

A Revised Taxonomic Account of *Paspalum* L. (Poaceae) in Thailand

MONTHON NORSAENGSR¹ AND PRANOM CHANTARANO^{2*}

¹*Northeastern Region Plant Collection Center, Khon Kaen Province, Botanic Garden Organization, Ministry of Natural Resources and Environment 40120, Thailand.*

²*Applied Taxonomic Research Center, Department of Biology, Faculty of Science, Khon Kaen University, Khon Kaen 40002, Thailand.*

ABSTRACT.— A taxonomic account of *Paspalum* L. in Thailand is provided. Ten species and four varieties are recognized. Keys, descriptions and illustrations of the species are presented. *Paspalum canarae* var. *fimbriatum* is a new record for Thailand.

KEY WORDS: *Paspalum*; Poaceae; Revision; Thailand

INTRODUCTION

Paspalum, a large genus in the family Poaceae, is currently comprised of some 320 species (Watson and Dallwitz, 1992) and is chiefly distributed in the tropical and temperate regions of the New World. The genus was established by Linnaeus (1759) based on *Panicum dissectum*, belonging to the tribe Paniceae. It is readily recognized by its inflorescent which is spike-like either single or digitate, or racemously arranged. The spikelets are secund, solitary or paired, alternate on either side of the midrib, with 2-4 rows and are usually plano-convex in cross-section, often with a hemispherical or oblong shape. (Clayton and Renvoize,

1986). An account of this genus in Southeast Asia including Thailand was treated by Lazarides (1980) with 11 species. The main aim of this manuscript is to provide an updated taxonomic account of *Paspalum* in Thailand based on a large number of recent collections and the authors' own fieldwork, which has permitted both the reinterpretation of many species and the discovery of a new record for Thailand. A taxonomic account of *Paspalum* in Thailand is provided with an identification key, descriptions and synonymy, and illustrations.

MATERIALS AND METHODS

Specimens were examined from Thailand and surrounding countries by obtaining herbarium collections from AAU, BK, BKF, BM, C, K, KKU, L, P, PSU, QBG and TCD (Holmgren and Holmgren,

*Corresponding author:
Tel: (6643)-342-908
Fax: (6643)-364-169
E-mail: pranom@kku.ac.th

1998). Fieldwork was also carried out to collect fertile materials in different parts of the country. Geographical data from herbarium specimens have revealed a number of localities in Thailand. Morphological observations together with habitat-associated species and ecological conditions were documented. Specimens were collected using standard procedures for herbarium materials.

Annual or perennial. Culms tufted, intravaginal branching at base, erect, rhizomatous, stoloniferous, decumbent; nodes glabrous or rarely pilose; internodes solid to hollow, glaucous. Sheaths slightly compressed, glabrous or hairy. Blades ovate-lanceolate or linear, with hairs at base, apex acuminate. Ligules membranous or a fringe of hairs, apex truncate or rounded, glabrous or hairy. Inflorescences with 1 to several spicate racemes; main axis subterete to distinctly winged; rachis triquetrous or flattened, spikelets attached by short stalks, single or in pairs, alternately to the sides of the ridge. Spikelets all alike in secund racemes with 1 perfect floret, plano-convex, ovate, broadly obovate, elliptic, orbicular or oblong. Lower glumes usually absent or membranous, nerveless or 1-nerved. Upper glumes membranous, 3–7-nerved, glabrous or hirsute, as long as spikelet. Florets 2. Lower floret sterile; lemma membranous, 3–5-nerved, as long as upper glume, margin

hairy or glabrous. *Upper floret* hermaphrodite; lemma chartaceous to coriaceous, with inconspicuous, 3–5 nerves, glabrous, with strongly incurved margin; palea indurate, margin membranous, involute, indurate, brownish black. *Lodicules* 2, cuneate, nerveless, glabrous. *Stigmas* divided. *Stamens* 3, yellow to purplish black. *Caryopsis* biconvex; embryo 1/3–1/4 as long as caryopsis. 320 species, pantropics, 10 species and 14 taxa in Thailand.

Key to the species

- 1a Annual; Leaf-blades ovate-lanceolate..... *P. canarae* var. *fimbriatum*
- 1b Perennial; Leaf-blades linear..... 2
- 2a Spikelets ovate, broadly ovate, elliptic or orbicular..... 3
- 2b Spikelet obovate or oblong-lanceolate 8
- 3a Spikelet single..... 4
- 3b Spikelets paired, with one rudiment ... 6
- 4a Plants rhizomatous..... *P. notatum*
- 4b Plants stoloniferous or decumbent..... 5
- 5a Upper glume ciliate..... *P. conjugatum*
- 5b Upper glume glabrous..... *P. scrobiculatum*
- 6a Spikelet glabrous..... *P. dilatatum*
- 6b Spikelet pilose..... 7
- 7a Rachis more than 3.5 mm wide..... *P. longifolium*
- 7b Rachis less than 3 mm wide..... *P. orbiculare*
- 8a Inflorescence with more than 4 racemes *P. plicatulum*
- 8b Inflorescence with 2 or rarely 3 racemes 9
- 9a Lower glume scale-like... *P. districhium*
- 9b Lower glume absent..... *P. vaginatum*

Paspalum canarae (Steud.) var. *fimbriatum*
(Bor) Veldk.

Figure 1

Paspalum canarae (Steud.) var. *fimbriatum* (Bor) Veldk., Blumea 21(1): 72. 1973. — *Panicum canarae* (Steud.) var. *fimbriatum* Bor, Grasses of Burma, Ceylon, India and Pakistan: 336. 1960. Type: India, Bombay, P.V. Bole 305, K!.

Annual, aquatic grass. *Culms* decumbent or ascending to 22–30 cm tall; node swollen, glabrous; internodes glabrous, 1.8–5 by 1–1.2 cm. *Sheaths* chartaceous-coriaceous, 1.6–4 cm long, distinctly keeled, villous on nerves, both surfaces villous, margin membranous, connected the leaf blade margins. *Blades* chartaceous, ovate, 2.5–3.5 by 0.8–1.1 cm, margins pectinate with bulbous-based hairs. *Ligules* a fringe of setose hairs. *Inflorescence* racemose, 1.8–5 cm long; main axis 3–10 cm long, angular, scabrous, along the edge, 14–20-racemose, glabrous; peduncles terete, glabrous; rachis flattened, margin pectinate. *Spikelets* solitary, ovate to elliptic, 1.3–1.5 by 1 mm, glabrous, purple, apex acute. *Lower glume* absent. *Upper glumes* membranous, elliptic, 1.3–1.4 mm long, 5-nerved; lateral nerves setose, apex acute. *Lower floret* sterile; lemma ovate, membranous, 3-nerved, 1–1.2 mm long, lateral nerves setose, margin membranous, glabrous. *Upper floret* hermaphrodite; lemma indurate or crustaceous, elliptic, 1–1.3 mm long, glabrous, margin inrolled, obscurely 5-nerved, apex acute; palea crustaceous, elliptic, 1–1.3 mm long, 2-nerved, glabrous, margin enrolled, apex acute. *Lodicules* 2, cuneate. *Stamens* 2, yellow; anthers 0.5–0.7 mm long. *Caryopsis*

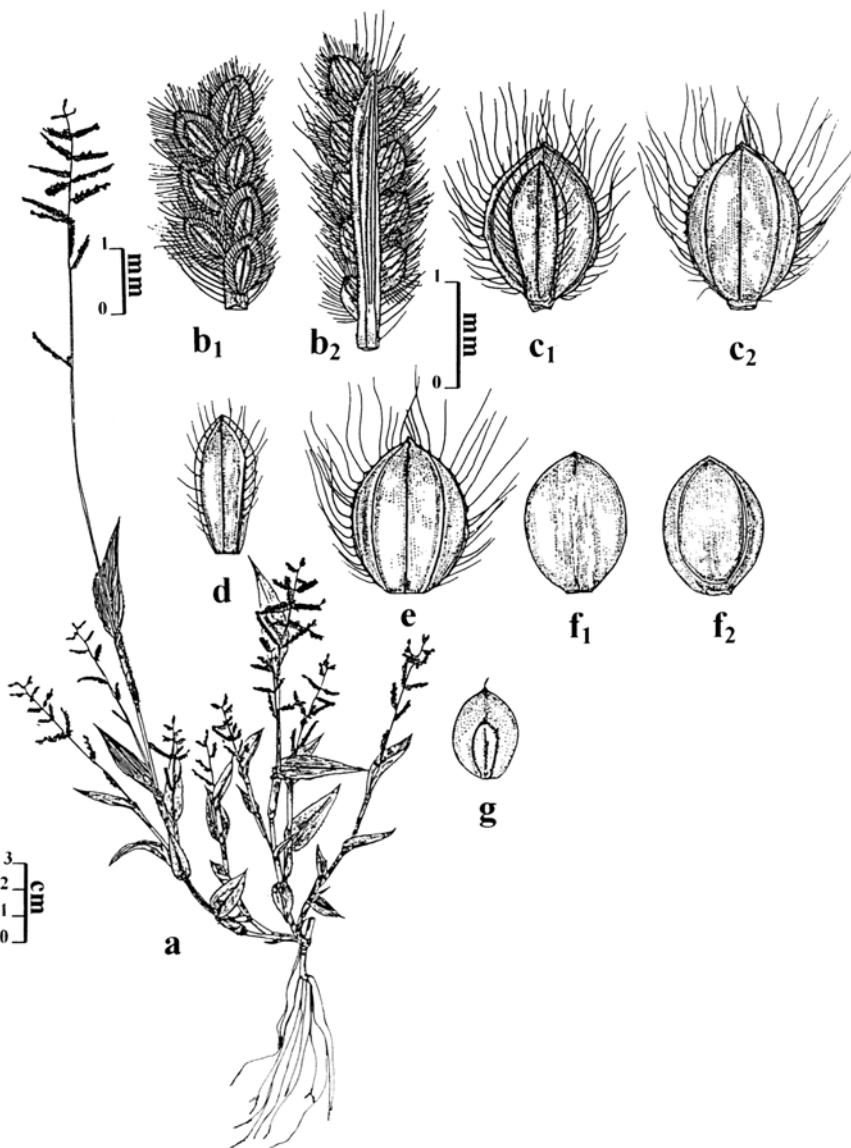

FIGURE 1. *Paspalum canarae* var. *fimbriatum* (a) habit, (b₁)-(b₂) part of raceme, (b₁) adaxial view, (b₂) abaxial view, (c₁)-(c₂) spikelet, two views, (d) upper glume, (e) lower lemma, (f₁)-(f₂) upper floret, (f₁) upper lemma, (f₂) upper palea, (g) caryopsis.

elliptic, brown, 1–1.2 mm long; embryo 1/4 as long as the caryopsis.

Thailand. – EASTERN: Nakhon Ratchasima; SOUTH-WESTERN: Kanchanaburi.

Distribution. – India, Myanmar.

Ecology. – Open areas, in swampy places, alt. 1,200–1,800 m.

Specimens examined. – C. Charoenphol et al. 4228 (L); M. Norsaengsri 2171 (K, KKU); T. Smitinand et al. s.n. (K).

Note. – The *Paspalum canarae* var. *fimbriatum* differs from the typical variety by its a fringe of setae along the lateral nerves of the upper glume and upper lemma.

Paspalum conjugatum P.J. Bergius
Figure 2

Paspalum conjugatum P.J. Bergius, Acta Helv. Phys.-Meth. 7: 129, pl. 8. 1762. Type: Zaire, K!. — *Paspalum renggeri* Steud., Syn. Pl. Glumac. 1: 17. 1855. Type: Paraguay, J.R. Rengger s.n., P. — *Paspalum sieberianum* Steud., Syn. Pl. Glumac. 1: 17. 1855. Type: French Guiana, F.W. Sieber 127, L. — *Paspalum bicrurum* Salzam. ex Döll, Fl. Bras. 2(2): 55. 1877. Type: Brazil, P. Salzman s.n., K. — *Paspalum conjugatum* forma *tristachyum* (Vanderyst) Beetle, Phytologia 28(4): 318. 1974. Type: not located.

Perennial. Culms erect, often tufted, creeping or stoloniferous, rooting at lower nodes, ascending to 10–40 cm tall, often greenish purple; nodes entire, pubescent; internodes more or less compressed, glabrous. Sheaths chartaceous, 3–7 cm long, laterally compressed, strongly keeled, glabrous except margins hairy; collar hairy. Blades chartaceous, linear, 10–15 by 1.2–1.6 cm, base rounded, margins undulate, apex acuminate. Ligules membranous, 0.6–1.5 mm long, truncate, glabrous, with line of hairs on the back. Inflorescence a pair of racemes, rarely 3, 2.3–4 cm long, base softly hairy, tip of racemes with reduced spikelet and drooping. Spikelets solitary, ovate, 2-seriate, 1.7–1.8 by 1.3–1.4 mm, greenish-yellow, turn to brown at maturity, with silky white hairs, apex acute. Lower

glumes absent. Upper glumes hyaline to membranous, elliptic, 1.2–1.3 mm long, obscurely 1-nerved, glabrous except margins with finely silky white hairs, apex acute. Lower floret sterile; lemma hyaline to membranous, elliptic to obovate, 1.2–1.3 mm long, obscurely 3-nerved, glabrous except margins with silky white hairs, apex acute; palea hyaline, lanceolate, obscurely 2-nerved, glabrous, apex acute with a few finely white hairs. Upper floret hermaphrodite; lemma crustaceous, obovate to elliptic, 1.5–1.6 by 1.1–1.2 mm, smooth, glabrous, margins chartaceous-membranous, apex acute; palea crustaceous, ovate to elliptic, 1.4–1.5 mm long, glabrous, apex acute. Lodicules 2, cuneate. Stamens 3; anthers yellow, 0.5–0.7 mm long. Stigmas white or pale greenish.

Thailand. – NORTHERN: Chiang Mai, Chiang Rai, Lampang, Tak; NORTHEASTERN: Loei; EASTERN: Chaiyaphum, Nakhon Ratchasima; SOUTHWESTERN: Kanchanaburi; CENTRAL: Krung Thep Maha Nakhon, Saraburi, Samut Prakan, Nakhon Nayok; SOUTHEASTERN: Prachin Buri, Chanthaburi, PENINSULAR: Ranong, Phangnga, Songkhla, Narathiwat.

Distribution. – America, Argentina, India, Japan, China, SE Asia, Polynesia, Australia.

Ecology. – In wet areas, particularly ditches and river banks. A common weed in rice fields.

Vernacular. – Ya nom non, Ya hep; Sour grass, Buffalo grass, Hilo grass.

Paspalum dilatatum Poir.

Paspalum dilatatum Poir., Encycl. 5: 35. 1804. Type: not located.

Perennial. Culms erect or decumbent, flattened at base, ascending to 50–150 cm tall; nodes entire, pubescent, rooting at lower nodes. Sheaths chartaceous, loose, slightly flattened at keel; collar margins hairy. Blades chartaceous, linear, 10–35 by 1–1.5 cm; both surfaces glabrous, base hairy, apex acute to acuminate. Inflorescence a compound raceme, with 3–5 racemes, each raceme 5–10 cm long; rachis 1.4–1.6 mm wide, the joint between rachis and main axis with white setose hairs. Spikelets paired, ovate, 3.2–3.5 by 2.5–2.7 mm, apex acute; pedicels flattened, 0.5–3.5 mm long, margins scabrous. Lower glumes absent. Upper glumes membranous, ovate, 3.3–3.5 by 2.4–2.5 mm, 7-nerved, pale green, concave, apex acute. Lower floret sterile or male; lemma membranous, ovate to elliptic, pale green, slightly flattened, 3–3.3 by 2–2.2 mm, 6-nerved, apex acute. Upper floret hermaphrodite; lemma membranous-chartaceous, ovate, 3–3.3 by 2–2.3

mm, glabrous, apex acute; palea ovate, indurate, similar to upper lemma in texture. *Lodicules* 2, cuneate. *Stamens* 3, purple; anthers 1–1.3 mm long. *Stigmas* divided, purple. *Caryopsis* slightly elliptic or cylindrical in outline.

Thailand. – NORTHERN: Chiang Mai; EASTERN: Chaiyaphum, Nakhon Ratcha-sima; SOUTH-WESTERN: Kanchanaburi; CENTRAL: Ang Thong, Phra Nakhon Si Ayuthaya, Krung Thep Maha Nakhon; SOUTH-EASTERN: Chanthaburi, Trat; PENINSULAR: Narathiwat.

Distribution. – America, Brazil, Argentina, Chile, Africa, France, India, Philippines, Australia.

Ecology. – Cultivated.

Vernacular. – Ya dallas; Paspalum grass, Water paspalum, Water grass, Dallas grass, Golden crown grass, Hairy-flowered paspalum, Leichardt grass, Bastard millet grass, Millet bastard, Teppich grass.

Specimens examined. – *R. Geesink et al.* 71743 (K); *A.F.G. Kerr* 4361 (K), 6951 (K), 19707A (K), s.n. (K); *K. Larsen* 9972 (K); *K. Larsen et al.* 2744 (K), 33943 (K); *C. Niyomdham* 1937 (K); *C. Paspalum distichum L.

Figure 3

Paspalum distichum L., Syst. Nat. 10(2): 855. 1759. Type: not located.

Perennial. Culms both shortly rhizomatous and stoloniferous, ascending to 30–70 cm tall, glabrous. Sheaths chartaceous, glabrous, except margins with fringe of dark purple finely hairs, 5–8.5 cm long.

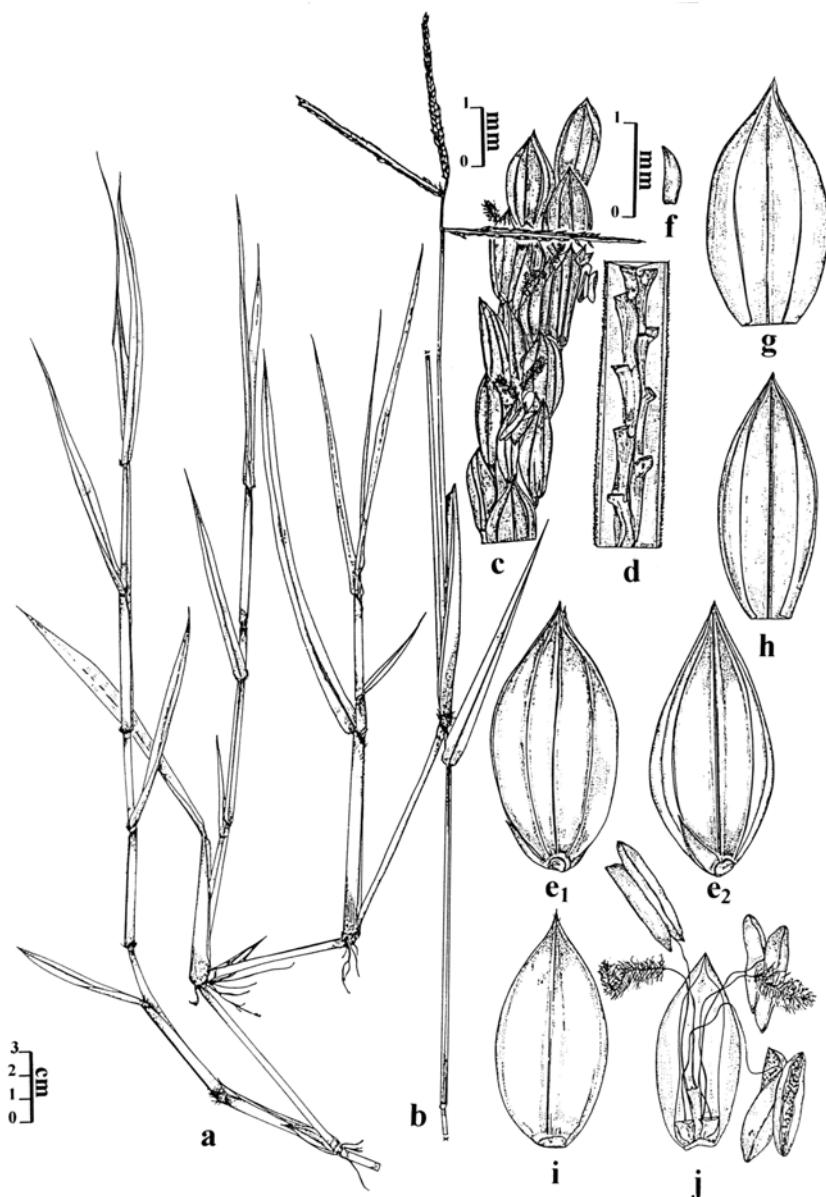

FIGURE 3. *Paspalum distichium* (a) habit, (b) inflorescence, (c) part of raceme, adaxial, (d) part of rachis, adaxial, (e₁)-(e₂) spikelet, two views, (f) lower glume, (g) upper glume, (h) lower lemma, (i) upper floret, upper lemma, (j) upper palea and floret.

Ligules membranous, 1–1.5 mm long. *Blades* chartaceous, linear, 9–13 by 0.3–0.7 cm, pale green, upper surface hairy, apex acuminate. *Inflorescence* with 2–3 racemes,

alternate; rachis triangular, 5–8 by 0.2–0.3 cm, pale green, glabrous, margins scabrous, softly hairy at base. *Spikelets* oblong to lanceolate, 3–3.2 mm long, secund, 2 or

rarely 3-seriate; pedicels triangular, 0.5–0.7 mm long. *Lower glumes* membranous, glabrous, scale-like, 2–3 mm long, 1-nerved, apex acute. *Upper glumes* membranous, obovate to lanceolate, 3–3.2 mm long, pubescent, 6-nerved, apex acute. *Lower floret* sterile; lemma membranous, 1.8–3 mm long, 5-nerved, glabrous or minutely hairy, apex acute; palea absent. *Upper floret* hermaphrodite; lemma membranous to crustaceous, oblong to lanceolate, 2.8–2.9 mm long, glabrous, apex obtuse to acute, hirsute; palea crustaceous, ovate, 2.4–2.5 mm long, apex acute. *Stamens* 3; anther dark purple or black. *Stigmas* divided, plumose, purple.

Thailand. – NORTHERN: Chiang Mai, Nakhon Sawan; NORTH-EASTERN: Udon Thani; EASTERN: Si Sa Ket, Surin; SOUTH-WESTERN: Ratchaburi; SOUTH-EASTERN: Chon Buri; CENTRAL: Krung Thep Maha Nakhon.

Distribution. – Tropics and subtropics.

Ecology. – Scattered in open swampy places, 0–1,800 m.

Vernacular. – Ya sakat nam khen; Silt grass, Water couch, Knot grass, Joint grass, Fort thompson grass, Sacasebo, Schamgrass.

Uses. – As soil binder along streams subject to erosion in the tropics and subtropics, and substitute to furnish excellent grazing in flat areas near the coast.

Specimens examined. – *G. Heckman* G-18 (K), *S. Laegaard & M. Norsaengsri* 21710 (AAU); *K. Larsen et al.* 1233 (K); *J.F. Maxwell* 71-713 (AAU), 71-714 (BK), 76-665 (AAU, BK); *G. Murata et al.* 49702 (BKF); *Y. Paisooksantivatana* 929-82 (BK); *J. Sadakorn s.n.* (BK); *Vacharae* 809 (BK).

Paspalum longifolium Roxb.

var. *lorirachis* Bor.

Figure 5.

var. *lorirachis* Bor, Fl. Assam: 251. 1940. Type: India, K!.

Perennial. *Culms* tufted, often decumbent and erect, 1.5–2.5 m tall. *Sheaths* chartaceous, glabrous, loose, margins membranous to hyaline, 12–15 cm long. *Blades* chartaceous, linear, glabrous, 40–45 by 1.2–1.5 cm, apex acuminate. *Ligules* membranous, glabrous, rounded at margins, 2–2.8 mm long. *Inflorescences* a compound raceme, with 9–20 racemes; peduncle glabrous; rachis flattened, 7–7.2 cm by 4–6 mm. *Spikelets* paired, ovate, 2–2.4 by 1.7–1.9 mm, hairy, yellow to purple, apex acute. *Lower glumes* absent. *Upper glumes* ovate to elliptic, as long as the length of spikelet, membranous, 3-nerved, hairy, apex acute. *Lower floret* sterile; lemma membranous, elliptic, membranous, similar to the upper glume in texture, 3-nerved apex rounded; palea minute or absent. *Upper floret* hermaphrodite; lemma crustaceous, elliptic, 1.4–1.6 by 1.1–1.2 mm, glabrous, polished, obscurely 3-nerved, apex rounded; palea crustaceous, elliptic, 1.4–1.6 by 1.1–1.2 mm, laterally 2-nerved, apex rounded. *Lodicules* 2, cuneate. *Stamens* 3, yellow; anthers 1–1.2 mm long. *Stigmas* divided, dark purple.

Thailand. – NORTHERN: Chiang Mai.

Distribution. – Sri Lanka, India.

Ecology. – Cultivated.

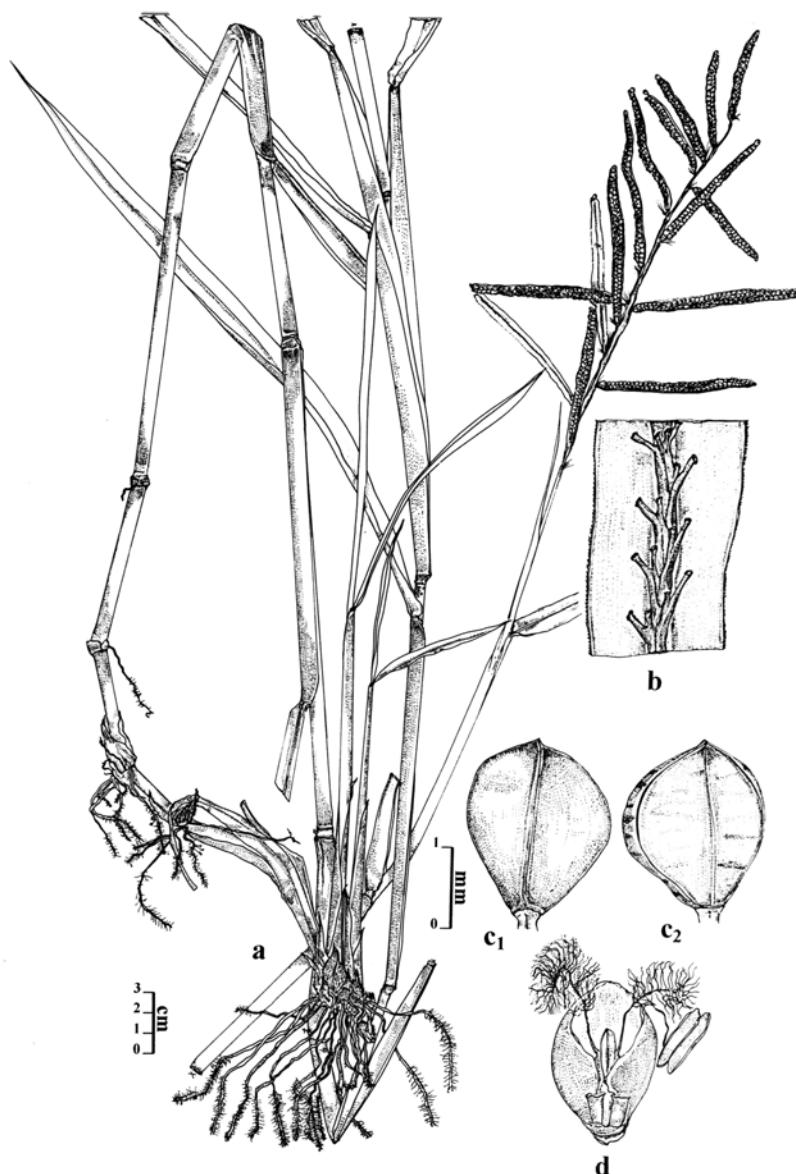

FIGURE 5. *Paspalum longifolium* var. *lorirachis* (a) habit, (b) part of rachis, (c₁)-(c₂) spikelet, (c₁) upper glume, (c₂) lower lemma, (d) upper palea and floret.

Paspalum notatum Flüggé, Gram.

Paspalum notatum Flüggé, Gram. Monogr. Paspalum: 106. 1810. Type: Virgin Island, St. Thomas, Ventenat s.n., BM!. — *Paspalum cronyorhizon* Trin. ex

Döll, Fl. Bras. 2(2): 74. 1877. Type: Brazil, F. Sellow s.n., US.

Perennial; vertical with thickening and long rhizomes. Culms tufted, ascending to 10–30 cm high. Sheaths glabrous, flattened, 2.5–7.5 cm long, glabrous. Blades chartaceous, linear, 10–20 by 1.0–1.2 cm, glabrous, apex acuminate. Ligules membranous, 0.8–1.0 mm long, truncate. Inflorescence with 2 racemes, rarely 3, digitate, glabrous; rachis triquetrous, 6–9 by 1.2–1.3 cm, purplish green. Spikelets solitary, elliptic, 2-rowed on one side of the rachis, glabrous, 3.7–3.8 by 2.5–2.6 mm, apex acute; pedicels 1.3–1.4 mm long. Lower glumes absent. Upper glumes membranous, ovate to elliptic, 5-nerved, glabrous, as long as spikelet, apex acute. Lower floret sterile or male; lemma membranous, obovate, 3.0–3.1 by 2.3–3 mm, 5-nerved, apex acute. Upper floret hermaphrodite; lemma crustaceous, elliptic, 3.0–3.1 by 2.3–3.0 mm, apex acute; palea crustaceous, elliptic, 2.7–3.0 by 1.8–1.9 mm, indurate, margins membranous, apex acute. Lodicules 2, cuneate, 0.6–0.7 mm long. Stamens 2, purple; anthers dark purple. Stigmas divided, black. Caryopsis elliptic.

Thailand. – NORTH-EASTERN: Khon Kaen.

Distribution. – Texas, Mexico to South America.

Ecology. – Cultivated.

Vernacular. – Ya bahia; Bahia grass.

Specimen examined. – *M. Norsaengsri* 2141 (KKU).

Paspalum orbiculare G. Forst.

Paspalum orbiculare G. Forst., Fl. Ins. Austr. Prodr.: 7. 1786. Type: Forster s.n., K!. — *Paspalum longifolium* Roxb. var.

pseudo-orbiculare Jansen, Reinwardtia 2: 321. 1953. Type: Philippines, Luzon, Santos 5, K!.

Perennial. Culms tufted, 40–80 cm high, glabrous. Sheaths chartaceous, 8–15 cm long, glabrous, hairy along margin. Blades chartaceous, linear, 15–25 by 0.3–0.6 cm, glabrous and smooth above, minutely puberulous at the base. Ligules truncate, membranous, 0.4–0.5 mm long, ciliaolate. Inflorescence a compound raceme, with 2–4, one-sided spike; axis 15–25 cm long; rachis flattened, bearing 2 rows, 5–7 cm by 1.9 mm. Spikelets ovate-elliptic, 1.6–1.7 mm long, glabrous. Lower glumes absent. Upper glumes membranous, lanceolate, 1.6–1.7 mm long, 5-nerved, apex acute. Lower floret sterile; lemma membranous, elliptic, 1.5–1.7 mm long, 3-nerved, apex acute; palea minutely hyaline. Upper floret hermaphrodite; lemma crustaceous, elliptic, 1.5–1.7 mm long, dark brownish; palea crustaceous, elliptic, 1.4–1.5 mm long. Stamens 3, yellow, 1.5–1.6 mm long. Stigmas dark purplish. Caryopsis elliptic, 1.1–1.2 mm long.

Paspalum plicatulum Michx.

Figure 6

Paspalum plicatulum Michx., Fl. Bor. Amer. 1: 45. 1803. Type: not located.

Perennial. Culms tufted with rhizomes, ascending and erect to 60–150 cm tall; nodes white beaded, entire. Sheaths chartaceous, glabrous, 10–15 cm long, margins membranous. Blades chartaceous, linear, involute, 20–30 by 0.4–0.5 cm, glabrous, apex acuminate. Ligule membranous-chartaceous, 2–3 mm long, margins pink. Inflorescence compound racemose, with 20–30 racemes, alternate; peduncle terete, glabrous; rachis slightly triangular, 0.5–6 cm by 0.5–1 mm. Spikelets oblong-lanceolate, 2–2.2 by 1–1.2 mm, hirsute, alternate; pedicels flattened, 0.4–0.5 mm

long. Upper glumes herbaceous – membranous, oblong, 3-nerved, glabrous, apex acute. Lower floret sterile or male; lemma membranous-chartaceous, elliptic, 2–2.4 by 1.5–1.8 mm, 3-nerved, glabrous, slightly transverse rugulose near the margins, apex acute. Upper floret hermaphrodite; lemma crustaceous, flattened, ovate to elliptic, 2–2.5 by 1.2–1.5 mm, glabrous, convex on the back, apex acute; palea crustaceous, ovate-lanceolate 1.8–2 by 1.3–1.5 mm, dark brown. Lodicules 2, cuneate or truncate at apex. Stamens 3; anthers purple, 1.3–1.5 mm long. Stigmas purple, divided at base. Caryopsis lanceolate.

Thailand. – NORTH-EASTERN; Maha Sarakham.

Distribution. – America, West Indies, Brazil, Argentina.

Ecology. – Cultivated.

Specimen examined. – *M. Norsaengsri* 2045 (KKU).

Ecology. – Scattered in open swampy soils or sandy coasts, 0-1,200 m.

Specimens examined. – *K. Iwatsuki* 240 (BKF), *A.F.G. Kerr* 6730 (BK, K), 6765 (BK), 11243 (BK, K), 15611 (K), 16099 (BK, K), 17558 (K); *K. Larsen* 8011 (C); *M. Lazarides* 7438 (K); *Th. Sørensen* 103 (C, L), 105 (C, K), 2027 (C, P), 2034 (C, BKF).

DISCUSSION

Ten species and 14 taxa of genus *Paspalum* are known from Thailand. It is widely dispersed and occurs in swampy areas of lowlands. However, *P. canarae* var. *fimbriatum* strictly grows at high altitudes in open forests often on sandy, moist soils. Many species are economically important for fodder or as lawn such as *P. longifolium*, *P. notatum* and *P. conjugatum*. Frequently, the *P. vaginatum* can be a troublesome in cultivated sites.

ACKNOWLEDGEMENTS

We would like to thank the directors, curators and staff of the following herbaria; A, AAU, BK, BKF, BM, K, KKU, L, P, PSU, QBG, SING and TCD and for their collections available for study. The first author indebted to Dr. David A. Simpson and Dr. Steve Renvoize for their suggestion and providing the facilities while working at Kew. We also wish to thank Dr. Weerachai Nanakorn for his valuable advice.
