SYNOPSIS. A key to the Mesoamerican taxa of *Pilea* is presented together with a nomenclatural revision of 85 names, of which 18 are typified here: *P. brittoniae* Urb., *P. centradenoides* Seem., *P. cornuto-cucullata* Cufod., *P. forgeti* N.E. Br., *P. hyalina* Fenzl, *P. imparifolia* Wedd., *P. involucrata* (Sims) Urb., *P. latifolia* Wedd., *P. lundii* Liebm., *P. microphylla* var. *peregrina* (Griseb.) Urb., *P. nummulariifolia* (Sw.) Wedd., *P. ovalis* Griseb., *P. pteroclada* Donn. Sm., *P. pubescens* Liebm., *P. rubiifolia* Blume, *P. rupicola* Wedd., *P. trianaeana* Wedd., and *P. vulcanica* Liebm. A list of material examined with determinations is appended.

INTRODUCTION

With over 600 species (Burger, 1977), *Pilea* Lindl. is the largest genus in the Urticaceae and one of the larger genera in the Urticales. It is distributed throughout the tropics, subtropics and temperate regions (with the exception of Australia, New Zealand and Europe) and easily distinguished from other neotropical Urticaceae by the combination of opposite leaves and a single ligulate intrapetiolar stipule in each leaf axil.

Pilea was first described by Lindley in 1821 using *Pilea muscosa* Lindl., a superfluous name for *P. microphylla* (L.) Liebm., as its type. This species was introduced as a greenhouse exotic in the early nineteenth century. Prior to Lindley's description there had been disagreement as to where it should be placed, with Linnaeus (1759) placing it in *Parietaria* L. and Swartz (1797) and Willdenow (1805) placing it in *Urtica* L. Little more than 30 years later Weddell, in his comprehensive revisions of the genus in 1856–1857 and 1869, had identified 159 taxa in three major subgeneric groupings, many of these taxa having been originally placed in *Urtica* by their authors.

Pilea has attracted little monographic attention since Weddell's monographs but the genus has attracted significant contributions from localized treatments (Killip, 1939; Standley & Steyermark, 1952; Adams, 1972; Burger, 1977 and Chen, 1982) and by 1997 a further 562 names and 17 major subgeneric groupings had been published (Anon., 1997).

For the purpose of this synopsis, the definition of Mesoamerica is that used in *Flora Mesoamericana* (Davidse et al., 1994), a region bounded to its north by the Mexican states of Yucatán, Campeche, Tabasco, Quintana Roo and Chiapas, and to its south by Panama. This represents the closest geopolitical delimitation of the Mesoamerican phytogeographical region. Within Mesoamerica there are 85 names for 56 recognized taxa of *Pilea* and there is significant

confusion over the application of many names. Combined with a lack of regional keys, and the similarity of form and habit within the genus, the determination of collections can be very difficult and has resulted in a significant proportion of herbarium material from Mesoamerica being misidentified. As more names are published (there are currently over 800 (*Index Kewensis*, 1997)) so the logistical problems of undertaking a monographic revision grow, and the classification of the genus has become more problematic. Whether or not *Pilea* is the subject of a global monographic revision in the near future, it is felt that the preparation of an identification key and nomenclatural review for Mesoamerican *Pilea* would be a useful first step in addressing some of the problems encountered whilst dealing with this genus for *Flora Mesoamericana* and would help provide a foundation for future work on neotropical *Pilea*.

In this treatment types are cited with the country of origin, collector name and number and the herbaria from which material has been seen. However, where types are designated here, all of the label locality information available, and the date of collection is included. Distributions for each species are given to country level within Mesoamerica, with the exception of Mexico and species which are only known from a single country, where they are given to state level. Global distributions are given to regional level e.g. South America, West Indies etc., following *Flora Mesoamericana* protocols (Davidse et al., 1994).

MATERIALS AND METHODS

The nomenclatural revision was based on the examination of the original published descriptions, type material for all 85 names, and all Mesoamerican material available on loan from BRU, C, F, GH, ITIC, K, LL, MEXU, MO, NY, P, PH, PMA, SCZ, TEX, and US. In

addition, material of related species from outside Mesoamerica, and from areas adjacent to Mesoamerica (e.g. Oaxaca and Veracruz in Mexico) was obtained, with the result that 2064 collections were examined and determined, 1748 of them from Mesoamerica. Of the 85 names included in this study, type material is known to have been destroyed for only one species (*Pilea cornuto-cucullata* Cufod.), and in this case a photograph of the holotype exists. Where it was felt that the existing type material was ambiguous, e.g. in the case of *Pilea nummulariifolia* (Sw.) Wedd. where the type element was an illustration, then an epitype was selected.

As the number of species described in *Pilea* has grown, so have the characters used to delimit species in the genus. The most frequently used macromorphological characters used by previous authors have been: leaf isomorphy and margin morphology, staminate inflorescence arrangement, staminate flower division and staminate tepal appendage morphology, stipule morphology, cystolith arrangement in the leaves, and fruit size. In this study, emphasis was also placed on pistillate inflorescence arrangement, pistillate flower size and dorsal tepal morphology, and stem morphology. All material was examined using a stereo microscope at $\times 64$ to $\times 400$ magnification and up to 71 observations were made for each specimen sampled. These observations were then used as a guide to delimiting taxa and in the preparation of the identification key. The key to the species was prepared using herbarium specimens and the observations made for each species; it was then tested in the herbarium on the loan material and collections at BM, and on the collections present at GH and P in 1999.

Many of the characters used in this key are very small and it may be necessary to make measurements ± 0.1 mm; a dissecting microscope (to $\times 200$) is therefore recommended. The terminology used for the description of leaf shape is based on that in Stearn (1992). Because of their small size and large number, it is usually fairly easy to find well preserved flowers on herbarium specimens.

TAXONOMIC TREATMENT

Key to the species

- 1 Leaves pectinate 40. *P. pteridophylla*
- Leaves entire, serrate, crenate or sinuate, but never pectinate 2
- 2 Leaves sinuate 52. *P. trichomanophylla*
- Leaves entire, serrate or crenate 3
- 3 Leaves 4–6 at each node, verticillate 49. *P. senarifolia*
- Leaves 2 at each node, opposite 4
- 4 Stipules generally more than 2 mm long, prominent (clearly visible to the naked eye), auriculate, cordiform, ovate, oblong or obovate, occasionally caducous 5
- Stipules generally less than 2 mm long, evident to obscure (not clearly visible to the naked eye), deltate or broadly ovate 42
- 5 Leaf margin entire 6
- Leaf margin serrate or crenate, at least towards the leaf apex 7
- 6 Stipules auriculate; upper leaf surface densely pubescent, the hairs to 1.3 mm long 29. *P. lindeniana*
- Stipules narrowly ovate to ovate; upper leaf surface glabrous to sparsely pubescent, where pubescent the hairs to 2.3 mm long 36. *P. parietaria*
- 7 Upper leaf surface glabrous 8

- Upper leaf surface pubescent 26
- 8 Petioles winged 9
- Petioles unwinged 10
- 9 Stipules 2–6 mm long, ovate; upper leaf surface frequently with 'V'-shaped cystoliths 26. *P. irrorata*
- Stipules 6–23 mm long, obovate or oblong; upper leaf surface lacking 'V'-shaped cystoliths 41. *P. pteropodon*
- 10 Leaves of unequal length in pair, the ratio of smaller to larger $> 1:1.5$ 11
- Leaves of equal or subequal length in pair, if subequal then the ratio of smaller to larger $< 1:1.5$ 12
- 11 Petioles pubescent; leaf margin deeply serrate, the teeth weakly ascending 6. *P. centradenoides*
- Petioles glabrous; leaf margin weakly serrate, the teeth strongly ascending 12. *P. costaricensis*
- 12 Lower surface of leaves pubescent 13
- Lower surface of leaves glabrous 20
- 13 Petioles glabrous 10. *P. cornuto-cucullata*
- Petioles pubescent 4
- 14 Leaf margin entire from the base for $\geq 1/2$ of the leaf length 15
- Leaf margin entire from the base for $\leq 1/3$ of the leaf length 16
- 15 Secondary leaf veins 5–9 pairs, 30–65° to the midrib; stipules 2.5–5 mm long; staminate inflorescence < 10 mm long 25. *P. involucrata*
- Secondary leaf veins 7–16 pairs, 60–75° to the midrib; stipules 5–14 mm long; staminate inflorescence > 30 mm long 19. *P. forgetii*
- 16 Secondary leaf veins 4–6 pairs; lower surface of leaves eglandular; staminate flowers 3-parted; fruit ≥ 2 mm long 54. *P. tripartita*
- Secondary leaf veins 6–28 pairs; lower surface of leaves glandular-punctate; staminate flowers 4-parted; fruit ≤ 1.5 mm long 17
- 17 Leaves lanceolate or narrowly elliptic, or sometimes falcate; lateral veins visible for over $3/4$ of the leaf length; staminate inflorescences < 15 mm long 34. *P. pallida*
- Leaves ovate, elliptic, broadly elliptic, rhomboid, obovate, but never falcate; lateral veins visible for $2/3$ – $3/4$ of the leaf length; staminate inflorescences > 15 mm long 18
- 18 Leaf base cordate or occasionally subcordate; stipules widest at or below the midpoint; staminate flowers borne in 1–3 compact heads 37. *P. pittieri*
- Leaf base acute, cuneate, decurrent, obtuse, subcordate or cordate; stipules widest at or above the midpoint; staminate flowers borne in loose panicles, or in 5 or more compact heads borne in a loose panicle 19
- 19 Leaves oblanceolate, rhomboid or elliptic; stipules 3–6 mm long; secondary leaf veins 60–90° to the midrib; subapical appendage of staminate tepals 1.3–1.5 mm long 28. *P. latifolia*
- Leaves ovate to elliptic; stipules 7–20 mm long; secondary leaf veins 35–45° to the midrib; subapical appendage of staminate tepals 0.3–0.5 mm long 1. *P. acuminata*
- 20 Petioles pubescent, the hairs short, curved and appressed (frequently difficult to see with the naked eye) 21
- Petioles glabrous 22
- 21 Leaves 63–235 mm long, with 13–28 pairs of secondary veins 60–80° to the midrib 34. *P. pallida*
- Leaves 6.5–47 mm long, with 3–7 pairs of secondary veins 30–45° to the midrib 4. *P. auriculata*

- 22 Upper surface of leaves variegated, the variegation visible when dry 5. *P. cadierei*
- Upper surface of leaves never variegated, or if so, the variegation not visible when dry 23
- 23 Leaf margin entire from the base for $\geq \frac{2}{3}$ of the leaf length, thereafter remotely crenat 2. *P. adamsiana*
- Leaf margin entire from the base for $\geq \frac{2}{3}$ of the leaf length, thereafter serrate, crenate or serrate-crenate 24
- 24 Leaves obovate 19. *P. forgeti*
- Leaves ovate, lanceolate or elliptic 25
- 25 Upper surface of leaves drying bright green, yellow-green or occasionally pale brown 45. *P. quercifolia*
- Upper surface of leaves drying dark brown, almost black 10. *P. cornuto-cincinnata*
- 26 Leaves of unequal length in pair, the ratio of smaller to larger $> 1:1.5$ 27
- Leaves of equal or subequal length in pair, where subequal the ratio of smaller to larger $< 1:1.5$ 28
- 27 Stipules cordiform or broadly ovate, auriculate at the base; lower surface of leaves glabrous, occasionally sparsely pubescent; secondary leaf veins 3–5 pairs, 30–45° to the midrib 9. *P. cornmanae*
- Stipules obovate, oblong or narrowly ovate, neither cordiform nor auriculate at the base; lower surface of leaves always pubescent; secondary leaf veins 6–17 pairs, 45–90° to the midrib 6. *P. centradenoides*
- 28 Lower surface of leaves glabrous 4. *P. auriculata*
- Lower surface of leaves pubescent 29
- 29 Leaves orbicular or suborbicular 33. *P. nummulariifolia*
- Leaves ovate, elliptic, obovate, rhomboid or lanceolate 30
- 30 Leaves obovate, rarely elliptic or ovate 31
- Leaves lanceolate, ovate, elliptic or rhomboid, occasionally obovate, in which case elliptic and/or ovate leaves also present 32
- 31 Plants to 10 cm; stem obscured by rosette of leaves 47. *P. rostulata*
- Plants to 30 cm; stem clearly visible 25. *P. involucrata*
- 32 Stipules as broad or broader than long, broadly ovate or cordiform 33
- Stipules longer than broad, oblong, obovate or narrowly ovate 34
- 33 Leaf margin deeply serrate; inflorescences unisexual; staminate flowers 3-parted, borne in solitary compact heads, the bracts forming an involucre 48. *P. rugosissima*
- Leaf margin crenate-serrate, not deeply so; inflorescences bisexual; staminate flowers 4-parted, borne in loose panicles, the bracts not forming an involucre 42. *P. pubescens*
- 34 Secondary veins < 8 pairs on larger leaves; fruit 1–3 mm long 35
- Secondary veins > 8 pairs on larger leaves; fruit < 2 mm long 37
- 35 Leaf margin entire from the base for $\frac{1}{10}$ – $\frac{1}{8}$ of its length; fruit 1.0–1.4 mm long 1. *P. corona*
- Leaf margin entire from the base for $\frac{1}{4}$ – $\frac{1}{2}$ of its length; fruit 2–3 mm long 36
- 36 Lateral veins visible for over $\frac{3}{4}$ of the leaf length; upper surface of leaves sparsely pubescent, the hairs < 1 mm long; staminate flowers 3-parted 54. *P. tripartita*
- Lateral veins visible for $\frac{1}{2}$ – $\frac{2}{3}$ of the leaf length; upper surface of leaves pubescent, the hairs > 1 mm long; staminate flowers 4-parted 42. *P. pubescens*
- 37 Staminate flowers borne in 1 or more compact heads 38
- Staminate flowers borne in loose panicles, occasionally borne in clumps along panicle branches 40
- 38 Cystoliths of upper leaf surface fusiform; leaf base cordate or subcordate; leaf apex acuminate to acute; subapical appendage of staminate tepals glabrous 37. *P. pittieri*
- Cystoliths of upper leaf surface fusiform, 'V'- and or 'Y'-shaped; leaf base never cordate; leaf apex obtuse or cuspidate; subapical appendage of staminate tepals pubescent 39
- 39 Epiphytic or epipetric; leaves lanceolate, narrowly elliptic, occasionally elliptic; pistillate inflorescences 3–10 mm long, the peduncle $\frac{1}{3}$ – $\frac{1}{2}$ inflorescence length 11. *P. corona*
- Terrestrial; leaves broadly elliptic, obovate or rhomboid; pistillate inflorescence 12–24 mm long, the peduncle $\frac{1}{2}$ – $\frac{2}{3}$ inflorescence length 15. *P. digitata*
- 40 Stems pubescent, with hairs to 1.8 mm long; cystoliths on stem fusiform, 'V'- and or 'Y'-shaped; leaves oblanceolate, rhomboid or broadly elliptic; fruit > 1.0 mm long 18. *P. fasciata*
- Stems pubescent, with hairs to 0.8 mm long; cystoliths on stem fusiform; leaves ovate to ovate-lanceolate; fruit 0.5–1.0 mm long 41
- 41 Cystoliths on upper surface of leaves fusiform; apices of leaves acuminate to subcaudate; stipules 7–20 mm long; staminate inflorescences 30–90 mm long; fruit 1.0 mm long 1. *P. acuminata*
- Cystoliths on upper surface of leaves fusiform, 'V'- and or 'Y'-shaped; apices of leaves acute or subcuspidate; stipules 6–7 mm long; staminate inflorescences 12–18 mm long; fruit 0.7–0.8 mm long 21. *P. gomeziana*
- 42 Upper surface of leaves pubescent 43
- Upper surface of leaves glabrous 45
- 43 Margin serrate; staminate flowers 2-parted 23. *P. hyalina*
- Margin entire; staminate flowers 4-parted 44
- 44 Leaves > 13 mm long, evenly spaced along the stem, occasionally clustered but never forming terminal rosettes, the lower surfaces pubescent towards the base 36. *P. parietaria*
- Leaves < 10 mm long, clustered towards the apex forming terminal rosettes, the lower surfaces glabrous 22. *P. herniarioides*
- 45 Leaves of equal or subequal length in pair, where subequal the ratio of smaller to larger $< 1:1.5$ 46
- Leaves of unequal length in pair, the ratio of smaller to larger $\geq 1:1.5$ 56
- 46 Leaves pinnately-veined 47
- Leaves 3-veined 49
- 47 Leaf margin entire 32. *P. microphylla*
- Leaf margin crenate or crenate-serrate 48
- 48 Leaves linear-lanceolate; staminate inflorescences borne at the base of an internode which is shorter than the adjacent leaves 39. *P. plumulosa*
- Leaves oblanceolate, narrowly rhomboid or narrowly obovate; staminate inflorescences borne at the base of an internode which is longer than, or rarely equal to, the adjacent leaves 38. *P. pleuroneura*
- 49 Lateral primary veins visible for less than $\frac{3}{4}$ the leaf length 50

- Lateral primary veins visible for $\frac{3}{4}$ or more of the leaf length 51
- 50 Pistillate inflorescences bearing 6–20 flowers; larger petiole in pair < 14 mm long 14. *P. dauciodora*
- Pistillate inflorescences bearing 30–300 flowers; larger petiole in pair ≥ 14 mm long 56. *P. vulcanica*
- 51 The majority of petioles equal or subequal at each node, where subequal the ratio of shorter to longer < 1.5 52
- The majority of petioles unequal at each node, the ratio of the shorter to longer > 1.5 54
- 52 Leaves 2.5–7 mm wide; petioles < 4 mm long; staminate inflorescences bearing < 24 flowers 27. *P. killipiana*
- Leaves > 8 mm wide; petioles > 4 mm long; staminate inflorescences bearing > 24 flowers 53
- 53 Secondary leaf veins straight or weakly curved, 60–90° to the midrib; staminate inflorescences 8–25 mm long; staminate pedicels up to 1 mm long 31. *P. mexicana*
- Secondary leaf veins strongly curved, 45–60° to the midrib; staminate inflorescences 15–75 mm long; staminate pedicels up to 3 mm long 20. *P. glabra*
- 54 Leaves ovate, frequently falcate; staminate flowers 1.3–1.5 mm long 17. *P. falcata*
- Leaves oblong, linear-lanceolate, lanceolate or oblong-lanceolate, rarely falcate; staminate flowers 1.5–2.8 mm long 55
- 55 Stems drying yellow-green, pale green or green; staminate peduncle $\frac{8}{10}$ – $\frac{9}{10}$ inflorescence-length, the flowers borne in solitary compact heads 3. *P. angustifolia*
- Stems drying brown, dark brown or black; staminate peduncle $\frac{1}{8}$ – $\frac{1}{3}$ inflorescence-length, the flowers borne in loose panicles 20. *P. glabra*
- 56 Larger leaf in pair pinnately veined 57
- Larger leaf in pair 3-veined 59
- 57 Leaves entire; staminate flowers 0.5–0.8 mm long 32. *P. microphylla*
- Leaves apically 3–5-dentate, rarely entire; staminate flowers 1.0–1.8 mm long 58
- 58 Smaller leaf in pair not reflexed; larger leaf in pair 10–63 mm long; staminate flowers 1–1.5 mm long 24. *P. imparifolia*
- Smaller leaf in pair generally reflexed, appearing proximate to larger leaf; larger leaf in pair 5–11.5 mm long; staminate flowers 1.5–1.8 mm long 53. *P. tridentata*
- 59 Stems prostrate 60
- Stems erect 67
- 60 Fruit ≥ 1.8 mm 61
- Fruit ≤ 1.5 mm 63
- 61 Larger leaf in pair ≤ 30 mm 55. *P. tutensis*
- Larger leaf in pair > 35 mm 62
- 62 Stems angulate in cross-section, drying dark brown almost black; staminate inflorescences solitary, bearing 11–50 flowers; pistillate inflorescences bearing 4–30 flowers 30. *P. magnicarpa*
- Stems rounded or irregularly shaped in cross-section, not angulate, drying red-brown to dark brown; staminate inflorescences 1–4 per axil, bearing 15–200 flowers; pistillate inflorescences bearing 5–95(450) flowers 43. *P. purulensis*
- 63 Lateral veins of leaves visible for $\frac{2}{3}$ or less of the leaf length 64

- Lateral veins of leaves visible for $\frac{3}{4}$ or more of the leaf length 65
- 64 Smaller leaf in pair < 4 mm wide; major petiole in pair 1.0–1.5 mm long 44. *P. quadrata*
- Smaller leaf in pair ≥ 4 mm wide; major petiole in pair 1.5–2.5 mm long 24. *P. imparifolia*
- 65 Lower surface of leaves pubescent, the hairs c. 0.5 mm long 13. *P. daguensis*
- Lower surface of leaves glabrous 66
- 66 Stems with ‘V’- or ‘Y’-shaped cystoliths; minor leaves in pair 3–8 mm wide; pistillate inflorescences bearing 12–200 flowers 35. *P. pansamalana*
- Stems lacking ‘V’- or ‘Y’-shaped cystoliths; minor leaves in pair 1.5–2.5 mm wide; pistillate inflorescences bearing 6–25 flowers 16. *P. ecboliophylla*
- 67 Fruit > 1.5 mm 68
- Fruit ≤ 1.5 mm 70
- 68 Smaller petioles in pair ≥ 3 mm long 8. *P. conjugalis*
- Smaller petioles in pair ≤ 1.5 mm long, or leaves sessile 69
- 69 Stems angulate in cross-section, drying dark brown almost black; staminate inflorescences solitary, bearing 11–50 flowers; pistillate inflorescences bearing 4–30 flowers 30. *P. magnicarpa*
- Stems rounded or irregularly shaped in cross-section, not angulate, drying red-brown to dark brown; staminate inflorescences 1–4 per axil, bearing 15–200 flowers; pistillate inflorescences bearing 5–95(450) flowers 43. *P. purulensis*
- 70 Smaller leaf in pair ≥ 10 mm wide 50. *P. skutchii*
- Smaller in pair < 9 mm wide 71
- 71 Upper surface of leaves lacking ‘V’- or ‘Y’-shaped cystoliths; secondary leaf veins inserted 45–60° to the midrib; Costa Rica and Panama 12. *P. costaricensis*
- Upper surface of leaves with some ‘V’- or ‘Y’-shaped cystoliths present; secondary leaf veins inserted 60–90° to the midrib; Tabasco, Chiapas, Guatemala and Belize 72
- 72 Smaller leaf in pair 1.0–1.8 mm wide; staminate inflorescences 16–54 mm, the flowers borne in a compact head 46. *P. riparia*
- Smaller leaf in pair ≥ 3 mm wide; staminate inflorescences < 15 mm, the flowers borne in a loose panicle 73
- 73 Larger leaf in pair with $\frac{1}{3}$ margin entire from the base; staminate inflorescences 10–14 mm; staminate tepal subapical appendage c. 0.1 mm, scale-shaped 35. *P. pansamalana*
- Larger leaf in pair with $\frac{2}{3}$ margin entire from the base; staminate inflorescences 4–9 mm; staminate tepal subapical appendage 0.5–1 mm, corniculate 7. *P. chiapensis*

1. ***Pilea acuminata*** Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5, 2:* 302 (1851). Type: Mexico, Liebmann 14238 ‘2’ (C!-holotype).

Pilea longipes Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5, 2:* 302 (1851). Type: Mexico, Liebmann 14242 (C!-holotype).

DISTRIBUTION. Mexico (Guerrero, Oaxaca, Veracruz and Chiapas), Costa Rica, Panama, 400–1700 m; South America.

2. ***Pilea adamsiana*** A.K. Monro in *Bull. nat. Hist. Mus. Lond. (Bot.)* 30: 9 (2000). Type: Panama, Hammel 4702 (MO!-holotype).

DISTRIBUTION. Panama (Veraguas), 1300–1500 m.

3. **Pilea angustifolia** Killip in *J. Wash. Acad. Sci.* **15**: 295 (1925).
Type: Costa Rica, *Cook & Doyle* 181 (US!-holotype).

DISTRIBUTION. Costa Rica (Alajuela, Cartago, Puntarenas and San José), 1100–2300 m.

4. **Pilea auriculata** Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5*, **2**: 299 (1851). Type: Costa Rica, *Oersted* s.n. (C!-holotype).

DISTRIBUTION. Mexico (Chiapas), Guatemala, Costa Rica and Panama, 1400–3000 m.

5. **Pilea cadierei** Gagnep. & Guillaumin in *Bull. Mus. Hist. Nat. sér. 2*, **10**: 629 (1938). Type: Cultivated, from material collected in Vietnam by Cadière, *Anon.* s.n. (P!-holotype).

DISTRIBUTION. Mexico (Chiapas), Honduras, El Salvador and Costa Rica, 600–1400 m; West Indies, South America, Asia, Africa, Pacific Islands.

In cultivation throughout the tropics as an ornamental and frequently escaping.

The holotype consists of a packet containing two leaves and an inflorescence, accompanied by an original line drawing by F. Gagnepain.

6. **Pilea centradenoides** Seem., *Bot. voy. Herald* **4**: 194 (1854).
Type: Panama, *Seemann* 1099 (BM!-holotype; F!, MO!-isotypes);
Panama, San Blas, trail from Puerto Obaldía to La Bonga,
tributary of the Río Armila, c. 2 hours walk from Puerto Obaldía,
8°40'N 77°25'W, 0–50 m, 17 April 1982, *Knapp & Mallet* 4672
(BM!-epitype, designated here; MO!-isoepitype).

Pilea trianaeana Wedd. in A.DC., *Prodr.* **16**(1): 121 (1869). Type:
Colombia, *Triana* 887 (P!-lectotype, designated here; NY!-
isolectotypes).

P. variegata Wedd. in A.DC., *Prodr.* **16**(1): 123 (1869), non Seemann
(1854).

P. seemannii Killip in *Contr. U.S. Natl. Herb.* **26**: 382 (1936). Type:
Colombia, *Triana* 888 (P!-holotype; BM!-isotype).

DISTRIBUTION. Panama, 0–1500 m; South America.

An epitype was selected for *Pilea centradenoides* because the specimen cited by Seemann as type is a sterile collection and therefore potentially ambiguous.

A specimen of *Triana* 887 at BM has had the collection number crudely altered from 885 to 887 in darker ink. This collection is therefore not recognized as an isotype of *Pilea trianaeana* Wedd. in this treatment.

The collection cited by Killip (1936) as the type of *Pilea seemannii* is numbered '888' at P and BM. However, there is some evidence (Killip, 1936; pers. obs.) that duplicate Triana collections distributed to other herbaria were either not numbered, or numbered differently. For example, Killip observed that the locality information is cited differently for the duplicate collections of *Triana* 888 and in the case of other Triana collections, collection numbers have been altered.

The combination *Pilea variegata* (Spreng.) Seem. was generated to account for one of Seemann's collections from Panama. The incorporation of *Urtica variegata* Spreng. into the genus *Pilea* by Seemann is generally accepted; however, the Seemann collection (*Seemann* 561, BM) does not correspond to the taxon described by Sprengel as *U. variegata* but to another species, *P. centradenoides*.

7. **Pilea chiapensis** Killip in *J. Wash. Acad. Sci.* **15**: 295 (1925).
Type: Mexico, *Rovirosa* 938 (PH!-holotype).

Pilea caudata Killip in *J. Wash. Acad. Sci.* **15**: 295 (1925), non Winkler (1922). Type: Guatemala, *Cook & Griggs* 609 (US!-holotype).

DISTRIBUTION. Mexico (Tabasco and Chiapas), Belize and Guatemala, 600–1200 m.

8. **Pilea conjugalis** A.K. Monro in *Bull. nat. Hist. Mus. Lond. (Bot.)* **30**: 7 (2000). Type: Panama, *Pittier* 3230 (NY!-holotype).

DISTRIBUTION. Costa Rica and Panama, 1400–2200 m.

9. **Pilea cornmanae** Killip in *J. Wash. Acad. Sci.* **15**: 292 (1925).
Type: Panama, *Killip* 3543 (US!-holotype).

DISTRIBUTION. Costa Rica and Panama, 1500–2000 m.

10. **Pilea cornuto-cucullata** Cufod. in *Arch. Bot. Sist.* **10**: 29 (1934).
Type: Costa Rica, *Cufodontis* 292 (W†-holotype; F!-photograph ex W); Costa Rica, San José, along the trail from Canaán to Chirripó via Los Angeles, above (north of) the Río Talarí, 9°30'N 83°32'W, 3100–3200 m, 24 August 1971, *Burger* 8326 (F!-neotype, designated here).

DISTRIBUTION. Costa Rica and Panama, 2900–3200 m.

The holotype has been destroyed and only a photograph of the type specimen could be traced. Since no duplicates of the holotype have been located, a neotype has been selected.

11. **Pilea corona** A.K. Monro in *Bull. nat. Hist. Mus. Lond. (Bot.)* **31**: 5 (2001). Type: Panama, *Antonio* 2043 (PMA!-holotype; MO!-isotype).

DISTRIBUTION. Panama (Chiriquí, Veraguas), 700–1200 m.

12. **Pilea costaricensis** Donn. Sm. in *Bot. Gaz.* **20**: 294 (1895).
Type: Costa Rica, *Cooper* 5952 (US-799606!-holotype; US-799605!, K!-isotypes).

DISTRIBUTION. Costa Rica and Panama, 1000–1900 m.

13. **Pilea daguensis** Killip in *Contr. U.S. Natl. Herb.* **26**: 382 (1936). Type: Colombia, *Triana* 889 (P!-holotype; BM!-isotype).

Pilea dendrophila var. *major* Wedd. in A.DC., *Prodr.* **16**(1): 122 (1869). Type: Colombia, *Triana* 889 (P!-holotype).

DISTRIBUTION. Mexico (Chiapas), Panama, 100–1000 m; South America.

14. **Pilea daucioidora** Wedd. ex Pav. in *Ann. Sci. Nat., Bot. sér. 3*, **18**: 223 (1852). Type: Peru, *Pavón* s.n. (FI-W-holotype; BM!-photograph).

Pilea uncidens Wedd. in *Ann. Sci. Nat., Bot. sér. 3*, **18**: 224 (1852). Type: Bolivia, *Weddell* 4561 (P!-holotype).

P. daucioidora var. *uncidens* (Wedd.) Wedd. in A.DC., *Prodr.* **16**(1): 121 (1869).

DISTRIBUTION. Mexico (Chiapas), Guatemala, Honduras, El Salvador, Costa Rica, 1400–3300 m; South America.

15. **Pilea digitata** A.K. Monro in *Bull. nat. Hist. Mus. Lond. (Bot.)* **31**: 7 (2001). Type: Panama, *Hampshire & Whitefoord* 189 (PMA!-holotype; BM!, MO!-isotypes).

DISTRIBUTION. Panama (Bocas del Toro, Chiriquí, Coclé, and Darién), 700–1700 m.

16. **Pilea ecboliophylla** Donn. Sm. in *Bot. Gaz.* **46**: 115 (1908). Type: Guatemala, von Tuerckheim 7983 (US!-holotype; GH!, MO!, NY!-isotypes).

Pilea diversissima Killip in *Fieldiana, Bot.* **18**: 394 (1937). Type: Costa Rica, Brenes 4851 (F!-holotype; GH!, NY!-isotypes).

DISTRIBUTION. Mexico (Tabasco, Chiapas), Guatemala, Honduras, Nicaragua, Costa Rica and Panama, 0–1500 m; South America.

Pilea ecboliophylla closely resembles *P. rhizobola* Miq. from Brazil, and further study may place these names in synonymy, in which case *P. rhizobola* would have priority.

17. **Pilea falcata** Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd.*, ser. 5, **2**: 304 (1851). Type: Mexico, Liebmann 14241 (C!-holotype; F!-isotype).

DISTRIBUTION. Although not known from Mesoamerica, the type collection is from the neighbouring state of Oaxaca and this species is expected to occur in Chiapas. Breedlove (1986: 191) recorded *Pilea falcata* for Chiapas, but the determinations of the collections on which this record is based are erroneous.

18. **Pilea fasciata** Wedd. in A.DC., *Prodr.* **16**(1): 149 (1869). Type: Colombia, Triana s.n. (P!-holotype; BM!-isotype).

DISTRIBUTION. Costa Rica, Panama, 0–1300 m; South America.

19. **Pilea forgeti** N.E. Br. in *Bot. Mag.* **13**: t. 8699 (1917). Type: material grown from seed collected by Forget in Venezuela, Brown s.n. ‘June 4, 1914’ (K!-lectotype, designated here).

DISTRIBUTION. Panama, 0–900 m, South America.

Collections of *Pilea forgeti* are often incorrectly determined as *P. fasciata* Wedd.

The lectotype, although not cited in the original protologue, was determined and annotated by Brown: ‘Type specimen!’.

20. **Pilea glabra** S. Watson in *Proc. Amer. Acad. Arts* **26**: 152 (1891). Type: Mexico, Pringle 3550 (GH!-holotype; K!-isotype).

Pilea tuerckheimii Donn. Sm. in *Bot. Gaz.* **46**: 116 (1908). Type: Guatemala, von Tuerckheim 1835 (US!-holotype; NY!-isotype).

DISTRIBUTION. Mexico (San Luis Potosí, Veracruz and Chiapas), Belize, Guatemala, Honduras, Nicaragua and Costa Rica, 200–1900 m.

21. **Pilea gomeziana** W.C. Burger in *Phytologia* **31**: 269 (1975). Type: Costa Rica, Gómez P. 3304 (F!-holotype; CR, MO!, NY!, US-isotypes).

DISTRIBUTION. Costa Rica (Cocos Island), altitude unknown.

22. **Pilea herniarioides** (Sw.) Wedd. in *Ann. Sci. Nat., Bot. sér. 3, 18*: 207 (1852). *Urtica herniarioides* Sw. in *Kongl. Vetensk. Acad. Nya Handl.* **8**: 64 (1787). Type: Hispaniola, Swartz s.n. (S-holotype; BM!-isotype).

Pilea deltoidea Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5, 2*: 302 (1851). Type: Costa Rica, Oersted 14240 ‘11/46’ (C!-holotype).

P. microphylla var. *peregrina* Griseb., *Pl. wright.*: 173 (1860). Type:

Cuba, 1860–1864, Wright 1458 (B†-holotype; BM!-lectotype, designated here; K!, MO!, P!-isolectotypes).

P. brittoniae Urb., *Symb. antill.* **5**: 528 (1908). Type: Jamaica, vicinity of Cinchona, Point Heberu’s Gap to Marc’s Gap, 2–10 September 1906, Britton 95 (B†-holotype; BM!-lectotype, designated here; K!, MO!, NY!-isolectotypes).

P. herniarioides var. *peregrina* (Griseb.) Urb. in *Ark. Bot.* **23A**(5): 48 (1930).

P. peregrina (Griseb.) Grudz. & P. Herrera in *Novosti Sist. Vyssh. Nizsh. Rast.* **23**: 52 (1986).

DISTRIBUTION. El Salvador, Costa Rica and Panama, 600–1000 m; West Indies.

Commonly grown as an ornamental in gardens and probably present throughout Central America.

Pilea peregrina was apparently spelled incorrectly as ‘perexigua’ when the combination was published by Grudzinska & Herrera (1986). This would appear to be based on Urban’s (1930) re-spelling of the epithet in his recombination of Grisebach’s variety as *P. microphylla* var. *perexigua* (Griseb.) Urb. A reason for changing Grisebach’s epithet is not given in either publication and the original name is used here.

23. **Pilea hyalina** Fenzl in *Denkschr. Kaiserl. Akad. Wiss., Math. - Naturwiss. Kl.* **1**: 256 (1850). Type: Peru, Poeppig s.n. ‘Peruvia subandina prope Cuchero ad fossas cultorum, Dec. 1829’ (C!-lectotype, designated here).

Pilea lundii Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd.*, ser. 5, **2**: 299 (1851). Type: Brazil, Lund s.n. (C!-lectotype, designated here).

P. scrobiculata Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd.*, ser. 5, **2**: 300 (1851). Type: Mexico, Liebmann s.n. ‘14254’ (C!-holotype).

DISTRIBUTION. Mexico (Chiapas), Belize, Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica and Panama, 0–1600 m; South America.

24. **Pilea imparifolia** Wedd. in *Ann. Sci. Nat., Bot. sér. 3, 18*: 212 (1852). Type: French Guiana, 1845, Mélinon 123 (P!-lectotype, designated here).

Pilea dendrophila Miq. in Mart., *Fl. Brasil.* **12**: 202 (1853). Type: Brazil ‘Solimoês fluvium, Rio Negro’, Martius s.n. (M!-holotype).

DISTRIBUTION. Costa Rica and Panama, 100–1600 m; South America.

25. **Pilea involucrata** (Sims) Urb., *Symb. antill.* **1**: 298 (1899). *Urtica involucrata* Sims in *Bot. Mag.* **51**: t. 2481 (1824). Holotype: Sims, *Bot. Mag.* 51: t. 2481 (1824); St. Vincent, Anderson s.n. ‘purchased 1853’ (K!-epitype, designated here).

Pilea chrysosplenoides Wedd. in *Ann. Sci. Nat., Bot. sér. 3, 18*: 209 (1852). Type: Colombia ‘près Fusaguasuga, 1844’, Goudot s.n. (P!-holotype).

P. ovalis Griseb., *Fl. Brit. W. I.*: 159 (1859). Type: Trinidad, Gaspari s.n. (K!-lectotype, designated here).

DISTRIBUTION. Costa Rica and Panama, 100–1300 m; West Indies, South America.

Sims provided only an illustration as a type element and no other type elements were traced at K. Because of the ambiguous nature of the illustration it is felt that the designation of an epitype is appropriate.

26. **Pilea irrorata** Donn. Sm. in *Bot. Gaz.* **19**: 11 (1894). Type: Guatemala, *Smith* 2751 (US!-holotype).

DISTRIBUTION. Mexico (Oaxaca, Veracruz, Chiapas) and Guatemala, 0–2000 m.

27. **Pilea killipiana** Standl. & Steyermark in *Fieldiana, Bot.* **24**: 415 (1952). Type: Guatemala, *Steyermark* 44700 (F!-holotype; NY!, US!-isotypes).

DISTRIBUTION. Mexico (Chiapas), Guatemala, 300–500 m.

28. **Pilea latifolia** Wedd. in *Arch. Mus. Hist. Nat.* **9**: 249 (1856). Type: Colombia, Ocana, 3000 ft, ‘3000 Ps’ [annotation by Schlim], June 1846–1852, *Schlim* 701 (P!-lectotype, designated here).

DISTRIBUTION. Panama (Darien, Panamá), 400–1700 m; South America.

Label information for the type collection indicates that this is a mixed collection. Each sheet has a different altitude indicated and therefore should be considered as a distinct collection, although all sheets have the same collection number and handwriting.

29. **Pilea lindeniana** Wedd. in *Ann. Sci. Nat., Bot. sér. 3*, **18**: 210 (1852). Type: Colombia, *Linden* 799 (P!-holotype; BM!, K!-isotypes).

DISTRIBUTION. Panama (province unknown), 2000–2800 m; South America.

30. **Pilea magnicarpa** A.K. Monro in *Novon* **9**: 398 (1999). Type: Panama, *Hammel* 2424 (MO!-holotype; NY!-isotype).

DISTRIBUTION. Panama (Coclé, San Blas), 400–1400 m.

31. **Pilea mexicana** Wedd. in *Ann. Sci. Nat., Bot. sér. 3*, **18**: 214 (1852). Type: Mexico, *Linden* 651 (P!-holotype).

Pilea quichensis Donn. Sm. in *Bot. Gaz.* **19**: 12 (1894). Type: Guatemala, *Heyde & Lux* 3147 (US-holotype; K!-isotype).

DISTRIBUTION. Mexico (Veracruz, Chiapas) and Guatemala, 1200–2100 m.

32. **Pilea microphylla** (L.) Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5*, **2**: 296 (1851). *Parietaria microphylla* L., *Syst. nat.* 10th ed.: 1308 (1759). Type: Jamaica?, LINN-1220.8 (LINN!-lectotype, designated by De Rooij, 1975).

Urtica serpyllacea Kunth in Humb., Bonpl. & Kunth, *Nov. gen. sp. 2*: 37 (1817). Type: Equatorial America, *Bonpland* 2143 (P!-holotype).

Pilea muscosa Lindl., *Coll. bot.*: t. **4** (1821), nom. superfl.

P. serpyllacea (Kunth) Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5*, **2**: 296 (1851).

P. portula Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5*, **2**: 297 (1851). Type: Costa Rica, ‘Aguacate’, *Oersted* s.n (C!-holotype).

DISTRIBUTION. Mexico (Tabasco, Chiapas, Yucatán, Campeche, Quintana Roo), Belize, Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, Panama, 0–2400 m; North America, Greater Antilles, Leeward Islands, Windward Islands, South America.

This species is cultivated worldwide as an ornamental.

The lectotype of *Pilea microphylla* is a Patrick Browne specimen, almost certainly collected in Jamaica, and probably purchased by Linnaeus in 1758 (Savage, 1945). In addition Linnaeus refers to Sloane’s *Voy. Jamaica* (1707) in his original description.

33. **Pilea nummulariifolia** (Sw.) Wedd. in *Ann. Sci. Nat., Bot. sér. 3*, **18**: 225 (1852). *Urtica nummulariifolia* Sw. in *Kongl. Vetensk. Acad. Nya Handl.* **8**: 63 (1787). Holotype: *Kongl. Vetensk. Acad. Nya Handl.* **8**: t.1, f. 2 (1787); Jamaica, *Swartz* s.n. ‘Herb. Alströmer’ (S!-epitype, designated here).

DISTRIBUTION. Guatemala, Honduras, El Salvador, Costa Rica and Panama, 0–1500 m; Greater Antilles, South America.

This species is frequently used as an ornamental in gardens.

The type for *Pilea nummulariifolia* is an illustration which was felt to be ambiguous in view of the large number of neotropical *Pilea* species, and an epitype is selected from amongst Swartz’s Jamaican collections.

34. **Pilea pallida** Killip in *J. Wash. Acad. Sci.* **15**: 295 (1925). Type: Panama, *Rowlee & Rowlee* 376 (US!-holotype).

DISTRIBUTION. Costa Rica and Panama, 0–1200 m.

35. **Pilea pansamalana** Donn. Sm. in *Bot. Gaz.* **19**: 10 (1894). Type: Guatemala, *von Tuerckheim* 939 (US-holotype; B†, GH!, NY!, P!-isotypes).

DISTRIBUTION. Mexico (Chiapas) and Guatemala, 800–2600 m.

36. **Pilea parietaria** (L.) Blume, *Mus. bot.* **2**: 48 (1856). *Urtica parietaria* L., *Sp. pl.*: 985 (1753). Lectotype: Sloane, *Voy. Jamaica* **1**: t. 93, f. 1 (1707), designated by Kellogg, 1988.

Urtica ciliaris L., *Syst. nat.* 10th ed.: 1266 (1759). Lectotype: Plumier, *Pl. amer.*: t. 120, f. 2 (1757), designated by Kellogg, 1988.

U. rhombea L.f., *Suppl. pl.*: 417 (1782). Type: Mexico, LINN-1111.25 (LINN!-holotype).

Pilea integrifolia Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5*, **2**: 298 (1851). Type: Mexico, Liebmann 14339 ‘2’ (C!-holotype).

P. rhombea (L.f.) Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5*, **2**: 305 (1851).

P. ciliaris (L.) Wedd. in *Ann. Sci. Nat., Bot. sér. 3*, **18**: 209 (1852).

P. rubiifolia Blume, *Mus. bot.* **2**: 49 (1856). Type: Guatemala, Alta Verapaz Department, Rubeleruz, 3000 ft, May 1887, *von Tuerckheim* 1270 (F!-neotype, designated here; P!-isoneotype).

DISTRIBUTION. Mexico (Chiapas, Yucatán), Guatemala, Honduras, Nicaragua, Costa Rica and Panama, 300–2000 m; Greater Antilles, Leeward Islands.

A neotype is selected for *Pilea rubiifolia* because Blume did not explicitly cite any type material in his protologue. His citation ‘—Yantencillo incolar.— In Guatimalâ ad rivos.’, implies that he saw a collection. However, no type material could be located at BM, L or P and it was therefore decided to select a neotype. Standley & Steyermark (1952: 418) erroneously cited *von Tuerckheim* 1270 as the type collection.

The lectotype of *Pilea parietaria* (L.) Blume is an illustration based on a typotype collection made by Sloane in Jamaica: Herb. Sloane Vol. 2: 120, BM-SL!

37. **Pilea pittieri** Killip in *J. Wash. Acad. Sci.* **15**: 298 (1925). Type: Costa Rica, *Pittier* 14149 (US-1080422!-holotype; US-577992!-isotype).

Pilea phenacoides Killip in *Fieldiana, Bot.* **18**: 1548 (1938). Type: Costa Rica, *Smith* A443 (US!-holotype; F!-isotype).

DISTRIBUTION. Costa Rica (Alajuela, Cartago, Heredia, Limón, Puntarenas, San José), 600–2300 m.

38. ***Pilea pleuroneura*** Donn. Sm. in *Bot. Gaz.* **19**: 12 (1894). Type: Guatemala, *von Tuerckheim* 754 (US-holotype; GH!, NY!, P!-isotypes).

DISTRIBUTION. Mexico (Chiapas) and Guatemala, (300–)1200–4000 m.

39. ***Pilea plumulosa*** A.K. Monro in *Novon* **9**: 392 (1999). Type: Panama, *Kirkbride & Duke* 944 (NY!-holotype; MO-2090983!, MO-2605434!-isotypes).

DISTRIBUTION. Panama (Bocas del Toro-Chiriquí border), 2500 m.

40. ***Pilea pteridophylla*** A.K. Monro in *Novon* **9**: 390 (1999). Type: Mexico, *Hanan A.* 438 (MEXU!-holotype).

DISTRIBUTION. Mexico (Tabasco), 600 m.

A number of collections from Veracruz (*Wendt et al.* 4877 & 3912) and Oaxaca (*Wendt et al.* 2538) closely resemble *Pilea pteridophylla*, but differ in the presence of equal-sized leaves at each node. Further study is needed to decide whether these collections represent a new taxon.

41. ***Pilea pteropodon*** Wedd. in A.DC., *Prodr.* **16**(1): 144 (1869). Type: Colombia, *Triana* s.n. (P!-holotype; BM!-isotype).

Pilea pteroclada Donn. Sm. in *Bot. Gaz.* **31**: 121 (1901). Type: Costa Rica, Cartago, Atirro, 600 m, April 1896, *Smith* 6779 (US!-lectotype, designated here).

DISTRIBUTION. Costa Rica and Panama, 0–2000 m; South America.

This species closely resembles *Pilea verbascifolia* (Poir.) Wedd., endemic to the Mauritius Islands.

42. ***Pilea pubescens*** Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5*, **2**: 303 (1851). Type: Brazil, *Lund* s.n. '1' (C!-lectotype, designated here).

Pilea fuscata Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5*, **2**: 300 (1851). Type: Mexico, *Liebmann* s.n. (C-holotype; GH!, P!-isotypes).

P. rupicola Wedd. in *Ann. Sci. Nat., Bot. sér. 3*, **18**: 224 (1852). Type: Mexico, Tabasco, Teapa, December, *Linden* 71 (FI-W-lectotype, designated here; BM!-photograph).

DISTRIBUTION. Mexico (Tabasco, Chiapas), Belize, Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica and Panama, 0–3000 m; South America.

This species is frequently grown as a garden ornamental throughout the neotropics.

In his original description of *Pilea rupicola*, Weddell cites a collection by Linden which he saw at P. This collection could not be traced on a visit there in 1999.

43. ***Pilea purulensis*** Donn. Sm. in *Bot. Gaz.* **46**: 115 (1908). Type: Guatemala, *von Tuerckheim* 1707 (US-holotype; BM!, C!, F!, GH!, NY!-isotypes).

Pilea chiriquina Killip in *J. Wash. Acad. Sci.* **15**: 291 (1925). Type: Panama, *Killip* 3546 (US!-holotype).

P. donnell-smithiana Killip in *J. Wash. Acad. Sci.* **15**: 292 (1925).

Type: Costa Rica, *Donnell Smith* 7467 (US!-holotype; GH!-isotype).

DISTRIBUTION. Costa Rica and Panama, 1000–2100 m; South America.

44. ***Pilea quadrata*** A.K. Monro in *Novon* **9**: 395 (1999). Type: Panama, *Antonio* 1345 (MO!-holotype).

DISTRIBUTION. Panama (Panama, Colón), 200–500 m.

45. ***Pilea quercifolia*** Killip in *Phytologia* **1**: 146 (1935). Type: Guatemala, *Skutch* 559 (US!-holotype; GH!-isotype).

DISTRIBUTION. Mexico (Chiapas) and Guatemala, 1300–2400 m.

46. ***Pilea riparia*** Donn. Sm. in *Bot. Gaz.* **19**: 11 (1894). Type: Guatemala, *von Tuerckheim* 1040 (F-holotype; GH!, NY!, P!-isotypes).

DISTRIBUTION. Guatemala (Alta Verapaz, Baja Verapaz), c. 1000 m.

47. ***Pilea rostulata*** A.K. Monro in *Novon* **9**: 395 (1999). Type: Panama, *Antonio* 1237 (BM!-holotype; MO!-isotype).

DISTRIBUTION. Panama (Colón), 0–400 m.

48. ***Pilea rugosissima*** Killip in *Proc. Biol. Soc. Wash.* **52**: 28 (1939). Type: Panama, *Davidson* 335 (F-holotype; GH!-isotype).

DISTRIBUTION. Panama (Chiriquí, Bocas del Toro), 1800–2500 m.

A collection from Chiriquí, *Knapp* 1622 (MO), is unusual in its small stature and epiphytic habit.

49. ***Pilea senarifolia*** Donn. Sm. in *Bot. Gaz.* **19**: 12 (1894). Type: Guatemala, *Heyde & Lux* 3145 (F-holotype; GH!, MO!, NY!-isotypes).

DISTRIBUTION. Mexico (Chiapas) and Guatemala, c. 2400 m.

50. ***Pilea skutchii*** Killip in *Fieldiana, Bot.* **24**: 421 (1952). Type: Guatemala, *Skutch* 974 (US!-holotype; GH!-isotype).

DISTRIBUTION. Mexico (Chiapas), Guatemala, 1400–2700 m; South America.

51. ***Pilea tilarana*** W.C. Burger in *Phytologia* **31**: 270 (1975). Type: Costa Rica, *Standley & Valerio* 44753 (US!-holotype).

DISTRIBUTION. Costa Rica (Alajuela), 600–1000 m.

52. ***Pilea trichomanophylla*** A.K. Monro in *Bull. nat. Hist. Mus. Lond. (Bot.)* **30**: 9 (2000). Type: Panama, *Hammel* et al. 14646 (MO!-holotype).

DISTRIBUTION. Panama (Chiriquí), c. 1300 m.

53. ***Pilea tridentata*** Killip in *J. Wash. Acad. Sci.* **15**: 290 (1925). Type: Guatemala, *von Tuerckheim* 2011 (US-holotype; C!, F!, GH!, MO!, NY!-isotypes).

Pilea mimema Standl. & Steyermark in *Fieldiana, Bot.* **24**: 417 (1952). Type: Guatemala, *Hatch & Wilson* 162 (F!-holotype).

DISTRIBUTION. Mexico (Oaxaca, Chiapas), Guatemala, (300) 1200–1600 m.

54. **Pilea tripartita** A.K. Monro in *Novon* **9**: 393 (1999). Type: Costa Rica, Burger & Liesner 6330 (MO!-holotype; CR!, NY!, US!-isotypes).

DISTRIBUTION. Costa Rica, Panama, 2500–3200 m.

55. **Pilea tutensis** A.K. Monro in *Novon* **9**: 397 (1999). Type: Panama, Antonio 1845 (MEXU!-holotype; MO!, NY!-isotypes).

DISTRIBUTION. Panama (Veraguas), 900–1600 m.

56. **Pilea vulcanica** Liebm. in *Kongel. Danske Vidensk. Selsk. Skr., Naturvidensk. Math. Afd. ser. 5, 2*: 303 (1851). Type: Mexico, Veracruz, Riço de Orizaba, Vaqueria del Pacal, 300 m, September 1841, Liebmann 14256 '2' (C!-lectotype, designated here).

Pilea standleyi Killip in *J. Wash. Acad. Sci.* **15**: 294 (1925). Type: Costa Rica, Standley 38697 (US!-holotype).

P. gracilipes Killip in *J. Wash. Acad. Sci.* **15**: 298 (1925). Type: Costa Rica, Maxon 5426 (US-holotype; F!-isotype).

DISTRIBUTION. Mexico (Chiapas), Guatemala, Honduras, El Salvador, Costa Rica and Panama, 1300–3000(4500) m; South America.

The species epithet was incorrectly spelled as 'vulcania' when first published.

ACKNOWLEDGEMENTS. I thank the curators at BRU, C, F, GH, ITIC, K, LL, MEXU, MO, NY, P, PH, PMA, SCZ, TEX, and US for the loan of herbarium material. I would also like to thank Emily Wood and David Boufford for my reception at GH, Mireya Correa for my reception at PMA, Carmen Galdames for my reception at SCZ, Nohemy Ventura for my reception at ITIC, Roberto Escobar for my reception at LAGU, Marie-Laure Groult, PARSYST and the CORDIS Large Scale Facility fund for my visit to Paris, Piero Cuccini (FI) for providing photographic negatives of type material, and Steve Cafferty and Charlie Jarvis of the Linnaean Plant Name Typification Project for assistance with Linnaean names. I would also like to thank William Burger and Sandy Knapp for their comments on the manuscript.

|--|--|--|
| <i>Parietaria microphylla</i> L. 15
<i>Pilea acuminata</i> Liebm. 13
<i>Pilea adamsiana</i> A.K. Monroe 13
<i>Pilea angustifolia</i> Killip 13
<i>Pilea auriculata</i> Liebm. 13
<i>Pilea brittoniae</i> Urb. 14
<i>Pilea cadierei</i> Gagnep. & Guillaumin 13
<i>Pilea caudata</i> Killip 13
<i>Pilea centradenoides</i> Seem. 13
<i>Pilea chiapensis</i> Killip 13
<i>Pilea chiriquina</i> Killip 16
<i>Pilea chrysosplenoides</i> Wedd. 15
<i>Pilea ciliaris</i> (L.) Wedd. 15
<i>Pilea conjugalis</i> A.K. Monroe 13
<i>Pilea cornmanae</i> Killip 13
<i>Pilea cornuto-cucullata</i> Cufod. 13
<i>Pilea corona</i> A.K. Monroe 13
<i>Pilea costaricensis</i> Donn. Sm. 13
<i>Pilea daguensis</i> Killip 13
<i>Pilea dauciodora</i> Wedd. ex Pav. 14
<i>Pilea dauciodora</i> var. <i>uncidens</i> (Wedd.) Wedd. 14
<i>Pilea deltoidea</i> Liebm. 14
<i>Pilea dendrophila</i> Miq. 14
<i>Pilea dendrophila</i> var. <i>major</i> Wedd. 13
<i>Pilea digitata</i> A.K. Monroe 14
<i>Pilea diversissima</i> Killip 14
<i>Pilea donnell-smithiana</i> Killip 16
<i>Pilea ecboliophylla</i> Donn. Sm. 14
<i>Pilea falcata</i> Liebm. 14
<i>Pilea fasciata</i> Wedd. 14
<i>Pilea forgeti</i> N.E. Br. 14
<i>Pilea fuscata</i> Liebm. 16
<i>Pilea glabra</i> S. Watson 14
<i>Pilea gomeziana</i> W.C. Burger 14
<i>Pilea gracilipes</i> Killip 17 | <i>Pilea herniarioides</i> (Sw.) Wedd. 14
<i>Pilea herniarioides</i> var. <i>peregrina</i> (Griseb.) Urb. 14
<i>Pilea hyalina</i> Fenzl 14
<i>Pilea imparifolia</i> Wedd. 14
<i>Pilea integrifolia</i> Liebm. 15
<i>Pilea involucrata</i> (Sims) Urb. 14
<i>Pilea irrorata</i> Donn. Sm. 15
<i>Pilea killipiana</i> Standl. & Steyermark 15
<i>Pilea latifolia</i> Wedd. 15
<i>Pilea lindeniana</i> Wedd. 15
<i>Pilea longipes</i> Liebm. 14
<i>Pilea lundii</i> Liebm. 14
<i>Pilea magnicarpa</i> A.K. Monroe 15
<i>Pilea mexicana</i> Wedd. 15
<i>Pilea microphylla</i> (L.) Liebm. 15
<i>Pilea microphylla</i> var. <i>peregrina</i> Griseb. 14
<i>Pilea mimema</i> Standl. & Steyermark 17
<i>Pilea muscosa</i> Lindl. 15
<i>Pilea nummulariifolia</i> (Sw.) Wedd. 15
<i>Pilea ovalis</i> Griseb. 15
<i>Pilea pallida</i> Killip 15
<i>Pilea pansamalana</i> Donn. Sm. 15
<i>Pilea parietaria</i> (L.) Blume 15
<i>Pilea peregrina</i> (Griseb.) Grudz. & P. Herrera 14
<i>Pilea phenacoides</i> Killip 16
<i>Pilea pittieri</i> Killip 16
<i>Pilea pleuroneura</i> Donn. Sm. 16
<i>Pilea plumulosa</i> A.K. Monroe 16
<i>Pilea portula</i> Liebm. 15
<i>Pilea pteroclada</i> Donn. Sm. 16
<i>Pilea pteridophylla</i> A.K. Monroe 16
<i>Pilea pteropodon</i> Wedd. 16
<i>Pilea pubescens</i> Liebm. 16
<i>Pilea purulensis</i> Donn. Sm. 16 | <i>Pilea quadrata</i> A.K. Monroe 16
<i>Pilea quercifolia</i> Killip 16
<i>Pilea quichensis</i> Donn. Sm. 15
<i>Pilea rhizobola</i> Miq. 14
<i>Pilea rhombea</i> (L.f.) Liebm. 15
<i>Pilea riparia</i> Donn. Sm. 16
<i>Pilea rostulata</i> A.K. Monroe 16
<i>Pilea rubiifolia</i> Blume 15, 16
<i>Pilea rugosissima</i> Killip 16
<i>Pilea rupicola</i> Wedd. 16
<i>Pilea scrobiculata</i> Liebm. 14
<i>Pilea seemannii</i> Killip 13
<i>Pilea senarifolia</i> Donn. Sm. 16
<i>Pilea serpyllacea</i> (Kunth) Liebm. 15
<i>Pilea skutchii</i> Killip 16
<i>Pilea standleyi</i> Killip 17
<i>Pilea tilarana</i> W.C. Burger 16
<i>Pilea trianaeana</i> Wedd. 13
<i>Pilea trichomanophylla</i> A.K. Monroe 17
<i>Pilea tridentata</i> Killip 17
<i>Pilea tripartita</i> A.K. Monroe 17
<i>Pilea tuerckheimii</i> Donn. Sm. 14
<i>Pilea tutensis</i> A.K. Monroe 17
<i>Pilea uncidens</i> Wedd. 14
<i>Pilea variegata</i> Wedd. 13
<i>Pilea vulcanica</i> Liebm. 17
<i>Urtica ciliaris</i> L. 15
<i>Urtica herniarioides</i> Sw. 14
<i>Urtica involucrata</i> Sims 14
<i>Urtica nummulariifolia</i> Sw. 15
<i>Urtica parietaria</i> L. 15
<i>Urtica rhombea</i> L.f. 15
<i>Urtica serpyllacea</i> Kunth 15
<i>Urtica variegata</i> Spreng. 13 |
