Version 5.1 & 5.5

Note:

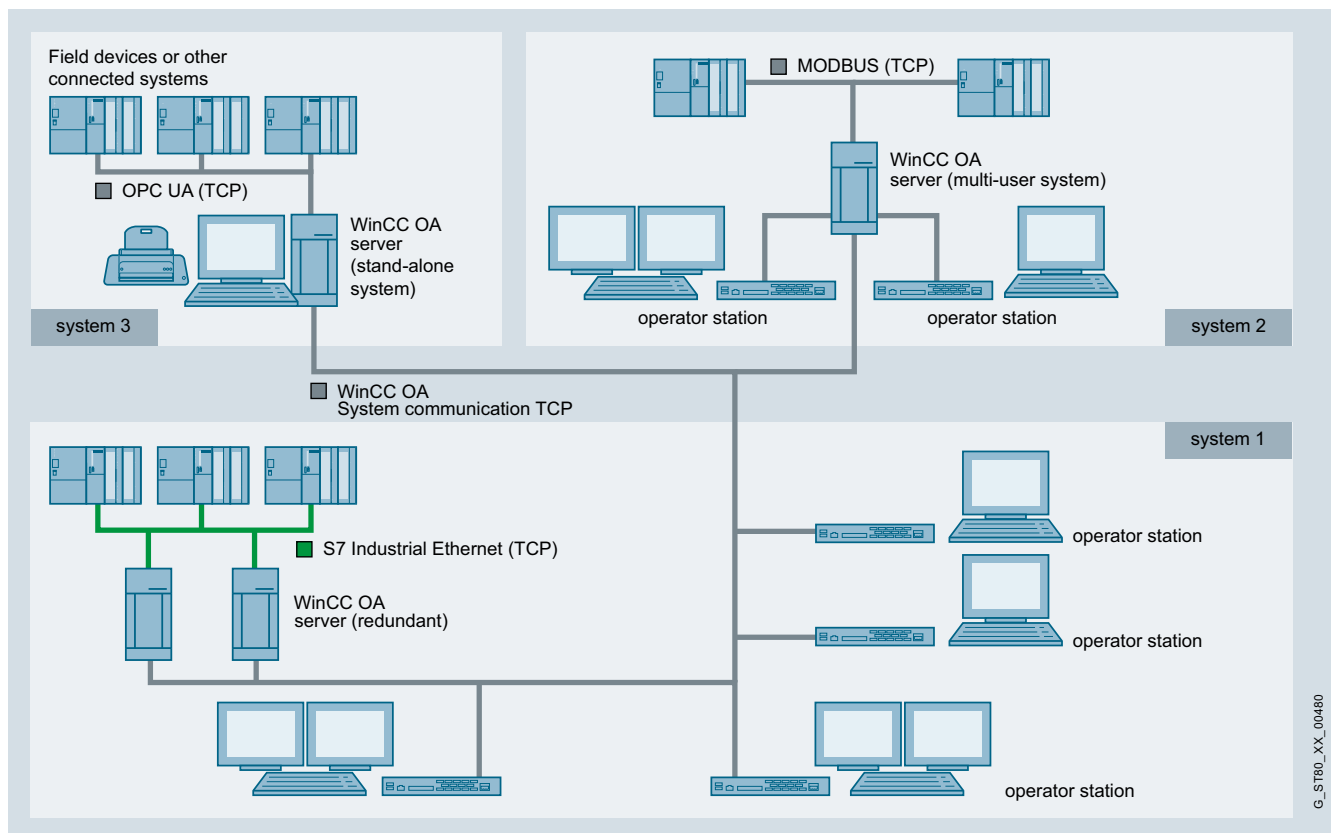

Native 64-bit support on 64-bit systems.

Function

SIMATIC WinCC Open Architecture add-ons

The universal WinCC Open Architecture basic software is the basis for modular expansions.

These functional expansions are available in the form of WinCC Open Architecture add-ons.

Distributed systems with WinCC OA

SIMATIC HMI Software

SCADA System SIMATIC WinCC Open Architecture

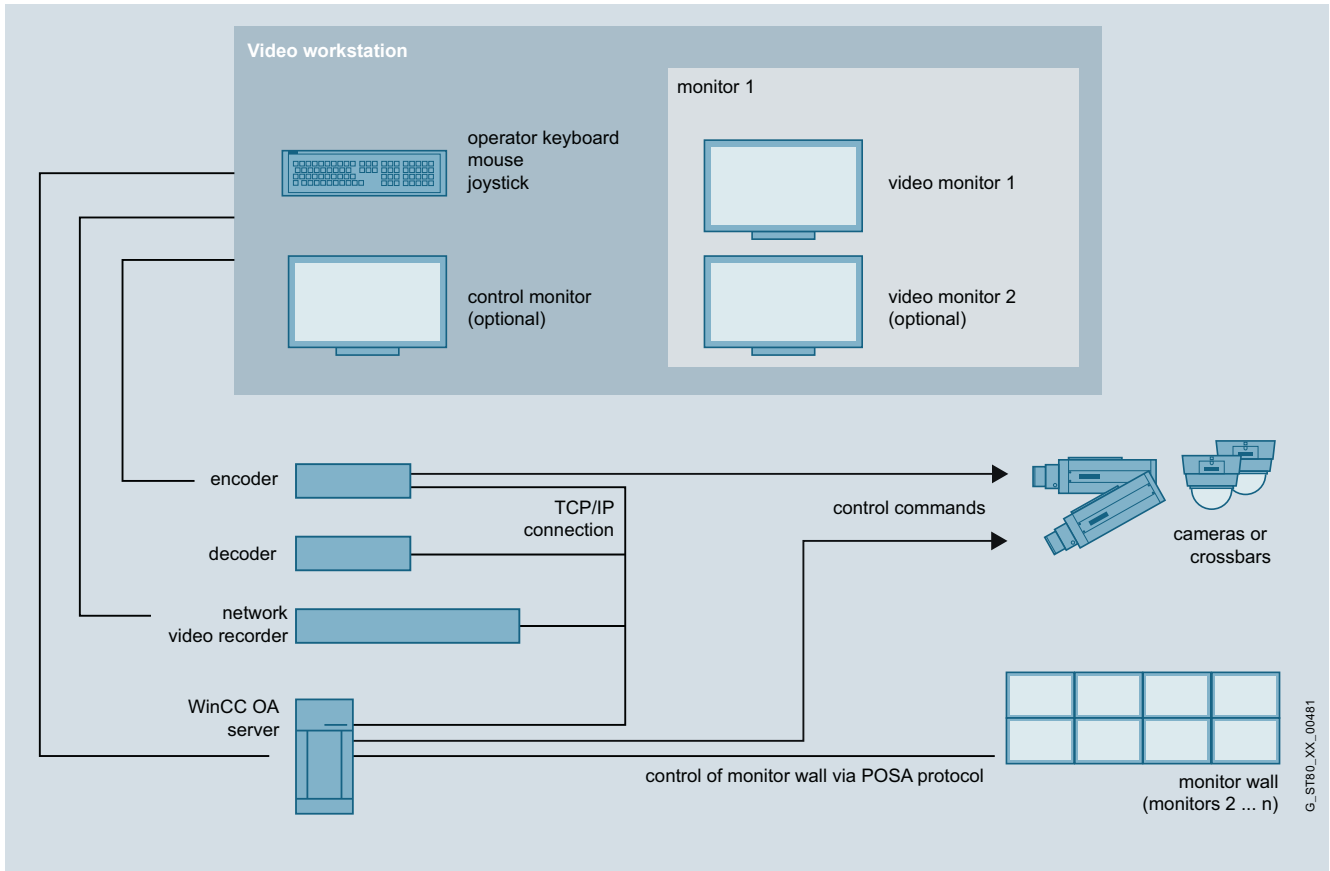

SIMATIC WinCC Open Architecture Add-ons

Function (continued)

Add-ons	Task
ETool	The engineering tool ETool offers significant benefits in engineering in the case of combined WinCC OA and SIMATIC STEP7/PCS7 projects. It provides a user-friendly engineering environment that permits easy, integrated and fast configuration on the basis of the WinCC OA mass parameterization.
BACnet	BACnet provides an integrated BACnet-compliant online/offline engineering solution for building automation technology, including object library. Designed for heating, ventilation and air-conditioning, lighting control and safety systems.
S7 AdvancedLib object library	The S7 AdvancedLib (AdvS7) is an industry-independent object library that permits the use and visualization of objects from the process control system (e.g.: drives, valves, regulators, motors, etc.) in a project with WinCC OA and S7. In addition to the WinCC OA and AdvS7 license, the use of S7 AdvancedLib requires the use of the relevant library on the SIMATIC side.
Maintenance package	Includes the following functions: Operating hours counter, operating cycle counter and maintenance log.
Scheduler	Permits the creation, parameterization and management of time programs that allow the time and event-driven triggering of specific actions.
Recipes	WinCC OA recipes allow setpoints or commands for certain data point elements to be sent simultaneously. Based on "recipe types", which define the quantity of the assigned data point elements, recipes are created that send their values to the data point elements upon activation.
GIS Viewer	With the help of this viewer, standardized cards of a geo-information system (GIS) can be fully integrated in WinCC OA. Furthermore, it is possible to display all WinCC OA objects in the cards.
Excel report	Powerful report generator directly in Microsoft Excel. Templates can be created easily and directly in Excel. If a report has to be created over a defined period of time, the system accesses the template and automatically completes it with data from the WinCC OA process database. Reports can also be created, printed and saved on a time-controlled basis, without any need for user access. The Excel Report fully supports compression structures (AC - archive compression) of WinCC OA.
Communication Center	Stands for modern alarm management/remote alerting and communication using the latest standards and various media. The Communication Center creates synergies by using the various interfaces for remote alerting via the control system. Text message and email media are covered with the Communication Center.
VIDEO	Enables the integration of a video management system in WinCC OA. Through the combination of SCADA and video monitoring in one system, the costs for separate video interfaces and the additional expense of maintenance and operation can be saved, and the period of training for operating personnel can also be reduced.
HTTP server	For displaying WinCC OA data via Intranet and Web.

Add-ons	Task
Authentication via Kerberos	A WinCC OA system can be exposed to a variety of attacks. An unauthorized WinCC OA System could set up a connection to the distribution manager or hackers could try to manipulate WinCC OA messages. Secure authentication has been developed to prevent such attacks. The authentication based on Kerberos enables each WinCC OA component to verify the identity of another component. WinCC OA servers can verify the identity of the clients and clients can verify the identity of the servers. In addition, Kerberos ensures that messages are not modified during their transmission (capture-replay attacks are prevented). Furthermore, it is also possible to send messages in encrypted form.
AMS (Advanced Maintenance Suite)	For the effective planning, administration, implementation and monitoring of maintenance work and faults. The processes are evaluated by means of statistics and reports are communicated.
Web client	From a technical standpoint, the WinCC OA Web Client is a plug-in that is downloaded via the web browser (which is used on the client computer) and a WinCC OA UI Manager is then displayed embedded in the HTML page. No WinCC OA installation on the client computer is required, except for the required web client plug-ins.
Ultralight Client	A "thin client" that supports access to the plant via a mobile device (such as a mobile telephone or tablet) in addition to a PC workstation. Access is possible via a standard Web browser using native Web technologies (Javascript, SVG) without the need for any additional installations. It provides a user interface even at those locations with Internet connections offering very low bandwidth, as only the most essential data is transferred.
WinCC OA Operator	Permits operation and visualization of a WinCC OA installation via iPhone and iPad. Process data, plant availability, and plant status can all be displayed. Location filtering provides a rapid overview of all spatially distributed systems including summation alarms.
Disaster Recovery System	This system expands the simple redundancy to include a second redundant system, to which the system can switch over in the event of a fault (e.g. fire or explosion in the building of the primary system). By means of this additional local redundancy, the highest level of system stability is obtained.

Ordering data	Article No.	Article No.
WinCC OA Scheduler Daily, weekly and monthly program, as well as individual non-periodic events with consideration of public holidays, assignment of priority and override function. License required for each server.	6AV6352-1DF31-2AA0	Communication Center WinCC OA CommCenter 1 Basic package for 25 alarms. Output as text message or e-mail is possible. Price per WinCC OA Server.
WinCC OA Recipe Creation of any recipe types and recipes, acceptance of current process values as recipe, activation/download to data points, import and export (Microsoft Excel). License required for each server.	6AV6352-1DG31-2AA0	WinCC OA CommCenter 2 Basic package for 250 alarms. Output as text message or e-mail is possible. Price per WinCC OA Server.
WinCC OA RDB RDB Oracle connection for WinCC OA Server S-UL. Oracle licenses are not included. License required for each server.	6AV6352-1DH31-2AA0	WinCC OA CommCenter 3 Basic package for 2 500 alarms. Output as text message or e-mail is possible. Price per WinCC OA Server.
Solution Frameworks WinCC OA PMS Application framework for the implementation of production management systems. The framework offers functions for recording and evaluating production and batch-related quality data. This item is not available as a product but only in combination with consulting and additional testing overhead.	6AV6352-1EA31-2AA0	WinCC OA CommCenter 4 Basic package for unlimited alarms. Output as text message or e-mail is possible. Price per WinCC OA Server.
WinCC OA topology package The topology package is an application framework enabling the topological coloring of network views. A qualitative statement is made regarding which parts of a network are directly connected to which infeed units in a connection established by switching elements. Only available in combination with consulting and additional testing overhead.	6AV6352-1EB31-2AA0	Video management WinCC OA Video Package Light Permits connection of 16 video inputs (cameras) and simultaneous display of 4 video outputs (streams). This package cannot be expanded.
WinCC OA ACAS WinCC OA Advanced Command Authority Suite framework for managing and visualizing authority settings. The license includes the management panel and panel expansions for alarm, horn and acknowledgement functions. This item is not available as a product but only in combination with consulting and additional testing overhead.	6AV6352-1EC31-2AA0	WinCC OA Video Package Basic Permits connection of 32 video inputs (cameras) and simultaneous display of 8 video outputs (streams). This can be expanded by additional video inputs and outputs.
Excel report WinCC OA Report 1 UI Expands a WinCC OA Server by 1 active Excel report process; Microsoft Excel is not included.	6AV6352-1FA31-2AA0	WinCC OA Video Inputs WinCC OA Video Inputs expands a WinCC OA Video Package Basic by 8 additional video inputs (cameras)
WinCC OA Report 2 UI Expands a WinCC OA Server by 2 parallel active Excel report processes; Microsoft Excel is not included.	6AV6352-1FB31-2AA0	WinCC OA Video Output WinCC OA Video Output expands a WinCC OA Video Package Basic by 1 additional video output (stream)
WinCC OA Report 5 UI Expands a WinCC OA Server by 5 parallel active Excel report processes; Microsoft Excel is not included.	6AV6352-1FC31-2AA0	HTTP server WinCC OA HTTP Server Forwarding of alarms, events and WinCC OA information to the Internet in HTML format including 1 HTTP connection.
WinCC OA Report 10 UI Expands a WinCC OA Server by 10 parallel active Excel report processes; Microsoft Excel is not included.	6AV6352-1FD31-2AA0	WinCC OA HTTP Server Extension5 Extends the WinCC OA HTTP server by 5 HTTP connections.
		WinCC OA HTTP Server Extension10 Extends the WinCC OA HTTP server by 10 HTTP connections.
		WinCC OA HTTP Server Extension25 Extends the WinCC OA HTTP server by 25 HTTP connections.

AMS Large 5,000 A/E The license includes the AMS application as well as up to 5,000 A/E = 5,000 checklists assigned to alarm/event DP. ¹⁾²⁾³⁾	6AV6352-1ME31-2AA0		

- ¹⁾ The basic price also includes the AMS Reports packages.
- ²⁾ AMS importer as well as 1 day of consulting for initial design by ETM Consultants (excluding travel expenses) and 5 hours of telephone support within 3 months after delivery.
- ³⁾ AMS Reports and AMS Importer, and 1 day of consulting for initial conceptualization by ETM consultants (not incl. travel costs). This license does not include any support and cannot be expanded or extended.

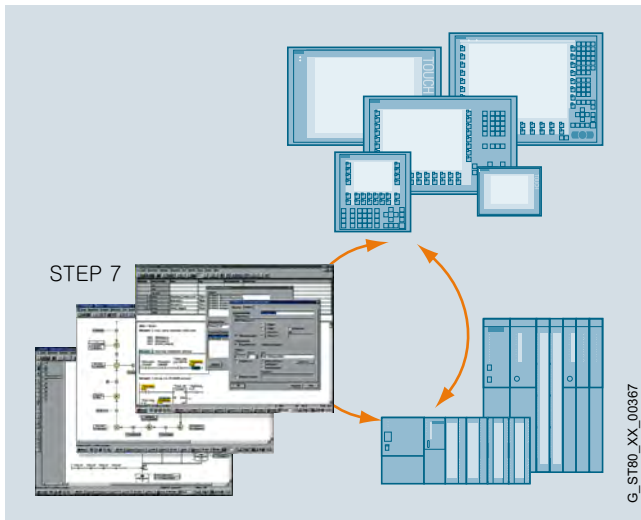

More information

Additional information is available on the Internet at:

<http://www.siemens.com/wincc-open-architecture>

Overview

- Process error diagnosis software for quick and precise diagnosis of faults/errors in plants and machines for SIMATIC S7 and SIMATIC HMI
- Standardized diagnostics concept for various SIMATIC components: optimum interaction of STEP 7 engineering tools and SIMATIC HMI
- Standardized user interface

Process error diagnostics with ProAgent for WinCC flexible /ProAgent and with the STEP 7 engineering tools

WinCC/ProAgent – Process error diagnostics

Benefits

- Integral component of Totally Integrated Automation (TIA): increases productivity, minimizes the engineering outlay, reduces the lifecycle costs
- ProAgent:
 - Provides optimum support for plant and machine personnel in respect of troubleshooting and fault rectification
 - Increases plant availability
 - Reduces downtimes
- No further configuration overhead for diagnostics functionality
- Frees up PLC capacity with regard to memory and program execution time
- No special operator know-how is required thanks to clearly comprehensible indication of the cause of error

Application

Increased productivity is being achieved more and more by cutting costs. In this context, the focus is increasingly on maintenance. The emphasis here is on rectifying faults as quickly and efficiently as possible. Ideally, the operating personnel should also perform part of the maintenance tasks. The operating personnel are on-site, they are familiar with the procedures and can intervene quickly. This saves time and reduces costs. It is precisely here that ProAgent can assist operating personnel in identifying faults quickly, in particular in the automotive and machine tool industries.

In the event of a process fault, process fault diagnosis with SIMATIC ProAgent will provide information about the location and cause of that fault and support personnel with troubleshooting.

The ProAgent solution has been optimized specifically for use with SIMATIC S7-300/S7-400 and SIMATIC WinAC. It can be used in combination with the S7-PDIAG, S7-GRAPH and S7-HiGraph¹⁾ STEP 7 engineering tools. The ProAgent option package features standard displays that are updated with process-specific data during runtime.

¹⁾ Process diagnostics with S7-HiGraph in combination with TP/OP/MP 270/277, MP 370/377, and C7636 and PC RT systems.

SIMATIC HMI Software

SIMATIC ProAgent process diagnosis software

SIMATIC ProAgent

Function

- Context-sensitive diagnostics initiation due to process error message
- Output of operands with symbols and comment
- Switching is possible between LAD, STL and signal list
- Supporting fault rectification with direct process access when using the motion display
- Output of the faulty operands directly in the message including address, symbol and comment¹⁾
- Consistency test in RT:
Inconsistent diagnostic units are marked with icons. This permits quick locating of faults regarding configured data in the commissioning phase.
- Direct, unit-related entry point in the diagnostic display from user displays by using ProAgent functions
- Unit or message-related entry to STEP 7 (LAD/STL/FD editor, S7-GRAPH, HW CONFIG (upon system error messages)), supported fully automatically²⁾
- Unit or message-related entry to STEP 7, supported fully automatically³⁾
- Graphic display of step sequences (overview display)⁴⁾

¹⁾ In combination with TP/OP/MP 270/277, MP 370/377, C7 636, WinCC/ProAgent as of V6.0, and WinCC flexible /ProAgent

²⁾ WinCC/ProAgent as of V5.5 and as of WinCC flexible 2007 /ProAgent on PC RT

³⁾ Only WinCC/ProAgent as of V5.5

⁴⁾ As of WinCC flexible 2007 /ProAgent, WinCC/ProAgent as of V5.6 in combination with S7-GRAPH as of V5.1 (OCX is delivered as of S7-GRAPH 5.1)

Standardized user interface with standard displays

- Message display
- Unit overview
- Diagnostics detail display
- Motion display
- Sequencer operating display

The displayed image contents are related to the previously selected units or messages. This means that the proper context-sensitive diagnostics display can be called up based on a message or a selected technological unit.

Message display

All of the existing process messages are shown in the message display. Context-sensitive branching to other diagnostic displays is also possible with a selected message. The operating personnel can also take the message directly from the erroneous operands and react immediately without having to perform any other operations on the HMI device.

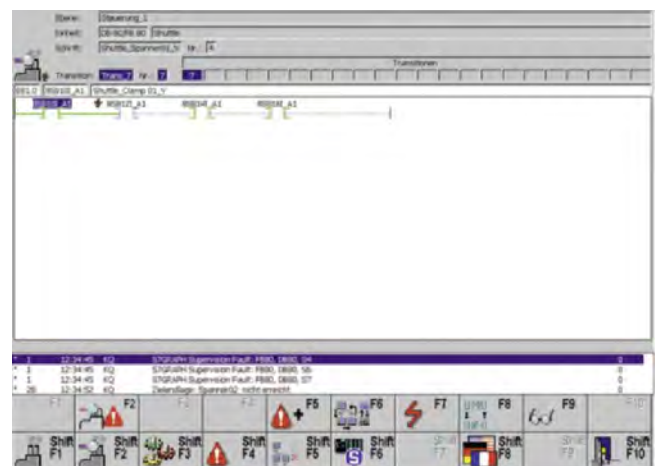

WinCC flexible permits this function on the Windows CE-based devices TP/OP/MP 270/277, MP 370/377, and on PC Runtime systems. The function is available as of version 6.0 for WinCC/ProAgent.

Unit overview

The units overview displays all technological units and the respective sub-units (system/machine components) in table form. In this display, the user is able to recognize, for example, which operating mode or which status the respective unit is in. The operating mode can be changed by the user if required.

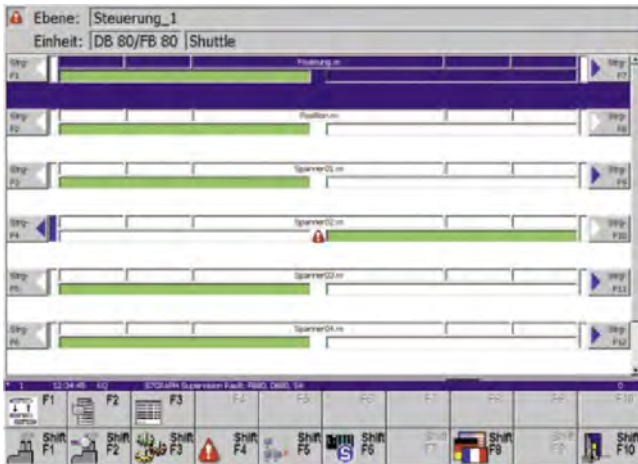

Faulty units are marked with attributes.

Function (continued)

Diagnostics detail display

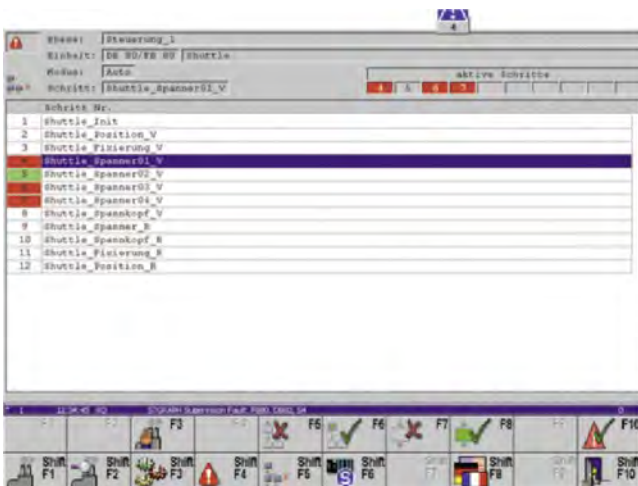

The diagnostic detail display shows the faulty operands at the time of origination of a process error. As an option, current status information can also be displayed. The diagnostics results are either displayed in a ladder diagram (LAD), statement list (STL), or in a clearly arranged signal list overview. The output of the operands depends on the display format with symbols and comments from the S7 symbol table. Only the operands that cause the fault are displayed and marked with a highlighted attribute. Switching to a display that calls up the current status of all operands in the controller is also possible.

Motion display

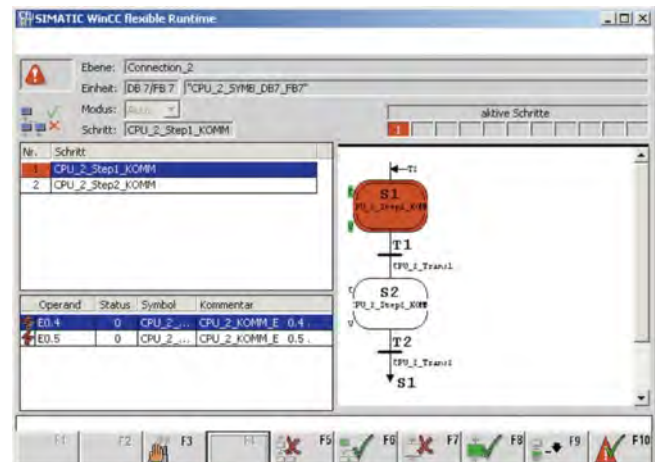

The motion display is used for supported fault rectification. Every motion line contains a comment line that describes the motion (e.g. x-axis), two actions for implementing the motion, response concerning the actuation of a motion and information on the respectively achieved end positions (max. 16).

The motion itself is controlled with softkeys on the side of SIMATIC Panels and Multi Panels. For time-critical motions, the actuation can be done directly through inputs of the controller (depending on the capabilities of the target hardware: 24 V direct keys, DP direct keys via PROFIBUS).

Sequencer operating display

The sequencer operating display supports sequencer control. This makes functions such as initializing and acknowledging sequencers, activating/deactivating individual steps and operating mode settings possible analog to the status/control in S7-GRAPH. The steps are output to a list with step number/name. Attributes for identifying an active/faulty step give the operating personnel an overview of the current status of the step sequence.

Sequencer diagnostic display

WinCC flexible /ProAgent and WinCC/ProAgent¹⁾ also offer capabilities for graphic monitoring and sequencer diagnostics. This gives the user the ability to monitor active/faulty steps as well as the fault cause, e.g. faulty transition conditions, simultaneously on the HMI device.

¹⁾ WinCC/ProAgent as of V5.6 in combination with S7-GRAPH as of V5.1 (OCX is delivered as of S7-GRAPH 5.1)

Overview

Industrial PC

Our reliable and innovative industrial PCs are the optimal PC hardware platform for PC-based Automation from Siemens.

Rack PC

Rack PCs are flexible, high-availability industrial PC systems for powerful yet compact applications using 19" technology.

Box PC

SIMATIC Box PCs provide mechanical engineers, plant engineers and control cabinet makers with particularly rugged industrial PC systems for use in powerful yet compact applications.

Panel PC

SIMATIC Panel PCs are suitable thanks to their high industrial compatibility for use in control cabinets, consoles and control panels, as well as directly on the machine. Typical areas of application can be found in both factory and process automation.

Industrial monitors and thin clients

Flexible operator input concepts can be implemented via Flat Panel monitors or thin clients. These are industry-standard LCD monitors with high-contrast displays that can be located up to 30 m away from the PC, or low-cost, rugged thin clients that offer HMI functionality over the network in larger plants spread over wide areas.

Ruggedness and industrial compatibility for 24-hour continuous use in an industrial environment

- Compact, space-saving enclosure (Box PC and Panel PC)
- Suitable for installing in space-saving control cabinets, only 500 mm deep (Rack PC)
- All-metal enclosure with a high degree of electromagnetic compatibility for use in industrial areas and in domestic, business and commercial environments and for a degree of protection up to IP65/NEMA 4
- The mounting position of the devices can be varied by means of wall, portrait or control cabinet mounting (Box PC), rail mounting (SIMATIC IPC427D or IPC227D only) and horizontal or vertical mounting position in the 19" cabinet or with the appropriate kit as an industrial tower PC (Rack PC).
- High resistance to shock/vibration thanks to special hard disk mountings, locked connectors, and card retainers
- Maintenance-free due to design without hard disk or fans using SIMATIC CFast memory cards or solid-state drive (SIMATIC IPC427D/IPC477D and SIMATIC IPC227D/IPC277D)
- Service-friendly, modular device design for replacement of defective components
- Integral industrial power supplies (according to NAMUR) for safe power supplies protected against system disturbances
- Attractive product design with dirt-repelling fronts and coated surfaces
- Dust protection thanks to a pressurized cooling concept, front-mounted fans and dust filters (Rack PC)

More information

Notes on the scope of delivery

Microsoft operating systems are pre-installed in an OEM version.

The scope of supply also includes:

- Recovery CD for simple reinstallation of the operating system (not for Windows Embedded)
- Restore DVD (hard disk image) for fast and very easy restoration of the PC delivery status
- SIMATIC IPC Documentation and Drivers DVD
- Compact Operating Instructions (German/English/French/Spanish/Italian/Chinese)
- Electronic manual on IPC Documentation and Drivers DVD (German/English)

PC-based Automation

Rack PC

Introduction

Overview

Rack PCs are flexible, high-availability industrial PC systems for powerful yet compact applications using 19" technology.

Three device classes are available for various requirements:

SIMATIC IPC347 – high performance at an optimized price

SIMATIC IPC547 – maximum performance at an attractive price

SIMATIC IPC647 – maximum compactness combined with maximum industrial functionality

SIMATIC IPC847 – maximum expandability and industrial functionality

Shared industrial functionality of the IPC series 547, 647 and 847

- Maximum system performance for complex automation tasks and computationally intensive PC tasks in the industrial environment through use of Intel Core processors
- Designed for 24-hour continuous operation
- Monitoring and diagnostics functions (e.g. temperature, fan, watchdog)
- RAID1 configuration (mirrored drives), optionally in hot swap drive bays
- Hard disks with capacities up to 1 TB for large volumes of data
- Solid-state drive (SSD) with MLC technology, optional
- Redundant AC power supply, optional
- Compact dimensions for installation in control cabinets only 500 mm deep
- Dust protection thanks to overpressure ventilation concept with fan on the front and dust filter
- Lockable front panel or front door
- Service-friendly equipment design due to prepared telescopic rail mounting
- Universal implementation as an industrial workstation or server
- Operating system preinstalled and activated for fast startup
- Fast restoration of the delivery status of the HDD thanks to restore DVD
- High flexibility and expandability of components
- PCI and PCI Express expansion slots
- Independent industrial product design

Overview (continued)**SIMATIC IPC347D – high performance at an optimized price**

- Intel Core i processors 3rd generation
- Lockable front panel or front door
- Service-friendly equipment design due to prepared telescopic rail mounting
- Dust protection thanks to overpressure ventilation concept with fan on the front and dust filter
- PCI and PCI Express expansion slots
- 4 configurations available ex stock at short notice

SIMATIC IPC547E – maximum performance at an attractive price

- Intel Core i processors 4th generation
- Maximum processor performance in maximum configuration without loss of power (throttling) at ambient temperatures of up to 40 °C
- Optional RAID5 configuration (striping with parity) in hot swap drive bays
- RAID1 and RAID5 configurations with additional hot spare hard disk, optional
- Low noise output thanks to controlled fans
- Status and alarm LEDs at the front for signaling critical system states
- Availability for at least 1.5 years
- Guaranteed spare parts availability for at least 3 years

SIMATIC IPC647D – maximum compactness combined with maximum industrial functionality

- Maximum compactness due to 4 free PCI/PCI Express slots for installing long expansion cards and integrated interfaces for communication, e.g. integrated PROFIBUS/MPI or PROFINET interface
- High thermal stability up to 50°C ambient temperature, even at maximum processor performance
- High vibration/shock resistance thanks to special hard disk holders
- Intel Core i processors 4th generation
- ECC memory, optional
- Service-friendly device design due, for example, to the replacement of filters/fans from the front without the need for tools, or opening of the enclosure with just one screw.
- Front LED concept for efficient self-diagnostics, e.g. monitoring of hard disks in RAID1 configurations, fans or the status display for Ethernet, PROFINET and PROFIBUS.
- Integrated PROFIBUS DP/MPI or PROFINET interface (optional)
- High component/design continuity
- Motherboard developed and manufactured by Siemens
- Availability for up to 6 years
- Guaranteed spare parts availability for at least 5 years

SIMATIC IPC847D – maximum expandability and industrial functionality

- Maximum expandability due to 11 free PCI/PCI Express slots for installing long expansion cards and integrated interfaces for communication, e.g. integrated PROFIBUS/MPI or PROFINET interface
- High thermal stability up to 50 °C ambient temperature, even at maximum processor performance
- High vibration/shock resistance thanks to special hard disk holders
- Intel Core i processors 4th generation
- Optional RAID5 configuration (striping with parity) in hot swap drive bays
- RAID1 and RAID5 configurations with additional hot spare hard disk, optional
- ECC memory, optional
- Service-friendly device design due, for example, to the replacement of filters/fans from the front without the need for tools, or opening of the enclosure with just one screw.
- Front LED concept for efficient self-diagnostics, e.g. monitoring of hard disks in RAID1 configurations, fans or status displays for Ethernet, PROFINET and PROFIBUS
- Integrated PROFIBUS DP/MPI or PROFINET interface (optional)
- High component/design continuity
- Motherboard developed and manufactured by Siemens
- Availability for up to 6 years
- Guaranteed spare parts availability for at least 5 years

PC-based Automation

Rack PC

SIMATIC IPC347D

Overview

The SIMATIC IPC347D is a rugged industrial PC in 19" rack design (4 U).

It offers:

- Optimized price
- High performance
- Intel Core i technology

Technical specifications

SIMATIC IPC347D	
General features	
Design	19" rack, 4 U, painted on the front
Processor	<ul style="list-style-type: none"> • Intel Core i5-3340S (4C/4T, 2.8 (3.3) GHz, 6 MB Cache, Turbo Boost 2.0, EM64T, VT-x/-d) • Intel Pentium Dual Core G2010 (2C/2T, 2.8 GHz, 3 MB Cache, EM64T, VT)
Chipset	<ul style="list-style-type: none"> • Intel H61
Main memory	<ul style="list-style-type: none"> • from 2 GB and 4 GB DDR3 1600 SDRAM • Dual channel support • 2 DIMM base • Expandable up to 16 GB ¹⁾
Spare slots for expansions (all long)	<ul style="list-style-type: none"> • 4 x PCI • 1 x PCI-Express x16 • 1 x PCI-Express x8 (1 lane) • 1 x PCI-Express x1
Graphics	Onboard Intel HD graphics / Intel HD 2500 graphics integrated into the processor; Shared Video Memory up to 1.7 GB; up to 1 920 x 1 200 pixels at 60 Hz image refresh rate and 32-bit colors
Operating system	<ul style="list-style-type: none"> • Without Preinstalled and activated (supplied on restore DVD): <ul style="list-style-type: none"> • Windows 7 Ultimate MUI (64-bit) MUI (Multilanguage User Interface, 5 languages): English, German, French, Italian, Spanish
Power supply	<ul style="list-style-type: none"> • 100 ... 240 V AC, 50 ... 60 Hz, with bridging of short-term power failures: max. 17 ms at 0.85 % rated voltage

Technical specifications (continued)

SIMATIC IPC347D	
Drives	
3.5" SATA hard disk	Installation in internal drive support: • 500 GB
DVD-ROM, 5.25", SATA	• 16 x (DVD media) • 48 x (CD media)
DVD±R/RW, 5.25", SATA	• 16 x 24 x 8 x (DVD media) • 48 x 48 x 24 x (CD media)
Slots for drives	Front: • 3 x 5.25" Internal: • 1 x 3.5"
Interfaces	
Ethernet	2 x Realtek Gbit Ethernet (RJ45)
USB 2.0	• 2 x front (high current) • 4 x rear (high current)
Serial	9-pole COM1 (V.24); COM2 (V.24)
VGA	1 x
DVI-D	1 x
Keyboard	PS/2
Mouse	PS/2
Audio	1 x Line In; 1 x Line Out; 1 x Mic.
Monitoring functions	
Front LEDs	• POWER (PC switched on) • HDD (access to hard disk)
Ambient conditions	
Degree of protection	IP20 according to EN 60529
Dust protection	Yes
Protection class	Protection class I according to IEC 61140
Vibration load during operation	-
Shock loading during operation	-

SIMATIC IPC347D	
Electromagnetic compatibility (EMC)	
Emitted interference	EN 61000-6-4; CISPR 22; FCC Class A; EN 61000-3-2 Class D; EN 61000-3-3
Immunity to conducted interference on the supply lines	• ± 2 kV (IEC 61000-4-4, burst) • ± 1 kV (IEC 61000-4-5, symm. surge) • ± 2 kV (IEC 61000-4-5, surge asymm.)
Noise immunity on signal lines	• ± 2 kV (IEC 61000-4-4, burst, length > 30 m) • ± 1 kV (IEC 61000-4-4, burst, length < 30 m) • ± 2 kV (IEC 61000-4-5, Surge, Length > 30 m)
Immunity to static discharge	• ± 4 kV, contact discharge (IEC 61000-4-2) • ± 8 kV, air discharge (IEC 61000-4-2)
Immunity to high radio frequency interference	• 1 V/m 80% AM; 2 ... 2.7 GHz (IEC 61000-4-3) • 3 V/m 80% AM; 1.4 ... 2 GHz (IEC 61000-4-3) • 10 V/m 80% AM; 80 MHz ... 1 GHz (IEC 61000-4-3); • 10 V, 150 kHz ... 80 MHz (IEC 61000-4-6)
Immunity to magnetic fields	30 A/m, 50/60 Hz (IEC 61000-4-8)
Ambient temperature during operation	5 ... 40 °C Note: Limitations for operation of DVD±R/RW
Humidity during operation	5 ... 80% at 25 °C (no condensation)
Approvals and safety regulations	
Safety regulations	IEC 60950-1; CSA
Approvals	cULus 60950
CE mark	Use in industry: • Emitted interference: IEC 61000-6-4:2011 • Noise immunity: IEC 61000-6-2:2005
Dimensions and weights	
Installation dimensions (W x H x D) in mm	430 x 177 x 463
Weight, approx.	15 kg

¹⁾ Memory information: In order to use a memory with more than 4 GB, a 64-bit operating system is required. In the case of configurations with 4 GB, the visible memory can be reduced to about 3.5 GB or less (with 32-bit operating systems).

Note regarding SIMATIC PC operating system licenses

The accompanying operating system license is only valid for installation on the respective supplied SIMATIC IPC. Installation can only be performed on these SIMATIC systems in accordance with Microsoft OEM licensing regulations.

Overview

The SIMATIC IPC547D is a rugged industrial PC in 19" rack design (4 U).

It offers:

- Maximum performance
- Attractive price
- Intel Core i technology

Technical specifications

SIMATIC IPC547D	
General features	
Design	19" rack, 4 U, externally painted
Processor	<ul style="list-style-type: none"> • Intel Core i7-2600 (4C/8T, 3.40 GHz, 8 MB Last Level Cache, Turbo Boost 2.0, EM64T, VT-x/-d, iAMT) • Intel Core i5-2400 (4C/4T, 3.10 GHz, 6 MB Last Level Cache, Turbo Boost 2.0, EM64T, VT-x/-d, iAMT) • Intel Pentium Dual Core G850 (2C/2T, 2.90 GHz, 3 MB Last Level Cache, EM64T, VT)
Chipset	• Intel Q67
Main memory	<ul style="list-style-type: none"> • From 1 GB DDR3 1333 SDRAM • Dual channel support • 4 DIMM base • Expandable up to 32 GB ¹⁾
Spare slots for expansions (all long)	<ul style="list-style-type: none"> • 4 x PCI • 1 x PCI Express x16 • 1 x PCI-Express x16 (4 lanes) • 1 x PCI-Express x8 (1 lane)
Graphic	<ul style="list-style-type: none"> • Onboard Intel HD 2000 graphics controller integrated into the processor; Shared Video Memory up to 1.7 GB; up to 2560 x 1600 pixels at 60 Hz image refresh rate and 32-bit colors • PCI Express graphics card (Dual Head: 2 x VGA or 2 x DVI-D) in the PCIe x16 slot; 512 MB; up to 2048 x 1536 pixels at 85 Hz image refresh rate and 32 bit colors (optional)
Operating system	<ul style="list-style-type: none"> • Without • Preinstalled and activated (supplied on restore DVD): <ul style="list-style-type: none"> • Windows XP Professional MUI (32-bit) • Windows 7 Ultimate MUI (32/64-bit) • Windows Server 2008 incl. 5 Client MUI (32 bit) • Windows Server 2008 R2 incl. 5 Client MUI (64 bit) • MUI (Multilanguage User Interface, 5 languages): English, German, French, Italian, Spanish • Project-specific on request: <ul style="list-style-type: none"> • Linux ²⁾ • Other
Power supply	<ul style="list-style-type: none"> • 100 ... 240 V AC, 50 ... 60 Hz, with bridging of short-term power failures: max. 20 ms at 0.85% rated voltage • Redundant 100 ... 240 V AC, 50 ... 60 Hz

¹⁾ Memory information:

In order to use a memory with more than 4 GB, a 64-bit operating system is required. In the case of configurations with 4 GB, the visible memory can be reduced to about 3.5 GB or less (with 32-bit operating systems). In configurations with 8 GB, the visible memory can be reduced to about 7.5 GB or less.

²⁾ Suitable for specific LINUX versions in accordance with the specifications of the Siemens manufacturer's declaration "Suitable for LINUX", see <http://www.siemens.com/simatic-pc/suited-for-linux> (LINUX is a trademark of Linus Torvalds)

Technical specifications (continued)

SIMATIC IPC647D	
Ambient conditions	
Degree of protection	IP41 at the front, IP20 at the rear acc. to EN 60529
Dust protection	with front door closed: G2 EN 779, 99 % of particles > 0.5 mm are held back
Protection class	Protection class I according to IEC 61140
Vibration load during operation	DIN EN 60068-2-6, 10 cycles Internal mounting of the hard disk drives in optional, internal drive cage: • 10 ... 58 Hz: 0.0375 mm; • 58 ... 500 Hz: 5 m/s ² (approx. 0.5 g) Note: There are limitations when DVD+/-RW and HDD are operated in a removable drive bay
Shock loading during operation	DIN EN 60068-2-27, IEC 60068-2-29 Internal mounting of the hard disk drives in optional, internal drive cage: • Half-sine: 50 m/s ² , 30 ms (approx. 5 g), 100 shocks per axis Note: There are limitations when DVD+/-RW and HDD are operated in a removable drive bay
Electromagnetic compatibility (EMC)	
Emitted interference (AC)	• EN 61000-6-3, FCC Class A • EN 61000-6-4; CISPR 22, EN 55022 Class B • EN 61000-3-2 Class D, EN 61000-3-3
Immunity to conducted interference on the supply lines	• ± 2 kV (IEC 61000-4-4, burst) • ± 1 kV (IEC 61000-4-5, symm. surge) • ± 2 kV (IEC 61000-4-5, asymm. surge)
Noise immunity on signal lines	• ± 1 kV (IEC 61000-4-4, burst, length < 30 m) • ± 2 kV (IEC 61000-4-4, symm. surge, length > 30 m) • ± 2 kV (IEC 61000-4-5, asymm. surge, length > 30 m)
Immunity to static discharge	• ± 6 kV, contact discharge (IEC 61000-4-2) • ± 8 kV, air discharge (IEC 61000-4-2)
Immunity to high radio frequency interference	• 10 V/m, 80 to 1000 MHz and 1.4 to 2 GHz, 80% AM (according to IEC 61000-4-3) • 3 V/m, 2 to 2.7 GHz, 80% AM (according to IEC 61000-4-3) • 10 V, 10 kHz to 80 MHz, 80% AM (according to IEC 61000-4-6)
Immunity to magnetic fields	100 A/m, 50/60 Hz (IEC 61000-4-8)
Ambient temperature during operation	5 ... 50 °C Note: Limitations for operation of DVD+/-RW
Humidity during operation	5 ... 85 % at 30 °C (no condensation)

SIMATIC IPC647D	
Approvals and safety regulations	
Safety regulations	• IEC 60950-1 • EN 60950-1 • UL 60950-1 • CSA C22.2 No 60950-1-07
Approvals	cULus 60950, KCC
CE mark	For use in industrial areas as well as domestic, business and commercial environments: • Emitted interference: EN 61000-6-3: 2007 +A1:2011 • Noise immunity: EN 61000-6-2:2005
Dimensions and weights	
Installation dimensions (W x H x D) in mm	430 x 88 x 445

Note regarding SIMATIC PC operating system licenses

<http://www.siemens.com/simatic-pc>

5

Technical data of the telescopic rails

Carrying capacity per pair, min.	30 kg
Full extension length, min.	470 mm
Rail thickness, max.	9.7 mm
Fixing screws	M5 x 6 mm

The fixing screws of the telescopic rails should not project more than 5 mm into the enclosure.

The enclosure is prepared for the following telescopic rails:

- Rittal: Type 3659.180 for 600 mm cabinet / Type RP 3659.190 for 800 mm cabinet
- Schroff: Type 20110-072

Overview

The SIMATIC IPC847D is an extremely robust, high-performance industrial PC in 19" rack design (4 U) with excellent industrial functionality.

It offers:

- Maximum expandability
- Extreme ruggedness
- 4th generation Intel® Core™ i technology

Technical specifications

SIMATIC IPC847D		SIMATIC IPC847D	
General features			
Design	19" rack, 4 U, externally painted	Graphics	Onboard Intel HD 4600 graphics controller integrated into the processor Dynamic Video Memory up to 1.7 GB Up to 3840 x 2160 pixels at 60 Hz image refresh rate and 32-bit colors PCI Express graphics card (Dual Head: 2 x VGA or 2 x DVI-D) in the PCIe x16 slot (optional) 512 MB, up to 2048 x 1536 pixels at 60 Hz image refresh rate and 32-bit colors
Processor	<ul style="list-style-type: none"> • Intel® Xeon™ E3-1268L v3 4C/8T, 2.3 (3.3) GHz, 8 MB cache, turbo-boost 2.0, Extended Memory 64 (EM64) and virtualization technology (VT-x/-d), iAMT 9.0 • Intel® Core™ i5-4570TE 2C/4T, 2.7 (3.3) GHz, 4 MB cache, turbo-boost 2.0, Extended Memory 64 (EM64) and virtualization technology (VT-x/-d), iAMT 9.0 • Intel® Core™ i3-4330TE 2C/4T, 2.4 GHz, 4 MB cache, Extended Memory 64 (EM64) and virtualization technology (VT-x) 	Operating system	<ul style="list-style-type: none"> • without • Preinstalled and activated / supplied on restore DVD • Windows 7 Ultimate MUI, 32/64-bit • Windows Server 2008 R2 incl. 5 client MUI, 64-bit
Chipset	Intel C226	Power supply	<ul style="list-style-type: none"> • 100 ... 240 V AC, 50 ... 60 Hz with bridging of temporary power failures in accordance with NAMUR: max. 20 ms at 0.85 % rated voltage • Redundant 100 ... 240 V AC, 50 ... 60 Hz
Main memory	<ul style="list-style-type: none"> • From 2 GB DDR3 1600 SDRAM • Dual channel support • 4 DIMM base • Expandable up to 32 GB ¹⁾ • ECC memory (optional) 		MUI: Multi-language User Interface; 5 languages (English, French, German, Italian, Spanish) • Project-specific on request • Linux ²⁾ • Other

Overview

The SIMATIC IPC647C is a very rugged, high-performance industrial PC in 19" rack design (2 U) with excellent industrial functionality.

It offers:

- Extreme compactness
- Extreme ruggedness
- Intel Core i technology

Technical specifications

SIMATIC IPC647C	
General features	
Design	19" rack, 2 U, external coating
Processor	<ul style="list-style-type: none"> • Intel Core i7-610E (2C/4T, 2.53 GHz, 4 MB Cache, Turbo Boost, VT-d, iAMT, EM64T) • Intel Core i5-520E (2C/4T, 2.4 GHz, 3 MB cache, Turbo Boost, VT-d, iAMT, EM64T) • Intel Core i3-330E (2C/4T, 2.13 GHz, 3 MB cache, EM64T)
Chipset	Intel QM57
Main memory	<ul style="list-style-type: none"> • from 1 GB DDR3 1066 SDRAM • Dual channel support • 2 DIMM base • Expandable up to 8 GB, optional ECC ¹⁾
Spare slots for expansions (all long)	<ul style="list-style-type: none"> • 2 x PCI • 1 x PCI Express x16 or <ul style="list-style-type: none"> • 1 x PCI • 1 x PCI-Express x8 (4 lane) • 1 x PCI Express x16
Graphic	<ul style="list-style-type: none"> • Onboard Intel GMA HD graphics controller integrated into processor; dynamic video memory; up to 2048 x 1536 pixels with 75 Hz refresh rate and 16-bit colors • PCI Express graphics card (Dual Head: 2 x VGA or 2 x DVI-D via display port adapter) in the PCIe x16 slot; 256 MB; up to 2048 x 1536 pixels with 75 Hz refresh rate and 32-bit colors (optional)
Operating system	<ul style="list-style-type: none"> • Without • Preinstalled, activated, and supplied on restore DVD • Windows XP Professional MUI, 32-bit • Windows 7 Ultimate MUI, 32/64-bit • Windows Server 2003 R2 incl. 5 client MUI, 32-bit • Windows Server 2008 incl. 5 client MUI, 32-bit • Windows Server 2008 R2 incl. 5 client MUI, 64-bit MUI: Multi-language User Interface; 5 languages (English, French, German, Italian, Spanish) <ul style="list-style-type: none"> • Project-specific on request ²⁾ • Other
Power supply	<ul style="list-style-type: none"> • 100 ... 240 V AC, 50 ... 60 Hz; with bridging of temporary power failures in accordance with NAMUR: max. 20 ms at 0.85% rated voltage • Redundant 100 ... 240 V AC, 50 ... 60 Hz

¹⁾ Memory information: in order to use a memory with more than 4 GB, a 64-bit operating system is required. In configurations with at least 4 GB, the visible memory can be reduced to about 3.5 GB or less (with 32-bit operating systems) and in configurations with 8 GB, the visible memory can be reduced to about 7.5 GB or less.

²⁾ Suitable for specific LINUX versions in accordance with the specifications of the Siemens manufacturer's declaration "Suitable for LINUX" (LINUX is a trademark of Linus Torvalds).

Dimensional drawings

All dimensions in mm. For mounting cut-out see technical specifications.

Technical data of the telescopic rails

Carrying capacity per pair, min.	30 kg
Full extension length, min.	470 mm
Rail thickness, max.	9.7 mm
Fixing screws	M5 x 6 mm

The fixing screws of the telescopic rails should not project more than 5 mm into the enclosure.

The enclosure is prepared for the following telescopic rails:

- Rittal: Type 3659.180 for 600 mm cabinet / Type RP 3659.190 for 800 mm cabinet
- Schroff: Type 20110-072

Overview

SIMATIC Box PCs provide mechanical engineers, plant engineers and control cabinet makers with particularly rugged industrial PC systems for use in powerful yet compact applications.

The following device classes are available for various requirements:

- **SIMATIC IPC227 (Nanobox PC):** The compact embedded IPC – maintenance-free and dust-proof with versatile mounting
- **SIMATIC IPC427 (Microbox PC):** The powerful embedded IPC – maintenance-free with versatile configuration
- **SIMATIC IPC627/IPC827 (Box PC):** The high-end IPC – with maximum performance, functional scope, and expansion capability

Shared industrial functionality:

- Extreme compactness
- Certification for global marketing
- System-tested with SIMATIC components
- High vibration/shock load during operation
- Wide operational temperature range
- Robust data storage with CompactFlash/CFast or Solid-State Drive (SSD)
- Integrated PROFIBUS or PROFIBUS/MPI interface (optional)
- Varied mounting possibilities for flexibility with installation
- Designed for 24-hour continuous operation
- Integrated parameterizable monitoring functions (temperature, fan, watchdog)
- High service friendliness
- Operating system preinstalled and activated for fast startup
- Motherboard developed and manufactured by Siemens
- Availability for 3 to 6 years
- Repairs and spare parts service for 5 years
- High component/design continuity
- Installation and software compatible with predecessor model
- Long-term availability of PC components from the Intel embedded line

SIMATIC IPC227 (Nanobox PC): **The compact embedded IPC – maintenance-free and dust-proof with versatile mounting**

- Maximum compactness with approx. 1 liter enclosure volume with integrated industrial power supply for minimum space requirements in the control cabinet
- Maximum flexibility thanks four mounting options and interfaces on one side suitable for every installation situation
- Optimum variety of interfaces due to a large number of integrated interfaces such as selectable serial ports (RS 232/RS 485/CAN) and 2 x teaming-capable Gigabit Ethernet
- Maximum industrial functionality due to closed enclosure for optimum dust protection and non-volatile retentive memory
- Further device options for optimum adaptation to the application with additional PCIe slot or RS 232 interfaces or digital I/O

SIMATIC IPC427 (Microbox PC): **The powerful embedded IPC – maintenance-free with versatile configuration**

- Fan-free operation
- High performance with maximum compactness and ruggedness for direct installation in the machine
- Optimized for embedded applications
- Flexibility expandable using one or two PCIe I/O cards (optional)
- Flexible installation options due to DIN rail/wall/front upright mounting, even outside a control cabinet
- NVRAM for retentive data storage (optional)

SIMATIC IPC627/IPC827 (Box PC): **The high-end IPC – with maximum performance, functional scope, and expansion capability**

- Maximum system performance for complex measuring, control and visualization tasks
- High flexibility with expansion slots and integral interfaces
- Flexible, space-saving installation with mounting brackets or portrait assembly kits
- Rugged design for direct installation in the machine
- RAID1 controller onboard
- Maximum processor performance up to ambient temperature of 55 °C
- High system availability
- Battery-backed SRAM as memory for WinAC data
- 4 signaling LEDs

SIMATIC IPC227D

Overview

SIMATIC IPC227D (Nanobox PC): The compact embedded IPC – maintenance-free and dust-proof with versatile mounting

- Maximum compactness with approx. 1 liter enclosure volume or more with integrated industrial power supply for minimum space requirements in the control cabinet
- Maximum flexibility thanks four mounting options and interfaces on one side suitable for every installation situation
- Optimum variety of interfaces due to a large number of integrated interfaces such as a selectable serial port (RS 232/RS 485/CAN) and 2 x teaming-capable Gigabit LAN
- Maximum industrial functionality due to closed enclosure for optimum dust protection and non-volatile retentive memory
- Further device options for optimum adaptation to the application with additional PCIe slot or RS 232 interfaces or digital I/O

Technical specifications

6ES7647-8A...-....	
Processor	
Processor	Intel Atom E6x0
Drives	
Hard disk	CF or SSD or HD
Memory	
Main memory	512 MB to 2 GB
Data areas and their retentivity	
retentive data area in total (incl. times, counters, flags), max.	512 kbyte
Interfaces	
USB port	4x USB 2.0 high speed/high current
free slots	1x PCIe x1 (optional)
Connection for keyboard/mouse	USB / USB
serial interface	COM1: 1 x RS232 or RS485 or CAN
Video interfaces	
• Graphics interface	DVI-D
Industrial Ethernet	
• Industrial Ethernet interface	2 x Fast Ethernet
- 100 Mbps	Yes
- 1000 Mbps	Yes
Monitoring functions	
Temperature	Yes
Watchdog	Yes
Status LEDs	Yes
Degree and class of protection	
IP (at the front)	20
Standards, approvals, certificates	
Approval	CE (industry), UL, cULus
CE mark	Yes
KC approval	Yes
Marine approval	
• Germanischer Lloyd (GL)	Yes
• American Bureau of Shipping (ABS)	Yes
• Bureau Veritas (BV)	Yes
• Det Norske Veritas (DNV)	Yes
• Lloyds Register of Shipping (LRS)	Yes
Ambient conditions	
Operating temperature	
• Ambient temperature during operation	
- during operating phase, min.	0 °C
- during operating phase, max.	50 °C
Operating systems	
Pre-installed operating system	Yes
Windows XP Prof.	Yes
without operating system	Yes

Box PC

SIMATIC IPC427D

Overview

SIMATIC IPC427D (Microbox PC): The powerful embedded IPC – maintenance-free with versatile configuration

Ready-to-run, complete solutions (software is already installed and preconfigured) for visualization and automation in connection with WinCC RT Advanced and/or WinAC RTX:

- Ultra-compact
- Maintenance-free
- Third generation Intel Core i technology

Technical specifications

6AG4140-.....-...0	
Supply voltage	
Type of supply voltage	24 V DC
Supply voltage	24 V
Processor	
Processor	Intel® Celeron® Processor 827E (1.5MB Cache, 1.40 GHz); Intel® Core™ i3-3217UE Processor (3MB Cache, 1.60 GHz); Intel® Core™ i7-3517UE Processor (4MB Cache, up to 2.80 GHz)
Drives	
Hard disk	2.5" SATA hard disk, at least 250 GB
Memory	
Main memory	1 GB to 8 GB, ECC optional
Interfaces	
PROFIBUS/MPI	Onboard, isolated, max. 12 Mbit/s, CP5611-compatible
USB port	4x USB 3.0 high speed/high current
free slots	1xPCIe (x4), 1xPCIe (x1)
Connection for keyboard/mouse	USB / USB
serial interface	1 x RS232; 2 x RS232 (optional); CAN (optional)
Video interfaces	
• Graphics interface	1x DisplayPort and 1x DVI-I; 1x VGA via adapter cable (optional)
PROFINET IO	
• Number of PROFINET interfaces	1; 3 ports (incl. switch)
Industrial Ethernet	
• Industrial Ethernet interface	2 x Fast Ethernet
- 100 Mbps	Yes
- 1000 Mbps	Yes
Monitoring functions	
Temperature	Yes
Watchdog	Yes
Status LEDs	Yes
Degree and class of protection	
IP (at the front)	20

SIMATIC IPC627D

Overview

IPC627D with DVD drive

SIMATIC IPC627D (Box PC): The high-end IPC – with maximum performance, functional scope and expansion capability

It offers:

- Maximum performance in the smallest space
- Intel Xeon technology

Technical specifications

SIMATIC IPC627D	
General features	
Processor	<ul style="list-style-type: none"> • Intel Xeon Processor E3-1268L v3 (4C, 2.3 (3.3) GHz, HT, 8 MB cache, HT, VT-d, AMT) • Intel Core i3-4330TE (2C, 2.4 GHz, 4 MB cache, HT, VT-x) • Intel Celeron G1820TE (2C, 2.2 GHz, 2 MB cache)
Main memory	2 GB; DDR3 1600, DIMM; expandable up to 16 GB (2 memory receptacles); ECC memory 8/16 GB optional
Free slots for expansions	<ul style="list-style-type: none"> • 1 x PCI (185 mm) and 1 x PCI (185 mm) or • 1 x PCI (185 mm) and 1 x PCIe x16 (185 mm) • 2 x PCI-Express (x16/x4, 185/185 mm)
Operating system	
Operating system	<ul style="list-style-type: none"> • Without • Windows 7 Ultimate Multi-Language – 32-bit or 64-bit variant, SP1
Supply voltage	100 V / 230 V / 240 V AC (widerange) 50/60 Hz; optional 24 V DC
Drives	
Optical drives	SATA DVD±RW/DL Drive, optional (Depth increases from 80 mm to 100 mm)
SATA hard disks	None; 250 GB, 500 GB, RAID1 (2 x 250 GB)
Solid state drive	240 GB SATA 2.5"
Approvals	
cULus508, cULus1950, FCC Class A	
Ports	
DisplayPort	1 x DisplayPort
DVI-I	1 x (analog OR digital)
VGA	Via adapter cable, DVI-I to VGA adapter (available as accessory)
Dual Monitor	Via DisplayPort and DVI-I
Parallel interface	PC slot cover (available as accessory)
Serial interface	1 x COM1
PROFIBUS/MPI	12 Mbit/s (isolated, CP 5622-compatible, optional)
PROFINET	3 x RJ45 (CP 1616-compatible, optional) ¹⁾
USB	4 x USB 3.0, SuperSpeed; 2 x USB 2.0 (optional)
Ethernet	2 x Gigabit Ethernet (IE, PN, RJ45, teaming-capable)

¹⁾ Note:
The PROFINET and PROFIBUS options are supplied with 2 MB battery-backed SRAM

Overview

SIMATIC IPC827D (Box PC): The high-end IPC – with maximum performance, functional scope and expansion capability

It offers:

- Maximum performance and high expandability
- with Intel Xeon technology

Technical specifications

SIMATIC IPC827D	
General features	
Processor	<ul style="list-style-type: none"> • Intel Xeon Processor E3-1268L v3 (4C, 2.3 (3.3) GHz, HT, 8 MB cache, HT, VT-d, AMT) • Intel Core i3-4330TE (2C, 2.4 GHz, 4 MB cache, HT, VT-x) • Intel Celeron G1820TE (2C, 2.2 GHz, 2 MB cache)
Main memory	2 GB; DDR3 1600, DIMM; expandable up to 16 GB (2 memory receptacles); ECC memory 8/16 GB optional
Free slots for expansions	2 x PCI (240 mm) 1 x PCI (185 mm) 2 x PCI-Express (x16/x4, 185/185 mm)
Operating system	
Operating system	<ul style="list-style-type: none"> • Without • Windows 7 Ultimate Multi-Language – 32-bit or 64-bit variant, SP1
Supply voltage	100 V / 230 V / 240 V AC (widerange) 50/60 Hz; optional 24 V DC
Drives	
Optical drives	DVD±RW/DL SATA, optional (depth increases from 155 mm to 179 mm)
SATA hard disks	None; 250 GB, 500 GB, RAID1 (2 x 250 GB)
Solid state drive	240 GB SATA 2.5"
Approvals	cULus508, cULus1950, FCC Class A

PC-based Automation

Box PC

SIMATIC IPC827D

Technical specifications (continued)

SIMATIC IPC827D	
Ports	
DisplayPort	1 x DisplayPort
DVI-I	1 x (analog OR digital)
VGA	Via adapter cable, DVI-I to VGA adapter (available as accessory)
Dual Monitor	Via DisplayPort and DVI-I
Parallel interface	PC slot cover (available as accessory)
Serial interface	1 x COM1
PROFIBUS/MPI	12 Mbit/s (isolated, CP 5622-compatible, optional)
PROFINET	3 x RJ45 (CP 1616-compatible, optional) ¹⁾
USB	4 x USB 3.0, SuperSpeed; 2 x USB 2.0 (optional)
Ethernet	2 x Gigabit Ethernet (IE, PN, RJ45, teaming-capable)
Monitoring functions	
Temperature and Watchdog	Onboard
Status LEDs	4 LEDs
Ambient conditions	
Degree of protection	
	IP20 according to EN 60529 (front/rear)
Vibration load in operation ²⁾	<ul style="list-style-type: none"> • 10 ... 58 Hz: 0.75 mm, 58 ... 500 Hz: 9.8 m/s² (approx. 1 g) • with DVD operation: 10 ... 58 Hz: 0.018 mm, 58 ... 500 Hz: 2.5 m/s² (approx. 0.25 g)
Shock load during operation ³⁾	<ul style="list-style-type: none"> • Tested according to DIN IEC 68-2-29: 50 m/s² (5 g), • with DVD operation: 50 ms², 11 ms (5 g)
Relative humidity during operation	5 % to 80 % at 25°C (no condensation);
Relative humidity during transport / storage	5% to 95% at 25°C (no condensation)

SIMATIC IPC827D	
Electromagnetic compatibility (EMC)	
Emitted interference	EN 61000-6-3, EN 61000-3-2 Class D, EN 61000-3-3; FCC Class A
Immunity to interference	
<ul style="list-style-type: none"> • to conducted interference on the supply cables 	± 2 kV (IEC 61000-4-4, burst), ± 1 kV (IEC 61000-4-5, surge symm.), ± 2 kV (IEC 61000-4-5, surge asymm.)
<ul style="list-style-type: none"> • on signal cables 	± 1 kV (IEC 61000-4-4, burst, length < 3 m), ± 2 kV (IEC 61000-4-4, burst, length > 3 m), ± 2 kV (IEC 61000-4-5, surge, length > 30 m)
<ul style="list-style-type: none"> • to discharge of static electricity 	± 6 kV contact discharge (IEC 61000-4-2), ± 8 kV air discharge (IEC 61000-4-2)
<ul style="list-style-type: none"> • to high-frequency radiation 	10 V/m 80% AM, 80-1000 MHz and 1.4 - 2 GHz (IEC 61000-4-3); 1 V/m 80% AM, 2.0-2.7 GHz (IEC 61000-4-3), 10 V, 10 kHz to 80 MHz (IEC 61000-4-6)
<ul style="list-style-type: none"> • to magnetic fields • Ambient temperature during operation 	100 A/m, 50/60 Hz (IEC 61000-4-8) 5 to 45 °C (maximum configuration); 5 to 50 °C (up to 20 W load on PCI bus), 5 to 55 °C (up to 10 W load on PCI bus)
Dimensions	
Device dimensions (W x H x D) in mm	312 x 301 (incl. mounting rail) x 179 without DVD drive: 312 x 301 (incl. mounting rail) x 155
Weight	approx. 8 kg

¹⁾ Note:
The PROFINET and PROFIBUS options are supplied with 2 MB battery-backed SRAM

²⁾ No vibration permitted when burning DVDs;

³⁾ No shock permitted when burning DVDs

SIMATIC IPC427C, interfaces

Overview

SIMATIC IPC627C (Box PC): The high-end IPC – with maximum performance, functional scope and expansion capability

It offers:

- Maximum performance in the smallest space
- Intel Core i7 technology

Technical specifications

6ES7647-6C...-....	
Supply voltage	
Type of supply voltage	AC, optional DC
Supply voltage	100 - 240 V AC, optional 24 V
Line frequency	
• Line frequency	50 / 60 Hz
Processor	
Processor	Core i7-610E (2C/4T, 2.53 GHz, TB, HT, VT, AMT, 4MB cache); Core i3-330E (2C/4T, 2.13 GHz, HT, VT, 3MB cache); Celeron P4505 (2C/2T, 1.86 GHz, VT, 2MB cache);
Drives	
Hard disk	3.5" SATA hard disk ≥250 GB, optional ≥500 GB, optional 2 x 2.5" SATA hard disk module (≥250 GB), RAID 1 controller onboard; optional SATA Solid State Drive (>=50 GB); all hard disk drives vibration-damped
Memory	
Main memory	1 GB to 8 GB, ECC optional
Interfaces	
PROFIBUS/MPI	Onboard, isolated, max. 12 Mbit/s, CP5611-compatible
USB port	4x USB 2.0 high speed/high current
free slots	2x PCI or 1x PCI & 1x PCIe (x16) (265 mm/185mm long), 1x slot for CompactFlash Card
Connection for keyboard/mouse	USB / USB
serial interface	COM1: 1 x V.24 (RS232)
Video interfaces	
• Graphics interface	DVI-I: VGA / DVI combined
Industrial Ethernet	
• Industrial Ethernet interface	2 x Fast Ethernet
- 100 Mbps	Yes
- 1000 Mbps	Yes

PC-based Automation

Box PC

SIMATIC IPC627C

Technical specifications (continued)

6ES7647-6C...-....	
Monitoring functions	
Temperature	Yes
Watchdog	Yes
Status LEDs	Yes
Degree and class of protection	
IP (at the front)	20
Standards, approvals, certificates	
Approval	CE, cULus (508), C-Tick
CE mark	Yes
cULus	Yes
EMC	CE, EN 55022A, EN 61000-6-4, EN 61000-6-2
EN 61000-6-2	Yes
Marine approval	
• Germanischer Lloyd (GL)	Yes
• American Bureau of Shipping (ABS)	Yes
• Bureau Veritas (BV)	Yes
• Det Norske Veritas (DNV)	Yes
• Lloyds Register of Shipping (LRS)	Yes
Ambient conditions	
Operating temperature	
• Ambient temperature during operation	+5 °C to +45 °C with full configuration
- during operating phase, min.	5 °C
- during operating phase, max.	55 °C
Relative humidity	
• Relative humidity	Tested to DIN IEC 60068-2-3, DIN IEC 60068-2-30, DIN IEC 60068-2-56: 5% to 80% at 25 °C (no condensation)

6ES7647-6C...-....	
Ambient conditions (continued)	
Vibrations	
• Vibration load in operation	Tested to DIN IEC 60068-2-6: 10 Hz to 58 Hz: 0.075 mm, 58 Hz to 200 Hz: 9.8 m/s ² (1 g)
Shock testing	
• Shock load during operation	Tested to DIN IEC 60068-2-29: 50 m/s ² (5g), 30 ms, 100 shocks
Operating systems	
Operating system	
	Windows XP Prof. SP3, MUI; Windows 7 Ultimate 32/64Bit, MUI; Windows Embedded Standard 2009 English on 8 GB CompactFlash; without operating system;
Pre-installed operating system	Yes
Windows XP Prof.	Yes
without operating system	Yes
Software	
SIMATIC Software	Optionally in package with SIMATIC WinCC or WinCC flexible
Dimensions	
Width	312 mm
Height	80 mm; with DVD drive: 100 mm
Depth	301 mm; incl. mounting rail

PC-based Automation

SIMATIC Panel PC

Panel PC

Overview

SIMATIC Panel PCs are suitable thanks to their high industrial compatibility for use in control cabinets, consoles and control panels, as well as directly on the machine. Typical areas of application can be found in both factory and process automation.

There is a broad range of robust, high-performance SIMATIC Panel PCs available for different requirements.

Shared industrial functionality

- High-quality components and modules with a high MTBF (mean time between failure), which also ensure 24-hour operation in the extended temperature range.
- High swing/shock capacity of the devices through special hard-disk suspensions, locked connectors and card retainers
- Rugged housing model with high electromagnetic compatibility (EMC) and integrated industrial power supplies (also as per NAMUR)
- Service-friendly device design
- Bright, brilliant displays in different sizes up to 19"
- Same front panel mounting dimensions and uniform front design across all device families
- Rugged fronts protected from dust, humidity and chemical substances (front-side IP65 / NEMA 4 degrees of protection)

SIMATIC IPC277: The embedded Nanopanel PC – maintenance-free and compact with displays starting from 7"

- High degree of flexibility for selecting rugged widescreen fronts from 7" to 19" for a more freely configurable display area
- High resolution, large viewing angle, and up to 100% dimmable backlighting for a brilliant display with optimized power consumption
- Absolutely maintenance-free due to the use of CompactFlash or SSD as mass storage and fanless operation up to 50 °C ambient temperature
- Maximum industrial functionality due to non-volatile retentive memory (option)
- Ready-to-use embedded bundles with visualization and/or control software

SIMATIC IPC477D: The powerful embedded Panel PC – maintenance-free with versatile configuration

- Compact design
- High performance with highly compact design and ruggedness
- Flexible expansion using a PCIe I/O card (optional)
- No rotating parts (without fan and hard disk)
- High security due to use of the operating system
- Windows Embedded Standard 7
- Ready-to-use devices with optionally preinstalled software
- HMI: Innovative HMI software WinCC RT Advanced (including logging and recipes)
- RTX: with real-time capable software PLC WinAC RTX
- Retentive memory on-board
- (NV-RAM, usable with WinAC RTX)

SIMATIC HMI IPC477C: The powerful embedded Panel PC – maintenance-free with versatile configuration

- Compact design
- High performance with highly compact design and ruggedness

(optional)

- Also available as PRO version (all-round IP65 degree of protection) with 15" and 19" Touch displays
- No rotating parts (without fan and hard disk)
- High security due to Microsoft Windows Embedded Standard 2009 or Windows Embedded Standard 7 operating systems
- Ready-to-use devices with optionally preinstalled software
 - HMI: Innovative HMI software WinCC flexible (incl. archives and recipes)
 - RTX: with real-time capable software PLC WinAC RTX
- Retentive memory on board (NV-RAM, usable with WinAC RTX)

SIMATIC HMI IPC577: Industrial functionality and openness at an attractive price

- Full PC openness and performance boost with Intel Core2 Duo processors
- Rugged design for industrial use
- Can be expanded using a PCI slot and additional interfaces
- More rugged due to SSD (solid-state drive) or CompactFlash
- The configurator (best-fit for the customer) makes ordering more flexible
- Compact design

SIMATIC HMI IPC677: The high-end Panel PC – with maximum performance, functional scope and expansion capability

- Rugged, expandable industrial PC with different front panels
- Rugged design for industrial use
- Complete PC openness
- Optional PROFIBUS or PROFINET onboard
- All processors with dual core

⁷⁾ +0 °C to +45 °C for 19"

⁸⁾ 15" display optionally as Touch/Key version

More information

Additional information is available on the Internet at:

<http://www.siemens.com/simatic-panel-pc>

Note:

Do you need a specific modification or extension to the products described here? Then refer to "Customized Automation". There you will find information about additional and generally available sector-specific products as well as options for customer-specific modification and adaptation.

Examples are:

- Specific front panels for SIMATIC Panel PC, e.g. honing oil-resistant or with lateral function/movement keys
- SIMATIC HMI Net Panel with 46" large-scale display

Overview

SIMATIC IPC277D: The embedded Nanopanel PC – maintenance-free and compact with displays starting from 7"

- Offers great flexibility in the selection of rugged widescreen fronts
- From 7" to 19" for more freely configurable display area
- High resolution, large viewing angle, and up to 100% dimmable backlighting for a brilliant display with optimized power consumption
- Absolutely maintenance-free due to the use of CompactFlash and SSD as mass storage and fanless operation up to 50 °C ambient temperature
- Maximum industrial functionality due to non-volatile retentive memory
- Ready-to-use embedded bundles with visualization or/and control software

The following front installation versions are available:

- 7" Touch
- 9" Touch
- 12" Touch
- 15" Touch with USB interface on the front
- 19" Touch with USB interface on the front
- All fronts as widescreen version

Overview

SIMATIC IPC477D: The powerful embedded Panel PC – maintenance-free with versatile configuration

- Embedded PC platform with extremely high industrial compatibility for demanding tasks in the field of PC-based automation
- Maintenance-free (no rotating components such as fan and hard disk)
- Rugged construction: The PC is resistant to even the harshest mechanical stress and is extremely reliable in operation
- Compact design
- Battery-independent retentive memory onboard
- High degree of investment security
- Fast integration capability

The following front versions are available:

- Built-in versions
 - 12" TFT Touch
 - 15" TFT Touch
 - 15" TFT Touch/Key
 - 19" TFT Touch
 - 22" TFT Touch
 - 19" TFT Multi-Touch
 - 22" TFT Multi-Touch

SIMATIC IPC677D

Overview

SIMATIC IPC677D: The high-end Panel PC – with maximum performance, functional scope and expansion capability

Rugged construction: The PC is resistant to even the harshest mechanical stress and is reliable in operation.

- Compact design
- High degree of investment protection
- Fast integration capability
- Widescreen front panel versions:
 - 22" Touch (other front panels available soon: 15", 19" Touch and 15", 19" and 22" Multi-Touch)

Technical specifications

6AV7260-...	
General features	
Processor	<ul style="list-style-type: none"> • Xeon E3-1268Lv3 (4C/8T, 2.3 (3.3) GHz, 8 MB cache, VT-d, AMT) • Core i3-4330TE (2C/4T, 2.4 GHz, 4 MB cache, VT-x) • Celeron G1820TE (2C/2T, 2.2 GHz, 2 MB cache)
Main memory	2 GB, optionally 4, 8 or 16 GB, or 8 or 16 GB with ECC
Free slots for expansions	<ul style="list-style-type: none"> • 2 x PCI (slot with card retainer) or 1 x PCI and 1 x PCIe x16 or • 1 x PCIe x16 and 1 x PCIe x4
Operating system	Windows 7 Ultimate 32-bit or 64-bit
Power supply	24 V DC or 110/240 V AC (autorange), 50/60 Hz
MTBF backlighting	Typ. 80 000 h (at 24 h continuous operation, temperature-dependent)
Drives	
Optical drives	Optional DVD±RW±R combo drive, at the rear, operable from the side
Hard disk/mass storage	<ul style="list-style-type: none"> • 3.5" SATA hard disk ≥ 250 GB; • optional 3.5" SATA hard disk ≥ 500 GB, • Dual hard disk module 2 x ≥ 250 GB SATA as single disk configuration or RAID1 preconfigured, • 240 GB SSD (solid-state drive)
Interfaces	
Graphics interface	DVI-I and DisplayPort
Connection for keyboard/mouse	USB / USB
Serial interface	COM1: 1 x V.24 (RS232)
PROFIBUS DP/MPI	Onboard (optional), isolated, max. 12 Mbit/s, compatible with CP 5622, not upgradeable
PROFINET (IRT)	Onboard (optional), 3 x RJ 45, CP 1616-compatible, not upgradeable
PROFINET (IE), Ethernet	Onboard, 2 x 10/100/1000 Mbit
USB	1 x on front, 4 x on rear, USB 3.0 (500 mA)
Audio	Possible via USB (external)
Multimedia	No

6AV7260-...	
Monitoring functions	
Temperature	Yes
Watchdog	Yes
Ambient conditions	
Degree of protection	Front: IP65, Rear: IP20
Vibration load during operation	Tested according to DIN IEC 60068-2-6: 10 - 58 Hz: 0.075 mm, 58 to 500 Hz: 10 m/s ² (1 g) ¹⁾
Shock loading during operation	Tested to DIN IEC 60068-2-27, IEC 60068-2-29: 50 m/s ² (5 g), 30 ms, 100 shocks
EMC	CE, FCC A, EN 61000-6-4, EN 61000-6-3, CISPR22
Ambient temperature during operation	• 5 °C ... +45 °C in maximum configuration
Relative humidity	Tested according to DIN IEC 60068-78, DIN IEC 60068-2-30: 5% to 80% at 25 °C (no condensation)
Maximum permissible installation angle +/-	20° over vertical
Certifications & standards	
Approvals	CE, cULus(508), FCC, KC, C-Tick
Expansion components	Uninterruptible power supply (UPS), SIMATIC NET communication modules, SIMATIC IPC DiagMonitor, SIMATIC IPC Image & Partition Creator, SIMATIC IPC USB FlashDrive

¹⁾ Valid with SSD; with HDD: 5 g/0.5 g

Note

Do you need a specific modification or option for the products described here? Under "Customized products", you will find information about additional sector-specific products that can be ordered as well as about options for customer-specific modification and adaptation.

Overview

The following front versions are available:

- Built-in versions
 - 12" and 15" TFT Touch
 - 12" and 15" TFT keypad
 - 19" Touch
- Support arm versions
 - PRO 15" and PRO 19" Touch
 - Fully enclosed device with degree of protection IP65 for mounting on a support arm/stand

SIMATIC HMI IPC477C: The powerful embedded Panel PC – maintenance-free with versatile configuration

- Embedded PC platform with extremely high industrial compatibility for demanding tasks in the field of PC-based automation
- Maintenance-free (no rotating components such as fan and hard disk)
- Rugged construction: The PC is resistant to even the harshest mechanical stress and is extremely reliable in operation
- Compact design (only 61-69 mm installation depth for 12"-19")
- Battery-backed retentive memory onboard
- High degree of investment security
- Fast integration capability

PC-based Automation

SIMATIC Panel PC

SIMATIC HMI IPC577C

Overview

Rugged, expandable industry PC for demanding tasks in the area of PC-based automation with various control units (front panels):

- Rugged and compact design for industrial use
- Full PC openness
 - Windows Embedded Standard or Windows XP Professional, or without operating system
 - CF card, HDD, SSD
 - DVD drive
- Expandable using a PCI slot
- Optionally with PROFIBUS or PROFINET (RT/IRT) onboard
- Installation-compatible with Panel PC 577B
 - Touch screen control units with 12", 15" and 19" TFT display
 - 12" and 15" TFT Key
- High degree of investment protection

PC-based Automation

SIMATIC Panel PC

SIMATIC HMI IPC677C

Overview

SIMATIC HMI IPC677C: The high-end Panel PC – with maximum performance, functional scope and expansion capability

Rugged construction:

The PC is resistant to the harshest mechanical stress and is reliable in operation.

- Compact design
- High degree of investment security
- Fast integration capability
- Front panel versions:
 - 12", 15" and 19" TFT Touch
 - 12" and 15" TFT Key
 - 15" TFT Touch INOX with stainless steel front for special requirements, e.g. in the food, beverages and tobacco industries

Technical specifications

6AV789-....	
General features	
Processor	<ul style="list-style-type: none"> • Intel Core i7-610E (2C/4T, 2.53 GHz, 4 MB L2, Turbo Boost, VT-d) • Intel Core i3-330E (2C/4T, 2.13 GHz, 3 MB L2) • Intel Celeron P4505 (2C/2T, 1.86 GHz, 2 MB L2)
Main memory	1 GB, optionally 2, 3, 4 or 8 GB or 2, 4 or 8 GB with ECC
Free slots for expansions	<ul style="list-style-type: none"> • 2 x PCI (slot with card retainer) or 1 x PCI and 1 x PCIe x16 • 1 x slot for CompactFlash Card (accessible from outside)
Operating system	Different Windows operating systems incl. Windows 7 Ultimate 64-bit
Power supply	24 V DC or 110/240 V AC (auto-range), 50/60 Hz
MTBF backlighting	Typ. 50 000 h (at 24 h continuous operation, temperature-dependent)
Drives	
Optical drives	Optional DVD±RW±R combo drive, at the rear, operable from the side
Hard disk/mass storage	<ul style="list-style-type: none"> • 3.5" SATA hard disk ≥ 250 GB; • optional 3.5" SATA hard disk ≥ 500 GB, • Dual hard disk module 2 x ≥ 250 GB SATA as single disk configuration or RAID1 preconfigured, • 50 GB SSD (solid-state drive)
Interfaces	
Graphics interface	DVI-I for additional display unit: Color depth 32 bits
Connection for keyboard/mouse	USB / USB
Serial interface	COM1: 1 x V.24 (RS232)
PROFIBUS DP/MPI	Onboard, isolated, max. 12 Mbit/s, compatible with CP 5611, not upgradeable
PROFINET (IRT)	Onboard, 3 x RJ 45, CP 1616-compatible, not upgradeable
PROFINET (IE), Ethernet	Onboard, 2 x 10/100/1000 Mbit
USB	1 x on front, 4 x on rear, USB 2.0 (500 mA)
Audio	Possible via USB (external)
Multimedia	No

6AV789-....	
Monitoring functions	
Temperature	Yes
Watchdog	Yes
Ambient conditions	
Degree of protection	IP65 (front) in accordance with EN 60529 and NEMA 4
Vibration load during operation	Tested according to DIN IEC 60068-2-6: 10 - 58 Hz: 0.075 mm, 58 to 500 Hz: 10 m/s ² (1 g) ²
Shock loading during operation	Tested according to DIN IEC 60068-2-6: 50 m/s ² (5 g), 30 ms, 100 shocks
EMC	CE, FCC A, 55022A, EN 61000-6-4 ¹ , EN 61000-6-2
Ambient temperature during operation	<ul style="list-style-type: none"> • 12"/15": 5 °C ... +50 °C in maximum configuration • 19": 5 °C ... +45 °C in maximum configuration
Relative humidity	Tested according to DIN IEC 60068-78, DIN IEC 60068-2-30: 5% to 80% at 25 °C (no condensation)
Maximum permissible installation angle +/-	20° over vertical
Certifications & standards	
Approvals	CE, cULus(508) ATEX 22, UL Class 1 Div 2 (see front options)
Shipbuilding approval (for configurations with CompactFlash or SSD memory and without optical drive)	<ul style="list-style-type: none"> • GL - Germanische Lloyd • BV - Bureau Veritas • LR - Lloyds Register of Shipping • ABS - American Bureau of Shipping • DNV - Det Norske Veritas • NKK - Nippon Kaiji Kyokai
Expansion components	Uninterruptible power supply (UPS), SIMATIC NET communication modules, SIMATIC IPC DiagMonitor, SIMATIC IPC Image & Partition Creator, SIMATIC IPC USB FlashDrive

¹ 61000-6-2 replaces 50082-2; 61000-6-4 replaces 50081-2

² Valid with CF or SSD; with HDD: 5 g/0.5 g

PC-based Automation

SIMATIC PC-based controllers

SIMATIC PC-based controllers

Overview

Siemens has developed a wide range of coordinated hardware and software components for PC-based Automation.

Focal point: **SIMATIC PC-based Control** with SIMATIC WinAC, the open, flexible and reliable controller for your PC-based automation solution.

All automation tasks can be implemented on one platform on the PC, such as open-loop control, closed-loop control, HMI and motion control. PC-based Automation is your first choice whenever PC applications have to be handled in addition to classic PLC tasks.

SIMATIC PC-based Control

- Adds PC-based controllers to the SIMATIC S7 controller family
- Especially suitable where a variety of tasks such as data processing, communication, visualization, technology and control have to be integrated in one PC.

Versions

- **SIMATIC WinAC Software PLC** for tasks requiring a high level of flexibility and integration capability.
- **SIMATIC WinAC ODK** allows PC solutions for technological tasks to be integrated flexibly and powerfully into the controller.

Properties:

- Runs on standard PCs under Windows XP Professional SP2.
- Code-compatible with SIMATIC S7: Programmed with SIMATIC industrial software, created programs can also be used for SIMATIC S7.
- Uses standard interfaces for integration into the office environment.
- Open interfaces for the integration of solution-specific technological hardware and software.

Catalog ST 70:

You can also find information about SIMATIC PC-based controllers in **Catalog ST 70:**

http://www.automation.siemens.com/salesmaterial-as/catalog/en/simatic_st70_chap08_english_2013.pdf

Brochures

Information material for downloading can be found in the Internet:

<http://www.siemens.com/simatic/printmaterial>

Overview

- SIMATIC WinAC RTX: Optimized for applications that require a high degree of flexibility and integration capability.
- The software solution for tasks that require hard deterministic behavior and high performance.
- With real-time expansion for assuring deterministic behavior for the control section.

New with WinAC RTX 2010 SP1:

- SIMATIC IPC427D and IPC477D are fully supported
 - Communication via onboard CP 5622
 - Retentive memory
 - LED display of the operating status
- Support for the new PROFIBUS CP 5612 (PCI) and CP 5622 (PCIe)

Technical specifications

SIMATIC WinAC RTX 2010	6ES7671-0RC08-0YA0
General information	
Firmware version	V4.6
Engineering with	STEP7 as of V5.5 + HW update / iMap V3.0 SP1
Memory	
Type of memory	RAM
Work memory	4 Mbyte; Adjustable; depends on Non Paged Memory Pool
• integrated (for program)	4 Mbyte; Adjustable; depends on Non Paged Memory Pool
• integrated (for data)	
Load memory	8 Mbyte; Adjustable; depends on Non Paged Memory Pool
• integrated RAM, max.	
CPU processing times	
for bit operations, typ.	0.004 µs; Typical

3. Interface	
Interface type	PROFINET
Number of simultaneously operable CPs, max.	1; Intel Pro/1000 (82573L, 82574L, 82541PI; non-shared IRQ required); integrated IE interface SIMATIC PC 4x7B, 6x7B, 8x7B, IPC4x7C, IPC6x7C, IPC8x7C, IPC2x7D, IPC4x7D
Physics	Ethernet
isolated	Yes
integrated switch	No
Number of ports	1
automatic detection of transmission rate	Yes; 10/100 Mbit/s
Autonegotiation	Yes
Autocrossing	Yes

PC-based Automation

SIMATIC PC-based controllers

SIMATIC WinAC RTX

Technical specifications (continued)

SIMATIC WinAC RTX 2010	6ES7671-0RC08-0YA0
3. Interface (continued)	
Media redundancy	
• supported	No
Functionality	
• PROFINET IO Controller	Yes
• PROFINET IO Device	No
• PROFINET CBA	Yes
• Open IE communication	Yes
PROFINET IO Controller	
• Transmission rate, min.	100 Mbit/s
• Transmission rate, max.	100 Mbit/s
• Number of connectable IO Devices for RT, max.	128
- of which in line, max.	128
• IRT, supported	No
• Prioritized startup supported	Yes
- Number of IO Devices, max.	32
• Activation/deactivation of IO Devices	Yes
- Number of IO Devices that can be simultaneously activated/deactivated, max.	8
• IO Devices changing during operation (partner ports), supported	Yes
• Device replacement without swap medium	Yes
• Send cycles	1 ms
• Updating time	1 - 512 ms (minimum value depends on communication share set for PROFINET I/O, on the number of I/O devices, and on the volume of configured user data)
• Services	
- PG/OP communication	Yes
- Routing	Yes; S7 routing
- S7 communication	Yes
- Isochronous mode	No
- Open IE communication	Yes
• Address area	
- Inputs, max.	16 kbyte
- Outputs, max.	16 kbyte
- User data per address area, max.	2 kbyte
- User data consistency, max.	254 byte
PROFINET CBA	
• acyclic transmission	Yes
• cyclic transmission	Yes
SIMATIC communication	
• PG/OP communication	Yes
• S7 routing	Yes
• S7 communication	Yes
• Number of connections, max.	16
Open IE communication	
• Open IE communication, supported	Yes
• Number of connections, max.	32
• Local port numbers used at the system end	0, 20, 21, 23, 25, 80, 102, 135, 161, 443, 8080, 34962, 34963, 34964, 65532, 65533, 65534, 65535
• Keep-alive function, supported	Yes

SIMATIC WinAC RTX 2010	6ES7671-0RC08-0YA0
4. Interface	
Interface type	PROFINET
Number of simultaneously operable CPs, max.	1; CP 1616 (hardware release 8 or higher), CP 1604 (hardware release 7 or higher), integrated PROFINET interface of SIMATIC IPC and S7-mEC
Physics	Ethernet
isolated	Yes
integrated switch	Yes
Number of ports	3
automatic detection of transmission rate	Yes; 10/100 Mbit/s
Autonegotiation	Yes
Autocrossing	Yes
Change of IP address at runtime, supported	Yes
Number of connection resources	32
Media redundancy	
• supported	Yes
• Switchover time on line break, typ.	200 ms
• Number of stations in the ring, max.	50
Functionality	
• PROFINET IO Controller	Yes
• PROFINET IO Device	No
• PROFINET CBA	Yes
• Open IE communication	Yes
• Web server	Yes
PROFINET IO Controller	
• Transmission rate, max.	100 Mbit/s
• Number of connectable IO Devices for RT, max.	256
- of which in line, max.	256
• Number of IO Devices with IRT and the option "high flexibility"	64
- of which in line, max.	32
• Number of IO Devices with IRT and the option "high performance", max.	64
- of which in line, max.	32
• IRT, supported	Yes
• Prioritized startup supported	Yes
- Number of IO Devices, max.	32
• Activation/deactivation of IO Devices	Yes
- Number of IO Devices that can be simultaneously activated/deactivated, max.	8
• IO Devices changing during operation (partner ports), supported	Yes
• Device replacement without swap medium	Yes
• Send cycles	250 µs, 500 µs, 1 ms
• Updating time	0.25...512 depending on the send cycle
• Services	
- PG/OP communication	Yes
- Routing	Yes; S7 routing
- S7 communication	Yes
- Isochronous mode	Yes
- Open IE communication	Yes
• Address area	
- Inputs, max.	16 kbyte
- Outputs, max.	16 kbyte
- User data per address area, max.	2 kbyte
- User data consistency, max.	254 byte

Technical specifications (continued)

SIMATIC WinAC RTX 2010	6ES7671-0RC08-0YA0
4. Interface (continued)	
SIMATIC communication	
• PG/OP communication	Yes
• S7 routing	Yes
• S7 communication	Yes
• Number of connections, max.	32
Open IE communication	
• Open IE communication, supported	Yes
• Number of connections, max.	32
• Local port numbers used at the system end	0, 20, 21, 25, 80, 102, 135, 161, 34962, 34963, 34964, 65532, 65533, 65534, 65535
Isochronous mode	
Isochronous mode (application synchronized up to terminal)	Yes
Number of DP masters with isochronous mode	2
User data per isochronous slave, max.	128 byte
Equidistance	Yes
shortest clock pulse	2.2 ms; 2.2 ms without partial process image; 2.2 ms with partial process image
Communication functions	
PG/OP communication	Yes
Data record routing	Yes; Only with CP 5611 or integrated PROFIBUS interface of the SIMATIC PC
Global data communication	
• supported	No
S7 basic communication	
• supported	No
S7 communication	
• supported	Yes
• as server	Yes
• as client	Yes
• User data per job, max.	64 kbyte; When using BSEND/USEND
Open IE communication	
• TCP/IP	Yes
- Number of connections, max.	32
- Data length for connection type 01H, max.	Not supported
- Data length for connection type 11H, max.	65 534 byte
- Data length, max.	65 534 byte
• ISO-on-TCP (RFC 1006)	Yes
- Number of connections, max.	32
- Data length, max.	65 534 byte
• UDP	Yes
- Number of connections, max.	32
- Data length, max.	1 472 byte

SIMATIC WinAC RTX 2010	6ES7671-0RC08-0YA0
Web server	
• supported	Yes
• Number of HTTP clients	2
• User-defined websites	No
PROFINET CBA (at set setpoint communication load)	
• Setpoint for the CPU communication load	20 %
• Number of remote interconnection partners	64
• Number of functions, master/slave	30
• Total of all master/slave connections	1 000
• Data length of all incoming connections master/slave, max.	6 800 byte
• Data length of all outgoing connections master/slave, max.	6 800 byte
• Number of device-internal and PROFIBUS interconnections	500
• Data length of device-internal und PROFIBUS interconnections, max.	4 000 byte
• Data length per connection, max.	1 400 byte
• Remote interconnections with acyclic transmission	
- Sampling frequency: Sampling time, min.	500 ms
- Number of incoming interconnections	100
- Number of outgoing interconnections	100
- Data length of all incoming interconnections, max.	2 000 byte
- Data length of all outgoing interconnections, max.	2 000 byte
- Data length per connection, max.	1 400 byte
• Remote interconnections with cyclic transmission	
- Transmission frequency: Transmission interval, min.	10 ms
- Number of incoming interconnections	200
- Number of outgoing interconnections	200
- Data length of all incoming interconnections, max.	4 800 byte
- Data length of all outgoing interconnections, max.	4 800 byte
- Data length per connection, max.	250 byte
• HMI variables via PROFINET (acyclic)	
- Number of stations that can log on for HMI variables (PN OPC/iMap)	3
- HMI variable updating	500 ms
- Number of HMI variables	200
- Data length of all HMI variables, max.	2 000 byte
• PROFIBUS proxy functionality	
- supported	Yes
- Number of linked PROFIBUS devices	16
- Data length per connection, max.	240 byte; Slave-dependent

PC-based Automation

SIMATIC PC-based controllers

SIMATIC WinAC RTX

Technical specifications (continued)

SIMATIC WinAC RTX 2010	6ES7671-0RC08-0YA0
Number of connections	
• overall	96
• usable for PG communication	
- reserved for PG communication	1
• usable for OP communication	
- reserved for OP communication	1
S7 message functions	
Number of login stations for message functions, max.	62
SCAN procedure	No
Process diagnostic messages	Yes; ALARM_S, ALARM_SQ, ALARM_D, ALARM_DQ
simultaneously active Alarm-S blocks, max.	20; of a total of 20 for all SFCs
Alarm 8-blocks	Yes
• Number of instances for alarm 8 and S7 communication blocks, max.	4 000
Process control messages	No
Number of archives that can log on simultaneously (SFB 37 AR_SEND)	32
Test commissioning functions	
Status block	Yes
Single step	Yes
Number of breakpoints	20
Status/control	
• Status/control variable	Yes
Forcing	
• Forcing	No
Diagnostic buffer	
• present	Yes
• Number of entries, max.	
- adjustable	Yes
- preset	120
Hardware requirements	
Hardware required	PC with color monitor, keyboard, mouse or pointing device for Windows
Main memory, min.	1 Gbyte; WES7: 2 GB
required memory on hard disk, min.	100 Mbyte
Processor	Intel Celeron M, 900 MHz or compatible
• Multi-processor system	Yes; Dual Pentium, CoreDuo, Core2Duo or compatible
• Hyper-threading	Yes
Operating systems	
Windows CE	No
Windows NT 4.0	No
Windows 2000	No
Windows XP	Yes; Professional, SP2 and SP3
Windows XP embedded	Yes; With the delivery image of the SIMATIC PC
• supported HAL types under Windows XP	ACPI uniprocessor PC, ACPI multi-processor PC, MPS multiprocessor PC
Windows Vista	No
Windows 7	Yes; Professional, Enterprise, Ultimate (only 32 bits)
Windows embedded Standard 7	Yes; With the delivery image of the SIMATIC PC

SIMATIC WinAC RTX 2010	6ES7671-0RC08-0YA0
Configuration	
Configuration software	
• STEP 7	Yes; V5.5 and higher, Engineering Tools (optional)
Programming	
• Nesting levels	8
• Programming language	
- LAD	Yes
- FBD	Yes
- STL	Yes
- SCL	Yes
- CFC	Yes
- GRAPH	Yes
- HiGraph®	Yes
• Software libraries	
- Easy Motion Control	Yes
- Software redundancy	Yes; As of V1.2, only operation of WinAC RTX with WinAC RTX
• Number of simultaneously active SFCs	
- DPSYC_FR	20; of a total of 20 for all SFCs
- D_ACT_DP	20; of a total of 20 for all SFCs
- RD_REC	20; of a total of 20 for all SFCs
- WR_REC	20; of a total of 20 for all SFCs
- WR_PARM	20; of a total of 20 for all SFCs
- PARM_MOD	20; of a total of 20 for all SFCs
- WR_DPARM	20; of a total of 20 for all SFCs
- DPNRM_DG	20; of a total of 20 for all SFCs
- RDSYSST	20; of a total of 20 for all SFCs
• Number of simultaneously active SFBs	
- RD_REC	20; of a total of 20 for all SFBs
- WR_REC	20; of a total of 20 for all SFBs
Know-how protection	
• User program protection/password protection	Yes
• Block encryption	No
Open Development interfaces	
• CCX (Custom Code Extension)	Yes; WinAC ODK V4.2 or higher
• CMI (Controller Management Interface)	Yes; WinAC ODK V4.2 or higher
• SMX (Shared Memory Extension)	Yes; WinAC ODK V4.2 or higher
- Inputs	4 kbyte
- Outputs	4 kbyte
I/O/Options	
I/O devices	none
• Printer	No
Weights	
Weight, approx.	100 g; With packaging

Ordering data	Article No.
SIMATIC WinAC RTX 2010 Software PLC for PC-based automation tasks with stringent deterministic requirements; PROFIBUS and PROFINET; CD-ROM with electronic documentation d, e, f; single license, executable under Windows XP SP2 and SP3 as well as Windows 7 (32 bit)	6ES7671-0RC08-0YA0
SIMATIC WinAC RTX 2010 Upgrade For upgrading from basic/RTX V3.x, V4.0, V4.1 2005, 2008 and 2009; single license, executable under Windows XP SP2 and SP3 and Windows 7 (32 bit)	6ES7671-0RC08-0YE0
CP 5612 communications processor PCI card (32 bit) for connection of a programming device or PC to PROFIBUS	6GK1561-2AA00
CP 5622 communications processor PCI Express x1 card (32 bit) for connection of a programming device or PC to PROFIBUS	6GK1562-2AA00
CP 5603 Microbox Package Comprising CP 5603 module and Microbox expansion rack	6GK1560-3AU00
CP 5613 A2 communications processor PCI card (32 bit; 3.3 V/5 V) for connection to PROFIBUS incl. DP-Base software with NCM PC; DP-RAM interface for DP master, incl. PG and FDL protocol; single license for 1 installation, runtime software, software and electronic manual on CD-ROM, Class A, for 32 bit Windows 2000 Professional/Server, Windows XP Professional, German/English	6GK1561-3AA01
CP 5623 communications processor PCI Express x1 card (32 bit) for connection to PROFIBUS incl. DP-Base software with NCM PC; DP-RAM interface for DP master or DP slave, incl. PG and FDL protocols; single license for 1 installation, runtime software, software and electronic manual on CD-ROM, Class A, for operating system support see SIMATIC NET software; German/English	6GK1562-3AA00
CP 1616 communications processor PCI Card (32 bit; 3.3/5 V universal key) with ASIC ERTEC 400 for connecting PCs to PROFINET IO with 4-port real-time switch (RJ45); incl. IO-Base software for PROFINET IO controller (RT operation) and NCM PC; single license for one installation, runtime software, software and electronic manual on CD-ROM, Class A, for 32 bit Windows XP Professional; German/English	6GK1161-6AA02

More information

Add-ons for SIMATIC WinAC

PC-based Competence Center Cologne

Our add-ons supplement the WinAC RTX soft PLC by useful functions which have arisen in the context of projects. You can thus fully utilize the advantages of PC-based automation.

The applications are available in the form of function blocks and are easy to use without special programming knowledge.

Detailed information and prices can be obtained from your Siemens contact or from:

Contact:

Siemens AG
 Competence Center Cologne
 E-mail: CCCologne@siemens.com

Application	Function
WinAC serial driver	Communication over serial interfaces
WinAC PC IO driver	Access to central I/O expansion PC IO including interrupt handling
WinAC SQL	Access to SQL databases
WinAC TCP/IP driver	Data exchange between WinAC and other communication partners over Windows interface using TCP/IP, UDP, or ISO-on-TCP
WinAC OPC Client	Access to various OPC servers
WinAC Shutdown	Controlled shutdown of WinAC and PC system
WinAC File-I/O	Reading and writing of DBs as file on the PC system
WinAC Command	Calling of batch commands from WinAC
WinAC Access-DB	High-performance access to DBs, bit memories or I/O image
WinAC SMX Cover	Provision of SMX functions, e.g. for Delphi or VB
WinAC CMI Wrapper	Simple program-based operation of WinAC

PC-based Automation

SIMATIC PC-based controllers

SIMATIC WinAC RTX F

Overview

- SIMATIC WinAC RTX F:
Optimized for applications that demand a high degree of flexibility and integration capability and that must also satisfy safety requirements up to SIL 3 (IEC 61508).
- The software solution for tasks that require hard deterministic behavior and high performance.
- With real-time expansion for assuring deterministic behavior for the control section.
- Distributed I/O can be connected over PROFIBUS and/or PROFINET, also safety-related over PROFI-safe.

New:

- SIMATIC IPC427D and IPC477D are fully supported
 - Communication via onboard CP 5622
 - Retentive memory
 - LED display of the operating status
- Support for the new PROFIBUS CP 5612 (PCI) and CP 5622 (PCIe)

Technical specifications

SIMATIC WinAC RTX F 2010	6ES7671-1RC08-0YA0
General information	
Hardware product version	-
Firmware version	V4.6
Engineering with	
• Programming package	STEP 7 V5.5 or higher + hardware update / iMap V3.0 SP1 / option package S7 Distributed Safety V5.4 + SP5 / S7 F Configuration Pack V5.5 + SP6 + HF1
Memory	
Type of memory	RAM
Work memory	
• integrated (for program)	4 Mbyte; Adjustable; depends on Non Paged Memory Pool
• integrated (for data)	4 Mbyte; Adjustable; depends on Non Paged Memory Pool
Load memory	
• integrated RAM, max.	Adjustable; depends on Non Paged Memory Pool
CPU processing times	
for bit operations, typ.	0.004 µs; Typical
for fixed point arithmetic, typ.	0.003 µs; Typical
for floating point arithmetic, typ.	0.004 µs; Typical
Reference platform	Pentium IV, 2.4 GHz
CPU-blocks	
DB	
• Number, max.	65 535; Limited only by RAM set for data
• Size, max.	64 kbyte
FB	
• Number, max.	65 536; Limited only by RAM set for code
• Size, max.	64 kbyte
FC	
• Number, max.	65 536; Limited only by RAM set for code
• Size, max.	64 kbyte
OB	
• Number, max.	Limited only by RAM set for code
• Size, max.	64 kbyte
• Number of free cycle OBs	1; OB 1
• Number of time alarm OBs	1; OB 10
• Number of delay alarm OBs	1; OB 20
• Number of time interrupt OBs	9; OB 30-38
• Number of process alarm OBs	1; OB 40
• Number of ODK OBs	3; OB 52-54
• Number of DPV1 alarm OBs	3; OB 55-57
• Number of isochronous mode OBs	2; OB 61-62
• Number of startup OBs	2; OB 100, 102
• Number of asynchronous error OBs	7; OB 80, 82-85, 86, 88
• Number of synchronous error OBs	2; OB 121, 122
Nesting depth	
• per priority class	24
• additional within an error OB	24

Counters, timers and their retentivity		Address area	
S7 counter		I/O address area	
• Number	2 048	• Inputs	16 kbyte
• Retentivity		• Outputs	16 kbyte
- adjustable	Yes	• of which distributed	
- lower limit	0	- DP interface, inputs	16 kbyte
- upper limit	2 047	- DP interface, outputs	16 kbyte
- preset	8	- PN interface, inputs	16 kbyte
• Counting range		- PN interface, outputs	16 kbyte
- adjustable	Yes		
- lower limit	0	Process image	
- upper limit	999	• Inputs, adjustable	8 kbyte
		• Outputs, adjustable	8 kbyte
IEC counter		• Inputs, default	512 byte
• present	Yes	• Outputs, default	512 byte
• Type	SFB		
• Number	Unlimited (limited only by RAM capacity)	Subprocess images	
		• Number of subprocess images, max.	15
S7 times		Digital channels	
• Number	2 048	• Inputs	128 000
• Retentivity		• Outputs	128 000
- adjustable	Yes	Analog channels	
- lower limit	0	• Inputs	8 000
- upper limit	2 047	• Outputs	8 000
- preset	0		
• Time range		Hardware configuration	
- lower limit	10 ms	Submodules	
- upper limit	9 990 s	• Number of submodules, max.	4
		• of which PROFIBUS, max.	4; Supported interfaces: see 1st and 2nd interface
IEC timer		• of which Industrial Ethernet, max.	1; Supported interfaces: see 3rd and 4th interface
• present	Yes		
• Type	SFB	Number of operable FMs and CPs (recommended)	
• Number	Unlimited (limited only by RAM capacity)	• FM	4; FM distributed: FM 350-1, FM 350-2, FM 351, FM 352 / FM 352-5, FM 353, FM 354, FM 355, FM 355-2
		• CP, point-to-point	2; CP 340, CP 341 distributed
Data areas and their retentivity		• CP, LAN	Over PC CP
Retentivity without UPS and PS Extension Board	128 KB with SIMATIC IPC427C and HMI IPC477C; further SIMATIC PCs on request	Time of day	
Retentivity with UPS	all data	Clock	
Flag		• Hardware clock (real-time clock)	Yes
• Number, max.	16 kbyte	• battery-backed and synchronizable	Yes
• of which retentive	MB 0 to MB 16383		
• Retentivity preset	MB 0 to MB 15	Operating hours counter	
• Number of clock memories	8	• Number	8
Data blocks		Clock synchronization	
• Number, max.	Limited only by available retentive memory (NVRAM, or file storage)	• supported	Yes
• Size, max.	64 kbyte	• to PC-CP, slave	Yes
• Retentivity adjustable	Yes; via non-retain property on DB	• on Ethernet via NTP	Yes
• Retentivity preset	Yes		
Local data			
• adjustable, max.	64 kbyte		
• preset	32 kbyte		
• per priority class, max.	61 440 byte		

PC-based Automation

SIMATIC PC-based controllers

SIMATIC WinAC RTX F

Technical specifications (continued)

SIMATIC WinAC RTX F 2010	6ES7671-1RC08-0YA0
Interfaces	
With optical interface	No
1. Interface	
Number of simultaneously operable CPs, max.	1
Physics	RS 485 / PROFIBUS
isolated	Yes
Power supply to interface (15 to 30 V DC), max.	does not exist
Number of connection resources	8
Functionality	
• MPI	No
• DP master	Yes
• DP slave	No
DP master	
• Number of connections, max.	8
• Transmission rate, max.	12 Mbit/s
• Number of DP slaves, max.	64
• Services	
- PG/OP communication	Yes
- Routing	Yes
- Global data communication	No
- S7 basic communication	No
- S7 communication	Yes
- S7 communication, as client	Yes
- S7 communication, as server	Yes
- Equidistance mode support	Yes; Only in conjunction with isochronous mode
- Isochronous mode	Yes
- SYNC/FREEZE	Yes
- Activation/deactivation of DP slaves	Yes
- Direct data exchange (slave-to-slave communication)	Yes
- DPV0	Yes
- DPV1	Yes
• Address area	
- Inputs, max.	16 kbyte
- Outputs, max.	16 kbyte
• User data per DP slave	
- Inputs, max.	244 byte
- Outputs, max.	244 byte

SIMATIC WinAC RTX F 2010	6ES7671-1RC08-0YA0
2. Interface	
Interface type	CP 5613, CP 5613-A2, CP 5603, CP 5623
Number of simultaneously operable CPs, max.	4
Physics	RS 485 / PROFIBUS
isolated	Yes
Functionality	
• MPI	No
• DP master	Yes
• DP slave	No
DP master	
• Number of connections, max.	50
• Transmission rate, max.	12 Mbit/s
• Number of DP slaves, max.	125
• Services	
- PG/OP communication	Yes
- Routing	Yes
- Global data communication	No
- S7 basic communication	No
- S7 communication	Yes
- S7 communication, as client	Yes
- S7 communication, as server	Yes
- Equidistance mode support	Yes; Only in conjunction with isochronous mode
- Isochronous mode	Yes
- SYNC/FREEZE	Yes
- Activation/deactivation of DP slaves	Yes
- Direct data exchange (slave-to-slave communication)	Yes
- DPV0	Yes
- DPV1	Yes
• Address area	
- Inputs, max.	16 kbyte
- Outputs, max.	16 kbyte
• User data per DP slave	
- Inputs, max.	244 byte
- Outputs, max.	244 byte
3. Interface	
Interface type	PROFINET
Number of simultaneously operable CPs, max.	1; Intel Pro/1000 (Intel 82571EB, 82573L, 82574L, 82541PI; non-shared IRQ required); integrated IE interface SIMATIC PC 4x7B, 6x7B, 8x7B, IPC4x7C, IPC6x7C, IPC8x7C
Physics	Ethernet
isolated	Yes
integrated switch	No
Number of ports	1
automatic detection of transmission rate	Yes; 10/100 Mbit/s
Autonegotiation	Yes
Autocrossing	Yes
Media redundancy	
• supported	No
Functionality	
• PROFINET IO Controller	Yes
• PROFINET IO Device	No
• PROFINET CBA	Yes
• Open IE communication	Yes

Technical specifications (continued)

SIMATIC WinAC RTX F 2010	6ES7671-1RC08-0YA0
3. Interface (continued)	
PROFINET IO Controller	
• Transmission rate, min.	100 Mbit/s
• Transmission rate, max.	100 Mbit/s
• Number of connectable IO Devices, max.	128
• Number of connectable IO Devices for RT, max.	128
- of which in line, max.	128
• IRT, supported	No
• Prioritized startup supported	Yes
- Number of IO Devices, max.	32
• Activation/deactivation of IO Devices	Yes
- Number of IO Devices that can be simultaneously activated/deactivated, max.	8
• IO Devices changing during operation (partner ports), supported	Yes
• Device replacement without swap medium	Yes
• Send cycles	1 ms
• Updating time	1 - 512 ms (minimum value depends on communication share set for PROFINET I/O, on the number of I/O devices, and on the volume of configured user data)
• Services	
- PG/OP communication	Yes
- Routing	Yes; S7 routing
- S7 communication	Yes
- Isochronous mode	No
- Open IE communication	Yes
• Address area	
- Inputs, max.	16 kbyte
- Outputs, max.	16 kbyte
- User data per address area, max.	2 kbyte
- User data consistency, max.	254 byte
PROFINET CBA	
• acyclic transmission	Yes
• cyclic transmission	Yes
SIMATIC communication	
• PG/OP communication	Yes
• S7 routing	Yes
• S7 communication	Yes
• Number of connections, max.	16
Open IE communication	
• Open IE communication, supported	Yes
• Number of connections, max.	32
• Local port numbers used at the system end	0, 20, 21, 23, 25, 80, 102, 135, 161, 8080, 34962, 34963, 34964, 65532, 65533, 65534, 65535
• Keep-alive function, supported	Yes

SIMATIC WinAC RTX F 2010	6ES7671-1RC08-0YA0
4. Interface	
Interface type	PROFINET
Number of simultaneously operable CPs, max.	1; CP 1616 (HW release 8 or above), CP 1604 (HW release 7 or higher), integrated PN interface of SIMATIC PC and S7-mEC
Physics	Ethernet
isolated	Yes
integrated switch	Yes
Number of ports	3
automatic detection of transmission rate	Yes; 10/100 Mbit/s
Autonegotiation	Yes
Autocrossing	Yes
Change of IP address at runtime, supported	Yes
Number of connection resources	32
Media redundancy	
• supported	Yes
• Switchover time on line break, typ.	200 ms
• Number of stations in the ring, max.	50
Functionality	
• PROFINET IO Controller	Yes
• PROFINET IO Device	No
• PROFINET CBA	Yes
• Open IE communication	Yes
• Web server	Yes
PROFINET IO Controller	
• Transmission rate, max.	100 Mbit/s
• Number of connectable IO Devices for RT, max.	256
- of which in line, max.	256
• Number of IO Devices with IRT and the option "high flexibility"	64
- of which in line, max.	32
• Number of IO Devices with IRT and the option "high performance", max.	64
- of which in line, max.	64
• IRT, supported	Yes
• Prioritized startup supported	Yes
- Number of IO Devices, max.	32
• Activation/deactivation of IO Devices	Yes
- Number of IO Devices that can be simultaneously activated/deactivated, max.	8
• IO Devices changing during operation (partner ports), supported	Yes
• Device replacement without swap medium	Yes
• Send cycles	250 µs, 500 µs, 1 ms
• Updating time	0.25...512 depending on the send cycle
• Services	
- PG/OP communication	Yes
- Routing	Yes; S7 routing
- S7 communication	Yes
- Isochronous mode	Yes
- Open IE communication	Yes
• Address area	
- Inputs, max.	16 kbyte
- Outputs, max.	16 kbyte
- User data per address area, max.	2 kbyte
- User data consistency, max.	254 byte

PC-based Automation

SIMATIC PC-based controllers

SIMATIC WinAC RTX F

Technical specifications (continued)

SIMATIC WinAC RTX F 2010	6ES7671-1RC08-0YA0
4. Interface (continued)	
SIMATIC communication	
• PG/OP communication	Yes
• S7 routing	Yes
• S7 communication	Yes
• Number of connections, max.	32
Open IE communication	
• Open IE communication, supported	Yes
• Number of connections, max.	32
• Local port numbers used at the system end	0, 20, 21, 25, 80, 102, 135, 161, 34962, 34963, 34964, 65532, 65533, 65534, 65535
Isochronous mode	
Isochronous mode (application synchronized up to terminal)	Yes
Number of DP masters with isochronous mode	2
User data per isochronous slave, max.	128 byte
Equidistance	Yes
shortest clock pulse	2.2 ms; 2.2 ms without partial process image; 2.2 ms with partial process image
Communication functions	
PG/OP communication	Yes
Data record routing	Yes; Only with CP 5611 or integrated PROFIBUS interface of the SIMATIC PC
Global data communication	
• supported	No
S7 basic communication	
• supported	No
S7 communication	
• supported	Yes
• as server	Yes
• as client	Yes
• User data per job, max.	64 kbyte; Depends on which block is used: BSEND/USEND or PUT/GET
Open IE communication	
• TCP/IP	Yes
- Number of connections, max.	32
- Data length for connection type 01H, max.	Not supported
- Data length for connection type 11H, max.	65 534 byte
- Data length, max.	65 534 byte
• ISO-on-TCP (RFC 1006)	Yes
- Number of connections, max.	32
- Data length, max.	65 534 byte
• UDP	Yes
- Number of connections, max.	32
- Data length, max.	1 472 byte
Web server	
• supported	Yes
• Number of HTTP clients	2
• User-defined websites	No

SIMATIC WinAC RTX F 2010	6ES7671-1RC08-0YA0
PROFINET CBA (at set setpoint communication load)	
• Setpoint for the CPU communication load	20 %
• Number of remote interconnection partners	64
• Number of functions, master/slave	30
• Total of all master/slave connections	1 000
• Data length of all incoming connections master/slave, max.	6 800 byte
• Data length of all outgoing connections master/slave, max.	6 800 byte
• Number of device-internal and PROFIBUS interconnections	500
• Data length of device-internal und PROFIBUS interconnections, max.	4 000 byte
• Data length per connection, max.	1 400 byte
• Remote interconnections with acyclic transmission	
- Sampling frequency: Sampling time, min.	500 ms
- Number of incoming interconnections	100
- Number of outgoing interconnections	100
- Data length of all incoming interconnections, max.	2 000 byte
- Data length of all outgoing interconnections, max.	2 000 byte
- Data length per connection, max.	1 400 byte
• Remote interconnections with cyclic transmission	
- Transmission frequency: Transmission interval, min.	10 ms
- Number of incoming interconnections	200
- Number of outgoing interconnections	200
- Data length of all incoming interconnections, max.	4 800 byte
- Data length of all outgoing interconnections, max.	4 800 byte
- Data length per connection, max.	250 byte
• HMI variables via PROFINET (acyclic)	
- Number of stations that can log on for HMI variables (PN OPC/iMap)	3
- HMI variable updating	500 ms
- Number of HMI variables	200
- Data length of all HMI variables, max.	2 000 byte
• PROFIBUS proxy functionality	
- supported	Yes
- Number of linked PROFIBUS devices	16
- Data length per connection, max.	240 byte; Slave-dependent
Number of connections	
• overall	96
• usable for PG communication	
- reserved for PG communication	1
• usable for OP communication	
- reserved for OP communication	1

CP 1616 communications processor PCI Card (32 bit; 3.3/5 V universal key) with ASIC ERTEC 400 for connecting PCs to PROFINET IO with 4-port real-time switch (RJ45); incl. IO-Base software for PROFINET IO controller (RT operation) and NCM PC; single license for one installation, runtime software, software and electronic manual on CD-ROM, Class A, for 32 bit Windows XP Professional; German/English	6GK1161-6AA02

More information

Add-ons for SIMATIC WinAC

PC-based Competence Center Cologne

Our add-ons supplement the WinAC RTX soft PLC by useful functions which have arisen in the context of projects. In this way, you can fully utilize the advantages of PC based Automation.

The applications are available in the form of function blocks and are easy to use without special programming knowledge.

Detailed information and prices can be obtained from your Siemens contact or from:

Contact:

Siemens AG
 Competence Center Cologne
 E-mail: CCCologne@siemens.com

Application	Function
WinAC serial driver	Communication over serial interfaces
WinAC PC IO driver	Access to central I/O expansion PC IO including interrupt handling
WinAC SQL	Access to SQL databases
WinAC TCP/IP driver	Data exchange between WinAC and other communication partners over Windows interface using TCP/IP, UDP, or ISO-on-TCP
WinAC OPC Client	Access to various OPC servers
WinAC Shutdown	Controlled shutdown of WinAC and the PC system
WinAC File I/O	Reading and writing of DBs as a file on the PC system
WinAC Command	Calling batch commands from WinAC
WinAC Access DB	High-performance accesses to DBs, bit memories or I/O image
WinAC SMX Cover	Provides SMX functions, e.g. for Delphi or VB
WinAC CMI Wrapper	Easy program-controlled operation of WinAC

Brochures

Information material is available for downloading in the Internet at:

<http://www.siemens.com/simatic/printmaterial>

Overview

- SIMATIC WinAC software PLCs support powerful interfaces which permit close meshing of the control task with PC-based applications.
- WinAC ODK allows the user to develop applications or to integrate already existing applications into the control task.

New with WinAC ODK V4.2:

- CCX interface:
 - New SFB 65003 for asynchronous execution of ODK applications
 - Expansion of data access functions
 - Creation of Windows DLL with C# and VB
- SMX interface:
 - Access to the Shared Memory interface under IntervalZero RTX
 - Expansion of data access functions
 - Creation of Windows applications with C# and VB
- Supports MS Visual Studio 2005 and 2008 (under Windows)

Technical specifications

SIMATIC WinAC ODK V4.2 SP1	6ES7806-1CC03-0BA0
Hardware requirements	
Hardware required	PC with color monitor, keyboard, mouse or pointing device for Windows
Main memory, min.	1 Gbyte
required memory on hard disk, min.	30 Mbyte
Processor	Intel Pentium 800 MHz
Software requirement	
Software required	Microsoft Visual Developer Studio, for details see interfaces; CCX and SMX real-time applications in addition: IntervalZero SDK (SDK Version must match the WinAC RTX version used; see Technical Data for WinAC RTX)
Operating systems	
Windows XP	Yes; Professional, SP2 and SP3
Windows 7	Yes; Professional, Enterprise, Ultimate (only 32 bits)
Configuration	
Open Development interfaces	
• CCX (Custom Code Extension)	Yes; See product information: http://support.automation.siemens.com/WW/view/en/48207241
• CMI (Controller Management Interface)	Yes; See product information: http://support.automation.siemens.com/WW/view/en/48207241

PC-based Automation

Embedded Controller

Embedded Controller

Overview

An embedded PC or embedded device is combined with automation software (e.g. software PLC, HMI system, etc.) and is ready-for-use.

Windows Embedded Standard or Windows Embedded Compact is used as the operating system.

PC-based Automation comprises:

- Control
- Technology
- Visualization
- Data processing
- Communication
- Fail-safe

on a common embedded PC platform.

S7-mEC

SIMATIC S7-mEC is a modular controller in S7-300 design with powerful embedded PC technology. The embedded controller combines the advantages of the tried-and-tested modular S7 controller with PC technology in one new device.

SIMATIC S7-mEC RTX is characterized by:

- Maximum ruggedness without fan or hard disk
- Modular expansion options, e.g. central expansion with S7-300 I/O or PC interfaces
- Commissioning, as for S7-300, by automation specialists
- SIMATIC WinAC RTX or alternatively WinAC RTX F preinstalled as a software PLC.

SIMATIC IPC bundles

The SIMATIC IPC bundles are ready-to-use, combined embedded PCs with the following SIMATIC software options:

- SIMATIC WinAC RTX
- SIMATIC WinAC RTX F
- SIMATIC WinCC flexible or WinCC RT Advanced
- Combinations with WinAC and WinCC

SIMATIC IPC227D and IPC277D bundles

SIMATIC IPC227D and SIMATIC IPC277D are also available with ready-to-use, pre-installed SIMATIC software:

- SIMATIC WinCC RT Advanced
- SIMATIC WinAC RTX
- SIMATIC WinAC RTX F
- Combinations of SIMATIC WinAC (F) and WinCC

The panels are available in 7", 9", 12", 15" and 19" TFT touch operation. With their compact structure, these SIMATIC IPCs are the ideal solution for simple control and HMI tasks on a single platform and also offer the openness of a PC-based system.

SIMATIC IPC477C bundles

As in the case of SIMATIC IPC427C, the SIMATIC HMI IPC477C can also be ordered with ready-to-use, pre-installed SIMATIC software:

- SIMATIC WinCC flexible or WinCC RT Advanced
- SIMATIC WinAC RTX
- SIMATIC WinAC RTX F
- Combinations of SIMATIC WinAC RTX (F) and WinCC

The panels are available in 12", 15" and 19" front variants, optionally with touch or key functionality. With their compact structure, Panel PCs are the ideal solution for complex control and HMI tasks on a single platform and also offer the openness of a PC-based system.

SIMATIC IPC477D bundles

As in the case of SIMATIC IPC427D, the SIMATIC IPC477D can also be ordered with ready-to-use, pre-installed SIMATIC software:

- SIMATIC WinCC RT Advanced
- SIMATIC WinAC RTX
- SIMATIC WinAC RTX F
- Combinations of SIMATIC WinAC RTX (F) and WinCC

The panels are available in 12" TFT Touch, 15" TFT Touch, 15" TFT Touch/Key, 19" TFT Touch and 22" TFT Touch front variants. With their compact structure, Panel PCs are the ideal solution for complex control and HMI tasks on a single platform and also offer the openness of a PC-based system.

PC-based Automation

Embedded Controller

EC31

Overview

- Get off to a fast start in automation solutions with embedded PC platforms.
 - Ready-to-use SIMATIC WinAC RTX or WinAC RTX F preinstalled on EC31
 - Prepared for use in a SIMATIC environment with PROFINET and Industrial Ethernet
 - Commissioning by specialist automation personnel as with the S7-300
 - Configuring and programming with SIMATIC STEP 7 over Industrial Ethernet
 - Optional visualization
- Modular expansion capability:
 - Central expansion with
 - S7-300 I/O (SM modules of S7-300)
 - Expansion modules for additional PC interfaces, e.g. DVI-I, USB, Gigabit Ethernet networks and memory card slots, as well as PCI-104
- Rugged operation
 - Hard-disk-free operation based on flash disk and Windows Embedded Standard
 - Fan-free operation
- Flexibility of a PC-based automation environment
 - Free memory space on flash disk can be used for other PC applications
 - Use of WinAC ODK with SIMATIC WinAC RTX and WinAC RTX F (read-only in safety-related program part)
 - Connection option for USB devices
 - Memory capacity expandable using multimedia card
- Data retentivity for WinAC RTX and RTX F without uninterruptible power supply (UPS)

EC31-RTX F Intel CoreDuo 1.2 GHz processor Memory configuration: 1 GB RAM, 4 GB Flash Disk; interfaces: 1 Industrial Ethernet port, 2 PROFINET ports, 2 USB ports, 1 slot for multimedia card; Software: Windows Embedded Standard and WinAC RTX F 2010 preinstalled	6ES7677-1FD10-0FB0	EM PC expansion module Additional connection options: 2 USB interfaces, 1 Gigabit Ethernet interface, 1 serial interface, 1 slot for CF card, 1 slot for SD card/Micro Memory Card	6ES7677-1DD50-2AA0

PC-based Automation

Embedded Controller

Expansion modules

Overview

- Expansion modules for SIMATIC S7-modular Embedded Controller EC31
 - EM PCI-104 for additionally accommodating up to 3 PCI-104 cards
 - EM PC with additional PC interfaces and slots for memory media

Technical specifications

	6ES7677-1DD60-1AA0 EM PCI-104	6ES7677-1DD50-2AA0 EM PC
General information		
Hardware product version	01	01
Supply voltage		
Rated value, 24 V DC	Yes; Optional: external infeed	
permissible range, lower limit (DC)	20.4 V	
permissible range, upper limit (DC)	28.8 V	
Input current		
from expansion bus	100 mA	580 mA
Power loss		
Power loss, typ.	2.4 W; Without inserted PCI-104 cards	9 W
Power loss, max.		14 W
Hardware configuration		
Integrated power supply	Yes	No
Interfaces		
Number of USB interfaces	0	2
serial interface	0	1x V.24 (RS232)

EM PCI-104 expansion module**6ES7677-1DD60-1AA0**

For fitting up to 3 additional PCI-104 cards

EM PC expansion module**6ES7677-1DD50-2AA0**Additional connection options:
1 DVI-I interface, 2 USB interfaces,
1 Gigabit Ethernet interface, 1 serial interface, 1 slot for CF card, 1 slot for SD card/Micro Memory Card

PC-based Automation

Embedded bundles/Software packages

Introduction

Overview

Embedded Bundles

for PC-based Automation are based on rugged, fan-free SIMATIC IPCs. They are pre-installed, configured, and ready-to-use with the SIMATIC WinAC RTX (F) software controller and/or the SIMATIC WinCC/WinCC flexible visualization software.

Software packages

with WinCC or WinAC together with the corresponding SIMATIC IPC.

The following are available:

- SIMATIC IPC packages with WinCC flexible
- SIMATIC IPC packages with WinCC RT Advanced (TIA Portal)
- SIMATIC IPC Packages with WinCC
- SIMATIC IPC packages with WinCC RT Professional (TIA Portal)
- SIMATIC IPC packages with WinAC RTX (F)

A Software Package can only be supplied if the same number of SIMATIC industrial PCs is ordered together with the software. It cannot be ordered subsequently.

More information

You can find more information on the Internet at:

<http://www.automation.siemens.com/mcms/pc-based-automation/en/embedded-bundles>

Overview

- A quick start in automation solutions with embedded PC platforms
 - SIMATIC WinAC RTX or SIMATIC WinAC RTX F preinstalled on SIMATIC IPC227D and ready for use
 - PROFINET RT and Industrial Ethernet pre-configured for use in a SIMATIC environment
 - Optional WinCC RT Advanced for visualization tasks in parallel with SIMATIC WinAC RTX
 - Configuration and programming with SIMATIC STEP 7 via Industrial Ethernet or PROFINET
- Safety requirements up to SIL 3 in accordance with IEC 61508/62061 or EN ISO 13849-1 up to PL e can be implemented with WinAC RTX F.
- Rugged operation
 - Hard-disk-free operation with CompactFlash card (CF card) or solid-state drive and Windows Embedded Standard 2009 or Windows Embedded Standard 7, 32-bit
 - Fan-free operation
 - 128 KB of retentive data for WinAC RTX, also without uninterruptible power supply (UPS)
- Flexibility of a PC-based automation environment
 - Use of WinAC ODK with SIMATIC WinAC RTX or SIMATIC WinAC RTX F (read-only for fail-safe program section)
 - Connection option for USB devices, flat panel monitor or screen
 - PCIe cards can be plugged in

Production and delivery of the devices will typically be completed within 15 business days after receipt of order.

The hardware and mass memory with the complete, pre-installed, ready-to-use software are supplied fully assembled.

Overview

SIMATIC IPC427D (Microbox PC): The powerful embedded IPC – maintenance-free with versatile configuration

Ready-to-run, complete solutions (software is already installed and preconfigured) for visualization and automation in connection with WinCC RT Advanced and/or WinAC RTX.

- Ultra-compact
- Maintenance-free
- Third generation Intel Core i technology
- Current product versions of the pre-installed software:
 - SIMATIC WinCC RT Advanced V13
 - SIMATIC WinAC RTX 2010
 - SIMATIC Net V12.1

More information

Delivery

Production and delivery of the devices will typically be completed within 15 business days after receipt of order. The hardware and mass memory with the complete, pre-installed, ready-to-use software are supplied fully assembled.

Commissioning

Before the control or visualization application is complete, simply perform the following steps:

- Optional: Installation and setup of additional software on the device
- Optional: Installation and setup of other software on the device
- Transfer of the engineering projects from STEP 7 or WinCC Advanced
- Transfer of the supplied license keys for SIMATIC software
- Backup of the installed software and protection of the flash-based mass memory by switching on the Enhance Write filter

Overview

Embedded PC platform with extremely high industrial compatibility for demanding tasks in the field of PC-based automation

- Rugged operation
 - Operation without a hard disk, based on CompactFlash card (CF Card) or solid-state drive and Windows Embedded Standard
 - Fan-free operation
 - 128 KB of retentive data for WinAC RTX, also without uninterruptible power supply (UPS)
- Flexibility of a PC-based automation environment
 - Free memory space on CF Card can be used for other PC applications
 - Use of WinAC ODK with SIMATIC WinAC RTX or SIMATIC WinAC RTX F (read-only for fail-safe program section)
 - Connection option for USB devices, flat panel monitor or screen
 - PCI 104 cards can be plugged in
- High-performance service concept
 - Replacement parts for preferred types available ex stock
- Safety requirements up to SIL 3 in accordance with IEC 61508/62061 or EN ISO 13849-1 up to PL e can be implemented with WinAC RTX F.
- Cost-effective versions with PROFINET, based on the standard Ethernet interface
- Current product versions of the pre-installed software:
 - SIMATIC WinAC RTX 2010 or SIMATIC WinAC RTX F 2010
 - SIMATIC WinCC flexible 2008 or WinCC RT Advanced
 - and the combinations of the software packages above
 - SIMATIC NET Edition 2008 or V8.1 (depending on operating system), as well as
 - SIMATIC WinCC V7.0 SP2 or WinCC RT Professional as a client / single station

More information

Delivery

Production and delivery of the devices will typically be completed within 15 working days after receipt of order. The hardware and mass memory with the complete, pre-installed, ready-to-use software are supplied fully assembled.

Commissioning

Before the control or visualization application is complete, simply perform the following steps:

- Optional: Install and setup additional hardware on the device (e.g. an additional SIMATIC CP 5603 PROFIBUS interface)
- Optional: Installation and setup of other software on the device
- Transfer of the engineering projects from STEP 7 and/or WinCC flexible
- Transfer of the supplied license keys for SIMATIC software
- Backup of the installed software and protection of the flash-based mass memory by switching on the Enhance Write filter

Replacement units

For the preferred versions, repaired replacement devices are available extremely quickly ex stock. Preferred versions offer the following options:

- All processor versions with PROFINET(IE) or PROFIBUS option
- 2 GB RAM
- Exclusively for replaceable CompactFlash memory (supplied without mass memory)
- All software configurations

Overview

SIMATIC IPC277D for implementing simple visualization and control tasks

- High degree of flexibility when selecting rugged widescreen fronts from 7" to 19" for more freely configurable display area
- High resolution, large viewing angle and up to 100% dimmable backlighting for brilliant display with optimized power consumption
- Absolutely maintenance-free due to the use of CompactFlash and SSD as mass storage and fanless operation up to 50 °C ambient temperature
- Maximum industrial functionality due to non-volatile retentive memory for battery-free operation
- Ready-to-run embedded bundles with visualization or/and control software

The following front installation versions are available:

- 7" Touch
- 9" Touch
- 12" Touch
- 15" Touch with front USB interface
- 19" Touch with front USB interface
- All fronts in widescreen design

More information

Delivery

Production and delivery of the devices will typically be completed within 15 working days after receipt of order. The hardware and mass memory with the complete, pre-installed, ready-to-use software are supplied fully assembled.

PC-based Automation

Embedded bundles/Software packages

SIMATIC IPC477D bundles

Overview

SIMATIC IPC477D: The powerful embedded Panel PC – maintenance-free with versatile configuration

Ready-to-run, complete solutions (software is already installed and preconfigured) for visualization and automation in connection with WinCC RT Advanced and/or WinAC RTX.

- Embedded PC platform with extremely high industrial compatibility for demanding tasks in the field of PC-based automation
- Maintenance-free (no rotating components such as fan and hard disk)
- Rugged construction: the PC is resistant to even the harshest mechanical stress and is extremely reliable in operation
- Compact design
- Battery-independent retentive memory onboard
- High investment protection
- Fast integration capability
- Safety requirements up to SIL 3 in accordance with IEC 61508/62061 or EN ISO 13849-1 up to PL e can be implemented with WinAC RTX F

The following front versions are available:

- Built-in versions
 - 12" TFT Touch
 - 15" TFT Touch
 - 19" TFT Touch
 - 22" TFT Touch
 - 15" TFT Touch/Key
- Current product versions of the pre-installed SIMATIC software:
 - SIMATIC WinCC RT Advanced V13
 - SIMATIC WinAC RTX 2010 or SIMATIC WinAC RTX F 2010
 - SIMATIC NET V12.1 (including SIMATIC SOFTNET S7 Basis license)
 - and the combinations of the software packages listed above

PC-based Automation

Embedded bundles/Software packages

SIMATIC HMI IPC477C bundles

Overview

Embedded PC platform with extremely high industrial compatibility for demanding tasks in the field of PC-based automation.

- Rugged operation
 - Operation without a hard disk, based on CompactFlash card (CF Card) or solid-state drive and Windows Embedded Standard
 - Fan-free operation
 - 128 KB of retentive data for WinAC RTX, also without uninterruptible power supply (UPS)
- Flexibility of a PC-based automation environment
 - Free memory space on CF Card can be used for other PC applications
 - Use of WinAC ODK with SIMATIC WinAC RTX or SIMATIC WinAC RTX F (read-only for fail-safe program section)
 - Connection option for USB devices, flat panel monitor or screen
- High-performance service concept
 - Replacement parts for preferred types available ex stock
- Safety requirements up to SIL 3 in accordance with IEC 61508/62061 or EN ISO 13849-1 up to PL e can be implemented with WinAC RTX F.
- Cost-effective versions with PROFINET, based on the standard Ethernet interface
- Product versions of the pre-installed software:
 - SIMATIC WinAC RTX 2010 or SIMATIC WinAC RTX F 2010
 - SIMATIC WinCC flexible 2008 or WinCC RT Advanced
 - and the combinations of the software packages above
 - SIMATIC NET Edition 2008 or V8.x (depending on operating system)
 - as well as
 - SIMATIC WinCC V7.0 SP2 or WinCC RT Professional as a client / single station

The following display versions are available:

- Built-in versions
 - 12" and 15" TFT Touch
 - 12" and 15" TFT Key
 - 19" Touch
- Support arm versions
 - PRO 15" and 19" Touch
 - Fully-enclosed device to IP65 degree of protection for mounting on a support arm/stand.

Overview

HMI complete systems

SIMATIC IPC and S7-mEC with SIMATIC WinCC flexible

- SIMATIC IPC packages with WinCC flexible are an innovative solution for simple visualization tasks directly at the machine in the field of HMI.
- This package can only be supplied if a SIMATIC IPC or S7-mEC (same quantity) is ordered together with the WinCC flexible Runtime software. It cannot be ordered subsequently.
- In combination with the embedded SIMATIC IPC (HMI IPC477C (PRO) and IPC427C) and the embedded controller S7-mEC, there are turn-key solutions (bundles), i.e. the runtime software is already preinstalled.

SIMATIC IPC with SIMATIC WinCC (TIA Portal)

- The SIMATIC IPC packages with WinCC make it easy to order all the components required for an HMI solution on the basis of a Panel PC.
- This package can only be supplied if a SIMATIC IPC (same quantity) is ordered together with the WinCC RT Advanced or WinCC RT Professional software. It cannot be ordered subsequently.
- In combination with the embedded SIMATIC IPC (IPC277D / HMI IPC477C (PRO) / IPC477D and IPC227D / IPC427C / IPC427D) there are turn-key solutions (bundles) available, i.e. the runtime software is already preinstalled.

SIMATIC IPC with SIMATIC WinAC RTX (F)

- The SIMATIC IPC packages with WinAC RTX (F) make it easy to order all the components required for a control solution on the basis of an industrial PC.
- This package can only be supplied if a SIMATIC Industrial PC (same quantity) is ordered together with the WinAC RTX (F) Runtime software. It cannot be ordered subsequently.
- In combination with the embedded SIMATIC IPC (IPC277D / HMI IPC477C (PRO) / IPC477D and IPC227D / IPC427C / IPC427D) and the S7-mEC embedded controller, there are turn-key solutions (bundles) available, i.e. the runtime software is already preinstalled.

Overview

SIMATIC IFP1900 MT Flat Panel Monitor – industrial monitors with innovative multi-touch operation and brilliant display for the next generation of operating concepts.

- Installation:
 - Equally suited to installation in machines, control cabinets, consoles, and gantries or in 19" racks
- Operator input options:
 - Innovative projected capacitive touch technology (PCT)
 - Optimized touch technology for industrial requirements with multi-touch operation
 - High protection against incorrect operation thanks to detection and filtering out of ball of hand, drops of water, and cleaning operations

Technical specifications

IFP1900MT	6AV7466-7TB01-0AA0
General information	
Short designation	Flat Panel 19" Multitouch ext.
Display	
Screen diagonal	18.5 in
Screen diagonal (cm)	47 cm
Display width	409.8 mm
Display height	230.4 mm
visible area (HxV) in mm	230 x 410
Viewing angle	170° x 170°
Type	TFT widescreen display, LED backlighting
On Screen Display (OSD) configuration	No, can be set with the software configuration
Number of colors (bit levels)	24 bit
Resolution (pixels)	
• Resolution (WxH in pixel)	1366 x 768
General features	
• Detachable from computer unit	30 m
• Brightness/contrast	300cd/m ² / 1000:1
Backlighting	
• Backlighting (type)	LED
• MTBF backlighting (up to 50%, at 25 °C)	50 000 h; At 25°C
• Backlight dimmable	Yes; 0-100 %
Control elements	
Function keys	No
Mouse/cursor control	
• external mouse	USB
Touch operation	
• Touch keyboard	Yes
Installation type/mounting	
Built-in unit	Yes
• permissible angle to the vertical backward (console)	35°
• permissible angle to the vertical forward (ceiling mounting)	35°
Supply voltage	
Type of supply voltage	AC, DC
Rated value (DC)	24 V
permissible range, lower limit (DC)	19.2 V
permissible range, upper limit (DC)	28.8 V

Overview

The Industrial Flat Panels are rugged industry-standard LCD monitors in a wide screen design.

- Installation:
 - Equally suited for installation in the machine, in control cabinets, in consoles, to gantries, or in 19" racks.
- Type of operator control:
 - Simple display devices without operator functionality
 - Optional devices with touch control
 - Optional devices with multi-touch control
 - Rear-mounted connection of I/O devices (optional).

SIMATIC Flat Panels

Overview

The Flat Panels are rugged industry-standard LCD monitors.

- Installation:
 - They are equally suited to installation in the machine, in control cabinets, consoles and gantries or in 19" racks.
 - As a device with all-round IP65 protection for mounting on a supporting arm/stand
- Type of operator control:
 - Simple display devices without operator functionality
 - Optional devices with touch control
 - Rear connection of I/O devices (optional)

SCD monitors 1900

Overview

The SIMATIC HMI SCD 1900 is a rugged, industry-standard PC monitor.

It is used as an operator control unit in all types of industrial and standard PC, including for portrait mounting. Standard interfaces permit a wide range of possible applications.

Built-in versions:

- Built-in unit (for control cabinets, control desks, and gantries)
- Built-in portrait for portrait mounting (for control cabinets, control desks and gantries)
- 19" built-in units (for 19" racks)

Type of operator control:

- Panels with touch control

Overview

SIMATIC ITC Industrial Thin Clients are powerful operating units for flexible use in distributed visualization applications. All devices are equipped with high-resolution, brilliant widescreen displays, and due to the diverse communication protocols they can be used both for challenging machine-level operator control & monitoring and for the connection to control systems, e.g. in the SCADA environment. They can be used as (additional) operator stations on a SIMATIC Industrial PC, Panel PC, or server, and on a SIMATIC Panel.

The following installation versions are available:

- SIMATIC ITC1200 – 12" Touch
- SIMATIC ITC1500 – 15" Touch
- SIMATIC ITC1900 – 19" Touch
- SIMATIC ITC2200 – 22" Touch

The SIMATIC HMI Thin Client Ex is available for hazardous areas. This device differs technically from the devices mentioned above. For more details, refer to the SIMATIC Thin Client EX chapter.

More information

Additional information is available on the Internet at:

<http://www.siemens.com/simatic-itc>

Overview

SIMATIC PCs offer users a wide range of designs and systems which perfectly match industrial applications and fulfill the high requirements in terms of ruggedness.

These include e.g.:

- Wide temperature of use up to 55 °C
- High resistance to vibration/shock
- Rugged housing design
- Special degrees of protection up to IP65, NEMA 4
- High electromagnetic compatibility (EMC)
- UL, CE industry certification
- Integral industrial power supplies (NAMUR)
- Easy-to-service design for rapid replacement of faulty components

Increased system availability

A graded concept is available for effective early detection of potential failures and minimization of actual downtimes. This consists of hardware and software expansion options specially developed for SIMATIC PCs with which the system availability can be individually increased depending on the safety requirements.

The use pays off:

Because the safety is significantly increased by components such as a second hard disk for additional data backup or the DiagMonitor for permanent self-diagnostics. The system availability options thus make a contribution to the significant minimization of the total costs (TCO) of the installation according to the motto: "Small effort, large effect".

The following components are available:

Hard disks options

- Solid-state drive (SSD)
- Second hard disk:
The safety of the data stored on the hard disk is a cornerstone for system availability.
 - Simple and fast data backup of complete installation and user data in combination with the SIMATIC IPC Image & Partition Creator.
 - Following a faulty software installation or in the case of a hard disk defect, the system can be immediately put back into operation by booting the back-up disk.
 - Fast download of the last saved hard disk image to the working disk.

Two hard disks are optionally available in a user-friendly swap frame for the Rack PC to permit fast and easy data backup.

SIMATIC IPC CompactFlash/SIMATIC IPC CFast

The application of PCs in industrial areas requires rugged systems to prevent or minimize production downtimes. SIMATIC IPCs have been developed precisely for this purpose. One way of improving the industrial suitability and system availability of SIMATIC IPCs even further is to use SIMATIC PC CompactFlash cards instead of hard disk drives. These are system-tested with the SIMATIC IPCs.

SIMATIC PC CompactFlash is a hardware option that can be ordered via the relevant SIMATIC IPC configurator or separately as an accessory.

The SIMATIC IPC CFast memory cards are readily replaceable mass storage units for SIMATIC IPC427D and IPC477D. They are connected via a SATA interface. As a result of the different interface, the SIMATIC IPC CFast memory cards are not compatible with the SIMATIC IPC CompactFlash memory cards.

SIMATIC IPC USB FlashDrive

- Mobile memory medium for SIMATIC IPC/PG
- Fast data transfer (USB 2.0) and high memory capacity
- Ultra-compact and rugged
- Preinstalled SIMATIC IPC BIOS Manager

SIMATIC IPC Service USB FlashDrive

The SIMATIC IPC Service USB FlashDrive is the ideal tool for maintenance as well as saving and restoring of data. With the preinstalled SIMATIC IPC Image & Partition Creator and SIMATIC IPC BIOS Manager, the FlashDrive is immediately ready for use.

Central I/O expansion PC IO

The PC IO expansion comprises:

- Basic module with encoder/counter functionality, PCI104 interface to the host system, and communication interfaces to the I/O modules
- Digital and analog I/O modules that are managed by the basic module
- Mechanical installation components

PC-based Automation

Expansion components and accessories

Introduction

Overview (continued)

Industrial USB Hub 4

- The Industrial USB Hub 4 is essentially used as a USB hub for the connection of I/O devices to Multi Panels and Panel PCs with an integral USB interface
- USB I/O devices can be connected to the panel and operated via the USB Hub 4 without opening the cabinet door
- The Industrial Hub 4, in contrast to commercially available USB hubs, can be used in harsh industrial environments (IP65)

SIMATIC Panel PC Remote Kit

- Separation of computer unit and operator control unit
- At a maximum distance of up to 30 m
- Pure hardware solution, no need to install additional software
- Maintaining the full Panel PC front functionality

SIMATIC IPC Image & Partition Creator

- Software tool for preventive data backup of hard disk contents
- High-speed restoring of system and data partitions with bit accuracy; user software and special installations are also backed up
- Software tool for editing the hard disk partitioning

SIMATIC IPC DiagMonitor

- Diagnostic and alarm software for monitoring SIMATIC IPCs
- Comprehensive monitoring of temperature, fans, hard disks (SMART, RAID, CF Card, SSD), watchdog
- Operating hours counter for preventive maintenance
- Integrated log functions, comprehensive text messages, online help (English/German)

SIMATIC IPC Remote Manager

Efficient remote maintenance and management of SIMATIC IPCs.

With the SIMATIC IPC Remote Manager you can use functions of the Intel Active Management Technology (Intel AMT) for SIMATIC IPCs. Intel AMT is used for remote management of PCs.

SIMATIC IPC BIOS Manager

The SIMATIC IPC BIOS Manager is a software tool with which CMOS data from the BIOS configuration of a SIMATIC IPC can be edited. The tool is obtained by downloading it from the Internet using the Automation Value Card from Customer Support.

ADDM Data Management

With ADDM, you are completely in control of the SIMATIC and SINUMERIK controllers – around the clock and with any program version. This tool, indispensable in modern production systems, allows user-friendly backup, comparison and management of control data.

DC-UPS uninterruptible power supplies

- The uninterruptible DC power supply with battery modules consists of DC UPS modules.
- The maintenance-free SITOP UPS500 with capacitors as energy stores are especially suitable for use at high ambient temperatures. A further advantage of these high-capacity double-layer capacitors is their shorter charging times.
- For flexible use, there is the SITOP UPS500S – 15 A basic unit in 2.5 kW and 5 kW versions. Up to 3 SITOP UPS501S expansion modules of 5 kW each can be connected in parallel to extend the backup times. The SITOP UPS500P IP65 version has capacitors for 5 or 10 kW and supplies up to 7 A output current.

Input and output devices

The SIMATIC IPC accessories encompass various input devices.

Overview

Rugged systems are required when using PCs in industrial environments to ensure minimal production standstill times. SIMATIC IPCs have been developed precisely for this purpose. One possibility for enhancing the industrial compatibility and system availability of the SIMATIC IPC is to use SIMATIC IPC CompactFlash instead of hard disk drives. These have been system-tested with the respective SIMATIC IPC.

SIMATIC IPC CompactFlash can be ordered as a hardware option through SIMATIC IPC Configurator or as an accessory. Depending on the application, cards are available with a storage capacity ranging from 2 GB to 16 GB.

The SIMATIC IPC CFast memory cards are readily replaceable mass storage units for SIMATIC IPC427D and IPC477D. They are connected via a SATA interface. As a result of the different interface, the SIMATIC IPC CFast memory cards are not compatible with the SIMATIC IPC CompactFlash memory cards.

SIMATIC IPC (Service) USB FlashDrive

Overview

The SIMATIC IPC USB FlashDrive is the ideal mobile storage medium for industrial applications. Thanks to the rugged and ultra-compact construction in a metal enclosure, the fast data transfer, and the high memory capacity of 8 GB / 16 GB, the USB FlashDrive is ideally suited for use in industrial applications. It replaces diskettes, CD and DVD read/write media as data memory. Thanks to its high access speed, it is also ideal for tools that are not to be installed on the computer ("portable apps"). In addition, it can be set up ready to boot using SIMATIC PC BIOS-Manager. There is an option of expanding the USB FlashDrive set up in this way into a "tool stick" using SIMATIC IPC Image & Partition Creator.

The SIMATIC IPC SERVICE USB FlashDrive is the perfect tool for backup and restoring. With the pre-installed SIMATIC IPC Image & Partition Creator V3.3, it is immediately ready to use.

Technical specifications

SIMATIC IPC USB FlashDrive SIMATIC IPC Service USB FlashDrive	
Supported operating systems	Windows 2000, XP, Vista, Windows 7, Windows 8, Windows Server 2003 and 2008 as well as Windows Embedded Standard 2009 and Windows Embedded Standard 7

Overview

The PC IO expansion extends the rugged use of the SIMATIC HMI IPC427C at the machine level.

You can find further information under industrial PC -> SIMATIC PC -> SIMATIC Box PC.

The I/O expansion enables and supplements the use of the SIMATIC HMI IPC427C with:

- Extremely compact dimensions (262 mm wide, 134 mm high, depth from 47 mm)
- High system availability (rugged and maintenance-free, since without rotating parts, for example)
- Maximum flexibility

The PC IO expansion comprises:

- Base module with encoder/counter functionality, PCI104 interface to the HOST system and communication interfaces to the I/O modules
- Digital and analog I/O modules that are managed by the basic module
- Mechanical installation components

A selection guide with material list for your requirements can be found at:

<http://www.siemens.com/simatic-pc/pc-io-selection>

Module	Description
PC IO Base 400 (base module)	<ul style="list-style-type: none"> • PCI104 interface to host • 4 encoder inputs, can also be used as counters if required • 4 digital inputs • Management of encoder inputs and associated counters and up to four I/O modules over separate communication interfaces • Power supply distribution for 4 encoders
PC IO MOD Digital 010 (digital I/O module 0)	<ul style="list-style-type: none"> • 24 binary 24 V inputs • 16 binary 24 V outputs
PC IO MOD Analog 020 (analog I/O module 0)	<ul style="list-style-type: none"> • 8 analog inputs, 12 bits, 0 to 5 V, 0 to 10 V ± 5 V, ± 10 V • 8 analog outputs, 16 bits, ± 10 V • 4 Pt100 connections, 2-wire
PC IO KIT 040 (encoder expansion rack)	<p>For expanding a SIMATIC Microbox PC 420/427B/IPC427C.</p> <p>Connection unit for:</p> <ul style="list-style-type: none"> • 4 encoder inputs • 4 digital inputs • Encoder voltage supply
PC IO KIT 030 (I/O expansion rack)	<p>For expanding a SIMATIC Microbox PC 420/427B/IPC427C.</p> <p>Expansion rack to hold</p> <ul style="list-style-type: none"> • max. 2 I/O modules in the Microbox PC 42x system

Technical specifications

Electrical data

Supply voltages and current consumption

Parameters	Value
Power supply to base module	Via PCI-104 interface: 3.3 V DC and 5 V DC
Encoder supply voltage infeed	24 V DC
Current consumption of encoder inputs and counters	0.3 A per encoder
Power supply to digital I/O module 0	24 V DC
Current consumption of digital I/O module 0, max. approx.	4 A
Power supply to analog I/O module 0	5 V DC from Base 400
Current consumption of analog I/O module 0, max. approx.	

PC-based Automation

Expansion components and accessories

PC I/O

Technical specifications (continued)

Counters and encoder inputs

Parameters	Value
Number of counters or encoder inputs on the base module	4
Input signal from encoder	RS 422
Counting depth	32 bits
Encoder input counting frequency	≤ 2 MHz
Sampling time for timer or pulse-width measurement	1 MHz or 4 MHz
Gate time for frequency measurement	Adjustable in the following stages: 8 μs, 32 μs, 128 μs, 512 μs, 2048 μs, 8192 μs, 16384 μs, 32768 μs, 131072 μs, 262144 μs, 524288 μs, 1048576 μs, 2097152 μs, 4194304 μs, 8388608 μs, 16777216 μs
Isolation	No
Protected against polarity reversal	No

Digital inputs on base module

Base module: Digital inputs

Parameters	Value
Number of digital inputs	4
Cable length (without lightning protection element)	max. 30 m
Input voltage	24 V DC
Input current	Approx. 2 mA
Time constant of input filter	0.01 ms
Isolation	No

Digital I/O module 0: Digital inputs:

Parameters	Value
Number of digital inputs	24
Cable length (without lightning protection element)	max. 30 m
Input voltage	24 V DC
Input current	Approx. 2 mA
Time constant of input filter:	
• Inputs 0 ... 7	0.1 ms
• Inputs 8 ... 23	1 ms
• Inputs 8 and 9 also designed as high-speed inputs (parallel to 1 ms path)	0.01 ms
Isolation	
For communication between the base module and the inputs of digital I/O module 0	Yes
Isolation test voltage	500 V DC
Between the individual inputs/outputs of digital I/O module 0	No, one electrical circuit

Digital I/O module 0: Digital outputs

Parameters	Value
Number of outputs	16, Organized in 4 output groups
Cable length (without lightning protection element)	max. 30 m
Output voltage	24 V DC
Output current:	
• Per output group	1 A max.
• Total per digital I/O module 0	4 A max.
Switching rate	≤ 2 kHz
Switching type	Current sourcing
Output delay:	
Internal transmission delay	16 μs
Register output to driver output (load-dependent):	
• 0 → 1 signal	max. 30 μs
• 1 → 0 signal (with a digital input connected)	max. 130 μs
Isolation:	
For communication between the base module and the outputs of digital I/O module 0	Yes
Isolation test voltage	500 V DC
Between the individual inputs/outputs of digital I/O module 0	No, one electrical circuit
Short-circuit protection of the output drivers	Threshold on Typ. 9 A max. 11 A electronically pulsing In order to comply with UL requirements, the user must limit the input current to 4 A. Use NEC Class 2 current source
Excess temperature shutdown	Above 150 °C
Overvoltage protection	Typ. 47 V max. 52 V
Status after POWER ON and after RESET	High resistance

Technical specifications (continued)
Analog I/O module
Analog I/O module 0: Analog inputs

Parameters	Value	
Number of analog inputs	8	
Shielded cable length	max. 30 m	
Voltage ranges	0 ... 5 V 0 ... 10 V ±5 V ±10 V	
Permissible input voltage against analog ground	max. 15 V, continuous	
Impedance	> 10 kOhms	
Input type	Single-ended	
Resolution	12 bits (including sign)	
Repeatability	10 bits (including sign)	
Input filters	No	
Conversion time	max. 200 µs per channel	
Configuration cycle time for analog-to-digital conversion:	Without Pt100	With Pt100
• With one analog input	50 ... 100 µs	50 ... 200 µs
• With 4 analog inputs	200 ... 400 µs	200 ... 500 µs
• With 8 analog inputs	400 ... 800 µs	400 ... 1000 µs
Isolation	No	

Analog I/O module: Pt100 inputs

Parameters	Value
Number of external Pt100 inputs	4
Type	Two-wire measurement
Dynamic response	The mean value is constantly available and is updated approximately every 6 ms.
Isolation	No

Analog I/O module 0: Analog outputs

Parameters	Value
Number of analog outputs	8
Type	Single-ended
Shielded cable length	max. 30 m
Voltage range	±10 V
Load current	2 mA max.
Resolution	16 bits (including sign)
Accuracy	0.5 %
Conversion time	max. 200 µs per channel
Output value after POWER ON and after RESET	0 V
Configuration cycle time for digital-to-analog conversion ¹⁾ :	
• With one analog input	100 ... 200 µs
• With 4 analog inputs	400 ... 800 µs
• With 8 analog inputs	800 ... 1600 µs
Short-circuit protection	No
Isolation	No

¹⁾ The times also depend on the software response time (interrupt response time or polling times).

Overview

Industrial USB Hub 4

- The Industrial USB Hub 4 is used as a USB port extender (4 in 1) for the connection of peripheral devices to USB 2.0 interfaces of Comfort Panels, Multi Panels, IPCs, and standard PCs.
- The Industrial USB Hub 4 (IP65 degree of protection on the front, service kit may be required) can also be mounted directly in a control cabinet.
- With the USB Hub 4, the USB port can be moved forwards to the control cabinet door, making it accessible without opening the cabinet door
- The USB Hub 4 can also be mounted on a standard mounting rail in the control cabinet, in which case it serves as a simple interface multiplier

For all information, technical specifications and ordering data on Industrial USB Hub 4, [refer to Chapter 2 -> SIMATIC HMI Accessories -> General HMI Accessories -> Industrial USB Hub4](#)

More information

Note for SIMATIC Panel PCs

The Industrial USB Hub 4 is approved for the Windows CE/2000/XP/Windows 7 operating systems. The appropriate drivers are supplied with the operating system software.

SIMATIC IPC Image & Partition Creator, SIMATIC IPC DiagMonitor

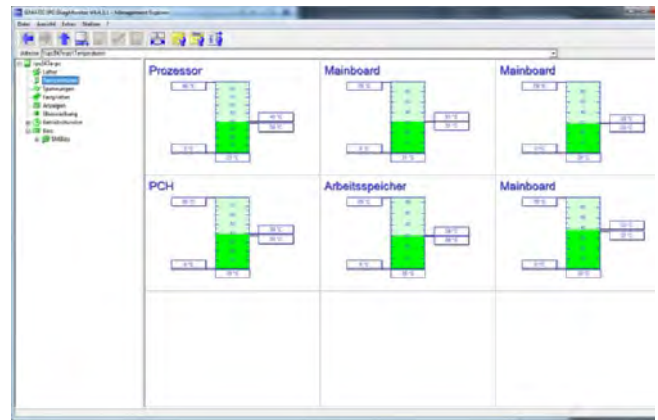

Overview

SIMATIC IPC Image & Partition Creator is the software tool for easy, preventive back-up and restoring of hard disk contents (images of individual partitions or complete hard disks). This software can be ordered through the Configurator for the SIMATIC IPCs, or separately with single license.

- Can run on all SIMATIC IPCs, regardless of the computer configuration
- Direct starting from the CD possible (no installation required)
- Complete backup by means of a mouse double-click with "1ClickImage" (must be installed)
- Menu-driven creation of a bootable USB flash drive as an alternative start medium from which SIMATIC IPC Image & Partition Creator can be started.
- Independent of the operating system thanks to ability to start from the bootable SIMATIC IPC Image & Partition Creator CD or bootable USB flash drive with Image & Partition Creator

Overview

SIMATIC IPC DiagMonitor: Intelligent and comprehensive diagnostics for the SIMATIC IPC – local and remote.

The SIMATIC IPC DiagMonitor software for monitoring and remote signaling detects possible hardware and software faults at an early stage. It monitors, signals and visualizes the operating statuses of the SIMATIC IPC both locally and remotely.

DiagMonitor V4.4.3 can run on the following SIMATIC IPCs:

- IPC427C / IPC627C / IPC827C
- IPC547C / IPC647C / IPC847C
- HMI IPC477C / HMI IPC477C PRO / HMI IPC577C / HMI IPC677C
- IPC227D / IPC427D / IPC 627D / IPC 827D
- IPC277D / IPC477D / IPC677D
- IPC547D / IPC 647D / IPC847D
- IPC547E

The software can be ordered as:

- Individual product from stock (e.g. for server applications on third-party PCs or immediate integration in new systems) or
- Option ordered according to the SIMATIC IPC configurator (Internet, Mall).

Overview

SIMATIC IPC Remote Manager

Efficient remote maintenance and management of SIMATIC IPCs.

With the SIMATIC IPC Remote Manager you can use functions of the Intel active management technology (Intel AMT) for SIMATIC IPCs. Intel AMT is used for remote management of PCs.

Intel AMT offers a range of functions, such as:

- Remote reboot
- IDE redirection
- Keyboard video mouse redirection
- Power on / off / reset, and
- an integrated Web server.

IP65 membrane keyboard, desktop version

The desktop version of the IP65 membrane keyboard is ideal for use in industrial areas in which a high degree of protection (IP65) is required. The keyboard is equipped with a touchpad.

Technical specifications

- Color "light-basic"
- MF2/Windows 95 compatible key layout with 105 short-stroke keys, type Omron
- German or international key layout
- Desktop unit made of polyester
- Mounting plate and base made of metal
- Front membrane made of resistant polyester (150 µm thick)
- 1 million strokes per key
- Y cable with 2 PS/2 connectors with 1.8 m connecting cable
- Weight approx. 1190 g
- Dimensions in mm (W x D x H): 478.6 x 180 x 26
- Licences: UL 1950, CSA C22.2 No. 950
- CE conformity according to EC 89/336
- Degree of protection IP65

IP65 membrane keyboard, 19" built-in version

The built-in version of the IP65 membrane keyboard is ideal for use in industrial areas in which a high degree of protection (IP65 at the front, IP54 at the rear) is required.

The keyboard is specially designed for installation in 19" cabinets.

Technical specifications

- Color "light-basic"
- MF2/Windows 95 compatible key layout with 105 short-stroke keys, type Omron
- German or international key layout
- Desktop unit made of polyester
- 19"/4HE mounting plate made of metal (1.6 mm thick)
- Front membrane made of resistant polyester (180 µm thick)
- Touchpad or trackball (IP65 version)
- Y cable with 2 PS/2 connectors with 1.8 m connecting cable
- Weight approx. 1480 g
- Dimensions in mm (W x D x H): 482.6 x 177.8 x 42.5
- Licences: UL 1950, CSA C22.2 No. 950
- CE conformity according to EC 89/336
- IP65 protection at the front, IP54 at the rear

Withdrawable keyboard

With its compact design and integrated trackball the new draw-out keyboard is suitable in particular for industrial applications with limited space. This can be, for example, cubicles or mobile systems.

The draw-out keyboard is supplied in combination with a drawer.

PC-based Automation

SITOP power supplies

SITOP power supplies

Overview

The benchmark in reliability, efficiency and integration

Efficient operation of a machine or plant requires a reliable, constant power supply.

The quality and reliability of the SITOP stabilized power supplies ensure high levels of safety in DC power supply in industrial engineering and building management systems.

Our perfectly coordinated selection of SITOP power supplies is enhanced by a unique range of add-on modules that extensively protect the 24 V power supplies against interference on the primary and secondary side, right up to complete all-round protection.

TOP reliability

You should only have to think once about a good power supply when you are purchasing it – and then never again.

SITOP has proved its reliability more than 10 million times over in almost every supply system in the world. With their wide-range input, excellent load behavior and extensive certification, SITOP power supplies alone ensure the reliability of the power supply.

Depending on requirements, SITOP power supplies can be individually adapted with expansion modules and uninterruptible power supplies (DC UPS). This ensures reliability of the 24 V supply for machines or plants, even in the event of an overload in the output circuit or power failure on the input side.

TOP efficiency

Production costs are determined more and more by energy costs. Savings in this area generate valuable competitive advantages. SITOP power supplies make an important contribution here. Due to the high degree of efficiency, the primary switched-mode power supplies operate extremely efficiently. The power loss across the entire performance range is low – even during no-load operation. Because power supplies are rarely operated at full load, there is outstanding potential for savings here.

SITOP also supports the entire process chain of the customer efficiently. It offers easy product selection using the SITOP Selection Tool, for example, and extensive additional information such as 3D data, circuit diagram macros, certification and individually-configurable product documentation. Every SITOP solution can therefore be planned and ordered, designed, configured and operated in an efficient manner.

TOP integration

The better power supplies are integrated in their industrial environment, the higher their productivity. SITOP is optimally tuned to automation systems such as SIMATIC, SINUMERIK and SIMOTION.

All SIMATIC power supplies and the new SITOP UPS1600 uninterruptible power supply are integrated into the TIA Portal. Engineering for the DC UPS, such as for integration in the PROFINET network, is extremely user-friendly in the TIA Portal; it also supports comprehensive diagnostics. SIMATIC S7 function blocks support easy integration in STEP 7 user programs, and ready-to-use WinCC faceplates are available for operator control and monitoring. The UPS1600 can also be connected to PC-based systems via the two Ethernet ports.

The product range at a glance

SITOP lite

The low-cost basic power supply

SITOP compact

The slim power supply unit for control boxes

LOGO!Power

The flat power supply unit for distribution boards

SITOP smart

The high-performance standard power supply

Well prepared for special tasks and conditions

Expansion modules

- Redundancy module
Protection against power pack failure by means of redundant configuration of the power supply unit
- Selectivity module
Protection against overload and short circuit by means of electronic protection of 24 V feeds
- Buffer module
Protection against power failure for up to several seconds

SITOP DC UPS

- SITOP UPS500 with capacitors
Protection against power failure on the input side through buffering for up to several minutes
- SITOP UPS1600 with battery modules
Protection against power failure on the input side through buffering for up to several hours.
DC UPS with Ethernet/PROFINET – open and system-integrated in TIA

Overview

The powerful standard power supply

SITOP smart is the optimum power supply for many 24 V applications. The new SITOP PSU100S 7 A and 14 A now also feature 12 V output voltage. Whether 1-phase or 3-phase: They offer compact dimensions, a strong performance, and a favorable price. Despite its compactness it offers an outstanding overload withstand capability.

Thanks to the extra power feature with 1.5 times the rated current for 5 seconds, even large loads can be switched on without any problems. With a continuous rated power of 120 percent up to +45° C, the slim power supply units are among the most reliable of their kind.

Numerous certifications facilitate the universal and global use and permit their use in hazardous areas.

Essential product features

- 24 V/2.5 A, 5 A, 10 A, 20 A and 40 A for standard applications
- 24 V/10 A, wall-mounted for high shock and vibration requirements
- 12 V/7 A and 14 V for 12 V applications
- Extra power function for brief operational overloads
- Permanent overload capability up to 45 °C ambient temperature
- No lateral installation clearances required
- Output voltage adjustable from 22.8 V to 28 V
- Comprehensive certification, e.g. GL and ATEX
- Expandable with DC UPS, redundancy module, and the selectivity and diagnostics module

24 V DC uninterruptible power supplies

SITOP DC UPS 24 V DC

Overview

SITOP add-on modules protect against power failures with durations of several seconds – from the buffer module through to the system-integrated DC UPS. Selection is based on the energy

storage unit used, the associated ambient conditions, performance and functionality.

The selection matrix should help you to find the right 24 V buffering for your application:

SITOP modules for 24 V buffering	UPS500	UPS1600	DC UPS
Energy storage units			
24 V buffering up to	Minutes	Hours	Hours
Storage medium	Double-layer capacitors	Lead-gel batteries	Lead-gel batteries
Lifetime dependent on temperature The specified time refers to a fall to 50% of the original capacitance in the case of lead batteries and 80% in the case of capacitors.	... +50 °C: > 8 years	+20 ... +40 °C: 4 ... 1 year	+20 ... +40 °C: 4 ... 1 year (high-temperature rechargeable battery: +20 ...+60 °C: > 10 ... 1 year)
Temperature range	0 ... +60 °C	0 ... +40 °C	0 ... +40 °C (high-temperature rechargeable battery: -40 ...+60 °C)

Introduction

SITOP DC UPS with capacitors

The high-capacitance and absolutely maintenance-free double-layer capacitors store sufficient energy to enable reliable shut-down of PC-based systems.

Advantages of DC UPS with capacitors

- Bridging of power failures for up to several minutes, depending on load current and DC UPS configuration
- Totally maintenance-free double-layer capacitors
- Short charging times
- Long lifetime, also at high ambient temperatures
- No ventilation of the installation location required
- IP65 version for use outside the control cabinet
- Easy PC integration with software tool
- USB interface for PC communication

Overview SITOP UPS500S

SITOP UPS500 builds on double-layer capacitors as energy storage units and backs up the 24 Volts for longer than a minute.

The advantage of these totally maintenance-free capacitors over lead rechargeable batteries is a long lifetime at high temperatures. Even at temperatures of 50 °C they still have more than 80% of their capacity after eight years. This means that the energy storage unit does not have to be replaced.

Lead rechargeable batteries, however, must be replaced annually at an ambient temperature of 40 °C, which is not uncommon in the control cabinet. At 40 °C, the capacitors only fall in capacity by 10%. Because the double-layer capacitors do not emit any gas, the control cabinet does not have to be ventilated.

The considerably shorter charging times also ensure that buffering is available again quickly when power is restored.

The IP65 version SITOP UPS500P in long metal housing is ideally suited to distributed use.

6EP1975-2ES00

Overview

By combining one DC UPS module SITOP UPS1600 with at least one UPS1100 battery module and a SITOP power supply unit, longer power failures can be bridged without any interruption. The intelligent battery management automatically detects the UPS1100 energy storage unit, ensures optimized temperature-specific charging and continuous monitoring. The compact DC UPS modules have overload capability, for example, to supply the inrush current of industrial PCs. In stand-alone mode, they support starting from the battery.

The DC UPS communicates openly over a USB or Ethernet/PROFINET port. It is easily integrated into the PC or PLC environment over the two Ethernet/PROFINET ports. Total integration in TIA provides user-friendly engineering in the TIA Portal and is supported with ready-to-use function blocks for S7 user programs and WinCC faceplates for fast visualization.

SITOP UPS Manager supports easy monitoring and configuration in PC systems, e.g. shutdown of several PCs in accordance with the master-slave principle. The integrated web server supports remote monitoring of the DC UPS.

DC UPS module, Battery module 1.2 Ah

DC UPS module

By combining a DC UPS module with at least one 24 V battery module and a SITOP power supply unit, longer power failures can be bridged without any interruption.

Even if a greater buffering current is required, the DC UPS with maintenance-free lead battery provides optimum safety.

It spans power failures up to several hours long and delivers up to 40 A.

Battery module 1.2 Ah

- Battery module for DC UPS module 6 A.
- It has two maintenance-free, closed lead-acid batteries (from the same lot) which are installed in a holder and connected in series with corrosion-resistant lead-calcium high-performance grid plates and glass fiber.
- Completely prewired with battery retainer and terminals.
- Low self-discharge rate of approximately 3% per month (at +20 °C).

6GK1160-4AA01

CP 1604 Microbox Package

Package for implementing the CP 1604 in the SIMATIC Microbox PC; comprising the CP 1604, connection board, power supply and expansion racks for Microbox PC; for use with Development Kit DK-16xx PN IO; NCM PC

6GK1160-4AU01

Accessories

Connection board for CP 1604

Connection board for CP 1604 with four RJ45 sockets incl. connecting cable

6GK1160-4AC00

Power supply for CP 1604

Redundant power supply for CP 1604 for operating the integral 4-port switch of the CP 1604 with the PC-104 system switched off; includes connecting cable

6GK1160-4AP00

Development Kit DK-16xx PN IO

Software Development Kit for CP 1616/CP 1604; driver and IO-Base software for CP 1616/CP 1604 as PN IO controller and PN IO device in source code for transfer to other PC-based operating systems; incl. executable sample code for SUSE Linux 10, Windows XP Professional and Windows 7

see <http://www.siemens.com/simatic-net/dk16xx>

IE TP Cord RJ45/RJ45

TP cable 4 x 2 with 2 RJ45 connectors

Overview

ISO	TCP/UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
	●	●	●				

6ES7 161-6AA02-0AB0

- PCI module for connecting PCs and SIMATIC PGs/PCs to PROFINET IO (Universal Keyed 3.3 V and 5 V; 33 MHz/66 MHz; 32-bit, runs in 64-bit PCI-X systems)
- Full/half duplex with autonegotiation
- With Ethernet real-time ASIC ERTEC 400
- Integral 4-port real-time switch
- Communication services:
 - PROFINET IO controller and/or PROFINET IO device
 - Support of IRT in motion control applications
- High performance through direct memory access
- Integration in network management systems through the support of SNMP
- Comprehensive diagnostics possibilities for installation, start-up and operation of the module
- Powerful configuration tools are part of the scope of delivery of the module

PC-based Automation

Communication – Industrial Ethernet

CP 1612 A2**Overview**

ISO	TCP/UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
●	●	●		●	●	●	●

- PCI card (32 bit; 33 MHz/66 MHz; 3.3 V/5 V Universal Key) for the connection of PG/PC to Industrial Ethernet
- 1 x 10/100/1000 Mbit/s RJ45 port, electrical
- Automatic data transmission rate detection (10/100/1000 Mbit/s), with autosensing and autocrossover function
- Communication services via
 - PROFINET
 - ISO or TCP/IP transport protocol
 - PG/OP communication
 - S7 communication
 - Open communication (SEND/RECEIVE)
- Designed for use in industrial environments
- The appropriate OPC servers and configuration tools are included in the scope of supply of the respective communication software.

Ordering data**Article No.****CP 1612 A2 communications processor****6GK1161-2AA01**

PC-based Automation

Communication – Industrial Ethernet

HARDNET-IE S7-REDCONNECT

Overview

- For connecting PCs over redundant Industrial Ethernet to the SIMATIC S7-400H
- Protected from communication failures arising from a fault in the double bus or in redundant rings
- For redundant Layer 2 or Layer 3 Industrial Ethernet
- Can also be implemented in non-redundant networks
- No additional programming overhead for the PC and in H systems
- The appropriate OPC server and configuration tools are included in the scope of supply of the respective communication software
- Enhanced redundancy over 4-way communication (STEP 7 V5.1 + SP4 and higher)

IE S7 OPC Redundancy V12

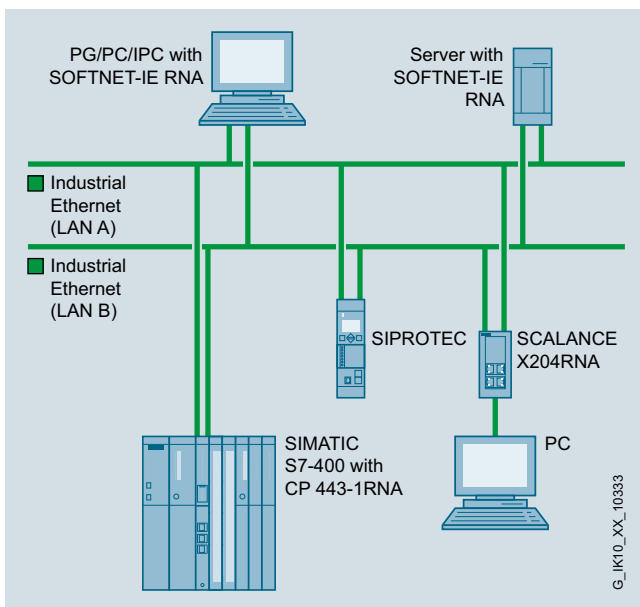

6GK1706-1CW12-0AA0

for 64-bit: Windows 2008 Server R2;
German/English
Single License for one installation

Overview

- SOFTNET-IE RNA (Redundant Network Access) is the software for connecting a PC to networks with PRP (**P**arallel **R**edundancy **P**rotocol in accordance with IEC62439-3) capability
- High level of plant availability thanks to duplicate transmission of frames in two parallel, separate networks
- Reconfiguration times in a subnetwork do not affect the propagation time because the frames are transmitted via two separate networks (bumpless redundancy)
- Integration in network management systems through support for SNMP
- Configuring tools are included in the scope of delivery of the communication software in each case

Ordering data

Article No.

SOFTNET-IE RNA

Software for connecting PCs to PRP-enabled networks with integrated SNMP, runtime software, software and electronic manual on CD-ROM, license key on USB flash drive, Class A

Overview

System integration with OPC server

OPC (**O**penness, **P**roductivity & **C**ollaboration) is a standardized, open, and vendor-independent interface that is widely used in automation.

A fundamental distinction is made between the classic OPC and its consistent further development OPC UA (**U**nified **A**rchitecture). Smooth migration to the new OPC UA standard is easily possible; this offers further value added, such as security. The SIMATIC NET OPC servers offer the two interfaces OPC UA and classic OPC for SIMATIC S7 and PROFINET.

- The corresponding OPC servers are included in the scope of supply of the respective communication software
- Standardized, open, multi-vendor interface
- It permits interfacing of OPC-capable Windows applications to S7 communication, open communication (SEND/RECEIVE), PROFINET, and SNMP
- Increased availability thanks to additional option packages such as OPC server redundancy
- OPC Scout with browser functionality as an OPC client and OCX Data Control/.NET Data Control for simple OPC client creation

Article No.

6GK1706-1CW12-0AA0

OPC (**O**penness, **P**roductivity & **C**ollaboration) is a standardized, open, and vendor-independent interface that is widely used in automation. OPC UA (**U**nified **A**rchitecture) is the result of consistent further development of this standard, offering additional functions such as security or redundancy.

S7 OPC Redundancy is a software product compliant with the OPC UA standard that enables the redundant configuration of OPC UA servers to SIMATIC S7. The availability of automation data to operator control and monitoring systems is guaranteed thanks to the redundant use of OPC UA servers. This requires neither additional cabling for synchronizing the redundant OPC UA servers, nor additional programming overhead in the PC. The OPC UA servers are synchronized via high-performance Industrial Ethernet network access points at 10/100 and 1000 Mbps. S7 OPC Redundancy represents an integrated customer solution for all SIMATIC NET S7 SOFTNET and HARDNET software products in the automation world.

Overview

- Status monitoring of SNMP-capable devices in any OPC client systems; e.g. SIMATIC WinCC/PCS 7
- Easy access to SNMP-capable devices over the OPC interface
- Devices without SNMP agents can be monitored using the ping mechanism
- Configuration with STEP 7 (up to STEP 7 V5.5) or NCM PC
- Ready-to-use SNMP diagnostics profiles for Siemens devices, e.g. SCALANCE X/W
- Generation of any SNMP diagnostics profiles by means of the integral MIB compiler
- Easy setup of the monitored devices with the help of an Autodiscovery function

Software

SOFTNET Security Client V4

6GK1704-1VW04-0AA0

Software for designing secure IP-based VPN connections from a programming device/PC to network segments which are secured by SCALANCE S in bridge mode; Single license for 1 installation, runtime software (German/English), configuring tool (German/English) and electronic manual on CD-ROM (German/English/French/Italian/Spanish) for 32-bit Windows, XP Professional + SP1, SP2, SP3; for 32/64-bit Windows 7 Ultimate/Business

For CP 1612 A2

Upgrade

- From V3.0 to SOFTNET Security Client V4
- From Edition 2008+HF1 to SOFTNET Security Client V4

6GK1704-1VW00-0AE0

6GK1704-1VW00-0AE1

SOFTNET PN IO

Software for PROFINET IO Controller with OPC server and NCM PC, runtime software, software and electronic manual on CD-ROM, license key on USB stick, Class A,

For CP 1612 A2

SOFTNET-IE PN IO V12

6GK1704-1HW12-0AA0

for 32/64-bit: Windows Server 2012, Windows 8 Pro, Windows 7 Professional/Ultimate; for 64-bit: Windows 2008 Server R2 German/English
Single License for one installation

Software Update Service

6GK1704-1HW00-3AL0

For 1 year with automatic extension; requirement: current software version

Upgrade

- From Edition 2006 to SOFTNET PN IO Edition 2008 or V12
- From V6.0, V6.1, V6.2 or V6.3 to SOFTNET PN IO Edition 2008 or V12

6GK1704-1HW00-3AE0

6GK1704-1HW00-3AE1

SOFTNET S7

for Industrial Ethernet

Software for S7 and open communication, including OPC server, PG/OP communication and NCM PC, runtime software, software and electronic manual on CD-ROM, license key on a USB stick, Class A

For CP 1612 A2

SOFTNET-IE S7 V12

6GK1704-1CW12-0AA0

for 32/64-bit: Windows Server 2012, Windows 8 Pro, Windows 7 Professional/Ultimate; for 64-bit: Windows 2008 Server R2; German/English

up to 64 connections

PC-based Automation

Communication – Industrial Ethernet

SINEMA server

Overview

SINEMA Server is a web-based network monitoring software that significantly reduces the response time to communications problems in industrial networks, and thus avoids downtimes and saves costs.

- Simple operator input even for plant operators or service personnel, to enable autonomous detection and correction of communications problems
- Graphical representation of industrial networks (automatic topology detection and layout)
- Standardized network documentation (reports for inventory, availability and utilization)
- Simple operation via web browser or via an HMI/SCADA application, without special IT knowledge
- Network data such as network topology and device information automatically saved to a database
- Low installation and maintenance costs, especially thanks to the use of pre-installed industrial PCs (Microbox PC)
- High degree of flexibility for graphical representation thanks to automatic and customizable topology views
- Monitoring can be adapted to devices and users

1) In order to use these CPs in other operating system environments, it is required to port HARDNET DP Development Kits (DK-5613) into the respective operating system. You can request the HARDNET DP DK in the Internet under www.siemens.com/simatic-net/dk5613.
 2) integrated PROFIBUS interface is optional
 3) depending on available memory and processor performance there could be restrictions
 4) Observe restrictions for some PC versions: Number of slots and tolerable maximum heat loss/ power consumption per slot and in total
 5) EM-PCI 104 expansion module is required

Notes
 - Please always note the supplementary conditions for the specified SIMATIC NET products that you can view on the Internet pages shown below.
 - for further details on XP embedded, see <http://support.automation.siemens.com/WWW/view/en/21661049>
 - further details on system requirements and operating environments can be found in the Readme file of the communication products on the SIMATIC NET PC Software DVD
 - Updates and supplements to the catalog entries, as well as the above tables can be viewed at <http://www.siemens.com/simatic-net/ik-info>

 The operating systems listed refer exclusively to the communication

products specified! For the actual operating system that is available and has been released, please refer to the description of the corresponding IPC.

PC-based Automation

Communication – PROFIBUS

CP 5603

Overview

DP-M	DP-S	FMS	OPC	PG/OP	S7/S5
●	●	●	●	●	●

- PCI-104 interface card with own microprocessor for connecting embedded systems with PCI-104 interface to PROFIBUS at up to 12 Mbit/s
- Function compatible with CP 5613 A2
- Communication services:
 - PROFIBUS DP master Class 1 and 2 or DP slave according to IEC 61158/61784
 - PG/OP communication with STEP 5 and STEP 7
 - S7 communication with HARDNET-PB S7 software package
 - Open communication (SEND/RECEIVE) based on the FDL interface
 - PROFIBUS FMS according to IEC 61158/61784 with FMS-5613 software package
- Extensive diagnostics options for installation, commissioning and operation of the module
- Event and filter mechanism for reducing the load on the host CPU
- Multiprotocol operation and parallel operation of up to three CPs
- The appropriate OPC server and configuration tools are included in the scope of delivery of the respective communication software
- Development kit with driver sources for integration into "non-Windows" environments

Note:

FMS-5613 supports up to two CP 5603/CP 5613 A2/5614 A2/CP 5623/CP 5624 processors

PC-based Automation

Communication – PROFIBUS

CP 5613 A3

Overview

DP-M	DP-S	FMS	OPC	PG/OP	S7/S5
●	●		●	●	●

- PCI card (universal keyed 5 V/3.3 V) with own microprocessor for connection of PCs and SIMATIC PG/PC to PROFIBUS at up to 12 Mbit/s
- Communication services:
 - PROFIBUS DP master according to IEC 61158/61784 on a PCI card
 - PG/OP communication with STEP 7
 - S7 communication with HARDNET-PB S7 software package
 - Open communication (SEND/RECEIVE) based on the FDL interface
- Comprehensive diagnostics possibilities for installation, commissioning and operation of the module
- High performance over direct dual-port RAM access
- Event and filter mechanisms to reduce the loading on the host CPU
- Multiprotocol operation and parallel operation of up to four CPs
- Implementation in Motion Control applications is possible because a constant bus cycle time is supported
- The appropriate OPC servers and configuration tools are included in the scope of supply of the respective communications software.

Communication – PROFIBUS

CP 5614 A3

Overview

DP-M	DP-S	FMS	OPC	PG/OP	S7/S5
●	●		●	●	●

- PCI card (universal keyed 5 V/3.3 V) with own microprocessor for connection of PCs and SIMATIC PG/PC to PROFIBUS at up to 12 Mbit/s
- Communication services:
 - PROFIBUS DP master and slave interface according to IEC 61158/61784 on one PCI card
 - PG/OP communication with STEP 5 and STEP 7
 - S7 communication with HARDNET-PB S7 software package
 - Open communication (SEND/RECEIVE) based on the FDL interface
- Comprehensive diagnostics possibilities for installation, commissioning and operation of the module
- High performance over direct dual-port RAM access
- Event and filter mechanisms to reduce the loading on the host CPU
- Multiprotocol operation and parallel operation of up to four CPs
- Implementation of Motion Control applications is possible because a constant bus cycle time is supported
- The appropriate OPC servers and configuration tools are included in the scope of supply of the respective communications software.

Communication – PROFIBUS

CP 5612

Overview

DP-M	DP-S	FMS	OPC	PG/OP	S7/S5
●	●		●	●	●

- PCI card (universal-keyed 5 V/3.3 V) for connecting PCs and SIMATIC PG/PC to PROFIBUS at up to 12 Mbit/s and to the MPI interface of SIMATIC S7
- Communication services:
 - PROFIBUS DP Master Class 1 incl. acyclic DP expansions with SOFTNET-PB DP software package
 - PROFIBUS DP Master Class 2 incl. acyclic DP expansions with SOFTNET-PB DP software package
 - PROFIBUS DP slave with SOFTNET-PB DP Slave software package
 - PG/OP communication with STEP 7
 - S7 communication with SOFTNET-PB S7 software package
 - Open communication (SEND/RECEIVE on basis of the FDL interface) with SOFTNET-PB DP or SOFTNET-PB S7 software package
- Can be used with:
 - STEP 7, STEP 7-Micro/Win, SIMATIC PDM (for PG/OP communication)
 - SOFTNET-PB S7 (for S7 communication)
 - SOFTNET-PB DP, SOFTNET-PB DP slave (for DP)
- The appropriate OPC servers and configuration tools are included in the scope of supply of the respective communications software.

Communication – PROFIBUS

CP 5711

Overview

DP-M	DP-S	FMS	OPC	PG/OP	S7/S5
●	●		●	●	●

- USB adapter for the connection of PCs and SIMATIC PG/PC to PROFIBUS DP or MPI via USB 2.0
- Operation in extended temperature range of -20 °C to +60 °C
- Active PROFIBUS termination to supply the PROFIBUS network as end station of a segment
- Robust USB connection due to mechanical locking of the USB connector to the CP 5711 enclosure
- Communication services:
 - PROFIBUS DP master Class 1 and 2 according to IEC 61158/61784 with SOFTNET-PB DP software package
 - PROFIBUS DP slave with SOFTNET-PB DP Slave software package
 - PG/OP communication with STEP 5 or STEP 7 software package
 - S7 communication with SOFTNET-PB S7 software package
 - Open communication (SEND/RECEIVE on basis of the FDL interface) with SOFTNET-PB DP or SOFTNET-PB S7 software package
- PROFIBUS connection with up to 12 Mbit/s
- Can be used with:
 - STEP 7, STEP 7 Micro/WIN, WinCC/WinCC flexible, NCM PC, SIMATIC PDM (for PG/OP communication)
 - SOFTNET-PB S7 (for S7 communication)
 - SOFTNET-PB DP, SOFTNET-PB DP slave (for DP)
- The appropriate OPC servers and configuration tools are included in the scope of supply of the respective communication software

PC-based Automation

Communication – PROFIBUS

SOFTNET for PROFIBUS

Overview

- Software for connecting PCs/programming devices and notebooks to programmable controllers
- Communication services:
 - PROFIBUS DP master Class 1 and 2 with acyclic expansions
 - PROFIBUS DP slave
 - PG/OP communication
 - S7 communication
 - Open communication (SEND/RECEIVE) based on the FDL interface
- The appropriate OPC servers and configuration tools are included in the scope of supply of the respective communications software

PC-based Automation

Communication – PROFIBUS

OPC server for PROFIBUS

Overview

System integration with OPC server

- Standardized, open multi-vendor interface
- Interfacing of OPC-capable Windows applications to DP, FMS, S7 communication and open communication (SEND/RECEIVE) based on the FDL interface
- OPC Scout with browser functionality as an OPC client and OCX-Data-Control/.NET Data Control for simple OPC client creation
- The relevant OPC servers are supplied with each communication software package

G_IK10_XX_50700

Overview

OPC (**O**penness, **P**roductivity & **C**ollaboration) is a standardized, open, and vendor-independent interface that is widely used in automation. OPC UA (**U**nified **A**rchitecture) is the result of consistent further development of this standard, offering additional functions such as security or redundancy.

S7 OPC Redundancy is a software product compliant with the OPC UA standard that enables the redundant configuration of OPC UA servers to SIMATIC S7. The availability of automation data to operator control and monitoring systems is guaranteed thanks to the redundant use of OPC UA servers. This requires neither additional cabling for synchronizing the redundant OPC UA servers, nor additional programming overhead in the PC. The OPC UA servers are synchronized via high-performance Industrial Ethernet network access points at 10/100 and 1000 Mbps. S7 OPC Redundancy represents an integrated customer solution for all SIMATIC NET S7 SOFTNET and HARDNET software products in the automation world.

PC adapter USB A2

Overview

DP-M	DP-S	FMS	PG/OP	S7/S5	
			●		

USB adapter for the connection of PCs/Notebooks and SIMATIC PG/PC to the SIMATIC S7 automation system via USB interface.

- For connection to USB 1.1, 2.0 and 3.0 interfaces
- Power supply from the USB interface
- PROFIBUS connection with up to 12 Mbit/s
- Support for routing
- Automatic transmission rate and profile search
- Can be used as of Windows XP SP2
- As of Windows 7, can also be used with 64-bit system
- Scope of delivery:
 - PC adapter USB A2
 - CD with drivers for the PC adapter USB A2
 - USB cable
 - MPI cable 0.3 m

Customized Automation

Introduction

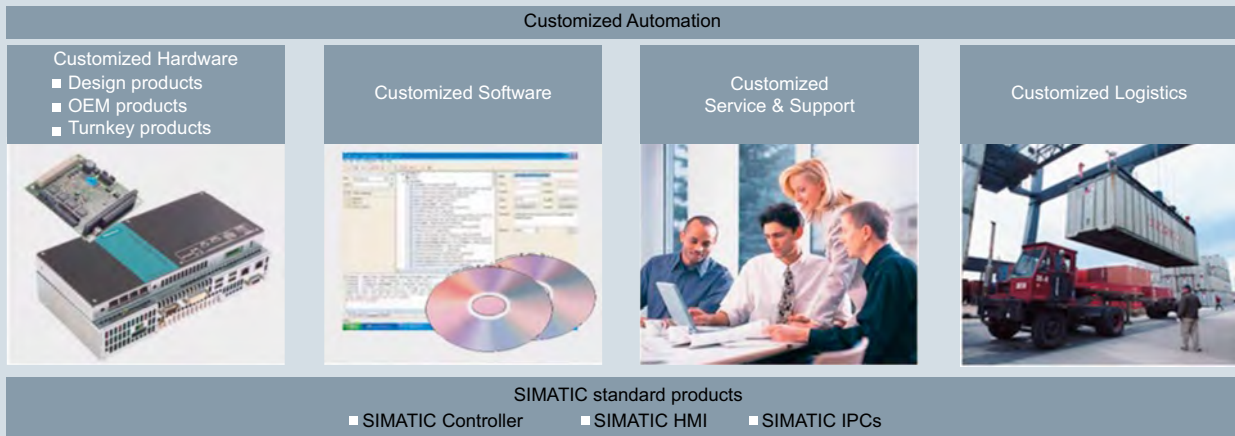

Overview

G_ST80_XX_00657

Customized Automation - Hardware

6

G_ST80_XX_00441

Customized Automation - overview

With Customized Automation, field-proven SIMATIC, SIMATIC PC and SIMATIC HMI standards are transferred to individual products and systems – tailored precisely to the customer's requirements.

The portfolio covers the hardware and software range, as well as support and logistics.

Benefits

Time savings

- you can use comprehensive customization know-how and our long years of experience with the SIMATIC components
- you do not have to build up any additional know-how, and you can concentrate completely on your own core competence

Increase in profitability

- you invest your money and resources selectively in your core competence
- you implement reliable material requirements and logistics planning, tailored to your needs, thanks to our logistics services
- you have maximum investment security thanks to maximum quality, long-term availability and continuity with SIMATIC, SIMATIC PC and SIMATIC HMI
- you save unnecessary costs thanks to tailor-made solutions, and you benefit from the global service & support concepts with SIMATIC, SIMATIC IPC, and SIMATIC HMI

Increase in competitive edge for the machine

- you use SIMATIC products that correspond to the highest quality standards, offer optimal performance, and thus boost your productivity by minimizing standstill times
- you receive customized products with Customized Automation that fit outstandingly well into the "Totally Integrated Automation" (TIA) concept
- you stand out not only for exceptional technology but also for individual design of your machine, for example, by printing a logo on the front of the enclosure

Customized hardware:

Customized products are modified SIMATIC HMI standard products. According to the necessary degree of modification of the hardware, these types of product are separately identified as:

- Design products
- OEM products
- Turnkey products

The customer-specific modifications are available in all performance classes, starting with Push Button Panels or Key Panels, Basic Panels, Comfort Panels up to Rack/Box/Panel PCs.

Customized software:

In the case of customer-specific products, the software can also be individually installed. This includes the generation of operating systems and also the integration and installation of driver software and images – for complete, turnkey systems.

Customized software products:

- Remote Operate Software for implementation of multi-user systems with HMI IPC and clients on the basis of MP 377 and HMI IPC477
- SIMATIC KNX/EIB2S7 enables integration of actuators/sensors on a KNX/EIB bus of building automation systems into SIMATIC S7
- Open MODBUS for SIMATIC systems provides the capability of connecting systems from various manufacturers to SIMATIC automation systems

Customized products from various industries

SIMATIC HMI products are provided with additional features in order to facilitate optimum use in specific sectors of industry. Stainless steel front panels for the food, beverages and tobacco industry are one such example. With the exception of their front panels, the devices are identical to standard products in respect of function and technology.

We can offer products for the following industries:

- Renewable energy
- Automotive industry - HMI for factory automation
- General machine construction
- Food and beverages industry/pharmaceuticals
- Oil & gas/chemicals and shipbuilding

Customized products for various industries are developed and produced in conjunction with a customized product agreement.

More information

Additional information is available on the Internet at <http://www.siemens.com/hmi-oem>

Customized Automation

Customized adaptations

Overview

Our SIMATIC IPC Customization Centers convert the field-proven SIMATIC IPCs into individualized products and systems for you – tailored precisely to your specific needs. Our portfolio ranges from individualized design, through software installation and special tests or certifications, right up to just-in-time delivery. This provides you with more **time** for your own projects while improving your **profitability** and thus your **competitive advantage**.

Customized SIMATIC IPC - precisely tailored to your requirements

Benefits

You gain time because you ...

- can benefit from our comprehensive customization expertise and many years of experience regarding industrial PCs.
- do not have to create industrial computer-specific expertise and can therefore fully concentrate on your core competencies.

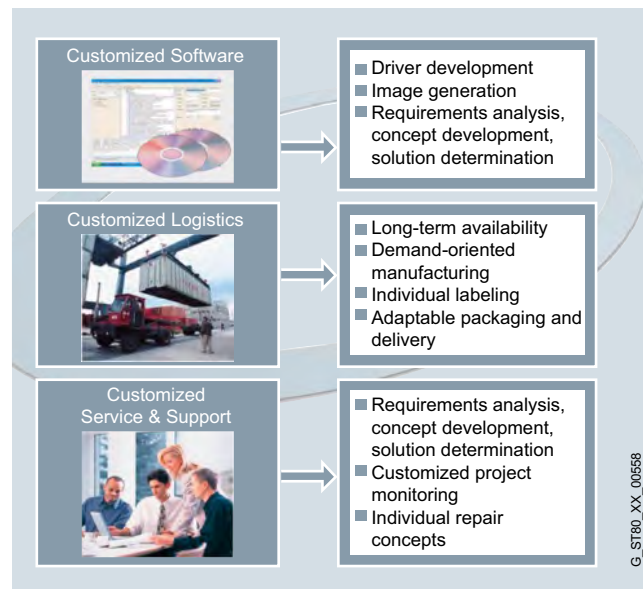

You increase profitability because you ...

- invest your money and resources specifically in your core competencies.
- implement a reliable inventory control and logistics planning as required thanks to our logistics services.
- ensure maximum investment protection due to maximum quality, long-term availability and continuity with SIMATIC IPC.
- avoid unnecessary costs due to custom-tailored solutions.
- benefit from worldwide Service & Support concepts with SIMATIC IPC.

You increase your competitive edge because you ...

- use industrial PCs that conform to the highest quality standards, offer optimum performance, and thus increase productivity by minimizing downtimes.
- use customer-specific SIMATIC IPCs that are optimally integrated in the Totally Integrated Automation (TIA) concept.
- not only stand out due to extraordinary technology, but also due to the customized design of your machine, e.g. by printing a logo on the device front of the industrial PC.

Application

Customized hardware - Individual in design and configuration

Customized design

- **Inscription or printed logo**, e.g. on the front cover of the enclosure, matches your corporate design requirements
- **Custom color design of enclosure**, individual enclosure components, e.g. enclosure front and front cover – for perfect optical integration of the PC in the operating environment

Customer-specific configuration

- **Optimization of the computer configuration** – corresponding to the requirements of your application, e.g. with or without PROFIBUS interfaces or optical drives
- **Optimal selection of the required components** – with regard to performance capability, long-term availability and compatibility, e.g. processor, fan, work memory, etc.
- **Installation of the hardware you specified** – e.g. third-party hardware such as drives and PC cards or customized, supplied hardware

Customized software – operating systems, drivers, image

Generation of operating systems

- E.g. for Windows XP embedded,
- and the RMOS3 real-time operating system from Siemens
- For customer-specific preinstalled LINUX operating system¹⁾

Integration and installation of driver software and image storage

- E.g. for additional plug-in cards, controllers and memory media
- For complete, turn-key systems

¹⁾ Suitable for specific LINUX versions in accordance with the specifications of the Siemens manufacturer's declaration "Suitable for LINUX", see <http://www.siemens.com/simatic-pc/suited-for-linux>

Application (continued)**Customized service and support**Pre-sales and after-sales support

- Requirements analysis, concept creation, solution generation
- Competent project support from the offer through to delivery and beyond
- Individual repair concepts with worldwide Siemens service network with 190 branches and 33 repair centers
- 24-hour product support over the SIMATIC Hotline

System test of hardware and software, e.g.

- **EMC chamber** – Test for electromagnetic compatibility
- **Thermal simulation** – Thermal simulation and heat imaging camera to detect heat pockets
- **Heat test** – Testing of all components in a 36-hour heat test at 40 degrees Celsius in a heated cabinet
- **Stress test** – Test for high vibration/shock loading, specially for CPU, graphics, memory, modules, etc.

Product Equipment Data (PED)

- **Online tool PED** (www.siemens.de/ped) – For easy, systematic identification and management of device components. It shows you the most important components of your equipment (delivery status) easily and quickly and supports you worldwide in the event of a servicing requirement with the procurement of suitable replacement parts.

"Tempeste" (SITEMP)

- **TEMPEST (Temporary emanation and spurious transmission)** – For protecting compromising data from listening-in attacks by means of electromagnetic radiation
- Series measurements and certification of special PC hardware according to the standards of the German Institute for Safety in Information Technology (BSI) for radiation safety
- E.g. PC for processing highly sensitive research and development data

Certification and approval of hardware and software

e.g. UL and CE industry certification

On-site service

e.g. for plant failure, on-site repairs, product upgrades

Customized logisticsAvailability tailored to your requirements

- **Configuration and design freeze** – Individual availability agreements for unchanged hardware and software versions of the products (image compatibility)
- **Replacement parts in centralized or decentralized spare parts storage** – For individually agreed periods or, where applicable, last-time buying and storage of components
- **License authorization** for discontinued software, e.g. for Microsoft operating systems such as Windows NT, MS DOS, Windows XP

Tailor-made right down to the detail

- **Change notices** – Individual agreements for customer information management, e.g. product discontinuation, version updates, phase-out announcements
- **Individual labeling** – On the industrial PC and/or product packaging, e.g. customized item/device/inventory numbers, warehouse barcodes or packing and safety instructions
- **Supply of accessories** – e.g. adapter cables, keyboards or accompanying documents and manuals

Individual logistics solutions

- **Kanban delivery** – We supply according to the requirements of the organization units in the production process of our customers who organize their production process control in accordance with the Kanban principle. This shortens the throughput time and reduces inventories.
- **Just in time** – We reduce the inventories and throughput times of our customers by supplying the hardware manufactured customer specifically at exactly the time when they need them in the production process or in the logistics chain
- **Reusable packaging** – Better than recycling! The packaging is collected from our customers after the specially manufactured hardware has been unpacked and reused for transporting the next delivery. Packaging material is saved to the advantage of our customers and the environment.

Customized Automation

Customized hardware

Introduction

Overview

Customized products are modified SIMATIC HMI standard products

A distinction is made according to the degree of hardware modification:

- Design products
- OEM products
- Turnkey products

The Open Platform Program is available for customized software solutions.

With these possible modifications, products are planned for special customer requirements in the various industries.

- Customized products from various sectors

Further information can be found on the Internet at:

<http://www.siemens.com/hmi-oem>

Proportion of customized modifications on the individual product types:

Customized hardware:

Design products

Customized design means modifying the design and visual impact of the SIMATIC, SIMATIC HMI and SIMATIC IPC products for seamless adaptation into the customer's individual machine and plant design and special operator philosophy.

The modification options are:

- Changing the company logo and device type designation
- Changing the keyboard color scheme, the key labeling, or the key symbols
- Changing the enclosure color (front frame)

Design products are fully compatible with the standard products in technology and functionality, and can thus be fully integrated into the Totally Integrated Automation environment. Identical technology enables, for example, replacement using standard devices in the event of a fault in case the machine or plant supplier does not currently have a customized product in the spare parts warehouse.

OEM products

Product modifications for OEM (Original Equipment Manufacturer) customers are suitable for individual, industrial automation solutions that cannot be fulfilled with the help of standard products, or can only be handled with design-modified panels.

OEM products are individual solutions based on SIMATIC standard components. They are specified, offered, developed and supplied individually in consultation with the customer. For this purpose, we simply combine the standard components, the customized components, and the additionally required software function expansions into a SIMATIC OEM device, as with a modular system.

Modification options:

- Changes in the keyboard layout, key size/design and key arrangement
- Freely definable front dimensions and mechanical components
- Integration into enclosure for desktop use or support arm mounting
- Different processes and memory media
- Different display technologies, sizes and resolutions
- Distributed configuration
- Additional modules or interfaces
- Freely selectable Windows versions as operating systems, pre-installed SIMATIC software packages

However, new OEM products can frequently be based on already implemented OEM products for efficiency and cost savings (see product examples). The end product is then represented as a customized modification of an existing OEM product.

Our OEM devices are available in every performance class - starting from OEM Push Button Panels, through Text Displays, Touch and Operator Panels, right up to multifunctional platforms (MPs) and PCs in rack/box/panel versions with extensive changes to hardware, equipment and installed software. Customized OEM products are developed and produced in various stages in accordance with quality standards.

Turnkey products

Customized turnkey products are ready-to-install and ready-to-use products from a single source that have been combined and assembled to customer specifications and in accordance with the specific technical requirements of HMI products. With the turnkey products, the HMI products are tested and supplied, e.g. as complete operator stations, that is, mounted and wired in special enclosures, and installed with the specified software:

- Optimized HMI operator station: ergonomic, functional, certified and tested
- Optimal mechanical installation of the devices with defined high degree of protection
- Flexible in installation and wiring
- Variable mounting options (support arm, stand, wall-mounting)
- Certified in accordance with VDE, CE and UL (in accordance with agreements and statutory conditions)
- Vibration-tested and shock-tested
- Packaged for safe transport
- Tested heat balance with passive cooling and with specified ambient temperature
- Customer-specific software suite with electronic software release management

Customized SIMATIC turnkey products offer standard product quality from a single source and are ready-to-install and ready-to-use.

Overview

SIMATIC HMI products in individual corporate design for machines and plants are important for customers when making purchasing decisions. Seamless integration of the HMI devices in operation and ergonomics as well as in the overall machine and plant design is especially important.

The HMI devices with customer-specific design fully meet these requirements.

The following design changes are possible depending on the variant:

- Extremely fast design implementations
- Implementation of even low minimum quantities (no general agreements)
- Photo-realistic design up to 600 dpi
- Color gradients in the logo

The following changes (design variants) are possible:

- **Version A:**
Inserting the individual company logo instead of the Siemens logo and changing the type designation
- **Version B:**
Version A + changing keyboard colors, key labels, symbols and background color
- **Version C:**
Version B + changing the frame color for the front frame
- **Digital Express design:**
Version B in photo-realistic print quality, for small quantities with accelerated execution of the project

The following applies for variants A-C:

- A contractually agreed minimum quantity per year is necessary
- Stockpiling in accordance with contract
- First deliveries approximately 8 weeks after design start

Selected SIMATIC HMI Touch devices are available in Digital Express design thanks to adapted production procedures.

The following applies for implementation in Digital Express design:

- Without contractual obligation
- Even small ordering quantities
- Significantly reduced implementation time
- Photo-realistic print quality

The SIMATIC HMI products with customer-specific design are completely identical to the standard products in respect of technology and function. This similarity makes it possible to respond flexibly to almost any need situation. In this way, a machinery and plant supplier can quickly switch to standard products if in the event of a fault there are no HMI design units available in the spare parts inventory.

This flexible production makes cost-effective design products possible even in small ordering quantities. The devices are manufactured in the series production factory and are subject to the same quality requirements as standard devices.

The professional creation of customized designs is handled by the **SIMATIC HMI Design Center**.

The following services are offered to the customer:

- Support in the selection of suitable design variants
- Direct, specialist coordination and customer consultation in the selection of appropriate typefaces, colors, and standard symbols, e.g. to optimize machine operation
- Creation of a customer-specific design draft
- Short response times, first design draft around 5 days after design start
- Obtaining required customer approval

There are no one-off project costs for these services of the SIMATIC HMI Design Center (see "Additional information" for details). A quotation will be made for any further changes and consultation services.

Regarding customized design, it is also possible to match the colors of various SIMATIC HMI design devices in order to achieve a uniform corporate identity. The associated costs will be calculated according to actual requirements.

Benefits

- Seamless adaptation to the customer's machine and plant design and special operating philosophy
- No restrictions in ergonomics compared with a standard product
- Even small quantities of design products may be ordered
- Replaceable and fully compatible with the standard devices in terms of:
 - Functions and interfaces
 - SIMATIC HMI configuration software
 - Enclosure and installation dimensions
 - Logistics and service, identified repairs
- UL and CE certification, more upon request

More information
Ordering information

Explanation of the tables with selection and order data:

"Device type" and "Article No. of the associated basic product"

- "Type specification" and "Article No." of the HMI standard product to be modified.
- Start of delivery of a design variant cannot commence less than 4 months after the start of delivery of a standard device.

"Design variant"

- Type of modification required, according to design variants

"Minimum quantity"

- In order to be able to offer high-quality products at a competitive price in the global market, there must be a lower limit to the annual quantity and a minimum order quantity.
- The possible design devices with the associated minimum quantities are listed in the overview tables.

Prices and one-off costs

An additional amount over the price of the standard device is charged for the customized design device.

There are no additional costs for a one-off design (without Change Requests).

Processing

A special order processing is required for the customized design. Various approval steps by the customer are to ensure that the end product meets the customer's expectations. The orders are processed, like standard orders, via the Logistic Center Nuremberg (LZN). Orders and deliveries of 1 unit or more depending on the version or contract are possible!

Repairs/spare parts storage

Only identified repairs are carried out.

The customer-specific spare parts required for this purpose (device front panels) are to be stored and made available by the customer on expiry of the warranty period or on termination of supply.

Contacts

Customized Automation

Customized hardware

OEM products

Overview

- HMI product modifications for OEM customers are suitable for complex industrial automation tasks that cannot be implemented using standard products.
- OEM devices are available in all performance classes: from OEM Push Button Panels through Micro Panels, Panels and Multi Panels right up to Panel PCs as well as Rack and Box PCs - with far-reaching changes in hardware, equipment and software.
- The following modifications are possible:
 - Changes to keyboard layout: Number of keys, key size/design and key layout
 - Freely definable front dimensions and mechanical components
 - A variety of processors for customized performance
 - A variety of memory media and capacities
 - Installation of function cards
 - Display technologies, sizes and resolutions
 - Options such as direct key modules
 - Distributed configuration of Panel PCs
 - Housings for desktop, stand or support-arm versions (operator station concept)
 - Additional modules or interfaces, of course always complete with the necessary device drivers
 - Selectable Windows operating systems
 - Preinstalled SIMATIC software and customized software packages
 - Additional functions due to PCIe slot
 - Frontplate design in color and labeling of the interfaces
 - Large number of interface options in the configurator in a very small space

Benefits

- The SIMATIC HMI OEM concept represents "customizing at its best": Your requirements, based on sector and application know-how, combined with our experience in the development of HMI devices of all performance classes, result in tailor-made solutions at a fair price.
- Customized OEM products are developed in defined stages in accordance with quality standards and produced using standard plant facilities - always in close cooperation with the customer.
- Users in various industries, including regenerative energies, the automotive industry, the food, beverages and tobacco industries, the oil and gas industry, as well as in the plastics-processing industry and others are benefiting from our experience of delivering tried and tested OEM versions and industry standards.

Overview

MP 377 15" Touch OEM according to flexible front-mounting concept for injection molding machines

Customer requirements with regard to HMI devices are extremely diverse. The flexible front-mounting concept makes it possible to meet these diverse customer-specific requirements.

The flexible front-mounting concept enables customized front design as well as customized layout of the operator elements. The SIMATIC products form the technical basis of a device developed according to the flexible front-mounting concept.

The diversity of the standard products enables integration from the small 6" Flat Panel right up to high-performance PC technology. The customer's own, typical operator philosophy can also be optimally implemented since the flexible front-mounting concept offers the wide range of operator elements – from the classic 3SB operator elements, through short-stroke keys, right up to membrane keyboards.

The flexible communication options with PROFIBUS or PROFINET facilitate integration into new or existing machine concepts. Fail-safe operation can be implemented by using PROFIsafe components. To meet individual customer requirements, a device built in accordance with the flexible front-mounting concept can be designed as a built-in device or as a stand-alone unit. If designed as a stand-alone unit, care is taken to make the enclosure slimline and modern in appearance.

Benefits

The flexible front-mounting concept allows customized HMI solutions based on the field-proven SIMATIC components. A project using the flexible front-mounting concept is the obvious choice especially for the following customer requirements:

- Customized integration of operator elements and display systems
- High integration density of SIMATIC products
- Demand for customized design and layout
- Demand for optimal integration into plants and machinery
- Compact design as stand-alone product in enclosure
- Compact design as built-in unit at the machine level
- Use of field-proven components and thus also optimized time-to-market

These requirements can be implemented for the customer by means of a flexible front-mounting concept.

The general conditions for a project using the flexible front-mounting concept are:

- Minimum unit quantity 100 p.a.
- Project agreement
 - With unit quantity start-up forecasting and annual unit quantities for the project
 - for funding development costs
 - Key project dates and standard start-of-delivery dates
 - Logistics with delivery times

Application

The industrial environment imposes diverse requirements on technology and design.

Thanks to its variable and modular approach, the flexible front-mounting concept opens up diverse options for re-combining SIMATIC standard components in a compact device configuration with individualized design and layout. The possible uses are thus diverse and universal.

Customized Automation

Customized hardware – OEM products

Flexible front design concept for HMI products

Design

The flexible design and the use of standard SIMATIC products make it possible to meet just about every technical requirement with regard to customized HMI. Components that can be combined to form an individualized HMI are listed below:

Basic devices:

- Flat Panels with different screen diagonals
- Thin Client
- Comfort Panel
- Panel PC

Operator control:

- Touch functionality
- Keys functionality with
 - 3SB elements
 - Short-stroke keys
 - Membrane keys (also illuminated)
- Keystitches etc.

Additional elements:

- High-speed keys via PROFINET
- Emergency stop (also PROFSafe)
- Front USB etc.

Design:

- Stand-alone (IP65 at front, <= IP54 at rear)
- Built-in unit (IP65 at front; IP20 at rear)
- Slimline enclosure design

Device connection:

- With support arm via VESA 100 on rear of enclosure
- Connected at the edges using hinges
- Installation in machinery

Design:

- Customized design
- Customized key layout
- Customized symbols and logos

More information

Quotation preparation

Product specification in accordance with customer requirements. Quotation drafted by SIMATIC HMI specialists.

Determining:

- One-time project costs
- Costs for sample devices/prototypes
- Standard unit prices
- General conditions (product agreement)

There must be a minimum limit to the annual unit quantity/ purchase quantity (minimum quantity per version: from 100) and this must be agreed with the project customer. Customized products can only be ordered in conjunction with a product agreement. A customer-specific article number is allocated during the product agreement process.

Contacts

Please contact the HMI representatives of your Siemens sales office/national company.

Additional information in the Internet is available at:

<http://www.siemens.com/hmi-oem>

Flexible front-mounting concept project development and service

Customized projects using the flexible front-mounting concept are developed and produced in different steps in accordance with quality standards. Prototypes are created to test products. Once the devices have been approved by the customer, they undergo certification and are introduced into the production process.

Devices are produced in standard product factories, ensuring observation of customer quantity forecasts. For this purpose, individual quantity forecasts are exchanged with the customer.

In the event of questions and problems, customers can contact our worldwide 24-hour SIMATIC Customer Support.

Customized products can only be ordered in conjunction with a product agreement.

The following points are defined in the product agreement:

- Delivery and pricing
- Logistics – annual volume, purchase quantity, delivery batch volumes
- Spare parts
- Service
- Repairs/spare parts storage

The repair concept is also agreed with the customer. The necessary customized spare parts (device fronts) are defined here and offered to customers for their products after completion of delivery.

Overview

OEM MP 277 8.4" Touch

Benefits

- Heavy-duty, die-cast aluminum housing
- Easy mounting on patient table with clamping device
- Low space requirements
- Extremely good readability
- Simple operation
- Joystick can be connected optionally on left or right
- Ethernet communication

Application

The OEM MP 277 8.4" Touch is suitable for use as a control console for coronary angiography systems in the medical field.

Technical specifications

- Rugged die-cast aluminum housing
- 8.4" TFT display
- 800 x 600 pixel resolution
- Operation by means of touch screen and optional joystick
- Customized application and customized WinCE image
- Degree of protection on front: IP65.

Option

- Different housing color

Ordering data

Article No.

OEM MP 277 8.4" Touch

On request

Customized products can only be ordered in conjunction with a product agreement. The following points are defined in the product agreement:

- Status: Released for delivery
- Project runtime: None
- Non-recurring costs: None
- Minimum quantity: 200

Customized hardware – OEM products

SIMATIC HMI Net Panel

Overview

Professional display system for continuous, maintenance-free operation

The SIMATIC HMI Net Panel is multifunctional when it comes to rugged, large-scale display applications for industrial areas, as it is ideal for production plants and control stations or for trade fairs and information points visited by the public.

The Net Panel is based on a reliable industrial PC of the SIMATIC IPC series and is designed for 24-hour, maintenance-free operation in an industrial environment. It is extremely flexible in operation and can be used as a stand-alone solution or in the network as a complete industrial display system comprising several Net Panels. For applications that require audio output, variants of the Net Panel are available with audio modules and speaker equipment.

Remote Control for setting up the SIMATIC HMI Net Panel

The Remote Control Software included in the scope of delivery allows the Net Panel to be operated either locally or via the network. It enables the brightness and volume to be adjusted and the backlight to be switched off.

For self-diagnosis the device temperature can be indicated. The Remote Control software allows the function to be shut down to prevent burn-in effects (anti-image sticking). The anti-image sticking function should, however, only be deactivated when adequate measures have been implemented on the Net Panel to prevent image sticking.

Remote Operate as client/server solution for industrial display systems (optional)

When Remote Operate is installed, four virtual graphics cards can be set up on one IPC and presented as extended desktops.

On every SIMATIC HMI Net Panel, a Remote Operate client is installed that is assigned to a virtual graphics card. The different screen contents are distributed to the virtual graphics adapters using the HMI software WinCC. If the Net Panel is equipped with sound, MP3 and Wave files can be sent to a specific Net Panel where they can be played, using an easily accessible function.

Benefits

- High degree of system availability due to maintenance-free industrial design with IP65 degree of protection for continuous 24-hour operation
- High security of investment due to rugged industrial products from SIMATIC that will remain available over the long term
- Reduced costs through low-wear and power-saving LED backlight and anti image sticking function
- Easy, cost-efficient integration in a standard network environment without VGA/DVI/HDMI extensions or expensive video signal extenders
- Optionally available with audio module and loudspeaker for sound output
- Flexible mounting on support arm systems, wall and ceiling, as well as back-to-back mounting and with an angle of inclination of up to 20° from the vertical
- Remote Control Software (locally on the device and remotely from the network) for the easy parameterization of
 - Brightness
 - Deactivation of backlighting
 - Status messages of display
 - Speaker control
- Supported by WinCC flexible 2008 SP2 or higher (IPC427C with 1920 x 1080 resolution)

Application

The SIMATIC HMI Net Panel is designed for demanding large-scale displays in the industrial environment.

It is based on rugged, reliable PC technology with interfaces for easy, cost-efficient integration in existing networks and offers maximum flexibility for positioning and mounting.

The large LCD display with LED backlight, round-the-clock operation, and full PC openness make the large-scale display ideal for use as an industrial manufacturing display, add-on system, multimedia display, process visualization system, railway station and airport display (check-in, gate, baggage claim, advertising display) or at trade fairs, in shopping centers, hotels, museums and more.

Design

The SIMATIC HMI Net Panel is a rugged display system with an integrated industrial PC and optional audio and loudspeaker equipment.

- LCD display with 1920 x 1080 pixel full HD resolution
- Power saving and long-life LED backlight
- Integral SIMATIC industrial PC
- Rugged and attractive device design with reduced enclosure depth
- Degree of protection IP65 all-round, industry compatible
- Solid, shatterproof front pane of 6 mm laminated glass
- Anti-glare front pane resistant to welding beads
- Safety eyebolts (removable as required) for additional protection against dropping in suspended installations
- Optional: adapter for Rose & Krieger FSK 50 support arm system
- Integrated wide-range power supply
- Rear connector for 1x USB (with IP65 protective cap), 1x Industrial Ethernet (M12 4-pin with protective cap)
- Rear Quick-On connection for integrated 100 - 240 V power supply (connector included in scope of delivery)
- Rear status indicator

Accessories

Support arm systems

Various support arm systems for
ceiling, back-to-back, wall or stand
mounting are offered by
Rose & Krieger.

More information

Customized modification options on request. Recommended
support arm system from Rose & Krieger.

Quotation preparation

SIMATIC HMI specialists define the product modifications
precisely in accordance with customer requirements.

This is followed by drafting of a quote with:

- Non-recurring costs
- Prototype costs
- Standard unit prices
- and the marginal conditions in the form of a product
agreement (e.g. minimum quantity).

The defined device can then be ordered easily using this
product agreement and a customized article number.

Overview Turnkey products

Turnkey products are ready-to-install and ready-to-use SIMATIC HMI products.

The benefits are found in the optimal mechanical installation of the devices, ergonomic, functional and with tested heat balance, and flexible in installation.

Products

- **HMI operator stations**

HMI devices with display diagonal of 10" and more are installed in selected enclosures to suit the function. HMI operator stations can be used wherever it is not possible to install human machine interface devices in a control cabinet or direct at the machine, and where off-the-shelf, turnkey products can save on engineering overhead. Installation of a customized image in the devices is possible (ready-to-run). Customized SIMATIC turnkey products offer standardized quality from a single source.

- **Backplane cover**

The backplane cover enables the enclosure of flat HMI products such as the HMI IPC 477C or MP 377. The backplane cover is provided with a VESA flange on the rear. More operator elements can be installed on the side in additional enclosures.

Overview

Turnkey products are SIMATIC HMI products or "ready-to-run" operator stations, i.e. pre-configured, ready for installation and ready-to-run SIMATIC Panels Thin Client, Multi Panels or Flat Panels and Panel PCs, installed in customer-specific enclosures.

Examples are Multi Panels fitted in customized die-cast aluminum enclosures with external keyboard; with installed application software, ready for connection, and ready-to-run.

Application example: Multi Panel in aluminum enclosure with operator controls, two-tier and with external keyboard

Benefits

High industrial capability thanks to an all-round rugged, tried and tested design:

- Ergonomic, technically proven and certified solutions ready for operation
- Safe operation even under difficult environmental conditions
- Temperature-tested and temperature-monitored
- Suitable even for special industries, e.g., stainless steel versions for the food, beverages and tobacco industries
- For high availability and a safe return on your investment
- Siemens quality support, service and repair

The following issues are considered when developing the HMI operator stations:

- Optimal HMI product installation technology to eliminate thermal hotspots and heat pockets in the housing
- Calculation of actual maximum permissible ambient temperature of the entire operator station in continuous duty at location of use Data takes into account device heat dissipation values
- Ensuring the adherence to the load limits for rotary mass storage systems and large displays verified by shock and vibration tests on the entire operator station during operation
- Adherence to legal regulations (certifications)
- Determination and testing of required degrees of protection and EMC measures
- Assurance of surface quality along with its abrasion and chemical resistance
- To the greatest possible extent, passive technology provides the basis for all measures to improve the suitability of use of the operator stations in specific environments (e.g., no active air conditioning). The aim is to ensure durability and fault-free operation with minimum maintenance.

Customized Automation

Customized hardware – Turnkey products

HMI operator stations for turnkey products

Application

Complete HMI operator stations can be used wherever HMI devices cannot be installed in a control cabinet or directly at the machine. Operator stations are suitable for:

- Industrial application
- Near-industrial application
- Use in secondary applications in food, beverage and tobacco production
- Stainless steel version in the primary areas of the food, beverages and tobacco industries

HMI turnkey products can be used wherever prefabricated, ready-to-run hardware and software products can be used to save on engineering.

Design

The HMI operator station concept is based on a modular system where HMI devices are built into selected enclosures to suit the functionality.

- HMI device enclosure for all-round protection (IP65)
- Mounting possible on stand or supporting bracket
- Rotation possible by means of adjusting elements
- Connection option for external keyboard and mouse
- Installation option for specific hardware components

Ambient temperature for turnkey products

The ambient temperature is always lower than the max. permissible ambient temperature of the HMI products (temperature values in Manual) installed in the operator station housing. Depending on the components and version (e.g. according to heat dissipation), permissible ambient temperatures around the operator station will vary between 5°C and 40 °C. Higher operator station ambient temperatures can be achieved by applying additional cooling measures.

Function

- Fatigue-free, fast operation
- Operator station can be quickly adapted to different operators
- Coherent, easy-to-learn operator philosophy
- Rugged against shocks and vibrations in operation
- Suitable device selection (SIMATIC HMI devices from 10" display)
- Ensuring the data transfer and access to drives and interfaces
- Direct operation of the machine (conventional operator elements for direct connection to machine units)
- Simple alphanumeric input
- Cleaning agents taken into account

Ordering data

Ordering notes

Product specifications and quotation preparations

- Product specification according to customer requirements
- Quotation preparation by SIMATIC HMI specialists, specification of:
 - one-time project costs
 - costs for sample devices/prototypes
 - standard unit prices
 - general conditions (product agreement)

Processing

Customized turnkey products are developed and produced in various stages in accordance with quality standards. Prototypes are created to test products. Once the devices have been approved by the customer, they undergo certification and are introduced into the production process.

Devices are produced using standard plant facilities, ensuring observation of customer quantity forecasts. For this purpose, individual quantity forecasts are exchanged with the customer.

In the event of questions and problems, customers can contact our worldwide 24-hour SIMATIC Customer Support. This is complemented by a special OEM After Sales Support service. Customer-specific project hotlines can be set up for bulk quantity customers.

Customized products can only be ordered in conjunction with a product agreement. The following points are defined in the product agreement:

- Delivery and pricing
- Logistics - annual volume, purchase quantity, delivery batch volumes
- Spare parts
- Service

Repairs/spare parts storage

Only identified repairs are performed. The required customer-specific spare parts (device fronts) are to be stored and provided by the customer upon delivery completion.

Overview

Customized software

In the case of customer-specific products, the software can also be individually installed. This includes the generation of operating systems and also the integration and installation of driver software and images – for complete, turnkey systems.

The customized software suite comprises:

- Generation of operating systems
 - for Windows XP embedded, for example
 - and the RMOS3 real-time operating system from Siemens
 - for customized LINUX installation
- Integration and installation of driver software and pre-installed images
 - for additional cards, controllers, or memory media, for example
 - for completely turnkey systems

In addition, customized software products based on our experience in the industrial automation offer an opportunity to set up multi-user systems and industrial remote operation and the possibility of integrating SIMATIC S7 into building automation:

Remote Operate Software

The HMI Remote Operate Software is an industrial remote control system based on Ethernet.

The software (server) enables the creation of a multi-user system with HMI IPC. Up to 6 operator stations (slaves) based on clients with MP 377 and HMI IPCs. The clients can also be assigned to several servers.

KNX/EIB2S7

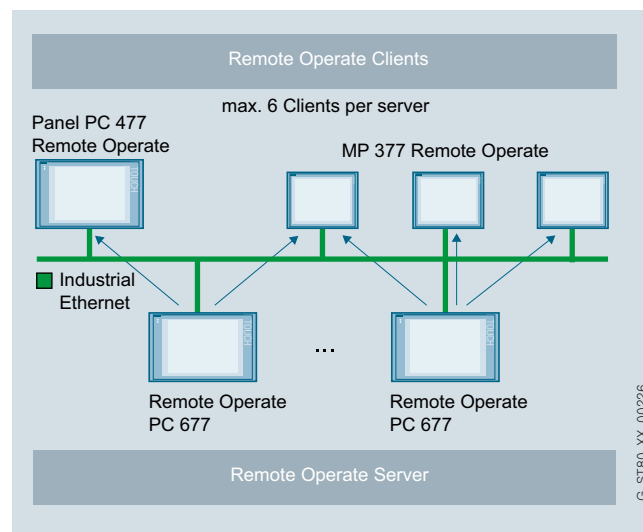

Bus systems for building management systems, such as KNX/EIB, and a host of associated components, are used for automation of building systems.

While controllers for the room level are used for local automation, field-proven industrial components like SIMATIC are resorted to in the case of more complex, higher-level automation.

Communication between the automation levels takes place over Ethernet using special KNXnet/IP interfaces. The KNX/EIB2S7 software package provides blocks for communication between SIMATIC S7 and building automation components. This means message frames of the KNX bus can be processed in a SIMATIC controller.

Application

Remote Operate Software

Panel PC with connected thin clients

Multi-user system with Panel PCs for up to 6 operator stations based on thin clients with MP 377 and PC 477

- Including operator lock
- In one software application with identical image contents
- Identical screen resolution
- Excluding server operating system
- Industrial remote control
 - Independent of the installed software
- Identical images on all devices
- Automatic scaling takes place in the case of differences in screen resolution between server and client
- Resolution up to 1280 x 1024 with true color
- Remote Operate Server with Windows XP Professional, Windows XP embedded, or Windows 7
- Up to 6 clients on one server
- Communication via Ethernet
- Designed for industrial requirements
 - Automatic login
 - Simple administration
 - Automatic reconnect
 - Permanent server/client assignment
 - Administration of operator authorization
 - Can be used after Windows login
 - Optional key-operated switch for operator authorization

Customized Automation

Customized software

SIMATIC KNX/EIB2S7

Overview

- Software for communication between SIMATIC S7 and components of a building automation system
- For using components from industrial automation in the area of building automation
- Enables the integration of actuators/sensors into a KNX/EIB bus in automation solutions with SIMATIC S7
- For transferring information from the building automation system for automating a production plant

Benefits

- Use of field-proven industrial components in the area of building automation
- Use of information from building automation for automating production plants
- Simple transfer of configuring data from the KNX configuring tool ETS3
- Automatic matching of KNX addresses with the associated SIMATIC addresses
- Use of the SIMATIC standard

Application

With rising energy awareness and increased requirements regarding user-friendliness and security, recent years have seen building automation facing far-reaching demands.

Bus systems for building management systems, such as KNX/EIB, and a host of available components for these are used for implementing the corresponding systems.

While controllers for the room level are used for local automation, field-proven industrial components like SIMATIC are resorted to in the case of more complex, higher-level automation.

Communication between the automation levels takes place over Ethernet using special KNXnet/IP interfaces.

The KNX/EIB2S7 software package provides blocks for communication between SIMATIC S7 and building automation components. This means message frames of the KNX bus can be processed in a SIMATIC controller.

Design

The SIMATIC S7 is connected with the KNX/EIB components via KNXnet/IP interfaces. The interfaces connect the KNX/EIB bus with the Industrial Ethernet bus of the SIMATIC S7.

Up to 5 KNXnet/IP interfaces can be connected to a SIMATIC S7 controller. Up to 7 000 group addresses can be monitored, operated and read via these interfaces. The maximum number of group addresses depends on the controller type and the number of connected KNXnet/IP interfaces.

KNX/EIB2S7 supports the following CPUs of the SIMATIC S7:

- ET 200
 - IM 151-8 PN/DP CPU
- S7 300/400
 - CPU 315-2 PN/DP
 - CPU 317-2 PN/DP
 - CPU 319-3 PN/DP
 - CPU 414-3 PN/DP
 - CPU 416-3 PN/DP
- Soft PLC
 - SIMATIC WinAC RTX 2008 SP 1
- SIMATIC S7-300 with CP 343-1
 - CPU 315-2 DP
 - CPU 317-2 DP
 - CPU 319-3 PN/DP
- SIMATIC S7-400 with CP 443-1 Advanced
 - CPU 412-2 MPI/DP
 - CPU 414-2 MPI/DP
 - CPU 416-2 MPI
- Supported KNXnet/IP interfaces:
 - N 146/2 IP router
 - N 148/221 IP interface
 - N 350E IP controller
 - N 151 IP viewer

Mode of operation

The KNX components are parameterized with the ETS 3 software of the Konnex organization.

The KNX/EIB2S7 Editor is based on the exported parameterization data of ETS3 and evaluates the group address, data type, name and description. It only remains to select the group addresses that are to be received and to mark those that are to be automatically read at initialization.

Addresses are assigned automatically by the editor. The addresses can be viewed in the Editor or exported for documentation.

The parameterization of the blocks necessary for the SIMATIC is generated by the Editor at the click of a mouse and can then be downloaded to the SIMATIC. The blocks contained in KNX/EIB2S7 handle the communication on the basis of this parameterization.

When data is received, the current values are saved in the data blocks provided for them. The values that have been updated are then marked. Equally, there are blocks available for the selective reading and writing of values.

Technical specifications
Representation of the data types

Data type	KNX value	EIS type	SIMATIC data type	Representation in the SIMATIC	User conversion

Customized Automation

Customized software

S7 OpenModbusTCP

Overview

- Software for communication between SIMATIC S7 and devices that support the Modbus TCP protocol
- Expansion or upgrade of existing plants with SIMATIC automation systems
- Connection of controllers and systems from different manufacturers

Benefits

- Easy coupling of systems from different manufacturers with SIMATIC automation systems over Industrial Ethernet
- No specialized Modbus know-how required
- Engineering with the standard tool SIMATIC STEP 7
- Fast configuration with the help of a wizard (only available for specific versions)

Application

MODBUS is a protocol that is widely used internationally, open to all users and supported by many manufacturers. MODBUS/TCP was developed from it for use in modern networks. This protocol is now an open Internet draft standard that was introduced by IEFT (Internet Engineering Task Force), the organization for Internet standardization.

This openness means that every manufacturer and user is able to use this protocol – a possibility that many leading manufacturers have already availed of. The increasing expansion of Ethernet communication into industrial areas as well as the office environment has extended the use of MODBUS/TCP in every sector. Heterogeneous system landscapes are the typical areas of use.

Design

Communication with Modbus TCP stations is performed via a communications processor (CP) or via the integrated PN interface of the SIMATIC S7 CPU.

A SIMATIC S7 controller can communicate simultaneously with more than one Modbus TCP station simultaneously, depending on the number of connection resources of the S7 CPU.

S7 OpenModbusTCP CP and Redundant V2 support the following CPs of SIMATIC S7:

- S7 300
 - CP 343-1
- S7 400
 - CP 443-1

S7 OpenModbusTCP PN CPU supports the following CPUs of SIMATIC S7:

- ET 200
 - IM 151-8 PN/DP CPU
- S7 300/400
 - CPU 314C-2 PN/DP
 - CPU 315-2 PN/DP
 - CPU 317-2 PN/DP
 - CPU 319-3 PN/DP
 - CPU 412-2 PN
 - CPU 414-3 PN/DP
 - CPU 416-3 PN/DP
- Soft PLC
 - SIMATIC WinAC RTX

Mode of operation

The Modbus block functions according to the client/server principle. The client is the active station and the server is the passive station in the communication process. Data is exchanged between the communication partners by means of various different function codes. The S7 can be operated as a client as well as a server during transmission.

In the initialization phase, it is determined on which S7 data blocks the Modbus registers and coils should be represented.

A distinction is made between client and server functionality during cyclic operation:

- If the S7 is operating as a client, when a task is activated, a Modbus message frame is generated from the specified current parameters and sent to the coupling partner over the TCP/IP connection. After the response frame has been received and the data has been checked and found to be consistent, the required actions, such as reading or writing data, will be performed. Any errors that occur during evaluation or processing will be indicated on the Modbus block.
- If the S7 is operating as a server, the block waits for a response frame from the client. If a frame is received from a client, it is checked and evaluated. After the frame has been checked and found to be consistent, the response frame is generated and the required actions, such as reading or writing data, will be performed. A processed request, or any errors that occur during evaluation, will be indicated on the Modbus block.

Customized Automation

Examples of sector products

Overview

SIMATIC HMI products are provided with additional features in order to facilitate optimum use in specific sectors of industry. Stainless steel front panels for the food, beverages and tobacco industry are one such example. With the exception of their front panels, the devices are identical to standard products in respect of function and technology.

We can offer products for the following sectors:

- Renewable energy
- Automotive industry - HMI for factory automation
- General machine construction
- Food and beverages industry, pharmaceuticals
- Oil & gas, chemicals industry and shipbuilding

Customized products for various industries are developed and produced in association with a customized product agreement.

Examples:

- Application area **Renewable energy**:
 - SIMATIC Rack PC with flexible expansion
 - SIMATIC Box PC: 627/427 with QNX
- Use in the **automotive industry**:
 - HMI operator stations
 - Front panel for Panel PC, 15" with arrow keys on the side
 - Mobile Panel 277 10" Remote Operate
- Application area **mechanical equipment manufacture, general**:
 - Touch and Key front panel 15" for Panel PC, resistant to honing oil
 - Flat Panels 10.4" for Panel PCs – Flat Panel SCD1900 portrait
- Area of application **food and beverages industry and pharmaceuticals**:
 - Panels and Panel PCs with stainless steel front
 - HMI panels as rear-mounting devices
 - Flat Panels with stainless steel front
 - HMI stainless steel operator stations
- Area of application **oil & gas, chemicals and shipbuilding**:
 - MP 377 15" Touch daylight readable

Overview

SIMATIC HMI products are provided with additional features in order to facilitate use in specific sectors.

Solar systems

Photovoltaic systems are subject to hardly any mechanical stress and therefore require little maintenance. This also requires reliable and low-maintenance devices in the automation system. With the wide operating temperature range at a high computing power, with their various mounting styles, as well as options for diagnostics and data backup, SIMATIC Panels and IPCs meet these requirements.

Wind farms

Wind farms can be used in all climatic zones and also in poorly accessible areas, e.g. offshore. The requirements regarding the control systems are accordingly diverse, and complete freedom from maintenance of the devices is required. The industrial PCs of the 427 series can meet these requirements. Versions of the Microbox treated by special paint processes can also be used in salt-laden air.

Customized Automation

Examples of sector products – Renewable energy

Solar systems

Overview

Solar systems

Compared to other power plants, photovoltaic systems are subject to hardly any mechanical stress and therefore require little maintenance. The same also applies for solar and solar-thermal systems. This also reduces the maintenance overhead on the devices. The SIMATIC Industrial PCs and Panels meet these requirements through the targeted selection of high-quality components and special production processes.

Benefits

SIMATIC Box PC family with mounting bracket for front mounting in portrait format

- Long service life
- Extra long spare parts availability
- Adapted computing power
- High system availability
- Individually adaptable

Application

All SIMATIC Panels and IPCs are developed for especially demanding environments and also for long service life. Spare parts availability for many years secures use in sound solar and photovoltaic systems.

- Rugged:
 - Ambient temperatures of 0 °C to +55 °C offer high flexibility in the choice of installation location. Use of a TEK is recommended for increasing the temperature range (see Chapter: Temperature Extension Kit).
- Innovative and flexible:
 - We meet the ever-increasing demand for more computing power by using the current generation of processors from Intel®. Based on the current chipsets, devices are available with CeleronM, Core2Solo, Core2Duo and Core2Quad. This makes power-saving applications (e.g. simple data acquisition) just as possible as power-hungry applications (such as the software PLC in real-time WinAC RTX) and server systems.
 - The SIMATIC IPCs fit into any control cabinet. Different mounting methods enable a host of installation variants.

Optimized equipping of the Panels and IPCs for more system availability is one of the simplest options for increasing productivity by means of reducing standstill times. Electromechanical components often cause malfunctions in PCs.

Since hard disks and fans in the industrial PC usually operate continuously, they are subject to an especially high rate of wear and tear. Software options for diagnostics and data backup, such as SIMATIC IPC DiagMonitor or SIMATIC IPC Image Creator, are particularly effective here, in addition to the use of high-quality industrial grade components.

Overview

Wind farms

Wind farms can be used to produce electrical power in all climatic zones, at sea, and in all types of terrain. The requirements regarding the control systems for wind turbines and wind parks are as diverse as the installation locations.

These locations are increasingly difficult to reach. This means the equipment must be completely maintenance-free. The Industrial PCs of the 427 series can meet these requirements. By selecting high-quality components and special production procedures, all the SIMATIC IPCs and Panels can be used for several years without requiring servicing.

Benefits

SIMATIC IPC427C with expansion frame

- Suitable for special temperature requirements
- Maintenance-free for offshore use
- Can handle high mechanical load
- High system availability
- Individually adaptable

Application

All SIMATIC Panels and IPCs are developed for especially demanding environments. The devices are optimally equipped to deal with vibration in wind turbines: rugged enclosures, special hard disk brackets, and interlocks are just a few examples of standard features on SIMATIC devices.

- Rugged:
 - The SIMATIC IPCs fit into any control cabinet. Different mounting methods enable a host of installation variants. Ambient temperatures of 0 °C to +55 °C are supported on the IPC427C, with much higher temperatures in some applications. Use of a TEK is recommended for extreme temperatures (see Chapter: Temperature Extension Kit).
 - Salt-laden atmospheres are hard on the devices. SIMATIC Panels are also available in the IP65 type and are thus eminently suitable for offshore use. Versions of the Microbox 427C also enable use in salt-laden atmospheres: this is made possible by special paint processes that have been in use for many years.
- Innovative and flexible:
 - We meet the ever-increasing demand for more computing power by using the current generation of processors from Intel®. Based on current chipsets, devices with Celeron M, Core2 Solo, Core2 Duo and Core2 Quad are available. This makes power-saving applications (e.g. simple data acquisition) just as possible as power-hungry applications (such as the software PLC in real-time WinAC RTX) and server systems.

Optimized equipping of the IPC and the Panel for more system availability is one of the simplest options for increasing productivity by means of reducing standstill times. Electromechanical components often cause malfunctions in PCs.

Since hard disks and fans in the industrial PC usually operate continuously, they are subject to an especially high rate of wear and tear. Software options for diagnostics and data backup, such as SIMATIC IPC DiagMonitor or SIMATIC IPC Image Creator, are particularly effective here, in addition to the use of high-quality industrial grade components.

EMS400S family

Overview

EMS400S family for S7-1200

Power Signal Booster PSB-C and PSB-S with S7-1200

- Device family for the low-cost transmission of pulse-encoded commands via contact wire for electric overhead conveyors.
- Bidirectional communication between vehicle and system control with a transmission rate of 16 bit/ 250 ms.
- Control via S7-1200; programmable via TIA Portal

Overview EMS450S controller, front view

The EMS450S controller is part of the EMS400S family and consists of an enclosure with the following integrated components:

- S7-1212 DC/DC/DC
- SITOP power supply SITOP PSU 300E 6EP1433-0AA00 400 V AC / 50 Hz – three-phase / 24 V DC / 5 A
- MM440 frequency inverter
- SIMATIC PSB C module for sending and receiving pulse-encoded signals on the rail
- Display unit with three 7-segment displays for depicting the control states

Overview EMS451S controller, front view

The EMS451S controller is part of the EMS400S family and consists of an enclosure with the following integrated components:

- S7-1212 DC/DC/DC
- SITOP power supply SITOP PSU 300E 6EP1433-0AA00, 400 V AC / 50 Hz – three-phase / 24 V DC / 5 A
- SINAMICS V20 frequency inverter
- SIMATIC PSB C module for sending and receiving pulse-encoded signals on the rail
- Display unit with three 7-segment displays for depicting the control states

SIMATIC EMS400S PSB-C module, SIMATIC EMS400S PSB-S module

Overview PSB-C module

EMS400S rail signal booster

The PSB-C (*power signal booster carrier*) module is employed in the cart and establishes the communication between it and the segment control.

The module is connected on the right of the S7-1200 as an IO module. The PSB-C module can operate one rail channel. Other interfaces:

- Analog velocity setpoint
- RS232 interface for the IR-DU display module

Overview PSB-S module

EMS400S rail signal booster

The PSB-S (*power signal booster segment*) module is used for segment control and establishes the communication between it and the cart. The module is connected on the right of the S7-1200 as an IO module. The PSB-S module can operate 3 rail channels. Up to 8 PSB-S modules can be connected on the right-hand side of the S7-1200 CPU. Other interfaces:

- SYNC input
- Digital inputs

Overview

Operations computer: Unit operator panel and protective guard control box (PGCB)

The fully-equipped and wired turnkey solutions in a variety of designs are ideal for the requirements of the automotive industry.

Benefits

- Modern design combined with outstanding functionality
- Increased heat dissipation thanks to ribbed aluminum profile and backpanel heat sink
- Easy access to controls thanks to hinged front frame or hinged backpanel
- Modular system for precise customization and tailoring to Panel or Panel PC
- High-quality aluminum press-drawn section with clean surface finish
- Colors to complement design, also possible in customized RAL colors
- Rugged and maintenance-friendly device design
- Very high EMC
- Distributed configuration for large machines and distributed installations

- Optimized high-speed operator control thanks to:
 - Reduced number of operator controls
 - Optimum control element layout
 - 24 V DC hardware
 - Direct keys or high-speed PROFIBUS communication for direct keys
- Use of high-capacity mass storage for large software applications
- Silicone-free device configuration
- Chemically-resistant surfaces (resistant to lubricants and fillers, oils, etc., in particular)
- Welding sputter-resistant surface
- Project-specific software ready installed

Application

In automotive industry, the fault-free operation of production facilities is of paramount importance. The requirements of industrial control enclosures in respect of impermeability to dust and water, as well as those in respect of the management of the internal heat balance are therefore very high.

In addition to the HMI IPC477C and HMI IPC577C, the HMI IPC677C and Flat Panels are also suitable for use as operator PCs in the automotive industry.

Design

- The modular design with a variety of aluminum frame and expansion profiles can support all required device combinations. A variety of operator stations appear in the overview:
 - Modular aluminum control enclosure system for the combination of multiple HMI Panels, Panel PCs, and SIMATIC S7 PLCs
 - Modular aluminum control enclosure system for the combination of multiple HMI Panels
 - Modular aluminum control enclosure system for the installation of an HMI Panel or Panel PC (see "Overview" figure bottom left)
- Can be accessed via hinged front frame or hinged backpanel
- Integrated support arm elements at the top and bottom for the direct attachment of support arm couplings
- Integrated handle attachments facilitate handling and underline the design image

Certifications/Approvals

- IP65
- NEMA 4/EEMAC Type 12
- cULus
- CE

Overview

Front panel 15" with function keys at side for Panel PC in the automotive industry

The front panel 15.1" with arrow keys at side is designed as a front unit for Panel PC. The arrow keys at the side allow intuitive and direct activation of movements in the plant. The display is a pure display unit, alphanumeric characters are entered using an external keyboard and external pointing device.

Benefits

- Display unit with additional function keys for efficient and direct activation of motions
- Display surface resistant to welding beads
- 24 V DC function keys for wiring to digital inputs of controller
- Non-interchangeable terminals

Application

Application example: Operations computer in the automotive industry

The front panel for Panel PCs with function keys at the side is designed for HMI operations in the automotive industry, e.g. as a display for control computers.

The front unit as the display unit with function keys at the side is always used if comprehensive inputs are necessary using an external keyboard and pointing device, but where efficient control of movements should be additionally possible using the function keys assigned to the graphics and directly to the PLC.

Design

- 2 x 6 function keys (24 V DC) on left and right of display
- Function keys connectable using non-interchangeable terminals, e.g. using vacant inputs of a Push Button Panel to the control
- Display surface resistant to welding beads
- USB interface at the front
- External dimensions and mounting cutout as for corresponding standard product
- IP65 degree of protection at the front

Technical specifications

Type	Front panel 15" with lateral function keys
Display	15.1" TFT
Resolution (pixels)	1024 x 768 pixels
General features	As for 15.1" front panel for HMI IPC677C
Special features	
Interfaces	USB interface at the front
Connectable to Panel PC	HMI IPC477C, HMI IPC677C, compact and distributed design
Number of keys	2 x 6 function keys (24 V DC) on left and right of display, wired to terminals

Modification possibilities

- Customized design
- Modification of front design

Mobile Panel 277 10" Remote Operate

Overview

Front view

- For high-contrast and clearly readable display of already configured SIMATIC WinCC process pictures of a stationary operator panel (e.g. with PC 677) without further configuring and adaptation overhead
- Server and client optimized for the following resolutions:
 - Remote Operate Server with 1024 x 768 pixels
 - Remote Operate Client with 800 x 600 pixels.
- Features
 - High-resolution display 10" SVGA
 - Integral acknowledgment and stop button (safety category 3 in accordance with EN 954-1)
 - Rugged and double-panel enclosure (drop height 1 m, complete IP65 degree of protection)
 - Thin Client concept: Communication with the higher-level operator station using Remote Operate software and PROFINET

Design

Rear view

Side view

Application

RO Client 800 x 600 pixels and RO Server 1024 x 768 pixels

The SIMATIC Mobile Panel 277 10" Remote Operate (RO) from Siemens bridges the gap between flexible use through portability and ease of handling, and the benefits of a thin client concept.

Existing WinCC configurations of a Panel PC 677 15" can be represented with functional compatibility. Reliable data transfer and short response times are guaranteed here. Operator input using the touch screen is intuitive. The optional device holder enables secure storage or stationary operation of the Mobile Panel.

User-friendliness and ergonomic use were consistent design considerations. With its low weight and compact design, the Mobile Panel sits comfortably in the hand.

The Mobile Panels are extremely impact-resistant thanks to the double-panel design and the rounded enclosure shape. The STOP button is protected by a "collar" against unintentional use and against damage when dropped. Harsh industrial environments present no problems to the SIMATIC Mobile Panels with their dust and spray-water-protected enclosures in degree of protection IP65.

The Mobile Panel is simply connected wherever it is needed in the plant. The rugged connection box with degree of protection IP65 can be installed anywhere. It ensures fault-free connection and disconnection during normal operation and thus enables the operator-control locations to be easily and safely changed when several connection points are available in a plant.

The cable is up to 25 meters in length and handles power supply, transfer of the STOP and acknowledgment button signals, and also data communication.

The device has no rotating media.

Mode of operation

All applications are run on the the Remote Operate Server, which in turn handles any control connection to the production process. The user now decides which applications will be operated and monitored from the Mobile Panel. The plant operator hardly notices that he or she is now working on the main operator station and no longer locally.

Mode of operation (continued)

The device does not process the data locally, but instead accesses the data of up to ten selectable main operator stations with the help of the pre-installed Remote Operate Client software. These main operator stations are, in turn, equipped with the Remote Operate Server software. All stations are connected via Industrial Ethernet.

The Mobile Panel is thus optimized exclusively on the visualization and management of the different stationary operator stations. Communication with the higher-level operator station takes place via the Remote Operate software and is enabled via PROFINET.

Function

- Automatic restart after switching on and display of the server selection list (up to 4 hierarchical levels and up to 10 servers)
- Password protection
- Automatic Reconnect of client
- Operation authorization indication (traffic light) on the server and client

Sophisticated safety concept

The Mobile Panel has an acknowledgement button (in accordance with EN 60204-1) with three switching steps. This can be adjusted to an ergonomic position for both left-handed users and right-handed users simply by turning.

The STOP pushbutton (acc. to EN 60204-1) can be looped into the EMERGENCY OFF circuit of a machine and positively latches when pressed. It is distinguished from an EMERGENCY-OFF button by its gray color. This ensures that it cannot be mistaken for the EMERGENCY-OFF equipment.

The STOP and acknowledgment buttons are implemented as double circuits in accordance with Safety Category 3 to EN 954-1.

Technical specifications

Type	Mobile Panel 277 10" Remote Operate
Display	10" touch screen SVGA with 800x600 pixels, TFT display with 65,536 colors
Operation	Touch screen with captive stylus and stylus holder, three-level acknowledgment button (dead-man's switch) integrated into the handle, stop button, function keys, key-operated switches and backlit pushbuttons as option. Suitable for left and right-handed operation
Interfaces	Hardwired connection line to connection box Plus for PROFINET/Ethernet and power supply (e.g. Mobile Panel 277 PN)
Software	Remote Operate Client software (Thin Client) on Windows CE 5.0, function-compatible representation of existing WinCC configurations/software applications of an existing server, e.g. PC677
Ambient conditions	Full IP65 degree of protection, ambient operating temperature 0°C to 40°C, drop height to 1.0 m
Certification	CE, cULus, C-Tick, EMC compliance, prototype test (BG/BIA or SIBE Switzerland)
In the accessories pack	CD-ROM, operating instructions, programming manual for Remote Operate Software
Options	Membrane function keys, access control (key-operated switch), buttons, handwheel
Weight	2.3 kg

PN Plus connection box

Interfaces	2 x Ethernet with 10/100 Mbit/s, integrated switch
Expansion for operator-process communication	Reconnection during operation without interrupting the emergency stop circuit, monitoring of the STOP button, location recognition (through hardware)

Customer-specific modifications

- Individual company logo instead of the Siemens logo and changing the type designation
- Changing the keyboard colors, labeling, symbols and background color
- Possible options: Membrane function keys, access control, pushbuttons and handwheel

Quotation preparation

SIMATIC HMI specialists define the product modifications precisely in accordance with customer requirements.

This is followed by drafting of a quote by SIMATIC HMI specialists, determining the following:

- Non-recurring costs
- Prototype costs
- Standard unit prices
- and the marginal conditions in the form of a product agreement (e.g. minimum quantity).

The defined device can be easily ordered using this product agreement and a customized article number. Device fronts are to be stored and provided by the customer upon delivery completion.

Customized Automation

Examples of sector products – General machine construction

Front panel 15" Touch and Key for Panel PCs, resistant to honing oil

Overview

The Front Panel Touch and Key is designed as a front unit for Panel PCs. The combination of Touch and Key operation as well as the resistance to honing oil are characteristics of this product.

Complete lamination of the decoration foil over the touch area of the display increases the resistance against contamination and welding beads, and the absence of edges and joints facilitates cleaning. Openings and cutouts in the front have been completely omitted in favor of a homogenous surface which can also be used in the environment of honing oil and similar cooling agents and lubricants.

Clear operation is achieved using the Touch pen which is delivered as standard and can be stored in a front holder. Dirty or oily hands are therefore not an argument against using a Touch screen. The pen has an ergonomic shape, is optimized for operations when wearing gloves, and is linked to the front using an elastic helix cable. Its "parking position" in the special stainless steel holder on the front means that it is always readily accessible.

Benefits

- Combined Touch + Key operation for increased efficiency
- Touch pen operation avoids contamination of the display area
- Ergonomically shaped touch pen which cannot be lost
- Simple cleaning
- Resistant to coolants and lubricants

Application

The front panel for Panel PCs with touch screen and membrane keyboard has been designed for operator control and monitoring at machine level for machine construction applications, where honing oil and lubricants are used.

The touch and key front is always used if efficient operation of the machine is associated with the following requirements:

- Intuitive operation using graphic representation on display
- Specific command inputs using fixed command inputs
- Effective inputs in forms using the integrated numeric and alphanumeric keyboard

Also in applications with increased environmental influences such as dirt and oil. The homogenous foil surface without joints or edges permits easy cleaning, and is resistant to coolants and lubricants.

Application examples

- Printing machines
- Drilling, milling, honing machines
- Brake test stands
- Injection molding machines
- Building management
- Warehouse systems
- Automotive industry

Design

- External dimensions and mounting cutout as for corresponding standard product
- Degree of protection IP65 at the front

Technical specifications

Type	Front panel 15" Touch + Key, resistant to honing oil

Overview

- Ideal for machine-level human machine interfacing
- Especially suitable for use in machines with restricted installation space
- Can be modified in design and front mechanical components (e.g. stainless steel front for food and beverages industry)
- Distance between the Flat Panel and PC max. 30 m
- Functions correspond to the standard Flat Panels
- Available with and without touch operation
- VGA and SVGA resolution

Application

The Flat Panel 10.4" TFT Touch has been designed as display and operator control unit for industrial PCs (e.g. SIMATIC Microbox 427C) and Panel PCs (e.g. PC 677C) and can be separated from the computing unit by up to 30 m.

They supplement the SIMATIC standard products and are suitable for machine-level human machine interfacing when PC functionality is required but little space is available for installing a display. VGA and SVGA resolution also in a secondary display, e.g. Panel PC 677C.

Technical specifications

Flat Panel	10.4"
Resolution (pixels)	800 x 600 pixels
Input unit	Analog-resistive touch screen
MTBF (at 25 °C)	50 000 h

Examples of sector products – Food and beverages industry/pharmaceuticals

Introduction

Overview

Hygiene areas in food and beverage production, pharmaceuticals or fine chemicals all share one requirement: The devices and equipment must be easy to clean. The relevant directives, standards and legislative requirements must be observed, e.g. EHEDG, FDA, DIN EN 1672-2 (Hygienic Design), GMP, LMHV, LMBG.

However, optimization and variation in the device hardware are also perfectly possible:

- Degree of protection
- Ruggedness
- Temperature resistance
- Design and installation versions
- Suitable for clean rooms
- Certification in accordance with ATEX

The aim is to find the cost-optimized solution for the specific application case.

The overview below shows different features depending on the applications areas, from packaging to the wet area in processing.

Applications Features	Hygienic packaging	Pharmaceuticals, fine chemicals	Food and beverages, bottle cleaning, bottle filling, laboratories	Abattoirs, meat processing
Stainless steel front	partially	x	x	x
Stainless steel control boxes	x	x	x	x
Stainless steel fully enclosed	x	x	x	x
Simple to clean	x	x	x	x
No grooves and gaps, no projections	partially	partially	membrane-covered protective edge not always accepted	-
Increased tightness	-	-	x	x
Mechanical ruggedness, no membrane front	-	-	partially	x
Suitable for high-pressure cleaning (IP69K)	-	-	-	partially
ATEX Ex Zone 2/22	x	x	partially	-

The product examples described on the following pages cover a wide range of the most important requirements.

6

Benefits

- Simpler cleaning thanks to resistant and rugged stainless steel front with smooth surface, and minimal grooves and gaps
- High degree of protection IP66K (TP 177B and MP 277 additionally IP66K) on the front for increased sealing properties and ruggedness
- Food-standard sealing material and shatter protection for the display to prevent contamination of the foodstuffs
- Optimized frame design almost flush with the control cabinet so that liquids can run off
- Device front developed on the basis of DIN EN 1672-2
- Decorative membrane tested against chemicals in accordance with DIN 42115, Part 2¹⁾
- Food-standard flat seal in accordance with FDA 21 CFR 177.2006
- Rear tensioning frame (included in scope of supply) for even application pressure of the seal
- External dimensions and mounting cutout as for corresponding standard product

High degree of protection for humid environments

With low installation depth and rugged front, the SIMATIC HMI Standard Panels are eminently suitable for industrial and machine-level use.

The Panels with stainless steel front are also even better equipped to meet the high requirements presented by the food and beverage production environment. IP66K degree of protection protects against water even with a jet strength of 100 l/min at 10 bar from a distance of 2.5 m to 3 m. The optimized frame profile and almost flush-mounting of the device on the control cabinet allow liquids to run off.

Installation of the operator panels in a stainless steel control cabinet as ready-to-use units is optionally available as a customized version.

¹⁾ Special resistance requirements must be examined separately.

Benefits (continued)**Certificates, listings and appraisals**

SIMATIC HMI products with stainless steel front, and the stainless steel operator panel, were subjected to some or all of the tests below and are listed or appraised in accordance with:

- High degree of protection IP66K, NEMA Type 4, 4x, 12
- CE-compliant, cULus-listed
- LGA mark "Hygiene tested" (Approval document No. 5664018)
- Expert appraisal of the Munich University of Technology, Research Center Weihenstephan, in accordance with EHEDG recommendation (Report No. 126/01.03.2007)
- Clean room qualification by IPA Fraunhofer Institute (test report: Examination of the clean room suitability and ESD characteristics of Panel PCs from Siemens AG, Report No. SI 0810-450 of October 2008)

Qualification for clean rooms

High-quality products such as semiconductors, medicines, food & beverages, and nanotechnology products are subject to special demands with regard to contamination with particles or bacteria.

Increased requirements for protection of the products and processes can only be met by production in clean rooms with suitable equipment under controlled conditions.

Clean rooms are classified according to particle quantities and sizes per m³ of room air and time unit. Clean room classes in accordance with ISO 14644-1 (ISO 1 to 9) have been introduced in pharmaceuticals, for example, in accordance with EG-GMP, Annex 1 (Classes A to F), and in semiconductor production.

Example:

A person in normal clothing emits approximately 80,000 particles ≥ 0.5 mm per second (in clean room clothing, this can be reduced to approximately 700 particles/s ≥ 0.5 mm).

- Requirements regarding equipment in clean rooms include the following:
- Surfaces that are easy to clean and disinfect
- As few adhesives as possible, e.g. electrostatic
- No emitting surfaces
- Shape favorable to air circulation, no air eddies
- Dense, as few hollow or dead spaces as possible
- Smooth, as few grooves and gaps as possible

The SIMATIC HMI products with stainless steel front and the stainless steel operator panel have been designed for these requirements.

The stainless steel operator stations with Panel PC 677B 15" Touch INOX and MP 377 15" Touch INOX have been tested by the Fraunhofer Institute and qualified for "obvious suitability for clean rooms of ISO Class 1 in accordance with EN ISO 14644-1".

Application

Quality and hygiene are decisive competitive features in the production of food and beverages. In addition, higher volumes have to be produced in shorter times and with rising quality demands.

Objects and equipment that come into contact with food and beverages must be

- such that they are clean and can be maintained and, if necessary, disinfected, and have no adverse effect on the food and beverages
- installed in such a way that the immediate environment can be cleaned appropriately.

Objects and equipment must be clean and well maintained (extract from the German food and beverages hygiene legislation). This requires not only the innovative know-how of engineering offices, mechanical equipment manufacturers and plant builders, but also modern, powerful human machine interface systems whose hardware and software are adapted to the special requirements.

The SIMATIC Panels and Panel PCs with touch screens and stainless steel fronts have been designed for use in the food, beverages and tobacco industry and for operator control and monitoring close to food processing machines. For this reason, the devices with stainless steel front have been developed in compliance with DIN EN 1672-2 "Food processing machinery – Safety and Hygiene Requirements".

Simpler cleaning and disinfecting

The high quality requirements in the food and beverages industry require a high standard of the food processing machinery. There are many relevant regulations, directives, ordinances, standards and laws. Essential here is that all equipment and components must be easy to clean and disinfect so that cross-contamination of the foodstuffs can be avoided.

The Panels with stainless steel front have a 240 grit hairline finish, so they are suitably smooth. The membrane covering the display cutout is tested with regard to its resistance to chemicals, has minimal grooves and gaps in which micro-organisms could settle, and also provides shatter protection for the display.

Panels and Panel PCs with stainless steel front

Overview

TP 177B color PN/DP, MP 277 10" Touch, MP 377 15" Touch and Panel PC 677B 15"

The SIMATIC Panels with touch screens and stainless steel fronts have been designed for use in the food, beverages and tobacco industry for operator control and monitoring close to food processing machines. They have been developed in compliance with DIN EN 1672-2 "Food processing machines – Safety and Hygiene Requirements".

- Simple cleaning and disinfecting
 - Stainless steel surface with 240 grade hairline finish
 - Membrane tested for resistance to chemicals
 - Minimal number of grooves and joints
 - Optimized frame profile so that liquids can run off
- Display shattering protection
- Degree of protection IP66K

Design

- External dimensions and mounting cutout as for corresponding standard product
- Optimized frame profile with a slight projection to the cabinet
- IP66K degree of protection at the front
- Surface ground with 240 grain abrasive
- Minimal number of grooves and joints
- Decorative film tested for resistance to chemicals
- Display splash protection
- Food-standard seals
- Rear tensioning frame for even application pressure of the seal

More information

Customized modification options

- Customized design
 - Use of the company name instead of the Siemens logo and modification of the type designation
 - Changing the background color
- Customer-specific hardware modifications such as the design and dimensions of the front plate, selection of the display, memory capacity, drives, options
- Customer-specific Panel PC configuration as a rugged embedded hardware and software system, without hard disk and with tailor-made software
- Customer-specific software suite with choice of Windows operating systems
- Customer-specific Panel PCs with software suite with choice of Windows operating systems
- Protection against condensation and corrosive gases (for selected panels)
- Device mounted in a stainless steel cabinet as a ready-to-install and ready-to-connect terminal which is ergonomic, functional, with high degree of protection as well as tested heat dissipation (e.g. with complete degree of protection IP66K)

Drafting a quotation

SIMATIC HMI specialists define the product modifications precisely in accordance with customer requirements.

This is followed by drafting a quotation with:

- Non-recurring costs
- Prototype costs
- Standard unit prices
- and the marginal conditions in the form of a product agreement (e.g. minimum quantity).

The defined device can then be easily ordered using this product agreement and a customized Article No.

HMI Panels as rear-mounted devices

Overview

MP 377 12" Touch, rear-mounting, MP 277 8" Touch vertical, rear-mounting

The solution for installing HMI devices without "corners and edges" on the front. The devices are installed in the control cabinet enclosure from the rear and are flush with the control cabinet sheet metal at the front. They are therefore known as "rear-mounting devices".

Benefits

- Front surface flush with the control box
- Simple to clean
- No dirt-collecting edges and deposits
- Front membrane resistant to the usual cleaning agents and disinfectants
- Can be replaced with front-mounting device of the same type for service purposes (MP 377 12" Touch rear-mounting only)

Design

The front frame is modified customer-specifically on the "rear-mounting devices":

The surface with the display viewing area covered with decorative membrane, and the marginal area around the display necessary for touch operation must be flush with the control cabinet sheet metal at the front. For this purpose, the front frame with the device seal and the cutouts for the holding bolts are set back from the visible surface by the thickness of the control cabinet sheet metal. The enclosure must have a suitable number of stud bolts available. The all-round device seal thus enables a high degree of protection: IP65.

The installation cutout can be dimensioned in such a way that the rear-mounting device can be replaced with the same type of front-mounting device for service purposes.

The decorative membrane is also drawn across the visible area of the display on the rear-mounting devices, so there is no cutout with adhesive edge above the display. The decorative membrane is smooth.

For sensitive applications where the gap dimension of the control cabinet cutout has too great a tolerance, there is the option of covering the entire surface including the gap with a transparent and replaceable membrane.

Flat Panels with stainless steel front

Overview

**Flat Panel 15" Touch INOX,
Flat Panel 15" Touch INOX (enclosed),
Flat Panel 19" Touch INOX,
Flat Panel 19" Touch INOX (enclosed)**

The Flat Panels with touch screen and stainless steel front are designed as a display and operating unit for SIMATIC PCs in the food and beverages industry, pharmaceuticals and related industries.

They are easy to clean and can be installed in production areas subjected to splashes in a suitable control cabinet.

Design

- Functions compatible with the SIMATIC HMI Standard Flat Panels
- Enclosure seal EPDM, sulfur-free
- Decorative membrane laminated over display, no display cutout
- 240 grain brushed stainless steel surface

The Flat Panels 15" Touch INOX and 19" Touch INOX VESA are fully enclosed and are suitable for space-saving mounting on a support system. The cables are then run in the supporting tube.

HMI stainless steel operator stations

Overview

SIMATIC HMI Panels or Panel PCs mounted in a stainless steel cabinet as a ready-to-install and ready-to-use terminal that is ergonomic and functional, and has a high degree of protection (complete degree of protection IP66K) as well as tested heat balance.

The populated and wired turnkey solutions are based on the hygienic design requirements of the food and beverages industry as well as other hygiene and wet areas, pharmaceuticals, fine chemicals and semiconductor production.

Design

- Control box completely assembled, wired, tested, with passive cooling

Design of stainless steel terminal

- For Panels and Panel PCs
- Angular surfaces so that liquids can run off
- Prepared for stand mounting
- With integrated handles at sides.

High complete degree of protection

- Screwed-on rear panel
- Cable inlet through stand and flange

Simple to clean

- No sharp corners or edges
- No dead spaces
- Hairline finish of surface with 240 grade grain

More information

Customized modification options

- Other HMI devices, display sizes and resolutions
- External stainless steel keyboard, e.g. without short-stroke keys with piezo technology
- Modification of the front/enclosure design (hygiene test optional) and cable routing
- Specific flange from enclosure manufacturers
- Breather gland
- Use in extended ambient temperature range, e.g. -20 °C to +60 °C
 - Air-water heat exchanger (internal)
 - "Temperature Extension Kit" plus active heating and cooling elements

Certification/approvals

- LGA Certificate "Hygiene-tested"
- Inspection certificate of the Munich University of Technology
- IPA Fraunhofer Institute

These modifications are defined by HMI specialists in consultation with the customer who then receives a specific offer.

A product agreement with minimum quantities is required for the implementation of customized modifications. Please contact your local/national Siemens HMI representative.

Overview

The requirements of the sectors oil and gas, chemicals and shipbuilding are diverse and range from use in areas subject to explosion hazard involving drill pipes, use in the extended temperature range (outdoor) and in direct sunlight, all the way to use on the darkened bridge of a ship.

In the case of drill pipes in the oil and gas industry and also in the chemicals industry, the following product features are important:

- Certification for areas subject to explosion hazard in Zones 2 and 22 in accordance with ATEX, FM Class I, Div. 2 and UL Haz. Loc.
- Daylight-readable display
- Use in sub-zero temperatures and in regions with high atmospheric humidity
- Resistant to harsh environmental conditions
- Scratch-proof and impact-resistant fronts are demanded for increased mechanical requirements

The following features are required in shipbuilding:

- Dimmable display down to complete black-out
- Marine Type certification such as Germanischer Lloyd and others

HMI sector products

- MP 377 15" Touch daylight readable

Overview MP 377 15" Touch daylight readable

- Ideal for use in the oil & gas industry:
 - Certification in accordance with ATEX for Zone 2/22, UL Haz. Loc.,
 - FM Class I, Div.2
 - Bright, daylight-readable display
 - Rugged front for harsh environmental conditions
 - UV-protected decorative membrane
 - High degree of protection
 - Can be used in an air-conditioned control cabinet for the extended outdoor temperature range from -30 °C to +70 °C
- Ideal for use in shipbuilding:
 - Diverse shipbuilding certificates (available soon)
 - 100% dimmable display backlighting, local and centralized
 - Console installation without special measures or restrictions
 - High-contrast display with wide reading angle
 - Design version with black frame possible
- Features:
 - Daylight-readable, bright and dimmable LCD display
 - Splashwater-protected (IP66)
 - Rugged aluminum front, impact-resistant, UV-protected
 - Capacitive touch with 3 mm glass for harsh environmental conditions
 - Touch operation with thin gloves
 - Outdoor applications with extended temperature range (option)
 - ATEX Zone 2/22, FM Class I, Div. 2, UL Haz. Loc.
 - Ship-building certificates: DNV, GL, NK, ABS, LRS, CCS, RINA, BV, PRS
 - Fan-free

Benefits

- A panel for applications inside and outside the production hall
- Extremely easy to read under diverse conditions
- Ergonomic dimmer function for optimal reading in control desks
- Can be connected to centralized dimming potentiometer (via PLC)
- Familiar HMI functions (exception: Sm@rt option and high-speed keys), no new training

Customized Automation

Examples of sector products – Oil & gas/chemicals/shipbuilding

MP 377 15" Touch daylight readable

Application

The panel has a daylight-readable and dimmable display, making it ideal for use in the control consoles, for example, of drilling rigs (oil & gas industry), ships (marine industry) and in other exposed areas including outdoor applications in air-conditioned control cabinets.

Design

The "MP 377 15" Touch daylight readable" has a powder-coated milled aluminum front that is impact-resistant, scratch-proof and highly resistant to chemicals.

Touch operation uses projected capacitive technology protected against humidity, heat and dirt in harsh environments by a 3-mm pane of glass, without reflective membranes.

The refined polyester-based decorative membrane is UV-resistant and protected against yellowing and embrittling.

The LED-backlit and dimmable display is designed using transmissive technology that allows a higher contrast than conventional, transmissive displays in extremely bright environments. The LED backlighting is dimmable using a slider on the process picture or centrally via the controller. Dimming is carried out using a gradation curve and is thus optimally ergonomically matched to the human eye.

The Panel is based on the field-proven electronics card of the MP 377 with WinCC flexible functionality and the familiar interfaces. The entire mechanical design is prepared for good convection and temperature balance, for long service life, and for operation onboard ship, or other vehicles with corresponding shock and vibration stresses.

Technical specifications

Multi Panels	MP 377 15" Touch daylight readable
General features	
Display	15" TFT, transreflective
Brightness	max. 1 000 cd/m ²
Contrast	max. 1 000:1
Reading angle	160°
Resolution	1 024 x 768
MTBF of backlit display (at 25°C)	50 000 h LED backlighting, dimmable 0 (off) to 100%
Input unit	Touch, projected capacitive
Power supply	24 V DC, typ. 1.5 A
Special features	Daylight-readable
Front	
Material	Aluminum, Autotex XE, glass

Siemens Industry Training

Faster and more applicable know-how: Hands-on training from the manufacturer

Siemens Industry Training provides you with comprehensive support in solving your tasks.

Training by the market leader in the industry enables you to make independent decisions with confidence. Especially where the optimum and efficient use of products and plants are concerned. You can eliminate deficiencies in existing plants, and exclude expensive faulty planning right from the beginning.

First-class know-how directly pays for itself: In shorter startup times, high-quality end products, faster troubleshooting and reduced downtimes. In other words, increased profits and lower costs.

Achieve more with Siemens Industry Training

- Shorter times for startup, maintenance and servicing
- Optimized production operations
- Reliable configuration and startup
- Minimization of plant downtimes
- Flexible plant adaptation to market requirements
- Compliance with quality standards in production
- Increased employee satisfaction and motivation
- Shorter familiarization times following changes in technology and staff

Highlights Siemens Industry Training

Top trainers

Our trainers are skilled teachers with direct practical experience. Course developers have close contact with product development, and directly pass on their knowledge to the trainers.

Practical experience

The practical experience of our trainers enables them to teach theory effectively. But since theory can be pretty drab, we attach great importance to practical exercises which can comprise up to half of the course time. You can therefore immediately implement your new knowledge in practice. We train you on state-of-the-art methodically/didactically designed training equipment. This training approach will give you all the confidence you need.

Wide variety

With a total of about 300 local attendance courses, we train the complete range of Siemens Industry products as well as interaction of the products in systems.

Tailor-made training

We are only a short distance away. You can find us at more than 50 locations in Germany, and in 62 countries worldwide. You wish to have individual training instead of one of our 300 courses? Our solution: We will provide a program tailored exactly to your personal requirements. Training can be carried out in our Training Centers or at your company.

The right mixture: Blended learning

"Blended learning" is a combination of various training media and sequences. For example, a local attendance course in a Training Center can be optimally supplemented by a teach-yourself program as preparation or follow-up. Additional effect: Reduced traveling costs and periods of absence.

Training offer for SIMATIC HMI

This page contains an overview of the SITRAIN training offer for SIMATIC HMI operator control and monitoring systems.

Depending on your demands we'll make you fit for specific applications or teach you important background knowledge about products and systems.

All courses contain the largest possible share of practical exercises so that training can be carried out very intensively in very small groups.

Further information regarding course contents, dates and prices can be found in the Internet at:

www.siemens.com/sitrain

Courses for SIMATIC HMI

Title	Course suitable for			Duration/ Medium	Order code
	Planning	Imple- men- ta- tion	Operation		

SIMATIC WinCC based on TIA Portal and SIMATIC S7-1500

SIMATIC TIA Portal WinCC on the machine level	TIA	✓	✓	✓	6 hours	WT-TIAWMUP
SIMATIC TIA Portal WinCC SCADA retraining course	TIA		✓	✓	3 days	TIA-WCCSUP
SIMATIC TIA Portal WinCC on the machine level	TIA		✓	✓	3 days	TIA-WCCM
SIMATIC TIA Portal WinCC SCADA	TIA		✓	✓	5 days	TIA-WCCS

SIMATIC WinCC flexible based on SIMATIC S7-300

SIMATIC WinCC flexible, system course 1			✓	✓	3 days	ST-WCCFSYS1
SIMATIC WinCC flexible, system course 2			✓	✓	3 days	ST-WCCFSYS2

SIMATIC WinCC based on SIMATIC S7-300 V7.x

SIMATIC WinCC, system course			✓	✓	5 days	ST-BWINCCS
SIMATIC WinCC, advanced course			✓		5 days	ST-BWINOND
ANSI-C in the SIMATIC World, Introduction			✓	✓	5 days	ST-SIMACE

SIMATIC WinCC V7.x Market-specific Solutions

Energy management

Energy management with SIMATIC powerrate for WinCC			✓	✓	3 days	ST-EMPRWCC
Energy management with B.Data			✓	✓	4 days	ST-EMBDATA

TIA These courses are based on the new engineering platform TIA Portal.

Appendix

Standards and approvals

Operating system licenses for SIMATIC PC/PG

The accompanying operating system license is only valid for installation on the supplied SIMATIC PC/PG.

Installation can only be performed on these SIMATIC systems in accordance with Microsoft OEM licensing regulations.

Standards UL (U) and CSA (C)

All HMI products comply with the standards UL (U) and CSA (C), or the approval procedure has been applied for.

Products which have no approval are specially marked (see ordering data of the products).

CE marking

The electronic products described in this catalog comply with the requirements and protection objectives of the following EC-directives insofar as they relate to the product concerned. They also comply with the corresponding harmonized European standards (EN) published for these products in the Official Journals of the European Community.

- Directive 2004/108/EC of the European Parliament and Council on the approximation of the laws of the Member States relating to electromagnetic compatibility (EMC Directive)
- Directive 2006/95/EC of the European Parliament and of the Council on the harmonization of the laws of Member States relating to electrical equipment designed for use within certain voltage limits (Low Voltage Directive)
- Directive 94/9/EC of the European Parliament and the Council on approximation of the laws of the Member States concerning equipment and protective systems intended for use in potentially explosive atmospheres (ATEX Directive)
- Directive 1999/5/EC of the European Parliament and of the Council on radio equipment and telecommunications terminal equipment and the mutual recognition of their conformity (RTTE Directive)

The originals of the declarations of conformity are kept available for the responsible supervisory authorities at:

SIMATIC PLC / HMI:

Siemens Aktiengesellschaft
I IA AS FA DH AMB
Postfach 1963
92209 Amberg
Germany

SIMATIC IPC:

Siemens Aktiengesellschaft
I IA AS PA R&D DH
Oestliche Rheinbrueckenstr. 50
76187 Karlsruhe
Germany

SIMATIC NET:

Siemens Aktiengesellschaft
Industry Sector
I IA SC CI
Postfach 4848
90327 Nürnberg
Germany

Note on the EMC Directive:

The installation instructions in the manuals must be adhered to when installing and operating the products described in this catalog. These contain, for example, important information on installation in cabinets and on the use of shielded cables.

Overview

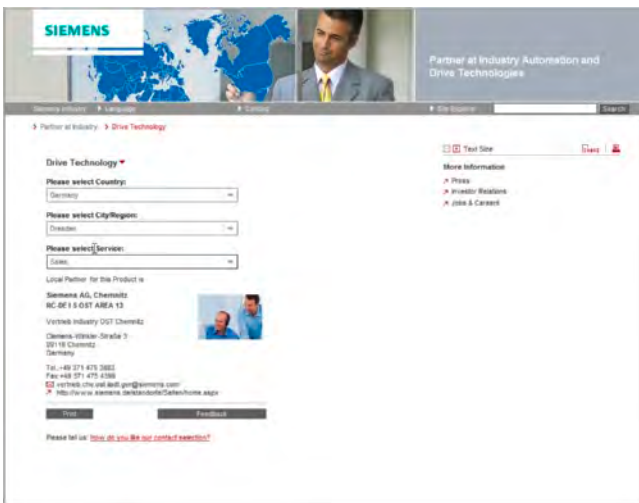

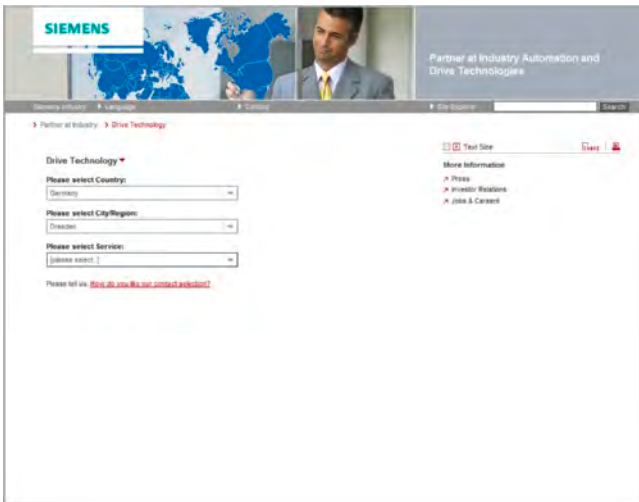

At Siemens Industry we are resolutely pursuing the same goal: long-term improvement of your competitive ability. We are committed to this goal. Thanks to our commitment, we continue to set new standards in automation and drive technology. In all industries – worldwide.

At your service locally, around the globe for consulting, sales, training, service, support, spare parts ... on the entire Industry Automation and Drive Technologies range.

Your personal contact can be found in our Contacts Database at: www.siemens.com/automation/partner

You start by selecting a

- Product group,
- Country,
- City,
- Service.

Partner at Industry

WinCC Competence Centers

WinCC Competence Centers

The WinCC Competence Centers are Siemens-internal partners. They offer a wide range of products and services designed to make optimal economic and system-oriented use of the openness and integration capability of WinCC.

In addition to the development of standard solutions/add-on products, they are authorized to implement customized/industry-specific solutions in the areas of application development and system integration on the basis of WinCC. The portfolio is rounded off with consulting services, project-related training, and workshops for decision-makers and users.

Sector competence in addition to automation expertise and WinCC system know-how ensure professional and efficient solutions. The software is, of course, developed in compliance with recognized standards on the basis of certified quality management in accordance with DIN ISO 9001.

You can find more information on the Internet at:

www.siemens.com/wincc-competence-center

Overview

Siemens Solution Partner Automation Drives

Solution Partner: Highest quality - guaranteed

The products and systems from Siemens Industry Automation and Drive Technologies offer the ideal platform for all automation applications.

Under the name of Siemens Solution Partner Automation Drives, selected system integrators around the world act as uniformly qualified solution providers for the Siemens range of products and services in the fields of automation and drives. Day after day, they utilize their qualified product and system know-how as well as their excellent industry expertise to your advantage – for all requirements.

The partner emblem is the guarantee and indicator of proven quality. The basis for this are defined quality features that identify Solution Partners as reliable and competent solution providers:

- **Solution quality**
Always a good result with tried and tested solutions expertise.
- **Expert quality**
Certified technical competence ensures maximum efficiency.
- **Project quality**
With proven project experience straight to the target.
- **Portfolio quality**
Comprehensive portfolio for state-of-the-art solutions from a single source.

Partner Finder

The Siemens Solution Partner Program helps you to find the optimum partner for your specific requirements.

Support is provided by the Partner Finder, a comprehensive online platform that showcases the profiles of all our solution partners. You can convince yourself of the competence of the respective Solution Partner by means of the references provided. Various search criteria are available for this purpose.

Once you have located a partner, you are only one small step away from contacting them.

Find the right partner here for your specific task and convince yourself of the solution competence provided:

www.siemens.com/automation/partnerfinder

Additional information on the Siemens Solution Partner Program is available online at:

Siemens Automation Cooperates with Education

Applicable practical know-how

Comprehensive teaching support for educational institutions

Cooperates
with Education

Automation

SIEMENS

Siemens Automation Cooperates with Education (SCE)

offers a global system for sustained support of technical skills. SCE supports educational institutions in their teaching assignment in the industrial automation sector and offers added value in the form of partnerships, technical expertise, and know-how. As the technological leader, our comprehensive range of services can support you in the knowledge transfer for Industry 4.0.

Our services at a glance

- Training curriculums for your lessons
- Trainer packages for hands-on learning
- Courses convey up-to-date, specialist knowledge
- Support for your projects/textbooks
- Complete didactic solutions from our partners
- Personal contact for individual support

Training curriculums for your lessons

Use our profound industrial know-how for practice-oriented and individual design of your course. We offer you more than 100 didactically prepared training curriculums on the topics of automation and drives technology free of charge. These materials are perfectly matched to your curricula and syllabuses, and optimally suited for use with our trainer packages. This takes into account all aspects of a modern industrial solution: installation, configuration, programming, and commissioning. All documents, including projects, can be individually matched to your specific requirements.

Particular highlights:

- With the new SIMATIC PCS 7 curriculums and trainer packages, you can pass on basic, practice-oriented PCS 7 knowledge at universities within about 60 hours (= 1 semester), using plant simulation.

- The new TIA Portal training materials for SIMATIC S7-1200 are available in English, German, French, Italian, Spanish and Chinese for download.

www.siemens.com/sce/documents

Trainer packages for hands-on learning

Our SCE trainer packages offer a specific combination of original industrial components which are perfectly matched to your requirements and can be conveniently used in your course. These price reduced bundles available exclusively to schools include innovative and flexible hardware and software packages. SCE can currently offers more than 90 SCE trainer packages including related equipment. These cover both the factory and process automation sectors. You can use them to impart the complete course contents on industrial automation at a very low cost.

Trainer packages are available for:

- Introduction to automation technology with LOGO! logic module and SIMATIC S7-1200 compact controller
- PLC engineering with SIMATIC S7 hardware and STEP 7 software (S7-300, S7-1500 and TIA Portal)
- Operator control and monitoring with SIMATIC HMI
- Industrial networking over bus systems with SIMATIC NET (PROFINET, PROFIBUS, IO-Link)
- Sensor systems with VISION, RFID and SIWAREX
- Process automation with SIMATIC PCS 7
- Power Monitoring Devices SENTRON PAC 4200
- Motor Management SIMOCODE
- Networked drive and motion technologies with SINAMICS/SIMOTION
- CNC programming with SinuTrain

Important ordering notes:

Only the following institutions are authorized to obtain trainer packages: vocational schools, Colleges and Universities, in-house vocational training departments, non commercial research institutions and non commercial training departments.

To purchase a trainer package, you require a specific end-use certificate, which you can obtain from your regional sales office.

www.siemens.com/sce/tp

Comprehensive teaching support for educational institutions (continued)**Courses convey up-to-date specialist knowledge**

Profit from our excellent know-how as the leader in industrial technologies. We offer you specific courses for automation and drive technology worldwide. These support you in the practice-oriented transferring of product and system know-how, are in conformance with curriculums, and derived from the training fields. Compact technical courses especially for use at universities are also available.

Our range of courses comprises a wide variety of training modules based on the principle of Totally Integrated Automation (TIA). The focus is on the same subject areas as with the SCE trainer packages.

Every PLC and drive course is oriented on state-of-the-art technology. Your graduates can thus be prepared optimally for their future professional life.

In some countries we are offering classes based on our training curriculums. Please inquire with your SCE contact partner.

www.siemens.com/sce/contact

Support for your projects/textbooks

Automation and drive technology is characterized by continuous and rapid developments. Service and Support therefore play an important role.

We can provide you with consulting for selected projects and support from your personal SCE contact as well as our web based and regional Customer Support.

As a particular service, SCE supports technical authors with our know-how as well as with intensive technical consulting. Siemens library of special textbooks covering the industrial automation sector provides an additional resource for you and your students. These can be found at the SCE web site.

www.siemens.com/sce/contact
www.siemens.com/sce/books

Complete didactic solutions

Our partners for learning systems offer a wide range of training systems and solutions for use in your courses or laboratory.

These models have been designed based on our trainer packages and thus save you the time and cost of self-construction of individual components. The Partner systems provide you with simple and effective help in the fulfillment of your teaching assignment.

www.siemens.com/sce/partner

Contact for individual support

You can find your personal SCE contact on our Internet site. Your local SCE Promoter will answer all your questions concerning the complete SCE offering, and provide you with timely and competent information about innovations. When you encounter challenges, you can profit from our global team of excellence.

If a direct SCE contact is not listed for your country, please contact your local Siemens office.

Online Services

Information and Ordering in the Internet and on DVD

Siemens Industry Automation and Drive Technologies in the WWW

A detailed knowledge of the range of products and services available is essential when planning and configuring automation systems. It goes without saying that this information must always be fully up-to-date.

Siemens Industry Automation and Drive Technologies has therefore built up a comprehensive range of information in the World Wide Web, which offers quick and easy access to all data required.

Under the address

www.siemens.com/industry

you will find everything you need to know about products, systems and services.

Product Selection Using the Interactive Catalog CA 01 of Industry

Detailed information together with convenient interactive functions:

The interactive catalog CA 01 covers more than 80 000 products and thus provides a full summary of the Siemens Industry Automation and Drive Technologies product base.

Here you will find everything that you need to solve tasks in the fields of automation, switchgear, installation and drives. All information is linked into a user interface which is easy to work with and intuitive.

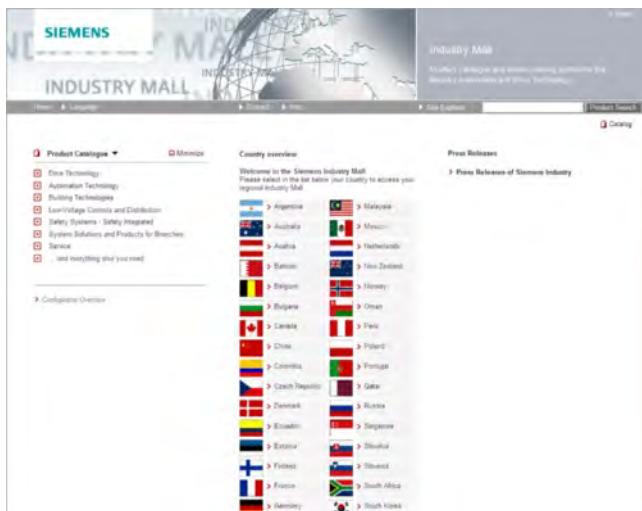

After selecting the product of your choice you can order at the press of a button, by fax or by online link.

Information on the interactive catalog CA 01 can be found in the Internet under

www.siemens.com/automation/ca01

or on DVD.

Easy Shopping with the Industry Mall

The Industry Mall is the electronic ordering platform of Siemens AG on the Internet. Here you have online access to a huge range of products presented in an informative and attractive way.

Data transfer via EDIFACT allows the whole procedure from selection through ordering to tracking and tracing of the order to be carried out. Availability checks, customer-specific discounts and preparation of quotes are also possible.

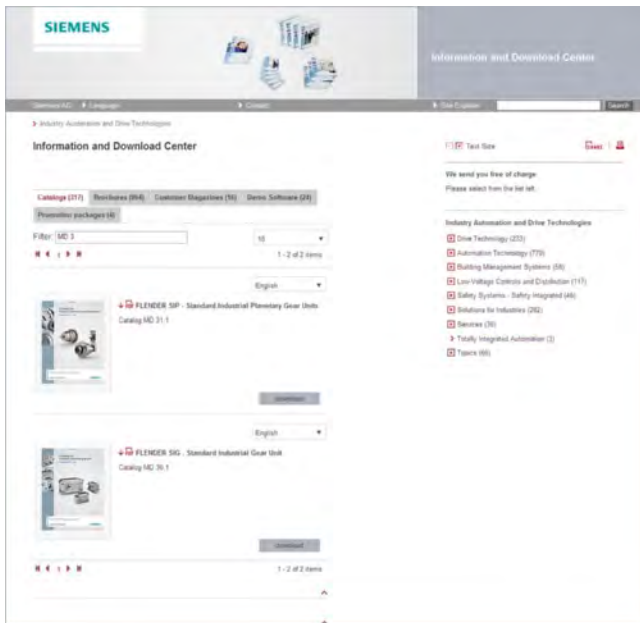

Numerous additional functions are available to support you.

For example, powerful search functions make it easy to select the required products. Configurators enable you to configure complex product and system components quickly and easily. CAx data types are also provided here.

Please visit the Industry Mall on the Internet under:

www.siemens.com/industrymall

Downloading Catalogs

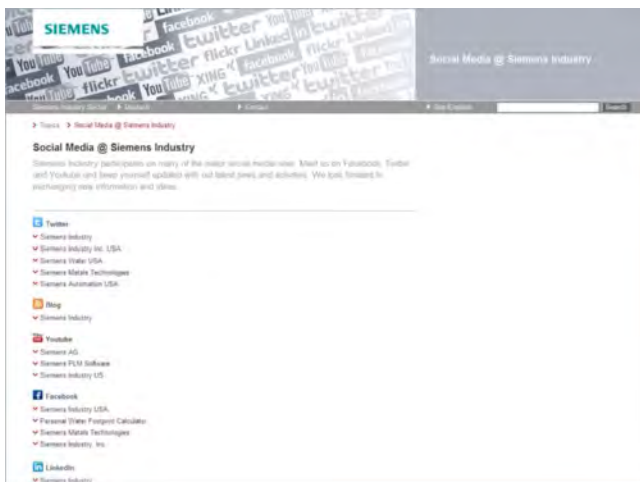

In addition to numerous other useful documents, you can also find the catalogs listed on the back inside cover of this catalog in the Information and Download Center. Without having to register, you can download these catalogs in PDF format or increasingly as digital page-turning e-books.

The filter dialog box above the first catalog displayed makes it possible to carry out targeted searches. If you enter "MD 3" for example, you will find both the MD 30.1 and MD 31.1 catalogs. If you enter "ST 70" both the ST 70 catalog and the associated news or add-ons are displayed.

Visit us on the web at:

www.siemens.com/industry/infocenter

Social Media

Connect with Siemens through social media: visit our social networking sites for a wealth of useful information, demos on products and services, the opportunity to provide feedback, to exchange information and ideas with customers and other Siemens employees, and much, much more. Stay in the know and follow us on the ever-expanding global network of social media.

Connect with Siemens Industry at our central access point:

www.siemens.com/industry/socialmedia

Or via our product pages at:

www.siemens.com/automation

or

www.siemens.com/drives

To find out more about Siemens' current social media activities visit us at:

www.siemens.com/socialmedia

Mobile Media

Discover the world of Siemens.

We are also constantly expanding our offering of cross-platform apps for smartphones and tablets. You will find the current Siemens apps at the app store (iOS) or at Google Play (Android).

The Siemens app, for example, tells you all about the history, latest developments and future plans of the company – with informative pictures, fascinating reports and the most recent press releases.

Appendix Industry Services

Your machines and plant can do more – with Industry Services.

Overview

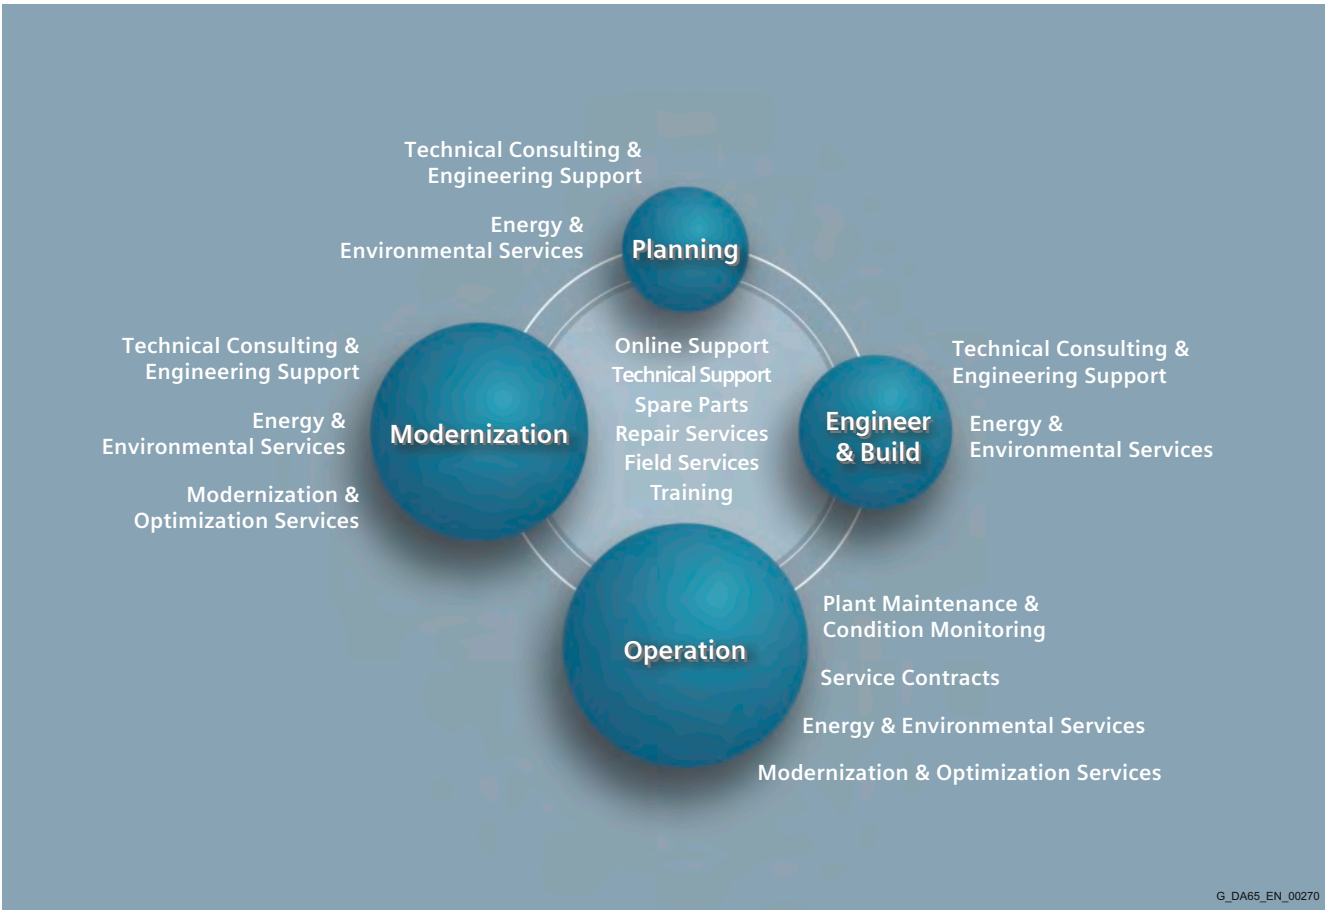

Whether it is production or process industry - in view of rising cost pressure, growing energy costs, and increasingly stringent environmental regulations, services for industry are a crucial competitive factor in manufacturing as well as in process industries.

All over the world Siemens supports its customers with product, system, and application-related services throughout the entire life cycle of a plant. Right from the earliest stages of planning, engineering, and building, all the way to operation and modernization. These services enable customers to benefit from the Siemens experts' unique technological and product knowledge and industry expertise.

Thus downtimes are reduced and the utilization of resources is optimized. The bottom line: increased plant productivity, flexibility, and efficiency, plus reduced overall costs.

Discover all advantages of our service portfolio:
www.siemens.com/industry-services

G_DA65_EN_00270

Siemens supports its clients with technology based Services across a plants entire life cycle.

Overview (continued)

Online Support

Online support is a comprehensive information system for all questions relating to products, systems, and solutions that Siemens has developed for industry over time. With more than 300,000 documents, examples and tools, it offers users of automation and drive technology a way to quickly find up-to-date information. The 24-hour service enables direct, central access to detailed product information as well as numerous solution examples for programming, configuration and application.

The content, in six languages, is increasingly multimediated – and now also available as a mobile app. Online support's "Technical Forum" offers users the opportunity to share information with each other. The "Support Request" option can be used to contact Siemens' technical support experts. The latest content, software updates, and news via newsletters and Twitter ensure that industry users are always up to date.

Online Support App

Using the Online Support app, you can access over 300,000 documents covering all Siemens industrial products - anywhere, any time. Regardless of whether you need help implementing your project, fault-finding, expanding your system or are planning a new machine.

You have access to FAQs, manuals, certificates, characteristics curves, application examples, product notices (e.g. announcements of new products) and information on successor products in the event that a product is discontinued.

Just scan the product code printed on the product directly using the camera of your mobile device to immediately see all technical information available on this product at a glance. The graphical CAx information (3D model, circuit diagrams or EPLAN macros) is also displayed. You can forward this information to your workplace using the e-mail function.

Technical Support

The ability to quickly analyze system and error messages and take appropriate action are key factors in ensuring that plants run safely and efficiently. Questions can arise at any time and in any industry, whether it's an individual product or a complete automation solution. Siemens technical support offers individual technical assistance in matters related to functionality, how to operate, applications, and fault clearance in industrial products and systems – at any time and globally, over the phone, by e-mail, or via remote access. Experienced experts from Siemens answer incoming questions promptly. Depending on the requirements, they first consult specialists in the areas of development, on-site services, and sales. Technical support is also available for discontinued products that are no longer available. Using the support request number, any inquiry can be clearly identified and systematically tracked.

www.siemens.com/industry/onlinesupport

The search function retrieves product information and articles and supports you with a personalized suggestion list. You can find your favorite pages – articles you need frequently – under "mySupport". You also receive selected news on new functions, important articles or events in the News section.

Scan the QR code
for information on
our Online Support
app.

The app is available free of charge from the Apple App Store (iOS) or from Google Play (Android).

www.siemens.com/industry/onlinesupportapp

Appendix

Industry Services

Industry Services for the entire life cycle

Overview (continued)

Spare Parts

Drive and automation systems must be available at all times. Even a single missing spare part can bring the entire plant to a standstill – and result in substantial financial losses for the operator. The spare parts services from Siemens protects against such losses – with the aid of quickly available, original spare parts that ensure smooth interaction with all other system components. Spare parts are kept on hand for up to ten years; defective parts can be returned. For many products and solutions, individual spare parts packages ensure a preventive stock of spare parts on-site. The spare parts services is available around the world and around the clock. Optimum supply chain logistics ensure that replacement components reach their destination as quickly as possible. Siemens' logistics experts take care of planning and management as well as procurement, transportation, customs handling, warehousing, and complete order management for spare parts.

Repair Services

Reliable electrical and electronic equipment is crucial for operating continuous processes. That is why it is essential that motors and converters always undergo highly specialized repair and maintenance. Siemens offers complete customer and repair services – on site and in repair centers – as well as technical emergency services worldwide. The repair services include all measures necessary to quickly restore the functionality of defective units. In addition, services such as spare parts logistics, spare parts storage and rapid manufacturing are available to plant operators in all verticals. With a global network of certified repair shops operated by Siemens as well as third parties, Siemens handles the maintenance and overhaul of motors, converters, and other devices as an authorized service partner.

Field Services

It's a top priority in all industries: the availability of plants and equipment. Siemens offers specialized maintenance services such as inspection and upkeep as well as rapid fault clearance in industrial plants – worldwide, continuously, and even with emergency services as needed. The services include startup as well as maintenance and fault clearance during operation. The startup service includes checking the installation, function tests, parameterization, integration tests for machines and plants, trial operation, final acceptance, and employee training. All services, including remote maintenance of drives, are also available as elements of customized service contracts.

Overview (continued)

Training

Increasingly, up-to-date knowledge is becoming a determining factor in success. One of the key resources of any company is well-trained staff that can make the right decision at the right moment and take full advantage of the potential. With SITRAIN – Training for Industry, Siemens offers comprehensive advanced training programs. The technical training courses convey expertise and practical knowledge directly from the manufacturer. SITRAIN covers Siemens' entire product and system portfolio in the field of automation and drives. Together with the customer, Siemens determines the company's individual training needs and then develops an advanced training program tailored to the desired requirements. Additional services guarantee that the knowledge of all Siemens partners and their employees is always up-to-date.

Technical Consulting & Engineering Support

The efficiency of plants and processes leads to sustainable economic success. Individual services from Siemens help save substantial time and money while also guaranteeing maximum safety. Technical consulting covers the selection of products and systems for efficient industrial plants. The services include planning, consulting, and conceptual design as well as product training, application support, and configuration verification – in all phases of a plant's lifecycle and in all questions related to product safety. Engineering support offers competent assistance throughout the entire project, from developing a precise structure for startup to product-specific preparation for implementation as well as support services in areas such as prototype development, testing and acceptance.

Energy & Environmental Services

Efficient energy use and resource conservation – these top sustainability concerns pay off – both for the environment and for companies. Siemens offers integrated solutions that unlock all technical and organizational potential for successful environmental management. Customized consulting services are aimed at sustainably lowering the cost of energy and environmental protection and thus increasing plant efficiency and availability. The experts provide support in the conceptual design and implementation of systematic solutions in energy and environmental management, enabling maximum energy efficiency and optimized water consumption throughout the entire company. Improved data transparency makes it possible to identify savings potential, reduce emissions, optimize production processes, and thereby noticeably cut costs.

Appendix

Industry Services

Industry Services for the entire life cycle

Overview (continued)

Modernization & Optimization Services

High machine availability, expanded functionality and selective energy savings – in all industries, these are decisive factors for increasing productivity and lowering costs. Whether a company wants to modernize individual machines, optimize drive systems, or upgrade entire plants, Siemens' experts support the projects from planning to commissioning.

Expert consulting and project management with solution responsibility lead to security and make it possible to specifically identify savings potential in production. This secures investments over the long term and increases economic efficiency in operation.

Plant Maintenance & Condition Monitoring

Modern industrial plants are complex and highly automated. They must operate efficiently in order to ensure the company's competitive strength. In addition, the steadily increasing networking of machines and plants require consistent security concepts. Maintenance and status monitoring as well as the implementation of integrated security concepts by Siemens' experts support optimum plant use and avoid downtime. The services include maintenance management as well as consulting on maintenance concepts, including the complete handling and execution of the necessary measures. Complete solutions also cover remote services, including analysis, remote diagnosis, and remote monitoring. These are based on the Siemens Remote Services platform with certified IT security.

Service Contracts

Making maintenance costs calculable, reducing interfaces, speeding up response times, and unburdening the company's resources – the reduced downtimes that these measures achieve increase the productivity of a plant. Service contracts from Siemens make maintenance and repairs more cost-effective and efficient. The service packages include local and remote maintenance for a system or product group in automation and drive technology. Whether you need extended service periods, defined response times, or special maintenance intervals, the services are compiled individually and according to need. They can be adjusted flexibly at any time and used independently of each other. The expertise of Siemens' specialists and the capabilities of remote maintenance thus ensure reliable and fast maintenance processes throughout a plant's entire lifecycle.

Siemens Service Option for SIMATIC IPC

The expanded hardware service for SIMATIC IPC products

Purchasing and registering this additional agreement for a SIMATIC IPC extends the time period for free repairs of this device to 36 months after delivery.

Scope of services of the service option within the period of service (36 months):

- Free¹⁾ repair during the period of service at one of our authorized repair centers near you. The addresses of our worldwide partners can be found on the Internet at www.siemens.com/asis
- Within the agreed contractual period, Siemens will bear the costs that are incurred in the repair center (labor and materials/replacement parts), which are needed to restore the functions²⁾ of the hardware
- Siemens will also assume the return shipping costs of the repaired device from the repair center to the customer

¹⁾ Wear and tear as well as problems that arise due to improper handling of the devices are not included.

²⁾ For hard disk defects that require the system to be restored, the repair service will only cover restoring the installation to its original condition exworks. The uploading of additional application software, drivers and setting up the operating software are not covered by the free repair service.

Product family	Article No. Service Option	Article designation
SIMATIC Rack PC <ul style="list-style-type: none"> • SIMATIC IPC547 • SIMATIC IPC647 • SIMATIC IPC847 	A5E00510072	36 months service option for SIMATIC Rack PC and Box PC
SIMATIC Box PC <ul style="list-style-type: none"> • SIMATIC IPC227 • SIMATIC IPC427 • SIMATIC IPC627 • SIMATIC IPC827 		
SIMATIC Panel PC <ul style="list-style-type: none"> • SIMATIC IPC277 • SIMATIC IPC477 • SIMATIC IPC577 • SIMATIC IPC677 	A5E00509961	36 months service option for SIMATIC Panel PCs

Ordering and registering the additional agreement:

- Select the appropriate article number for the optional package based on the family of products and place your order
- Scope of delivery: Description of services in 4 languages + service device label with a license number for identifying the additional agreement on the device
- Activation of the service license number for a SIMATIC PC/ SIMATIC PG via the Internet (www.siemens.com/ped): The registration must be completed within the first 90 days after initial delivery of the device!

Appendix

Expertise and services relating to all aspects of PC-based Automation

Overview

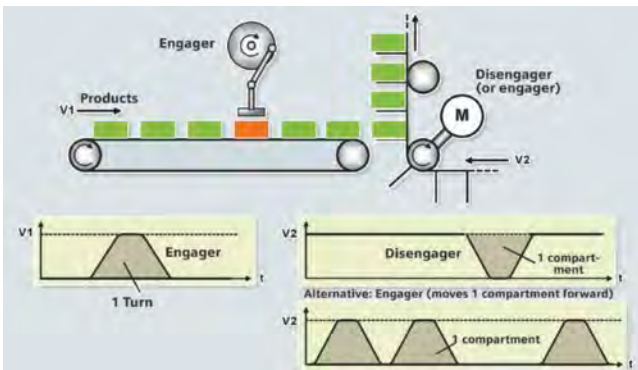

Expertise and services relating to all aspects of PC-based Automation

Do you require support with the dimensioning and options of a PC-based Automation project, or even engineering support?

Specifically for this purpose, Siemens has established a team of specialists in Cologne and Milan who work closely with Development and Product Marketing and can thus provide our sales departments worldwide with competent support in PC-based Automation.

Our core competencies

- Design of PC-based Automation systems from Siemens
- Integrated, customer-specific technology (add-ons) using high-level languages (C++) in Windows or real-time environments
- Knowledge transfer/workshops for the integration of third-party components, as well as for applications using the Open Development Kit (ODK)
- Technology and application know-how
- Development of add-ons for WinAC and WinCC flexible

Reference applications

- Fast recording of measured values
- Software blocks for drives library
- Customer-specific communications via Ethernet (OPC/ActiveX, TCP socket)
- Synchronous operation, flying shear, table interpolation for electric and hydraulic axes
- Integration of PCI cards into PC-based Automation applications (e.g. WinAC and ASI-Bus)
- Customer-specific development and integration of C++ programs
- Database connections
- Integration of complex control algorithms

Contacts

Activation of the Competence Centers for your application via your regional contact.

If you do not yet have a contact person in your region, just go to:
<http://www.siemens.com/automation/partner>

The latest information about the workshops offered can be found on the Internet:

<http://www.siemens.com/pc-based>

Overview

Software types

Software requiring a license is categorized into types. The following software types have been defined:

- Engineering software
- Runtime software

Engineering software

This includes all software products for creating (engineering) user software, e.g. for configuring, programming, parameterizing, testing, commissioning or servicing.

Data generated with engineering software and executable programs can be duplicated for your own use or for use by third parties free-of-charge.

Runtime software

This includes all software products required for plant/machine operation, e.g. operating system, basic system, system expansions, drivers, etc.

The duplication of the runtime software and executable programs created with the runtime software for your own use or for use by third-parties is subject to a charge.

You can find information about license fees according to use in the ordering data (e.g. in the catalog). Examples of categories of use include per CPU, per installation, per channel, per instance, per axis, per control loop, per variable, etc.

Information about extended rights of use for parameterization/configuration tools supplied as integral components of the scope of delivery can be found in the readme file supplied with the relevant product(s).

License types

Siemens Industry Automation & Drive Technologies offers various types of software license:

- Floating license
- Single license
- Rental license
- Rental floating license
- Trial license
- Demo license
- Demo floating license

Floating license

The software may be installed for internal use on any number of devices by the licensee. Only the concurrent user is licensed. The concurrent user is the person using the program. Use begins when the software is started. A license is required for each concurrent user.

Single license

Unlike the floating license, a single license permits only one installation of the software per license.

The type of use licensed is specified in the ordering data and in the Certificate of License (CoL). Types of use include for example per instance, per axis, per channel, etc.

One single license is required for each type of use defined.

Rental license

A rental license supports the "sporadic use" of engineering software. Once the license key has been installed, the software can be used for a specific period of time (the operating hours do not have to be consecutive).

One license is required for each installation of the software.

Rental floating license

The rental floating license corresponds to the rental license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

Trial license

A trial license supports "short-term use" of the software in a non-productive context, e.g. for testing and evaluation purposes. It can be transferred to another license.

Demo license

The demo license support the "sporadic use" of engineering software in a non-productive context, for example, use for testing and evaluation purposes. It can be transferred to another license. After the installation of the license key, the software can be operated for a specific period of time, whereby usage can be interrupted as often as required.

One license is required per installation of the software.

Demo floating license

The demo floating license corresponds to the demo license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

Certificate of license (CoL)

The CoL is the licensee's proof that the use of the software has been licensed by Siemens. A CoL is required for every type of use and must be kept in a safe place.

Downgrading

The licensee is permitted to use the software or an earlier version/release of the software, provided that the licensee owns such a version/release and its use is technically feasible.

Delivery versions

Software is constantly being updated. The following delivery versions

- PowerPack
- Upgrade

can be used to access updates.

Existing bug fixes are supplied with the ServicePack version.

PowerPack

PowerPacks can be used to upgrade to more powerful software. The licensee receives a new license agreement and CoL (Certificate of License) with the PowerPack. This CoL, together with the CoL for the original product, proves that the new software is licensed.

A separate PowerPack must be purchased for each original license of the software to be replaced.

Upgrade

An upgrade permits the use of a new version of the software on the condition that a license for a previous version of the product is already held.

The licensee receives a new license agreement and CoL with the upgrade. This CoL, together with the CoL for the previous product, proves that the new version is licensed.

A separate upgrade must be purchased for each original license of the software to be upgraded.

Appendix

Software Licenses

Overview

ServicePack

ServicePacks are used to debug existing products. ServicePacks may be duplicated for use as prescribed according to the number of existing original licenses.

License key

Siemens Industry Automation & Drive Technologies supplies software products with and without license keys.

The license key serves as an electronic license stamp and is also the "switch" for activating the software (floating license, rental license, etc.).

The complete installation of software products requiring license keys includes the program to be licensed (the software) and the license key (which represents the license).

Software Update Service (SUS)

As part of the SUS contract, all software updates for the respective product are made available to you free of charge for a period of one year from the invoice date. The contract will automatically be extended for one year if it is not canceled three months before it expires.

The possession of the current version of the respective software is a basic condition for entering into an SUS contract.

You can download explanations concerning license conditions from www.siemens.com/automation/salesmaterial-as/catalog/en/terms_of_trade_en.pdf

Appendix

Conditions of sale and delivery

1. General Provisions

By using this catalog you can acquire hardware and software products described therein from Siemens AG subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

1.1 For customers with a seat or registered office in Germany

For customers with a seat or registered office in Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"¹⁾ and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office in Germany"¹⁾ and,
- for other supplies and services, the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹⁾.

1.2 For customers with a seat or registered office outside Germany

For customers with a seat or registered office outside Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"¹⁾ and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office outside of Germany"¹⁾ and
- for other supplies and/or services, the "General Conditions for Supplies of Siemens Industry for Customers with a Seat or Registered Office outside of Germany"¹⁾.

2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

An exact explanation of the metal factor can be downloaded at:

www.siemens.com/automation/salesmaterial-as/catalog/en/terms_of_trade_en.pdf

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog - especially with regard to data, dimensions and weights given - these are subject to change without prior notice.

4. Export regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export of goods listed in this catalog may be subject to licensing requirements. We will indicate in the delivery details whether licenses are required under German, European and US export lists. Goods labeled with "AL" not equal to "N" are subject to European or German export authorization when being exported out of the EU. Goods labeled with "ECCN" not equal to "N" are subject to US re-export authorization.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Even without a label, or with label "AL:N" or "ECCN:N", authorization may be required i .a. due to the final disposition and intended use of goods.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you must comply with all applicable national and international (re-)export control regulations.

If required for the purpose of conducting export control checks, you (upon request by us) shall promptly provide us with all information pertaining to the particular end customer, final disposition and intended use of goods delivered by us respectively works and services provided by us, as well as to any export control restrictions existing in this relation.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.

Information and Download Center

Digital versions of the catalogs are available on the Internet at: www.siemens.com/industry/infocenter
There you'll find additional catalogs in other languages.
Please note the section "Downloading catalogs" on page "Online services" in the appendix of this catalog.

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, solutions, machines, equipment and/or networks. They are important components in a holistic industrial security concept. With this in mind, Siemens' products and solutions undergo continuous development. Siemens recommends strongly that you regularly check for product updates.

For the secure operation of Siemens products and solutions, it is necessary to take suitable preventive action (e.g. cell protection concept) and integrate each component into a holistic, state-of-the-art industrial security concept. Third-party products that may be in use should also be considered. For more information about industrial security, visit <http://www.siemens.com/industrialsecurity>.

To stay informed about product updates as they occur, sign up for a product-specific newsletter. For more information, visit <http://support.automation.siemens.com>.
