**Slope Detectors help  
Reduce the risk of trailer tip overs**

**Simply the Best!**

**Slope Detector IV**

# Slope Detector IV™

The all new Slope Detector IV™ is the latest in tip-over warning device technology. With the level sensor mounted to the rear axle and the control unit mounted in the cab, you will be warned if there is an out of level condition and the hoist will be shut off automatically.

Easy to program with just the turn of a key, the Slope Detector™ can be set to stop the hoist if it goes past the set limit. The hoist can then be lowered and the trailer repositioned to a level position. The operator cannot override the setting once the key is removed.

The cab unit displays both lights and warning sounds to alert the driver of unlevel conditions.

## New PLC Technology

The sensor unit is attached to the rear axle and the cab unit is mounted in the cab. The signal from the sensor unit is resident in the truck's electrical system. This eliminates the need for a plug between the tractor and trailer. If each trailer and tractor of a fleet are fitted with Slope Detectors™, you can hook up any tractor with any trailer.

Cab Unit Part # 518-0111

## Features and Benefits

- Can significantly reduce the chances of having an accident.
- Interchangeable between trucks without reprogramming.
- Potential for lower insurance rates and workman's compensation claims.

Complete Kit Part # 518-0110  
U.S. Patent # 7,236,096

## Slope Detector Testimonial

Mike, from Horizon Trucking in Colorado tells us how they wouldn't be caught without Slope Detectors on their Trucks. "We have 3 end dumps and all of them have Slope Detectors". Mike says, he can't say enough about them. "It gives the drivers peace of mind, they know they can rely on the Slope Detector to help keep them out of trouble." The cost to install one is nothing compared to the terrible repair expense and lawsuits that usually occur if you tip your end dump over. It's better to be safe than sorry.
