

# Multi switch systems 

Innovative solutions offering value and freedom to community network subscribers

A multi switch system is the rational way of providing satellite signals to a multitude of users in residential, public and office buildings. In terms of costs, individual freedom and variety of TV-channels, the right multi switch system is competitive to both individual solutions and larger TV-systems.

Triax's range of multi switch systems offers every opportunity of creating the perfect match between needs and actual solution. With 5 different solutions you can fulfil critical system demands at any location, i.e.

## - Number of subscribers

Solutions for an almost unlimited number of outlets, but also with competitive small-scale solutions for 4, 6 and up to 16 subscribers.

## - Number of positions/polarities

Rational solutions for 1, 2 and 4 satellite position systems (4, 8, and 16 polarities). But also fully modular and flexible solutions for 2, 3 and 4 satellite positions.

## - Terrestrial signals

All Triax multi
switches
support loop-through
for terrestrial signals.
Systems are also available with support for a terrestrial return path.

## - Expandability

You are safe with a Triax system. In case the need for more subscriber outputs arises in the future, all multi switch systems are easily expandable either via TAPs or cascadable units.

## Fulfilling subscriber needs the most efficient way

Each of our multi switch systems offers unique subscriber benefits in terms of performance and individual freedom. Advanced technology is used to provide these benefits, but is applied in a logical, modular way helping the professional installer save time.

## - Colour coding

All input connectors are colour coded to avoid installation errors and make the installation an easy and simple task.

Our multi switches can be used not only for establishing new systems, but also for improving existing systems, for example adding satellite TV to a terrestrial distribution

The number of satellite positions/polarities and subscriber outputs is the prime criteria for choosing the right multi switch system. You are always welcome to contact Triax regarding configuration of your multi switch system.

## TMS 5x and TMS 9x multi switches

offer a flexible and cost effective system for providing single and two position satellite distribution in small and medium sized networks.
The system's uniqueness in design and performance makes community networks attractive even in buildings with only 2 or 3 households.

## TMS 9xC and TMS17x multi switches

are rational solutions for building 2 - and 4 -satellite position systems for many subscribers using relatively few components. These cascadable systems can easily be extended with more subscribers.

## Districom multi switches

are the ideal system for providing freedom of choice to the individual subscriber. The modularity of the system makes it a competitive choice in both single and multi satellite systems, in small as well as in large community networks. The extensive modularity of this system makes it fully expandable in terms of both satellite positions and subscriber outputs.

## Designed for

## saving installation time

Our different multi switch systems are market leading in designs that save time in both initial installation and later changes or expansions.
The design idea is based upon plug-and-play type modules, which means that units are easily combined to suit individual subscriber needs, at initial installation and later. It is also very easy to use components across system families, should the need arise.

## Let us help with answers or a complete system proposal

Giving precise and understandable answers is probably the most important way of keeping it simple. Triax support is only a phone call away.

Furthermore we offer you complete planning and documentation of community networks.

Based on computer software, we can provide you with specifications of the right solution, including drawings, performance calculations and

## Simply more

 a part list of all the equipment needed. All you have to do is to specify network requirement, using the checklist on www.triax.com and specify demands by e-mail from the

## ne unit. Many users. TMS Mega DiSEqC Switches

The Triax TMS 17x switch system can provide many users with satellite programs from four satellite positions with a minimum of components. In a star configuration one TMS 17x switch can serve from 6 up to 16 subscribers, and by using cascade models and line-amplifiers the system can easily
be extended to a very high number of subscribers.
All Triax 17x switches have 16 satellite inputs and 1 terrestrial input.
An aerial or a cable system can easily be distributed together with the satellite signals.

## Triax TMS 17x C cascadable multi switch for 4 satellite positions and terrestrial signals

With Triax TMS 17x C it is easy to install cascadable multi switch systems for use where four satellite positions are required. A terrestrial input is available to allow terrestrial as well as satellite signals to be available on all subscriber outputs.
TMS 17x C has an active satellite signal path and a passive terrestrial signal path allowing a terrestrial return path if needed. Consequently a set-top box is not required at subscriber outlet to receive terrestrial signals. Satellite position switching is done via DiSEqC signals from the subscriber set-top box. A maximum of 100 mA is sourced for this purpose from the subscriber set-top box.

TMS 17x C series comprises versions with $6,8,12$ or 16 subscriber outputs in one cascadable unit allowing a large number of subscriber outputs to be realized with this product.
For the termination of the system a TMS 17 xT series is available. A TMS 17 AMP is also available for insertion in the system where it is necessary due to cable loss. Please see description and specifications.
LNB power can be applied anywhere in the system via one of the TMS17x units. Likewise a separate supply line is available for the TMS 17 AMP.

## TMS 17x line amplifier

The TMS 17 AMP has $16 x$ satellite line amplifiers with 18-24 dB amplification each (switchable $6 \mathrm{~dB} /$ flat slope) and one terrestrial 17 dB amplifier. The terrestrial amplifier also has an adjustable slope of 0-15 dB.
Separate attenuators allow 0-10 dB adjustable attenuation on all amplifiers.

## Triax TMS 17x T terminating multi switch for 4 satellite positions and terrestrial signals

Triax TMS 17xT is an easy-to-install terminating multi switch for use where four satellite positions are required and is used as the last unit in a cascaded TMS $17 \times \mathrm{X}$ system.

All other features are equivalent to the 17x C series.

## Triax TMS 9x C cascadable multi switch for <br> 2 satellite positions and terrestrial signals

The TMS9xC series is a cascadable system for use where two satellite positions are required. Also terrestrial input is available to allow terrestrial as well as satellite signals to be available on all subscriber outputs.

TMS9xC series comprises versions with 4,6 and 8 subscriber outputs in one cascadable unit allowing a large number of subscriber outputs to be realized with this product.

A TMS 9 AMP amplifier is also available for insertion in the system where it is necessary due to cable loss.

TMS 9xC has an active signal path and a passive terrestrial return path. A set-top box is not required at subscriber outlet to receive terrestrial signals. Satellite position switching is done via DiSEqC signals from the subscriber set-top box.
A maximum of 100 mA is sourced for this purpose from the subscriber settop box.

Supports network remote power via

## Triax TMS 9x P <br> multi switch for 2 satellite positions and terrestrial signals. Stand alone with power supply

Triax TMS 9x P is a stand alone system for use where two satellite positions are required.
A terrestrial input is also available to allow terrestrial as well as satellite signals to be available on all subscriber outputs.
The series comprises versions with $4,6,8,12$ or 16 subscriber outputs in one installation, but can also be used as part of a larger, easily expandable and cascadable system.

TMS $9 x P$ is an active system with internal amplifiers to compensate for the insertion loss. The integrated power supply powers the amplifiers and the LNB in the system. A set-top box is not required at users' outlet to receive
terrestrial signals.

## Easy coupling of satellite and terrestrial signals

All TMS multi switches have integrated loop-in of VHF/UHF, whether the signals come directly from aerials or from an existing cabling.
If the installation requires that attenuation of the terrestrial signals is kept at a minimum, you simply choose a switch with integrated amplifier.
To make upgrading with SAT-IF easy, the terrestrial amplification is designed to replicate signal levels in traditional splitters.

## Star or cascade networks

With Triax TMS units you can create both star and cascade networks. So, only a stock of a few variants is required to build different types of installations.

## Triax TMS 5x multi switch for 1 satellite position and terrestrial signals. External power supply

Triax TMS $5 x$ is a modular system for use where only one satellite position is required. A terrestrial input is available to allow terrestrial as well as satellite signals to be available on all subscriber outputs. The TMS $5 x$ series comprises versions with 4,6 , 8,12 or 16 subscriber outputs in one installation, but can also be used as part of a larger, easily expandable and cascadable system.

TMS $5 x$ is an active system with internal amplifiers to compensate for the insertion loss. The units depend upon external power supply (eg. TMS 5 PSU) and can also be powered via a TMS 5xP unit in the system. A set-top box is not required at users' outlet to receive terrestrial signals.

Design is not only a question of appearance. Logic in the technical design of the TMS 17x, TMS 9x and TMS 5x multi switch system reduces the time needed to design, install, change and expand collective, single position or multi position systems.

TMS switches can be used individually in small, high performance systems for example in semi-detached houses - or switches can be interconnected in flexible systems serving up to several users.

## TMS 55

## line amplifier

Triax TMS 55 AMP is a line amplifier to be used with the TMS $5 x$ series multi switch products. It is used to amplify the satellite and terrestrial signals to compensate for cable losses in the system. A switch allows terrestrial power to be switched off in the upward direction (to avoid DC short circuits in some types of aerials).
The TMS 55 AMP has $4 x$ satellite line amplifiers with 20 dB amplification each (fixed 5 dB slope) and one terrestrial line amplifier with a 17 dB amplification. The terrestrial amplifier also has an adjustable slope of 7-12 dB. Separate attenuators allow $0-15 \mathrm{~dB}$ adjustable attenuation on the satellite signals and 0-17 dB adjustable attenuation on the terrestrial signal.

All input connectors are colour coded to avoid installation errors and make the installation an easy and simple task.
The TMS $5 x$ series family also comprises the TMS 55 TAP and TMS 5-PSU units allowing installers to build larger cascadable systems with many subscriber outputs.

## Maximum flexibility Districom 4000

## TDM multi switches

Multi switch modules for single satellite as well as multi satellite configurations with up to 4 satellite positions and 16 polarities.

TDM 400 series is satellite only and is used, where terrestrial signals are not needed, or already installed. In an existing system, TDM 400 allows you to reuse the antenna cable by looping in the new satellite signals.

TDM 500 series combines satellite and terrestrial signals in one cable.

## Features of both

TDM 400 and TDM 500 include:
Modules with 4, 6 or 8 subscriber outputs

- Cascadable system with numerous configuration possibilities
- DC available on all satellite distribution lines for power supply to LNBs, amplifiers and other system units
- Where active DiSEqC switches are needed, the TDC DiSEqC switches are extremely easy to plug-in and the configuration is equally easily changed whenever needed.

## TDC DiSEqC switches

from up to 4 satellite positions and 16 polarities.

All Districom units support a return path, and the system can be used also for interactive transmission of data, eliminating the need for additional Internet cabling. Even if the need is not immediate, the option is worth taking into account.

A flexible system allows you to minimize the initial investment without compromising future expandability and subscriber possibilities. Districom 4000 is state-of-the-art in flexibility, and it is flexible in a logical, straightforward way. By adding or changing modules, you can at any time change the number of subscriber outputs as well as satellite positions per subscriber.

Districom 4000 is cascadable and can feed from 4 up to an almost unlimited number of outlets with terrestrial signals and satellite IF signals

## A complete and coherent modular system

The Districom 4000 program includes all units typically needed in a distribution system. Modular and coherent technical design of all units yields plug-and-play advantages,

## TDP double power supply

The TDP comprises two completely separated power supplies for maximum reliability and security. TDP supplies power to all units through the satellite distribution lines and from any point in the multi switch distribution system. With the TDL 200 power cable (see right) it is possible to loop-through the power from one module to the next.

## TDA line amplifiers

For amplification of each of the 4 polarities per satellite position. The amplifiers have fixed tilt to compensate for the cable loss in the system. Available with TDA fixed gain on 15 dB or with adjustable gain on 19-25 dB. Level can be separately adjusted per each polarity. DC feed-through on all lines.

## CCD camera system with UHF modulator

Surveillance of buildings, entrance doors, garages etc. can easily be integrated in a Triax SMATV system.
Triax's line powered camera is for in- and outdoor use (waterproof) and available as both colour and black/white camera.
reducing the installation time needed and facilitating later changes and expansions of the system.

## Unique cable system

To simplify installation, TRIAX supplies a unique type of cable with a colour coding system starting from the LNB and continuing through the whole system.

## TDL 200

Power cable enabling you to daisychain power from one module to the next.

## TDA 122 amplifier

Module for amplification of terrestrial signals. 22 dB gain and variable attenuation. Options include selectable return path modules for $5-30,5-55$ or $5-65 \mathrm{MHz}$.

## TDD 110 tap

With a low through-loss of only 2 dB and a tap-loss of 6 dB in the whole $5-2400 \mathrm{MHz}$ range, this unit is used in the trunk-line when you need connections for extra subscribers. On/off switch for DC feed-through.

## TDR 200 splitter

Typically used for expanding the Districom system to more storeys. With a low insertion-loss of only 6 dB in the whole $5-2400 \mathrm{MHz}$ range, the splitter allows you to get more out of your system. On/off switch for DC feed-through.

## Applications where Districom 4000 is at its best

- In multi satellite systems with differentiated and changing subscriber needs - for example in buildings with multi ethnic users or businesses with interest in 24 hours global news
- In buildings where horizontal distribution reduces the costs of cabling and satisfying individual subscriber needs
- In renovation of existing terrestrial installations where additional IF satellite distribution is required, but the existing antenna cable can be reused.

Flexibility

Internet distribution can be integrated now or later

1) Modulator UHF channel settable via 2-digit rotary switch (channels 21 thru 69) combinations of different polarities from many dishes

The Triax multi switch range supports from 1 to 4 satellite positions, or up to 16 polarities in normal configurations. However, it is also possible to create a system that receives and distributes signals from a larger number of satellite positions, using satellite receivers with an extended DiSEqC and LNB control set capability.

## Thinking one step ahead...

Triax's philosophy is customerorientation: In both our markets, TV-systems and enclosures, our objective is to save time and trouble for the installers, operators and distributors building their business on our products.

Simplicity and support are key words, expressed both in products and in service.
Our products offer more in performance and simplifying logic, and in our support customers have easy access to understandable, useful and competent answers.

Innovative thinking, serviceoriented people and advanced technology has made Triax one of the leading European suppliers of both TV-systems and enclosures.

We offer everything that can be expected from a professional supplier within these fields.

Triax is of course ISO 9001 certified and delivers products according to all acknowledged local and international quality standards.
