Snow Couture

2018 2019

made by Alpina

The Mountains are our Catwalk!

Since the company was founded, Alpina has been in the forefront of product design, taking inspiration from nature, the environment and the world of fashion with the aim of influencing the latest trends. More than ever before, the theme of trendsetting lifestyle is going to be a feature of the 2018/2019 winter season, and Alpina has developed three fashion styles to flavour its collection: Athleisure, Casual Chic and Prêt-à-Sporter – making the mountains into a catwalk.

Alpina Athleisure [al'pi:na aθ'leʒə]

Fashion trend. Clothing designed for yoga sessions, gym work-outs and outdoor athletics practice; for the office, town and everyday wear. The out-of-context use is the underlying concept. It's not just about comfort: it's about expressing your own active lifestyle in everyday life. Away from training, in your free time.

Athletes are emotional people who love what they do. Their love of sport finds many forms of expression – and the Alpina Athleisure range by Alpina is one of them. Stretch materials hug the products like the performance fabrics used in leggings or jogging pants. The more laid-back style means each ski helmet and pair of goggles becomes a fashion accessory in the snow – making the mountains into a catwalk.

ALPINA

ALPINA
athleisure

Alpina Casual Chic [al'pi:na 'kæʒʊəl ʃɪk]

Dress code consisting of two separate fashion terms: [1] casual and [2] chic. They are defined as [1] informal, relaxed, comfortable and [2] elegant, stylish, classy. In combination they produce a fashion style characterised by relaxed lines and refined detail. Alpina Casual Chic is distinct from smart casual and business casual dress codes.

Making sport into an experience – that's what Alpina is all about. It is essential for practitioners of winter sports to feel at one with their equipment. The Alpina Casual Chic collection is a conduit for individuality and allows the athlete's personality to emerge on the outside. Materials such as denim and cord are used so the sports enthusiast can feel really comfortable with his or her equipment. Since 1873 twill-weave blue denim has been the embodiment of adventure, ruggedness and lifestyle and a symbol of freedom. Corduroy, with its ridged patterns, is extremely hard-wearing thanks to its velvet-like surface and also very comfortable to wear. Red highlights in the form of stitching, prints and labels make the collection a real eye-catcher. On or off piste, the Alpina Casual Chic collection makes the mountains into a catwalk.

ALPINA

CASUAL CHIC

ALPINA
CASUAL CHIC

Alpina Prêt-à-Sporter [al'pi:na pretaspør'te:]

Striking and stylish collection with fashion-house origins. An exclusive production line featuring distinctive high-grade textiles and quality finishing. The unusual design has a distinctive look and combines with the selected colours to create a product world of its own.

For a long time now, sport has been about much more than physical exercise – it's also about expressing your personality and lifestyle. The Alpina Prêt-à-Sporter collection is aimed at outgoing winter sports enthusiasts who like to be noticed. Tweed is the fabric that underpins the refined character of the range: a material woven from two yarns, which is normally found in suits, jackets, coats and hats. In combination with the subtle nightblue and bordeaux hues an exclusive look emerges – making the mountains into a catwalk.

ALPINA MAROI

ALPINA MAROI

In Austria's Vorarlberg Alps the summit of the Maroi towers at a height of 2548 metres, a roughly-hewn block of bare rock and raw nature. The place has become a mecca for powder skiing pros, thanks to fields of snow like cotton wool and metre-deep drops. It's a paradise for freeriders – and the home of the ALPINA MAROI.

Clear lines and a clean design combine to produce a distinctive modern shape. The helmet shell consists of two polycarbonate plates joined in an invisible bond thanks to our Seamless Connection process. Edge Protect reinforces the full circumference of the helmet and smooth surface joins further enhance the quality of the exterior.

The outside also benefits from numerous air vents integrated at strategic points to ensure that the goggles are well ventilated and plenty of cool air is supplied to the Air Channels. The airflow inside the helmet is now directed along the whole head thanks to a new design in the EPS which simultaneously supplies cool air and transports heat away.

One feature that's not new but has consistently proven itself over time is the fit. It is the same design as the ALPINA's best-selling helmet, the GRAP. This was the model the development of the ALPINA MAROI was based on. The optimised interior with moulded structure and cushion sections guarantees optimum comfort of wear and safety as the head is enclosed all round – for maximum protection and maximum fun in the backcountry.

ALPINA MAROI

A9206

- Distinctive, compact, modern shape
- Segmented cushioning guarantees optimum comfort of wear
- Air Channels in the EPS ensure outstanding climate management

ALPINA PARSENA

ALPINA PARSENA

With a satisfying “clack” your boots snap securely into their bindings. Surrounding you are the peaks of the Swiss Alps: Gotschnagrat, Schiahorn, Christenstein – mountains as far as the eye can see. You take a deep breath and there’s the smell of winter: a mixture of pine needles and fresh new snow. Now the descent. The Parsenn piste towards Küblis covers twelve kilometres. This is the slope where skiing is thought to have started in Switzerland, and now it’s given its name to the new ALPINA PARSENA.

Its tradition and history have made the Parsenn run a classic. Just like the SCARA, with which the ALPINA PARSENA shares a key feature: its renowned fit. Its narrow styling was specially designed for smaller heads, and is an optimum fit for women. Size ranges down to 52 centimetres are a feature of the model.

Another aspect of the helmet interior has been greatly improved: the climate management system. The airflow is now channelled along the whole head thanks to a new design in the EPS which simultaneously directs cool air to the inside and transports heat away. And at the front, the ALPINA PARSENA is perfectly compatible with Alpina ski goggles. An active ventilation system directs air to the top of the goggles, making it impossible for them to fog up.

The helmet shell consists of two polycarbonate plates which are bonded together in an invisible join thanks to our Seamless Connection and Inmold manufacturing processes. Edge Protect and smooth surface joins enhance the quality of the helmet’s exterior. The result is a compact, modern, timeless shape – the essential prerequisite for the ALPINA PARSENA to become a real classic itself.

ALPINA PARSENA

TECHNOLOGIES

A helmet can never provide 100% protection, but statistics clearly show the positive benefit of wearing a helmet: prior to Dieter Althaus's accident, the proportion of head injuries sustained was around 11%, but by the winter of 2013/14 it was down to 7.2%. All Alpina helmets meet the EN 1077 quality standard. Yet it is always our aim to develop and optimise our helmets to a level that goes beyond that standard in terms of safety, ergonomics and comfort.

For years now Alpina has been analysing the diverse demands arising from different anthropometric features and optimising products for them to provide a perfect fit for each and every individual.

ERGONOMICS

ERGO³

ERGO³ allows the helmet to be adjusted so that it fits the head accurately. This involves altering the volume of the helmet, not its circumference. A ratchet locking system allows one shell of the helmet to be finely adjusted to fit around the head. This results in greatly improved comfort and an enhanced feeling of safety.

RUN SYSTEM ERGO SNOW

Alpina ski helmets rely on the time-tested Run System Ergo Snow, a flexible head adjustment system with a central rotatable control knob. The top-end model has two large pads to the left and right of the redesigned control knob that distribute pressure. The large control knob is made of a two-component mix that grips well and can be perfectly operated even when wearing ski gloves.

RUN SYSTEM CLASSIC

The classic for optimal fit: Thanks to the control knob at the back of the head the helmet can be adjusted to the head in a flash and will reliably remain where it belongs.

3D-FIT

The 3D-Fit System adds five-stage height adjustment to the Run System at the rear of the head. This enables the helmet to be adjusted even more precisely for an individual fit, increasing comfort and enhancing the wearer's feeling of safety along with the snugness of the fit.

CUSTOM FIT

The Custom Fit System is a further development of the time-tested Run System. The inclination of the retaining bracket at the back of the head on which the practical control knob for width adjustment sits can be adjusted and thus optimally adapts to the back of the head.

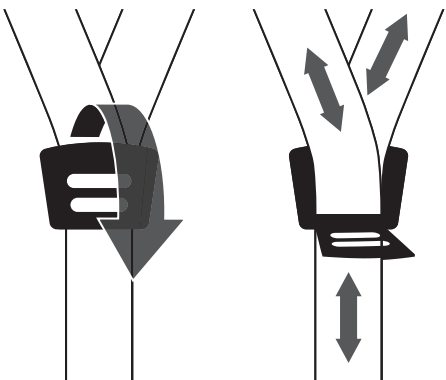

ERGOMATIC

Proven a hundred-thousand-fold and used in all Alpina ski helmets: Our famous strap buckle with a red push button and multi-step automatic locking mechanism. Ergomatic can be operated when wearing ski gloves – the strap can be loosened while using the ski lift and tightened again before the downhill run – and is prevented from opening on its own in a crash.

Y-CLIP

A helmet can only protect the wearer as effectively as it stays in its optimal position in case of a fall. The retention of the two under-ear straps plays a crucial part in this. Alpinas "Y-Clip" system guarantees optimal adjustment with millimeter-accuracy – easily and in a matter of seconds.

SAFETY

HI-EPS

The inner shell of every Alpina helmet consists of HI-EPS (High Expanded Polystyrene). These microscopic air pockets absorb the forces that act in an impact and provide the protective damping. HI-EPS allows extra-thin wall thicknesses and slim helmet shapes to be achieved. As HI-EPS absorbs neither water nor perspiration the protective effect is retained for a long time.

CERAMIC SHELL

This impact- and scratch-resistant polycarbonate shell is fitted to all Alpina helmets manufactured using the Inmold procedure. The blank work pieces are shaped at high temperature onto the form of the helmet design and the shells are then pressed onto the helmet's Hi-EPS body. The material combines a number of distinct advantages: it is impact and scratch-resistant, it contains UV stabilisers and is anti-static.

INMOLD

Inmold ski helmets by Alpina are very light as well as extremely sturdy. This is achieved by a production process in which the helmet's polycarbonate upper shell is fused with the EPS granulate under high heat and pressure. The result is an inseparable bond between the upper and lower shells across a large area.

HARDSHELL

Hard shell helmets have an impact-resistant ABS or polycarbonate outer shell on top of the EPS inner shell. This combination makes the helmets extremely tough and ensures perfect insulation against the cold.

HYBRID

Hybrid technology combines the advantages of Inmold and hard shell. The bottom part of the helmet consists of a lightweight Inmold shell that provides good shock absorption, whereas a super-robust hard shell covers impact-absorbing HIEPS material in the upper part of the helmet. Another advantage: The hard shell of the Hybrid construction allows for an extra amount of room to be used for vent holes and channels. Thanks to the large number of vents and channels hybrid helmets, in addition to their plus in safety, score with the best ventilation available on the market.

COMFORT

REMOVABLE EARPADS

The Removable Earpads can be detached in fractions of a second and stowed in the pockets of a ski jacket. When enjoying the snow on a warm and sunny Easter weekend, this feature will allow you to experience an even higher degree of freedom during your ride. And when temperatures drop again, just click the earpads back on.

CHANGEABLE INTERIOR

Freecarve or freeride bonanzas can be sweat-inducing affairs! Especially the head acts as a veritable "heat exchanger." That's why Alpina ski helmets equipped with Changeable Interior allow you to quickly remove the interior lining, handwash it in tepid soap water, let it dry and simply insert it again.

NECKWARMER

The Alpina Neckwarmer is pulled down low at the back of the helmet and consists of a comfortable, soft micro-fleece material. This "heat collar" also prevents the neck from being hit by air draft at high speed and Siberian temperatures. Thanks to its clever construction there are no pressure points.

AIRSTREAM CONTROL

Further airstream regulation features the Airstream Control Ventilation openings of the helmet can be opened and closed by a sliding mechanism. Perfect climate around your head is guaranteed.

VENTING SYSTEM

Vents in the shell of the helmet efficiently prevent any build-up of heat and provide perfect air conditioning for the helmet and goggles. The air vents in the helmet draw the warm air from inside the goggles and feed it out through the air channels in the helmet. This effect is optimized when used with the matching goggles, so that the air vents in the goggles dock neatly with those of the helmet. This ensures the circulation of air through the goggles and helmet, preventing misting and the build-up of heat.

CHEMICALCUISINE

Elements in love

New recipes bring variety to the kitchen – so Alpina has revamped its ChemicalCuisine collection and will be serving up a new menu for the 2018/2019 winter season, prepared with fresh ingredients, vibrant colours and lots of love.

The two models from the ChemicalCuisine special range are experimental, unusual and distinctive. For this reason they have their own special marketing concept that distinguishes them from the rest of the collection. The ChemicalCuisine goggles are a combination of translucent frame, colour-coordinated mirrored lens and straps printed in a variety of colours with blended tones. A total of three different combinations are available, inspired by the world of molecular cuisine, which is all about chemical reactions, neon colours, smoke and a love of experimentation. The ChemicalCuisine's SCARABEO and ESTETICA models boast a daring yet harmonious design. Their appeal to a specific target group is obvious: young, extrovert, style-conscious, technically adept. Like molecular cuisine itself, the ChemicalCuisine will appeal to the adventurous customer. In the winter sports industry these customers are reached outside the mainstream. Take a translucent frame, straps with blended colours, a colour-coordinated tinted mirror lens, and voilà: we present our three-course menu – ChemicalCuisine specials.

GOGGLE TECHNOLOGIES

Our most important sensory organ is the eye. Weighing only 7 grams and measuring about 25 millimetres, it provides around 90% of our sensory perception. Our eyes come under enormous pressure during alpine sports, especially skiing, snowboarding and ski touring. For every 1000 metres of altitude, UV radiation increases by up to 20%. In addition to this, snow reflects up to 95% of light, compared with only 6% in grassed areas.

UV radiation and winds at speeds over 10 km/h can cause permanent damage to the eye. Our eyes are protected by lashes, the secretion of tears, our eyelids and our blinking reflex. However, additional and full protection can only be provided by ski goggles. They offer protection against UVA, UVB and UVC radiation.

COMFORT FRAME

Small zigzag-shaped, flexible synthetic ties in the forehead and cheek area of the goggle frame plus a more flexible nose construction allow the snow goggles to adapt to the wearer's individual facial shape particularly well – for superior comfort without pressure points!

SPHERICAL LENS

The spherically curved thermal double lens provides clearly improved panoramic vision. In addition, the enlarged interior volume improves thermal management inside the goggles. And Thermoblock plus Fogstop effectively prevent fogging of the goggles.

180°+ VIEW

Alpina snow goggles with 180+ View have a larger field of vision than the 180 degree field required by the CE standard. A special goggle frame and extra-large, curved panoramic lenses make this possible. This ensures a better overview – and earlier recognition of dangers in the peripheral field of vision.

VENTING LENS

Vents in the lens ensure a defined routing of the air flow and ventilation of the goggle lens. This effectively prevents fogging.

HINGE BAND

Our snow goggles featuring Hinge Band technology don't have the goggle strap attached directly to the frame but to movable synthetic hooks on the outside of the frame. This construction provides even better fit of the goggles – especially when they're worn with a ski helmet.

SKID GRIP

Ski helmets typically have very smooth surfaces. When the skier makes dynamic movements on a trail with moguls or in open terrain conventional goggle straps can easily move out of place, unlike goggle straps using Skid Grip technology: The special rubber coating on the inside keeps the goggles from slipping.

MAGNETIC LENS

In fog or under blue skies: Snow goggles featuring Magnetic Lens technology ensure clear vision! You choose between a brighter bad-weather lens and a darker fair-weather lens. The darker lens is attached to the brighter lower lens where it will stay in place by means of a magnet – until you make it disappear in your pocket when the weather turns again.

RIMLESS

In conventional goggles the structure of the goggles holds the front lens in place, but with the rimless variant it is the rear lens that is secured. This means the frame can be reduced to a minimum allowing bigger lenses and a wider field of vision as the double lens is positioned further forward. Rimless goggles are extremely suitable for powder skiing, as the powdery snow will not collect on the rim of the goggles, impeding visibility. Added to this, they are also unbeatable for style.

LENS TECHNOLOGIES

More contrast, less glare

Alpina's specially developed lens technology offers winter sports practitioners greatly improved vision.

The ruby red lens tint reduces the amount of blue in the visible light, increasing the contrast of the snow and allowing the wearer to quickly make out the details of the surroundings.

Thanks to the brightening effect of the lens, the contours and other features of the piste are easier to discern even in difficult weather conditions (e.g. snowfall, fog, diffused light).

A polarising film (see 'Polarisation' below) of the highest optical quality grade is integrated in the lens to complete the Quattroflex effect: distracting stray light and glare are filtered out, further enhancing contrast levels.

Reflections are reduced to a minimum, making it much easier to see icy areas and dangerous situations and react to them more quickly.

Polarisation

Natural light is 'unpolarised' – the light waves vibrate in a multitude of different directions. However, if a light wave hits a reflective surface, such as ice for example, the light is 'diverted'. When this happens it is polarised, meaning that reflected light waves vibrate on a horizontal plane.

The polarising filter is aligned vertically, ensuring that the reflected, polarised light cannot pass through. As a result, glare from water and icy surfaces, wet streets and snow is almost completely eliminated.

- Polarized lens
- Direct light
- Reflected light

VARIOFLEX

Perfect visibility whatever the light

Varioflex is a lens technology which allows glasses to adapt to the weather conditions.

The self-tinting photochromic lenses react to visible light, which causes chemical components to 'open', producing a two-dimensional, shading effect.

If the ambient light becomes less intense, the chemical components close and the lens becomes lighter. The process takes place in a matter of seconds – one lens for a whole range of lighting conditions.

PROTECTION LEVEL

					
Protection level	S0	S1	S2	S3	S4
Tint-Intensity	clear/medium tinted	lightly tinted	medium tinted	intensely tinted	very intensely tinted
Transmission	80 - 100 %	43 - 80 %	18 - 43 %	8 - 18 %	3 - 8 %

All of our ski goggles meet the European standard EN 174:2001. As part of this standard, the goggles are tested for visual requirements, mechanical stability, tightness, and protection against inflammability.

LENS TECHNOLOGIES

QUATTROFLEX [Q]

- Contrast-enhancing + polarising
- Minimises reflections
- 100% protection against UV-A, UV-B and UV-C radiation
- Double lens: Thermoblock
- Unbreakable polycarbonate lens
- Hard coating for non-mirrored lenses
- Fogstop coating

VARIOFLEX [V]

- Self-tinting (photochromic)
- 100% protection against UV-A, UV-B and UV-C radiation
- Double lens: Thermoblock
- Unbreakable polycarbonate lens
- Hard coating for non-mirrored lenses
- Fogstop coating

DOUBLEFLEX [D]

- 100% protection against UV-A, UV-B and UV-C radiation
- Double lens: Thermoblock
- Unbreakable polycarbonate lens
- Hard coating for non-mirrored lenses
- Fogstop coating

SINGLEFLEX [S]

- 100% protection against UV-A, UV-B and UV-C radiation
- Unbreakable polycarbonate lens
- Hard coating for non-mirrored lenses
- Fogstop coating

HICON (H)

- Orange-tint lens: contrast-enhancing

+ fogstop

- Fog-free view thanks to anti-static Fogstop coating on the inside of the lens

MULTI mirror (MM)

- Heavily mirrored lens: reduces infra-red radiation

mirror (M)

- Mirrored lens: helps reduce infra-red radiation

ALPINA FIT-INDEX

FIND GOGGLES THAT FIT!

Along with technical and design features, the top priority when choosing ski goggles is the correct size and fit. Alpina helps you to make the right choice with the Alpina Fit-Index.

HOW DOES IT WORK?

The Alpina Fit-Index measures two important facial features:

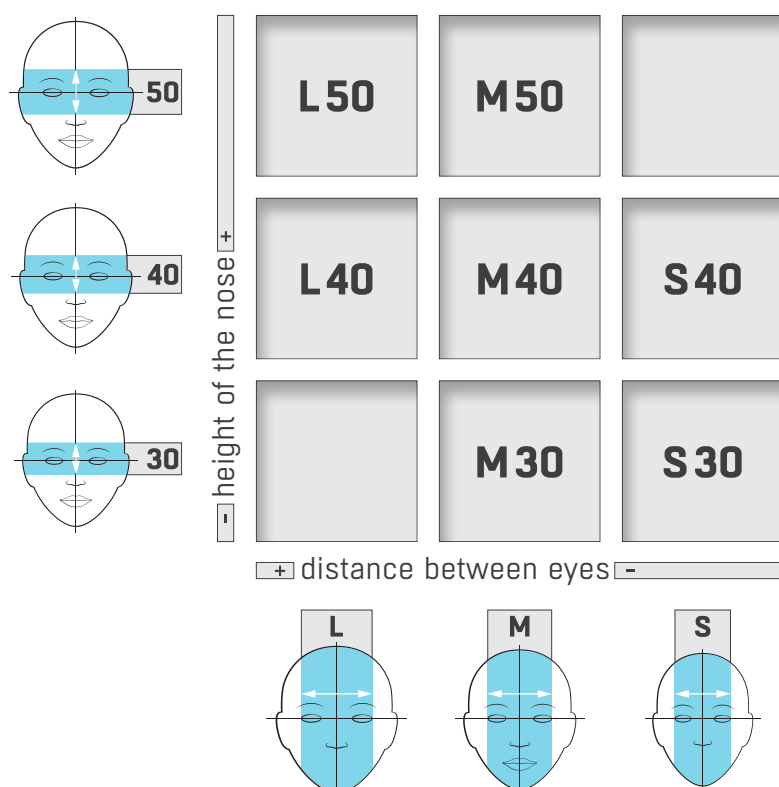

1. The distance between your eyes (S, M, L)
2. The height of your nose, i.e. the distance from the bridge of your nose to the upper edge of your eyebrows (30, 40, 50)

DIRECTIONS:

- Position the Alpina Fit-Finder at the upper edge of your eyebrows.
- Adjust it to the circumference of your head using the adjustment wheel at the back.
- Position the wings of the Alpina Fit-Finder at the outer edges of your eye sockets. The wings should not interfere with your view when looking straight ahead.
- Slide the nosepiece down so that it lightly touches your nose.

You can read off your goggle size* from the width scale at the side of the Alpina Fit-Finder and the height scale at the top.

* The measurements are a guideline only.

ALPINA FIT FINDER

A7000

A7000.0.05

FACTS & FIGURES

- Outer material: Polyamide (Fig. 1)
- Elastic trapezoidal girder for optimum distribution of resistance (Fig. 2)
- Velcro waist belt and protective flap to prevent pilling (Fig. 3)
- Robust and abrasion-proof shoulder area
- Mesh inserts at the sides for high comfort and optimum body temperature (Fig. 4)
- Mesh in the back area facilitates circulation of air, thus enhancing comfort of wear (Fig. 5)
- Rubberised waistband to prevent the protector from slipping (Fig. 6)
- YKK® front zip (Fig. 7)
- Removable, multi-layer, flexible and extra long EVA foam structure in the back area, also providing protection for the lumbar region and rump (Fig. 8)
- The protector is insensitive to cold temperatures ensuring it remains flexible and the shock-absorbing properties aren't compromised
- Complies with EN 1621-2 Level 1
- Machine washable (vest without foam), gentle cycle at 30° C
- Weight: 440g (size M)
- Please also read the CE brochure!

JSP 3.0 VEST

The back protectors for the entire family are continuously developed further and an established part of the Alpina winter collection. Thanks to being lightweight, elastic, breathable and comfortable to wear, they don't restrict movement in any way to fully enjoy winter sports on ski slopes, in the park or powder. The combination of supple outer material and elastic trapezoidal girder ensures ideal temperature control, optimum distribution of resistance and high comfort of wear without the risk of slipping. A multi-layer and flexible foam structure provides effective protection for the back area. It also makes the protector highly flexible without allowing it to slip or restrict movement. The foam used in our protectors remains flexible when cold. Its shock-absorbing properties are much better at low temperatures than those of the foams commonly used on the market, which get hard and are able to absorb significantly less impact force at low temperatures. The protector vest complies with EN 1621-2 Level 1. This standard applies to all skiing and snowboarding protectors.

TOUR
GLACIER

ALPINA S-WAY VLM+

A8585

VARIOFLEX mirror **fogstop** hydrophobic

If you are looking for the perfect glasses for use on the glacier, then ALPINA S-WAY VLM+ is the answer. Its spherical shield, mirrored lens features the self-tinting Varioflex technology (reacts to visible light) and automatically adjusts to the ambient level of brightness up to the darkest protection category 4. The Fogstop coating prevents the lens from misting up and, thanks to a hydrophobic coating, water and dirt roll off easily – thus guaranteeing perfect visibility at all times. With its inclinable and bendable arms, the glasses can be adapted to fit any shape of face. Note: Due to the high level of tinting, these glasses may not be worn when driving. The glasses offer 100% UV protection.

CERAMIC mirror  fogstop

The arms of the CHILL ICE CM+ have a wider design, thus offering optimal protection from lateral glare. The twin-component design combines a hard frame with soft, rubberised arm tips and nose pads – a real bonus in respect of the fit and comfort of the glasses. The unbreakable, ceramic lenses offer protection category 4 and are thus suitable for use on glaciers. Note: Due to the high level of tinting, these glasses may not be worn when driving. The glasses offer 100% UV protection.

CERAMIC mirror

With style on the glacier: it's possible with the SIBIRIA. This model in retro design is fitted with leather glare- and wind-protection side flaps. The unbreakable, ceramic lenses offer protection category 4 and are thus suitable for use on snow. Note: Due to the high level of tinting, these glasses may not be worn when driving. A neck strap is also included.
