### Abstract

A new species of *Andinia* belonging to *A.* subgenus *Brachycladium* from the eastern Andes of southern Colombia is described and illustrated. *Andinia obesa* is related to the *A. nummularia* species complex, characterized by the glabrous leaves, short inflorescences, an inconspicuous trilobed lip and a relatively large column. The new species can be distinguished by the unusually plump, orbicular, cucullate column with an incumbent anther.

### Keywords

*Andinia*, *A. nummularia*, *A. obesa*, Eastern Andes, Luer, new species.
