Abstract

Two new species of *Mandevilla* (subgenus *Mandevilla*) from Peru are described and illustrated. *Mandevilla pristina* is related to *M. assimilis*, *M. holosericea* and *M. tubiflora*, but differs by its leaves with domatia along the midvein, foliaceous bracts and longer sepals. *Mandevilla vasquezii* is similar to *M. cercophylla*, but differs by the length of the corolla tube and stamen insertion point.

Keywords

Apocynaceae, Apocynoideae, *Mandevilla*, Mesechiteae, Peru.
