University of Guam

University of Guam Marine Laboratory Technical Report 157
February 2014

ACKNOWLEDGEMENTS

I thank Dr. Pat McCarthy (Australian Biological Resource Study, Canberra) for permission to use the taxonomic catalogue of Pacific island lichens.

Dankulu na Saina Ma'åse!

SUMMARY

This is a catalogue of lichens known from the Mariana Islands. The species entries have been extracted from Elix & McCarthy's (2008) *Checklist of Pacific Island Lichens* available online from the Australian Biological Resources Study, Canberra. This online compendium of lichens was by turn a considerable extension of their earlier catalogue of those from the Oceanic Pacific islands (McCarthy & Elix 1998). The catalogue is of the 86 species for which Elix & McCarthy's (2008) give locality records that include Guam (39 spp.) and the Commonwealth of the Northern Mariana Islands (65 spp).

INTRODUCTION

This is a catalogue of lichens known from the Mariana Islands. The species entries have been extracted from Elix & McCarthy's (2008) *Checklist of Pacific Island Lichens* available online from the Australian Biological Resources Study, Canberra (<http://www.environment.gov.au/topics/science-and-research/australian-biological-resources-study>). This online compendium of lichens was by turn a considerable extension of their earlier catalogue of those from the Oceanic Pacific islands (McCarthy & Elix 1998). From their Introduction:

Species and infraspecific taxa, their publication details, synonymy and bibliographic and distributional information are documented for 32 island groups and isolated islands in the Pacific Ocean between latitudes 40°N and 40°S. A total of 291 genera are listed, with 2422 accepted species and infraspecific taxa and 1710 synonyms; 749 of the accepted taxa are based on type specimens from the region (indicated by *). We have not included records from Japan and islands of the Nansei-Shoto Ridge, Taiwan, the Philippines, New Guinea, the Bismarck Archipelago, Bougainville and New Zealand. Checklists [of valid nomina] for each of the island groups [were] added during 2008.

The list in this report is of the 86 species for which Elix & McCarthy's (2008) give locality records that include Guam and the islands of the Commonwealth of the Northern Mariana Islands.

Editing the list

The material reprinted here is copyrighted. Hence, I first requested and received permission from the author of contact, Dr. Pat McCarthy, to extract the Mariana flora from Elix & McCarthy (2008). This was in accordance with The Copyright Act of 1968 of

Australia, which permits 'fair dealing' of copyrighted material in the service of private research and study.

I am not a lichenologist. Hence, I've not made any taxonomic changes nor even updated their listings. I restricted myself to making only editorial changes, primarily reformatting the references to limit them to those parenthetically referenced in the Mariana entries, as well as adding several new references. Also, the format of the entries themselves were changed somewhat, e.g., the locality information was reschuffled (as the authors had originally put in different categories Guam and the names of the northern Mariana Islands), and I fixed a few errors in the references. A few errors in the references remain, as I couldn't track down some of them, their correct page numbers, etc. I also left in the alphabetic qualifiers to the dates of the references, e.g., 1985a and 1985b, even though I may have removed, say, the former because it did not refer to literature about the Marianas.

Each entry begins with the most widely used name, almost invariably the name found at *IndexFungorum* (<http://www.indexfungorum.org/>). Below this is the literature reference to the most recent authority's taxonomic decision. Then comes a list of synonyms (by convention, each preceded by an equal sign). Below this is a fairly complete list of the literature records of the species' records from the Mariana islands. Finally, the authors list the islands in the Marianas from which the species is known.

Botanical naming conventions, including those for the fungi-algal symbioses lichens, are slightly different than for zoological nomenclature. Latin binomials are followed by the name of the taxonomic authority, usually abbreviated, who is the original describer of the species. Following this name may be a literature reference to the original paper. A list for interpreting author abbreviations can also be found at *IndexFungorum*. Alternatively the name is enclosed in parentheses if someone has later placed the species in a different genus, this second authority's name follows, itself followed by a literature reference to this later taxonomic decision.

Discussion

Naturalists in the islands of the Pacific often lack comprehensive or even accurate lists of their study organisms. Even common organisms like fungi and land snails may be only poorly known. Hence, one of the really cool things about lichens is that despite the lack of scientific attention to them in any given island group, many species have very broad distributions, and so wonderful photographs and detailed morphological descriptions of no few of the species listed by Elix & McCarthy (2008) for the Marianas are available online. One of the most useful but by no means only site worth investigating is at, appropriately enough, *Pictures of Tropical Lichens* (<http://www.tropicallichens.net/specieslist.aspx>).

Based on Elix & McCarthy's (2008) this list, there are 89 species distributed in 37 genera known from the Mariana Islands. Table 1 contrasts these numbers with the authors reported numbers of species from the adjacent Micronesian and Ogasawara islands (see Table 1). Mariana species richness compares well with the 82 species known from the adjacent island group to the north, the Ogasawara-Shotō, or Bonin Islands. Kiribati and the Marshall Islands consist of low-lying and small atolls, hence these islands may not hold a rich haul of lichens. However, the vast differences in species richness between the high island groups and the Marianas undoubtedly reflects stark differences in collecting effort, rather than solely differences in true inter-archipelagic diversity.

Table 1. Number of species in the Mariana Islands compared to that in nearby archipelagos based on Exline & McCarthy (2008).

Island group	<i>n</i>
Mariana Islands	86
Kiribati	9
Marshall Islands	9
Federated States of Micronesia	34
Ogasawara-Shotō ("Bonin Is.")	82
Palau	3

Table 2 compares islands within the Mariana archipelago for species richness of lichens. Guam has the most species at 39, while the other 13 main islands of the archipelago collectively sport 65. Nineteen of these species have localities listed only as "northern Mariana Islands". However, none of these small, geologically recent (3—5 my) islands have more than 17 (Alamagan); most have about 12—15 species records. Even the larger, much older geologically (to 40 my), and more southern islands Rota and Saipan, have only seven and 16 species, respectively. Three islands, Agiguan, Farallon de Medinilla, and Tinian have no species reported. Some of these islands may also currently hold fewer species than recorded here because of extreme volcanism since being surveyed, e.g., Anatahan and Pagan.

Nevertheless, the pattern of species richness across the archipelago strongly suggests that the number of species per island has been driven mainly by collecting effort, rather than biogeographic drivers such as land area, island age, or distance from one another and a continental source. As well, the pattern also suggests in turn that the biodiversity of lichens in most of the Mariana Islands is likely to be much higher than reported here. It is hoped that Elix & McCarthy's (2008) list will serve as a basis for future studies of our archipelago's lichens.

Table 2. Number of species (*n*) in the Mariana Islands based on Exline & McCarthy (2008).

Island	Area (km ²)	<i>n</i>
Agiguan	7.1	0
Agrihan	43.5	14
Alamagan	11.1	17
Anatahan	31.2	16
Asuncion	7.3	11
Farallon de Medinilla	0.9	0
Guam	540.5	39
Guguan	3.9	7
Maug	2.1	2
Pagan	47.2	9
Rota	85.4	7
Saipan	115.4	16
Sarigan	5.0	15
Tinian	101.0	0
Uracas	2.6	1
"Northern Marianas"	463.7	19

Appendix 1. Checklist of Lichens from the Mariana Islands ex Elix & McCarthy (2008).

- Agonimia pacifica* (Harada) Diederich
Arthonia cinnabarinina var. *violacea* (Pers.) Nyl.
Bulbothrix goebelii (Zenker) Hale
Calopadia fusca (Müll. Arg.) Vězda
Chiodecton congestulum Nyl.
Chiodecton tentaculatum Vain.
Cladonia humilis (With.) J. R. Laundon
Coccocarpia adnata Arv.
Coccocarpia erythroxyli (Spreng.) Swinscow & Krog
Coccocarpia palmicola (Spreng.) Arv. & D. J. Galloway
Coccocarpia pellita Müll. Arg. emend R. Sant.
Coccocarpia smaragdina Pers. emend. Arv.
Coenogonium leprieurii (Mont.) Nyl.
Coenogonium linkii Ehrenb.
Collema coilocarpum (Müll. Arg.) Zahlbr.
Collema leptaleum Tuck.
Collema leptaleum var. *biliosum* (Mont.) Degel.
Collema rugosum Kremp.
Collema subflaccidum Degel.
Dictyonema membranaceum Arg.
Dirinaria aegialita (Ach.) B. Moore
Dirinaria applanata (Fée) D. D. Awasthi
Dirinaria picta (Sw.) Schaer. ex Clem.
Endocarpon neopallidulum Harada
Endocarpon superpositum Harada
Flavoparmelia caperata (L.) Hale
Glyphis cicatricosa Ach.
Graphis albocolpata M. Nakan. & H. Harada

- Graphis cleistoblephara* Nyl.
- Graphis contexta* (Pers.) Nyl.
- Graphis dicarpoides* M. Nakan. & H. Harada
- Graphis fissurata* M. Nakan. & H. Harada
- Graphis gracilescens* Vain.
- Graphis pandicola* M. Nakan. & H. Harada
- Graphis saipanensis* M. Nakan. & H. Harada
- Graphis subpulicaris* Zahlbr.
- Graphis subserpentina* Nyl.
- Heterodermia albicans* (Pers.) Swinscow & Krog
- Heterodermia dendritica* (Pers.) Poelt
- Heterodermia fragilissima* (Kurok.) J.-C. Wei & J.-M. Jiang
- Heterodermia hypoleuca* (Ach.) Trevis.
- Heterodermia japonica* (Sato) Swinscow & Krog
- Lasioloma arachnoideum* (Kremp.) R. Sant.
- Leptogium azureum* (Sw. ex Ach.) Mont.
- Leptogium cyanescens* (Rabenh.) Körb.
- Leptogium javanicum* Mont.
- Leptogium moluccanum* f. *marianum* (Pers.) Vain.
- Leptogium moluccanum* var. *hypoleia* Vain.
- Mazosia melanophthalma* (Müll. Arg.) R. Sant.
- Melanotrema meiospermum* (Nyl.) A. Frisch
- Melaspilea heterocarpa* (Fée) Müll. Arg.
- Parmeliella mariana* (Fr.) P. M. Jørg. & D. J. Galloway
- Parmeliella stylophora* (Vain.) P. M. Jørg.
- Parmotrema cristiferum* (Taylor) Hale
- Parmotrema pacificum* (Kurok.) Kurok.
- Parmotrema tinctorum* (Despr. ex Nyl.) Hale
- Paulia perforata* (Pers.) Asah.
- Pertusaria velata* (Turner) Nyl.
- Phaeographis planiuscula* (Mont. & Bosch) Müll. Arg.

Phyllopsora furfuracea (Pers.) Zahlbr.
Physcia aipolia (Ehrh. ex Humb.) Fürnr.
Physcia integrata Nyl.
Physma byrsaeum (Ach.) Tuck.
Porina cestrensis (Mich.) Müll. Arg.
Porina coarctata P. M. McCarthy & Harada
Porina mastoidea (Ach.) Müll. Arg.
Porina papuensis P. M. McCarthy
Porina perminuta Vain.
Porina tetracerae (Ach.) Müll. Arg. var. *tetracerae*
Pyrenula flagellata Harada
Pyxine cocoes (Sw.) Nyl.
Ramalina australiensis Nyl.
Ramalina dumeticola Krog & Swinscow
Ramalina leiodea (Nyl.) Nyl.
Ramalina nervulosa (Müll. Arg.) Abbayes
Ramalina pacifica Asah. var. *pacifica*
Ramalina pacifica var. *inacida* G. N. Stevens
Ramalina subfraxinea Nyl.
Relicina connivens (Kurok.) Hale
Relicina relicinula (Müll. Arg.) Hale
Sarcographa labyrinthica (Ach.) Müll. Arg.
Trichothelium assurgens (Cooke) Aptroot & Lücking
Trypethelium ochroleucum (Eschw.) Nyl.
Trypethelium tropicum (Ach.) Müll. Arg.
Trypethelium variolosum (Ach.) Müll. Arg.
Usnea baileyi (Stirt.) Zahlbr.
