Turner, I. M. 2012: The angiosperm taxa of R. H. Beddome with notes on the dates of publication of two serially published works. — *Ann. Bot. Fennici* 49: 289–304.

Richard Henry Beddome (1830–1911) is best known to botanists for his research on the ferns of India. However his contribution to angiosperm taxonomy was also significant, particularly through his *Flora Sylvatica for Southern India* and *Icones Plantarum Indiae Orientalis*. These works were published serially. The composition and publication dates of the parts of these works are reviewed here. A listing is presented of all angiosperm taxa described by Beddome and all new names and combinations he published. This includes some names not currently included in IPNI, or included in IPNI but with different authors or places of publication and later publication dates. An immediate nomenclatural repercussion of the research is confirmation that the recently published avowed substitute *Eugenia neogracilis* Mazine & Sobral for the Brazilian *Eugenia gracilis* O. Berg is superfluous as Berg's original publication predated that of *Eugenia gracilis* Bedd.

Introduction and background

Richard Henry Beddome (1830–1911) was an officer in the Indian Army in the days of British colonial rule. When the Forest Department of the Madras Presidency was formed in 1857, Beddome was employed as assistant to the first Conservator of Forests, Dr. Hugh Cleghorn. Beddome became Conservator when Cleghorn retired from the Department in 1860. A post he held until 1882. Beddome had strong interests in natural history which flourished as his army and forestry careers provided opportunities for collection and study. He made notable contributions in the fields of herpetology, malacology and pteridology, but his forestry post forced his attention on to higher plants, particularly trees. In this paper, I focus on his work on angiosperms — specifically the taxa

he described and other nomenclatural novelties. This consists largely of his publications on the flora of southern India including papers in the *Madras Journal of Literature and Science* (Beddome 1858a, 1858b, 1858c, 1861a, 1864a), and two in journals of the Linnean Society in London (Beddome 1865a, 1865b). There is also a list of trees from part of what were then called the Northern Circars. This was published in Cleghorn's *Trees and Gardens in South India* (Beddome 1861b) but was clearly in circulation before then as it was referred to by Elliot (1859) as a source for his *Flora Andhrica*. Beddome went on to produce a list of trees for the whole of the Madras Presidency (Beddome 1863). The Conservator of Forests was responsible for producing an annual published report on the Department's activities and expenditure for the Government of

Madras. Beddome was responsible for the setting up of the Madras herbarium and the development of a team of illustrators to produce botanical drawings. Notices of these botanical activities were included in the annual report, and for several years Beddome included plates of tree species including descriptions of new species (Beddome 1864b, 1865c, 1867a, 1867b, 1868), perhaps most importantly *Dipterocarpus indicus*. There were also two, lengthy, serially published works (Beddome 1868–1874, 1869–1874) which are dealt with in detail below. In his later years in India, he published accounts of the vegetation and flora of the Nilgiris (Beddome 1876, 1880). Beddome retired to Putney in London where he continued his work on ferns and was an enthusiastic gardener, publishing a series of papers on the plants in cultivation in the groups that he found particularly interesting (Beddome 1907, 1908a, 1908b).

The two major works on general taxonomy by Beddome are the *Icones Plantarum Indiae Orientalis* and *The Flora Sylvatica for Southern India*. These were both published serially in small parts consisting of text and plates, over roughly the same period of 1869–1874. The *Flora Sylvatica* included the *Forester's Manual of Botany for Southern India*, which is often cited as a separate publication but was distributed in parts under the same cover as the *Flora Sylvatica*. *Taxonomic Literature* (Stafleu & Cowan 1976) includes an analysis of dates of publication and make-up of the parts of *Flora Sylvatica*. There are some errors in this transcription. No analysis of the publication dates of the *Icones Plantarum* seems to be available. Given the large number of new species and new combinations published in these works, it is useful to review the publication dates of these works. A list of all angiosperm taxa described by Beddome and all new combinations and new names that he published is included. Names proposed by Beddome but validated by others are not included in the list. There are also some names that appear in IPNI attributed to Beddome that are isonyms or not novelties at all.

Publication dates

The exact dates of publication of the parts of Beddome's two important works on Indian

higher plants remain unknown. It seems reasonable to accept the year of publication of the parts as those printed on the original covers. However, for the purposes of establishing priority, I have also looked for more detailed evidence of the timing of publication. The dates presented are based on the copies of Beddome's works seen by me in London at the Royal Botanic Gardens Kew, Linnean Society, Natural History Museum and the British Library. Additionally the Proceedings of the Asiatic Society of Bengal published accounts of the society's regular meetings including information on donations and acquisitions to the society's library. Receipt of nearly all the parts of these two works by Beddome are noted.

The composition of the parts of the *Flora Sylvatica* and their publication dates were given by van Steenis-Kruseman and Stearn (1954) based on the copy in the Kew Library that has the original part covers bound in to the second volume, including annotations stating what material (plate numbers, pages of the *Forester's Manual* and its accompanying plates) was received in each part and the date (month and year) of arrival in most cases. Twenty-eight parts were issued, with all but the last having a year of publication printed on the part cover. A hiatus in the order of publication of the already complex output was caused by Beddome deferring publication of the Rubiaceae until after the family was published in Bentham and Hooker's *Genera Plantarum*. This is evident from the inclusion of an unnumbered page in the Kew copy, presumably issued at the end of Part 18, stating this as the case. The Rubiaceae were not issued until the last part, leading to a complex numbering system in the pages for the family as the material overran the gap in page numbers that had been left. The outline of publication dates for the *Flora Sylvatica* in *Taxonomic Literature* omits this delay, so the Rubiaceae section is said to have a publication date of 1872 rather than 1874. The contents of the parts and their publication dates are summarised in Appendix 1. The only parts for which no detailed evidence of date of publication has been found are 9 and 10. However there is no evidence that any parts were published out of order, so it seems reasonable to consider that these two parts appeared in the period July–September 1871.

Evidence for the composition and publication dates of the parts of the *Icones Plantarum* comes from similar sources to that for the *Flora Sylvatica*. There is a copy in the library of the Linnean Society that has the original part covers bound in the back. These have a year of publication printed on them. Two parts (4 and 8) have a white paper label pasted over the printed publisher's name and date, but the year is hand written on the label. The Kew copy does not have original part covers but the first page of each part is annotated with date of arrival and part contents. The latter are confirmed by copies in the Linnean Society and the Natural History Museum which are bound in part order, with text and plates mixed rather than with the text and plates in separate running order. These data are summarised in Appendix 2. The evidence from both Kew and Calcutta indicates that parts 10–15 of the *Icones* were not received until March–April 1874. However Beddome cites in detail some of the species published in the later parts of the *Icones* in the *Flora Sylvatica*, so perhaps the *Icones* was published in Madras as per the cover dates, but distribution was delayed.

Beddome's new angiosperm taxa

Names marked with an asterisk (*) are not listed in IPNI. Those marked with a cross (†) represent an earlier publication than currently listed in IPNI.

Sinningia × gesnerioides Bedd., J. Roy. Hort. Soc. 33: 97. 1908. — Replaced synonym: *Gloxinia × gesnerioides* G. Nicholson, Ill. Dict. Gard. 2: 76, fig. 120. 1885 [Apr. 1885 *vel ante*] ('*gesnerioides*'), *nom. illegit.*, non *G. gesnerioides* Lem., Fl. des Serres, Ser. I, 2 t. 3. 1846.

Lauraceae

Cinnamomum zeylanicum var. *wightii* (Meissn.) Bedd., Fl. Sylv. S. India t. 262. 1872 (Aug. 1872). — BASIONYM: *Cinnamomum wightii* Meissn., Prodr. 15(1): 11. 1864.

Leguminosae

**Piliostigma racemosum* (Lam.) Bedd., Trees Madras 25. 1863. — BASIONYM: *Bauhinia racemosum* Lam., Encyl. 1(2): 390. 1785.

Lythraceae

Woodfordia tomentosa Bedd., Fl. Sylv. S. India [Forester's Man. Bot.] cxvii, t. 14, fig. 4. 1872 [Jun. 1872 *vel ante*], *nom. illegit.* — Presumably Beddome intended to transfer *Grislea tomentosa* Roxb. to *Woodfordia*, but *G. tomentosa* is a superfluous renaming of *Lythrum fruticosum* L. The other synonym cited by Beddome, *Woodfordia floribunda* Salisb., is similarly superfluous. *Woodfordia tomentosa* Bedd. is therefore also superfluous and illegitimate.

Malvaceae

Melochia velutina (DC.) Bedd., Fl. Sylv. S. India [Forester's Man. Bot.] xxxv. 1871 [Jul. 1871 *vel ante*]. — BASIONYM: *Riedleia velutina* DC., Prodr. 1: 491. 1824.

Oleaceae

Chionanthus intermedius (Wight) Bedd., Trees Madras 44. 1863 ('*intermedia*'). — BASIONYM: *Linociera intermedia* Wight, Icon. Pl. Ind. Orient. 4(1): 12, t. 1245. 1848. — Ferdinand von Mueller published the combination *Chionanthus intermedius* (Wight) F. Muell. [Fragm. 3: 140. 1863] in March 1863. No evidence for an accurate date of publication of Beddome's *Trees of Madras* has been found so it is not possible to confirm which is the earlier of these two publications.

†*Chionanthus malabaricus* (Wall. ex G. Don) Bedd., Trees Madras 44. 1863 ('*malabarica*'). — BASIONYM: *Linociera malabarica* Wall. ex G. Don, Gen. Hist. 4: 53. 1837.

Orchidaceae

**Cnemidia nervosa* (Wight) Bedd. in Grigg, Man. Nilagiri Distr. 122. 1880. — BASIONYM: *Govindooia nervosa* Wight, Icon. Pl. Ind. Orient. 6: 34, t. 2090. 1853.

Appendix 1. Details of publication of *Flora Sylvatica for Southern India* by R.H. Beddome. Listed are the published parts and their contents. The contents include the plates with descriptions (the verso numbered the same as the plate on the recto) that made up the main part of the *Flora Sylvatica* (here given as the first set of arabic numerals) and the pages of the *Forester's Manual of Botany* (using roman numerals including an extension in arabic numerals in one case) and the accompanying plates (here given as arabic numerals preceded by t.). The cover year is the year printed on the part covers. The earliest confirmed date represents the earliest date of publication established from a range of sources where ^a = dates given in the Report of the Conservator of Forests, for the official year 1868–1869, ^b = dates noted on the covers of parts in the RBG Kew Library copy, and ^c = dates of monthly meetings of the Royal Asiatic Society of Bengal where receipt of parts by the society's library was reported in the published Proceedings.
