

Taller: Información sobre biodiversidad para la
conservación medioambiental
15-18 de abril, 2013. Costa Rica

Nodes Portal Toolkit

María Mora, Instituto Nacional de Biodiversidad - INBio

Contents

- Introduction
- Nodes Community Requirements
- Way Forward

Nodes Portal Toolkit

- Envisioned as a **suite of informatics tools** designed to help GBIF Participants to **deploy, maintain and extend biodiversity data portals** (at the national, regional or thematic levels).
- Extensible to accommodate custom needs
 - New features added by Nodes community
 - Shared with other Nodes

NPT Objectives

- Deployment, development and maintenance, of national, thematic, regional biodiversity portals.
- Develop a technical strategy backed by the GBIF community.
- Establish a mechanism for Nodes to work together on their own portals.

The Situation

Case 1: No website available and little technical capacity.
=> **A simple, hosted web site.**

Case 2: No web portal or have a portal with limited functionality => **A collaborative web development platform.**

Case 3: Established web presence => **Access to processed GBIF data.**

Case 4: Establish own local data harvesting infrastructure
=> **Access to local raw data**

"One-solution-fits-all"
is not an option

A Phased Approach

NPT Startup "Jumpstart" instances [Case 1]

NPT Startup [Case 1, Case 2]

NPT Advanced [Case 2, Case 3, Case 4]

NPT Data Services [Case 3, Case 4]

A website construction platform

- NPT is a website building tool
- Provides a foundation for extending features and capabilities

= NPT

NPT is built on an open source platform

- A “content management system” called [Drupal](#)
- Drupal is the basis of millions of websites worldwide
- Actively maintained by over 12,000 developers
- Scratchpads is a Virtual Research Environment to gather, share, and publish information on the biodiversity of life that is in use since 2006.

NPT Startup

The target audience:

- ▶ Nodes that have limited **web presence**

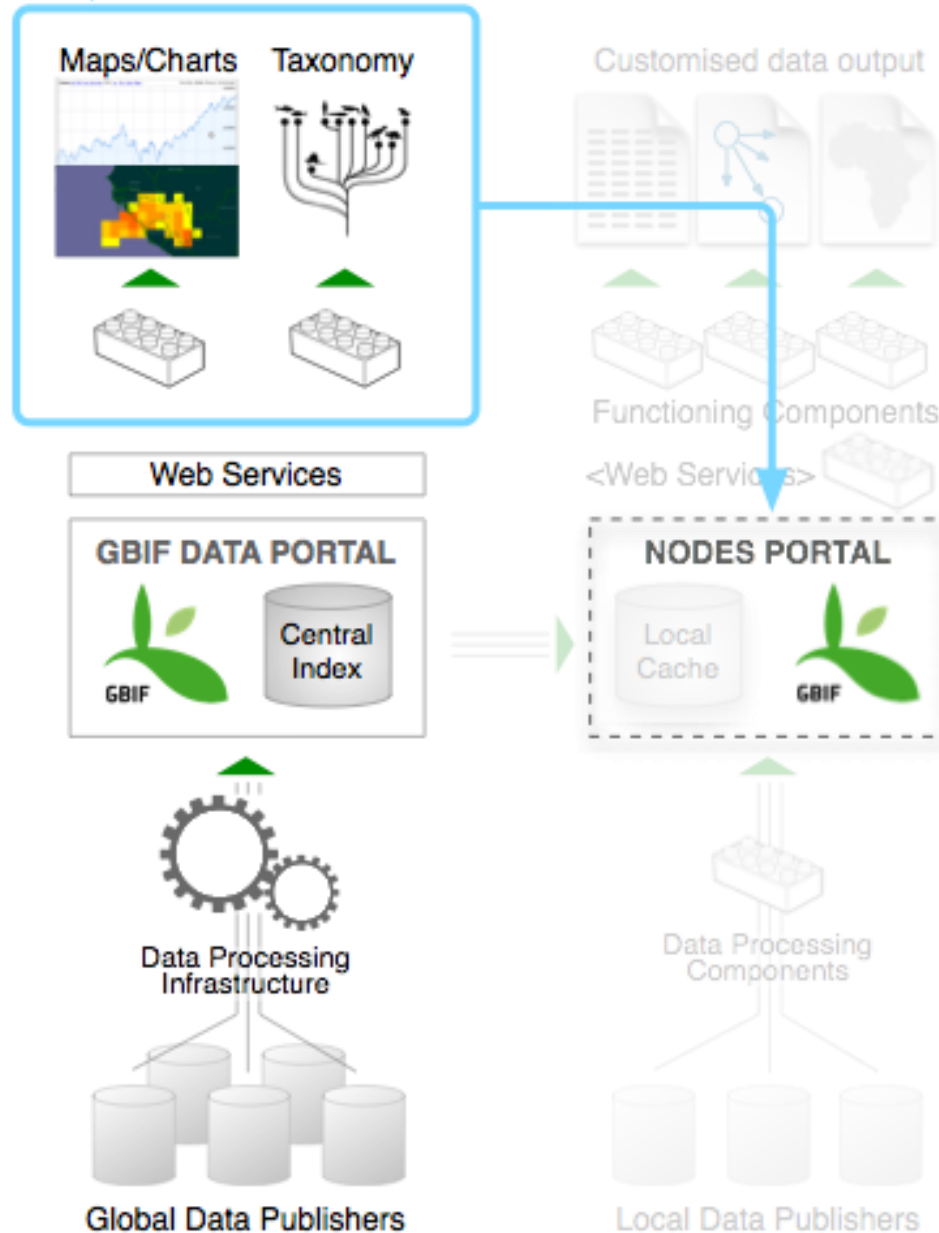

The approach:

- ▶ Using [the country checklist](#) generated from the GBIF mediated data to dynamically retrieve biodiversity information from GBIF & EOL.

The result:

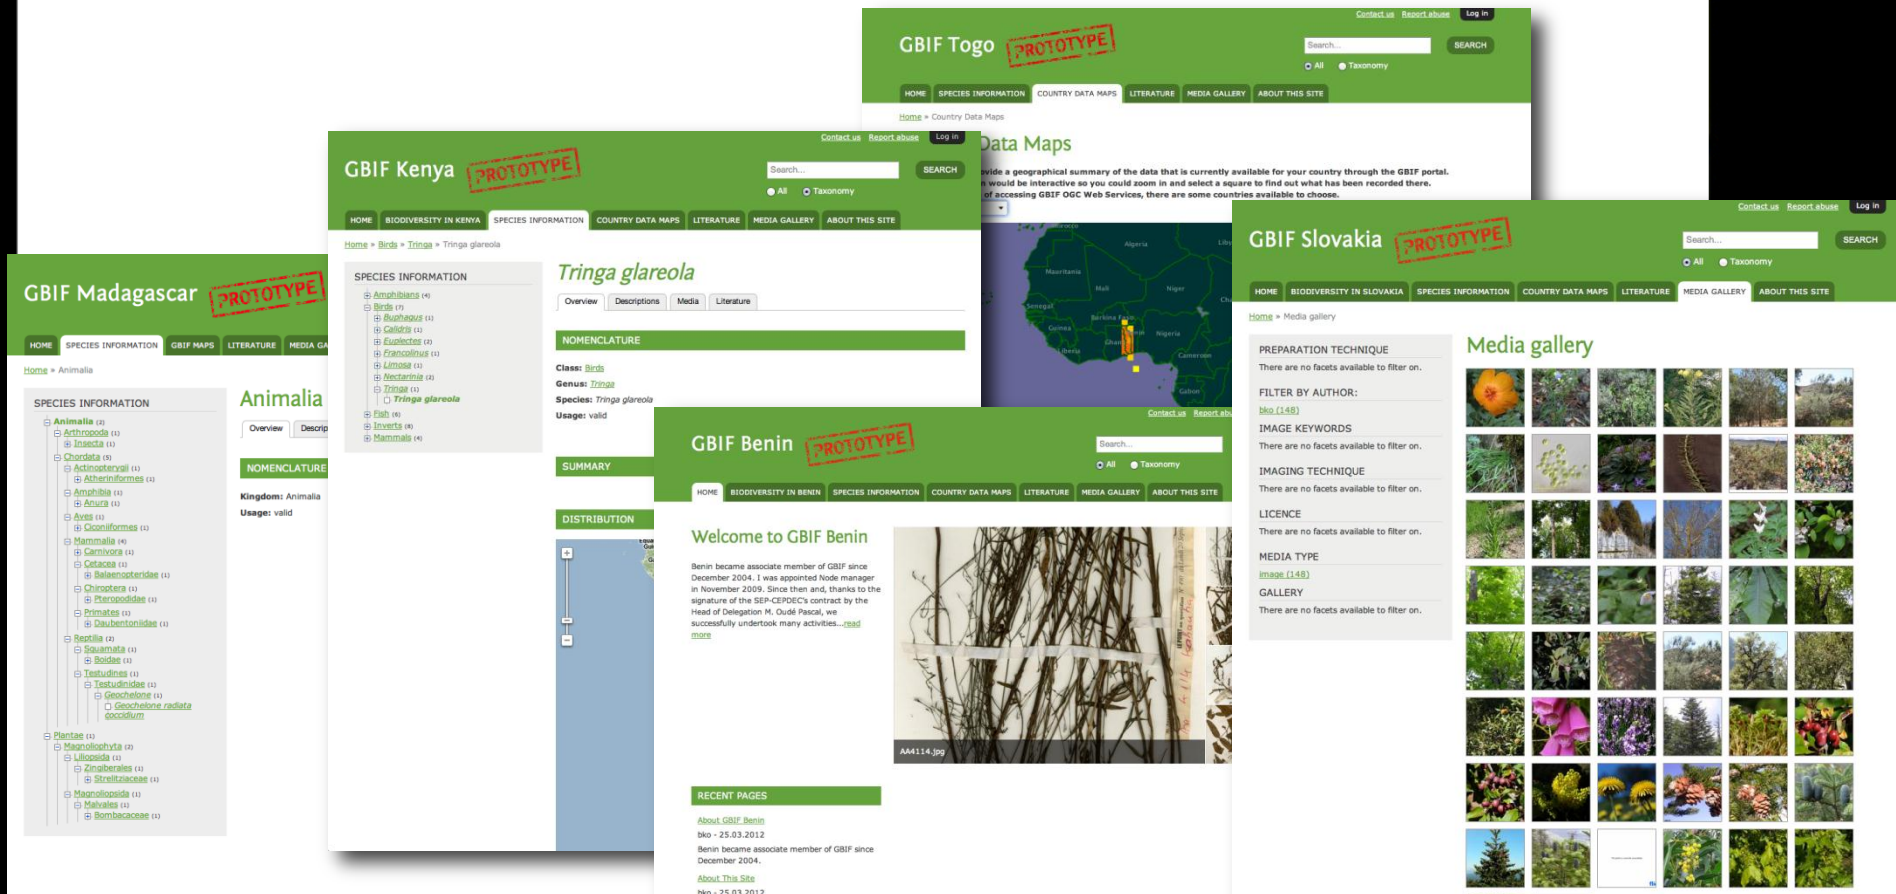

- ▶ A web portal that is easy to set up and [customise](#), and enables [joint development](#).

NPT Startup web presence

The Concept Demonstrated

- While building NPT Startup, some country sites were initiated to demonstrate the concept.

The image displays five overlapping screenshots of GBIF country prototype websites. Each site has a green header with the country name and a red 'PROTOTYPE' stamp. The sites shown are:

- GBIF Madagascar:** Shows a navigation menu with 'HOME', 'SPECIES INFORMATION', 'GBIF MAPS', 'LITERATURE', and 'MEDIA GALLERY'.
- GBIF Kenya:** Shows a species page for *Tringa glareola* with sections for 'SPECIES INFORMATION', 'NOMENCLATURE', and 'DISTRIBUTION'. It includes a taxonomic tree and a distribution map.
- GBIF Togo:** Shows a 'Country Data Maps' page with a map of West Africa and a search bar.
- GBIF Benin:** Shows a 'Welcome to GBIF Benin' page with a photo of plant material and a 'RECENT PAGES' section.
- GBIF Slovakia:** Shows a 'Media gallery' page with a grid of images and a search bar.

Species information

- [Abrus fruticulosus](#)
- [Abrus precatorius](#)
- [Acacia](#)
- [Acacia ataxacantha](#)
- [Acacia dudgeonii](#)
- [Acacia erythrocalyx](#)
- [Acacia hockii](#)
- [Acacia nilotica subsp. indica](#)
- [Acacia polyacantha subsp. campylacantha](#)
- [Acacia senegal](#)
- [Acacia seyal var. seyal](#)
- [Acacia sieberiana var. villosa](#)
- [Adenium obesum](#)
- [Adenodolichos paniculatus](#)
- [Adenopodia scelerata](#)
- [Aeschynomene afraspera](#)
- [Aeschynomene cristata](#)
- [Aeschynomene elaphroxylon](#)
- [Aeschynomene nilotica](#)
- [Aeschynomene sensitiva](#)
- [Aeschynomene tambacoundensis](#)
- [Afzelia africana](#)
- [Aganope stuhlmannii](#)
- [Aidia genipiflora](#)
- [Alafia barteri](#)
- [Alafia benthamii](#)
- [Alafia landolphioides](#)
- [Albizia adianthifolia](#)
- [Albizia chevalieri](#)
- [Albizia glaberrima](#)
- [Albizia zygia](#)
- [Alternanthera sessilis](#)
- [Alysicarpus](#)
- [Alysicarpus ovalifolius](#)
- [Alysicarpus vaginalis](#)
- [Amblygonocarpus andongensis](#)

Abrus fruticulosus

[Overview](#) [Descriptions](#) [Media](#) [Maps](#) [Specimens](#)

GBIF Global Distribution

Nomenclature

Unranked: *Abrus fruticulosus*

Distribution

Specimen count

There are [2 specimens](#) for this taxon.

NPT Advanced site building blocks

Post-GB18 Survey result (2011)

Amount of GBIF Participants without web presence

Nodes

N = 58 Participant Countries

Post-GB18 Survey result

Question	Overall	Country Participant	Associate Participant
Are you interested in using NPT Startup for your biodiversity data-portal?	47	41	6
Are you interested in participating (development, expertise, funding, hosting, training...) in NPT Startup?	31	26	5
Do you agree that Drupal is fit for the development of your web portal?	38	32	6

NPT Startup

- An example site at <http://nptstartup.gbif.org>
- The code is available at <https://git.scratchpads.eu/git/scratchpads-2.0.git> as a branch “gbif-npt”
- Import the checklist requested separately by writing to nodes@gbif.org
- Finish the setup with initial news and textual contents

Way forward

- Establish a task group on developments around NPT Startup/Drupal
 - Nodes comes with development resources
 - To clarify roles of Nodes and GBIFS during the process
- Experience sharing / case studies in the global Nodes meeting at GB20.
- For more information about Nodes Portal Toolkit: nodes@gbif.org

Presentation prepared by
