Dear friends and customers,

I am pleased to present my new catalogue. Most of my book stock contains many rare and seldom offered items. I hope you will find something of interest in this catalogue, otherwise I am in the position to search any book you find difficult to obtain. Please send me your want list. I am always interested in buying books, journals or even whole libraries on all fields of science (zoology, botany, geology, medicine, archaeology, physics etc.). Please offer me your duplicates.

Terms of sale and delivery:

We accept orders by mail, telephone or e-mail. All items are offered subject to prior sale. Please do not forget to mention the unique item number when ordering books. Prices are in Euro. Postage, handling and bank costs are charged extra. Books are sent by surface mail (unless we are instructed otherwise) upon receipt of payment. Confirmed orders are reserved for 30 days. If payment is not received within that period, we are in liberty to sell those items to other customers. Return policy: Books may be returned within 14 days, provided we are notified in advance and that the books are well packed and still in good condition.

Catalogue Invertebrate Books (July 2023)

Indonesia/Malaysia

IO35662 **HARMER, S.F., 1915.** € 200,00

Siboga Expeditie. The Polyzoa of the Siboga Expedition. Part I. Entoprocta, Ctenostomata and Cyclostomata. Part II. Cheilostomata Anasca (with additions to previous reports); viii, 501, [1] p., 23 figs, 34 (1 partly coloured) plates, roy. 4to, contemporary black half cloth, spine with paper label. Small paper labels with numbers laid on spine. Small round blind-stamp on lower margin title-page.

From 1899 to 1900 the HMS "Siboga" explored the waters of the Dutch East Indies (now Indonesia), where an enormous collection of both shallow water and deep water organisms was gathered. The drawings are beautifully done, and all by Harmer who was an excellent draughtsman.

Report on the Annelida Polychaeta collected by H.M.S. Challenger during the years 1873-1876; xxxvi, 554 p., 91 figs, 94 lithographed pls (numbered 1-55, 1A-39A), 1 large folded map, roy. 4to, green publisher's cloth (repaired tear in upper part spine). Report on the scientific results of the voyage of H.M.S. Challenger during the years 1873-76 under the command of captain George S. Nares, and captain Frank Tourle Thomson, prepared under the superintendence of the late Sir. C. Wyville Thomson, and now of John Murray. Zoology. Volume XII. Number written on lower end spine, library stamp on title-page and first (blank) end-paper. A few plates with very slight foxing, but text and most of the plates clean.

A large, thorough and well-illustrated monograph on shallow water and deeper water Polychaeta which took the author 7 years to finish. A taxonomically very important work as in it over 200 new species are described for the first time.

H.M.S. Challenger set sail in December 1872 for a circumnavigation that covered 130.000 kilometres, and it took almost 4 years before the ship reached Great Britain again. During the voyage 360 stations were investigated and many hundred deep sea soundings and dredgings were made. This resulted in the description of nearly 5,000 new species belonging to almost every known animal group. The report(s) took almost 20 years to finish and no less than 50 large volumes were published. This is the complete volume 21 of these Challenger reports.

 Systema Porifera. A Guide to the Classification of Sponges; 2 volumes (complete). xlviii, xlvi, 1708 p., ca. 1200 figs, 4to, hardbound. Library stamps (Universiteit van Amsterdam), else good set.
 Research whilst compiling this book has uncovered a fauna about twice the size as that previously published in the literature and consequently Systema Porifera revises and stabilizes the systematics of the phylum to accommodate this new knowledge in a contemporary framework. Practical tools (key illustrations, descriptions of character) are provided to facilitate the assignment of approximately 680 extant and 100 fossil genera. These are illustrated and placed in a unified higher systematics scheme, including over forty new higher taxa. New copies from the publisher are 1200 euro!

Recherches sur les Ascidies simples des côtes de Provence. – Pallusiadées; 270, [1] p., 6 figures, 13 lithographed plates of which 4 are coloured, 4to (23 x 29 cm), contemporary half calf with marbled boards, author and title in gilt on spine. Some wear on edges boards and spine. Inner corner of plates and end-papers with faint waterstain. This copy with author's dedication reading: "A mon ami Fernand Lahille, Souvenir bien affectueux" and his signature. On the left upper corner of the title-page is the small library stamp of Lahille. Several annotations in pencil by Lahille in the text.

Louis Roule (1861-1942) was a French zoologist and ichthyologist. From 1885 he was a lecturer at Toulouse University, and became professor in 1892. From 1910 until 1937 he occupied the chair of zoology (reptiles and fish) at the Muséum national d'histoire Naturelle in Paris. His early research was mainly focused on invertebrates, but later he became one of the leading ichthyologists of his time. He was also quite interested in the history of French naturalists and wrote books on Buffon, Daubenton, Cuvier and Lamarck.

Fernand Lahille (1861-1940) was a French zoologist who also wrote on Tunicates. He taught in Toulouse at the same time as Roule, but traveled to Argentina in 1893, where eventually he became director of the Museum de La Plata.

Some parts with scattered foxing, one part with faint waterstain in first and last pages.

Rare and complete set of the only edition of Karl Asmund Rudolph's (1771-1832) system of helminthology, especially rare with the often lacking Synopsis volume. Nordenskiöld (p.353): "His work, *Entozoorum historia naturalis*, has so considerably widened the knowledge of intestinal worms which Pallas founded that all subsequent research has been based on it; this work is the result of investigations into numerous germ-carrying animals and gives detailed accounts of the appearance and conditions of life of the parasites existing in them. Through this work the number of known species of intestinal parasites has tripled."
