Diatoms (Bacillariophyta) of the Gulf of Mexico

David M. Krayesky, Esther Meave del Castillo, Eugenia Zamudio,
James N. Norris, and Suzanne Fredericq

The Bacillariophyta (Diatoms) represent a very large group of unicellular algae present in marine, freshwater, terrestrial, and aerial ecosystems. Although long studied in fossil and living environs, their diversity is still not completely known. Small-subunit ribosomal RNA (ssRNA) sequence data support the premise that the Bacillariophyta are a monophyletic group within the chromophyte or brown algal lineage (Medlin, Williams, and Sims 1993). More recently, Adl et al. (2005, 423) recognized 20 groups within the Chromalveolata, one of 6 clusters of eukaryotes that are considered to be evolutionarily related and represent the basic groups (or traditional kingdoms) in their nameless ranked higher-level classification.

The Chromalveolata are composed of: (1) the Alveolata (includes ciliates, dinoflagellates, and Apicomplexa); (2) the Stramenopiles (includes diatoms, Phaeophyceae [brown algae], many zoosporic fungi, and the opalinids, among others); and (3) the Haptophyta and Cryptophyceae. It has been argued that the Chromalveolata are derived from an alga, and that then some groups arose through plastid loss, or possibly they branched off before the appearance of plastids within the group. Plastid reduction as well as reacquisition has also occurred in some (Adl et al. 2005). It has been argued that the chromalveolates are derived from a single symbiosis of a phagotrophic heterotrophic eukaryote with a photosynthetic red algal eukaryote, and that the plastid was secondarily lost in several lineages (Adl et al. 2005).

As is the case for all taxa previously referred to as “Protists,” we have here followed a hierarchical system with-

Bacillariophyta (Diatoms). After Mangin 1908.

out formal rank designations such as class, subclass, super order, or order, as this approach is currently the preferred decision—primarily motivated by utility—to avoid the common problem of a single change causing a cascade of changes to the system (Adl et al. 2005).

At present there are over 250 genera of living diatoms, with 10,000–12,000 species recognized and an estimated diversity of 100,000–10,000,000 species (Round, Mann, and Crawford 1990, Norton, Melkonian, and Andersen

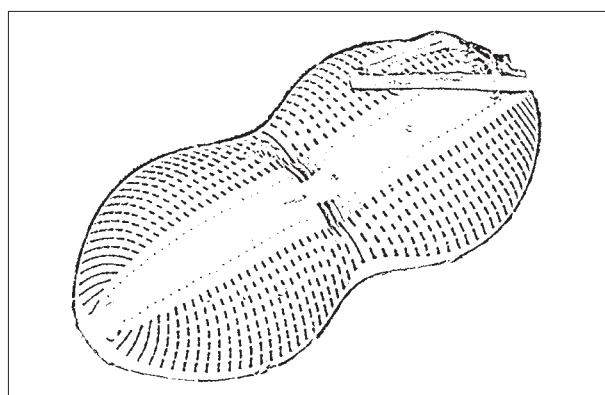

1996). Traditionally, diatoms have been classified into “centric” and “pennate” on the basis of pattern (radial organization versus bilateral organization), pattern center (ringlike annulus versus elongate sternum), and sexual reproduction (oogamy versus morphological isogamy), diatom shape/symmetry, and plastid structure and number (Round, Mann, and Crawford 1990). Molecular data show the centrics as a whole to be paraphyletic, but relationships between the principal groups, and whether particular groups are monophyletic or paraphyletic, is currently unclear (Adl et al. 2005); furthermore, several major clades are cryptic, with no or few morphological or life history traits that can be convincingly argued to be synapomorphies. In order to reflect the historical treatment of diatom taxonomy, we have opted for the conservative approach that follows the subdivision of the Bacillariophyta into the Bacillariophyceae (pennates), Fragilarophyceae (araphid pennates), and Coscinodiscophyceae (centrics; Round, Mann, and Crawford 1990). The more phylogenetically correct treatment (Adl et al. 2005) divides the Diatoms into Coscinodiscophytina and Bacillarioptina.

Diatoms are reported to be ubiquitous in all waters worldwide except for regions of extreme heat and salinity. Both planktonic and benthic taxa occur within the Bacillariophyta, as well as epipelagic, epipsammic, epilithic, epiphytic, and epizoic individuals/communities (Round, Mann, and Crawford 1990). Of great ecological and commercial significance, diatoms are a major component of the marine phytoplankton and represent the base of the food web for many marine organisms. Furthermore, marine diatoms, due to their abundance and productivity, are responsible for approximately 25% of the world's

carbon fixation contribution (Werner 1977, Tréguer et al. 1995). Commercially, diatomaceous earth (fossilized diatoms) has industrial uses, as it is made into abrasives and filtering aids. Recently, diatoms have been used as model organisms for biofuels, as they are triglyceride-rich, with triglycerides accounting for approximately half of their mass (Danielo 2005).

Since the treatment by Conger (1954) of the Diatoms in the Gulf of Mexico, many regional studies have been conducted (Curl 1959, Simmons and Thomas 1962, Wood 1963, Ivanov 1966, Saunders and Glenn 1969, Sullivan 1978, Sullivan 1981, Stowe 1982, Prasad 1987, Prasad, Nienow, and Livingston et al. 1990, Prasad, Fryxell, and Livingston 1993, Prasad and Livingston 1993, Lehman and Wood 1996, Prasad, Nienow, and Riddle 2001, Gallegos et al. 2004, Prasad and Livingston 2005, Prasad and Nienow 2006). A second checklist of the Bacillariophyta was accomplished by Conger et al. (1972), which was predominantly a compilation of names of taxa along with some information on the environmental implications of 14 species occurring in particular regions of the study area. This list reported over 700 species, including alphabetized intraspecific taxa, but did not indicate in which families the taxa belonged, nor how many families occurred throughout the Gulf of Mexico. In the past 35 years the systematics of the Bacillariophyta has changed significantly, and there has been the addition of species previously unreported from the Gulf of Mexico. The present study reports about 1000 diatom species, including previously reported species, updates the nomenclature of reported species names, and is the first attempt to group them into families for the region. As this chapter reports the biodiversity of a group that falls within the confines of botany, the species names and authors reported herein follow the rules of the International Code of Botanical Nomenclature (McNeill et al. 2006); author(s) of species names follow Brummitt and Powell (1992).

The checklist furnished here for Gulf of Mexico diatoms is in several ways unique to this volume. Rather than representing a thorough review of regional vouchers, it is a compilation of species putatively occurring in Gulf of Mexico waters. As such, we must acknowledge that not all records are equally verifiable or based upon accessible vouchers. For example, many of the records reported here are based on the work of Conger et al. (1972), a study that listed the known diversity of the group in the Gulf of Mexico up until that time. A large number of the species listed therein were based on personal identifications by the authors or were “compiled from old literature” (with

Bacillariophyta (Diatoms). Modified by F. Moretzsohn after a photograph from <http://www.ulpg.pt/adiac/pubdat/pubdat.html>

Bacillariophyta (Diatoms). After Mangin 1908.

ambiguity as to which was the case); none of these records included information on habitat and distribution and no reference was made to vouchers. Short of tracking down everything that could qualify as old literature and deducing from this which were new records, there is no way to verify the sources. With the lack of habitat and distributional information in that aforementioned major Gulf of Mexico summary, and our concern regarding possible overvaluation of reports from the Gulf of Mexico that should themselves require better documentation in years to come, we elected to not treat habitats and distributions to the same extent as in other chapters of this volume. Although a modern species nomenclator for the Bacillariophyta does exist, namely the Catalogue of the Fossil and Recent Genera and Species of Diatoms and their Synonyms (Van Landingham 1967, 1968, 1971, 1975, 1978a, 1978b, 1979), online sources such as Index Nominum Algarum (Silva 2006), AlgaeBase (Guiry and Guiry 2007), and the California Academy of Sciences Diatom Names (Fourtanier and Kocolek 2006) provide additional information on the diversity of this group. Therefore, these online sources are being used to confirm reported species as distinct.

We envision that taxonomic treatments, along with ecological (temporal and spatial), distributional accounts, as well as phylogenetic analyses will elucidate the composition of the Gulf of Mexico diatoms. The most tractable approach will be on a regional basis within the Gulf of Mexico. Toward such ends, our present effort provides a baseline of diatom taxa reported from the Gulf of Mexico for future workers.

Abbreviations

All abbreviations for Habitat-Biology used in this checklist are given with their definitions in the following. We realize that some benthic species are at certain points in time found in the water column and are regarded as tycho-planktonic. In the checklist, habitat data are reported under the ecological term(s) that best fits specimen collection information. The Habitat-Biology terms herein reflects the Habitat-Biology information as reported from Gulf of Mexico literature. Although diatoms can be epilithic (i.e., growing on a hard substratum—hsb), investigators have not focused on this habitat in the Gulf of Mexico.

The following terminology is used for this chapter's checklist. Ecological habitat: ben = benthic; plk = planktonic; epi = epibiotic. General depth/strata: bns = bay and nearshore; osp = oceanic surface and epipelagic. Substrate/biotic associations: sft = soft substrates (mud, sand, clay); hsb = hard substrate.

Acknowledgments

We thank Darryl Felder and Sherry Krayesky for their input on this checklist.

- ²⁰⁵ Reported as *Dactyliosolen mediterraneus* (H. Perag.) H. Perag.
- ²⁰⁶ Reported as *Melosira sulcata* (Ehrenb.) Kütz.
- ²⁰⁷ Reported as *Melosira sulcata* (Ehrenb.) Kütz.
- ²⁰⁸ Reported as *Melosira sulcata* (Ehrenb.) Kütz.
- ²⁰⁹ Reported as *Coscinodiscus moelleri* A. Schmidt.
- ²¹⁰ Reported as *Coscinodiscus moelleri* A. Schmidt.
- ²¹¹ Reported as *Guinardia blavyana* H. Perag.
- ²¹² Reported as *Rhizosolenia fragilissima* Bergon.
- ²¹³ Reported as *Rhizosolenia fragilissima* Bergon.
- ²¹⁴ Reported as *Rhizosolenia cylindrus* Cleve.
- ²¹⁵ Reported as *Rhizosolenia cylindrus* Cleve.
- ²¹⁶ Reported as *Rhizosolenia delicatula* Cleve.
- ²¹⁷ Reported as *Rhizosolenia delicatula* Cleve.
- ²¹⁸ Reported as *Rhizosolenia stolterfothii* H. Perag.
- ²¹⁹ Reported as *Rhizosolenia stolterfothii* H. Perag.
- ²²⁰ Reported as *Rhizosolenia robusta* G. Norman.
- ²²¹ Reported as *Rhizosolenia robusta* G. Norman.
- ²²² Reported as *Rhizosolenia alata* Brightw.
- ²²³ Reported as *Rhizosolenia alata* Brightw.
- ²²⁴ Reported as *Rhizosolenia obtusa* Hensen.
- ²²⁵ Reported as *Rhizosolenia calcar-avis* M. Schultze.
- ²²⁶ Reported as *Rhizosolenia calcar-avis* M. Schultze.
- ²²⁷ Reported as *Rhizosolenia styliformis* var. *latissima* Brightw.
- ²²⁸ Reported as *Schroederella delicatula* (H. Perag.) Pavill.
- ²²⁹ Reported as *Stephanodiscus dubius* Hustedt.
- ²³⁰ Reported as *Stephanodiscus dubius* Hustedt.
- ²³¹ Reported as *Cyclotella bodanica* Eulensteine ex Grunow.
- ²³² Reported as *Cyclotella comta* (Ehrenb.) Kütz.
- ²³³ Reported as *Cyclotella comta* (Ehrenb.) Kütz.
- ²³⁴ Reported as *Coscinodiscus trioculatus* F. J. R. Taylor.
- ²³⁵ Reported as *Coscinodiscus blandus* A. Schmidt.
- ²³⁶ Reported as *Coscinodiscus blandus* A. Schmidt.
- ²³⁷ Reported as *Thalassiosira polychorda* (Gran) Jörg.
- ²³⁸ Reported as *Coscinosira polychorda* (Gran) Gran.
- ²³⁹ Reported as *Thalassiosira decipiens* (Grunow) Jörg.
- ²⁴⁰ Reported as *Thalassiosira decipiens* (Grunow) Jörg.
- ²⁴¹ Reported as *Thalassiosira decipiens* (Grunow) Jörg.
- ²⁴² Reported as *Coscinodiscus lineatus* Ehrenb.
- ²⁴³ Reported as *Coscinodiscus lineatus* Ehrenb.

Checklist of diatoms (Bacillariophyta) from the Gulf of Mexico. (continued)

- ²⁴⁴ Reported as *Coscinosira mediterranea* Schröd.
- ²⁴⁵ Reported as *Thalassiosira floridana* (I. C. G. Cooper) Hasle.
- ²⁴⁶ Reported as *Micropodiscus oliveranus* (O'Meara) Grunow and *Actinocyclus bonatus* Castrac.
- ²⁴⁷ Reported as *Thalassiosira gravida* Cleve.
- ²⁴⁸ Reported as *Biddulphia smithii* (Ralfs) Van Heurck.
- ²⁴⁹ Reported as *Biddulphia smithii* (Ralfs) Van Heurck.
- ²⁵⁰ Reported as *Biddulphia aurita* (Lyngb.) Bréb. & Godey.
- ²⁵¹ Reported as *Biddulphia aurita* (Lyngb.) Bréb. & Godey.
- ²⁵² Reported as *Biddulphia longicurvis* Grev.
- ²⁵³ Reported as *Biddulphia longicurvis* Grev.
- ²⁵⁴ Reported as *Biddulphia mobiliensis* (Bailey) Grunow.
- ²⁵⁵ Reported as *Biddulphia regia* (Schultze) Ostenf.
- ²⁵⁶ Reported as *Biddulphia rhombus* (Ehrenb.) W. Sm.
- ²⁵⁷ Reported as *Biddulphia sinensis* Grev. and *Biddulphia chinensis* Grev.
- ²⁵⁸ Reported as *Biddulphia laevis* Ehrenb.
- ²⁵⁹ Reported as *Biddulphia reticulata* Roper.
- ²⁶⁰ Reported as *Asterionella glacialis* Castrac. and *Asterionella japonica* Cleve.
- ²⁶¹ Reported as *Asterionella japonica* Cleve.
- ²⁶² Reported as *Asterionella japonica* Cleve.
- ²⁶³ Reported as *Synedra gailloni* (Bory) Ehrenb.
- ²⁶⁴ Reported as *Synedra gailloni* (Bory) Ehrenb.
- ²⁶⁵ Reported as *Fragilaria gessneri* Hustedt.
- ²⁶⁶ Reported as *Fragilaria gessneri* Hustedt.
- ²⁶⁷ Reported as *Fragilaria virescens* Ralfs.
- ²⁶⁸ Reported as *Synedra laevigata* Grunow.
- ²⁶⁹ Reported as *Fragilaria atomus* Hustedt.
- ²⁷⁰ Reported as *Fragilaria schulzii* C. Brockmann.
- ²⁷¹ Reported as *Fragilaria brevistriata* Grunow.
- ²⁷² Reported as *Fragilaria brevistriata* Grunow.
- ²⁷³ Reported as *Opephora parva* (Grunow) Krasske.
- ²⁷⁴ Reported as *Opephora parva* (Grunow) Krasske.
- ²⁷⁵ Reported as *Fragilaria pinnata* Ehrenb.
- ²⁷⁶ Reported as *Fragilaria pinnata* Ehrenb.
- ²⁷⁷ Reported as *Fragilaria pinnata* Ehrenb.
- ²⁷⁸ Reported as *Synedra affinis* Kütz.
- ²⁷⁹ Reported as *Synedra affinis* Kütz.
- ²⁸⁰ Reported as *Synedra investiens* W. Sm.
- ²⁸¹ Reported as *Synedra acus* Kütz.
- ²⁸² Reported as *Synedra acus* Kütz.
- ²⁸³ Reported as *Licmophora abbreviata* C. Agardh.
- ²⁸⁴ Reported as *Licmophora abbreviata* C. Agardh.
- ²⁸⁵ Reported as *Licmophora abbreviata* C. Agardh.
- ²⁸⁶ Reported as *Licmophora abbreviata* C. Agardh.
- ²⁸⁷ Reported as *Coscinodiscus nitidus* W. Greg.
- ²⁸⁸ Reported as *Coscinodiscus nitidus* W. Greg.
- ²⁸⁹ Reported as *Rhaphoneis surirella* (Ehrenb.) Grunow.
- ²⁹⁰ Reported as *Thalassiothrix delicatula* Cupp.
- ²⁹¹ Reported as *Thalassiothrix delicatula* Cupp.
- ²⁹² Reported as *Thalassiothrix mediterranea* var. *pacifica* Cupp.
- ²⁹³ Reported as *Thalassiothrix mediterranea* var. *pacifica* Cupp.

(continued)

Checklist of diatoms (Bacillariophyta) from the Gulf of Mexico. (*continued*)

²⁹⁴ Reported as *Thalassiothrix frauenfeldii* (Grunow) Grunow in Cleve & Grunow.

²⁹⁵ Reported as *Thalassiothrix frauenfeldii* (Grunow) Grunow in Cleve & Grunow.

²⁹⁶ Reported as *Synedra hennedyana* W. Greg.

²⁹⁷ Reported as *Synedra hennedyana* W. Greg.

²⁹⁸ Reported as *Synedra undulata* (Bailey) W. Greg.

²⁹⁹ Reported as *Synedra undulata* (Bailey) W. Greg.
