

Collezione Angelini Firenze: 33.775 specie in 385.870 esemplari + 49.056 esemplari preparati ma non determinati + 5.000 Ptiliidae in alcol per un totale di 439.925 esemplari

- Famiglie, generi e specie sono in rispettivo ordine alfabetico. Per le famiglie si è generalmente tenuto conto della nomenclatura proposta nel "Catalogue of Palaearctic Coleoptera", vol.1-8 e in Bouchard & alii, 2011: 1-972.
- Il nome di ciascun taxa è stato generalmente verificato sull'indice del "Catalogue of Palaearctic Coleoptera", vol.1-8 e, per le specie extrapaleartiche, sui siti internet "Encyclopedia of Life", "Global Names Index", "Species 2000 ITIS Catalogue of Life: 2014 Annual Checklist" e, per i Carabidae, anche il sito "Carabidae of the World"
- Le Nazioni della regione paleartica sono in genere abbreviate come in Löbl & Smetana (2004, Catalogue of Palaearctic Coleoptera), quelle extra paleartiche sono indicate generalmente con i nomi di cui a Google Maps o abbreviazioni facilmente intuibili.
- Le 5 colonne in cui è suddiviso il testo riportano, nell'ordine: nome del taxa, numero di esemplari, nazione/i di provenienza, numero paratypi, numero scatola ove è conservato

La collezione comprende:

- Holotipi: 4 specie
- Paratypi: 312 specie per un totale di 1.395 esemplari
- 8.223 specie provenienti dall'Italia (più circa 2.000 specie segnalate per l'Italia ma provenienti da nazioni estere)
- 2.496 specie provenienti dalla Grecia
- 2.238 specie provenienti dalla Turchia
- 876 specie provenienti dalla Tunisia
- 976 specie provenienti dal Marocco
- 1.938 specie provenienti dall'Argentina
- 1.276 specie provenienti dal Cile
