

# Features of MRP Live in S/4HANA

Prasath E

October 02, 2020

# Target Audience

---

- Project manager
- SCM Consultant
- SME's
- SAP PP beginners
- Business owner's

# Contents

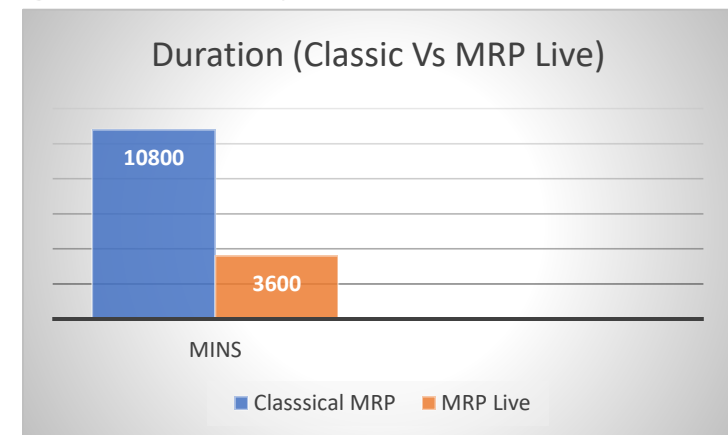

---

- Technical changes in MRP Live
- Optimization of MRP Run time duration
- Flexible Source determination
- Fiori App for MRP Live

# Features of MRP Live (DB changes)

- Many calculations in MRP Live are implemented in SQLScript/CDS views/AMDPs running on the database server as opposed to classic ABAP code, which is performed on the application server. Enhancements or BAdI implementations of the classic MRP run does not work with MRP Live if the material is supported/planned within MRP Live.
- MRP Live can force materials into classic MRP if materials use a setup which is not supported in MRP live
- The simplified data model that comes with SAP S/4HANA has played a big role in achieving this end. The underlying SAP HANA database eliminates many of the tables otherwise needed to facilitate lookups and reporting with traditional databases. Running in memory, SAP S/4HANA Live also completes computational tasks in a fraction of the time.

# Features of MRP Live (DB changes)

- A new set of AMDP BAdIs will be available for MRP Live from SAP S/4HANA on-premise edition 1603. BAdI implementations of the classic MRP have to be translated into AMDP.
- In the classic Business Suite, reports RMMDVM10 and RMMDVM20 made a first setup of planning file entries and checked planning file consistency for operative planning. In SAP S/4HANA, run report PPH\_SETUP\_MRPRECORDS instead.

Planning File	
Classic MRP	MRP Live
RMMDVM20	PPH_SETUP_MRPRECORDS
RMMDVM20	
RMMDVL10	PPH_SETUP_MRPRECORDS_SIMU
RMMDVL20	

# Features of MRP Live (DB changes)

---

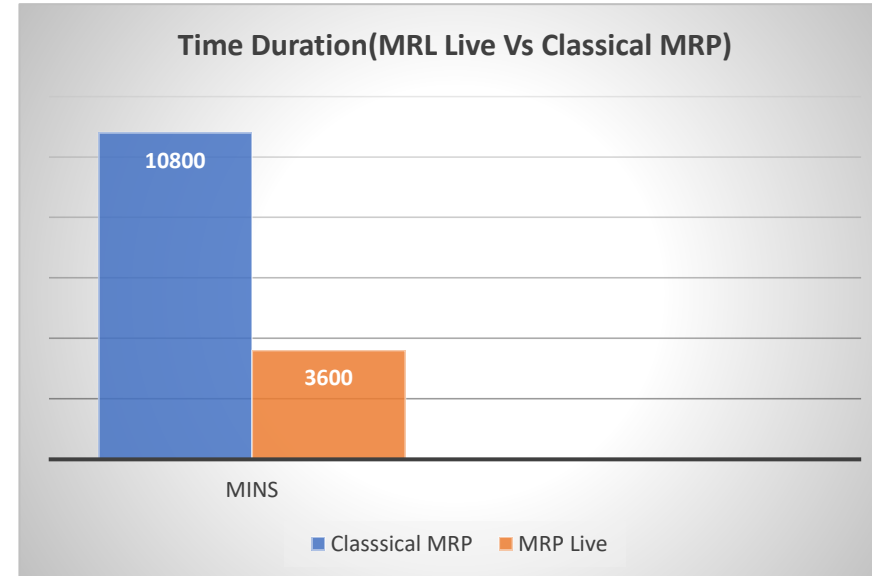

- The original planning files MDVM/MDVL and DBVM/DBVL no longer exist. They were replaced by the new planning file PPH\_DBVM.
- If your custom code creates planning file entries directly by updating or inserting into tables MDVM, MDVL, DBVM, or DBVL, then you have to adapt the custom code and call function module DISPSATZ\_ERSTELLEN instead. If your custom code only reads from the tables DBVM or DBVL, no adaptation is necessary. Queries from table DBVM or DBVL will be redirected to the new planning file PPH\_DBVM by compatibility views. See note 2227059.
- Planning Horizon restriction

# Features of MRP Live (Supply chain)

- Faster reaction to demand changes reduces the risk of stock-outs and means that you can reduce safety stocks
- The planning of a selected material in a selected location and its supplying locations and the components in the production location or locations, multilevel across the complete supply chain.

# Features of MRP Live (Supply chain)

- This T code will have option know the material which are planned in Classical MRP and MRP Live also if any Issue with any material can be fixed through this t code
- MD\_MRP\_MATERIAL\_INFO

Material	Plant	MRP Controller	Procurement type	to
	0001			

Only Materials with Messages

# Features of MRP Live (Supply chain)

- Influencing the parallelization of MRP Live in Hana (PPHMRPSET)
- The definition of the planning scope is more flexible. MRP Live allows you to plan a set of materials with all components, materials for which a certain production planner is responsible, or one material across all plants ([Screen -2](#))
- If a material is transferred from one plant to another then the stock-transfer requirement is not known in the supplying plant until after the material has been planned in the receiving plant. MRP Live determines the sequence in which materials have to be planned across several plants. ([Screen-3](#) & [Screen-4](#))
- MRP Live is a prerequisite for the future production planning and detailed scheduling PP/DS solution in SAP S/4HANA.

# Features of MRP Live(Optimized Sourcing)

- Sourcing priority has been optimized
- MRP Live always creates delivery schedule lines for externally procured material with valid delivery schedules and it creates purchase requisitions for all other externally procured material
- External source of supply determination logic at generic article level and regular vendor determination logic.
- The simplified data model that comes with SAP S/4HANA has played a big role in achieving this end. The underlying SAP HANA database eliminates many of the tables otherwise needed to facilitate lookups and reporting with traditional databases. Running in memory, SAP S/4HANA Live also completes computational tasks in a fraction of the time.
- One concrete advantage of this setup is much faster materials requirements planning (MRP)

# Fiori Apps of MRP Live

---

- With this app you can create and schedule a job for executing your MRP runs.
- To automate the planning process, the MRP run is carried out on a regular basis so you can use this app to create a job that performs this task for you; reducing your workload by running this task smoothly in the background.
- During the MRP run, the system checks whether current material demand can be covered by current inventory and expected material receipts.

# Fiori Apps of MRP

The screenshot displays the SAP Fiori Manufacturing / Operations dashboard. The top navigation bar includes the SAP logo, a user profile icon, and a 'Home' dropdown menu. Below the navigation bar, there are several tabs: 'Manufacturing / Operations', 'Production Operations', 'Inventory', 'MRP Material', 'Production Control Management', and 'Quality Management'. The main content area is a grid of app tiles:

- Monitor Material Coverage Net Segments** (Yellow highlight)
- Monitor Internal Requirements** (Yellow highlight)
- Monitor External Requirements** (Yellow highlight)
- Display MRP Key Figures** (Yellow highlight)
- Display MRP Material Issues** (Yellow highlight) with a counter showing 0 Materials with Issues
- Spool Request**
- Monitor Material Coverage Net Segments** (Duplicate)
- Manage Change Requests - MRP All**
- Material where used list in BOMs where used list, hier...**
- Excess Component Consumption** with a 'now' refresh button and a small data visualization
- Manage Buffer Levels** with a counter showing 0 Buffers
- Display Stock/Requirement MD04**
- REM Confirmation**

# Limitations in MRP Live

---

- Restrictions for lot-sizing procedures (Refer KBA 1914010)
  - Reorder point planning with period or cost-based lot-sizing procedures not supported.
  - Cost-based lot-sizing procedures such as the Groff reorder procedure or part-period balancing are not supported in MRP Live on HANA. MRP Live calls the classic MRP procedures to plan materials with cost-based lot-sizing procedures.
  - Overlapping in lot-sizing procedures is not supported. MRP Live calls the classic MRP procedures to plan materials with overlapping defined in lot-sizing procedures.
  - Optimum lot-sizing procedures are not supported. MRP Live calls the classic MRP procedures to plan materials with optimum lot-sizing procedures.
- MRP Live on HANA does not support parameter effectivity.
- MRP Live does not write MRP List (MD05).
- Multi-level, make-to-order planning (transaction MD50) is not optimized for HANA.
- Individual project planning (transaction MD51) is not optimized for HANA

# Road Map on MRP

Innovations	Product	Planned for
Simulate the impact of master data changes on production planning with predictive material and resource planning (on premise)	SAP S/4HANA	2022
Advanced variant configuration - Loose coupling	SAP S/4HANA	2021
Enable supplier collaboration in a demand-driven environment through demand prediction (on premise)	SAP S/4HANA	2021
Advanced variant configuration - enabling further scenario and modelling	SAP S/4HANA	Q4 2020
Reduce data maintenance efforts by assigning a default material requirements planning (MRP) area in the material master when posting materials for storage locations (on premise delivery)	SAP S/4HANA	Q4 2020
Advance the SAP Fiori apps for predictive material requirements planning (on premise)	SAP S/4HANA	Q4 2020
Deliver flexible integration by OData API for batch master records (create, update, delete)	SAP S/4HANA	Q4 2020
