

Marine molluscs from Cyprus: new data and checklist

Bilal Öztürk, Giovanni Buzzurro & H. Avni Benli

KEY WORDS: Mollusca, Recent, Checklist, Cyprus, Mediterranean Sea.

ABSTRACT

This study has been carried out along the North Cypriot coasts on May 10th-19th 1997 and July 12th-21st 1998. As a result of the sampling in the shore region and in deep-water, depths ranging from 0 to 600 m, 304 species, for a total number of 4786 individuals, included in the classes of Polyplacophora, Gastropoda, Bivalvia and Scaphopoda have been identified. Among the 304 taxa examined, 18 species from Cyprus Island are here reported for the first time. In particular, 16 Gastropoda: *Nodilittorina (Echinolittorina) punctata* (Gmelin, 1791), *Rissoa splendida* Eichwald, 1830, *Alvania fractospira* Oberling, 1970, *Alvania testae* (Aradas & Maggiore, 1844), *Hydrobia acuta* (Draparnaud, 1805), *Protatlanta souleyeti* (Smith E. A., 1888), *Cerithiopsis scalaris* Locard, 1892, ex Monterosato ms., *Nassarius circumcinctus* (Adams A., 1852), *Granulina boucheti* Gofas, 1992, *Gymnobela subaraneosa* (Dautzenberg & Fischer H., 1896), *Teretia teres* (Reeve, 1844), *Chrysallida juliae* (de Folin, 1872), *Folinella ghisotti* Aartsen, 1984, *Tragula fenestrata* (Jeffreys, 1848), *Eulimella bogii* Aartsen, 1994, *Turbanilla acutissima* Monterosato, 1884, and 2 Bivalvia: *Limaria losombi* (Sowerby G. B. I, 1823), *Kelliella abyssicola* (Forbes, 1844). Furthermore, six species are reported for the Eastern basin for the first time. All the species reported for the first time from Cyprus in this paper are figured and discussed. A total amount of 696 species is here reported in a newly formed checklist of Molluscs of Cyprus, considering all the previous works concerned about the malacological fauna occurring in the area under investigation and the additional species we have identified. Furthermore, the list, which is taking into account the many nomenclatural changes recently introduced in the class Mollusca, also deals with alien species.

RIASSUNTO

Questo studio è stato condotto lungo le coste della parte Nord dell'isola di Cipro tra il 10 e il 19 Maggio del 1997 e il 12 e il 21 Luglio del 1998. Sono stati raccolti campioni fino alla profondità massima di 600 m, individuando 4786 esemplari distribuiti tra 304 specie appartenenti alle classi Poliplacophora, Gastropoda, Bivalvia e Scaphopoda. Di queste 304 specie 18 risultano inedite per Cipro, 16 Gastropoda: *Nodilittorina (Echinolittorina) punctata* (Gmelin, 1791), *Rissoa splendida* Eichwald, 1830, *Alvania fractospira* Oberling, 1970, *Alvania testae* (Aradas & Maggiore, 1844), *Hydrobia acuta* (Draparnaud, 1805), *Protatlanta souleyeti* (Smith E. A., 1888), *Cerithiopsis scalaris* Locard, 1892, ex Monterosato ms., *Nassarius circumcinctus* (Adams A., 1852), *Granulina boucheti* Gofas, 1992, *Gymnobela subaraneosa* (Dautzenberg & Fischer H., 1896), *Teretia teres* (Reeve, 1844), *Chrysallida juliae* (de Folin, 1872), *Folinella ghisotti* Aartsen, 1984, *Tragula fenestrata* (Jeffreys, 1848), *Eulimella bogii* Aartsen, 1994, *Turbanilla acutissima* Monterosato, 1884 e 2 Bivalvia: *Limaria losombi* (Sowerby G. B. I, 1823), *Kelliella abyssicola* (Forbes, 1844). Tra queste, 6 specie sono inedite per il bacino orientale del Mar Mediterraneo. Di tutte le specie trattate si dà anche una rappresentazione iconografica. Viene presentata inoltre una nuova lista aggiornata comprendente tutte le specie precedentemente segnalate in Letteratura e quelle ulteriormente identificate da noi, per un totale di 696 taxa. Questa lista, corredata da relative note integrative ed in accordo con gli ultimi aggiornamenti tassonomici, evidenzia anche le specie di provenienza indopacifica.

INTRODUCTION

The island of Cyprus has special ecological characteristics due to its narrow sublittoral and littoral but wide bathyal zones. This island, with a coastline of 750 km in length, is an important biogeographical spot in the Levantine basin where Red Sea originated Lessepsian migrants establish. There are many studies so far carried out by different scientists on the biological diversity Cyprus' bottoms. The first report on the Mollusca from the coasts of this island was by MONTEROSATO (1899). Thereafter, many works were carried out especially in the second half of century. Among the others, we cite TSURNAMAL (1969), DEMETROPOULOS (1969, 1971), BARASH & LEWINSOHN (1971), DEMETROPOULOS & HADJICHRISTOPHOROU (1976), STAVERINOS (1984), TORNARITIS (1987), BARASH & DANIN (1989), BOGI *et al.* (1989), FISCHER (1993a, b; 1994), CECALUPO & QUADRI (1994, 1995, 1996) and HADJICHRISTOPHOROU *et al.* (1997). As a result of these studies, 585 Mollusca species have been reported from Cyprus (CECALUPO & QUADRI, 1996). More recently, BUZZURRO & GREPPI (1997) and SALMAN *et al.* (1998) have reported 42 and 10 additional species, respectively. Several checklists of the molluscan fauna of Cyprus have been published in the past by different Authors (DEMETROPOULOS, 1971; BOGI *et al.*, 1989; FISCHER, 1994 and CECALUPO & QUADRI, 1996). However, some of these early reports suffered

the complicated taxonomy of some groups, and several species were listed as separate taxa in spite of being synonyms according to the latest taxonomy. In this paper we present an up to date checklist of Mollusca species occurring in the Island of Cyprus. With this report, the total number of Mollusca occurring along the Cyprus coasts has been enriched with 16 Gastropoda and 2 Bivalvia species.

MATERIAL AND METHODS

Specimens and shells identified in this study were collected during the expeditions along Northern Cyprus coasts on the dates of May 10th-19th, 1997 and July 12nd-21st, 1998 by R/V "K. Piri Reis". Samples were taken from a depth ranging from 0 to 10 m along the shore region and from 20 to 600 m offshore (Fig 1). Sampling have been randomly selected in the coastal regions having both sandy and rocky habitat and in the substrates consisting of algae (*Padina pavonica* (L) Thivy, 1960, *Cystoseira crinita* (Desf.) Bory, 1846, *Cystoseira* sp., *Sargassum vulgare* C. Agardh, 1821, *Udotea petiolata* (Turra) Boerg, 1915, *Caulerpa prolifera* (Forskål) Lamaroux, 1809, *Caulerpa racemosa* (Forskål) J. Agardh), phanerogam (*Posidonia oceanica* (L.) Delile, 1813) and sponge (*Sarcotragus* sp.) (Table 1). Samples were collected directly by hand. A total of 70 samplings were carried out at 12 stations. Furthermore, in the open sea, trawl-

ing and dredging have been utilized. Samples were sieved with 0.5 mm mesh size.

Systematics of the identified species are according to SABELLI *et al.* (1990-1992). Moreover, species names reported in the past by several Authors have been reconsidered according to SABELLI *et al.* (1990-1992) during the preparation of this new checklist. Thus, the list was cleaned up of synonym species. The many

changes occurred in the nomenclature of Mollusca after 1990 have been also considered. Furthermore, systematic information about some species was adopted by visiting the web-site Check List of European Marine Mollusca (CLEMAM: home page, <http://www.mnhn.fr/base/malaco/html>).

The materials collected were deposited in the Department of Hydrobiology, Ege University (Izmir, Turkey).

RESULTS

During the study carried out in the Northern Cypriot coasts, 4786 specimens were collected. As a result of evaluation of this sampling, 9 Polyplacophora, 183 Gastropoda, 110 Bivalvia and 2 Scaphopoda species were identified (Table 2).

Out of 304 species identified during this study, 18 species are here reported for the first time from Cyprus (Table 3).

According to the literature so far analyzed, 6 of these 18 species have never been reported before for the entire Levantine basin, i.e.: *Rissoa splendida* Eichwald, 1830, *Protatlanta souleyeti* (Smith E. A., 1888), *Cerithiopsis scalaris* Locard, 1892, ex Monterosato ms., *Granulina boucheti* Gofas, 1992, *Teretia teres* (Reeve, 1844) and *Turbonilla acutissima* (Monterosato, 1884).

Table 2: Taxonomical distribution of the species examined.

Classis	Ordo	Familia	Genus	Species
Polyplacophora	1	4	6	9
Gastropoda	12	59	109	183
Bivalvia	10	38	83	110
Scaphopoda	-	2	2	2
Total	23	103	200	304

Argonautidae				
<i>Argonauta argo</i> Linnaeus, 1758				L2

Literatur: L1: MONTEROSATO, 1899; L2: DEMETROPOULOS, 1969; L3: DEMETROPOULOS, 1971; L4: DEMETROPOULOS & HADJICHRISTOPHOROU, 1976; L5: BARASH & DANIN, 1977; L6: VERDUIN, 1984; L7: STAVRINOS, 1984; L8: VERDUIN, 1986; L9: TORNARITIS, 1987; L10: BARASH & DANIN, 1989; L11: BOGI *et al.*, 1989; L12: AARTSEN & KINZELBACH, 1990; L13: BARASH & DANIN, 1992; L14: LINDEN & EIKENBOOM, 1992; L15: FISCHER, 1993a; L16: FISCHER, 1993b; L17: CECALUPO & QUADRI, 1994; L18: FISCHER, 1994; L19: OLIVERIO & BUZZURRO, 1994; L20: OLIVERIO *et al.*, 1994; L21: CECALUPO & QUADRI, 1995; L22: NOFRONI & TRINGALI, 1995; L23: CECALUPO & QUADRI, 1996; L24: BUZZURRO & GREPPI, 1997; L25: HADJICHRISTOPHOROU *et al.*, 1997; L26: SALMAN *et al.*, 1998; L27: SMRIGLIO *et al.*, 1998; L28: HOUART, 2001, L29: BUZZURRO, 2002.

NOTES

- 1: *Lepidopleurus boettgeri* Sulc, 1934 for the claimed synonymy with *L. bedulli* (Dell'Angelo & Palazzi, 1986), reported by CECALUPO & QUADRI (1996), see DELL'ANGELO & SMRIGLIO (1999).
- 2: *Acanthochitona aeneus* (Risso, 1826), reported by BOGI *et al.* (1989) is hard to consider, since the species belonging to this genus are only two according to DELL'ANGELO & SMRIGLIO (1999) and are already present in the checklist, so we prefer not to report it.
- 3: *Acanthochitona crinita oblonga* Leloup, 1981 reported by CECALUPO & QUADRI (1996) has been excluded: see DELL'ANGELO & SMRIGLIO (1999).
- 4: this is the correct name considering that *Haliotis lamellosa* Lamarck, 1822 is a synonym of *H. tuberculata*: see GEIGER (1998).
- 5: several Authors have reported this species, while others have identified it as *Gibbula umbilicaris* (Linnaeus, 1758). Anatomical studies are needed to definitively solved this taxonomical problem. Due to the lack of data, we are conservatively in line with the interpretation of MONTEROSATO (1899: 398), who wrote: "Forme peu commune, voisine du *G. umbilicaris* Linné, dont elle diffère par sa forme conique, par ses taches suturales blanches et son ombilic plus étroit".
- 6: following REID (1996) we use *Melarhaphe* for *neritooides* (Linnaeus, 1758), the type and only living member of this genus.
- 7: BOGI *et al.* (1989) reported a record of this species by TORNARITIS (1987), who has nevertheless not reported it in his work.
- 8: the origin of *Alvania dorbignyi* (Audouin, 1827) is still debated by nowadays Authors: we actually follow the opinion of MIEHNIS (1985) considering this species as non lessepsian.
- 9: GIANNUZZI-SAVELLI *et al.* (1997: 15) ascribed this species to the genus *Rudolphosetia* Monterosato, 1917: we follow PONDER (1985: 34) in considering *Rudolphosetia* as a junior synonym of *Setia* (H. & A. Adams, 1852).
- 10: according to ABBOTT (1974: 139) Calyptraeidae de Blainville, 1824 is a junior synonym of Crepidulidae Fleming, 1822.
- 11: *Erronea caurica* (Linnaeus, 1758) reported by GIANNUZZI-SAVELLI *et al.* (1997) has been excluded: see BUZZURRO & GREPPI (1997).
- 12: BEU (1998) has demonstrated that the Mediterranean form related to *Charonia tritonis* represents a distinct species instead of a subspecies.
- 13: *Vexillum hypatiae* (Pallary, 1912), reported by CECALUPO & QUADRI (1996) is not listed according to TRINGALI & VILLA (1991).
- 14: for the claimed synonymy reported by CECALUPO & QUADRI (1996) with *Granulina clandestina* (Brocchi, 1814) see GOFAS (1992).
- 15: in the past it has been identified by many Authors as *Clathromangelia quadrillum* (Dujardin, 1837), but this is a fossil species (OLIVERIO, 1995).
- 16: *Mangelia fieldeni* (Aartsen & Fehr de Wal, 1978) = *M. angelinae* (Cecalupo & Quadri, 1996): see BUZZURRO & GREPPI (1997).
- 17: *Chrysallida decorata* (Philippi, 1849) is the correct name for the taxon commonly reported by several Authors as *Chrysallida maiae* (Hornung & Mermod, 1924) (BUZZURRO & GREPPI, unpublished data).
- 18: the genus has been assigned following SCHANDER & SUNDBERG (1997).
- 19: probably the record referred to *Anisocyla nitidissima* (Montagu, 1803).
- 20: reported by FISCHER (1994) from shallow water of the littoral zone, this is the only record of this deep-sea species, probably it is a case of misidentification with *Caecilianella acicula* Müller, 1774, a terrestrial species commonly found in our samples: see GAGLINI (1982).
- 21: for the putative finding of *Cyllichnina* cf. *mongii* (Audouin, 1827) reported by CECALUPO & QUADRI (1996) see BUZZURRO & GREPPI (1997).
- 22: the name of this species comes from the Latin word regula(-ae) = a ruler [and not from regulus(-i) = a small king!].
- 23: for the presence of *Macoma balthica* (Linnaeus, 1758) in the Eastern Mediterranean Sea we refer to BUZZURRO (unpublished data).
- 24: European Authors traditionally refer *decussatus* to *Tapes*, whereas they currently use *Ruditapes* for the Japanese carpet shell (*R. philippinarum* (Adams & Reeve, 1850), which has been imported for aquaculture since a number of years. Both species

Figs 2-19. Gastropods and bivalves from Cyprus. 2: *Nodilittorina (Echinolittorina) punctata* (Gmelin, 1791) mm 6.6: St. C7. 3: *Rissoa splendida* Eichwald, 1830 mm 4.8: St. C8. 4: *Alvania fractaspira* Oberling, 1970 mm 2.5: St. C10. 5: *Alvania testae* (Aradas & Maggiore, 1844) mm 2.1: St. D10. 6: *Hydrobia acuta* (Draparnaud, 1805) mm 3.2: St. C11. 7: *Protatlanta souleyeti* (Smith E. A., 1888) mm 2.1: St. D17. 8: *Cerithiopsis scalaris* Locard, 1892, ex Monterosato ms. mm 4.2: St. C8. 9: *Nassarius circumcinctus* (Adams A., 1852) mm 15: St. C10. 10: *Granulina boucheti* Gofas, 1992 mm 2.2: St. C8. 11: *Gymnobela subaraneosa* (Dautzenberg & Fischer H., 1896) mm 5.4: St. D17. 12: *Terebra teres* (Reeve, 1844) mm 4.3: St. D17. 13: *Chrysallida juliae* (de Folin, 1872) mm 1.9: St. C8. 14: *Folinella ghisotti* Aartsen, 1984 mm 2.5: St. C8. 15: *Tragula fenestrata* (Jeffreys, 1848) mm 3.1: St. C8. 16: *Eulimella bogii* Aartsen, 1994 mm 1.9: St. C8. 17: *Turbanilla acutissima* Monterosato, 1884 mm 5.3: St. D21. 18: *Limaria loscombi* (Sowerby G. B. I, 1823) mm 8.9: St. C10. 19: *Kelliella abyssicola* (Forbes, 1844) mm 1.6: St. D16

belong to *Ruditapes*, as proposed by FISCHER-PIETTE & MÉTIVIER (1971) and MATSUKUMA (1986); in particular, the last author excludes *Ruditapes* from *Tapes*.
25: *Alvania* sp., under study.

New records of the molluscs fauna of Cyprus

LITTORINIDAE

Nodilittorina (Echinolittorina) punctata (Gmelin, 1791)
(Fig. 2)

Turbo punctatus Gmelin, 1791: 3597

Littorina syriaca Philippi, 1847: 165 (23), pl. 3, figs 21-22

Turbo sculus Chiereghin in NARDO, 1847: 78, sp. 20, figs 909-910

Turbo siculus Brugnone in MONTEROSATO, 1872: 33 (*nomen nudum*)

Littorina punctata, Gmelin in MONTEROSATO, 1872: 33

Littorina (Melaraphe) punctata (Gmelin, 1791) in PRIOLO, 1953: 124

Littorina punctata (Gmelin, 1791) = *Tricolia draparnauldii* Audouin, 1826 = *Littorina pulchella* Dunker, 1853 = *Littorina syriaca* Philippi, 1847 = *Littorina guttata* Reeve, 1858 = *Littorina perplexa* Turton, 1932 in ROSEWATER, 1970: 474

Nodilittorina (Echinolittorina) punctata (Gmelin, 1791) in REID, 1996: 99.

Remarks: The allocation in the genus *Nodilittorina* von Martens, 1897 recently proposed by REID (1996) for this species is surprising because *Nodilittorina*, type species *L. pyramidalis* Quoy & Gaimard, 1833, which is characterised by a strong ribbed sculpture with nodules, includes mainly Indo-pacific species with very different shell. The modern systematics of the family Littorinidae is primarily based on anatomical characters of the penis, pallial oviduct, radula, sperm nurse cells or spawn. See REID (1986, 1989, 1996).

Material: St. C7, C12, 19 specimens, Supralittoral Zone, rocky habitats.

Distribution: Discontinuous distribution in Mediterranean basin, Portugal and African coasts of Atlantic Ocean.

RISSOIDAE

Rissoa splendida Eichwald, 1830

(Fig. 3)

Rissoa splendida Eichwald, 1830: 219

Rissoa violaestoma Krynický, 1837 *fide* CLEMAM

Remarks: *Rissoa splendida* Eichwald, 1830 figured by GIANNUZZI-SAVELLI *et al.*, 1997: 74, figs 203-204.

Material: St. C8, 1 specimen, *Cystoseira* sp., 2-3 m and St. C10, 1 shell, grit near *Posidonia oceanica*, 4 m.

Distribution: Aegean Sea, Central Mediterranean Sea, Adriatic Sea, the Marmara Sea and Black Sea. This species is here reported for the first time from the Levantine Basin.

Alvania fractospira Oberling, 1970

(Fig. 4)

Alvania fractospira Oberling, 1970: 3

Alvania monterosatoi sensu BOGI *et al.*, 1989: 194, fig. 7 (not Fis-

CHER P., 1877)

Remarks: *Alvania fractospira* Oberling, 1970 in MOOLENBEEK *et al.*, 1991: 113, fig. 16 (the lectotype is selected) and in OLIVERIO, 1993: 33 (restored as a valid name).

Material: St. C1, 3 specimens, *Posidonia oceanica*, 5 m; St. C8, 2 shells in grit near *Posidonia oceanica*, 4 m and St. C10, 2 specimens, *Cystoseira* sp., 1-2 m.

Distribution: Eastern Mediterranean Sea and Adriatic Sea (GIANNUZZI-SAVELLI *et al.*, 1997).

Alvania testae (Aradas & Maggiore, 1844)

(Fig. 5)

Rissoa reticulata Philippi, 1836: 156, tav. 10, fig. 14 (not *T. reticulata* Montagu, 1803)

Rissoa testae Aradas & Maggiore, 1844: 135

Rissoa abyssicola Forbes in FORBES & HANLEY, 1850: 86

Rissoa partschii Hörnes, 1857: 573 (fossil)

Rissoa (Alvania) testae (Aradas & Maggiore, 1844) in ARADAS & BENOIT, 1870a: 199

Rissoa abyssicola var. *conformis* Jeffreys, 1870: 77

Rissoa (Actonia) testae Aradas & Maggiore in CARUS, 1889: 336

Actonia testae (Aradas & Maggiore, 1844) in MONTEROSATO, 1890: 147

Alvania testae (Aradas & Maggiore, 1844) in LOCARD, 1892: 161

Alvania (Actonia) testae (Aradas & Maggiore) in THIELE, 1931: 163

Turbona testae (Aradas & Maggiore, 1844) in NORDSIECK, 1972: 186

Remarks: *Alvania testae* (Aradas & Maggiore, 1844) in BOUCHET & WARÉN, 1993: 628, figs 1386-1387, 1400-1405 and in OLIVERIO *et al.*, 1992: 251 (*A. testae* complex is here analyzed and discussed).

Material: St. D10 (35°34'8"N-34°28'3"E), 3 shells, muddy habitats, 210 m, dredged.

Distribution: Eastern Mediterranean Sea (Aegean Sea), Western Mediterranean Sea and coastal line of the Eastern Atlantic Ocean from Morocco to Norway.

HYDROBIIDAE

Hydrobia acuta (Draparnaud, 1805)

(Fig. 6)

Cyclostoma acutum Draparnaud, 1805: 40, pl. I, fig. 23

Paludestrina acuta Draparnaud in MONTEROSATO, 1878a: 86

Paludestrina glyca Servain, 1880: 151

Hydrobia acuta (Draparnaud, 1805) in GIUSTI & PEZZOLI (1984: 125, tav. 1)

Remarks: *Hydrobia acuta* (Draparnaud, 1805) figured by GIUSTI *et al.*, 1995: 116, 117, figs 39-42, 50-52. After BOETERS (1984) that designated a lectotype for this species from two syntypes, GIUSTI *et al.* (1998) demonstrated that they belong to different species and designate a neotype "in line with the earlier and more widely accepted usage of the name" (1998: 2, figs 3-6).

Material: St. C11, 5 shells, grit, 1 m.

Distribution: Whole Mediterranean basin (BARASH & DANIN, 1992).

ATLANTIDAE

***Protatlanta souleyeti* (Smith E. A., 1888)**

(Fig. 7)

Atlanta souleyeti Smith E. A., 1888: 1-51, pl. XII, fig. 7a, b

Protatlanta souleyeti (Smith E. A., 1888) = *Atlanta lamanonii* Souleyet, 1852 = *Protatlanta sculpta* Issel, 1911 = *Protatlanta sculpta* var. *mediterranea* Issel, 1911 = *Protatlanta mediterranea* (Issel) Di Geronimo, 1970 in VATOVA, 1975: 1

Remarks: *Protatlanta souleyeti* (Smith E. A., 1888) figured by GIANNUZZI-SAVELLI et al., 1997: 248, figs 921-923.

Material: St. D17 (35°43'8"N-34°37'3"E), 1 shell, 250-300 m dredged.

Distribution: It has a cosmopolitan distribution due to its pelagic life style, similar to other members of the family. Southern Aegean Sea, Central Mediterranean and Western Mediterranean Sea. It is here reported for the first time in the Levantine basin.

CERITHIOPSIDAE

Cerithiopsis scalaris Locard, 1892, ex Monterosato ms.

(Fig. 8)

Cerithiopsis scalaris Monterosato, 1878a = *C. corona* var. *scalaris* Monterosato: 99 (*nomen nudum*)

Cerithiopsis scalaris Monterosato, 1878 in LOCARD, 1892: 118

Cerithiopsis scalaris Coen, 1937: 31, tav. 3, fig. 26 (*nomen nudum*)

Cerithiopsis scalaris (Monterosato, 1877) in NORDSIECK, 1976: 7; 6, fig. 10

Cerithiopsis scalaris Monterosato, 1877 in PIANI, 1980: 136

Cerithiopsis scalaris Monterosato, 1878 (*nomen nudum*) in GAGLINI, 1992: 148, fig. 139

Cerithiopsis scalaris Locard, 1892, ex Monterosato ms. in TRINGALI, 1999: 129, 130: figs 1-3

Remarks: *Cerithiopsis scalaris* Locard, 1892 figured by GIANNUZZI-SAVELLI et al., 1999: 41, figs 60- 63.

Material: St. C8, 2 shells, grit near *Posidonia oceanica*, 4 m.

Distribution: Central Mediterranean Sea. It is here reported from the Eastern Mediterranean Sea for the first time.

NASSARIIDAE

Nassarius circumcinctus (Adams A., 1852)

(Fig. 9)

Nassa circumcincta Adams A., 1852: 102.

Arcularia circumcincta Adams A. in PALLARY, 1912: 96, pl.XV (I), figg. 14-17

Nassarius (Plicicularia) circumcinctus (A. Adams, 1851) in PIANI, 1980: 149

Nassarius (Plicicularia) circumcinctus (Adams A., 1852) =

Naytiopsis granum flammulata Nordsieck, 1972 in NOFRONI, 1986: 13

Remarks: *Arcularia circumcincta* (Adams A., 1851) in SABELLI & SPADA, 1977: 3, figs 5a-5b and *Nassarius circumcinctus* (Adams A., 1851) in OLIVERIO & TRINGALI, 1992: 159, figs 4-8.

Material: St. C10, 2 specimens, sandy habitat, 2 m.

Distribution: Eastern Mediterranean Sea.

CYSTISCIDAE

Granulina boucheti Gofas, 1992

(Fig. 10)

Granulina boucheti Gofas, 1992: 10, fig. 9; 11, fig. 10; 24, fig. 26.

Material: St. C8, 2 specimens, alive collected in brown algae, 1 m. Distribution: Sicily, France, Corse, Tunisie and Algerie. It is here reported from the Levantine basin for the first time.

CONIDAE

Gymnobela subaraneosa (Dautzenberg & Fischer H., 1896)

(Fig. 11)

Pleurotoma subaraneosa Dautzenberg & Fischer H., 1896: 422, pl. 16, figs 11-12

Gymnobela subaraneosa (Dautzenberg & Fischer H., 1896) in BOUCHET & WARÉN, 1980: 58, figs 114-115

Pleurotomella subaraneosa (Dautzenberg & Fischer H., 1896) in POWELL, 1966: 131.

Material: St. D17 (35°43'8"N-34°37'3"E), 1 shell, muddy bottoms, 250-300 m, dredged.

Distribution: Mediterranean Sea and North Eastern Atlantic Ocean. Reported once from the Eastern Mediterranean Sea (JANSSEN, 1989).

Teretia teres (Reeve, 1844)

(Fig. 12)

Pleurotoma teres Reeve, 1844: 190

Philbertia anceps (Eichwald, 1830) (fossil): 225

Pleurotoma boreale Phil., ms. in LOVÉN, 1846: 14

Pleurotoma fusiforme Réquier, 1848: 101

Pleurotoma anceps in LOCARD, 1866: 109

Raphitoma barbierii Brusina, 1866: 33

Pleurotoma teres Forbes in MONTEROSATO, 1870: 45

Defrancia (Pleurotoma) teres Forbes in MONTEROSATO, 1872: 51

Pleurotoma (Defrancia) anceps Eichwald in MONTEROSATO, 1875: 44

Clathurella anceps V. Crs. in CARUS, 1889: 427

Teretia teres Forbes in MONTEROSATO, 1890: 187

Teretia anceps (Eichwald, 1830) in PIANI, 1980: 157

Teretia teres (Reeve, 1844) in SABELLI et al., 1990: 45

Remarks: *Teretia teres* (Forbes, 1844) figured by BOUCHET & WARÉN, 1980: 81, fig. 168 and GIRIBET & PEÑAS, 1997: 75, fig. 69.

Material: St. D17 (35°43'8"N-34°37'3"E), 1 shell, muddy bottoms, 250-300 m, dredged.

Distribution: Coastline from Gibraltar Strait to Northern Norway, Western Mediterranean Sea, Adriatic Sea and Aegean Sea. It is here reported from the Levantine basin for the first time.

PYRAMIDELLIDAE

Chrysallida juliae (de Folin, 1872)

(Fig. 13)

Truncatella juliae de Folin, 1872: 49, pl. II, fig. 4

Odostomia (Pyrgulina) nanodea Monterosato, 1878a: 93

Parthenina tenuistriata Milachewitch, 1909: 314

Chrysallida sarsi Nordsieck, 1972: 98, pl. II, fig. 4 in PEÑAS et al., 1996: 24

Chrysallida juliae (de Folin, 1872) in AARTSEN, 1977: 61, fig. 13.

Remarks: *Chrysallida juliae* (de Folin, 1872) in MICALI et al. (1993: 150): it is there designated the lectotype. Regarding all

the synonyms listed above we are waiting for the revision of these taxa accomplished by I. Nofroni (personal communication, manuscript in preparation).

Material: St. C8, 3 shells, grit near *Posidonia oceanica*, 4 m.

Distribution: Mediterranean Sea and Atlantic Ocean including the Canary Islands.

Folinella ghisottii Aartsen, 1984

(Fig. 14)

Odostomia intermedia Brusina, 1869: 237 (non Deshayes, 1861)

Odostomia (Pyrgulina) intermedia Brusina in MONTEROSATO, 1878b: 317

Folinella ghisottii Aartsen, 1984: 137.

Material: St. C8, 1 shell, grit near *Posidonia oceanica*, 4 m.

Distribution: Mediterranean Sea and Atlantic Ocean including the Cape Verde Islands.

Tragula fenestrata (Jeffreys, 1848)

(Fig. 15)

Odostomia fenestrata Jeffreys, 1848: 345, pl. 6, fig. 17

Chemnitzia fenestrata Jeffreys in FORBES & HANLEY, 1853: 249

Odostomia (Pyrgulina) fenestrata, Forbes in MONTEROSATO, 1877: 35

Tragula fenestrata (Jeffreys, 1848) in MONTEROSATO, 1884: 86

Odostomia (Tragula) fenestrata Forbes in PALLARY, 1912: 132, pl. XVI (II), fig. 42

Turbanilla fenestrata (Forbes) in BABIO & THIRIOT-QUIEVREUX, 1974: 544, pl. VI, H, L

Tragula fenestrata (Forbes, 1848) in GROSSU, 1986: 24

Chrysallida fenestrata (Forbes in Jeffreys, 1848) in AARTSEN, 1981: 80, pl. 1, fig. 1

Chrysallida fenestrata (Jeffreys, 1848) in LINDEN & EIKENBOOM, 1992: 45

Remarks: *C. fenestrata* (Jeffreys, 1848) figured by PEÑAS *et al.*, 1996: 27, fig. 54.

Material: St. C8, 1 shell, grit near *Posidonia oceanica*, 4 m.

Distribution: Mediterranean Sea and Atlantic Ocean including Corimba.

Eulimella bogii Aartsen, 1994

(Fig. 16)

Eulimella bogii Aartsen, 1994: 89-90, fig. 5.

Material: St. C8, 1 shell, near *Posidonia oceanica*, 4 m.

Distribution: Mediterranean Sea including the Eastern basin (NOFRONI & TRINGALI, 1995).

Turbanilla acutissima Monterosato, 1884

(Fig. 17)

Turbanilla acutissima Monterosato, 1884: 92

Remarks: *Turbanilla acutissima* Monterosato, 1884 figured by AARTSEN, 1981: 85, pl. 4, fig. 24 and PEÑAS *et al.*, 1996: 69, fig. 185.

Material: St. D21(35°09'0"N-33°57'0"E), 1 shell, *Posidonia oceanica*, 20 m, dredge.

Distribution: Mediterranean Sea (POPPE & GOTO, 1990).

LIMIDAE

Limaria loscombi (Sowerby G. B. I, 1823)

(Fig. 18)

Lima loscombi Sowerby G. B. I, 1823: 17, pl. 113, fig. 4

Limea loscombei Sowerby in ARADAS & BENOIT, 1870b: 94

Lima (Limatella) loscombei Leach in Sowerby in ANDERSON, 1964: 144, figs 27a-c

Lima (Limea) loscombii Sowerby G. B., 1823 in ALTENA REGTEREN *et al.*, 1969: 24 (fossil)

Lima (Mantellum) loscombi Sowerby = *Lima bullata* Turton = *Lima clausa* Danilo & Sandri in MUSETTI, 1969: 52

Limaria (Limatulella) loscombi (Sowerby G. B., 1830) in JANSSEN, 1972: 16, 74, figs 4-5 (fossil)

Limea (Limea) loscombi MacGillivray, 1843 in PIANI, 1980: 187

Limea loscombi (Sowerby G. B. I, 1823) in SABELLI *et al.*, 1990: 85

Limea (Limatulella) loscombi (Sowerby G. B. I, 1823) in ZENETOS, 1996: 88

Limaria loscombii (Sowerby G. B. I, 1823) in SALAS, 1996: 57.

Material: St. C10, 1 specimen, muddy-sandy habitats, 1.5 - 2 m.

Distribution: This species is common in muddy and muddy-sandy bottoms down to a depth of 3000 m (PARENZAN, 1974), distributed in the Aegean Sea, Adriatic Sea, Western Mediterranean Sea and the coastline of the Eastern Atlantic Ocean from Senegal and to Norway (JEFFREYS, 1879; TEBBLE, 1976; BARASH & DANIN, 1992).

KELLIELLIDAE

Kelliella abyssicola (Forbes, 1844)

(Fig. 19)

Kelliella abyssicola Forbes, 1844: 122

Venus miliaris Philippi, 1844: 36, pl. 14, fig. 15

Kelliella abyssicola Sars in MONTEROSATO, 1870: 39

Kelliella miliaris Philippi in SARS, 1878: 65

Kelliella miliaris Philippi in MONTEROSATO, 1880: 59

Kellyella miliaris (Phil.) in PARENZAN, 1974: 154, 265, fig. 158

Kelliella abyssicola (Forbes, 1844) in SABELLI *et al.*, 1990: 95.

Material: St. D16 (35°19'9"N-32°50'1"E), 1 specimen, muddy habitats, 210 m, dredged.

Distribution: Aegean Sea, Taranto Gulf and Northern Norway coasts (PARENZAN, 1974; POPPE & GOTO, 1993; ZENETOS, 1996). Already reported from the Eastern Mediterranean Sea by JANSSEN (1989). This species shows a vertical distribution from the continental shelf down to the abyssal zone.

DISCUSSION

There has been a significant increase in the number of molluscan species reported from Cyprus since the first study carried out by MONTEROSATO (1899). In fact, in his report, an initial amount of 29 species was listed. But the number has grown up to 696 to date. Particularly, the studies of BOGI *et al.* (1989), FISCHER (1994), CECALUPO & QUADRI (1996) and BUZZURRO & GREPPI (1997) made important contribution to such increase. BOGI *et al.* (1989), reported 221 species in total, 89 as new records from this island. Then, FISCHER (1994) gave

a list of 123 fossils and 434 living species for Cyprus. This Author, following SABELLI *et al.* (1990-1992), has reconsidered the systematic positions of several species reported by DEMETROPOULOS (1969, 1971), DEMETROPOULOS & HADJICHRISTOPHOROU (1976), STAVRINOS (1984) and TORNARITIS (1987). Since there are many different views concerning classification, at the mean time FISCHER (1994) followed his personal conception regarding some cases of synonymy, changing the taxonomical rank of some species. For example, while *Emarginula cancellata* Philippi, 1836 and *Emarginula sicula* Gray J. E., 1825 are two synonyms according to SABELLI *et al.* (1990), on the contrary FISCHER (1994: 87) reported these two taxa as distinct species. In our opinion the sole valid species name is *E. sicula*. Other controversial cases of synonymy that we had to face making the new checklist are discussed below. BOGI *et al.* (1989) reported *Pirenella conica* (Blainville, 1826) and *Pirenella cailliaudi* (Potiez & Michaud, 1838) as different species, while the latter should be considered just as junior synonym of the first one according to SABELLI *et al.* (1990-1992). In like man-

ner, *Lima lima* (Linnaeus, 1758) and *Lima inflata* (Chemnitz, 1784) should be thought as synonyms, taking as valid species name *L. lima*. Similarly, MICALI *et al.* (1993) considered *Chrysallida cf. delpretei* (Sullioti, 1889) as junior synonym of *Chrysallyda indistincta* (Montagu, 1808): both taxa are listed as separate species in BOGI *et al.* (1989). An another example of systematic confusion is the case of *Retusa semisulcata* (Philippi, 1836) and *Retusa truncatula* (Brugière, 1792), both listed in CECALUPO & QUADRI (1996), but re-discussed as synonyms by TRINGALI (1995).

Of a total of 389 species listed by CECALUPO & QUADRI (1996), 134 species were new ones for Cyprus. In their papers, BUZZURRO & GREPPI (1997) and SALMAN *et al.* (1998) have reported 42 and 10 additional new species, respectively, for the Cyprus coasts. When the lists of BOGI *et al.* (1989) and CECALUPO & QUADRI (1996) are compared, 6 and 24 species, respectively, given as new records had already been reported previously (Table 4). Additionally, *Argonauta argo* Linnaeus, 1758 reported by SALMAN *et al.* (1998) as a new record, was

Table 4. Species previously listed by BOGI *et al.* (1989) (*) and CECALUPO & QUADRI (1996) (**) as new records and the literature relevant to these species.

Species

<i>Ischnochiton rissoi</i> (Payraudeau, 1826) *
<i>Lepidochitona corrugata</i> (Reeve, 1848) *
<i>Chiton corallinus</i> (Risso, 1826)**
<i>Gibbula umbilicaris</i> (Linnaeus, 1758)**
<i>Cerithium scabridum</i> Philippi, 1848 **
<i>Rissoa auriformis pseudomonodonta</i> (Verduin, 1983)**
<i>Alvania datchaensis</i> Amati & Oliverio, 1987 **
<i>Alvania mamillata</i> Risso, 1826 **
<i>Alvania beniamina</i> (Monterosato, 1884) **
<i>Strombus persicus</i> Swainson, 1821 **
<i>Petalonconchus glomeratus</i> (Linnaeus, 1758) **
<i>Vitreolina levantina</i> Oliverio, Buzzurro & Villa, 1994 **
<i>Vexillum littorale</i> (Forbes, 1844) *
<i>Bela laevigata</i> (Philippi, 1836) **
<i>Bela menkhorsti</i> Aartsen, 1988 **
<i>Bela nebula</i> (Montagu, 1803) *
<i>Mitrolumna olivoidea</i> (Cantraine, 1835)*
<i>Chrysallida terebellum</i> (Philippi, 1844)**
<i>Turbanilla delicata</i> (Monterosato, 1874) **
<i>Turbanilla striatula</i> (Linnaeus, 1758)**
<i>Retusa mamillata</i> (Philippi, 1836) **
<i>Retusa semisulcata</i> (Philippi, 1836) **
<i>Cyllichnina umbilicata</i> (Montagu, 1803) *
<i>Cyllichna crossei</i> (B.D.D., 1886) **
<i>Cavolinia tridentata</i> (Niebuhr, 1775 ex Forskål, ms.) **
<i>Styliola subula</i> (Quoy & Gaimard, 1827) **
<i>Modiolarca subpicta</i> (Cantraine, 1835)*
<i>Lucinella divaricata</i> (Linnaeus, 1758) **
<i>Cerastoderma edule</i> (Linnaeus, 1758) **
<i>Abra nitida</i> (Müller O. F., 1776) **
<i>Gastrochaena dubia</i> (Pennant, 1777) **

previously reported by DEMETROPOULOS (1969). Besides that, *Anachis troglodytes* (Souverbie & Montrouzier, 1866) and *Anachis savignyi* Moazzo, 1939 ex Jousseaume ms. reported as synonyms by CECALUPO & QUADRI (1996), are considered as two distinct species according to TRINGALI & VILLA (1995). Furthermore, although CECALUPO & QUADRI (1996) discussed that some of the species which had been reported as synonyms by SABELLI *et al.* (1990) can be accepted as valid taxa, species such as *Emarginula crebrisculpta* (Coen, 1939), *Calliostoma alexandrinum* Pallary, 1911, *Muricopsis inermis* (Philippi, 1836), *Mangelia derelicta* Reeve, 1846, *Raphitoma intermedia* Nordsieck, 1977 and *Raphitoma lineolata* (B.D.D., 1883) are not valid species according to the CLEMAM database.

Some of the species names found in literature referred to the Island of Cyprus have been omitted from the checklist because fossils: *Alvania monterosatoi* (Fischer P., 1876), *Granulina clandestina* (Brockhi, 1814), *Clathromangelia quadrillum* (Dujardin, 1837), *Raphitoma histrix* Bellardi, 1847, *Odostomia bismichaelis* Sacco, 1892 and *Odostomia* cf. *clavulina* Fischer P., 1877. Also *Hydrobia ulvae* (Pennant, 1777), most probably confused with other *Hydrobia* sp., has been deleted since we reasonably think it is not a Mediterranean species. Other cases of shell misidentification reported by TORNARITIS (1987) are: *Cerithiopsis tubercularis* (Montagu, 1803) which is *Dizoniopsis coppolae* (Aradas, 1870) (: 58, fig. 80b), *Fusinus pulchellus* (Philippi, 1844) is just a juvenile form of *F. syracusanus* (Linnaeus, 1758) (: 98, fig. 146), *Mathilda cochlaeformis* Brugnone, 1873 which is *M. gemmula* Semper, 1865 (:54, fig. 72); *Mytilus edulis* Linnaeus, 1758 which is *M. galloprovincialis* Lamarck, 1819, since the former is not an eastern mediterranean species. *Hinnites distorta*, to allocate within the genus *Crassadoma* according to WALLER (1993), has been reported only once by DEMETROPOULOS (1971), most probably it has been misidentified with *C. multistriata*. We remove this taxon from the proposed checklist of molluscs of Cyprus, since this species is mainly distributed in the Atlantic Ocean and very seldom reported from the Western Mediterranean basin. FISCHER (1994) has reported over 90 Indo-Pacific species in the Levantine basin, and 8 of them have also been recorded from the Cyprus coasts. Today, the number of the known Indo-Pacific species occurring in the Island of Cyprus increased up to 32 (Table 3). Summing up all the data coming from this investigation and those of the past, a total of 696 Molluscs species are presently known from Cyprus.

ACKNOWLEDGEMENTS

Sincere thanks are due to: Dr. P. Mariottini (Università di Roma Tre, Roma, Italy) for critical reading of the manuscript, Dr. J. M. Poutiers (MNHN) for helpful suggestions, Dr. V. Aysel (University of Canakkale, Turkey) for identifying the sampled algae, Dr. R. La Perna (Università di Bari, Italy) for helpful advises on Bivalvia Systematics, Dr. M. Bodon (Università di Siena, Italy), Dr. S. Chiarelli (Porto Garibaldi, Italy), Dr. S. Gofas (University of Malaga, Spain), Dr. A. W. Janssen (Gozo, Malta), Dr. G. Manganelli (Università di Siena, Italy), Dr. H. Mienis (University of Jerusalem, Israel), Mr. G.

Nardi (Ghedi, Italy), Dr. M. Oliverio (Università "La Sapienza", Roma, Italy), Mr. P. Russo (Venezia, Italy), Dr. M. Streitz (Valbonne, France) and Dr. A. Zenetos (National Centre for Marine Research, Hellenikon, Greece) for generously providing references. We are very indebted to Mr. A. Cecalupo (Buccinasco, Italy) for his cooperation in dealing with the many synonyms treated in the present paper and in supplying references. We are really grateful to Dr. J. J. Van Aartsen (Dieren, The Netherland) and Dr. P. Micali (Fano, Italy) for *G. subaraneosa* and *T. acutissima* identification, respectively. We are deeply indebted to Dr. S. Chiarelli (Porto Garibaldi, Italy) and Dr. E. Greppi (Castellanza, Italy) for having taken the pictures utilized in the present paper.
