

Ohio Lake Erie Shoreline Fish Community Survey

Through the collaboration of the Ohio Division of Wildlife, Ohio Environmental Protection Agency, and the University of Toledo we have been sampling the shoreline fish community from Toledo to Cleveland to investigate the habitat preferences of fish species and to develop long-term monitoring program. With this program we will be able to monitor the changes in the fish community in a continuously changing lake. For further information, please contact us at; Jason.ross2@rockets.utoledo.edu.

Here is the list of species we found near you:

Fish Species

Bigmouth buffalo		Mimic shiner	
Black bullhead		Northern hogsucker	
Black crappie		Northern pike
