FORWARD. FOR YOU.

Graduate Medical Education Annual Report

2019-2020

Message from the Chair

2020 marks the 50th Anniversary of SIU School of Medicine. Our first residents matriculated 2 years after the SOM was founded. 2019-2020 started out as many other academic years: making plans to celebrate our anniversary, adapting and rising to the standards expected by our accreditation bodies and patient safety goals, educating and developing learners and continuing in our journey to nurture and support our learners and each other. The advent of COVID-19 and the killing of George Floyd required us to re-focus our energies and reexamine our priorities. In that spirit, The Graduate Medical Education Committee (GMEC) rearticulated its SIU SOM GME Institutional Mission and Aims.

SIU School of Medicine was established in 1970 to optimize the health of the people of central and southern Illinois through education, patient care, research and service to the community. For 50 years SIU has emphasized teaching and achieved national recognition as an innovator in medical education.

Our institutional aim is to train physicians in a variety of specialties who are well equipped to practice in small urban and rural communities. Our values, as articulated in the 2020-2025 SIU SOM Strategic plan, are that we:

- are committed to an environment of discovery in which innovation, scientific inquiry, application of knowledge and creative professional achievement flourish.
- are committed to excellence and continuous improvement in all we do.
- collaborate and partner with the community.
- strive to be a just, fair, unbiased, and anti-racist organization.
- strive for equity in our relationships, hiring practices, teaching, research, access to care, delivery of care and partnerships.
- create compassionate and healing environments for all.

Graduates of SIU residency and fellowship programs will be confident, caring and passionate physicians who will succeed and carry our values, and our commitment to social accountability, wherever they choose to practice.

Our programs rose to the challenges presented by COVID-19 with dedication, resilience and educational creativity. Faculty, staff and learners adapted quickly to virtual opportunities for education and patient care. During the shutdown and incremental reopening of outpatient clinics, residents and fellows became early and enthusiastic telehealth adopters. Through April and May, over 40% of SIU outpatient care was delivered via telehealth. We continue to do relevant work and maintain strong relationships with our hospital partners. For the 5th consecutive year, SIU received ACGME Institutional Accreditation with no citations. This year we received ACGME approval for the Alton Family and Community Medicine Residency and welcomed Alton Memorial Hospital and Southern Illinois Healthcare Foundation as our newest affiliated training sites. Recruitment is underway and the first residents will matriculate in July 2021.

In this spirit, I proudly present the 2019-2020 GME Annual Report.

Kau Drogst nD

Karen Broquet, MD, MHPE Associate Dean for Graduate Medical Education Chair, GMEC

The GMEC is accountable for advising and monitoring all aspects of residency education in a manner to meet the needs of the residents, programs and hospitals as well as fully comply with the regulations and directions of the Accreditation Council for Graduate Medical Education (ACGME) and the Residency Review Committees. A list of GMEC members for the 2019-2020 academic year is included below.

GMEC Annual Institutional Goals

Goal 1

Establish and implement a process to verify residents' competency to perform procedures without direct supervision (Carry over from 2018-2019)

For bedside procedures, it has become an ACGME requirement and Clinical Learning Environment Review (CLER) expectation that programs have a process for their Clinical Competency Committee (CCC) to assess and document any individual resident's achievement of competence to perform a specific procedure without direct supervision (procedural autonomy), and to ensure that residents who have been granted procedural autonomy know when they must involve their attending or senior resident (patient acuity, etc.). We are also expected to establish a mechanism for the clinical care team to be able to verify the level of procedural autonomy for an individual resident. Work toward this goal was interrupted by COVID and has recently resumed. The GMEC Supervision Policy was revised to further delineate these expectations. Templates and How to Guide are being developed to help programs standardize their process. Memorial Health System hospitals are in the process of adopting a new provider credentialing platform. We hope to pilot the use of this platform to make the information available to clinical care teams.

Goal 2

Improve standard setting, oversight and supervision/monitoring of high risk transitions of care (TOC) (Carry over from 2018-2019)

SIU GME programs have a well-established set of content and communication standards for transitions of care. This goal was established to focus on TOC settings with a higher risk for loss of information. The GMEC Transitions of Care Policy was revised to more clearly delineate TOC responsibilities and serve as an educational tool. Each program was charged with identifying their highest risk TOC, identifying areas for improvement and implementing changes via one or more PDSA cycles. Work toward this goal was interrupted by COVID. Our target date for programs to complete their TOC PDSA findings has been moved back to late 2020.

Goal 3

Provide programs with historical data on trainee composition and provide education to GMEC on the holistic recruitment of candidates who are Underrepresented in Medicine (URM).

GMEC has historically set far reaching, multi-year goals as part of its Annual Institutional Review (AIR) process. We formulated these concrete goals to ensure that program directors have the needed vocabulary and context as we progress on our ongoing journey toward an inclusive and diverse training environment. These activities both occurred in February of 2020. Although the journey toward equity and inclusivity continues, this particular AIR goal was retired as having been met.

In 2019, the ACGME established a common standard for all specialties to assess program success in preparing their graduates for successful Board Certification:

- The program's aggregate pass rate of those taking the examination for the first time must be higher than the bottom fifth percentile of programs in that specialty.
- Any program whose graduates have achieved an 80 percent pass rate will have met this requirement, no matter the percentile rank of the program for pass rate in that specialty.

In addition to first-time pass rates, the ACGME recognizes that ultimate board certification is a valuable parameter of program quality. Graduates are eligible for initial certification for up to seven years from completion of residency. Therefore, programs report board certification status for the cohort of board-eligible residents that graduated seven years earlier. (ACGME will eventually calculate a rolling three-year average of the ultimate board certification rate and monitor it. They have not, as yet, established a minimum standard for ultimate certification.)

We do not have access to our programs' percentile rankings in their specialty. The table contains three year rolling pass rate for first time takers and the ultimate certification rate for 2012-2013 graduates.

COVID-19

At the onset of the pandemic, we developed an SIU GME Redeployment Plan to provide the framework and allowable parameters in the event the volume of COVID patients required residents to be externally redeployed to fill clinical needs outside of their specialty. Resident functional levels and capabilities were established and supervisory requirements were outlined. Thankfully, we have not had to implement the Redeployment Plan. SIU Residents and Fellows were instrumental within their programs in meeting patient care and community needs as the Sars-CoV-2 pandemic unfolded. Pulmonary Disease and Critical Care Medicine fellows began assisting with preparations for the pandemic prior to the first case in Springfield, helping to create, implement and update best practice protocols for both patient care and staff safety, and have been continuously involved in direct patient care. Infectious Disease Fellows assisted with triage

before COVID testing was widely available and have provided vital consultation to hospitalist services regarding clinical management. They have been instrumental in developing protocols and guidelines for testing, infection control and antibiotic stewardship. Internal Medicine residents participated in the care of COVID patients indirectly by supporting attending physicians in order entry, family and nurse communication and note preparation. Carbondale, Quincy and Springfield Family Medicine residents provided COVID screening and testing. Springfield and Decatur Family Medicine residents helped provide care for patients in the COVID unit at Memorial Medical Center and Decatur Memorial Hospital. Sports Medicine fellows in Carbondale and Quincy played an integral role in developing COVID protocols for athletes at local high schools and community colleges.

Over the summer, program directors were asked to reflect on the most valuable thing they learned about SIU SOM from the COVID experience. A number of common themes emerged:

- We are a resilient, adaptive community
- SIU has effective relationships with institutions and organizations throughout the community
- We developed a new appreciation for the quality of our SIU SOM Leadership Team
- Clear and open lines of communication are invaluable
- We embraced Telehealth and will continue to incorporate
- We have been creative with technology, the use of limited physical space and opportunities to collaborate locally and nationally to maintain clinical care and education - and still have much to learn
- We gained a heightened awareness of health care inequity
- We developed a new appreciation for the importance of a disaster preparedness plan for clinical care, education, well-being and the financial viability of the institution

occasion during the early months of the pandemic. Excerpts include:

We have a cohesive team and when things become difficult, everyone is willing to step up and pitch in.

Residents did it all - they helped with COVID testing....they provided inpatient COVID care to patients, they saw patients in the office and adapted to PPE needs to provide safe care, and they quickly learned and provided telemedicine care to patients all while also continuing their education and helping with our new virtual educational platform. And now they are ready to start our Virtual Recruitment with new and innovative ideas including leading us in our social media outreach! As a program director I could not be more proud of all that our residents have done.

This pandemic is still not a closed chapter in our lives, but it has already unearthed an unknown potential in everyone to rise to the challenge, and shown the hidden virtues in them, such as resilience, camaraderie, and human compassion.

COVID-19

Program directors described the myriad of ways in which trainees, faculty and staff rose to the

CLER: Clinical Learning Environment Review

The ACGME Clinical Learning Environment Review (CLER) program was developed to increase the integration of GME into quality and patient safety endeavors at clinical teaching sites. In late 2019 the ACGME introduced CLER Version 2.0, which significantly revised and expanded the CLER Focus Areas, sub-areas (called pathways) and the individual properties or behaviors that CLER site visitors use to assess GME learner and faculty engagement within our hospitals' learning environment.

Current CLER Focus Areas are:

- Patient Safety
- Health Care Quality
- Teaming
- Supervision
- Well-Being
- Professionalism

There are two significant changes that deserve mention. First is the addition of a Focus Area called Teaming, with multiple properties surrounding interprofessional learning, performance and patient engagement. Teaming replaces the previous Focus Area called Care Transitions; the properties from Care Transitions were either moved into the Common Program Requirements or redistributed as properties of the other five CLER Focus Areas.

Second is the inclusion of attending physicians in multiple expectations regarding transitions of care, participation in patient safety investigations, and both literacy and engagement in Quality Improvement and elimination of Health Care Disparities. Previously, the standards only included residents and fellows.

Psychiatry	95%	95%	95%	100%
Pulmonary Disease	60%	100%	80%	100%
Radiology	100%	100%	100%	100%
Surgery	94%	94%	72%	100%
Urology	89%	100%	100%	100%
Vascular	80%	80%	80%	100%
All Programs/Institution	86%	93%	82%	97%

Other changes include an increase in:

- Emphasis on interprofessional learning and work
- Oversight of faculty supervision of learner TOCs
- Onus on clinical sites for education, oversight and infrastructure support for
- Identifying and eliminating healthcare disparities
- Teaming

CLER Version 2.0 frames each of the pathways and properties from the health system's perspective, recognizing that health care organizations create and are therefore primarily responsible for the clinical learning environment (CLE). This focus reinforces the importance of the interface between graduate medical education and the hospitals, medical centers, and ambulatory sites that serve as CLEs.

Although the focus of CLER is GME learning environments, these standards represent evolving consensus items from the National Collaborative for Improving the Clinical Learning Environment (NCICLE), which represents every major organization involved in hospital or medical education accreditation and patient care delivery. As such, we can expect to see growing concordance in CLE standards across ACGME, LCME, Joint Commission, etc. For the time being, the ACGME is only CLER reviewing Springfield hospitals, but SIU is responsible for ensuring engagement of these principles at all of our teaching sites. SIU's last CLER visit was to Memorial Medical Center in 2018. ACGME suspended CLER visits during the early months of COVID. They have resumed virtually.

CLER: Clinical Learning Environment Review

• Level of detail and specificity for oversight of supervision and verification of level of procedural supervision required for individual residents, and to maintain information systems to make this information available to nurses and other clinical care team members. (See AIR Goal #1)

Quality Improvement Poster Symposium and Competition

Despite COVID restrictions, the SIU Graduate Medical Education Committee presented the 4th Annual SIU SOM Quality Improvement Poster Competition

virtually on April 8, 2020, with funding for awards provided by the Memorial Medical Center Foundation.

- Physician Burnout, Depression & Substance Misuse: Prevention, Recognition & Assistance
- Principles of Risk Management
- Professionalism: Patient Confidentiality, Physician-Patient Boundaries, E-Professionalism, Inclusion & Respect
- Supervision

Equity, Diversity, and Inclusion

The emphasis on equity, diversity, and inclusion within graduate medical education has been brought to the forefront over the past several years. The ACGME has several Common Program Requirements pertaining to equity, diversity, and inclusion within GME training programs. This is reflected in a sampling of the following requirements:

- Section I.C. focuses on recruitment and retention of a diverse and inclusive workforce.
- Section V. addresses changing the collection of data regarding board pass rates from first time pass rates to ultimate board certification rates as a quality measure.
- Requirement VI.B.6. states that programs and Sponsoring Institutions must provide a professional, and respectful environment free from discrimination, harassment, mistreatment, abuse, or coercion.

During this academic year, the following steps were taken to put more focus on EDI at SIU School of Medicine:

- The School committed to striving to be an antiracist institution, establishing the Antiracism Taskforce: "We strive to be a just, fair, unbiased, and anti-racist organization." This core value was published with the 2020-2025 strategic plan.
- An institutional goal in 2019-2020 was to provide education to our GME program leadership on holistic review & recruitment of URM candidates. Data was provided to the training programs on their trainee composition.
- The Office of Graduate Medical Education works in partnership with the Associate Dean of Equity, Diversity, & Inclusion, Dr. Wendi Wills El-Amin, to educate and advocate within the GME community to expand the OEDI's outreach and to make trainees aware of their available resources to promote inclusiveness within the school.
 - The OEDI has several affinity groups and events that are open to the SIU GME Community: Alliance for Women in Medicine and Science, Global Health Program, Gay and Lesbian Medical Association, American Medical Women's Association, and a Black Lives Matter March and Townhall were held in June.
 - The House Staff Board will work with the OEDI in identifying an equity project to focus on next academic year.
 - There are many GME leaders and residents involved with the Equity Ambassador Program, which is a key multi-year longitudinal initiative that integrates a participatory research approach for building an antiracist institution. The purpose of this project is to actively engage with members of our community to critically reflect and activate change. Equity Ambassadors are key representatives identified through each department who share relevant information, lead difficult conversations, and increase departmental accountability around equitable environments.

Physician wellness has been a focus of the GMEC for many years at SIU School of Medicine. Resident, fellow, and faculty wellness gained a new level of importance this year with the high demands and challenges faced as a result of the COVID-19 pandemic. Here is a sampling of how our training programs practiced wellness throughout the past year. Please note that all of the featured activities on this page occurred prior to the pandemic.

Wellness

House Staff Board of Directors

The House Staff Board of Directors (HSBOD) is a group of residents that meets monthly to address issues pertaining to residency and the relationship residents have with each hospital and the School of Medicine. Each residency program nominates a primary and alternate delegate to represent them in the HSBOD. While only the representatives are able to vote, every resident is welcome to sit in on meetings.

Each year the board reviews the ACGME mid-year and end-of-year surveys to determine what changes may need to be made to improve the learning environment in Springfield. This information has proven useful in addressing the concerns of our residents and we have seen improvements in both the ACGME and SIU surveys.

COVID-19 has been the overarching theme of this academic year as we began July in the middle of the pandemic and a state-wide shutdown. SIU has done a tremendous job enacting policies to keep the residents safe and in good health during this time. Together with the hospitals the school has been receptive to feedback from the house staff and kept the wellbeing of its trainees at the forefront of coronavirus protection measures.

Over the past year we have continued our work with the Resident Resource Fund and annually have awarded approximately \$2500 to residents to help them manage expenses related to conference attendance, away rotations, research, and educational materials.

The HSBOD has always assisted new incoming residents with their institutional orientation, but this year was a little different with everything being virtual. As small gatherings become safer and we develop a better understanding of the virus we look forward to sponsoring more in-person resident events and continue to foster the culture of openness and camaraderie of SIU. Over the past several years I have been proud to work as part of the HSBOD and look forward to continuing to work this year on bettering the learning climate at SIU for all residents.

Breck Jones, MD Neurosurgery, PGY6 President, House Staff Board of Directors

The ACGME Common Program Requirements state that all training programs require a lead administrator to manage the operations of the program and liaise with learners, faculty, staff, and the ACGME. Individuals in this role are recognized by the ACGME as "program coordinators". A coordinator is a "member of the leadership team and is critical to the success of the program". A coordinator is expected to have skills in leadership and personnel management. They assist the program director in meeting accreditation requirements, educational programming, and supporting the trainees.

At SIU School of Medicine, these job titles vary, including Medical Education Program Coordinator, Medical Education Program Specialist, or the staff member might have a dual role with a title in the Office Support Series. No matter the civil service classification, these staff members are expected by the ACGME to fulfill the same job responsibilities in terms of accreditation. Program Coordinators at SIUSOM are not supervised centrally within the Office of Graduate Medical Education (OGME), so engagement in professional development and training requires a great deal of interdepartmental teamwork. This section is to recognize the tireless commitment and work put forth every day by the program coordinators at SIU School of Medicine. The institution is grateful for their dedication and partnership.

Resources

Melissa Smock, General Surgery Residency Program Coordinator, was chosen as the institution's 2019 employee of the year. This award is open to all civil service and principal administrative employees at SIUSOM. The recipient of this award performs the responsibilities of their position in an exemplary manner, shows growth, takes initiative, uses sound judgement, and projects a positive attitude. Melissa has been the General Surgery Coordinator for over 1 year and has worked at the School for 14 years.

Resources

Jennifer Rodgers, MS, C-TAGME, Director of Graduate Medical Education, was chosen as the institution's 2019 supervisor of the year. This award is open to all supervisors at SIUSOM. The recipient of this award must have made an outstanding contribution in a supervisory capacity to the organization. Jennifer has worked in the GME office and for the School for 10 years.

Awards Corner

2020 Parker J. Palmer Courage to Lead Award - ACGME

Karen E. Broquet, MD, MHPE, was chosen by the ACGME to be a recipient of the Courage to Lead Award. This national award honors "designated institutional officials (DIO) who have demonstrated excellence in overseeing graduate medical education programs at their Sponsoring Institutions." Dr. Broquet was presented with this prestigious award at the annual international ACGME meeting held in San Diego, CA, in March 2020. Dr. Broquet has been the Associate Dean for GME for 19 years and has worked for the School for 32 years.

2020 SIU School of Medicine Outstanding Coordinator Award -**Graduate Medical Education**

Linda Savage, Quincy Sports Medicine Fellowship Program Coordinator, was chosen as the institution's outstanding coordinator of the year. This award is open to all SIUSOM GME program coordinators or medical education specialists with at least one year in their role. Linda has been the Sports Medicine Coordinator since its inception 17 years ago and has worked at the School for 28 years. Linda earned this award through her leadership, exemplary work, and significant contributions to her
