

Drooping Sheoak

Allocasuarina verticillata

Large shrub or tree to 5m, with long drooping branchlets. Leaves are just a ring of scales. Male and female flowers are on different plants. Female plants have small, globular orange-red flowers which become small woody cones, and grow close to the branches. Male flowers are tan-orange tassels on the end of branchlets.

Anglesea: A, C, F

Aireys Inlet: K, L

Cranberry Heath

Astroloma humifusum

Prostrate, dense, mat-like plant with bluish-green, sharp-tipped lance-shaped, leaves. Deep-red, narrow tubular flowers are scattered through the foliage.

Anglesea: A, C, E

Aireys Inlet: K, M, N

Silver Banksia

Banksia marginata

The only local Banksia. Low shrub to small tree up to 3m. Leathery blunt-tipped, dark-green leaves, with a silvery undersurface, densely covered with short woolly hairs. Bottlebrush flowers, pale yellow at first, then turning brown.

Anglesea: A, B, C, D, E, F **Aireys Inlet: L, N**

Austral Stork's-bill

Pelargonium australe

Clump-forming hairy plant to 90cm, with soft, deeply-veined, lobed round or oval leaves. Clusters of pale pink, five-petalled flowers with deep-red markings.

Anglesea: E

Aireys Inlet: L

Seaberry Saltbush

Rhagodia candolleana
subsp. *candolleana*

Dense, sprawling shrub growing 1m or higher, and scrambling up taller plants. Succulent green leaves are of variable shape, but can be triangular or arrow-like. The female plants have dense, terminal clusters of small, juicy, dark-red, juicy berries eaten by birds.

Anglesea: A, C, F

Aireys Inlet: K, L

Coast Daisy-bush

Olearia axillaris

Erect dense shrub to 1.5m, with a smoky-grey look due to narrow, hairy grey-green young leaves. The older leaves are darker green. Solitary small, stalkless creamy-yellow flowers in leaf axils at upper ends of the branches.

Aireys Inlet: K

ORCHIDS

Mosquito Orchid

Acianthus pusillus

Small slender-stemmed to 18-20cm, with 4 to 14 greenish to dark-brown, insect-like flowers. Often in large colonies, each stem has a single heart-shaped leaf, green on top and purplish underneath. Occasionally pale-green flowers and leaves that are green on both surfaces are seen.

Anglesea: C, E **Aireys Inlet: N**

Tiny Greenhood Orchid

Pterostylis parviflora

The flowers of this orchid are the smallest of local greenhoods. Flower stems to 25cm with 3 or 4 stem-hugging bracts. Bears up to 6 well spaced flowers that face towards the stem.

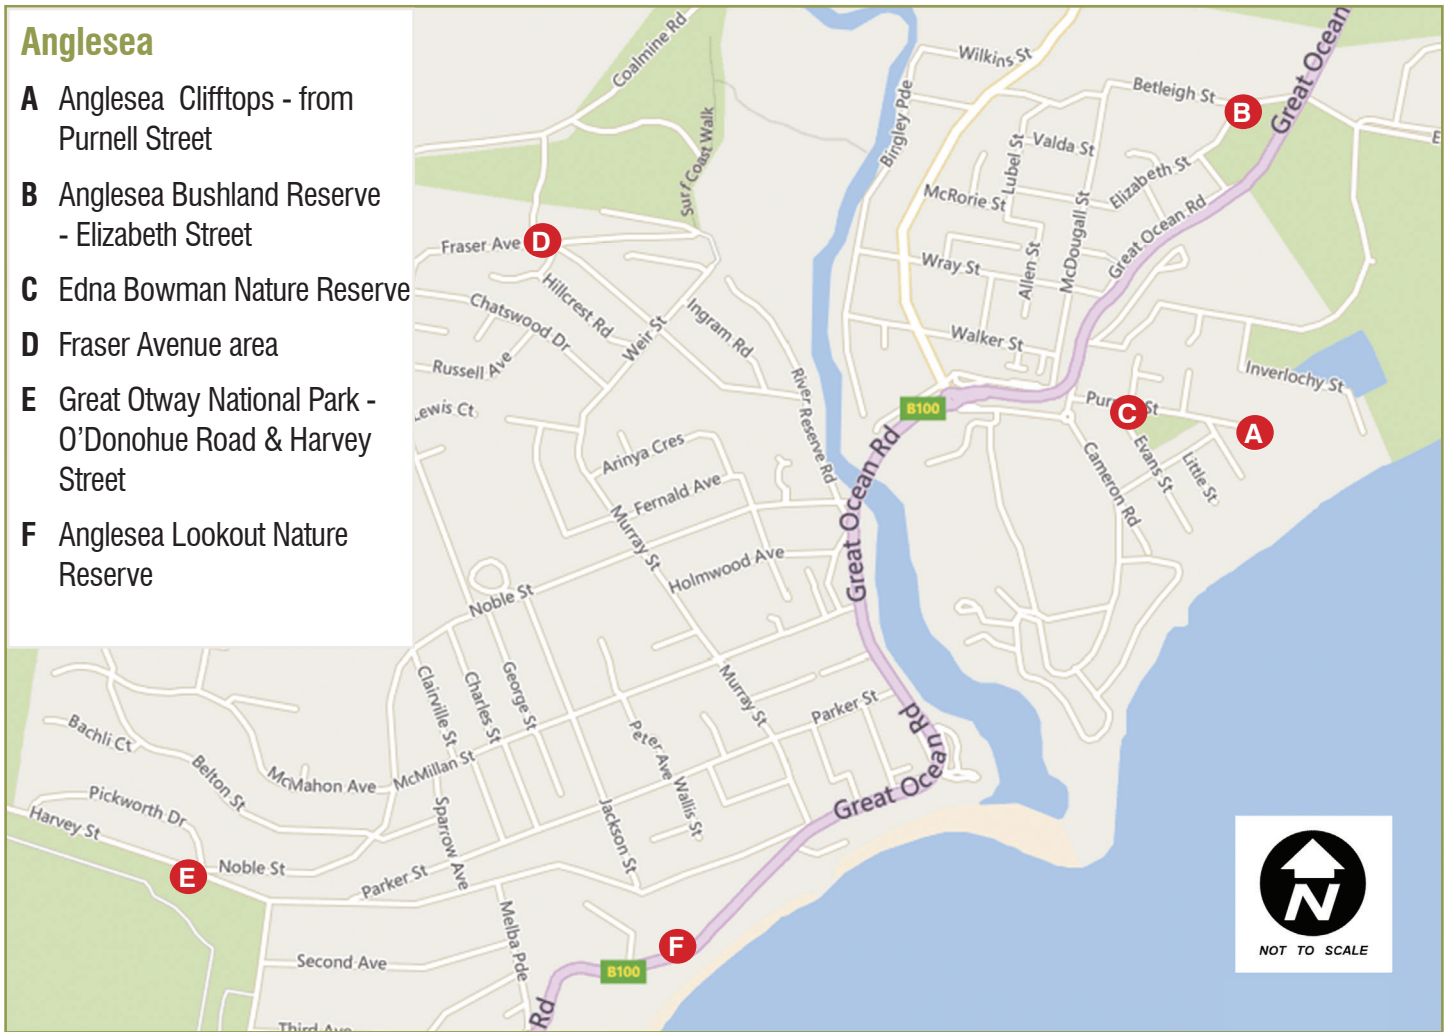

Anglesea: D

Aireys Inlet: N

Many other plants are found at these and other locations. These are just some of the significant ones you may find. Please refer to reserve location maps overleaf.
