1. ABSTRACT

A project to list every known species of catfish and shark species was initiated by searching through thousands of pages of printed & digital resources in this researcher's private library. Additionally online resources were also searched to obtain references. This search uncovered multiple species references that were not listed on the base references. This is not a work on taxonomy. Any names synonyms or valid is incorporated to give the reader the most inclusive results possible. When possible only the genus+species was listed, but on several occasions only family or genus names were given. The L, LDA, and C numbers for aquarium species without a specific species designation is listed, as well as, any hybrids even though these listings are not "valid". This research listing has been ongoing since August 2014 and will continue with updates on irregular intervals. I make no assumptions with regards to the catalogue listings. The listings are straight from the texts unless otherwise verified with the authors as to being misprints, etc..

2. INTRODUCTION

I have been toying around with the idea of creating some type of resource to quickly look up certain species from different references, but until recently it has only been an idea. This resource idea started several years ago when as a high school student I read that the scientific nomenclature for a common mudcat was *Ictalurus natalis*. This name was included when I wrote my very first paper while in high school and only posted it on ResearchGate a couple of years ago. It became apparent to me that the proper scientific name was *Ameiurus natalis*; whereas some authors used that and others used the *I. natalis* name. So the question was which was correct. I discovered that not only both were correct at some point or another, but also there were different spellings for them.

It quickly became apparent that the total information for a species was not situated in any one text. I wanted to have information pertaining to every aspect of a species. This catalogue was the result of that.

The question as to why Catfish & Sharks in a single catalogue has been posed. Simply put; those of the type of fish that I want to learn about and did my primary research on as a high school student. I noticed that the Species of Catfish and Sharks shared some similarities. Even though they were not phylogenetically comparable; the similarities were there and I was and am still looking into that, thus the reason why I have publications on both types.

This catalogue or listing is important for several reasons, but the most obvious is that if a researcher takes a digital paper and does a search for a species on it; it may or not reveal its presence as the spelling might be different or in early papers that did not copy well onto a pdf the name might not be legible enough.

Every listing in this catalogue has at least one reference. Any other references have not been uncovered in the wealth of information that makes up my library as of this publication

THIS PROJECT IN NO WAY ATTEMPTS TO REPLACE ANY OF THE RESOURCES THAT IS INCLUDED (PRINTED, DIGITAL PDF, OR ONLINE). I WOULD NOT ATTEMPT TO DO SO ON ANY LEVEL. ALL OF THE RESOURCES LISTED IN THIS CATALOGUE ARE EXTREMELY IMPORTANT.

The main reason for this catalogue is to help me in my research. If others can benefit from this project is an added bonus. To explain the catalogue itself and how it was created please refer to the methodologies and materials section.

Additionally; a researcher can download this catalogue and make it their own by putting in references that are omitted. None of my papers have been included (as they are not in official publications) but you can still download them from ResearchGate or Academia.

A checklist such as this one is not a new concept by any means. There are multiple websites devoted to such lists (ie. Catalogue of fishes and FishBase). Websites such as Planet Catfish and Shark References also have such lists. Even a Journal called Checklist. What makes this one unique is that it combines specific groups of fishes by giving specific references to study. In addition; this

document has so many different facets of scientific research, taxonomy, aquarium care, biology, etc to provide a more complete picture of the specimen.

This checklist, as well as, the future supplements; are designed to assist me in my own studies, so that I can find specific references for individual species, but it has grown to be so much more. The project has become a learning experience by itself.

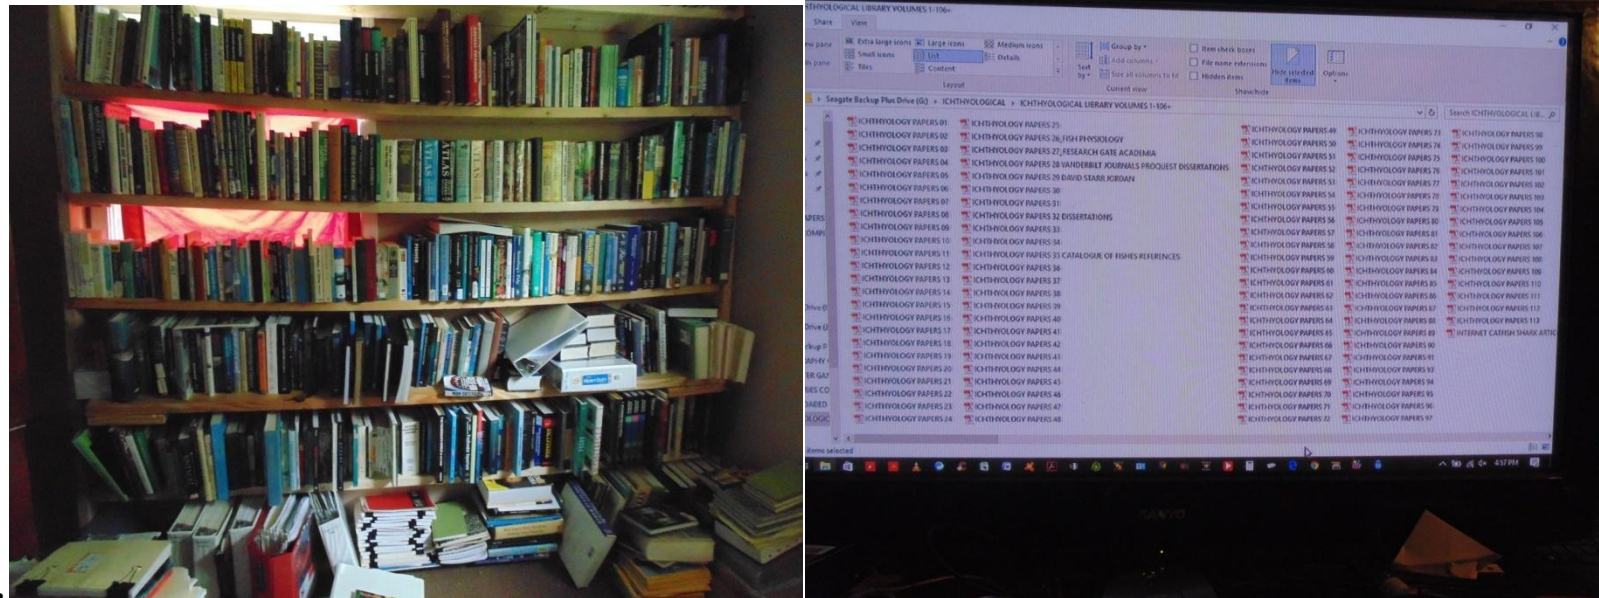

3. ACKNOWLEDGMENTS

This project would not of been possible without a multitude of individuals and entities. First and foremost; Dr. Mark Sabaj Perez deserves special recognition. Without his assistance with providing the primary listing that he built from FishBase; this project would not have started. The late Dr. Richard Vari, Dr. Carl Ferraris, Jr., Dr. John Lundberg, Dr. Dominique Adriaens, Dr. John Maisey have all listened to my questions and provided the answers to those questions without hesitation. ResearchGate has been instrumental in obtaining digital copies of papers, and posting questions and project updates on. Dr. Roberto Reis who sent me several papers and books to me personally and who gave technical advise on the format of this project. There are so many individual scientists and researchers that have provided information in the form of published papers that it would be very difficult to describe my many thanks. BiodiversityLibrary and Archive.org were instrumental in procuring out of print books and papers from authors that were pioneers in the science of ichthyology.

Dr. John Maisey of the American Museum of Natural History provided some advise that became the mantra of this project if you will. I e-mailed him to see about the possibility of obtaining a complete listing of extinct sharks to include in this catalogue. I presented the resources that I had already researched; and his answer was so productive that it stuck with me. He told me to start a listing and continually add to it as the information came.

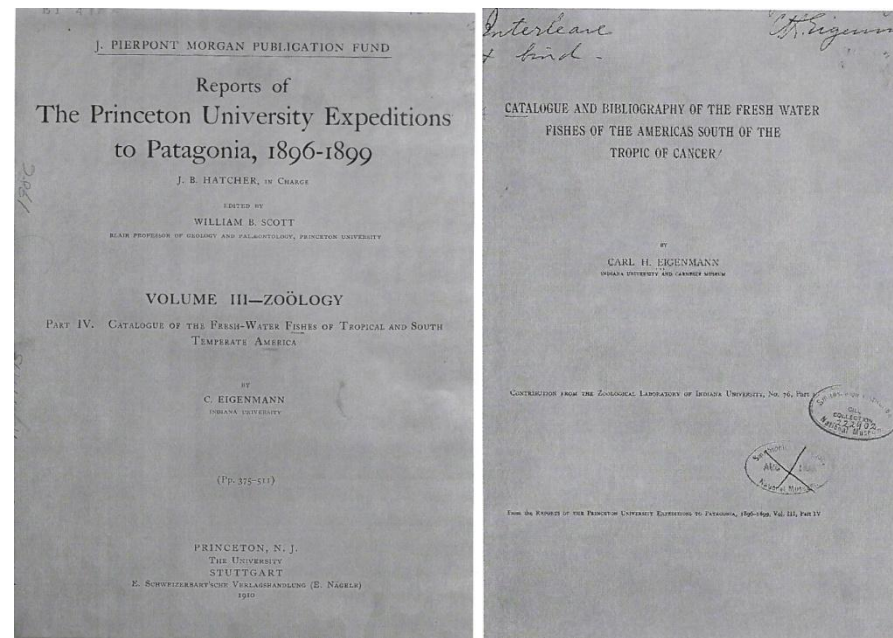

4 MATERIALS & METHODOLOGIES

The materials for this project are quite ordinary in reality. A computer with Microsoft Excel and Word installed alongwith a HP Laserjet 1320 printer with a Sanyo 42" TV for a monitor

PICTURES OF MY EVER EXPANDING PRINTED AND DIGITAL LIBRARY

The literature utilized for this project have been various printed books as well as digital resources either downloaded from Biodiversity Library, ResearchGate, Vanderbilt University Library, or sent to me by the researcher themselves. Please review the bibliography for more indepth examinations of the exact references. A note here concerning some of the references themselves is needed. There are multiple editions of the same reference annotated (ie. Axelrod's Exotic Tropical Fishes and others from TFH Publications, as well as, Nelson's Fishes of the World). These different editions are listed separately as they could contain different information given at different dates. I have included Eigenmann's 1910 reference twice. Even though the page numbers are exactly the same; when the covers are examined they appear to be from different sources as evidenced by the following scans of the papers themselves.

Even though these texts are usually only in printed form; I had to scan them in when they were borrowed from the Interlibrary Loan Program. In so doing; they became integrated into the digital library. The “Tropical Fish Hobbyist Excerpts” printed text

comes from the Tropical Fish Hobbyist magazine. The excerpts are because the online version of the magazine does not allow the subscriber to download or print out the articles. I was able to do a search and copied and pasted what I found onto a word document.

A note on several texts that the authorship was credited to individuals is actually a text where there were several individual papers collected together (ie. Arratia, Carrier, P. W. Gilbert, etc.). The individual paper's authors were not listed, but rather collectively listed under the editor or editors of the texts which is how you would look them up in a standard library system.

Several references did not list specific species, so the genera was listed. The genera listings are separated from the species by a prefix of ZZC for Catfish or ZZS for Shark. By utilizing the prefixes in such a manner; these listings can be put at the end of the catalogue itself. In addition; there are two generic listings: one for catfish and one for sharks.

The methods used for this project have been varied as it was started by getting a base listing for each type (siluriforms and selachians). Initially Dr. Mark Sabaj Perez supplied the listing that he had put together from the site FishBase. The text used for the Siluriforms was Burgess, 1989, Atlas of Freshwater and Marine Catfish and Carl Ferraris, Jr.'s 2007 Checklist of Catfishes. The shark listing was made up using Castro's Sharks of North America, Compagno's Sharks of the World, Ebert's Sharks of the World, and Hamlett's Sharks, Skates, and Rays.

When obtaining information from the printed material; it was gone through page by page. When possible the index was used as a guide. The digital resources were gone through page by page as well. The genus+species listing was at first integrated into the catalogue one at a time. This process was very slow and demanding. Shortly a new method was devised in that a separate listing would be made so that only the genus+species was listed with the reference beside it. After the entire reference was gone through; then the references would be added to the catalogue. This process provided a speed up of going through references and

allowed for faster integration of those references into the catalogue. Below is an example of the format that was utilized to sort and add information to the catalogue.

EXAMPLE OF SPECIES AND REFERENCE

ICHTHYOLOGY PAPERS VOLUME 18-20			
001. SPECIMEN	002. SPECIMEN TYPE	003. REFERENCE	PAGE FOUND
ACANTHARHINUS FERDINANDINUS	SHARK	GARMAN, 1913, IP18 P2544, 528 PP	2750

ACANTHIAS VULGARIS	SHARK	SEDGWICK, 1932, IP20 P7187, 732 PP EIGENMANN & EIGENMANN, 1889, IP19 P7708, PP.	7318
ACANTHICUS GENIBARBIS	CATFISH	28-56	7726
ACANTHICUS HYSTRIX	CATFISH	REGAN, 1904, IP18 P4605, 200PP	4609

Another evolution in the methodology of going through the digital references (which is now carried over to the printed texts) is as before. The new way of adding the data is assigning it a specific color (purple), integrating it, doing a data sorting, and then integrate the new data in with the older data.

I make no assumptions when it comes to the references. The scientific nomenclature is included as it appears in the original text. A special note here is that throughout the history of a species; the nomenclature may of changed for the same species, but instead of only listing the current one; all the names are listed.

A note on what is termed as an Ichthyological Paper. As I was amassing this digital library; a way to quickly access certain papers was needed. A software program (PDFSam) was utilized to merge these individual papers and books together whereas essentially creating a book or volume from the various papers and books with a coversheet. This merging is thus termed ICHTHYOLOGICAL PAPER and assigned a number. The IP number is integrated into the reference in the catalogue.

An explanation for the proceeding is as follows:

Jardine, 1843, IP16 P6427, 291PP

By utilizing this method the entire reference can be located quickly not only in the bibliography, but for myself in my digital library.

The Bibliography itself is standardized with the addition of the IP#, the start page, and the end page so that the reference can be found quickly within the confines of my own digital library. The different types of references have also been color coded: Red for Printed texts (books), Green for Printed texts (copies of reprints directly from the authors themselves, and Blue for digital texts (PDF formatted).

The Catalogue itself is divided into several parchments. They are as follows.

Common Name, Genus/Species, Type, Base Reference, Base Reference Page Number, Printed References, Digital References, and finally OnlineResources.

When going through the references; if a species is not on the current catalogue listing, the reference is marked and set aside. While making out the list starting from IP#16; the exact page number was also listed where the data was located. Once the entire new data has been completed; the new species (it could be just spelled different by a single letter or space, but different from the existing data) are double checked for accuracy. By utilizing the newly incorporated specific page listing within the volume itself; the unlisted data was quickly identified and validated. The majority of the times it is my error as it was being copied. There have been instances when it could be an error on the printing. When possible; the authors were contacted to verify that it was an error in the printing. The printing error was then integrated into the catalogue with the correct entry in parenthesis.

The species that the paper was primarily about was not necessarily the only one listed as additionally any species that was mentioned within the context of the publication deserved mention. Especially any comparative specimens were included into the listing for that publication.

Local individuals not of a scientific background use common names to identify the local varieties of fish. These local names are as varied as the people that use them. While this bibliographical catalogue focuses on the scientific nomenclature; it also lists these species by the multiple common names used throughout the world. The common or vernacular names of species can and does quite often describe different specimens. An example is Mud Cat. It is a common name for *Ameiurus natalis*, but it is also used to describe a *Pylodictis olivaris*. By adding the common names associated to the different species; it can also be used in searching for references.

The entire catalogue is primarily separated into two types (catfish/shark), and assigned a color code. Red being Catfish and Green being Sharks. The format of the catalogue is alphabetized as to the genus and species without regards to type of fish it is. That way a researcher can quickly locate the species and theoretically can be more efficient for the research in question. On certain instances; the amount of information for a specific species (ie. CARCHARODON CARCHARIAS) is quite large. On that instance; the references are divided into multiple listings so that viewing the entire references was more complete and easier.

Any type of listing would be incomplete if the species of the past were not mentioned as well. These fossils give valuable insight into the evolutionary history of the modern extant varieties. Initially the extinct species were separated (or tried to), but as several fossil species were also categorized as extant so to simplify the catalogue; it was decided to list the fossil species into the generalized categories of shark or catfish. The initial shark listing came from Williams, 1999, and then went on to encompass the extinct listing from Shark References.com.

A species of animal contains a variety of disciplines. The capture of, handling, keeping, morphology, ecology, taxonomy as well as others combine to give a total picture of information. The information contained in this catalogue combines references to give the researcher just that.

Website Information: This project originally had spaces to allow for the incorporation of the information from the World Wide Web. The catalogue was going to have the website information copied and integrated into the current edition. As that format was very time consuming; an alternate formulation is hereby employed. The purpose of these websites is to have as many visitors to the site. The new formulation is incorporated into a single system with multiple columns to display which websites have what information on the listed species.

The following websites are ones that will be researched and annotated.

1. CATALOGUE OF FISHES
2. FISHBASE.ORG
3. INTERNATIONAL SHARK ATTACK FILE
4. PLANET CATFISH
5. SHARK REFERENCES
6. DIGIBONES
7. FISH CHANNEL
8. ANIMAL DIVERSITY WEB
9. FISHWATCH.GOV
10. SHARKS-WORLD.COM
11. FISHBOL.ORG
12. LIVEAQUARIA.COM
13. THETROPICAL TANK.CO.UK
14. ENCYCLOPEDIA OF LIFE
15. GLOBAL INVASIVE SPECIES DATABASE
16. IUCN RED LIST OF ENDANGERED SPECIES
17. CITIES
18. SILURIFORMES TREE OF LIFE
19. CHONDRICHTHYAN TREE OF LIFE
20. WILLIAMS 1999, A LISTING OF FOSSIL SHARKS AND RAYS OF THE WORLD

Each website incorporates different methodologies to look up information. For the online resources that had a listing; it was compared to the checklist and noted as such, but the other ones that required search criteria that was done by inputting the genus and noting the species that resulted from that search.

PRINTING OUT: This project has been formatted to fit on legal size paper. The catalogue itself and the bibliography is situated so as to allow binding along the top margins so as to view it horizontally and so that the information is flipped on the back of the page.

Unfortunately; not every printer can be tested, so the one that I have is a HP Laserjet. On my printout; the top and bottom margins are set at 1.5". This allows for binding as double-sided printing is the preferred method. Anyone else knows their own printer and the settings that are to their liking.

DISCLAIMER: ALTHOUGH THIS COMPILATION IS MY OWN WORK; IT HAD ASSISTANCE FROM AUTHORS THROUGHOUT THE AGES. I HAVE ATTEMPTED TO REFRAIN FROM DUPLICATING REFERENCES, BUT MISTAKES ARE INEVITABLE. IN THAT SPIRIT; I BEG FORGIVENESS FOR ANY MISTAKES THAT THE HUMAN SIDE OF ME HAS MADE, INCLUDING REFERENCE DUPLICATION.

Funding for this project, as well as, future supplementals was provided by the author himself without outside monetary assistance.

6. RESULTS & CONCLUSIONS

RESULTS: The results of this project have been a positive catalogue compilation of the varied species of catfish and sharks. The catalogue is a “living document” as it amasses several thousand references, but it is definitely not a complete one. This catalogue will be updated continually as new publications become available. As one can see; there are several more entries for each type than one can find in any one source. There are a number of extra listings that are either printing errors where the error could not be validated as such, or synonyms.

CONCLUSIONS: While researching and compiling this catalogue; it became apparant that there was a need for a complete set references for individual species. Therefore; it is necessary to combine references to get a complete picture of any one species of animal. This catalogue combines all facets of information for any one species. Updates to the catalogue are inevitable and will be made at irregular intervals.

WHAT I HAVE LEARNED: Learning and exploring the different aspects of catfish and sharks is what I have been interested in since I started my studies. While this catalogue listing looks like a simple bibliography for specific types of fish; it is so much more. A couple of things that I have learned from doing this project was that publishers/printers make unintentional mistakes. With such mass production of books it is no wonder that there are not more of them. Just like common names that are mostly local in origin; the scientific nomenclature is variable throughout the history of the species: ie. Ictalurus/Ameiurus/Pimelodus and the different spellings or variations of those names. I have learned that there are so much more specimens of catfish and sharks than what I was aware of. Sometimes my curiosity gets the better of me and I have to stop working on this project to investigate different and new species. One colleague mentioned in an e-mail that doing a project such as this was a gigantic undertaking and most individuals restrict project contents to a single family or even genus of fish. He was so correct in his assessment, but doing this project has enlightened me on so many levels. I now know more about the sharks and catfish specimens than ever before. This project is not over by any measure and will constantly be updated at irregular intervals.

7. AFTERWARDS

During the compilation of this project; every effort was made to correctly identify the varied species of catfishes and sharks. However since I am a human and there are the possibilities that I have made some errors. I would welcome any comments, critiques, or issues to be sent to me at the email address listed below.

In addition; if any publications would help me understand the different species any better, I would welcome those as well.

The future of this project continues with supplements as more and more documents, both printed and digital, are searched through. In addition other areas such as where the specimens can be found to study such as aquariums and natural history museums will be added. Ultimately an index will be in order to bring it all together.

As it was said before; this is a constantly updating document, a "LIVING DOCUMENT". The supplements will be posted as they develop.

James E. Burgess, 2017

10. CONTACT INFORMATION

My E-mail is as follows: catfishresinst@gmail.com

I would be honored to reply to those messages answering any questions, responding to any comments or critiques.

James E. Burgess, SSG(Ret)

Member of ResearchGate, PlanetCatfish, ASIH, and Academia

11. BIOGRAPHY

Figure 1: PICTURE TAKEN BY AUTHOR

James Eugene Burgess was born on March 26, 1961 in Bethesda, MD where he resided in Dickinson, MD until 1968. The family moved to San Angelo, Texas in 1968. James started having a passion for animals at a very young age where his house was filled with reptiles, birds, fish, as well as,

any other type of animal that he could get. Ichthyology came natural to him as he spent most of his free time either at the river fishing, or in his room reading. He grew up in modest surroundings. His upbringing caused him to be self-sufficient at a very early age consequently utilizing easily obtainable materials for his rudimentary scientific exploits. During his senior year at San Angelo Central High School; he completed his first extensive observations for ichthyology which he posted on ResearchGate in 2014. Along with the “Aquarium Observations” he performed his first removal of a catfish parasite which was later incorporated into the posted paper.

James continued his research throughout the years following high school and into college at Angelo State University.

Figure 2: PICTURE TAKEN BY CASSANDRA DORRIS AND USED BY PERMISSION

The Army presented educational opportunities so James joined the Texas Army National Guard in 1991. After Basic and Advanced Individual training; he transferred to the Kentucky Army National Guard in Bowling Green, Ky. He remained there until 1998 when his enlistment was up and feeling as though there was no future in it; he left the service only to return later that year to a Transportation Company in Bowling Green, Ky for about a year. He was then offered a promotion to go to a Field Artillery unit in Glasgow, Ky. He was then promoted from Specialist through to the rank of Staff Sergeant. The first deployment came up in 2003 when he was sent to Ft. Campbell for intensive training to be sent overseas, but it was called off after three months. The following year of 2004 his unit was called up again to be sent to Iraq in support of Iraqi Freedom. He was stationed around Baghdad International Airport for the first several months as the unit’s mailman, supply, and maintenance liason. The last four

months of that tour was spent at Abu Ghraib prison in the position of a prison guard. Christmas Eve 2005 found James home. In 2011 he was deployed as an individual soldier to northern Iraq by Tikrit going along with an infantry company as the senior Motor SGT. It was a short tour and he was home in the middle of December of 2011. That was his last deployment as he retired from the Kentucky Army National Guard in 2013.

He became, according to the Veteran's Administration, totally and permanently disabled and unemployable after he was terminated from Wal-Mart for being sick too much and missing too much time.

He then put more emphasis on his ichthyological studies.

He had written a computer program, and several ichthyological papers prior, but didn't entertain an avenue for displaying them. He was informed about the website ResearchGate by Dr. Whitehead of Australia when James requested his thesis comparing catfish and shark ampullae.

ResearchGate now has several of his papers and his computer program listed with additional research on the way.

James lives fifteen miles outside of Franklin, Ky with his wife of thirty five years. They have three adult children and six grandchildren.

He continues to study and learn with respects to the science of Ichthyology, catfish with an emphasis on *Ameiurus natalis* and different aspects and species of sharks.
