Received: 28 June 2022; Accepted: 27 October 2022

**ABSTRACT.** – The synopsis of three genera, *Dyschoriste*, *Eranthemum* and *Phaulopsis* of the family Acanthaceae in Thailand is presented. One species each for *Dyschoriste* and *Phaulopsis* is recorded such as *Dy. nagchana* and *P. dorsiflora*. Five species in *Eranthemum*, namely *E. burmanicum*, *E. ciliatum*, *E. decumbens*, *E. macrophyllum* and *E. tetragonum* are enumerated. *Eranthemum burmanicum* and *E. macrophyllum* are new records from Thailand. *Eranthemum obovatum* is presently reduced as synonymy under *E. tetragonum*. *Daedalacanthus parishii*, *D. ciliatus*, *E. macrophyllum*, *E. obovatum* and *E. tetragonum* are lectotypified.

**KEYWORDS:** distribution, identification, floristic, typification, taxonomy

## INTRODUCTION

*Dyschoriste*, *Eranthemum* and *Phaulopsis* are genera of the family Acanthaceae which were formerly classified as belonging to the subtribe Ruelliinae by having left-contorted aestivation, filament curtain and jaculators (Watson & Dallwitz, 1992; Scotland & Vollesen, 2000; Olmstead, 2005). However, based on the present taxonomic treatment *Dyschoriste* is placed into the subtribe Petalidiinae, and *Eranthemum* and *Phaulopsis* are proposed as an individual subtribe namely Eranthemiinae and Phaulopsidinae (Tripp et al., 2021). These genera are distributed in pantropical Asia, Africa and America and *ca* 65 species, 30 species and 22 species are known for *Dyschoriste*, *Eranthemum* and *Phaulopsis*, respectively (Kobuski, 1928; Manktelow, 1996; Mabberley, 2008; Christenhusz et al., 2017). In Thailand, one species each for *Dyschoriste* and *Phaulopsis*, *Dy. erecta* (Burm. f.) Kuntze and *P. dorsiflora* (Retz.) Santapau and four species in *Eranthemum*, *E. ciliatum* (Craib) Benoist, *E. obovatum* J.B. Imlay, *E. pulchellum* Andrews and *E. tetragonum* Wall. ex Nees were enumerated (Benoist, 1935; Hosseus, 1907; Imlay, 1939; Hansen, 1985; Manktelow, 1996; Pooma & Suddee, 2014). Furthermore, a new species of *Eranthemum*, *E. decumbens* Kladwong & Chantar. and a key to species of this genus in Thailand were reported (Kladwong & Chantaranothai, 2021).

Ongoing preparation of the account of these genera for the Flora of Thailand, many misidentified specimens and also through the misapplication of names are recognized. The nomenclatural circumscription is determined. We found that the records of *Dy. erecta* and *E. pulchellum* in Thailand are misidentified. Moreover, two species of *Eranthemum*, *E. burmanicum* N.P. Balakr. and *E. macrophyllum* Wall. ex Nees are newly recorded in Thailand, and one species, *E. obovatum* is

treated as a new synonym. The lectotypes of Thai *Eranthemum* species are designated. The description of two new recorded species is presented, including a revised key to species of *Eranthemum* in Thailand. The distribution, habitat and phenology are provided as well as distribution maps, conservation assessments, photographs, vernacular names and taxonomic notes.

## MATERIALS AND METHODS

Extensive field investigation and careful examination of specimens from Thai and abroad herbaria: AAU, BK, BKF, BM, C, CMU, CMUB, E, G, GZU, K, KKU, KYO, K-W, L, LD, M, P, PSU, QBG and US (herbarium acronyms follow Thiers, 2021, continuously updated) were carried out. The consultation of type and non-type specimens from C, E, G, GZU, K, K-W, L, LD, M, P and US was made by means of visiting digital herbaria online. The investigation of protogues and other related literature viz. Clarke, 1885 & 1908; Ridley, 1915 & 1923; Benoist, 1935; Wood, 2001; Kress et al., 2003; Hu et al., 2005 & 2011; Newman et al., 2007 & 2017) were conducted. The herbarium specimens from the field collection were made and housed at KKU. The morphological description was performed based on the herbarium specimens and field information. The vernacular names of the new records were provided by the authors and the other species were recorded from the specimens and Thai Plant Names Tem Smitinand (Pooma & Suddee, 2014). The distribution, habitat and phenology are recorded from specimen labels and field observations. The distribution maps in Thailand were illustrated based on the locality provided on the herbarium sheet. The IUCN red list assessments were performed by means of the extent of occurrence (EOO) and the area of occupancy (AOO) using

GeoCat (Bachman et al., 2011). The type specimens have been investigated, seen by digital images and are not seen indicated by ‘!’, ‘image seen’ and ‘n.v.’, respectively.

## TAXONOMIC TREATMENT

**1. *Dyschoriste*** Nees in Wall., Pl. Asiat. Rar. 3: 81. 1832.  
— *Calophanes* D. Don in Sweet, Brit. Flow. Gard. 2. 181. 1833.  
— *Linostylis* Fenzl ex Sond., Linnaea 23(1): 94. 1850.

***Dyschoriste nagchana*** (Nees) Bennet, Indian Forester 109(4): 220. 1983.

— *Dipteracanthus nagchana* Nees in Wall., Pl. Asiat. Rar. 3: 82. 1832.— *Calophanes nagchana* (Nees) Nees in de Candolle, Prodr. 11: 109. 1847. Type: India, Patna, 19 Mar. 1812, Wall. Numer. List: 2396, 1831–1832 (syntypes GZU [GZU000280504], image seen & K-W [K001115852], image seen).

— *Dyschoriste depressa* Nees in Wall., Pl. Asiat. Rar. 3: 81. 1832.— *Calophanes depressa* (Nees) T. Anderson in Thwaites, Enum. Pl. Zeyl. 1: 225. 1860., [non *Ruellia depressa* L. f.] Type: Sri Lanka [Ceylon], Wall. Numer. List: 2379, 1831–1832 (syntypes GZU [GZU000280518], image seen & K-W [K001115803], image seen).

— *Dyschoriste erecta* auct. non (Burm.f.) Kuntze: Benoit in Lecomte et al., Fl. Indo-Chine 4: 659. 1935.

**Distribution, habitat and phenology.**— *Dyschoriste nagchana* is distributed in India, Sri Lanka, and Thailand where it grows on open spaces and sandy soil in mixed deciduous, evergreen and pine forests. This species is flowering and fruiting from Aug. to Mar.

**Specimens examined.**— THAILAND: NORTHERN Mae Hong Son [without locality, 750 m alt., 10 Nov. 2004, Maxwell 04-691 (BKF)]; Chiang Mai [Ban Mon, 320 m alt., 1 Nov. 1960, S.N. 2313 (BK); Ban Pee Lu, 24 Oct. 1996, Nanakorn et al. 7772 (QBG-2 sheets); Chom Thong, near Mae Klang Waterfall, 350 m alt., 15 Dec. 1965, Tagawa et al. 2230 (BKF, KYO); ibid., en route from Mae Klang Waterfall to Ban Yang, along Mae Klang Stream, 350–600 m alt., 16 Dec. 1965, Tagawa et al. 2302 (KYO); Doi Lohn, west side open wet area, 1050 m alt., 22 Oct. 1996, Maxwell 96-1372 (BKF); Samoeng, Mae Kahn (Karen) Village area, Mae Sahp, 675 m alt., 11 Oct. 2001, Maxwell 01-512 (CMUB)]; Lampang [Lakon, 4 Feb. 1912, Kerr 2324 (P)]; Phrae [Song, Mae Yom National Park, Dow Boon, 225 m alt., 13 Oct. 1991, Maxwell 91-899 (CMUB, P)]; Tak [Sam Ngao, Doi Pan Thee, 700 m alt., 25 Nov. 2009, Watthana 3370 (QBG) & 3378 (QBG)]; Sukhothai [Mueang, near Pra Tah Due Nahm

Doke So Gah Cah Nah Temple, 5 Nov. 1971, Maxwell 71-686 (AAU, BK)]; Phitsanulok [Thung Nong Luang National Park, 1 Dec. 1966, Prayad 553 (BK); Thung Salaeng Luang National Park, Kang So Pa Waterfall, 500 m alt., 30 Sept. 1967, Tagawa et al. 11248 (KYO); ibid., Kang So Pa Waterfall, 350 m alt., 11 Oct. 1979, Shimizu et al. 18357 (BKF-2 sheets, KYO) & 18377 (BKF-2 sheets, KYO, L); ibid., Kang So Pa Waterfall, 500 m alt., 29 Dec. 1982, Koyama et al. 31901 (KYO); ibid., about 20 km E of Phitsanulok along the path by stream along the road, 450–480 m alt., 21 Oct. 1984, Murata et al. 38289 (BKF, KYO-2 sheets) & 38434 (BKF, KYO) & 38446 (BKF, KYO-2 sheets, QBG); ibid., Poi Waterfall, 210 m alt., 22 Oct. 1984, Murata et al. 51461 (BKF, KYO-2 sheets, QBG); ibid., Poi Waterfall, 210 m alt., 22 Dec. 1984, Murata et al. 51455 (BKF, KYO); ibid., road side in sunny place, 520 m alt., 22 Oct. 1984, Murata et al. 38468 (BKF, KYO, QBG-2 sheets); ibid., without date, S.P. et al. 81 (BKF, KYO, P)]; NORTH-EASTERN: Phetchabun [Nam Nao National Park, Pha Daeng Cliff, 900–960 m alt., 26 Dec. 1982, Koyama et al. 31721 (BKF, KYO); ibid., 280–350 m alt., 28 Oct. 1983, Murata et al. 51510 (BKF, KYO); ibid., Tham Pha Hong, 12 Nov. 2013, Maknoi 6256 (QBG); ibid., Tham Yai, 12 Nov. 2013, Maknoi 6206 (QBG); ibid., 14 Nov. 2013, Maknoi 6439 (QBG)]; Loei [Phu Kradueng, Ban Na Yang Tai, 14 Nov. 2011, Lakoet 212 (QBG); Sithan, 300 m alt., 21 Mar. 1958, Smitinand 4893 (BKF); ibid., 22 Nov. 1958, Sørensen et al. 6134 (BKF); Phu Kradueng National Park, 22 Oct. 1947, Bunpheng 17 (BKF); ibid., 1300 m alt., 30 Aug. 1950, Bunpheng 8773 (BKF); ibid., 9 Oct. 1967, Prayad 1011 (BK); ibid., 10 Nov. 1970, Charoenphol et al. 4885 (AAU, BKF, KYO, P); ibid., 300–1200 m alt., 17 Nov. 1977, Shimizu et al. 22708 (BKF); 300–900 m alt., 14 Nov. 1978, Shimizu et al. 22571 (KYO); ibid., 300–1200 m alt., 17 Nov. 1979, Shimizu et al. 22708 (BKF); ibid., 350–900 m alt., 17 Dec. 1982, Koyama et al. 31194 (BKF, KYO) & 31195 (KYO); ibid., 4 Nov. 1984, Murata et al. 43074 (BKF); ibid., along trail from Samhaek to Langpae, 750 m alt., 29 Aug. 1988, Takahashi 63229 (KYO-2 sheets)]; Bueng Kan [Seka, Phu Wua Wildlife Sanctuary, Chet Si Waterfall, 26 Aug. 2001, Pooma et al. 2749 (BKF)]; Sakon Nakhon [68 km from Kalasin Province border on road from Khon Kaen, 13 Oct. 1990, Chantaranothai & Parnell 90/684 (KKU); Phu Phan National Park, 350 m alt., 14 Dec. 1982, Koyama et al. 31022 (BKF, KYO, L); ibid., 380 m alt., 12 Nov. 1984, Murata et al. 50636 (AAU, BKF, KYO); ibid., 380 m alt., 13 Nov. 1984, Murata et al. 48873 (QBG) & 48876 (QBG); ibid., 380 m alt., 14 Nov. 1984, Murata et al. 50512 (BKF); ibid., 380 m alt., 15 Nov. 1984, Murata & Phengklai

Larsen & S. Larsen* 34001 (**AAU**); *ibid.*, Erawan National Park, Koh Buk Village, 350 m alt., 26

Nov. 1982, *Koyama et al.* 30334 (**BKF, KYO**)]; Ratchaburi [Tung Luang, under 50 m alt., 8 Nov. 1931, *Kerr* 20603 (**BK**)]; CENTRAL Lop Buri [Chai Badan, 10 Oct. 1926, *Lakshnakara* 262 (**BK**)]; Saraburi [Mueang, Samlan [Sahm Lahn] forest, 16 Dec. 1973, *Maxwell* 73-770 (**AAU, BK**)]; SOUTH-EASTREN Sa Kaeo [Watthana Nakhon, 14 Oct. 1928, *Put* 1914 (**BK**)]; PENINSULAR Narathiwat [Ban La Dua, ca 200 m alt., 28 Nov. 1920, *Kerr* 4660 (**BK**)]. INDIA: Patna [19 Mar. 1812, *Wall. Numer. List*: 2396 (**K-W**)]; Peninsula Indiae Orientalis [*Wight* 2181 (**L**)]. SRI LANKA: without locality [without date, *Wall. Numer. List*: 2379 (**GZU, K-W**)].

**Vernacular name.**—I tu khok (ឈ្មោះគុក), sabai nam (សោរី នោ), ya sam chan (យស្សាសាមខ្លួន).

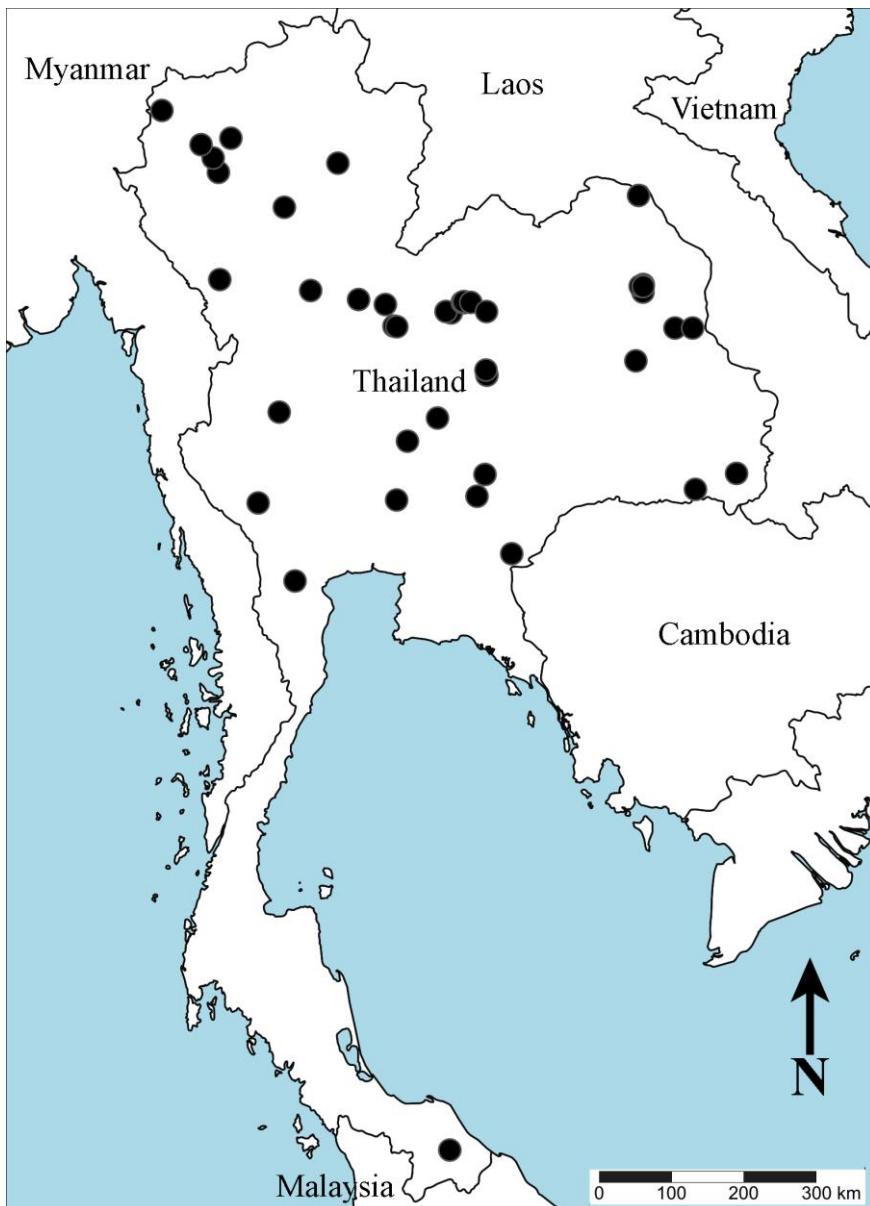

**Notes.**—*Dyschoriste nagchana* was formerly known in Thailand as *Dy. erecta* (Burm. f.) Kuntze according to the report of Benoit (1935). However, this was a misapplication of the name *Dy. erecta* (Burm. f.) Kuntze because it was accepted as a synonym of *Hygrophila erecta* (Burm. f.) Hochr. by Hochreutiner (1934) and Bremekamp (1948). *Dychoriste nagchana* is commonly observed in Thailand and is distributed in Northern, North-Eastern, Eastern, South-Western, Central, South-Eastern and Peninsular floristic regions (Fig. 1). This species has an Extent of Occurrence (EOO) of 590,049.441 km<sup>2</sup> and an Area of Occupancy (AOO) of 168.000 km<sup>2</sup> and is assessed as the Least Concern (LC) criterion based on the IUCN Red List Categories (IUCN Standards and Petitions Committee, 2022).

## 2. *Eranthemum* L., Sp. Pl. 1: 9. 1753.

— *Daedalacanthus* T. Anderson in Thwaites, Enum. Pl. Zeyl. 1: 229. 1860.  
— *Upudalia* Raf., Fl. Tellur. 4: 66. 1836.

### Key to species of *Eranthemum* from Thailand

1. Bracts variegated white and green; stamens exserted except *E. tetragonum*
2. Stamens included..... *E. tetragonum*
2. Stamens exserted
  3. Bracts margin ciliate..... *E. ciliatum*
  3. Bracts margin never ciliate
    4. Corolla blue; lobes ovate, all lobes not reflexed at anthesis..... *E. pulchellum*
    4. Corolla pale purple; lobes obovate, four upper lobes reflexed at anthesis..... *E. macrophyllum*
1. Bracts not variegated white and green; stamens included
  5. Bracts rhomboid or elliptic-orbicular, margin crenulate or subentire..... *E. burmanicum*
  5. Bracts not as above
    6. Stems decumbent; leaves ovate-oblong, base cuneate or rounded; bracts with sticky glandular hairs..... *E. decumbens*
    6. Stems erect; leaves ovate-lanceolate to narrowly lanceolate or oblong to linear, base attenuate; bracts without sticky glandular hairs..... *E. tetragonum*

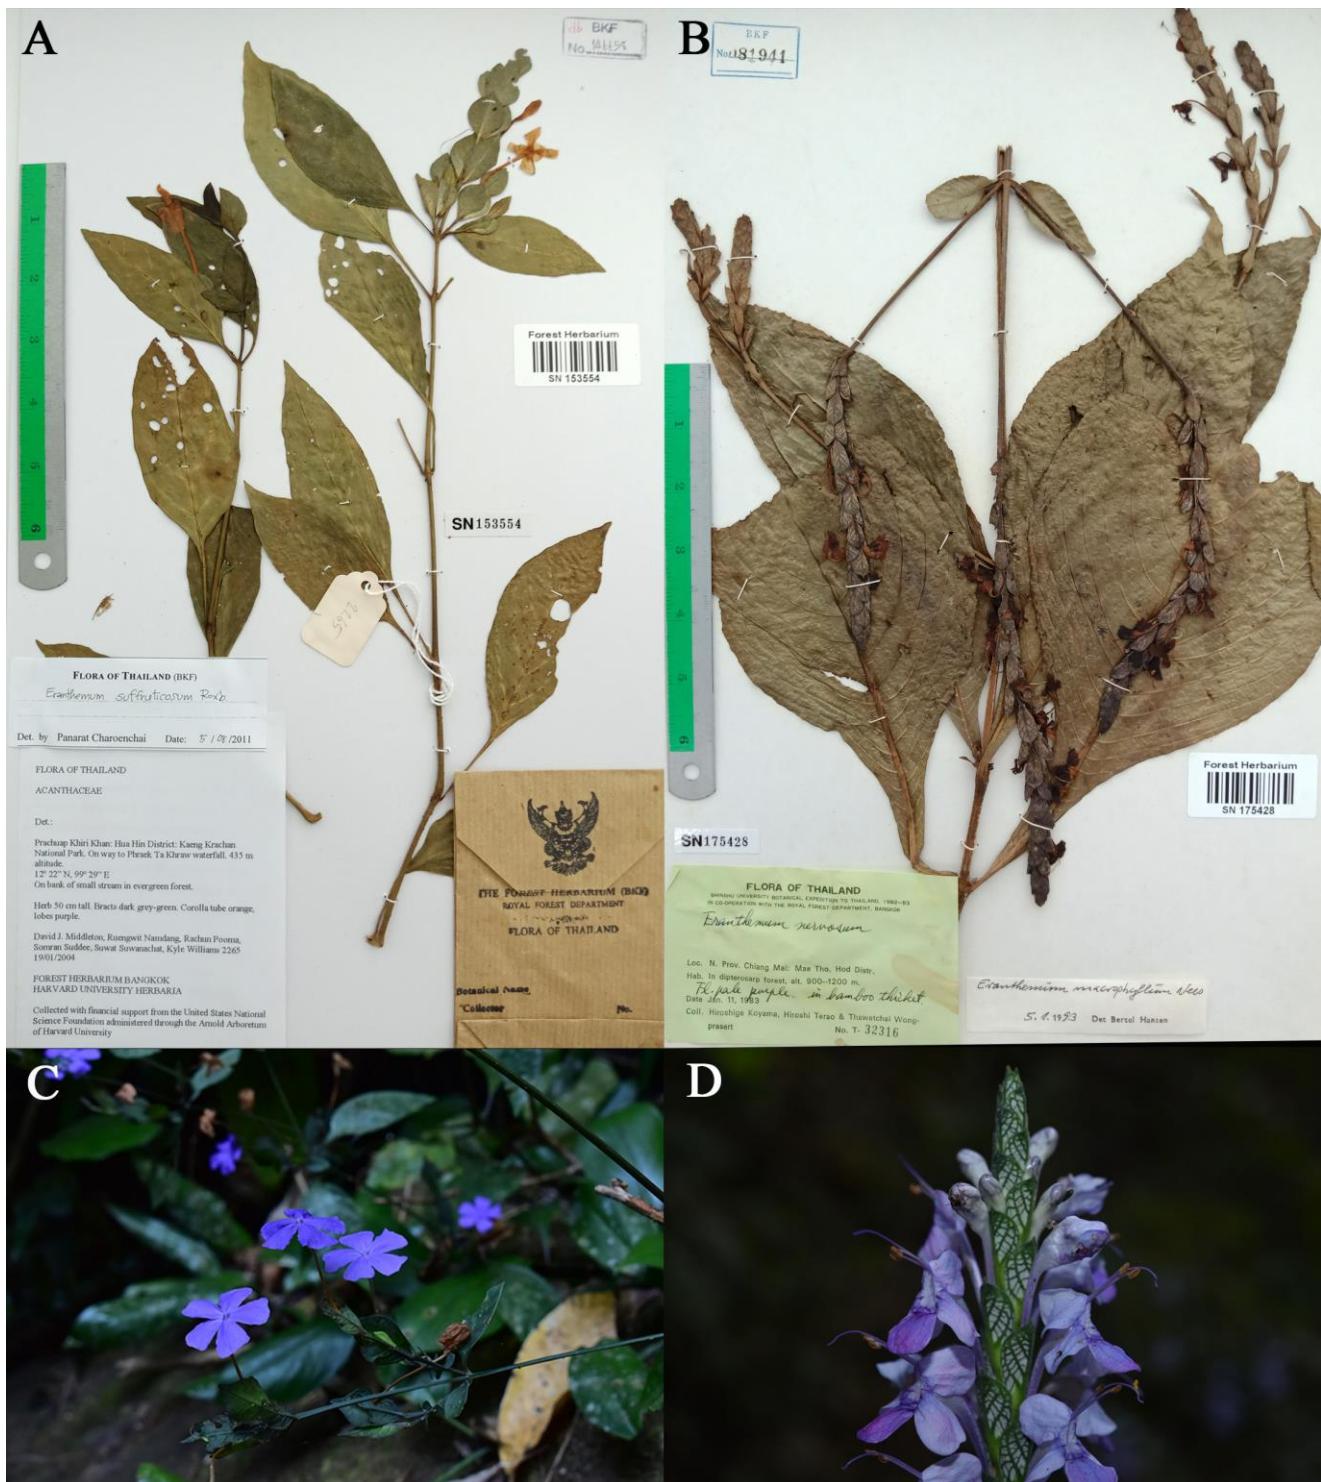

**FIGURE 1.** Distribution map of *Dyschoriste nagchana* (Nees) Bennet in Thailand.

*Eranthemum burmanicum* N.P. Balakr., J. Bombay Nat. Hist. Soc. 67: 63. 1970., Fig. 2A & 2C.

— *Daedalacanthus parishii* T. Anderson, J. Linn. Soc., Bot. 9: 489. 1867.— *Eranthemum parishii* T. Anderson in K (unpublished), [non *E. parishii* (T. Anderson) C.B. Clarke]. Type: Myanmar [Bruma], Mawlamyine [Moulmein], 1862, Parish 414 (lectotype CAL [CAL0000019509], image seen, designated here; isolectotype K [K000882627], image seen).

Perennial herb, isophyllous. Stems 4-angled, pubescent at nodes. Leaves broadly ovate or ovate-elliptic or elliptic, 8–14 by 4–7 cm, apex acute to acuminate, base cuneate to attenuate, margin subentire, slightly recurved, glabrous or pilose both surfaces,

lateral veins 5–7 on each side of midvein, conspicuous on both surfaces; petiole subsessile to 3.5 cm long, upper petioles shorter, pilose or pubescent. Inflorescences of axillary clustered of spikes, 2–6 cm long; peduncle subsessile to 5 cm long, glabrous or pilose; bracts rhomboid or elliptic-orbicular, 2–3 by 1.5–2 cm, persistent, glabrous or pilose on both surfaces, not variegated white and green, apex acute or attenuate to acuminate, margin crenulate or subentire; bracteoles linear-lanceolate, 4–5 by ca 2 mm, glabrous, apex tipped, white with green tip. Calyx 4–5.5 by 2–3 mm; lobes lanceolate, apex acute to acuminate. Corolla purple, 3.5–5 cm long, glandular trichomes pubescent outside; tube cylindric, narrow, ca 1.5 mm wide; lobes obovate, 1–1.5 by 0.8–1.3 cm, apex obtuse or rounded.

**FIGURE 2.** Two new recorded species of *Eranthemum* from Thailand: A. & C., *E. burmanicum* N.P. Balakr.; B. & D., *E. macrophyllum* Wall. ex Nees. Photos C. by T. Kankha; D. by S. Suddee.

*Stamens* 2 fertile and 2-minute staminodes inserted near the apex of the corolla tube; filament *ca* 2 mm long; anther thecae *ca* 3 mm long. *Ovary* pubescent; style *ca* 4 cm long, pubescent. *Capsule* clavate, stalked. *Seeds* rounded in outline, flattened, densely hairy.

**Distribution, habitat and phenology.**—*Eranthemum burmanicum* is distributed in Myanmar and Thailand where it grows in a shady area of hardwood with bamboo forest and near a stream in an evergreen forest. This species is flowering and fruiting from Nov. to Jan.

**Specimens examined.**— THAILAND: NORTHERN Nakhon Sawan [Mae Wong National Park, 2 km west of Mae Rewa Ranger Station, 170 m alt., 25 Dec. 2003, *van de Bult* 735 (**BKF**, **CMUB**)]; SOUTH-WESTERN Uthai Thani [Huai Kha Khaeng Wildlife Sanctuary, To Jone Waterfall along Huai Kha Khaeng, 280–330 m alt., 12 Nov. 1979, *Shimizu et al.* 22279 (**BKF**-2 sheets, **KYO**) & 22305 (**BKF**-2 sheets, **KYO**)]; Prachuap Khiri Khan [Hua Hin, Kaeng Krachan National Park, on way to Phraek Ta Khraw Waterfall, 435 m alt., 19 Jan. 2014, *Middleton et al.* 2265 (**BKF**)]; SOUTH-EASTERN Chanthaburi [Klong Narai Waterfall, 21 Jan. 1973, *Maxwell* 73-22 (**AAU**, **BK**); Khao Sa Bap, 100 m alt., 7 Nov. 1993, *Larsen* 44279 (**AAU**)]; Trat [Dan Chumphon, under 50 m alt., 19 Dec. 1924, *Kerr* 17611 (**BK**)]; PENINSULAR Chumphon [Khao Phra Bat, 23 Nov. 1930, *Lakshnakara* 501 (**BK**)]; Phuket [Kathu, Kathu Waterfall, 100–200 m alt., 14 Dec. 1979, *Shimizu et al.* 27319 (**BKF**-2 sheets, **KYO**)]. MYANMAR: Mawlamyine [1862, *Parish* 414 (**CAL**, **K**)]; Tenasserim and Andamans [1861, *Helper* 6176 (**K**, **P**)]; Dawei [Tavoy] [without date, *Parish* 413 (**K**)]; Suayghin [Dec. 1854, *Scott* 385 (**CAL**)].

**Vernacular name.**— Khem kap liam (ເຂົ້ມຄານຫຼັ່ມ).

**Notes.**— *Eranthemum burmanicum* is similar to *E. suffruticosum* Roxb. a native species of the Andaman Islands (Clarke, 1885) but differs based on having ovate to ovate-elliptic leaves with slender petioles vs ovate-oblong with stout petioles in *E. suffruticosum*. In addition, the bract of *E. burmanicum* is rhomboid or elliptic-orbicular with attenuate to acuminate at apex vs obovate or wedge-shaped with apiculate at the apex in *E. suffruticosum*.

*Eranthemum burmanicum* was proposed as a new name of *D. parishii* T. Anderson (Balakrishnan, 1970) according to the Anderson combination, *E. parishii* was never published for this species. Indeed, the name was treated as a combination name of *Asystasia parishii* T. Anderson by Clarke (1885) as *E. parishii* (T. Anderson) Clarke. However, it is presently accepted as a synonymy of *Pseuderanthemum parishii* (T. Anderson) Lindau (POWO, 2022).

The collections of *Brandis*, *Parish* and *Scott* were cited in the original protologue of *D. parishii* (Anderson, 1867). On the examination, we found *Parish* 414 and *Scott* 385 correspond with the type location mentioned in the protologue. *Scott* 385 is kept in CAL (CAL0000019508). Two duplicates of *Parish* 414 are observed and each one is deposited in CAL (CAL0000019509) and K (K000882627). The specimens at CAL have been annotated as “*Daedalacanthus parishii*” by Anderson’s handwriting and fit the description in the protologue. However,

*Parish* 414 has mature leaves and inflorescences; therefore, we selected this specimen as the lectotype of *D. parishii*. The sheet at K (K000882627) is isolectotype.

*Eranthemum burmanicum* was formerly known as endemic to Myanmar, but now it is a new record for Thailand where it distributes in Northern, South-Western, South-Eastern and Peninsular floristic regions. The Thai specimen extends the distribution of this species Eastern ward of its range (Fig. 3). This species has an Extent of Occurrence (EOO) of 255,937.811 km<sup>2</sup> and an Area of Occupancy (AOO) of 40.000 km<sup>2</sup> and is assessed as the Least Concern (LC) criterion based on the IUCN Red List Categories (IUCN Standards and Petitions Committee, 2022).

***Eranthemum ciliatum*** (Craib) Benoist in Lecomte, Fl. Indo-Chine 4: 661. 1935.

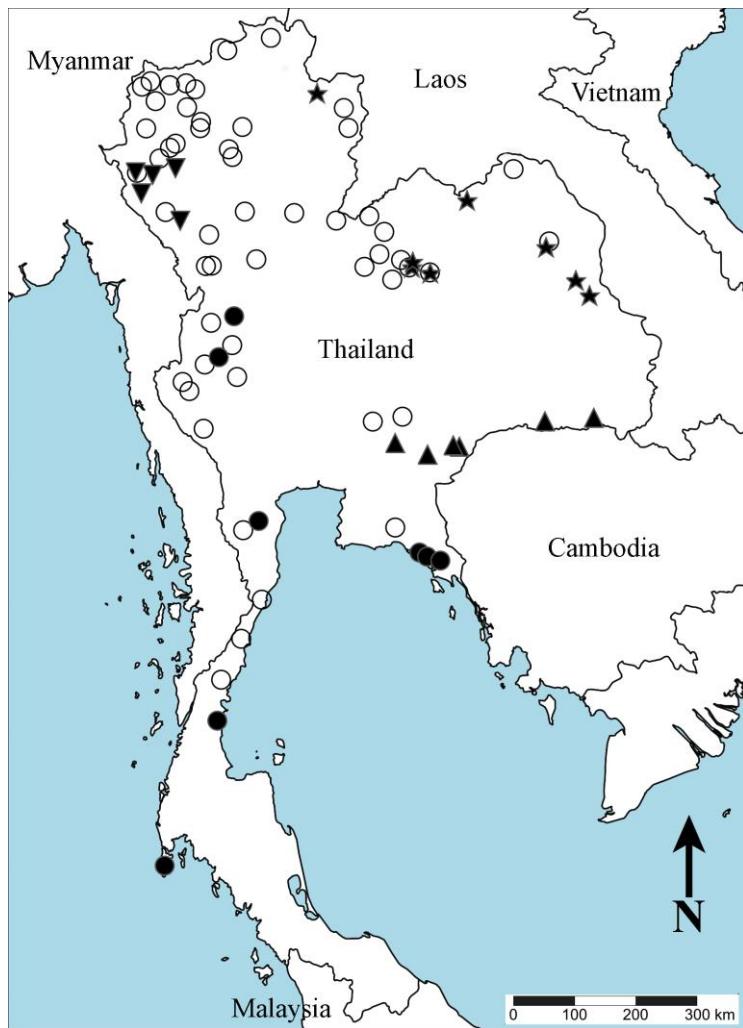

— *Daedalacanthus ciliatus* Craib, Bull. Misc. Inform. Kew. 1913: 202. 1913. Type: Thailand, Nan, 21 Feb. 1912, *Kerr* 2398 (lectotype **K** [K000882624], image seen, designated here; isolectotypes **BM** [BM000950036], image seen, **K** [K000882623], image seen).

**Distribution, habitat and phenology.**— *Eranthemum ciliatum* is distributed in Myanmar, Thailand, Laos, and Vietnam. In Thailand, it grows in mixed deciduous and evergreen forests. This species is flowering from Nov. to Feb.

**Specimens examined.**— THAILAND: NORTHREN Nan [Song Kuae, Tham Sakoen National Park, 12 Feb. 2011, *La-onsri* & *Romkham* 1499 (**QBG**)]; NORTHEASTERN Nong Khai [Ban Choum Mani, 27 Jan. 1966, *Sutheesorn* 101 (**BK**)]; Sakon Nakhon [Phu Phan National Park, 20 Nov. 1999, *Chai-kong* 22/42 (**KKU**)]; Nakhon Phanom [Dong Bang Ee, 150 m alt., 17 Dec. 1963, *Smitinand* 8458 (**BKF**)]; Mukdahan [Khamcha-I, without locality, 300 m alt., 13 Dec. 1982, *Koyama et al.* 30974 (**BKF**, **KYO**-2 sheets, **QBG**); Nikom Khamsoi, Phu Moo Forest Park, 350–450 m alt., 11 Dec. 1982, *Koyama et al.* 30849 (**BKF**-3 sheets, **KYO**-2 sheets)]; Khon Kaen [Phu Pha Man National Park, Sam Nam Yoi, 291 m alt., 25 Feb. 2001, *Norsaengsri et al.* 7580 (**QBG**); Phu Wieng, ca 300 m alt., 7 Feb. 1931, *Kerr* 20017 (**BK**); Photiyarn Cave, 16 Feb. 1963, *Adisai* 311 (**BK**)].

**Vernacular name.**— Cha hom (ຈ້າທ້ອມ), khem phuang (ເຂົ້ມພວງ).

**Notes.**— *Eranthemum ciliatum* superficially resembles *E. pulchellum* Andrews in having a distinct greenish midrib and veins on white ovate-lanceolate bract but *E. ciliatum* has hairy bracts with ciliate margin vs glabrous to pubescent but never ciliate in *E. pulchellum*. This species was known in Thailand, Laos and Vietnam as *E. nervosum* (Vahl) R. Br. ex Roemer

**FIGURE 3.** Distribution map of *Eranthemum* in Thailand; *E. burmanicum* N.P. Balakr. (●), *E. ciliatum* (Craib) Benoist (★), *E. decumbens* Kladwong & Chantar. (▲), *E. macrophyllum* Wall. ex Nees (▼) and *E. tetragonum* Wall. ex Nees (○).

& Schultes (Benoist, 1935). Later, *E. nervosum* was accepted as a synonym of *E. pulchellum* (Fosberg & Sachet, 1953; Pooma & Suddee, 2014). However, after investigating the specimens cited by Benoist (1935). These specimens were collected from Thailand, Laos and Vietnam and housed at P.

We found that the bracts are variegated white and green and ciliate at the margin which is determined as *E. ciliatum*. Therefore, we concluded that *E. nervosum* (now *E. pulchellum*) which was formerly recorded in Thailand, Laos and Vietnam by Benoist (1935) is a misidentification. *Eranthemum pulchellum* is native to India, Bangladesh, Bhutan and Nepal (Andrews, 1797; Fosberg & Sachet, 1953; Wood, 2001), but it is not occurred in Thailand except cultivated as an ornamental plant. *Eranthemum ciliatum* is distributed in Northern and North-Eastern floristic regions (Fig. 3). This species has an Extent of Occurrence (EOO) of 155,278.136 km<sup>2</sup> and an Area of Occupancy (AOO) of 44.000 km<sup>2</sup> and is assessed as the Least Concern (LC)

criterion based on the IUCN Red List Categories (IUCN Standards and Petitions Committee, 2022).

*Kerr 2398* was mentioned in the protologue of *D. ciliatus* and it has three duplicates, one in BM and two in K. The sheet K000882624 at K is selected as the lectotype of this species because it has preserved a whole plant with completed leaves and inflorescences.

***Eranthemum decumbens* Kladwong & Chantar.,** Nordic J. Bot. 39(8): 3. 2021. Type: Thailand, Surin, 10 Jan. 1924, Kerr 8249 (holotype BK! [231335]).

**Distribution, habitat and phenology.**— *Eranthemum decumbens* is distributed in Laos and Thailand where it grows in mixed deciduous or dry evergreen forests and it is flowering and fruiting from Jan. to Mar.

**Specimens examined.**— THAILAND: EASTERN Si Sa Ket [Kanthararak, Phumisarol Village, 15 Mar. 1967, *Phusomsaeng* 56 (BKF)]; SOUTH-EASTERN Sa Kaeo [Pang Sida National Park, Pang Sida

Waterfall, 300 m alt., 11 Jan. 2002, *Jaikrasene* 145 (**CMUB**); *ibid.*, 109 m alt., 17 Feb. 2009, *Norsaengsri* 4956 (**QBG**); Prachin Buri [Khao Yai National Park, Kaeng Hin Phaeng Ranger Unit, nature trail, 12 Feb. 2006, *Poopath et al.* RP 6204 (**BKF**); Ta Phraya National Park, 4 Jan. 1967, *S & J* 2107 (**BK**); *ibid.*, Lam Sa Ton, 16 Jan. 1932, *Put* 35 (**BKF**)].

**Vernacular name.**— Cha hom tia (ຈ້າທ້ອມເຕື້ອ), khem prakai pruek (ເໜີມປະກາຍພຸກຍົກ).

**Notes.**— *Eranthemum decumbens* is distributed in Eastern and South-Eastern floristic regions (Fig. 3) and also known from Champasak, Southern Laos. This species has the Vulnerable (VU) criterion (Kladwong & Chantaranothai, 2021).

***Eranthemum macrophyllum*** Wall. ex Nees in Wall., Pl. Asiat. Rar. 3: 106. 1832., Fig. 2B & 2D.

— *Daedalacanthus macrophyllus* (Wall. ex Nees) T. Anderson, J. Linn. Soc., Bot. 9: 487. 1867. Type: Myanmar, Pyay [Prome], Pingee, Ayeyarwady [Irawaddi] River, 1826, *Wall. Numer. List*: 7179.A, 1831–1832 (lectotype **K-W** [K001126830], image seen, **designated here**).

Herb 0.5–1.5 m tall, isophyllous. Stems erect, 4-angled, pubescent and scabrous. Leaves elliptic or elliptic-ovate, 8–15 by 4–8 cm, apex attenuate or caudate or sometimes obtuse, base attenuate, decurrent onto petiole, margin subentire or weakly serrate, slightly recurved, glabrous or scabrous on both surfaces, lateral veins 9–12 pairs, prominent on abaxial surface; petiole 2.5–4 cm long, subglabrous. Inflorescences terminal or axillary spikes, 8–20 cm long; peduncle 2.5–10 cm long, subglabrous or scabrous; bracts elliptic or obovate-elliptic, 0.5–2.5 by 0.4–1.5 cm, persistent, subglabrous, variegated white and green, apex mucronate, margin entire; bracteoles linear-lanceolate, ca 5 by 2 mm, subglabrous, apex acute. Calyx 5-lobed, ca 5 by 2–3 mm; lobes lanceolate, sparsely pubescent, apex attenuate or acute. Corolla pale purple, 4–5 cm long, pubescent outside; tube cylindric, inflated toward the top, 1–2 mm wide; lobes obovate, 6–9 by 5–7 mm, four upper lobes reflexed at anthesis, apex rounded or obtuse. Stamens 2 fertile and 2-minute staminodes, exserted; filament 1.5–2 cm long, glabrous; anthers thecae ca 2.5 mm long. Ovary glabrous; style 3–4 cm long, hairy. Capsule clavate, ca 1.5 cm long, stalked. Seeds rounded in outline, flattened, densely hairy.

**Distribution, habitat and phenology.**— *Eranthemum macrophyllum* is distributed in India, Bangladesh, Myanmar and Thailand where it grows in deciduous

and dry evergreen forests. This species is flowering and fruiting from Jan. to Mar.

**Specimens examined.**— THAILAND: NORTHERN Mae Hong Son [Mae Sariang, 350 m alt., 14 Feb. 1971, *Smitinand* 11424 (**BKF**); Sob Moei, Ban Hua Kong Moon, 880 m alt., 1 Mar. 2014, *Pongamornkul* 4089 (**QBG**); *ibid.*, 950 m alt., 24 Jan. 2015, *Pongamornkul* 4784 (**QBG**)]; Chiang Mai [Hod, Mae Tho, 900–1200 m alt., 11 Jan. 1983, *Koyama et al.* 32316 (**BKF, KYO**); Mae Rim, Doi Monlong, 1400 m alt., 8 Jan. 2014, *Wongnak s.n.* (**QBG**)]; Tak [Mae Ramad, 200 m alt., 22 Nov. 2005, *Pooma et al.* 5780 (**AAU**); road between Sob Moei and Mae Ngao National Park, 13 Jan. 2015, *Tanming* 759 (**QBG**)]; MYANMAR: Mawlamyine, Pyay, Pingee, Ayeyarwady River, 1826, *Wall. Numer. List*: 7179.A, 1831–1832 (**K-W**)].

**Vernacular name.**— Khem phuang bi yai (ເໜີມພວງໃບໄຫຍງ).

**Notes.**— *Eranthemum macrophyllum* is similar to *E. pulchellum* Andrews in having white bract with prominent green midrib and reticulate venation, but the corolla of *E. macrophyllum* is pale purple vs blue in *E. pulchellum*. The corolla lobes of *E. macrophyllum* are obovate and four upper lobes are reflexed at anthesis vs ovate and all lobes not reflexed in *E. pulchellum*.

The original protologue of *E. macrophyllum* was based on Wallich's collections from Pyay and Thandaung [Toong Dong] in Myanmar (Nees, 1832). On the examination, we found that Wallich 7179.A was collected from Pyay and deposited at K-W (K001126830). Wallich 7179.B was collected from Thandaung and it has four duplicates, each one in CAL (CAL0000019511), K (K000882636) and K-W (K001126831). We select Wallich 7179.A at K-W (K001126830) as the lectotype of *E. macrophyllum* because it has more mature leaves and complete inflorescences.

*Eranthemum macrophyllum* was formerly known from India, Bangladesh and Myanmar and now it is a new report for Thailand where it distributes in the Northern floristic region (Fig. 3). The Thai specimen extends the distribution of this species Eastern ward of its range. This species has an Extent of Occurrence (EOO) of 14,279.316 km<sup>2</sup> and an Area of Occupancy (AOO) of 24.000 km<sup>2</sup> and is assessed as the Vulnerable (VU), B1ab (i, ii, iii) criterion based on the IUCN Red List Categories (IUCN Standards and Petitions Committee, 2022).

***Eranthemum tetragonum*** Wall. ex Nees in Wall., Pl. Asiat. Rar. 3: 106. 1832.

— *Daedalacanthus tetragonon* (Wall. ex Nees) T. Anderson, J. Linn. Soc., Bot. 9: 488. 1867. Type: Myanmar, Trogla, 12 Mar. 1827, *Wall. Numer. List*:

7180, 1831–1832 (lectotype **K-W** [K001126832], image seen, **designated here**; isolectotype **GZU** [GZU00024997], image seen).

— *Eranthemum obovatum* J.B. Imlay, Bull. Misc. Inform. Kew 1939(3): 115. 1939, [non *E. obovatum* E. Mey. ex Nees]. Type: Thailand, Kanchanaburi, 2 Jan. 1924, Kerr 10126 (lectotype, **BM** [BM000950037] image seen, **designated here**; isolectotypes **ABD** (ABDUH:2/840) n.v., **BK!** [BK257604]), **syn. nov.**

**Distribution, habitat and phenology.**— *Eranthemum tetragonum* is distributed in Myanmar, China, Thailand, Laos, Cambodia and Vietnam. In Thailand, it grows in the shade or near a stream in a mixed deciduous forest. This species is flowering and fruiting from Dec. to Feb.

**Specimens examined.**— THAILAND: NORTHERN Mae Hong Son [Khun Yuam, Huai Yuak Village, 500 m alt., 13 Jan. 1983, *Koyama et al.* 32436 (**BKF**, **KYO**); Mae Sariang, Ban Papae, 800 m alt., 8 Feb. 1969, *Smitinand & Saphasi* 10682 (**BKF**, **L**); Mueang, Huai San, Tham Pla-Namtok Pha Suea National Park, 5 Feb. 2014, *Norsaengsri* 10748 (**QBG**); Nai Soi, Pong Mu, 280 m alt., 6 Feb. 2013, *Norsaengsri* 10181 (**QBG**); Wat Tham Wua, Ban Mae Suya, Huai Pha, 738 m alt., 4 Feb. 2014, *Norsaengsri* 10732 (**QBG**); Pai, en route from Pai to Maeyan Waterfall, 570 m alt., 15 Jan. 1983, *Koyama et al.* 32500 (**BKF**, **KYO**, **L**); Mueang Sroi Waterfall, 800 m alt., 17 Jan. 1983, *Koyama et al.* 32644 (**KYO**); near Hmo Paeng Waterfall, 850 m alt. 15 Jan. 1983, *Koyama et al.* 32492 (**BKF**, **KYO**, **L**)]; Chiang Mai [Chiang Dao, Doi Chiang Dao Wildlife Sanctuary, 13 Feb. 1905, *Hosseus* 389 (**L**, **M**); ibid., Mae Na Lao, 400–600 m alt., 16 Mar. 1950, *Garrett* 1281 (**L**); ibid., Pang Wua [Boh], 800 m alt., 10 Mar. 1965, *CC. & CH.* 322 (**BKF**) & *Chem sirivathana* 324 (**BK**); ibid., southeastern side, 500–1510 m alt., 9 Feb. 1983, *Koyama et al.* 33250 (**BKF**, **KYO**); ibid., east side, Pa Blawng Cave area, 525 m alt., 15 Jan. 1989, *Maxwell* 89-68 (**CMU**, **L**); ibid., south side, off the dirt road to Bahng Hahng Village, 925 m alt. 4 Feb. 1996, *Maxwell* 96-193 (**BKF**, **CMUB**, **L**); ibid., Road Huai Pha Tung-Na Lao, near Huai Pha Tung-Na Lao Wildlife Sanctuary, 930 m alt., 18 Jan. 2012, *Sirimongkol & Karakate* 244 (**BKF**-2 sheets); Mae Taman, 1000–1500 m alt., 28 Jan. 1996, *Nanakorn et al.* 5824 (**QBG**-2 sheets); Chom Thong, Mae Klang, 780 m alt., 17 Jan. 1936, *Garrett* 1049 (**BKF**); Mae Pan Waterfall, Doi Inthanon National Park, 1110 m alt., 8 Jan. 1983, *Koyama et al.* 32100 (**BKF**, **KYO**); Mae Soi Valley, east part, Mae Sai, 425 m alt., 13 Jan. 1990, *Maxwell* 90-74 (**CMU**, **L**); Doi Saket, en route from Chiang Rai to Chiang Mai, along route 1019, 930 m alt., 15 Feb. 1983, *Koyama et al.* 33556 (**BKF**,

**Vernacular name.**—Cha hom (ชาห้อม), pan ngu pa (พันญา), salet phang phon pa (เสลตพัง phonป่า), ta kai muang (ดาวกี้เมือง).

**Notes.**—*Eranthemum tetragonum* has many features in common with *E. ciliatum*, but it has ovate-lanceolate or oblong to linear leaves, attenuate to acuminate apex vs oblong-lanceolate, attenuate or acute at the apex in *E. ciliatum*. The stamens of *E. tetragonum* are included vs exserted in *E. ciliatum*. The original protologue of *E. tetragonum* was based on Wallich 7180 (Nees, 1832). On examination, we found that this collection has two duplicates, each one in GZU and K-W. We selected the sheet K001126832 at K-W as the lectotype because it has more mature leaves and inflorescences. *Eranthemum tetragonum* is distributed in Northern, North-Eastern, Eastern, South-Western, Central, South-Eastern and Peninsular floristic regions (Fig. 3). This species has an Extent of Occurrence (EOO) of 427,531.845 km<sup>2</sup> and an Area of Occupancy (AOO) of 216,000 km<sup>2</sup> and is assessed as the Least Concern (LC) criterion based on the IUCN Red List Categories (IUCN Standards and Petitions Committee, 2022).

Imlay (1939) proposed *E. obovatum* which differed from *E. tetragonum* based on short ovate to ovate-lanceolate leaves, obovate bracts with rounded or short attenuate apex and corolla lobe truncate at apex. The examination of type and non-type material of the *E. obovatum* and *E. tetragonum* showed that the differences between them are so small and unreliable that they are best united. Therefore, *E. obovatum* is regarded as conspecific *E. tetragonum*.

*Eranthemum obovatum* was described based on Kerr's specimens. In the examination of nomenclatural circumscription, we found that this name is illegitimate because it is a later homonym of *E. obovatum* E. Mey. ex Nees (Nees, 1847) according to the guidelines of Art. 53.1 of the ICN Shenzhen Code (Turland *et al.* 2018). Kerr 10126 was cited as type in the protologue of this species and it has two duplicates, each one in BK and BM. We selected the sheet BM000950037 at BM as the lectotype because it has completely mature flowers.

**Vernacular name.**— Nam mok bo wai (ນ້ຳມອກນ່ວຍ).

**Notes.**— *Phaulopsis dorsiflora* is commonly observed in Thailand which is distributed in Northern, North-Eastern, Eastern, South-Western and Peninsular floristic regions (Fig. 4). This species has an Extent of Occurrence (EOO) of 640,248.486 km<sup>2</sup> and an Area of Occupancy (AOO) of 196.000 km<sup>2</sup> and is assessed as the Least Concern (LC) criterion based on the IUCN Red List Categories (IUCN Standards and Petitions Committee, 2022).

### Excluded species

- E. acuminatissimum* Miq. = *Pseuderanthemum graciliflorum* (Nees) Ridl.  
*E. album* Nees = *Pseuderanthemum album* Radlk.  
*E. parishii* C.B. Clarke = *Pseuderanthemum parishii* (T. Anderson) Lindau  
*E. pumilio* C.B. Clarke = *Pseuderanthemum latifolium* (Vahl) B. Hansen  
*E. zollingerianum* Nees = *Pseuderanthemum diversifolium* (Miq.) Radlk.

### ACKNOWLEDGEMENTS

This work was financially supported by the Carlsberg Foundation, Denmark (Grant no. CF14-0245 to H. Balslev). We gratefully thank the directors, curators and staff of AAU, BK, BKF, BM, C, CMU, CMUB, E, G, GZU, K, KKU, KYO, K-W, L, LD, M, P, PSU, QBG and US for their facilities and to Prof. H. Balslev, Aarhus University, Denmark, Dr. K. Chayamarit, Forest Herbarium, Department of National Parks, Wildlife and Plant Conservation, Thailand and Assoc. Prof. Dr. K. Rueangsawang, Ramkhamhaeng University, Thailand for their kind assistance. The authors thank Dr. S. Suddee and T. Kankha for the photographs.
