

Annex 3: Prioritized country profiles

For details on data sources and methodology see the sections on *Gathering information on site designation and management* and *Prioritizing sites for filling gaps in designation and management* in the main report (pages 15-19). This table represents the information available to the compilers in January 2012 following the data gathering process described in the above-mentioned sections of the main report and may not represent the actual situation in absence of update from Range States.

Keys:

Designation:

- Whole: Whole area of IBA covered by appropriate conservation designation (>90%) = 3
Most: Most of IBA covered (including the most critical parts for the trigger species) (50–90%) = 2
Some: Some of IBA covered (10–50%) = 1
Little/unknown: Little/none/unknown of IBA covered (<10%) = 0

Management planning

- Compr. & Appr.: A comprehensive and appropriate management plan exists that aims to maintain or improve the populations of qualifying species = 3
Outdated/Inc: A management plan exists but it is out of date or not comprehensive = 2
Planning begun: No management plan exists but the management planning process has begun = 1
No mgt plan r.: No management planning has been reported (including when status of management planning is unknown) = 0

Conservation action

- Compr. & Eff.: The conservation measures needed for the site are being comprehensively and effectively implemented = 3
Substantive: Substantive conservation measures are being implemented but these are not comprehensive and are limited by resources and capacity = 2
Limited: Some limited conservation initiatives are in place (e.g. action by LCGs) = 1
None/Unknown: Very little or no conservation action is reported (including when status of management actions is unknown) = 0

Response score: expresses the overall level of conservation and management.

- High: reverse response score = 0
Medium: reverse response score = 1
Low: reverse response score = 2
Negligible: reverse response score = 3

Conservation importance score: expresses the relative international importance of the site based on the sum of proportions present of the qualifying populations weighted with their conservation status in Table 1 of the AEW A Action Plan.

Priority for action score: expresses the relative importance of filling gaps in the conservation and management of the site taking into account of the conservation importance of the site and the gaps in conservation and management. To identify gaps see the columns for designation, management planning and conservation action.
0.000 indicates that no gap was reported in designation, management planning and conservation action for the site.
No value indicates that the priority of the site was not assessed in the absence of quantitative information about the conservation importance of the site.
