

Coloplast Product Guide

Ostomy, Continence, Wound and Skin Care
Effective April, 2022

"I did a lot of research during my early diagnosis and it became clear to me that the Coloplast SenSura® Mio Click would be hugely beneficial. On my first vacation after surgery, the SenSura® Mio Click allowed me to swim in the ocean and participate in activities such as snorkeling and kite surfing. I was confident that my urostomy appliance would not let me down or become a problem while away."

Biatain[®] Silicone Non-Border

Designed for high absorption and retention under compression to minimise the risk of leakage and maceration of fragile periwound skin. Can also be cut to fit areas that are difficult to dress, e.g. on the heel or in between toes and fingers. For high absorption and retention under compression. 3DFit Technology minimizes risk of leakage and maceration.

Biatain® Fiber

reddot award 2017
winner

Suitable for highly exuding wounds and locks in exudate and bacteria. Effectively absorbs and retains exudate and bacteria, thereby reducing exudate pooling. HexaLock Technology is the new gelling fiber for all exuding wounds. It effectively absorbs and retains exudate and bacteria, thereby reducing exudate pooling. It also keeps in shape, minimising risk of gap creation and further exudate pooling.

Biatain®

Foam Dressing

Soft and conformable polyurethane foam dressing that effectively absorbs and retains wound exudate. This ensures a balance that is optimal for management of exuding wounds. Available in adhesive and non-adhesive. The adhesive has a hydrocolloid border – for a secure adhesion. This product is also used in high friction and shear areas such as the coccyx.

Brief Statements

Biatain® Family of Dressings

Biatain® dressings are single-use only. See the device manual for detailed information regarding complete instructions, contraindications, warnings, precautions and potential adverse events. For further questions, call Coloplast Canada Corporation at 1-888-880-8605 and/or consult the company website at www.coloplast.ca.

InterDry®

InterDry® is a skin protectant for the management of skin folds and other skin-to-device contact areas. It reduces microbial colonization in the fabric. This single use fabric provides moisture transportation to keep skin dry while the antimicrobial in the fabric reduces odor. The safe use of InterDry fabric during pregnancy, lactation and on children has not been demonstrated. Although many patients benefit from the use of this device, results may vary. See the device labeling for detailed information including the indication, contraindications, warnings, precautions, and potential complications/adverse events. For further questions, call Coloplast Canada Corporation at 1-888-880-8605 and/or consult the company website at www.coloplast.ca.

Peristeen Anal Plug®

The Peristeen Anal Plug is intended as a barrier to faeces in the rectum. The anal plug can be used by people who are faecal incontinent or suffer from involuntary passing of air (flatus). It functions as an effective barrier to faeces in the rectum.

Contraindication: Peristeen Anal Plug must not be used, if you suffer from: hemorrhoids (3rd and 4th degree), and anal stenosis

Caution: This product should not be used without assessment by your health care professional. Contact your health care professional before you use Peristeen Anal Plug for the first time, as professional guidance in the use of the plug is vital. The anal plug should not be used if you are suffering from diarrhoea. If placed in the mouth, the Peristeen Anal Plug will expand and may cause choking. Remove the anal plug when you feel the urge to defecate. If you have no sensation in the rectal area and do not feel the urge to defecate, changing plug at regular intervals is recommended.

The Peristeen Anal Plug must be removed no later than 12 hours after insertion. If you experience difficulties removing the Peristeen Anal Plug, you must contact your health care professional. If you repeatedly experience discomfort when using the Peristeen Anal Plug, stop using it and contact your health care professional. Keep out of reach of children. See the device manual for detailed information regarding instructions, contraindications, warnings, precautions, and potential complications/adverse events or, call Coloplast Canada Corporation at 1-866-293-6349 and/or consult the company website at www.coloplast.ca.

Peristeen®

The Peristeen® Anal Irrigation System is intended to instill water into the colon through a rectal catheter, which incorporates an inflatable balloon, inserted into the rectum to promote evacuation of the contents of the lower colon. The Peristeen Anal Irrigation System is indicated for use by children (3 years - <12 years old), adolescent (12 years - < 18 years old), transitional adolescent (18 - <21 years old) and adult patients with neurogenic bowel dysfunction who suffer from fecal incontinence, chronic constipation, and/or time-consuming bowel management procedures.

Contraindications: Peristeen Anal Irrigation must not be used in the following situations: known obstruction of the large bowel due to strictures or tumors, acute inflammatory bowel disease, diverticulitis, complex diverticular disease, abdominal or anal surgery within the last 3 months, spinal shock phase, and in patients who are pregnant and have not used the system before (if the patient is pregnant and has never used anal irrigation before, they should not start the irrigation procedure during pregnancy).

Warning: Anal irrigation procedure should always be carried out with care. Bowel perforation is an extremely rare, but serious and potentially lethal complication to anal irrigation and will require immediate admission to a hospital, often requiring surgery.

See the device manual for detailed information regarding the procedure, contraindications, warnings, precautions, and potential complications/adverse events. For further information, call Coloplast Canada Corporation at 1-866-293-6349 and/or consult the company website at www.coloplast.ca.

SpeediCath®

SpeediCath® catheters are indicated for use by patients with chronic urine retention and patients with a post void residual volume (PVR) due to neurogenic and non-neurogenic voiding dysfunction. The catheter is inserted into the urethra to reach the bladder allowing urine to drain. There is a separate SpeediCath device intended for either males or females. This is a single-use only product. Patients are to contact their healthcare professional before performing self-catheterization for the first time and follow the instructions carefully. See the device manual for further information or, call Coloplast Canada Corporation at 1-866-293-6349 and/or consult the company website at www.coloplast.ca.

Self-Cath®

Self-Cath® Catheters are intended for use in male, female, and pediatric patients (neonates, infants, children, adolescents, and transitional adolescents) requiring bladder drainage as determined by their physician. The catheter is indicated for those individuals unable to promote a natural urine flow or for those individuals who have a significant volume of residual urine following a natural bladder-voiding episode. Single-use only. See the device manual for detailed information regarding the procedure, contraindications, warnings, precautions, and potential complications/adverse events. For further information, call Coloplast Canada Corporation at 1-866-293-6349 and/or consult the company website at www.coloplast.ca.

Triad™

Triad™ hydrophilic wound dressing is indicated for the local management of pressure and venous stasis ulcers, dermal lesions/injuries, superficial wounds, scrapes, first-and second-degree burns, partial-and full-thickness wounds. Suitable for use on neonates.

Contraindications: Triad™ is contraindicated for third degree burns or infected wounds. See device label for complete information including warnings and precautions. For further questions, call Coloplast Canada Corporation at 1-888-880-8605 and/or consult the company website at www.coloplast.ca.
