ALPINA IS THE CHOICE

... That's the reason ALPINA's freeskiing team grows year over year, as does the appreciation of our brand in this sport. It's all down to our ultra-modern styles, colours and designs, plus of course the reliably high quality of ALPINA products, which is of crucial importance to performance at this high level.

In fact, with ALPINA the athletes can even have a direct input into product functions and further development. We recognise the importance of being close to the customer and responding to their needs. The fact that short distances are involved helps to make this possible: ALPINA products are developed and manufactured at the company's own production sites in Germany as well and it is easy to get feedback from the athletes and incorporate it quickly into product development.

In this way our athletes can accompany the development process from the initial sketches through to mock-ups cast in resin and the finished products, providing useful input along the way.

Ski helmets have to comply with the EN-1077 safety standard. Athletes can observe the rigorous tests the helmets undergo at the company's own testing station, and get a vivid impression of the forces they have to be able to withstand. As they take in what they are seeing their faces are filled with fascination and their confidence in our products is reinforced. Who could be in a better position to provide feedback than someone with this kind of background?

Name: **Roy Kittler**

Birthdate: 21.09.1988, Pirna, Germany

Height: 188cm

Weight: 80kg

HELMETS ◆

HELMET TECHNOLOGIES

Relying on over 30 years of experience and setting the highest standards of quality, ALPINA optimises its products on a year-by-year basis to ensure maximum safety, comfort and ergonomics as well as contemporary styles and design features. Helmets should feel as unobtrusive as possible when worn and yet still convey a feeling of security. High-grade materials, adjustment systems and features to ensure maximum comfort are redeveloped and refined down to the last detail on an ongoing basis.

SAFETY

INMOLD

INMOLD ski helmets by ALPINA are very light as well as extremely sturdy. This is achieved by a production process in which the helmet's polycarbonate upper shell is fused with the EPS granulate under high heat and pressure. The result is an inseparable bond between the upper and lower shells across a large area.

HARDSHELL

A combination of an impact-resistant outer shell (ABS or polycarbonate) plus a shock-absorbing and cold-insulating inner shell (EPS) guarantees a maximum of safety.

HYBRID technology combines the advantages of INMOLD and hard shell. The bottom part of the helmet consists of a lightweight INMOLD shell that provides good shock absorption, whereas a super-robust hard shell covers impact-absorbing HI-EPS material in the upper part of the helmet. Another advantage: The hard shell of the HYBRID construction allows for an extra amount of room to be used for vent holes and channels. Thanks to the large number of vents and channels hybrid helmets, in addition to their plus in safety, score with the best ventilation available on the market – an unbeatable team when combined with matching ALPINA snow goggles.

The inner shell of every ALPINA helmet consists of HI-EPS ("High Expanded Polystyrene"). These microscopic air pockets absorb the forces that act in an impact and provide the protective damping. HI-EPS allows extra-thin wall thicknesses and slim helmet shapes to be achieved. As HI-EPS absorbs neither water nor perspiration the protective effect is retained for a long time.

ERGONOMICS

3D-FIT

The 3D-FIT-SYSTEM is a thin strap that runs around the back of the neck and can be individually adjusted in height in five steps – for even better and secure fit.

CUSTOM FIT

The CUSTOM FIT SYSTEM is a further development of the time-tested RUN SYSTEM. The inclination of the retaining bracket at the back of the head on which the practical control knob for width adjustment sits can be adjusted and thus optimally adapts to the back of the head.

RUN SYSTEM ERGO SNOW

ALPINA ski helmets rely on the time-tested RUN SYSTEM, a flexible head adjustment system with a central rotatable control knob. The top-end model has two large pads to the left and right of the redesigned control knob that distribute pressure. The large control knob is made of a two-component mix that grips well and can be perfectly operated even when wearing ski gloves.

RUN SYSTEM CLASSIC

The classic for optimal fit: Thanks to the control knob at the back of the head the helmet can be adjusted to the head in a flash and will reliably remain where it belongs.

Y-CLIP

A helmet can only protect the wearer as effectively as it stays in its optimal position in case of a fall. The retention of the two under-ear straps plays a crucial part in this. ALPINA's "Y-Clip" system guarantees optimal adjustment with millimeter-accuracy – easily and in a matter of seconds.

ERGOMATIC

Proven a hundred-thousand-fold and used in all ALPINA ski helmets: Our famous strap buckle with a red push button and multi-step automatic locking mechanism. ERGOMATIC can be operated when wearing ski gloves – the strap can be loosened while using the ski lift and tightened again before the downhill run – and is prevented from opening on its own in a crash.

COMFORT

VENTING SYSTEM

Ventilation openings in the helmet shell very efficiently prevent heat from building up and ensure the temperature inside is controlled perfectly. ALPINA helmets use the Venturi effect to make air circulation as effective as possible. How does the effect, which was named after its discoverer, Giovanni Battista Venturi, work? Simply put, when a tube narrows and then widens again, air will flow through the narrower section faster. If another tube is connected to the narrow section, the negative pressure will suck air out of this tube. ALPINA engineers use this “jet effect” to draw air into the forehead area to warm up the inside of the helmet. It is also used to allow air to escape again at the back of the helmet.

AIRSTREAM CONTROL

Further airstream regulation features the AIRSTREAM CONTROL. Ventilation openings of the helmet can be opened and closed by a sliding mechanism. Perfect climate around your head is guaranteed.

REMOVABLE EARPADS

The REMOVABLE EARPADS can be detached in fractions of a second and stowed in the pockets of a ski jacket.

When enjoying the snow on a warm and sunny Easter weekend, this feature will allow you to experience an even higher degree of freedom during your ride. And when temperatures drop again, just click the earpads back on.

CHANGEABLE INTERIOR

Freecarve or freeride bonanzas can be sweat-inducing affairs! Especially the head acts as a veritable “heat exchanger.” That’s why ALPINA ski helmets equipped with CHANGEABLE INTERIOR allow you to quickly remove the interior lining, handwash it in tepid soap water, let it dry and simply insert it again.

NECKWARMER

The ALPINA NECKWARMER is pulled down low at the back of the helmet and consists of a comfortable, soft micro-fleece material. This “heat collar” also prevents the neck from being hit by air draft at high speed and Siberian temperatures. Thanks to its clever construction there are no pressure points.

FREERIDE

CHEOS

SPICE

FULLFACE

MENGA

CHEOS A9058

Hybrid helmet technology, combining Inmold and hard shell construction, makes it possible to incorporate large ventilation channels which can be actively adjusted. The CHEOS has one of the best air-venting systems on the market, making it the perfect helmet for freeriding. It also features a neck warmer and washable inner. The Ergo Snow adjustment system guarantees a perfect fit, with 3D Fit also enabling height adjustment.

TOUR 

SNOW TOUR

DETAILS

SNOW TOUR A9071

The SNOW TOUR is specially designed to meet the demands of ski touring to the fullest extent. At a mere 330 g it is one of the lightest ski touring helmets of all. In order to cut down on unnecessary weight and to guarantee good ventilation during ascents, the padding has been reduced inside the helmet, the ear pads have been removed and a ventilation system is incorporated. If it proves to be too cold, the helmet also comes with a beanie which can be inserted as a liner or worn as a hat during the ascent. In order to prevent headlamps from slipping out of place during the downhill, the helmet has a headlamp fixing. Now you can enjoy the perfect ski tour, day or night. Extra bonus for alpinists: As well as complying with the safety standard for ski helmets (EN-1077) the SNOW TOUR also also meets the standard for mountaineering helmets (EN-12492).

CARAT LE A9042

What do you want from a junior ski helmet?

The kids say: Great looks. Their parents say: Ultimate protection.

The CARAT LE fulfills both requirements, as testified by hundreds of thousands of sold helmets. It protects young heads optimally with its hard ear covers. The integrated vents guarantee good ventilation when the fun starts on the slopes.

PROTECTORS

JSP MEN VEST A8863

A completely redesigned range of protectors from ALPINA: lightweight, flexible and breathable materials with large mesh inserts at the sides guarantee a perfect fit, good ventilation and moisture dispersion.

The waist belt has a V-shaped fastening which pulls the protector in the right direction to achieve a perfect fit against the back.

The foam overlaps prevent slippage and guarantee unrestricted freedom of movement. The JSP is available in Men's and Women's versions, cut to accommodate the different anatomical proportions and guarantee an optimum fit.

GOGGLES ◆

LENS TECHNOLOGIES

ALPINA snow goggles are equipped with a wide range of different lenses and technologies to match the whole spectrum of possible requirements, from a simple entry-level model to a highly technical top-of-the-range product.

Every snow goggle lens made by ALPINA has its own essential quality features, including the basic

SINGLEFLEX:

- 100% UV-A, UV-B and UV-C protection up to 400 nm
- Anti-static Fogstop coating on the inside
- Shatter-proof polycarbonate lens
- Hard coating, except for mirrored lenses

The next grade up is the Doubleflex, a double lens with an air chamber between the two layers that creates a thermal block (a cold bridge) and prevents freezing.

DOUBLEFLEX:

- + Thermoblock

The Thermoblock principle is applied in all lenses from this model up. Further technological enhancements to the lenses are:

VARIOFLEX:

- + Photochromic lenses – automatically adapt tint level to the ambient light

The tinting of Varioflex lenses adapts automatically to the lighting conditions. The lenses react to visible light in the same way as the louvres of a blind. The brighter the ambient light becomes, the more the molecules integrated in the lens turn to the side and tint the lens.

QUATTROFLEX:

- + Polarisation filter for excellent contrast enhancement

Quattroflex lenses are polarising lenses: they filter the light and only allow beams from direct light sources through. This eliminates reflexions and dazzling so the eye is not distracted by them. Contrast is enhanced and the wearer's perception of colours and shapes is more clearly defined and accurate. This function comes into its own in snowy conditions, and on the ski slopes in particular, making contours clearly identifiable even in diffused light.

HYBRID mirror:

- + Lightly mirrored lenses

Mirrored lenses with a partial blocking effect yet affording optimum protection against infra-red radiation.

MULTIMIRROR:

- + Intensely mirrored lenses

Up to 16 mirrored layers are applied to this lens to provide protection against bright dazzling light and infra-red light.

The intensely mirrored lens means the Multimirror is a stylish accessory as well as being extremely functional.

HICON:

- + Orange tint

Hicon is the name for a specific orange lens tint. This colour has the property of making contrasts stand out even more clearly.

GOGGLE TECHNOLOGIES

COMFORT FRAME

ALPINA's COMFORT FRAME. Small zigzag-shaped, flexible synthetic ties in the forehead and cheek area of the goggle frame plus a more flexible nose construction allow the snow goggles to adapt to the wearer's individual facial shape particularly well – for superior comfort without pressure points!

SPHERICAL LENS

The spherically curved thermal double lens provides clearly improved panoramic vision. In addition, the enlarged interior volume improves thermal management inside the goggles. And THERMOBLOCK plus FOGSTOP effectively prevent fogging of the goggles.

180+ VIEW

ALPINA snow goggles with 180+ VIEW have a larger field of vision than the 180 degree field required by the CE standard. A special goggle frame and extra-large, curved panoramic lenses make this possible. This ensures a better overview – and earlier recognition of dangers in the peripheral field of vision.

RIMLESS

In conventional goggles the structure of the goggles holds the front lens in place, but with the rimless variant it is the rear lens that is secured. This means the frame can be reduced to a minimum allowing bigger lenses and a wider field of vision as the double lens is positioned further forward. Rimless goggles are extremely suitable for powder skiing, as the powdery snow will not collect on the rim of the goggles, impeding visibility. Added to this, they are also unbeatable for style.

VENTING LENS

Vents in the lens ensure a defined routing of the air flow and ventilation of the goggle lens. This effectively prevents fogging.

HINGE BAND

Our snow goggles featuring HINGE BAND technology don't have the goggle strap attached directly to the frame but to movable synthetic hooks on the outside of the frame. This construction provides even better fit of the goggles – especially when they're worn with a ski helmet.

SKID GRIP

Ski helmets typically have very smooth surfaces. When the skier makes dynamic movements on a trail with moguls or in open terrain conventional goggle straps can easily move out of place, unlike goggle straps using SKID GRIP technology: The special rubber coating on the inside keeps the goggles from slipping.

MAGNETIC LENS

In fog or under blue skies: Snow goggles featuring MAGNETIC LENS technology ensure clear vision! You choose between a brighter bad-weather lens and a darker fair-weather lens. The darker lens is attached to the brighter lower lens where it will stay in place by means of a magnet – until you make it disappear in your pocket when the weather turns again.

ALPINA FIT-INDEX

Along with technical and design features, the top priority when choosing ski goggles is the correct size and fit. ALPINA helps you to make the right choice with the ALPINA FIT-INDEX.

HOW DOES IT WORK?

The ALPINA FIT-INDEX measures two important facial features:

1. The distance between your eyes (S, M, L)
2. The height of your nose, i.e. the distance from the bridge of your nose to the upper edge of your eyebrows (30, 40, 50)

DIRECTIONS:

- Position the ALPINA FIT-FINDER at the upper edge of your eyebrows.
- Adjust it to the circumference of your head using the adjustment wheel at the back.
- Position the wings of the ALPINA FIT-FINDER at the outer edges of your eye sockets. The wings should not interfere with your view when looking straight ahead.
- Slide the nosepiece down so that it lightly touches your nose.

→ You can read off your goggle size* from the width scale at the side of the ALPINA FIT-FINDER and the height scale at the top.

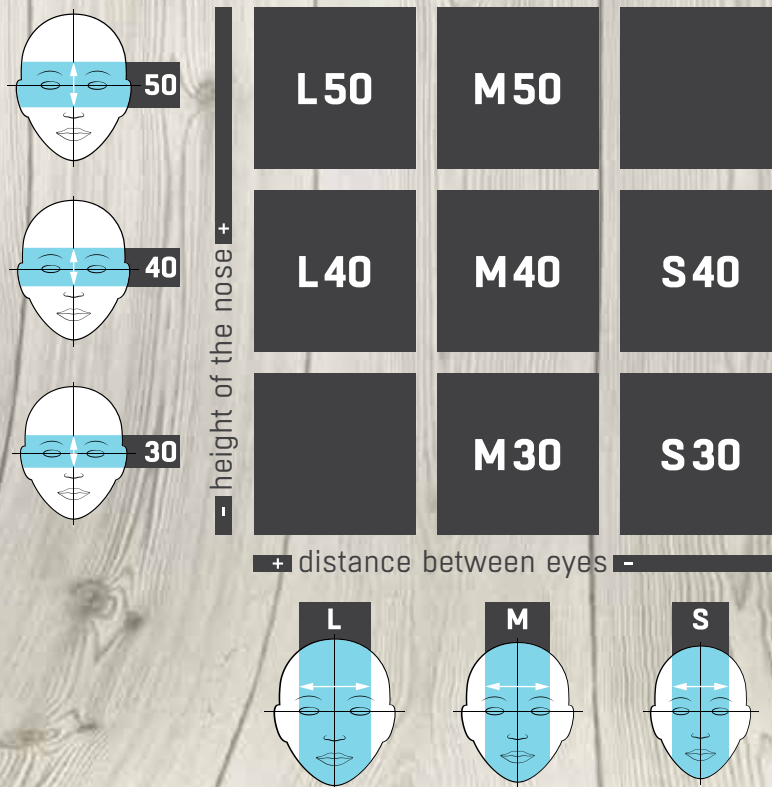

* The measurements are a guideline only.

ALPINA FIT-FINDER

Find *GOGGLES* that fit!

CHALLENGE 2.0

M40

As our stylish Challenge 2.0 goggles are so incredibly popular we upgrade them on a regular basis. For the 2015-2016 winter season they are available with a choice of five different lenses and in a total of 17 colours. Special recesses in the frame mean they can even be worn over prescription glasses.

OTG OVER THE GLASSES

„Over The Glasses“ – the goggles in Alpina’s OTG range can be worn over prescription glasses. With a particularly large interior volume and special recesses in the frame to accommodate the temples they are the perfect solution for people who wear glasses.

As well as the specific OTG goggles, there are other ALPINA goggles with recesses in the frame for glasses. However, with a smaller interior volume, their suitability will depend on the size of the glasses worn, so they are not considered OTG goggles as such. These include: the Panorama, Panorama S, Challenge 2.0, Challenge S 2.0 and Bonfire 2.0.

ALPINA ARRIS

Alpina Arris goggles are not only extremely stylish, they also offer a range of technical features including Comfort Frame, Skid Grip and a very wide field of vision which combine to enhance the pleasure of skiing. Alpina Arris goggles are available with Quattroflex and Doubleflex lenses.

JUNIOR GOGGLES

PHEOS JUNIOR

Pheos Junior goggles don't just look great, they also have a large number of technical features to meet the high demands of ski sports: the flexible Comfort Frame and the Hinge Band ensure an optimum fit for every shape of face and helmet style. The Pheos Junior is available in a choice of three lenses: Multimirror, Doubleflex and Magnetic. The Magnetic version has a second lens (protection category 3) which can be attached magnetically to the basic lens (protection category 2) to create the perfect goggles for any weather.

ALPINA CUSTOM CONCEPT

ALPINA CUSTOM CONCEPT

Alpina Custom Concept is an opportunity to create a personalised combination of helmet and goggle. There are a surprisingly large number of permutations, with four models of helmets in up to six colours, four ski goggles and six different headbands to mix and match. Additional goggle lenses can also be selected, as well as the Testido after-race eyewear in a choice of colours to match the helmet.

DOWNHILL COMP A9074

This bright orange hard shell helmet will really guarantee a dazzling performance. Ventilated ear pads make this helmet suitable for training and racing in warmer conditions too. For the uncompromising racer, the DOWNHILL COMP is also available with an optional chin guard.

CHEOS SL A9079

The CHEOS SL brings the flair of freeriding to the slalom course. With a hybrid construction that combines the advantages of Inmold and hard shell technologies the CHEOS SL is one of the best ventilated helmets on the market. The Ergo Snow and 3D Fit adjustment systems ensure it stays firmly in place even during the most demanding race manoeuvres. The CHEOS SL is available in six bright colours and with optional chin guard.

GRAP 2.0 R A9036

The classic GRAP 2.0 R has been given a makeover but retains its unbeatable fit and features such as the Run System and Airstream Control.

The outer shell has been redesigned with a new look and better ventilation, acquiring streamlined air vents, a new easy-to-use goggle headband fastening and a peak at the front. Now available in five bright colours for a sporty look.

ACC GOGGLES

ALPINA offers four different ski goggles within the Alpina Custom Concept: TYROX, SMASH 2.0, PHEOS R and SPICE R. For each pair of goggles there is a selection of six brightly coloured headbands to choose from. As delivered, the goggles are fitted with a Multimirror orange lens. There are up to five different spare lenses available to choose from, depending on the model.
