

# Siemens Gigaset C475 IP

## Next Generation Dual mode Cordless VoIP and land line phone with integrated answer phone.

The C475IP cordless phone is the latest model in the Siemens Gigaset range. Replacing the popular C460IP and having all the features of the class leading S450IP.

The C475IP takes IP/Dect technology to the next level in quality, features and performance.

### Highlights

#### Easy to use

With the C475IP Dect base unit connecting to both the Internet and a land line this phone system can handle 3 simultaneous calls, two over broadband Internet (VoIP) and one over the normal land line. Setting up the C475IP to make VoIP calls could not be easier. The handset's menu contains all the main UK VoIP Service Providers and their configuration settings are loaded automatically at the touch of a button and without the need for a PC. One touch allows the user to change between Internet and fixed-line telephony.

#### Integrated Answer Phone

Breaking new ground the C475IP is equipped with an integrated answer phone. With up to 30 minutes recording time the C475 IP will record messages from both land line and VoIP calls and display a list of your new messages on the handset's illuminated display. You can also access your messages from anywhere in the world thanks to the remote operation function. For extra convenience, the answering machine lets you individually select the recording time for messages and additionally gives the option to record phone calls.

#### For Business and the Home

The C475IP is ideal for both business and home use as it can be expanded to form a small phone system for up to 6 handsets. With its multi line calling feature 3 people can be talking at the same time and have the added flexibility to place calls on hold and transfer calls between handsets.

For large scale deployments users can take advantage of ProVu's automated order processing and end point management systems for initial supply and ongoing management-see [http://www.provu.co.uk/sp\\_fulfillment.html](http://www.provu.co.uk/sp_fulfillment.html) for further details.

#### IP/Dect goes green

Thanks to a combination of an energy saving power supply and the use of variable transmitting power, the C475 IP can use up to 60% less power than other conventional cordless phones. It is both easier on the environment and your electricity bill.
