

Priority Sites for Conservation in Samoa:

Key Biodiversity Areas

Vaega Fa'atauaina mo le Fa'asao i Samoa:

Vaega Oā Fa'apitoa i le
Ola Fa'a-natura

Preface and Acknowledgements

This booklet was written for the general public to raise awareness about the key areas for conservation in Samoa and the species most threatened with extinction. The work was developed as a partnership between the Conservation International Pacific Islands Program (CI Pacific), the Secretariat of the Pacific Regional Environment Programme (SPREP) and the Division of Environment and Conservation (DEC) of the Samoan Ministry of Natural Resources and Environment (MNRE). O le Siosiomaga Society and Birdlife International kindly provided their data on the Important Bird Areas (IBAs) of Samoa. Dr Steve Brown, ACEO of GEF Services, MNRE and Tu'u'u Dr Ieti Taulealo, former CEO of the MNRE, secured funds for this project from the Global Environment Facility through the Protected Areas Programme of Work (POWPA). We are very grateful for the technical support of Maxim Vergeichik, UNDP Program Associate for Environment, who provided invaluable guidance on the overall structure and content of the Samoa POWPA program. We thank the Coral Reef InitiativeS for the Pacific (CRISP) for providing financial support for the marine analysis component.

The report was written and edited by James Atherton of CI Pacific with assistance from Paul Anderson of SPREP and Elizabeth Kerstin of DEC. Many people contributed to the development of this work, including Natasha Doherty and Juney Ward of DEC and Naamal De Silva and Sue Miller Taei of CI. All maps were expertly prepared by Kellee Koenig of CI. Several individuals and organisations kindly allowed us to use their illustrations; their credits are listed within the document and on the back page. In particular we would like to thank Stuart Chape for allowing us to select from his extensive photographic collection. Suemalo Tumutalie Foliga, Juney Ward and Faleafaga Toni Tipamaa of the DEC and Leilani Duffy of CI Pacific translated sections of the booklet into Samoan and Tuaifaiva Samuelu Sesega completed and edited the translation. We would also like to thank Charmina Saili, Dr David Butler and Dr Greg Sherley for proof reading the document and providing many constructive comments.

We are very grateful for the support and assistance provided by all. Faafetai tele lava.

Faatomuaga

O lenei lomiga sa tusia mo le fa'atupulaia o le malamalama'aga lautele i vaega fa'apitoa o le siosiomaga o Samoa e tatau ona ave iai le fa'amuamua mo le fa'asaoina i Samoa aemaise o ituiga o meaola ua lamatia ma tauau ina mou atu. 1. Introduction

Biological diversity, or biodiversity, is the variability of life on earth from genes to species to the entire biosphere. Biodiversity provides immeasurable benefit to human societies through medicine, food, fiber, ecosystem services, and cultural values. Yet, this diversity of life is under siege: species are being lost at a rate far beyond the natural extinction rate.

To effectively conserve biodiversity as a whole, conservation action must focus on its key components: individual species in need of conservation, and on specific sites and landscapes that are most important for their persistence. Using a transparent, data-driven process to identify these conservation targets allows for the efficient allocation of scarce conservation resources. These targets also provide a baseline against which the success of biodiversity conservation interventions can be measured.

Samoa is part of the Polynesia-Micronesia Biodiversity Hotspot, one of 34 regions of the world where extraordinary levels of biodiversity and endemism are coupled with extremely high levels of threat (Mittermeier *et al.* 2004). Although 11 terrestrial and 65 marine species found in Samoa are listed as globally threatened on the 2009 IUCN Red List of Threatened Species, the true number of threatened species in Samoa is significantly higher than this, perhaps in the hundreds. The primary threats to our biodiversity are habitat alteration caused by agriculture and unplanned or poorly planned development, over harvesting of resources (e.g. logging of timber trees, hunting of pigeons and bats and over-fishing) and the spread of invasive species.

Site based conservation is one of the most important and successful tactics for reducing global biodiversity loss. Governmental commitments to site conservation include

Samoa's Biodiversity Strategy and Action Plan (SBSAP), which commits Samoa to "enhance the management of existing protected areas (PAs) and establish new ones to increase the coverage of PAs to 15% and achieve a full representation of Samoa's ecosystems" (Government of Samoa 2001) and the Convention on Biological Diversity (CBD), which enjoins Parties to establish "a system of protected areas or areas where special measures need to be taken to conserve biological diversity". Safeguarding these key areas requires a variety of governance approaches, including national parks, community conservation areas (CAs), and co-managed sites—the best approach will vary from place to place. A network of such sites, coupled with species-specific actions and anchored within a matrix of compatible land uses, provides the best way to ensure the conservation of globally important biodiversity.

The Key Biodiversity Areas (KBA) approach presents an appropriate framework for pinpointing site-level conservation targets and priorities in Samoa. The KBA approach builds on and complements the conservation priority setting approaches completed for Samoa for terrestrial ecosystems (Pearsall and Whistler 1991), for lowland ecosystems (Park *et al.* 1992) and for upland ecosystems (Schuster *et al.* 1999), while marine priorities in Samoa are presented for the very first time. All terrestrial KBAs identified here were also identified in some or all of these earlier approaches. However, KBAs target the subset of all identified sites that contain species most at risk of extinction, and thus are priority sites for conservation at a global as well as a national level.

KBAs as sites of global significance for biodiversity conservation are identified using transparent, globally standard

criteria (Langhammer *et al.* 2007). The KBA concept extends to all taxonomic groups the data-driven methodology employed by BirdLife International and Plantlife International to identify Important Bird Areas (IBAs) and Important Plant Areas (IPAs) respectively. KBAs can be used as a tool by governments, intergovernmental organizations, NGOs, the private sector, and other stakeholders to expand the protected area network in Samoa, and, more generally, for targeting conservation action. Additionally, KBAs provide the building blocks for landscape-level conservation planning and for maintaining effective ecological networks aimed at preventing biodiversity loss.

Key Biodiversity Areas: Approach and Criteria

The goal of the KBA approach is to identify, document, and safeguard networks of sites that are critical for the conservation of globally important biodiversity. Here, a "site" means an area of any size identified based on biological criteria that can be delimited and actually or potentially managed for conservation.

KBAs are identified using standard criteria based on the widely-accepted conservation planning principles of vulnerability and irreplaceability. The vulnerability criterion captures sites important for species that are at risk of extinction, while sites meet the irreplaceability criterion if they hold geographically concentrated species, or those with few spatial options for their conservation.

We used only the vulnerability criterion in the present analysis due to data limitations and potential complications with applying the irreplaceability criteria in a small island context.

Vulnerability Criterion: Globally threatened species.

KBAs identified under this criterion support the regular occurrence of one or more globally threatened species—those assessed as Critically Endangered (CR), Endangered (EN), or Vulnerable (VU) according to the IUCN Red List.

Identifying and Delineating KBAs in Samoa

In 2003, the Conservation International–Pacific Islands Program initiated a process to identify data-driven conservation targets for the Polynesia-Micronesia region including Samoa. This analysis was carried out in collaboration with the Secretariat for the Pacific Regional Environment Program (SPREP), the Bishop Museum, The Nature Conservancy, Société d'Ornithologie de la Polynésie, the Wildlife Conservation Society. Numerous other institutions and experts also provided data and reviewed the results of this analysis. A total of 162 KBAs were identified during this analysis, including 6 KBAs in Samoa.

In 2008, CI began a collaboration with the Division of Environment and Conservation (DEC) in the Samoan Ministry of Natural Resources and Environment (MNRE) and SPREP, under Samoa's Programme of Work for Protected Areas (POWPA) and with funds provided by the Global Environment Facility (GEF) through the United Nations Development Program, to conduct an ecological gap analysis for Samoa. The main purpose of the gap analysis was to analyse how effective our current PA network is at achieving our SBSAP conservation targets, and in particular to identify priority areas for the expansion of the PA network and priority actions for improved management of existing PAs. Another objective was to identify the key gaps in our knowledge of terrestrial and marine biodiversity.

A total of 8 terrestrial and 7 marine KBAs were identified during the gap analysis process and conservation targets were established for all native ecosystems. KBA revision for terrestrial ecosystems were based on new survey data on freshwater fauna, butterflies, flying foxes and rare plants, along with the

Important Bird Areas (IBAs) identified for the country by O le Siosiomaga Society, MNRE, BirdLife International and Conservation International. KBA identification for marine ecosystems was based on analysis of existing survey data and species sightings of fish and marine turtles.

The main challenge in identifying KBAs was to refine the results of previous surveys, specifically, to identify and map threatened species of corals, fish, landsnails, birds, plants and flying foxes so as to document the presence of these species in existing sites and to identify new KBAs where needed. The 2009 IUCN Red List provided the list of 76 threatened terrestrial and marine species for the country, as well as basic data on conservation status, distribution, threats, key contacts, and references. In addition to the 11 terrestrial species in Samoa listed as threatened on the 2009 IUCN Redlist, an additional three species known to be threatened in Samoa were added as “trigger” species (species that trigger a KBA). These are *ifilele* (Molluccan ironwood) and *taio* (Polynesian Storm Petrel) which are both classified as vulnerable, but are not recorded for Samoa on the IUCN Redlist, and *pea vao* (Samoan flying fox), recorded as near threatened on the Redlist, but actually highly threatened in Samoa.

Three ecological surveys in Samoa were conducted in association with this gap analysis project, including surveys of: freshwater biodiversity (Jenkins *et al.* 2008) Samoan butterflies (Patrick and Edwards 2009) and flying foxes (Shilton 2009). An assessment of threatened plants in Samoa is underway in 2010.

Point locality data for each species, were obtained from the new surveys and from published and unpublished literature and experts. The data environment for marine resources is particularly limited for point locality data; therefore habitat was used as a proxy for species presence when considering a network of Marine Protected Areas (MPAs) or Marine Managed Areas (MMAs). MPA design was confined to the near shore, defined here as one mile extending seaward from the reef crest.

Did you know?

- On land Independent Samoa has more than 2,500 species of insect, 770 species of native plants, 64 native land snails, 31 breeding birds, 14 reptiles and 3 native mammals. Marine diversity is also high with 890 coral reef fish, over 200 corals and several turtles, whales and dolphins.
- Samoa has more native species of ferns and butterflies than New Zealand, a country 85 times bigger than Samoa!
- New species are being discovered in Samoa all the time. In 2008 three new species of freshwater fish were discovered (some new to science) and in 2009 two new butterflies were discovered.
- Samoa has the smallest spider in the world- *Patu marplesi* found in the montane forests of Upolu. Fully grown this spider is only 0.43mm in size
- Samoa's national bird, the Manumea, or Tooth-billed Pigeon (endangered, *Didunculus strigirostris*) is a scientific curiosity. Unusually for a pigeon, it has a toothed bill, leading scientists at one time to think it was related to the now extinct dodo, also a toothed-billed pigeon. It is now very rare and restricted to mature native forest.
- The 76 species from Samoa that are classified on the 2009 IUCN Redlist as threatened species include 52 corals, 11 marine fish, 7 birds, 2 turtles, 2 plants, a land snail and a mammal. Many more species are believed threatened but have not yet made it onto the IUCN Redlist, or are on the Redlist but not classified as threatened (see page 10).

While this first cut marine KBA analysis focused on the near shore area, the offshore areas in Samoa's EEZ require analysis and conservation management as well. Datasets for the offshore environments, including deep sea and open ocean habitat, are limited. The National Oceanic and Atmospheric Administration (NOAA) is working through the Two Samoas Initiative to conduct a biogeographical assessment of the Exclusive Economic Zone (EEZ) of the Samoan archipelago to fill this gap in knowledge. As this analysis becomes available it is crucial to identify KBAs for these areas.

KBA boundaries were delineated using the following spatial data layers: protected areas and other land management units, IBAs, data on habitat type and extent, topography and bathymetry, watersheds, reef cover and settlement patterns. IBA boundaries were modified as needed to incorporate

The highest priority for terrestrial conservation investment is the Central Savaii Rainforest KBA. Only portions of the lower parts of this KBA benefit from official safeguard status.

habitat important for non-bird trigger species, and to incorporate management data.

Experts and interested members of the public reviewed the preliminary KBAs during several informal meetings, and during formal workshops held with key stakeholders in March and May 2009. Modifications to the boundaries were made based on recommendations at these meetings. Since KBA identification and delineation is an iterative process, the boundaries will be modified and new KBAs added as new data become available.

KBAs have been identified for globally threatened species of plants, reptiles, birds, snails, flying foxes, corals and fish in Samoa. No sites meeting the criterion for congregatory or colonial species were identified, or for restricted range species due to difficulties in applying this criterion in the

Pacific island context. Identifying such KBAs is a priority for further work.

The 8 terrestrial KBAs cover a total of 940 km² or approximately 33% of the total land area of Samoa, more than double Samoa's SBSAP commitment of 15% of land coverage and including representation of 12 of the 13 native terrestrial vegetation communities in the country. The 7 marine KBAs cover approximately 173 km² or 23% of the inshore reef area of Samoa.

Currently, 6 of the 8 terrestrial KBAs and 3 of the 7 marine KBAs have been completely or partially established as conservation areas by the government of Samoa or by local village communities and 2 additional KBAs have small community based fisheries sites within their boundaries. However, the effectiveness of management of these sites is highly variable and many need improved management to adequately safeguard their component biodiversity. The remaining KBAs lack, or no longer have, formal protection. These sites are targets for the expansion of the PA network.

Given that funding for conservation investment is limited and that some KBAs require safeguarding more urgently than others, prioritization amongst the 15 KBAs identified to date is important. KBAs can be prioritized according to their irreplaceability and vulnerability, the same principles involved in their identification. A detailed prioritization requires additional biological and socioeconomic data that were not available for this analysis and is therefore a task for the future.

One KBA does however emerge as the highest single priority for terrestrial conservation investment in Samoa. This is the Central Savaii Rainforest KBA, the largest contiguous area of rainforest in tropical Polynesia and a site identified by the Alliance for Zero Extinction (AZE), a consortium of over 60 conservation organizations worldwide, as one of the last remaining strongholds for one or more Critically Endangered or Endangered species. The loss of the Central Savaii KBA would result in the extinction of many species, making it an extremely urgent priority for conservation.

Currently only portions of the lower parts of this KBA benefit from official safeguard status, and thus the upland area should be considered the highest priority terrestrial area for immediate investment.

Monitoring of KBAs

It is not enough to identify KBAs and to implement conservation activities within them. The success of activities to safeguard KBAs and their trigger species must also be measured and monitored. Conservation International, MNRE and partners are employing a set of practical indicators, or measurement tools, to determine progress toward meeting the conservation objective of safeguarding all KBAs in Samoa. These are recognized as the most robust measures for monitoring the status of Samoa's biodiversity and the conservation measures that safeguard this biodiversity. These measures include:

- ▶ Change in the percentage of KBAs with official protection status.
- ▶ Change in forest cover extent within terrestrial KBAs.
- ▶ Change in percentage of KBAs with governance structures in place.
- ▶ Change in percentage of KBAs with management plans in place.
- ▶ Change in percentage of KBAs with required infrastructure in place as identified in management plan.

Through monitoring trends in these key indicators, the ability to communicate conservation successes and failures to government agencies, investment bodies, industry, and society as a whole is strengthened, thereby informing future decisions regarding strategic planning and investment within KBAs, and also influencing conservation policy more broadly.

The islands of Nu'u'ula (foreground) and Nu'u'utele (background) in the Aleipata MPA are located at the far eastern end of Upolu. This KBA consists of four forested volcanic islands and adjacent reef and lagoon. This is a key site for laumei (Hawksbill and Green Turtles), tuaimo (Ground Doves), manumea (Tooth Billed Pigeon) and rare coastal forest. A recent partnership project has attempted to eradicate rats from Nu'u'utele and Nu'u'ula with huge potential benefits for native biodiversity.

O le fa'amoemoe maualuga o le taiala mo Vaega Oā Fa'apitoa (VOF) mo le Ola Fa'a-natura, o le fa'ailoa atu, tu'u'atasia i ni fa'amaumauga ma le puipuia o vaega eseese o le siosiomaga ua ave iai le fa'ataua mo le fa'asaoina o le ola fa'a-natura o le lalolagi. O "Vaega Oā Faapitoa" (VOF) o se vaega o le siosiomaga po'o le a lava le tele ua fa'atauina i lona tulaga agavaa fa'a-natura ma ua puipuia ma pulea mo manulauti fa'a-fa'asao.

O vaega o le siosiomaga ua agava'a ona avea ma Vaega Oā Fa'apitoa (VOF) mo le Ola fa'a-natura ua faamalieina taiala nei: (i) ogaoga le ma'ale'ale ona o lamatiaga; (ii) ua leai se isi lava avanoa mo le fa'asaoina. O le taiala o le 'ma'aleale' e fa'ataua lea i le tulaga ogaoga ua o'o iai le lamatia ma le fa'aono mou atu o loo feagai ma le ola fa'anatura. O le 'leai o se isi avanoa mo le fa'asaoina', e fa'ailoa ai le matua leai ose isi siosiomaga fa'a-natura o totoe e fai ma sulufaiga o sea meaola pe a fa'aleagaina le apitaga o loo ola ai i le taimi nei.

I lenei lomiga, ua fa'aaogaina na ole taiala o le 'ogaoga le ma'aleale ona o lamatiaga' i le iloiloina o Vaega Oā Fa'apitoa (VOF) ona ole utiuti o fa'amaumauga ma le fa'afaigata ona fa'agalue o le taiala o le 'leai o se isi avanoa mo le fa'asaoina' i atu motu laiti.

Taiala o le Ma'ale'ale: Meaola lamatia i le lalolagi

O Vaega Oā Fa'apitoa (VOF) mo le Ola Fa'a-natura uma, ua fa'avasegaina i lalo o lenei taiala, o vaega ia o loo fa'alagolago iai le ola pea o se tasi pe sili atu foi o meaola lamatia i le

lalolagi – meaola ua fa'atulagaina i lalo o vaega nei: matua lamatia (ML), feololo le lamatia (FL) ma le lamatia (L) pei ona faailoa I le lisi a le Iuni o le Lalolagi mo le Fa'asao o le Natura (IUCN).

Fa'atulagaina ma le Fa'amatalaina o Vaega Oā Fa'apitoa mo le Ola Fa'a-natura i Samoa

I le tausaga e 2003, na amataina ai se sailiiliga a le Fa'alapotopotoga o Fa'asao Fa'a-va-o-malo ina ia fa'ailoa ma fa'amautuina ni manulauti tau fa'asao mo le atu Polenia ma Maikolenisia e aofia ai ma Samoa. O lea sailiiliga na fa'atinoina i se faiga fa'apa'aga ma le Fa'alapotopotoga o Siosiomaga a le Pasefika (SPREP), Bishop Museum, le Natura Sosaiete (TNC), Société d'Ornithologie de la Polynésie, ma le Sosaiete mo le Fa'asaoina o Meaola (Wildlife Conservation Society). E toatele nisi fa'alapotopotoga ma tagata poto fa'apitoa na tu'uina mai fa'amaumauga ma fesoasoani mai i lenei sailiiliga. Ina ua maea, e 162 le aofai o VOF na iloa ma fa'amautuina mai ai, e aofia ai le 6 i Samoa.

I le 2008, na amata ai ona galulue fa'atasi le Fa'alapotopotoga o Fa'asao Fa'ava-o-malo, le vaega o Fa'asao ma Siosiomaga o le Matagaluega o Punaoa Fa'anatura ma Siosiomaga (MNRE), ma le Fa'alapotopotoga o Siosiomaga o le Pasefika (SPREP) i lalo o le Polokalame o Galue a Samoa mo Eleele Fa'asaoina, e fa'atino se saili'iliga pe o iai ni VOF o Samoa o loo lape ma lē o aga'i iai le silasila mo galuega fa'asao. O le sini autu o lenei suesuega o le fia fa'amautuina lea pe o talafeagai eleele fa'asao ua ave iai le fa'amuamua i le SNBAP ma le taotoga o VOF ua faailoa mai i saililiga ua faia nei. I le ma lona lua, pe iai nisi VOF fou e ao ona fa'ataua auā le fa'alauteleina pea o fanua fa'asao o Samoa. O se tasi o fa'amoemoega o lenei sailiga o le fia iloa tino lea pe o iai ni vaega maoa'e o le ola fa'a-natura o Samoa e lei o'o iai lo tatou iloa.

E 8 nisi VOF o le laueele ma le 7 o le gataifale na fa'ailoa mai e ala i lenei sailiiliga ma ua fa'ataoto nei ni

E te silafia?

E silia ma le 2,500 ituaiga o iniseti i totolu o le Malo Tutoatasi o Samoa, 770 ituaiga o laau, 64 ituaiga o sisi o le laueele, 31 ituaiga o manulele, 14 ituaiga o repetile, 3 ituaiga o mamele. E maualuga foi le faitau aofai o meaola o le sami, 890 ituaiga o i'a, silia ma le 200 ituaiga o amu ma le tele o tafola ma manua.

O Samoa e sili atu le tele o ituaiga o laugasese (ferns) ma pepe e maua ai nai lo Niu Sila o se atunu e fa'a 8.5 e telē atu ai lona lauelele nai lo Samoa!

Tele meaola fou e maua i suesuega o lo'o faia peia. I le 2008 e tolu ituaiga o ia o vaimagalo na maua - o nisi o nei 'ia e fou i fa'amaumauga fa'a Sainisi. Ile 2009 e lua ituaiga pepe fou na maua ai.

O Samoa e maua ai le apogaleveleve sili ona laititi i le lalolagi – Patu marplesi - ma e maua i nofoaga maualuluga o Upolu. O lona tele e oo atu i le 0.43mm.

O le Manumea o le Manulele a Samoa o loo taulai i ai mafaufauga o saienitisi ia latou suesuega. E i le auaiga o lupe peitai o lona gutu ma'ai fa'aloulou ua fa'atusa ai e saienitisi i manu o le dodo lea ua leva ona le o toe maua i le lalolagi. O le manumea ua seasea ona vaaia ma e nofo i vaomatua lafulemu.

E 76 ituaiga o meaola o Samoa ua fa'atulagaina i le lisi a le IUCN ua lamatia e aofia ai ituaiga o amu e 52, 11 ituaiga ia, 7 ituaiga o manulele, 2 ituaiga o laumei, 2 ituaiga o laau, 1 le sisi fanua, ma le mamele e tasi. E tele nisi o meaola e talitonu ua i ai se tulaga lamatia peitai e lē oi totolu o le lisi a le IUCN (silasila i le laupepa o sosoo ai).

manulauti mo lo latou fa'asaoina i totonu o ni ekosistema fa'anatura o loo maua ai. O le ililogia o VOF mo le ola fa'a-natura o le laueelele sa mulimulita'i i le taunu'uga o suesuega lata mai sa faia mo vaimagalo, pepe, pe'a ma laau ua le o toe ta'atele aemaise fa'amatalaga pei ona fa'amauinua mo nofoaga ttau mo manufelei i Samoa e le Sosaiete o le Siosiomaga, Matagaluega o Punaoa Fa'anatura ma Siosiomaga, Fa'alapotopotoga Fa'ava-o-malo o Manufelelei ma le Fa'asao Fa'ava-o-malo. O VOF o le ola fa'a-natura o le gataifale, sa fa'atulagaina mai i fa'a'iuga o suesuega ua ma'ea ona fa'atino mo i'a ma laumei.

O le lu'itau laualuga lava sa feagai ai i le fa'atulagaina o VOF mo le ola fa'a-natura, o le taumafaiga lea e fa'amaoti lelei taunu'uga o suesuega ua uma ona fai aemaise ai taumafaiga e tusia i luga o fa'afanua vaega uma o le ola fa'a-natura o loo ogaoga ona lamatia - e aofia ai amu, 'ia, sisi fanua, manulele, laau ma pe'a – ina ia fa'amautuina pe o feola pea nei meaola i nei vaega pe leai. A leai, pe mo'omia le toe fa'atulagaina o ni VOF fou e fa'amautinoaina ai lo latou fa'asaoina.

E 76 meaola ole laueelele ma le sami ua fa'atulagaina mai totonu o le Lisi a le IUCN 2009 fa'atasi ai ma fa'amatalaga i lo latou tulaga tau fa'asaoina, o nofoaga e maua ai, o fa'afitali, o feso'otaiga mo nisi fa'amatalaga ma fa'amaumauga. Fa'aopoopo i le 11 o meaola o le laueelele ua lisiina i le IUCN 2009, e 3 nisi meaola lamatia o Samoa ua molimauina le i ai foi i lea vaega ma avea ai ma meaola 'fa'ailo' (poo meaola latou te fa'asofia le faia o se VOF fa'aopoopo). O le 3 lea o le laau o le ifilele, o le manulele o le taio (o le lua lea ua fa'atulagaina ua lamatia) ma le pe'a vao lea e sili atu lona tulaga lamatia nai lo fa'amaumauga a le IUCN.

E tolu ni suesuega na fa'atinoina i feso'otaiga o le ola fa'a-natura ma le siosiomaga i Samoa, e agai tonu i ni vaega e le o atoatoa iai lo tatou silafia i le taimi nei. O ia suesuega e a'afia ai suesuega o le ola fa'a-natura i vai magalo (Jenkins ma isi, 2008), pepe (Patrick ma Edwards, 2009), ma pe'a (Shilton, 2009). O le saililiga fa'ataua i laau lamatia o Samoa o loo fa'agasolo pea lona fa'atinoga i le 2010.

O fa'amaumauga i vaega tonu o Samoa e maua i ai nei meaola o le natura sa fa'amautuina mai i suesuega e lei leva atu ona maea, ma fa'amaumauga mai lomiga, fa'apea ma manatu mai ia i latou e iai le tomai faapitoa. O fa'amaumauga mo le gataifale e tele ni vaega e lē o atoatoa ai, ae maise i fa'amatalaga o vaega tonu e maua i ai meaola taitasi. Peitai sa fa'aogaina suesuega o apitaga fa'anatura e fai ma fa'asinomaga o le maua ma le lē maua o ia meaola i nei nofoaga, ae maise pe a iloiloina nofoaga fa'asao o le Gataifale, ae maise nofoaga fa'asao o le gataifale i vaega tulalata i le talafatai i le tasi le maila mai le aau agai atu i tua'au.

E ui o lenei vaega muamua o saililiga o VOF o le Gataifale o loo fa'a muamua le fa'asao o le vaega tulalata i le talafatai, e lē fa'aitiitia ai le ttau o le iloiloina maeaea o pulega fa'a-fa'asao i vaega i tua atu i le sone fagota o Samoa. E utiuti fa'amaumauga i le siosiomaga o le natura i tua'au ma le vasa loloa. Peitai o le National Oceanic ma le Atmospheric Administration (NOAA) o loo fa'atalanoaina se taumafaiga e aofia ai Amerika Samoa ma Samoa mo le fa'atinoina o se saili'iliga o le siosiomaga fa'anatura i sone fagota o atumotu o Samoa e fa'ailoa ai vaega ia o loo lape ai le iloa i le ola fa'a-natura. Pe afai e fa'atauuina lenei fuafuaga o le a mafai loa ona iloa tonu VOF mo le ola fa'a-natura i ia vaega.

O tua'oi o VOF o le Ola Fa'a-natura ua fa'ailoaina i lenei galuega, sa fa'amautuina mai i ata e pueina mai le vateatea, fanua puipua ma le pulega o ele'ele, fa'amaumauga i nofoaga autu mo manulele e pei o ituaiga o apitaga ma nofoaga e maua i ai, foliga va'aia ma le fuataga o le loloto o le sami, nofoaga e pueina ai le suavai, taotoga o 'aa u ma amu ma le fa'ataotoga o apitaga o tagata soifua. O tuaoi o nofoaga fa'atauina mo manulele ua toe fetu'una'i ina ia aofia ai ma apitaga taua mo manulele e lē o i le tulaga lamatia ma faiga fa'apulega talafeagai.

Sa iloiloina lenei galuega e i latou o i ai le poto fa'apitoa faapea ma sui o le atunuu e lagolagoina lenei fa'amoemoe ini fonotaga ma fa'atalatalanoaga sa faia atoa ai ma le mafutaga fa'aleaoaoga sa fa'atinoina mo fa'alapotopotoga lautogia ia Mati ma Me 2009. O teuteuga ma suiga i tuaoi, sa faia i

luga o fautuaga na tuuina mai i nei fonotaga. Talu ai o le fa'atulagaina ma le fa'ailoaina o VOF mo le Ola-Fa'a-natura o se taumafaiga, o loo fa'atinoina i se faiga fa'aauau, e tumau ai pea le iai o le avanoa e toe fetu'utu' unai ai tuaoi ma fa'aopopoina nisi VOF mo le Ola-Fa'a-natura pe a tusa ai ma nisi fa'amaumauga ma fa'amatalaga fou o le a tula'i mai.

O VOF mo le Ola Fa'a-Natura ua fa'atulagaina mo meaola lamatia uma i le lalolagi o loo i Samoa, e aofia ai laau, reptile, sisi, pe'a, amu ma i'a. E leai ni VOF mo meaola ola-fa'a-kolone ona e lē o fa'amalieina taiala fa'ata'atitia. Fa'apea foi meaola e pu mo'omo'o o latou apitaga ona o le lavelave o tulaga o le ola fa'a-natura i atu motu laiti o le Pasifika. O le fa'atulagaina o ia ituaiga nofoaga mo le ola fa'a-natura o se matafaioi e tatau ona ave i ai le fa'amumua i le lumanai.

O le 8 o VOF mo le ola fa'a-natura o le laueelele e aofia ai le aofaiga e 940 km² poo le 33% o le tu'ufa'atasiga o le eelele o Samoa, e sili atu ma le fa'aluaina o le manulauti o le 15% o loo fa'atulaga mai e le Taiala o le Ola Fa'a-natura lea e aofia ai le 12 o le 13 o nofoaga fa'a-natura o le laueelele o le atunuu. O le 7 o VOF mo le ola fa'a-natura o le gataifale lea e aofia ai le 173 km² poo 23% o le aloalo o Samoa.

I le taimi nei e 6 mai le 8 ni VOF mo le ola fa'a-natura o le laueelele ma le 3 mai le 7 ni VOF mo le ola fa'a-natura o le gataifale ua tu'u mavaevae mai ma ua avea nei nisi o ni nofoaga fa'asaoina i lalo o le pulega a le Malo ao isi o loo i lalo o le pulega a afioaga ma alalafaga. E 2 nisi VOF e aofia ai i totonu ni ogasami fa'asao mo fa'agotaga. Peitai o le puleaina lelei o nei nofoaga e tele le eseesega, ma e tele foi se manaomia o ni faiga fa'a-pulega e sili atu aua le fa'aleleia atili. O isi VOF e le o i lalo o ni pulega aloaia. O loo tulimataia nofoaga nei mo le fa'ateleina atu i ai o feso'otaiga fa'a-fa'asao.

Ona o le utiuti o seleni e fa'atupeina ai manaoga fa'a-fa'asao, tainane o nisi o VOF e tatau ona fa'anatinati ona fa'amausalīina ona o le ogaoga o le tulaga lamatia o loo i ai, e alagā tatau ai ona fa'atulaga lelei VOF e 15 ua filifilia i le taimi nei ina ia manino vaega e ave iai le fa'amuamua. O sea fa'atulagana e tatau ona fa'avae i luga o le taiala o le 'leai o se isi avaanoa e fa'asaoina ai' ma 'ogaoga o le tulaga ma'alele'

ua ausia - o taiala foi ia na fa'avae ai lo tatou filifilia o ni VOF. E m'oomia foi fa'amaumauga aulilili fa'a-natura ma fa'amatalaga o ni a'afiaga o ni tagata soifua o nonofo taulalata iai. Peitai ona o ia fa'amatalaga aulilili e le i tapenaina i le taimi nei o tasi lenei o galuega mo le lumana'i.

E tasi se VOF mo le ola fa'a-natura e tulaga maoa'e lona taua ma e tatau ona ave i ai le fa'amuamua mo le fa'asaoina pe a fa'atusatusa i VOF uma lava o Samoa. O le VOF lea e aofia ai Vaomatua Tu-Ogatotonu o Atumauga o Savai'i. O lenei vaomatua e aupito telē ma maopoopo lona malu puipuia i le atu Polenia atoa. O se tasi foi o nofoaga o loo i ai le talitonuga maumaututū o loo ofaga ma ola ai nisi o meaola ua 'ogaoga le lamatiaina. Afai e fa'atamaia lenei vaomatua i atumauga o Savai'i o le a matuā afaina le tele o le ola-fa'anatura o meaola o loo au mau ma ola saogalemu ai. Ona o lea mafuaga, e alagā tatau ai ona fa'amuamua ma fa'anatinati le fa'atinoina o polokalame mo lona fa'asaoina. I le taimi nei, e na o le vaega pito i lalo o lenei VOF o loo i ai se fa'amalumaluga aloaia. O le vaega maualuga o lenei VOF o iina tonu e ao ona ave iai le fa'ataua muamua

Mata'ituina o Vaega Oā Fa'apitoa (VOF) mo le Ola Fa'a-natura

E le tau ina fa'ailoa o VOF mo le ola fa'a-natura ma fa'atino galuega fa'a-fa'asao i ia nofoaga ona gata ai lea. O le manuia auliluma o taumafaiga e puipuia VOF mo le ola fa'a-natura ma meaola taua o loo aumau ai, e fa'alagolago lea i le mataituna ma le va'avaaia lelei. Ua fa'aaogaina e le Fa'alapotopotoga o Fa'asao Fa'a-va-o-malo ma le Matagaluega o Punaoa Faanatura ma Siosiomaga ma a latou paaga ni auala e fuatia ma fa'ailo gofie ai la'asaga o le gasologa o atinae fa'a-fa'asao o le a fa'atinoina ina ia ausia le manulauti o le puipuiga o VOF uma i Samoa. O ia auala ua fa'amautuina lo latou talafeagai mo le mataituna o la'asaga eseese o le ola fa'a-natura o Samoa aemaise le gasologa o atinae fa'a-fa'asao mo lo latou puipuia. O auala nei e aofia ai:

- ▶ Suiga i pasene o VOF mo le ola fa'a-natura ma puipuiga aloaia.
- ▶ Suiga i le fa'ateleina o vaomatua i totonu o VOF mo le ola fa'a-natura.
- ▶ Suiga i pasene o VOF mo le ola fa'a-natura ma le fa'atulagaina o pulega.
- ▶ Suiga i pasene o VOF mo le ola faa-natura fa'atasi ma taiala ia fausia
- ▶ Suiga i pasene o VOF mo le ola fa'a-natura ma atinae mo'omia e pei ona faailoa i totonu o taiala.

Mai le mataituna o ni suiga fa'aauau o le a tula'i mai i le ola fa'anatura o VOF eseese, o le a mafai ai ona iloa le agai manuia poo le lē manuia foi o ia taumafaiga fa'a-fa'asao. O le a fa'afaigofie ai foi ona tu'uina atu ni lipoti manino mo le silafia a fa'alapotopotoga fa'a-le-malo, fa'alapotopotoga o loo fa'atupeina galuega fa'asao, kamupani ma le lautele o le atunu'u. O ia lipoti o le a ta'ita'ilimaina ai ni fa'aiuga i le lumana'i e aofia ai ni fuafuaga tu'utu'u mamao mo galuega fa'atino i totonu o VOF, ae maise fuafuaga mo galuega fa'a-fa'asao i lona aotelega.

Aleipata Marine Protected Area includes the waters of the Aleipata district extending to a half a mile off the reef crest. This key site contains four islands, rare soft corals, sea grass beds and turtle nesting beaches. Photo by ©Stuart Chape, SPREP.

5	Apia catchments	Upolu	Vaimauga West, Faleata and Siumu	8,336	Partly protected in Lake Lanoto'o National Park and Mt Vaea Scenic Reserve. Some conservation effort by MNRE's watershed management section	Y	Samoan Bush Palm (<i>Niu vao</i>), Tooth-Billed Pigeon (<i>Manumea</i>), Ground Dove (<i>Tuaimeo</i>), Mao (<i>Maomao</i>), Samoan Broadbill (<i>Tolaifatu</i>), Samoan Flying Fox (<i>Pea vao</i>), <i>Thaumatodon hystricelloides</i> (<i>Sisi</i>)	Invasive species, hunting, development
6	Safata Marine Protected Area	Upolu	Safata	5,870 (marine); 101 (land)	Community Conservation Area	N	Hawksbill and Green Turtles (<i>Laumei</i>), Samoan Broadbill (<i>Tolaifatu</i>)	Management conflicts, land clearance for new house sites, dumping of rubbish, pollution
7	Central Savaii Rainforest	Savaii	Inland parts of all districts on Savaii	72,699	Partly protected in Mauga Salafai, Lata and Asau-Falelima National Parks	Y	Samoan Bush Palm (<i>Niu vao</i>), <i>Drymophloeus samoensis</i> , (<i>Maniiniu</i>), Tooth-Billed Pigeon (<i>Manumea</i>), Mao (<i>Maomao</i>), Samoan Broadbill (<i>Tolaifatu</i>), Samoan Flying Fox (<i>Pea vao</i>), Samoan Moorhen (<i>Punae</i>), Savaii White-Eye (<i>Mata papae</i>)	Invasive species, hunting
8	Falealupo peninsula	Savaii	Vaisigano West, Falealupo and Alataua West	1,537	Partly protected in a Community Conservation Area	N	Tooth-Billed Pigeon (<i>Manumea</i>); Samoan Broadbill (<i>Tolaifatu</i>), Samoan Flying Fox (<i>Pea vao</i>). This site also contains the only known populations of the <i>Pau</i> tree (<i>Manilkara samoensis</i>), a highly threatened tree endemic to Falealupo, not currently on the IUCN Redlist	Invasive species, fire, hunting

Map 2: Terrestrial Key Biodiversity Areas and Native Vegetation
Fa'afanua 2: Vaega Oā Faapitoa o Elele Faa-natura ma ituaiga Laa

Did you know?

- Approximately 30% of Samoa's native biodiversity is endemic to Samoa (ie only found in Samoa and nowhere else in the world).
- The biggest threats to Samoa's biodiversity are habitat destruction for agriculture, housing and other development, the over-harvest of resources and the impact of invasive species of pests and weeds. In future climate change may become the biggest threat.
- Recent species extinctions in Samoa possibly include the endemic Swallowtail Butterfly (*Pepe ae*, still found in American Samoa) and the Sheath-Tailed Bat (*Tagiti*). The Samoan Woodhen (*Puna'e*) hasn't been seen since 1908 and is also probably extinct. How many more species will go extinct before we act to conserve them?
- The rarest vegetation community in Samoa is the upland swamp forest with only one occurrence remaining- the Vaipu swamp on Upolu, covering approximately 150ha. This swamp is included in the Eastern Upolu Craters KBA. Photo ©James Atherton, CI Pacific.

The Central Savai'i Rainforest is the largest continuous patch of rainforest in tropical Polynesia, approximately 730km², and contains more than 100 volcanic craters, and areas of recent lava flow such as to the left of this image. This huge block of rainforest contains most of Samoa's endemic species, including many that are highly threatened, such as the Mata Papae (Savai'i White-Eye), the Manumea and the Maomao. There is hope that the Puna'e (Samoa Moorhen), last seen in 1908, may still be found in unexplored parts of this forest. Photo by ©James Atherton, CI Pacific.

14	<i>Carcharhinus longimanus</i>	White Tip Shark	Malie Aloalo	Vulnerable	Decreasing
15	<i>Carcharhinus limbatus</i>	Black Tip Shark	Malie Aloalo	Vulnerable	Not Known
16	<i>Plectropomus areolatus</i>	Polkadot Cod	Ata'ata-utu	Vulnerable	Decreasing
17	<i>Plectropomus laevis</i>	Blacksaddled Coral Grouper	Ata'ata-utu	Vulnerable	Decreasing

Note: A large number of marine species occurring in Samoa have not been reviewed by the IUCN or are data deficient, e.g. the Palolo Worm, and therefore may be locally or globally threatened but do not appear on this list. Also not featured here are threatened cetaceans, which would not benefit from the near shore conservation which is the focus of the KBAs developed here. In many of the surveys conducted in Samoa, corals are not identified to species. For this analysis, globally threatened corals did not independently trigger a KBA due to data limitations. The full list of IUCN red listed marine species including vulnerable corals, is shown in Appendix 1.

Map 3: Marine Key Biodiversity Areas and Marine Habitat

Did you know?

- Did you know that in Samoa over 90% of the protein consumed from local sources comes from the sea?
- Did you know that coral reefs are the largest living structure on the planet?
- Coral reefs form natural barriers that protect nearby shorelines from the eroding forces of the sea, thereby protecting coastal dwellings, agricultural land and beaches. So if you are worried about climate change reefs are your first line of defense.
- Less than 1% of the near-shore area in Samoa is fully protected from extractive uses.
- Resources like coral reefs and mangroves protect the land by breaking up big waves and reducing wave energy such as that from tsunamis and storm surges.
- Although coral reefs cover less than 1% of the Earth's surface, they are home to 25% of all marine fish species. Photo © Paul Anderson, SPREP.

**Table 4: Profile of Marine Key Biodiversity Areas

In late 2009 the south coast of Upolu was struck by a major tsunami which caused great loss both to the human communities and the natural environment. Coral communities were most heavily impacted in the Aleipata MPA but damage extends down the south coast, including the only other district-wide MPA of Safata. Savaii and the north coast of Upolu were generally spared the effects of the tsunami. This event illustrates the necessity of replicating habitats in a MPA network. Replicates increase resilience to disturbance by providing both a refuge for species and source of biota for the damaged area. The resilience of the Samoa MPA network will be enhanced by increased protection of reef communities throughout Samoa. Photo by © Stuart Chape, SPREP.

4. Main Findings and Recommendations

Terrestrial Findings and Recommendations

Eight terrestrial KBAs have been identified in Samoa. Five KBAs are actively managed, or parts of which are managed, as protected areas or community conservation areas. Two sites were formerly managed as community conservation areas, while one (the Eastern Upolu Craters) has never had any protection. Six of the eight sites have recently been identified as Important Bird Areas (IBAs) by O le Siosiomaga Society, MNRE, BirdLife International and Conservation International.

The assessment of gaps in our knowledge of terrestrial biodiversity has identified a number of taxonomic, thematic and geographic knowledge gaps. The taxonomic knowledge gaps include land snails, insects, seabirds, threatened plants and current population estimates of flying foxes as well as freshwater biodiversity in general. The main thematic knowledge gap is our knowledge of the biology and ecology of native species. We have a poor understanding of the current population, distribution, habitat, threats and feeding and breeding biology of most native species. This poor knowledge makes it difficult to adequately define effective conservation areas and other strategies that will allow threatened species to survive into the future. The spatial knowledge gaps include two main areas in particular- the central and eastern parts of both upland Savaii and upland Upolu.

Terrestrial Key Findings

- ▶ The total area of terrestrial KBAs in Samoa is about 940 km² (33% of the land area of Samoa).
- ▶ The area of terrestrial KBAs with some form of existing protection is approximately 173km², or 18% of the area of all KBAs.
- ▶ If all terrestrial KBAs are fully conserved the area of protection in Samoa will increase from 10% to 33% of the land area, more than double our SBSAP commitment of 15% of the land area of the country.
- ▶ The proposed KBAs capture key habitat for 8 of the 11 terrestrial species currently classified as threatened on the IUCN Redlist (with the exception of the sheath-tailed bat which is probably extinct and the bristle thighed curlew and storm petrel which are migratory).
- ▶ KBAs include within them examples of 12 of 13 native terrestrial vegetation communities in Samoa (the only vegetation community missing is fernland) and capture approximately 65% of the native forests of Samoa and most of the endemic terrestrial species in Samoa.
- ▶ The IUCN Redlist is highly under-representative of the true number of threatened species in Samoa.
- ▶ The key gaps in our knowledge of terrestrial biodiversity include our ecological knowledge of native species in general but especially of threatened plants, invertebrates and freshwater biota.

Terrestrial Recommendations

- ▶ We can take action to protect native terrestrial biodiversity now, as key sites for terrestrial conservation and many species at risk of extinction are known.
- ▶ We must raise awareness at all levels of society about Samoa's threatened species, the sites where they are found and what must be done to conserve them.
- ▶ Some threatened species need special protection in the entire country, not just in key sites (e.g. native pigeons, doves, flying foxes and *ifilele*).
- ▶ Existing laws such as the Protection of Wildlife Regulations need to be promoted and followed.
- ▶ Priorities for further species research include plants, invertebrates (especially land snails), seabirds and freshwater fish.
- ▶ Research should focus on increasing our understanding of the biology of native species and how to conserve them, including sustainable levels of harvest for harvested species.
- ▶ The biggest single priority for expansion of the PA network in Samoa is the Central Savaii Rainforest- which at 730 km² is the largest intact block of rainforest in tropical Polynesia and captures most of the threatened terrestrial species in the country. Large sites such as this are important refugia for whole communities of native species and species with wide ranges.

Marine Findings and Recommendations

Terrestrial Recommendations, continued

- The priorities for improved site management include the Uafato-Tiavea KBA and the Apia Catchments KBA, both on Upolu.
- Future refinements of Samoa's KBAs should include the addition of criteria such as congregatory and restricted range species as well as a prioritisation of all KBAs based on biological and sociological criteria.
- Since most terrestrial KBAs are on customary land, conservation of these sites depends on close and effective collaboration between government, donors, NGOs and community groups.

Seven marine KBAs have been identified in Samoa, three of which are currently managed as MPAs and include over 20 no take zones as well as much larger marine managed areas. Four additional KBAs have been identified, two of which currently host community based fisheries sites that could provide a foundation to work toward a heightened level of conservation. The other two sites have no ongoing active management. Building on the success of MNRE's marine protected areas and the Fisheries Division's community based fisheries sites, we can act rapidly to conserve the additional 4 KBAs.

The assessment of gaps in our knowledge of marine biodiversity has identified a number of taxonomic, thematic and geographic knowledge gaps. The taxonomic knowledge gaps include all corals and the current population of threatened fish and cetaceans. The thematic knowledge gap for marine species is quite similar to the terrestrial gap except that even less is known about the ecology of native marine species. We have a poor understanding of the current population, distribution, habitat, and breeding biology of most native species. In the marine environment the spatial knowledge gap encompasses much of the near shore area, from the west of Upolu to most of Savaii and the entire reef slope.

Each KBA has its own particular challenges and opportunities. In Apolima, there is a single community to engage. The community has been proactive in managing their resources in the past and represents a unique political and geographic situation in Samoa. Five Mile Reef has no

specific village with which to engage and would pose an enforcement challenge. There would be a different mix of stakeholders to address including commercial fishermen for this site and a national approach may work well in this situation. Vaotupua is an important site for Samoa, occupying the most westerly point in the country and housing a potentially important Hawksbill Turtle nesting site in Savaii. Quick action could be taken on education and outreach, data collection as well as engaging in the normal village consultation process while building on the community fisheries site currently there. Vaisigano may be best approached from a district, perspective perhaps using the examples of Aleipata and Safata, while also building off the community fisheries successes in the area. This would be the largest MPA in Savaii and there is potential collaboration with local businesses and tourism operators.

Giant Clam. Photo © Paul Anderson, SPREP.

Marine Key Findings

- ▶ The total area of marine KBAs in Samoa is about 173 km² (23% of the inshore reef area of Samoa).
- ▶ The area of marine KBAs with some form of protection is approximately 108km², or 14% of the inshore reef area of Samoa.
- ▶ If all marine KBAs are managed for conservation the area of protection in Samoan waters will increase from 14% to 23% of the near shore area, more than ten percent greater than our SBSAP commitment of 15% of the near shore area in Samoa.
- ▶ KBAs capture key habitat for 6 of the 17 vertebrates currently classified as threatened on the IUCN Redlist and at least 6 of the 48 coral species listed. The other 53 species may occur in the KBA network but the datasets are insufficient to verify their presence or absence currently.
- ▶ Marine KBAs include within them all 17 near shore habitat types in Samoa.
- ▶ Suitable models of successfully managed marine areas exist in the Aleipata and Safata MPAs and village fish reserves.
- ▶ The IUCN Redlist is highly under-representative of the true number of threatened marine species in Samoa.
- ▶ The key gaps in our knowledge of marine biodiversity include our ecological knowledge of native species in general but especially of threatened corals, and fish.

Marine Recommendations

- ▶ We can act now to protect native marine biodiversity, as key areas for marine conservation are known.
- ▶ Integrated marine surveys are needed, including targeting threatened taxa, to provide an improved basis to monitor the effectiveness of existing managed sites and to improve the knowledge base for targeting new sites.
- ▶ Some species need special protection in the entire country (turtles, long lived fish, clams).
- ▶ Existing fisheries regulations should be strengthened, promoted and enforced.
- ▶ Additional surveys need to be undertaken in the KBAs that have been identified, more rare species are likely to exist in these areas.
- ▶ Priority should be given to locations that have no current protection and represent special habitat like 5 Mile Reef and Apolima.
- ▶ Resource use and conservation are not mutually exclusive and can both be enhanced through good management of resources.
- ▶ The reef crest, slope, and off shore reefs are generally under-protected in Samoa, it is important to consider extending the boundary of MPAs no take zones to the extent of the reef slope.
- ▶ Western Upolu and Savaii are in need of conservation investment as there are no MPAs presently.
- ▶ Collaboration with the community based fisheries site developed in partnership with the Department of Fisheries provides opportunities to build on successful management efforts.
- ▶ Since most marine KBAs are under customary tenure, conservation of these sites depends on close and effective collaboration between government, donors, NGOs and community groups.

- E tatau ona taula'i suesuega e fa'alautele lo tatou iloa i le olaga o meaola totino a Samoa, pe fa'apefea ona fa'asaoina, ae pe o le a le fua e fa'aoga gafatia taulimaina ai.
- O le fa'amuamua laualuga mo le fa'alauteleina o nofoaga puipuia i Samoa e fa'asino tonu lea i le Vaomatua Tu-Ogatotonu o Atumauga o Savaii lea e 730 km² lona fuataga ma o se nofoaga sili ona ititi lona fa'aleagaina i le atu Polenia. O lenei foi VOF o loo fai ma ofaga saogalemu mo le tele o ituaiga o meaola totino ma meaola ta'atele.
- O nisi nofoaga e tatau ona ave i ai le fa'amuamua mo le toe fa'aleleia o pulega e aofia ai le VOF mo le ola fa'a-natura i Uafato-Tiavea ma nofoaga e pueina ai le suavai i Apia, i le motu o Upolu.
- O nisi fa'aopoopoga mo le fa'aleleia atili o VOF mo le ola-fa'a-natura o Samoa i le lumanai e i ai taiala mo meaola ta'a mamao ma meaola ola pu mo'omo'o. Ia fa'apea foi ona fa'atulaganaina manino VOF uma mo le ola fa'a-natura e fa'avae i luga o taiala aloaia fa'a-sainiesi o olaga o meaola ma le tulaga o ni a'afiaga o le soifuaga lautele o tagata soifua e faaono aafia ai.
- Talu ai ona o le tele o VOF mo le ola fa'a-natura i le laueleele e i totonu o eleele fa'a-le-agantu'u, o lea e taua tele ai le galulue so'oso'o tau'au o le malo, fa'alapotopotoga fesoasoani, fa'alapotopotoga tumaoti ma nuu i le fa'asaoina o ia nofoaga.

Taunu'uga o Sailiga ma Fautuaga mo le Gataifale

Efitu ni VOF mo le ola fa'a-natura o le gataifale ua fa'atulagaina mo Samoa. O le tolu o ia nofoaga o loo pulea o ni nofoaga fa'asao o le gataifale e aofia ai le sili atu i le 20 o sone e tapu ona fagotaina ma se vaega tele o le gataifale o loo avea o ni nofoaga puipuia. Mai lea aofaiga, e 4 nisi o VOF mo le ola-fa'a-natura o le gataifale ua fa'aopopoina, e lua ni nofoaga ua avea o ni vaega e atia'e ai fagotaga gafatia taulima mo nuu. E i ai le talitonuga o se amataga lelei lea e ao ina tapu'e mo le fa'asao, ae o le isi lua o nei nofoaga e le o maoti lelei lo latou puleaina. O taunuuga lelei na ausia e polokalame fa'asao o le gataifale a le Matagaluega o Punaoa Faanatura ma Siosiomaga ma fa'asao o le gataifale i nuu a le Vaega o Faigafaiva, o se fa'avae lelei lea mo ni taiala talafeagai mo le fa'agaioia vave loa o le fa'asaoina o VOF e fa (4) ua fautuaina.

I le iloiloga o itu o loo lape ai le iloa i le ola-fa'a-natura o le gataifale, ua fa'ailoa mai ai vaega nei o loo oge i sailiga ma fa'amaumauga: tasonomi (taxonomy), o vaega autu eseese o le ola fa'a-natura, ma fa'amatalaga i vaega tonu e maua i ai. O le silafia fa'a-tasonomi o loo moomia mo amu, faitauaofai o i'a ma mamele o le sami ua lamatia. E tali foliga tutusa vaega autu eseese o loo lape ai le iloa tau le olaga o meaola o le sami ma le laueleele, sei vagana ai le oge tele atu o fa'amaumauga i le ola fa'a-natura o le sami. E le o lava fo'i lo tatou malamalamaga i le faitau aofai o meaola o i ai nei, ta'apega, apitaga atoa ma aga o feusuaga ma taimi e tau tu'ufua ai. I le siosiomaga o le gataifale, e le o lava le silafia i le tele o le ola-faa-natura i vaega tu lalata i matafaga mai sisifo o Upolu agai i le tele o aloalo i Savaii.

E tofu lava le VOF mo le ola fa'a-natura o le gataifale ma ona luitau fa'atasi ma ona itu taua. I Apolima, na o le tasi le afioaga e manaomia le galulue soosoo tauau. O se afioaga e le nofonofoa'i ae galulue punouai mo le fa'asaoina o a latou alaoa o le gataifale ma e tulaga ese foi la latou puleaga fa'a-nuu i Samoa. O le aau lea ua faaigoaina o le Lima Maila, e leai se nuu patino e agai tonu iai ni feso'otaiga ma taumafaiga mo le puipuiga. E toatele vaega eseese o loo faaaogaina lenei ogasami. O i latou uma ia e ao ona feutagai ina ia faigofie

ona fa'atino gaioiga mo le fa'asaoina. E fa'aono talafeagai i lea tulaga se faiga puleaga fa'alaua'i tele. O Vaotupua o se tasi o nofoaga taua i Samoa o loo i le itu i Sisifo o Savaii, ua fa'atauaina o se faga e ofaga ma tautuufua ai laumei faiuna. E moomia vave ni polokalame fa'a-le-aoaoga ma le aoina mai o fa'amatalaga mai lea afioga aemaise fa'amaumauga mai nofoaga mo fagotaga fa'ale-agantu'u o loo i ai nei. O Vaisigano e fa'aono fetau iai se faiga fa'a-itumalo e pei ona iai Safata ma Aleipata, ma fa'aooga iai ni taunuuga lelei ma se tomai ua maua e nuu taitasi mai a latou fa'asao fa'a-faiga faiva. O se tasi lea o nofoaga fa'asao o le gataifale aupito tele i Savaii pe a taulau. E tele foi avanoa mo ni atina'e fa'apisinisi ma fa'aturisi e fa'aono maua ai.

Apolima island and its surrounding reef sits halfway between Upolu and Savaii. Apolima's small population, remote location and difficult to navigate reef passage have helped it maintain populations of rare species including Bump Head Parrot Fish and Hump Head Wrasse. Photo © Stuart Chape, SPREP.

O le motu o Apolima e tu lea ile va o Upolu ma Savaii. O le laititi o le faitau aofai o tagata e nonofa i lenei motu, faapea lona tulaga, ma le faigata ona o iai o nisi, ua fesoasoani tele lea i le faatumauna pea o le Siosiomaga faanatura o lenei motu, faapea le faitau aofai o nisi o ia taua e pei o laea ma fuga uluto'i. O loo ua lisiina i lalo nisi o taunuuga o suesuega mo le gataifale i lalo o lenei Poloketi:

- O le tu'u fa'atasiga o Vaega Oā Faapitoa (VOF) mo le gataifale i Samoa e tusa ma le 173 km² (23% o ogasami o Samoa).
- O le aofaiga o VOF mo le ola fa'a-natura o le gataifale o loo puipua e 108km², poo le 14% o le aofaiga uma o VOF mo le ola fa'a-natura o le gataifale.
- Pe afai e puipua uma Vaega Oā Fa'apitoa (VOF) mo le ola fa'a-natura o le gataifale, o le a siitia ai loa mai le 14% i le 23% ogasami puipua o Samoa ma e sili atu ma le 10% ua mauluga ai nai lo le manulauti o loo fa'atulaga mai le Taiala o le Olafaanatura e 15%.
- O le aofa'i ma puipua i totonu o VOF o le gataifale le 6 o le 17 o meaola e i ai ivitu ua lamatia i le fa'avasegana a le IUCN, ma le 6 mai le 52 o ituaiga o amu ua lisiina. O le isi 53 o ituaiga o loo aofai i totonu o le tu'u faatasiga o VOF mo le ola fa'a-natura, peitai, e le o lava fa'amaumauga e fa'amaonia ai lea tulaga.
- O loo aofia i totonu o VOF mo le ola fa'a-natura o le gataifale le 17 o ituaiga o apitaga tu lata i matafaga i totonu o Samoa.
- O loo ua iai fa'ataitaiga talafeagai o nofoaga fa'asao o le gataifale e avea ma taiala, e pei le fa'asao o le gataifale i itumalo o Aleipata ma Safata, ma nisi o fa'asao fa'a-faiga faiva a nisi o afioaga.
- I le lisi o meaola lamatia a le IUCN e lē o atoatoa ona aofia ai le fuainumera tonu o meaola o le gataifale o Samoa ua lamatia.
- O itu taua o loo lape ai lo tatou iloa i le ola fa'a-natura o le gataifale e aofia ai fesootaiga o meola ma le natura i lona aotelega ae faapitoa lava i ituaiga o amu ma i'a ua lamatia.

Fautuaga

- Ua tatau nei ona o tatou gaioi e puipui ma fa'asao le ola fa'a-natura o le gataifale aua o lea ua manino mai vaega e tatau ona agai i ai le fa'asaoina.
- E manaomia ni galuega suesue mo le faitauina lelei o ituaiga o meaola eseese ina ia fesoasoani i le mataituna o le alualu i luma o galuega fa'a-fa'asao, ma le fa'alauateleina o fa'amatalaga ma fa'amaumauga.
- E iai meaola e moomia ni puipuiga fa'apitoa i ogasami uma lava o Samoa, e pei o laumei, i'a ola umi, ma faisua.
- E tatau ona teuteu, fa'alauatele, fa'alauiloa ma fa'amalosia tulafono fa'atonutonu o faigafaiva o i ai nei.
- Ia fa'atino nisi suesuega i totonu o VOF ua fa'atulagaina, ona e i ai le manatu e tele nisi meaola seasea ona vaaia o loo maua i totonu o nei nofoaga.
- Ia ave le fa'amuamua i nofoaga e le o i ai se puipuiga fa'ale tulafono i le taimi nei faapea ma apitaga fa'apitoa e pei o le Aau o le Lima Maila (Five Mile Reef) ma Apolima.
- O le fa'aaogaina ma le fa'asaoina o tamaoaiga fa'anatura e le mafai ona tu'u eseeseina ae mafai ona ausia i le pulea lelei o alaga'oa ma le tamaoaiga.
- E lē o lava le puipuiga o aau i le aloalo ma aau mamao o loo sioina Samoa. Ona o lea tulaga, e taua ai ona silasila i le fa'alauateleina i tai o tuaoi o vaega e tapu ai fagotaga i nofoaga fa'asao o le gataifale.
- O le itu i sisifo o Upolu ma Savaii e mo'omia ona tuuina i totonu o faiga fa'a-fa'asao, talu ai e le o i ai ni nofoaga puipua o le gataifale ua fa'atuina ai i le taimi nei.
- I se faiga fa'apaaga o loo galulue faatasi ai le au fai faiva i nuu ma afioaga ma le Vaega o Faigafaiva a le Matagaluega o Fa'atoaga ma Faigafaiva, o se avanoa lelei lea e fa'atulaga ai ni la'asaga tau pulega manuia.

- Talu ai o VOF mo le ola fa'a-natura o le gataifale o loo i totonu o puipuiga fa'ale-agantu, o le fa'asaoina o nei nofoaga e fa'alagolago malosi i le galulue faatasi ai o le malo, fa'alapotopotoga fesoasoani, fa'alapotopotoga tuma'oti ma nu'u.

Of Samoa's 200 or so species of coral, about 25% are currently threatened by pollution, sedimentation and disease. Heat stress and changes to water chemistry induced by global warming are likely to have a huge impact on all our corals in future.
Photo by © Richard Howes.

E ui ina sili atu i le 200 ituaiga o 'amu i Samoa, pe tusa o le 25% o lea aofaiga ua afaina mai le faaoonaina, nuti liliu poo ni faama'i foi. O le vevela ma le mamafa tu o fesuiaiga o le tau, o le a avea o se faafitali tele mo 'amu ma aau i le lumanai. Ata na pueina e © Richard Howes.

5. Conclusion

Conclusion

Funding for conservation is limited, as are human resources and time. Given that all KBAs in Samoa have special value to the people and biodiversity of Samoa, it is imperative that all efforts are as efficient as possible and have the buy-in from all relevant sectors of society, especially the village communities with traditional tenure over the KBAs. By fully involving all stakeholders and related economic sectors including forestry, fisheries, agriculture and tourism, we can find the most appropriate way to conserve our natural heritage while providing for our current and future needs.

Effectively managing KBAs for their conservation values is important not only for the ecological integrity of Samoa, but also for the cultural, spiritual and economic vitality of the country. In this, the International Year of Biodiversity, we encourage all partners and stakeholders to work together to conserve Samoa's KBAs and natural wealth while we still can.

Five Key Recommendations

1. We should act now to protect native terrestrial and marine biodiversity, as key sites for conservation and many of the species at risk of extinction are known.
2. Since most KBAs are under customary tenure, conservation of these sites depends on close and effective collaboration between government, donors, NGOs and community groups.
3. Existing laws such as the Protection of Wildlife Regulations and fisheries regulations need to be promoted and followed.
4. Future ecological research should focus on increasing our understanding of the biology of native species and how to conserve them, including establishing sustainable levels of harvest for harvested species.
5. We must raise awareness at all levels of society about Samoa's threatened and ecologically important species, the sites where they are found and what must be done to conserve them.

Manatu Fa'au

Eutiuti seleni mo le fa'atupeina o galuega fa'a-faasao. E faapena foi tagata e fa'atinoina galuega ma le taimi. Ona o le taua i tele o Vaega Oā Faapitoa (VOF) mo Samoa ma lona ola-fa'a-natura, e matua alaga tatau ai ona fa'atinoina gaioioiga uma i se faiga e silisili ona lelei, e lagolagoina e tagata uma ae maise afioaga e ona eelele o loo taoto ai VOF. O le galulue fa'atasi o fa'alapotopotoga ma tagata uma, e aofia ai vaega o le vaomatua, faigafaiva, fa'atoaga ma turisi, o le a mafai ai ona maua ni auala talafeagai e fa'asao ai lo taou tofi fa'a-natura i ni auala e gafa taulimaina mo tupulaga nei ma a taeao.

E taua le puleaina lelei o Vaega Oā Faapitoa (VOF) o le Ola Fa'a-natura ona o lo latou taua fa'a-sao, faapea ma le fa'atumauina o Samoa i ona foliga fa'a-natura moni, ae maise ai le so'otaga vavalalata ma ana aganuu, tapuaiga ma le atinaeina o lona tamaoaiga. I lenei tausaga fa'apitoa o le Ola Fa'a-natura i le Lalolagi, e fautuaina pa'aga ma tagata uma ina ia galulue fa'atasi e fa'asao Vaega Oā Fa'apitoa o le Ola Fa'a-natura o Samoa ao maua le avanoa.
