

**LABORATORY
EMERGING PATHOGENS INITIATIVE (EPI)
ROLL UP MODIFICATIONS
TECHNICAL AND USER MANUAL**

PATCH LR*5.2*281

Version 5.2

June 2004

Department of Veterans Affairs
VistA Health System Design and Development

Preface

The Veterans Health Information Systems and Architecture (VistA) Laboratory Emerging Pathogens Initiative (EPI) Rollup Modifications Patch LR*5.2*281 Technical and User Manual provides assistance for installing, implementing, and maintaining the EPI software application enhancements.

Intended Audience

The intended audience for this manual includes the following users and functionalities:

- Veterans Health Administration (VHA) facility Information Resource Management (IRM) staff (will be important for installation and implementation of this package)
- Laboratory Information Manager (LIM) (will be important for installation and implementation of this package)
- Representative from the Microbiology section in support of the Emerging Pathogens Initiative (EPI) Rollup enhancements (i.e., director, supervisor, or technologist) (will be important for installation and implementation of this package especially with parameter and etiology determinations; may also have benefit from local functionality)
- Total Quality Improvement/Quality Improvement/Quality Assurance (TQI/QI/QA) staff or persons at the VHA facility with similar function (will be important for implementation of this package given broad-ranging impact on medical centers and cross-cutting responsibilities that extend beyond traditional service lines; may also have benefit from local functionality)
- Infection Control Practitioner (likely to have benefit from local functionality)

NOTE: It is highly recommend that the Office of the Director (00) at each VHA facility designate a person or persons who will be responsible for the routine implementation of this patch (both at the time of this installation and afterwards) and to take the lead in trouble-shooting issues that arise with the routine functioning of the process. This decision is left at the discretion of the director since the functions that persons perform locally may have different titles and meanings. The definitions of installation and implementation are provided below to help the Office of the Director in assigning the responsibility.

The term installation refers to the process of actually integrating the software into the currently existent VistA system locally. This is usually a process that occurs over a short period of time and does not recur. By default, this process is usually accomplished by personnel in IRM.

The term implementation refers to the process of executing the software after installation, adjusting parameters and maintaining the day-to-day functioning of the data cycle that the Laboratory EPI Rollup Modifications entail. There are two main functionalities that will need to be addressed by implementation (national functionality and local functionality). The national functionality will have limited local resource requirements, but will require periodic, on-going attention. Initial parameter set-up will take about 1-2 hours of time with personnel representing the LIM function, microbiology function and IRM function working in concert to set the parameters appropriately. Thereafter, a once-yearly review of the parameter set-up for all national EPI-specified pathogens is the minimum expected. Day-to-day functioning does not refer to the maintenance of the actual software patch, but, instead, refers to the EPI data cycle to assure that the national pathogen information has been appropriately sent to and received by the central data repository—by this definition, it is not necessarily the IRM function to oversee this. Because this will involve review of information sent, confirmation of information receipt, and, most importantly, troubleshooting of errors received from the processing into the central data repository, a local site function that has experience with numerous areas at the local facility from where the data are extracted (medical administrative services, social work, patient demographic information, laboratory information) and that cuts across multiple lines of authority should be considered by the Office of the Director (00) for this task. The local functionality resource requirements will be dependent upon the use at the local site.

Orientation

This section of the EPI Roll Up Modifications Technical and User Manual addresses package or audience-specific notations or directions pertaining to symbols used to indicate terminal dialogues and user responses, information for accessing the EPI Technical and User Manual via the Office of Information Field Offices (OIFOs) Anonymous Software directories, VistA website, VistA Documentation Library (VDL), EPI software phased installation and implementation procedures, instructions for seeding EPI historical data, and Austin Automation Center (AAC) transmission schedule for seeding the EPI historical data.

EPI Roll Up Modifications Technical and User Manual

The EPI Roll Up Modifications Technical and User Manual contains the following sections:

Introduction - conveys the major functions, purposes, and how the software accomplishes the objectives.

Security Information - addresses any legal requirements pertaining to the EPI Patch LR*5.2*281, software product and identifies any security measures necessary to protect the integrity of the product and database.

Pre-Installation Information - contains information that should be acknowledged prior to the installation of Patch LR*5.2*281.

Installation Instructions - provides information regarding the installation process for Patch LR*5.2*281.

Post Installation Instruction - provides all the necessary information required for the IRM and LIM personnel to implement the Laboratory EPI Rollup Modifications software application.

EPI Rollup Modifications User Manual - provides the necessary information for implementing and maintaining the EPI criteria.

Appendix A - provides instructions for editing/printing files, using input screens, linking data, and a Workload and Suffixes Codes Request Form.

Appendix B - suggest helpful hints and examples regarding for EPI preferred methods, transmissions, and data validation suggestions.

Appendix C - provides VistA Health Level Seven (HL7) Protocol tables used to transmit EPI Roll Up Modifications data to the Austin Automation Center (AAC)

Appendix D - provides a copy of the IMPLEMENTATION OF LOGICAL OBSERVATION IDENTIFIERS NAMES AND CODES (LOINC®) FOR LABORATORY DATA (VHA Directive 2001-039)

Screen Dialogue

Screen Captures - The computer dialogue appears in courier font, no larger than 10 points. **Example:** **Courier font 10 points**

User Response - User entry response appears in boldface type Courier font, no larger than 10 points. **Example: Boldface type**

Return Symbol - User response to computer dialogue is followed by the <Enter> symbol that appears in Courier font, no larger than 10 points, and bolded. **Example: <Enter>**

Tab Symbol - User response to computer dialogue is followed by the symbol that appears in Courier font, no larger than 10 points, and bolded. **Example: <Tab>**

References

Please review the following guide and manual prior to installing and implementing the VistA Laboratory EPI Rollup Modifications Patch LR*5.2*281:

EPI Roll Up Modifications Software Phased Installation and Implementation Instructions

Due to extensive historical data transmission requirements and mandated setups required for such, a phased installation and implementation of this patch (LR*5.2*281) is utilized for releasing this patch. The software download information is made available to sites attending one of the following national audio conference training calls:

Tuesday, June 8 at 1:00 - 3:00 PM EST for VISNs 1-2-3-4-5-6

Thursday, June 10 at 3:00 - 5:00 PM EST for VISNs 7-8-9-10-11

Tuesday, June 15 at 4:00 - 6:00 PM EST for VISNs 12-15-16-16-23

Wednesday, June 16 at 2:00 - 4:00 PM EST for VISNs 18-19-20-21-22

Thursday, June 17 at 2:00 - 4:00 PM EST for those unable to attend the other calls.

The VANTS telephone number is 1 800 767-1750 and the access code for all calls is 13143.

This patch will involve reseeding of the EPI databases for each site to allow the new data created by this patch to be captured. It is imperative that each site attend an audio conference prior to installation and implementation of the EPI patch LR*5.2*281.

Instructions for Seeding EPI Historical Data:

EPI historical data **must** be gathered from October 1, 2000 through June 14, 2004. Use the Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option to extract and transmit 6 manual runs (consecutive runs) at a time.

WARNING: SITES - DO NOT transmit the EPI historical data reports on June 16 or July 4, 2004 to avoid Austin Automation Center (AAC) capacity limitations.

Batch #1: October 1, 2000 -March 31, 2001
Batch #2: April 1, 2001 - September 30, 2001
Batch #3: October 1, 2001 - March 31, 2002
Batch #4: April 1, 2002 - September 30, 2002
Batch #5: October 1, 2002 - March 31, 2003
Batch #6: April 1, 2003 - September 30, 2003
Batch #7: October 1, 2003 - March 31, 2004
Batch #8: April 1, 2004 - June 14, 2004

Sites will run 8 batches of EPI historical data reports. Each batch should contain 6 separate monthly extracts which are tasked separately by month, (i.e., OCT 2000, NOV 2000, DEC 2000, JAN 2001, FEB 2001, MAR 2001 = 1 batch) and will generate six separate processing reports back to the station and transmit them over a five week period June 10, 2004 – July 12, 2004. You do not have to wait for one monthly extract to run before starting the next in a batch. You do not have to wait for one batch to complete running before queuing the next batch. If you receive any fatal errors and the monthly extract is rejected, you will need to fix the error and retransmit that month.

Austin Automation Center (AAC) Schedule for Transmitting EPI Historical Data:

WARNING: SITES - DO NOT transmit the EPI historical data reports on June 16 or July 4, 2004 to avoid Austin Automation Center (AAC) capacity limitations.

Sites may transmit EPI historical data reports to AAC on evenings and weekends following this schedule:

1. VISNs with odd numbers are asked to transmit batches on Tuesday & Thursday during the PM hours and Saturdays.
2. VISNs with even numbers are asked to transmit on Monday & Friday during the PM hours and Sundays.

EPI Roll Up Modifications Manual Retrieval

The VistA Laboratory EPI Rollup Modifications Technical and User Manual (i.e., LR_52_281_EPI_TUM.PDF) file is available for retrieval via the File Transfer Protocol (FTP). All VA medical centers are encouraged to use the Transmission Control Protocol/Internet Protocol (TCP/IP) FTP functionality to obtain the documentation file at the following Office of Information Field Offices (OIFOs) ANONYMOUS SOFTWARE directories:

OIFOs	FTP ADDRESS	DIRECTORY
Albany	ftp://fo-albany.med.va.gov	[ANONYMOUS.SOFTWARE]
Hines	ftp://fo-hines.med.va.gov	[ANONYMOUS.SOFTWARE]
Salt Lake City	ftp://fo-slc.med.va.gov	[ANONYMOUS.SOFTWARE]
VistA Download Site	download.vista.med.va.gov	

EPI Roll Up Modifications Manual Formats

VistA Laboratory EPI Rollup Modifications Technical and User Manual is exported as part of Patch LR*52*281 in the following file name and retrieval format:

FILE NAME	RETRIEVAL FORMATS
LR_52_281_EPI_TUM.PDF	LR EPI Technical and User Manual

Website Locations:

The VistA Laboratory EPI Rollup Modifications Patch LR*5.2*281 Technical and User Manual is available in MS Word (i.e., LR_52_281_EPI_TUM.DOC) format and Portable Document Format (PDF) (i.e., LR_52_281_EPI_TUM.PDF) at the following website locations:

Introduction

Overview

The Infectious Diseases Program Office was tasked by the Under Secretary for Health to retrieve tracking and trending information about emerging and re-emerging infectious diseases (including antibiotic resistance) that are important to VHA. Data would be used for tracking and trending of specified infectious diseases entities, policy decision-making, and resource allocation at the national level. To accomplish this, the VistA Laboratory Emerging Pathogens Initiatives (EPI) software was initially installed at all VAMC facilities in February 1997 via VistA EPI Patch LR*5.2*132, with modifications occurring by means of the VistA Laboratory Search/Extract Patch LR*5.2*175 in March 1998. This software was originally developed by the CIOFO-Dallas in conjunction with the Infectious Diseases Program Office. As this proved to be a successful and beneficial endeavor, the Under Secretary for Health further tasked the Infectious Diseases program Office to retrieve Hepatitis C antibody testing data for a one-day survey nationwide, Hepatitis C Surveillance Day (March 17, 1999). The EPI software application was selected to accomplish this task because data were already stored in the standard VistA data set and linked to patient identifiers. Information retrieved from both the routine running of the EPI, as well as Hepatitis C Surveillance Day was an extremely important component that resulted in the VHA obtaining additional Congressional funding for hepatitis C disease care. Information obtained from the EPI assisted in determining the importance of the emerging pathogen, hepatitis C, as a significant issue for VHA. Data from EPI have been used by the Allocation Resource Center (ARC) in determinations for Veterans Equitable Resource Allocation (VERA) hepatitis C resource allocation to local facilities; EPI data are still provided to ARC for this purpose.

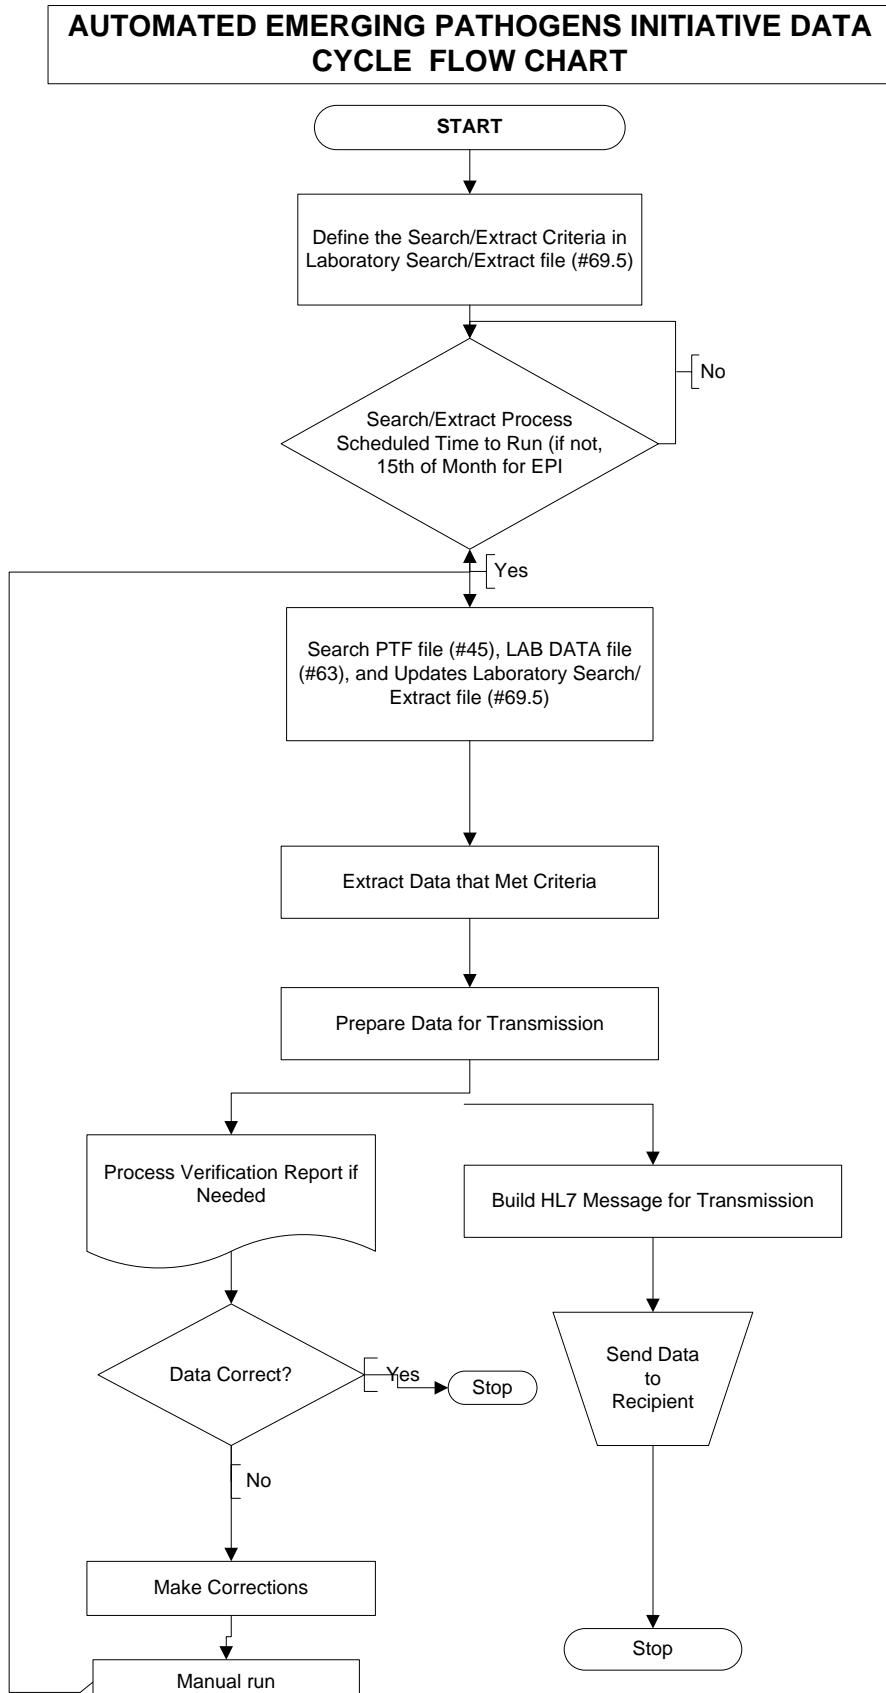

For Hepatitis C Surveillance Day, temporary modifications were necessary to achieve prompt data acquisition. More lasting modifications/enhancements were to occur with the release of the combined process from VistA Laboratory EPI Hepatitis Extract Patch LR*5.2*260, Patch PXRM*1.5*1, PSJ*5*48, and Patch PSO*7*45 in August 2000. However, due to significant pressures and time constraints applied to this project to produce the National Hepatitis C Risk Assessment portion of the requests, the Infectious Diseases Program Office agreed to delay the below-listed components of that approved request until this time; one of the key functionalities that was delayed was the ability of local facilities to use the software to extract locally-relevant data.

Introduction

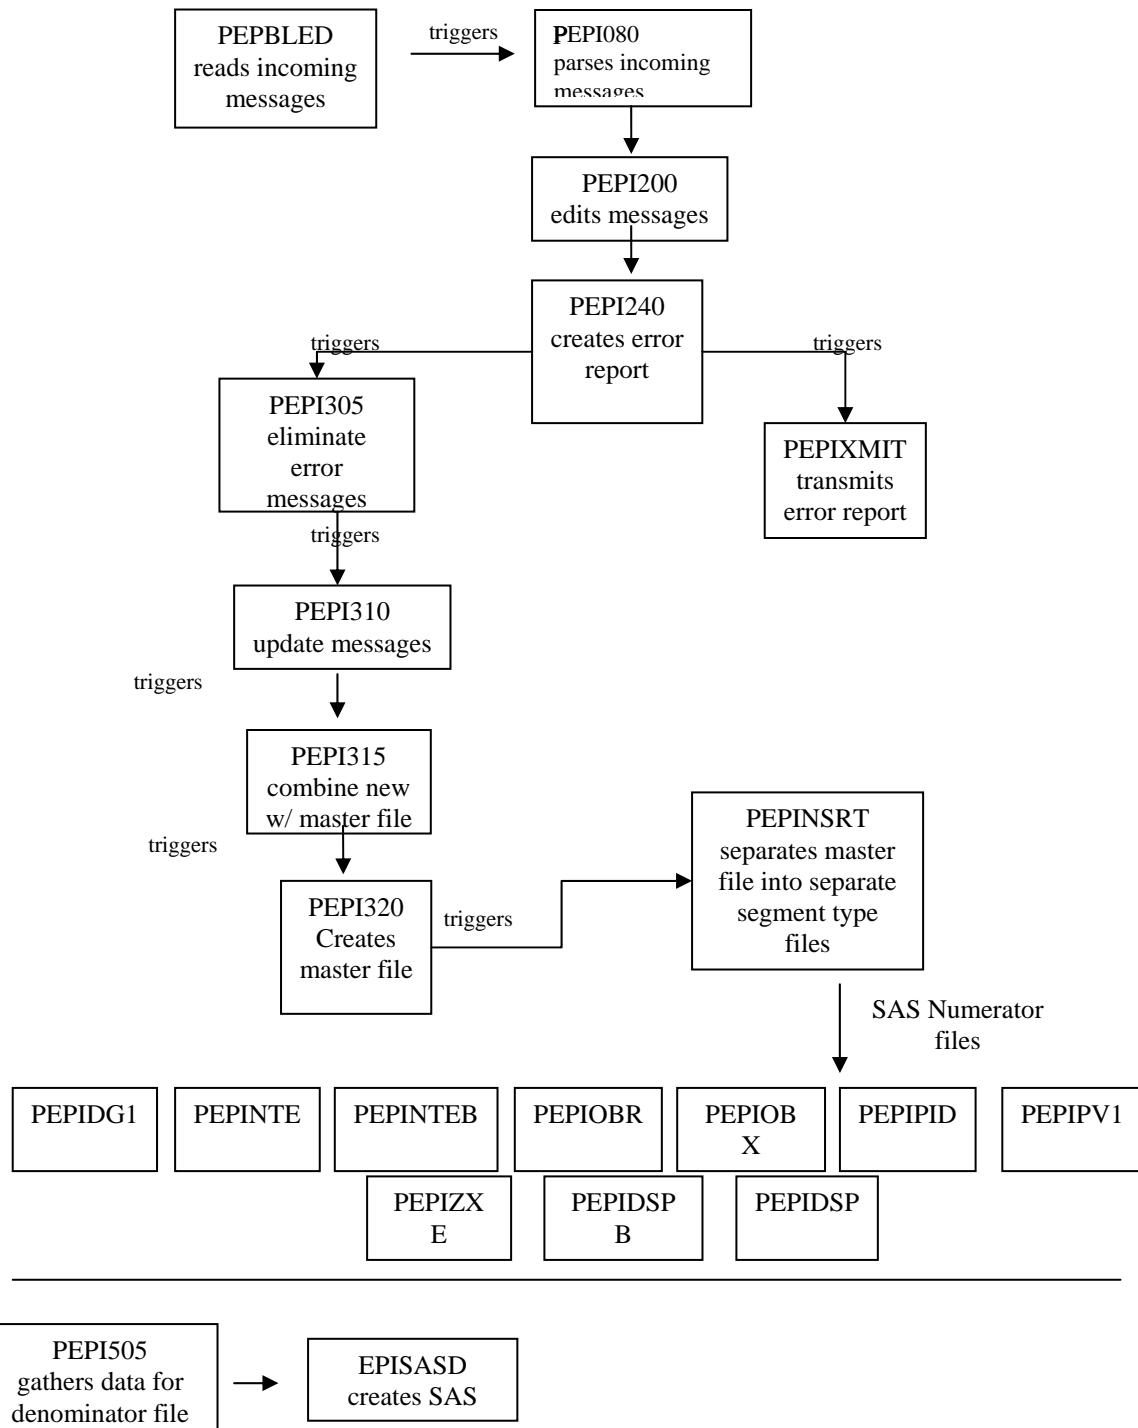

The following delayed enhancement components were requested and have been addressed with the release of VistA Laboratory Emerging Pathogens Rollup Modifications Patch LR*5.2*281 (note that due to systems constraints and set-ups, not all requested components are deliverable with this patch):

- New EPI Summary Verification Report of EPI-extracted data from site in plain text (human-readable) format for nationally rolled-up pathogen information
- New EPI Detailed Verification Report of EPI-extracted data from site in plain text (human-readable) format for nationally rolled-up pathogen information
- New EPI Processing Report (error report) concerning data processed at the central data repository for the EPI delivered to site in plain text (human-readable) format containing only patients with error/warning codes or indicating that the data were processed into the central data repository without any errors
- New Local Pathogen Menu [LREPI LOCAL PATHOGEN MENU]
- New EPI option to add locally-relevant pathogens using the EPI search/extract backbone, without altering nationally rolled-up pathogen information
- Improvement of the extraction tool to capture and report tuberculosis (due to constraints of long incubation periods in the results reporting, embedded within an accessioning acquisition framework of the EPI extracts)
- Ability to capture and report International Classification of Diseases, ICD-9-CM, codes in association with outpatients who have a reported EPI pathogen (system constraints will not allow this requested component to be completed for this release)
- Ability to capture and report Logical Observations, Identifiers, Names and Codes (LOINC) information along with laboratory-based testing information acquired by EPI (system constraints will not allow this requested component to be fully realized for this release; partial realization will occur for CH-subscripted laboratory tests)
- Ability to capture and report Master Patient Index codes for patients identified as meeting an EPI pathogen parameter
- Ability to capture and report antibiotic susceptibility MIC values

- Ability to use antibiotic susceptibility MIC values as an identification parameter for either national or locally-relevant pathogens (system constraints will not allow this requested component to be completed for this release)
- Ability to capture and report actual site/location (institution and division designations) in which the patient actually received care associated with the EPI pathogen trigger for data acquisition (not just the reporting site) in order to accurately assess where the pathogens are occurring (system constraints will not allow this requested component to be completed for this release)
- Ability to capture and report county and state information from patient's identified by the EPI process
- Ability to capture and report the newly implemented race and ethnicity coding, along with the prior race/ethnicity coding
- Ability to capture and report the actual station location (unit) of care for a patient at the time of EPI pathogen data acquisition (this currently only applies to inpatient information and only for information that is CH-subscripted)
- Six new national EPI Emerging Pathogens to be added for national roll-up
- New documentation of the prior Legionella pathogen to provide guidance for use of recently FDA-approved Legionella Urinary Antigen test that can be used for diagnosis

**AUSTIN AUTOMATION CENTER
EMERGING PATHOGENS INITIATIVE PROCESS FLOWCHART**

VistA Blood Bank Software Version 5.2

EFFECT ON BLOOD BANK FUNCTIONAL REQUIREMENTS: Patch LR*5.2*281 does not contain any changes to the VISTA BLOOD BANK Software as defined by VHA DIRECTIVE 99-053 titled VISTA BLOOD BANK SOFTWARE VERSION 5.2.

EFFECT ON BLOOD BANK FUNCTIONAL REQUIREMENTS: Patch LR*5.2*281 does not alter or modify any software design safeguards or safety critical elements functions.

RISK ANALYSIS: Changes made by patch LR*5.2*281 have no effect on Blood Bank software functionality, therefore RISK is none.

VALIDATION REQUIREMENTS BY OPTION: Because of the nature of the changes made, no specific validation requirements exist as a result of installation of this patch.

NOTE: As with previous Lab EPI patches, it is highly recommended that the **Office of the Director** (00) at each facility designate a person or persons to be responsible for the routine implementation of this patch (both at the time of this installation and afterwards) and to take the lead in trouble-shooting issues that arise with the routine functioning of the process

Enhancements and Modifications

VistA Laboratory EPI Rollup Modification patch LR*5.2*281 contain the following software enhancements and modifications:

Enhancements:

Renamed EPI Menu/Options

Lab Search Extract Primary [LREPI SEARCH EXTRACT MENU] menu RENAMED to Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu:

For consistency of this software release, the Lab Search Extract Primary [LREPI SEARCH EXTRACT MENU] menu is **RENAME**D Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu. This is the main EPI menu containing four existing options, two **new** options, and one **new** submenu containing 4 **new** options. This **new** submenu may be assigned to users without the Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu.

Lab Search/Extract Manual Run (Enhanced) [LREPI SEARCH/EXTRACT ENHANCED MANUAL RUN] option RENAMED Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option:

For consistency of this software release, the Lab Search/Extract Manual Run (Enhanced) [LREPI SEARCH/EXTRACT ENHANCED MANUAL RUN] is **RENAME**D Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option. This option is used ONLY to manually extract National EPI data, transmit the manually extracted data to the Austin Automation Center (AAC), and to generate the **new** EPI Summary Verification Report. This **new** EPI Summary Verification Report is automatically sent to the EPI-Report mail group after being generated. This option has been **enhanced** to generate the **new** Detailed Verification Report which can be printed using the **new** Print Detailed Verification Report [LREPI VERIFICATION REPORT] option.

NOTE: ONLY national emerging pathogens extract data are transmitted to the AAC, local emerging pathogens extract data will NOT be transmitted.

Modified Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu options:

Lab EPI Parameter Setup [LREPI (EPI) PARAMETER SETUP] option:

The Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option is used to define the search criteria associated with the National Emerging Pathogen Initiative extract data. This option only allows editing of the EPI Parameter Setup input screens. Local pathogens CANNOT be added using this option. This option has been **enhanced** by adding the **new** PREVIOUS CYCLE field which is automatically defined as '1' for TB ONLY and CANNOT be edit. For all other emerging pathogens the **new** PREVIOUS CYCLE field is blank and CANNOT be EDITED. The existing PROTOCOL field can no longer be EDITED. The ACTIVE: 'YES' has been changed to display INACTIVE: 'NO', and Lag Days for the six new EPIs have been defined as 15 with the release of the new EPI enhancement software.

New Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu options

Print Detailed Verification Report [LREPI VERIFICATION REPORT] option:

This **new** option is use to print the **new** Detailed Verification Report mailman message.

Pathogen Inquiry [LREPI PATHOGEN INQUIRY] option:

This **new** option is used to inquire into the LAB SEARCH/EXTRACT file (#69.5) parameter description fields (i.e., INACTIVE: NO, LAG DAYS: 15, RUN DATE: OCT 07, 2003, CYCLE: MONTHLY, PROTOCOL: LREPI, FOLLOW PTF: YES, REFERENCE NUMBER: 23, and ETIOLOGIES) for defined emerging pathogen.

New Local Pathogen Submenu and Options:

Local Pathogen [LREPI LOCAL PATHOGEN MENU] Submenu:

This **new** submenu contains four **new** options use to enter/edit local pathogens, generate and print local EPI reports and spreadsheets, and delete local pathogens.

Example: New Local Pathogen [LREPI LOCAL PATHOGEN MENU] Menu

Local Pathogen Menu	
ENT	Enter/Edit Local Pathogens
GEN	Lab EPI Generate Local Report/Spreadsheet
PRT	Lab EPI Print Local Report/Spreadsheet
DEL	Delete Local Pathogen
DRS	Delete Local Report or Spreadsheet

Enter/Edit Local Pathogens [LREPI ENTER/EDIT LOCAL PATH] option:

This **new** option is use to enter or edit local pathogens into LAB SEARCH/EXTRACT file (#69.5).

Lab EPI Generate Report/Spreadsheet [LREPI GENERATE REPORT/SP] option:

This **new** option is used to generate Lab EPI reports or spreadsheets for national and local emerging pathogens extract data. After selecting national or local emerging pathogens, time period, segments and fields, report or spreadsheet, the job is automatically tasked. The tasked job will take approximately 2-3 hours to generate. An alert is automatically sent to the requester/user after the tasked job has finished generating. The Lab EPI report or spreadsheet can then be viewed on the screen or printed using the **new** Lab EPI Print Local Report/Spreadsheet [LREPI PRINT] option. **NOTE:** NO data will be transmitted to AAC when using this option.

Lab EPI Print Local Report/Spreadsheet [LREPI PRINT REPORT/SPSHT] option:

This **new** option is used to print a report or spreadsheet that was generated with the Lab EPI Generate Local Report/Spreadsheet [LREPI GENERATE REPORT/SP] option.

Delete Local Pathogen [LREPI DELETE LOCAL PATHOGEN] option

This **new** option is use to delete local pathogens entries ONLY.

NOTE: National emerging pathogens entries CANNOT be deleted.

Delete Local Report or Spreadsheet [LREPI DELETE LOCAL REPORT] option

This **new** option is use to delete local reports or local spreadsheets.

New EPI Reports

New EPI Summary Verification Report of EPI Extracted Data from Site for Nationally Rolled-Up Emerging Pathogens:

The **new** Summary Verification Report of EPI Extracted Data from Site contains the following **new** functionality:

- Automatically sent to EPI-REPORT mail group after EPI extract data transmissions to AAC on the 15th each month
- Displays in a human readable format used for quick reviewing
- Displays reporting site name and station number
- Displays emerging pathogens total number of occurrences during the monthly processing cycle
- Displays emerging pathogens total number of persons with occurrences during the monthly processing cycle
- Displays number of persons with the nationally rolled-up resolutions for the National Hepatitis C Risk Assessment Clinical Reminder that occurred during the monthly processing cycle
- Displays report in several pages
- ENHANCE MANUAL RUN] option (**Note** that each manual run generates HL7 message transmission to the central data repository [AAC])
- Automatically sent to EPI-REPORT mail group after manual generation

New Detailed Verification Report of EPI Extracted Data from Site for Nationally Rolled-Up Emerging Pathogens:

The **new** Detailed Verification Report of EPI Extracted Data from Site' contains the following **new** functionality:

- Displays reporting site station number with Notes and Comment Segments (NTE) findings in a human readable format
- Displays the site reporting NTE findings of 1, 2, 3...23, starting with a new page for each NTE findings.
- Displays listing by emerging pathogens
- Recreation of the report on demand using the Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option
- Recreation of the manually generated EPI extract data is automatically sent to Austin Automation Center.
- Displays Clinical Reminder data transmitted to EPI data stream regarding nationally rolled-up data about Hepatitis C Risk Assessment and associated hepatitis laboratory data.

New EPI Processing/Error Report Mailman Message sent from Austin

The **new** EPI Processing (Error) Report mailman message itemizes all transmissions received by AAC and document the records status as either being accepted or rejected (with the reason and reject code identified). This report will be sent to EPI mail group. (*Examples of the new EPI Processing/Error Report mailman message and “Tables of Rejects and Errors and/or Warning Codes” are located in the Appendix - B section of this manual.*)

New EPI Data Extracted:

Logical Observation, Identifiers, Name, and Codes (LOINC)

EPI Roll up Modifications software provides the ability to automatically extract LOINC data, transmit the data to the AAC, and display the data on the **new** Verification Detailed Report of EPI Extracted Data from Site.

Master Patient Index (MPI)

EPI Roll Up Modifications software provides the ability to automatically extract MPI values and transmit the data to AAC.

Susceptibility Results MIC Values

EPI Roll Up Modifications software provides the ability to automatically extract Susceptibility Results MIC values from the ANTIMICROBIAL SUSCEPTIBILITY file (#62.06), Susceptibility Result field (#.01), Susceptibility Result subfile (#2), and transmit the data to AAC. These MIC values can be displayed via the **new** Verification Detailed Report of EPI Extracted Data from Site.

Site Institution/Division Number

EPI Rollup Modifications software release provides the ability to automatically capture the patient's site division number during an encounter.

Patient Demographics

EPI Roll Up Modifications software release provides the ability to extract patient's demographics county and state data, transmit data to the AAC, and display the demographic data on the **new** Verification Detailed Report of EPI Extracted Data From Site.

Race and Ethnicity

EPI Roll Up modifications software release provide the ability to capture patient's race and ethnicity data using the new race/ethnicity protocols, transmit data to AAC, and display the data on the **new** Verification Detailed Report of EPI Extracted Data from Site.

Six New Emerging Pathogens

EPI Roll-Up Modifications software provides the ability to automatically extract data for the following **six new** emerging pathogens without the necessity of any manual data entry once the parameter descriptions are set up using the Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option:

- All *Staphylococcus aureus* (Reference #18)
- Methicillin-Resistant *Staphylococcus aureus* (MRSA) (Reference #19)
- Vancomycin-Resistant *Staphylococcus aureus* (VRSA) (Reference #20)
- Vancomycin-Resistant Coagulase Negative *Staphylococci/Staph epi* (VRSE) (Reference #21)
- All *Streptococcus pneumoniae* (Reference #22)
- All Enterococci (Reference #23)

New Legionella Urinary Antigen Test

The Legionella Urinary Antigen test is FDA-approved and available clinical use. Suggestions will be provided for updating parameter setups to capture the results of this testing in the already existent Legionella (Reference #7) EPI national pathogen and allow for national roll-up. This newer test **must** be added for LEGIONELLA using the Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option. The preferred Lab EPI parameter setup for etiology for the **newer** Legionella Urinary Antigen test is *POSITIVE FOR LEGIONELLA PNEUMOPHILA*.

New EPI Informational Alert

This alert is created when the new Lab EPI Generate Local Report/Spreadsheet [LREPI GENERATE REPORT/SP] option is accessed. This alert is sent to the user who generated the report or spreadsheet when the report or spreadsheet is finished generating.

Modifications

VistA Laboratory EPI Roll-Up Modification Patch LR*5.2*281 software contains the following modifications:

EPI Single Day Transmissions:

Date handling for start and stop date was **modified** because it created a problem with EPI single day transmissions. It showed the beginning date and time to be 10:00 a.m. yesterday. The end time is (in effect) midnight tonight. This was corrected by creating a beginning time of one tenth of a second after midnight and the end time is the following midnight.

LAB EPI Search Criteria

Currently, some TB cultures are not being captured because it can require up to six weeks for TB cultures to grow and obtain the results. This delay causes the result to be overlooked in the subsequent EPI reporting. A new search criterion has been added to the Lab EPI engine. The LAB SEARCH/EXTRACT file (#69.5), contains the **new** PREVIOUS CYCLE field (# 19), which is a numeric value of 1, automatically set by the EPI software. This **new** field instructs the LAB SEARCH EXTRACT engine to also look for TB pathogen(s) in previous cycles. **Note:** The **new** PREVIOUS CYCLE field (# 19), is used for the automated run (i.e., 15th day of the month) ONLY. This field CANNOT be EDITED.

National Center for Health (NCH) Data Screening No Longer Required:

NCH data screening is no longer required and NCH transmissions to AAC have been terminated. NCH Cholesterol and NCH Pap smear entries has been removed from the Lab EPI Parameter Setup entries.

Deletion of National Center for Health (NCH) Protocol

The LRNCH AAC and LRNCH SEND CLIENT protocols have been deleted since the NCH data screening is no longer required.

Lab EPI Nightly Task [LREPI NIGHTLY TASK] option

The Lab Search/Extract Nightly Task [LREPI SEARCH/EXTRACT NIGHTLY TASK] option is **renamed** to Lab EPI Nightly Task [LREPI NIGHTLY TASK]. This option builds a HL7 message and sends it to the defined location specified in the EPI Protocols. The EPI Nightly Task [LREPI NIGHTLY TASK] option **must** be scheduled to run each night by TaskMan.

Enhancements and Modifications

Austin Automation Center Database Processing

The Austin Automation Center (AAC) serves as the central data repository for the national EPI pathogen data that is rolled-up from sites. AAC creates two file structures, both in Statistical Analysis System (SAS) file format. These two file structures are used as a source of data for the VHA Headquarters Infectious Disease Program Office. The data are available to the VA Central Office Infectious Diseases Program Office to be used for analysis and reporting. The two file structures are referred to as the “Numerator Files” and “Denominator File” because of their planned utilization.

Numerator Files:

The Numerator files contain accumulated data sent by all VHA facilities. The Numerator file information is specific to unique patients with a VA Central Office Infectious Diseases Program Office designated national emerging pathogen. Emerging pathogen data entries are flagged through the *VistA* Laboratory EPI software process. Numerator files data are collected and transmitted to AAC monthly by VHA facilities.

Denominator File:

The Denominator file provides the VHA Headquarters Infectious Diseases Program Office total and unique counts of patients each VHA facility. The individual files that these data elements are extracted from are the National Patient Care (NPC), Inpatient Treatment File (PTF), VHA Work Measurement (VWM), and Cost Distribution Report (CDR) systems.

The data elements are:

- * Unique SSN served (inpatient and outpatient together)
- * Total # of discharges
- * Total unique SSN discharges
- * Inpatient hospital days
- * Inpatient ICU days
- * Unique SSN encounters for both inpatient and outpatient

Unique and total counts are available for the individual months, current month, and previous eleven months for a year's set of totals, current month, and previous three month periods for a quarter's set of totals.

AAC EPI Data Transmission

National emerging Pathogens, as defined by VA Central Office, act as triggers for data acquisition for Patch LR*5.2*281. The software then retrieves relevant, predetermined, and patient-specific data for transmission to the EPI central data repository at the AAC. Once at that location, the data are uploaded into Statistical Analysis System (SAS)-based statistical software accessible files. VA Central Office reports may then be generated for appropriate use and distribution at the national level.

With the installation of patch LR*5.2*281, automated data transmissions will occur. Receipt of this transmission at the AAC queue will trigger a confirmation message back to the originating site to “confirm” that data has been sent. Then at the next processing cycle (~25th of the month), a processing/error report will also be generated and sent back to the originating site. This processing/error report will serve as the definitive “confirmation” that data has been accepted. If there is a fatal error in any segment of the message, the entire message will be rejected and must be resent manually. Warning codes/errors are accepted into the data set, but serve to remind the originating site that a correction of the process generating the error may be needed.

AAC Transmission Reports

EPI Confirmation Mailman Message sent from AAC

An EPI Confirmation mailman message is sent from the AAC upon receipt of the VHA facilities EPI monthly transmission via the EPI mail group. The EPI mail group members are notified that the original EPI HL7 format mailman message data transmission has been received by AAC for processing.

NOTE: This EPI Confirmation mailman message ONLY means that the sending VHA facility data transmission has been received by the AAC for processing.

New EPI Processing (Error) Report Mailman Message from Austin

The **new** EPI Processing Error Report mailman message itemizes all transmissions received by AAC and document the records status as either being accepted or rejected (with the reason and reject code identified). This report will be sent to the EPI mail group. (*Examples of the “Table of Rejects and Errors and/or Warning Codes” are located in the Appendix - B section of this manual*).

Security Information

This section addresses any legal requirements pertaining to the EPI Patch LR*5.2*281, software product and identifies any security measures necessary to protect the integrity of the product and database.

Security Management:

According to VA Directive 6214, the existing Laboratory EPI software meets the requirements for VA IT Security Certification and Accreditation Program. The Lab EPI Enhancement software (LR*5.2*281) does not constitute a major change that requires new risk assessment and re-accreditation of the Laboratory system. Lab EPI security is maintained through menu assignment and VA FileMan protection.

Security Features:

EPI Mail Groups

EPI mail group:

This mail group is used by the VHA facilities to transmit EPI HL7 format mailman messages to AAC and for AAC to transmit EPI Confirmation mailman messages back to the sending VHA facilities once the EPI HL7 format mailman messages data transmission has been received by AAC.

EPI-Report mail group:

This mail group is used to receive the Emerging Pathogens Verification Report and the EPI Processing Report mailman messages sent from AAC. The members of this mail group will assist in the EPI data validation and corrections process.

New EPI Informational Alert

An alert is created by the Lab EPI Generate Local Report/Spreadsheet [LREPI GENERATE REPORT/SP] option. This alert is sent to the user who generated the report or spreadsheet when the report or spreadsheet is finished generating.

Example: Alert Display

```
The local report/spreadsheet finished generating at JAN 23, 2004@18:45:00  
Enter "VA to jump to VIEW ALERTS option
```

Remote Systems

The EPI software retrieves relevant, predetermined patient-specific data for transmission to the Austin Automation Center database repository.

Archiving/Purging

Archiving and Purging utilities are not provided with this software release.

Contingency Planning

Each facility using the VISTA Laboratory EPI software application **must** develop a local contingency plan to be used in the event of application problems in a live environment. The facility contingency plan **must** identify procedures used for maintaining the functionality provided by the software in the event of a system outage.

Interfacing

No specialized (not VA-produced) products (hardware and/or software) are embedded within or required by the EPI software product.

Electronic Signatures

There is no electronic signature utilized in the VistA EPI software application.

Menus

The Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu contains six options. IRM staff assigns the menu to have access to all options and the **new** submenu [Local Pathogen Menu...] that has 4 options. The new [Local Pathogen Menu...] submenu may be assigned independent from the Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu; this will allow only access to the submenu options.

Security Keys

There are no locks or security keys associated with the EPI Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu or options.

File Security

EPI changes and enhancements **do not** modify any existing file security schemes. New files exported by the patch installation have no file security applied. However, VA FileMan security access L1 code is recommended if file security is deemed necessary by the facilities.

References

Please review the following guide and manual prior to installing and implementing the Laboratory EPI Rollup Modifications Patch LR*5.2*281:

- Kernel Systems Manual V. 8.0
- VA FileMan V. 21.0
- VA Mailman V. 7.1

Official Policies

EPI software release reference no official policy unique to the product regarding the modification of software and distribution of the product.

Pre-Installation Information

The following information contain recommendations and requirements that should be acknowledged **prior** to installing the VistA Laboratory EPI Rollup Modifications patch LR*5.2*281.

EPI Phased Installation and Implementation

NOTE: Due to extensive historical data transmission requirements and mandated setups required for such, a phased installation and implementation of this patch will be utilized for release of this patch. The software download information will be made available to sites attending one of the following national audio conference training calls:

Tuesday, June 8 at 1:00 - 3:00 PM EST for VISNs 1-2-3-4-5-6

Thursday, June 10 at 3:00 - 5:00 PM EST for VISNs 7-8-9-10-11

Tuesday, June 15 at 4:00 - 6:00 PM EST for VISNs 12-15-16-16-23

Wednesday, June 16 at 2:00 - 4:00 PM EST for VISNs 18-19-20-21-22

Thursday, June 17 at 2:00 - 4:00 PM EST for those unable to attend the other calls.

The VANTS telephone number is 1 800 767-1750 and the access code for all calls is 13143.

This patch will involve reseeding of the EPI databases for each site to allow the new data created by this patch to be captured. It is imperative each site attend an audio conference prior to installation and implementation of LR*5.2*281.

Intended Audience

IRM Staff:

IRM staff is required for the installation, post installation, assignment of mail groups, and menu options for the EPI Rollup Modifications patch LR*5.2*281.

Laboratory Staff:

It is **highly recommended** that the following person(s) jointly participate in reviewing the national EPI pathogen parameter descriptions and set-ups:

- Laboratory Information Manager (LIM)
- Representative from the Microbiology section for the Emerging Pathogens Initiative (i.e., director, supervisor, or technologist)

Quality Management Staff:

It is **highly recommended** that the following person(s) jointly participate in reviewing the national EPI pathogen parameter descriptions and set-ups:

- Total Quality Improvement/Quality Improvement/Quality Assurance (TQI/QI/QA) staff (or person at the facility with similar function)

Other Staff:

It may also be beneficial to have Infection Control Personnel involved in national EPI pathogen parameter set-ups.

Test Sites:

The VistA Laboratory EPI Rollup Modifications patch LR*5.2*281, has been tested at the following VAMCs:

EPI Test Sites	Operating System
Boston, MA HCS (Beta Test)	ALPHA/Digital Standard Mumps (DSM) Oct 2003 DSM VMS - May 15, 2004
Cincinnati, OH VAMC (Alpha/Beta Test)	OS V7.2-1 – DSM V7.2.1, June 2003
Detroit, MI VAMC (Beta Test)	OS V7.3 – DSM V7.2.1, June 2003
Durham, NC VAMC (Beta Test)	OS V7.2-1 – DSM V7.2.1, March 2003:
Manchester, NH VAMC (Beta Test)	Windows NT 3.2, June 2003
Togus, ME VAMC (Beta Test)	CACHE V7.3 - DSM V7.2.1, October 2003

Hardware and Operating System Requirements:

VistA software operates on two hardware platforms. The hardware platforms are listed in the mini-computer category, which provides multi-tasking and multi-user capabilities. The hardware platforms systems used are:

Digital Equipment Corporation (DEC) Alpha Series:

Digital Equipment Corporation (DEC) Alpha series is using the DEC Open Virtual Memory System (VMS), Version 6.1 or greater, operating system. This platform uses the DEC System Mumps (DSM), Version 6.3 or greater, of American National Standards Institutes (ANSI) of Massachusetts General Hospital Utility Multi-Programming System (MUMPS) also known as ‘M’ language. MUMPS is a Federal Information Processing Standard (FIPS) language.

System Performance Capacity:

There are no significant changes in the performance capacity of the VistA operating system once the Lab EPI Roll Up Modification Enhancement patch LR*5.2*281 is installed. The software application should not create any appreciable global growth or network transmission problems. There are no memory constraints.

Memory Constraints:

Sufficient memory is required by sites to maintain the growth of the EPI globals.

Installation Time:

Installation time for the VistA Laboratory EPI Rollup Modifications patch LR*5.2*281 is less than 2 minutes during off peak hours and less than 5 minutes during peak hours.

Disabling EPI Menus Not Required:

The Lab EPI Primary (LREPI SEARCH EXTRACT MENU) menu and options are NOT required to be disabled during the EPI installation process.

Users on the System:

Users may remain on system during the installation of patch LR*5.2*281 and all options may remain in service.

Backup Routines:

It is highly recommended that a backup of the transport global be performed before installing patch LR*5.2*281.

Namespace:

The VistA Laboratory EPI Rollup Modifications Patch LR*5.2*281, uses the Laboratory's LR namespace.

Software Requirements:

The following software applications are **must** be installed prior to the installation of Laboratory EPI Rollup Modifications patch LR*5.2*281:

Software Applications	Versions (or Greater)
VA FileMan	v. 21 (with patches installed)
Kernel	v. 8.0 (with patches installed)
Laboratory	v.5.2 (with patches installed)
PIMS	v. 5.3 (with patches installed)
HL7	v.1.6 (with patches installed)
Social Work	v.3.0 (with patches installed)
Mailman	v.7.1 (with patches installed)
Clinical Reminder	v.1.5 (with patches installed)

Required Patches:

Prior to the installation of Laboratory EPI Rollup Modifications patch LR*5.2*281, the following patches **MUST** be installed:

Software Applications	Patches
Laboratory V. 5.2	LR*5.2*175
	LR*5.2*242
	LR*5.2*260
Clinical Reminder V. 1.5	PXRM*1.5*1

Health Level Seven (HL7):

Laboratory EPI Rollup Modifications patch LR*5.2*281 uses the VistA HL7 V. 1.6 software application to transmit EPI data to the AAC.

Protocols:

LREPI: This event driver protocol defines the associated parameters required for building HL7 messages that are used to transmit EPI data to the AAC.

LREPI CLIENT: This subscriber protocol defines the parameter required by the HL7 application that determines where to send the HL7 formatted message containing the emerging pathogens data.

Domain

The Q-EPI-MED.GOV domain is used for transmitting EPI data to AAC.

Database Integration Agreements (DBIAs)

The following DBIAs were approved for VistA Laboratory EPI Rollup Modifications patch LR*5.2*281:

1. DBIA #418

Laboratory EPI software has been approved to look at the discharge date x-ref in the PTF file (#45). The EPI software gathers lab data to send to Austin.

```
FILE: 45                                     ROOT: DGPT(
DESCRIPTION:                                     TYPE: File #45 PTF file

^DGPT("ADS",      cross-reference:
      The routine LREPI5 searches a date range for discharge dates in that range
      to gather Lab EPI data to send to Austin.
```

2. DBIA #3018

Laboratory EPI software approved to call the \$\$IN^VAFHLPV1 to create a PV1 segment to send to the Austin Automation Center.

3. DBIA #3094:

AUPNVPOV (PCE PATIENT CARE ENCOUNTER DESCRIPTION: TYPE: File V POV diagnoses are used as a finding in Clinical Reminders. Therefore, Clinical Reminders needs to read the following fields:

```

FILE: 21	ROOT: DIC(21		
DESCRIPTION:	TYPE: File		

LAB EPI software does a direct read of the global \$P(^DIC(21,D0,0),U,3) and a direct global read of the "D" cross reference ^DIC(21,"D") The software gathers EPI data for transmission to Austin.

GLOBAL REFERENCE:
^DIC(21

Data Dictionary Changes

The following data dictionary changes are required for the EPI Roll-Up Modifications Patch LR*5.2*281 software release:

LAB SEARCH/EXTRACT file (#69.5)

This file contains search criteria used by the Laboratory EPI software. This file should ONLY be edited using the EPI Parameter Setup [LREPI PARAMETER SETUP] option provided with this software. This file contains the following changes:

Modified Fields:

NAME field (#69.5,.01)

The Search/Extract parameter name is converted to upper case and stored in the “D” x-ref for easier lookup (i.e., enter a Name (3 to 30 characters) for the Search/Extract parameter you are defining).

69.5,.01	NAME	0;1 FREE TEXT (Required)
	INPUT TRANSFORM:	K:\$L(X)>30!(\$L(X)<3)!'(X'?1P.E)!('X'?.ANP) X
	LAST EDITED:	MAR 16, 2004
	HELP-PROMPT:	Enter a Name (3 to 30 characters) for the Search/Extract parameter you are defining.
	DESCRIPTION:	This is the name of the Search/Extract parameter you are defining.
	NOTES:	XXXX--CAN'T BE ALTERED EXCEPT BY PROGRAMMER
	CROSS-REFERENCE:	69.5^B 1)= S ^LAB(69.5,"B",\$E(X,1,30),DA)="" 2)= K ^LAB(69.5,"B",\$E(X,1,30),DA)
	CROSS-REFERENCE:	69.5^D^MUMPS 1)= D UP^LRXREF S ^LAB(69.5,"D",X,DA)="" 2)= D UP^LRXREF K ^LAB(69.5,"D",X,DA) The name is converted to upper case and stored in the "D" x-ref for easier lookup. ^LAB(69.5,"D",UPPERCASE NAME, IEN)

This field has also been **modified** to add the following 6 **new** emerging pathogens entries:

- All *Staphylococcus aureus* (Reference #18)
- Methicillin-Resistant *Staphylococcus aureus* (MRSA) (Reference #19)
- Vancomycin-Resistant *Staphylococcus aureus* (VRSA) (Reference #20)
- Vancomycin-Resistant Coagulase Negative *Staphylococci/Staph* epi (VRSE) (Reference #21)
- All *Streptococcus pneumoniae* (Reference #22)
- All *Enterococci* (Reference #23)

INACTIVE field (#69.5,1)

This field has been renamed from ACTIVE to INACTIVE.

Example: 69.5,1 INACTIVE 0;2 SET

 '1' FOR YES;
 '0' FOR NO;

LAST EDITED: JUN 19, 2002

HELP-PROMPT: '1' or 'YES' indicates that this is an
 inactive entry. '0' or 'NO' indicates that
 this is an active entry.

DESCRIPTION: This defines if this entry is active or not.

PROTOCOL field (#69.55,12):

This field defines the protocol associated with the parameters. This field has been **changed** to UNEDITABLE.

Example: 69.5,12 PROTOCOL 0;7 POINTER TO LAB
SEARCH/EXTRACT PROTOCOL
FILE (#69.4)

LAST EDITED: NOV 06, 2003
HELP-PROMPT: Select the Protocol to be used to define the output messages.
DESCRIPTION: This defines what protocol is associated with the parameters.

UNEDITABLE

NEW Fields:PREVIOUS CYCLE field (69.5,19)

This **new** field is defined as a numeric field, (type a number between 1 and 99). By entering a number here the Lab search engine knows to look at a previous cycle for updates to data. How far back it looks is based on the cycle and number entered. For example if the cycle is monthly and the previous cycle is 1, then the search engine will also search 1 month back for data. This **new** field is UNEDITABLE.

Example: 69.5,19 PREVIOUS CYCLE 0;13 NUMBER

INPUT TRANSFORM:	K:+X'=X! (X>99)! (X<1)! (X?.E1"."1.N) X
LAST EDITED:	SEP 09, 2003
HELP-PROMPT:	Type a number between 1 and 99.
DESCRIPTION:	By entering a number here the Lab search engine knows to look at a previous cycle for updates to data. How far back it looks is based on the cycle and number entered. For example if the cycle is monthly and the previous cycle is 1 then the search engine will also search 1 month back for data.
UNEDITABLE	

INDICATOR field (#69.55,1):

NOTE: The **new** INDICATOR field (#69.55,1) located under ANTIMICROBIL SUSCEPTIBILITY sub-field (#69.55) is NOT being used in this release of the EPI software.

This **new** INDICATOR field (#69.55,1) is defined as a SET of CODES. Select the code that will determine how to match lab results. This indicates if the search for the lab test is conditional.

Example:

69.55,1 INDICATOR 0;2 SET

'1'	FOR Use Reference Ranges;
'2'	FOR Contains;
'3'	FOR Greater Than;
'4'	FOR Less Than;
'5'	FOR Equal To;
LAST EDITED:	MAR 24, 2004
HELP-PROMPT:	Select the code that will determine how to match lab results.
DESCRIPTION:	This indicates if the search for the lab test is conditional.

INDICATED VALUE field (#69.55,2):

NOTE: The new INDICATED VALUE field (#69.55,2) located under ANTIMICROBIL SUSCEPTIBILITY sub-field (#69.55) is NOT being used in this release of the EPI software.

The new INDICATED VALUE field (#69.55,2) is defined as FREE TEXT. When the search indicator is used then use this field to define the criteria. Answer must be 1-30 characters in length.

Example:

```
69.55,2      INDICATED VALUE      0;3 FREE TEXT
              INPUT TRANSFORM: K:$L(X)>30!($L(X)<1) X
              LAST EDITED: MAR 24, 2004
              HELP-PROMPT: Enter the data to be compared using the
                           INDICATOR field.
              DESCRIPTION: If the search is conditional this defines the
                           criteria.
```

PROTOCOL file (#101)

Modified Field

Processing Routine field (#771):

Entry in the Processing Routine field (#771) for the Protocol LREPI CLIENT was changed from PROCESS^LREPIRP to a NULL entry.

NOTE: In the LAB SEARCH/EXTRACT file (#69.5), the PROTOCOL field (#101) and PREVIOUS CYCLE field (69.5, 19) has been changed to be UNEDITABLE.

Routine Summary

Example: Checksum

The following routines are included in this patch. The second line of each of these routines now looks like:
<tab> ;;5.2;LAB SERVICE;<patchlist>;Sep 27, 1994

Routine Name	Checksum Before Patch	Checksum After Patch	Patch List
LR281	N/A	4418686	281 (Deleted by KIDS)
LREPI	14217525	14182167	132,175,260,281
LREPI1	10654552	11822436	132,157,175,260,281
LREPI2	7199135	8491199	132,157,175,242,260,281
LREPI2A	NEW	7574864	281

LREPIRP9	NEW	4718	281
LREPIRS	NEW	8576522	281
LREPIRS1	NEW	16664999	281
LREPIRS2	NEW	22133542	281
LREPIRS3	NEW	16290972	281
LREPISRV	12552990	15211664	260,281
LREPISV1	NEW	4805594	281

Installation Instructions

VistA Laboratory EPI Rollup Modifications patch LR*5.2*281 uses the Kernel Installation and Distribution System (KIDS). For further instructions on using KIDS, please refer to the Kernel V. 8.0 Systems Manual.

The install time for this patch is less than 2 minutes. This patch can be installed when Laboratory users are on the system.

NOTE: Kernel patches **must** be current on the target system to avoid problems loading and/or installing this patch.

1. If any of the above routines are mapped, disable mapping for them.
2. Use the 'Load a Distribution' option to load the Host file onto your system.
3. The patch has now been loaded into a Transport global on your system. You now need to use KIDS to install the transport global.
4. On the 'Kernel Installation & Distribution System' Menu (KIDS), select the 'Installation' menu.
5. Use the 'Verify Checksum in Transport Global' option and verify that all routines have the correct checksums.
6. On the KIDS menu, under the 'Installation' menu, use the following options:

Print Transport Global
Compare Transport Global to Current System
Backup a Transport Global

If you wish to preserve a copy of the routines exported in this patch prior to installation, you should use the 'Backup a Transport Global' option at this time. You may also compare the routines in your production account to the routines in the patch by using the 'Compare a Transport Global to Current System' option.

Installation Instructions

7. Use the 'Install Package(s)' option under the 'Installation' menu and select the package 'LR*5.2*281'.

If prompted ' Want KIDS to Rebuild Menu Trees Upon Completion of Install? YES// choose 'NO'.

If prompted ' Want KIDS to INHIBIT LOGONs during the install? YES// ' choose 'NO'.

If prompted 'Want to DISABLE Scheduled Options, Menu Options, and Protocols? YES//', choose 'NO'.

8. On a mapped system, rebuild your map set.

9. Routine LR281 will be deleted after successful patch installation.

Installation Example:

```
Select Kernel Installation & Distribution System Option: INSTallation<Enter>

Select Installation Option: 6 Install Package(s)<Enter>
Select INSTALL NAME: LR*5.2*281 <Enter> Loaded from Distribution
5/24/04@14:18:24 => LR*5.2*281

This Distribution was loaded on May 24, 2004@14:18:24 with header of
LR*5.2*281
It consisted of the following Install(s):
LR*5.2*281
Checking Install for Package LR*5.2*281
Will first run the Environment Check Routine, LR281

--- Environment Check is Ok ---

Install Questions for LR*5.2*281

Incoming Files:

69.5 LAB SEARCH/EXTRACT (including data)
Note: You already have the 'LAB SEARCH/EXTRACT' File.
I will MERGE your data with mine.

Want KIDS to Rebuild Menu Trees Upon Completion of Install? YES// NO<Enter>

Want KIDS to INHIBIT LOGONs during the install? YES// NO<Enter>
Want to DISABLE Scheduled Options, Menu Options, and Protocols? YES// NO<Enter>

Enter the Device you want to print the Install messages.
You can queue the install by enter a 'Q' at the device prompt.
Enter a '^' to abort the install.

DEVICE: HOME//<Enter> UCX/TELNET

Post Installation and Implementation Instructions

The following post installation and implementation instructions **must** be completed to ensure a successful performance of the EPI Roll up Modification software enhancements:

IRM Post Installation Instructions:

IRM - Step 1: Verify Lower Level Protocol of the HL7 V. 1.6 background job for EPI – LAB

Example: How to verify that the Lower Level Protocol of the HL7 V. 1.6 background job EPI – LAB is running.

```
Select HL7 Main Menu Option: ?<Enter>

    Event monitoring menu ...
    Systems Link Monitor
    Filer and Link Management Options ...
    Message Management Options ...
    Interface Developer Options ...
    Site Parameter Edit

Enter ?? for more options, ??? for brief descriptions, ?OPTION for help text.

Select HL7 Main Menu Option: FILER and Link Management Options<Enter>

Select Filer and Link Management Options Option: ?<Enter>

    SM      Systems Link Monitor
    FM      Monitor, Start, Stop Filers
    LM      TCP Link Manager Start/Stop
    SA      Stop All Messaging Background Processes
    RA      Restart/Start All Links and Filers
    DF      Default Filers Startup
    SL      Start/Stop Links
    PI      Ping (TCP Only)
    ED      Link Edit
    ER      Link Errors ...

Enter ?? for more options, ??? for brief descriptions, ?OPTION for help text.
```

Post Installation and Implementation Instructions

Select HL7 Main Menu Option: **FILER and Link Management Options<Enter>**

Select Filer and Link Management Options Option: **START/Stop Links<Enter>**

This option is used to launch the lower level protocol for the appropriate device. Please select the node with which you want to communicate

Select HL LOGICAL LINK NODE: **EPI-LAB<Enter>**

The LLP was last shutdown on JUL 14, 2000 08:52:58.

Select one of the following:

F	FOREGROUND
B	BACKGROUND
Q	QUIT

Method for running the receiver: **B// ACKGROUND**
Job was queued as 130212.

IRM - Step 2: Verify Lab EPI Nightly Task [LREPI NIGHTLY TASK] Option Nightly Run

The Lab EPI Nightly Task [LREPI NIGHTLY TASK] option **must** be scheduled to run nightly. This option will build HL7 messages and send them to the defined locations specified by the LREPI protocol.

Example: How to schedule the Lab EPI Nightly Task [LREPI NIGHTLY TASK] option to run nightly.

```
Select Systems Manager Menu
```

```
Core Applications ...
Device Management ...
FM VA FileMan ...
Manage Mailman ...
Menu Management ...
Programmer Options ...
Operations Management ...
Spool Management ...
Information Security Officer Menu ...
Taskman Management ...
User Management ...
Application Utilities ...
Capacity Management ...
HL7 Main Menu ...
```

```
You have 89 new messages. (Last arrival: 03/17/04@15:30)
```

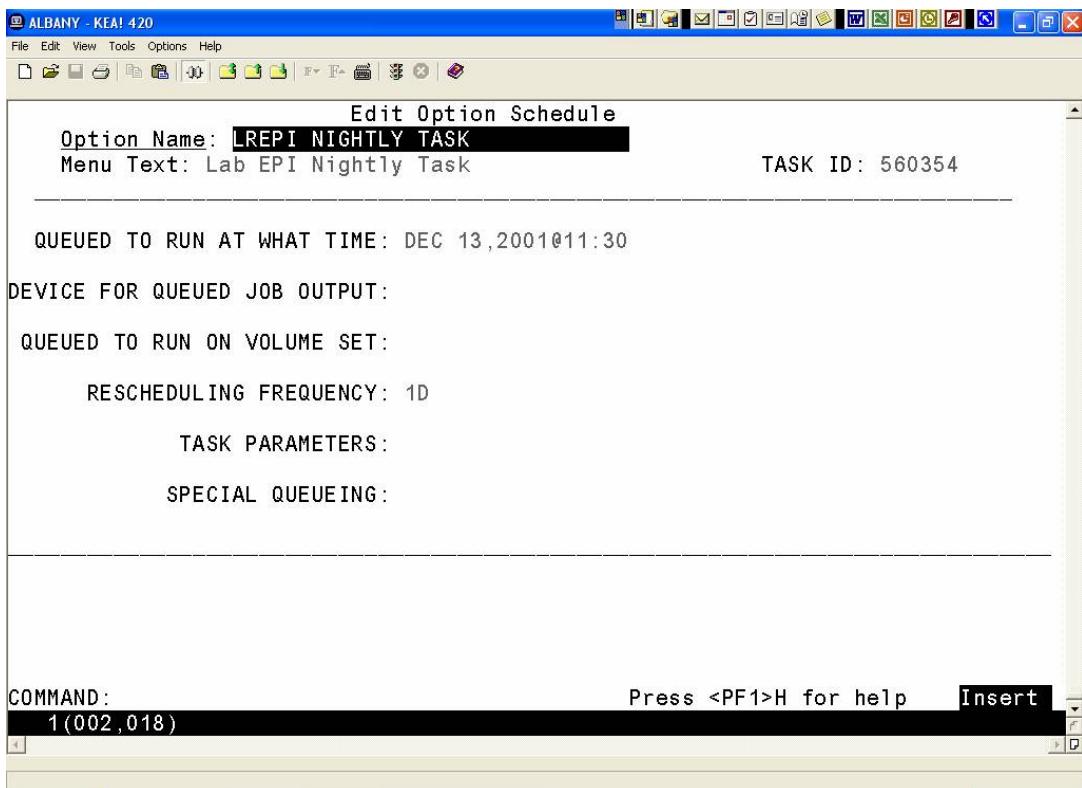

```
Select Systems Manager Menu Option: TASKman Management<Enter>
```

```
Schedule/Unschedule Options
One-time Option Queue
Taskman Management Utilities ...
List Tasks
Dequeue Tasks
Requeue Tasks
Delete Tasks
Print Options that are Scheduled to run
Cleanup Task List
Print Options Recommended for Queueing
```

```
Select Taskman Management Option: SCHEDULE/UnscheduleOptions<Enter>
```

```
Select OPTION to schedule or reschedule: LREPI NIGHTLY TASK<Enter>
```

Example: How to schedule the Lab EPI Nightly Task [LREPI NIGHTLY TASK] option to run nightly *continued.*

IRM - Step 3: Verify EPI mail group setup entries

This mail group is used by VHA facilities to transmit EPI HL7 format mailman messages to Austin Automation Center (AAC) and for AAC to transmit EPI Confirmation mailman messages back to the sending VHA facilities once the EPI HL7 format mailman messages data transmission has been received by AAC. The **Office of Director (00)**-designated staff for EPI process implementation should be assigned to this mail group and kept current as personnel assume this responsibility. This/these staff member(s) is/are responsible for that the monthly EPI process has run and generated the appropriately formatted HL7 messages that are transmitted to the AAC. Receipt of the HL7 message series by this mail group is a means of ascertaining that this process has occurred. Installation of this patch provides opportunity to review this EPI mail group and update as needed.

NOTE: It is highly recommended that the **Office of the Director (00)** at each facility initially designate the member(s) responsible for overseeing the EPI mail group data.

Example: How to verify existing EPI mail group setup entries

```
OUTPUT FROM WHAT FILE: LAB EPI// MAIL GROUP<Enter>
                                         (1441 entries)
Select MAIL GROUP NAME: EPI<Enter>
ANOTHER ONE:<Enter>
STANDARD CAPTIONED OUTPUT? Yes//<Enter> (Yes)
Include COMPUTED fields: (N/Y/R/B): NO//<Enter> - No record number (IEN), no
Computed Fields

NAME: EPI                               TYPE: public
ALLOW SELF ENROLLMENT?: NO               REFERENCE COUNT: 8499
LAST REFERENCED: AUG 15, 2000           RESTRICTIONS: UNRESTRICTED
MEMBER: EPI, USER
```

DESCRIPTION: This mail group is used to deliver a formatted report taken from the HL7 message that is created to assist in the verification of data.

IRM Step 4: Verify EPI-REPORT mail group setup entries

This mail group **receives** the **new** EPI Summary Verification Report that is automatically generated on the 15th day of each month at each VHA facility. The **Office of Director (00)**-designated staff for EPI process implementation should be assigned to this mail group and kept current as personnel assume this responsibility. Other members of this mail group should be personnel who can assist the Office of Director-designated staff validate that the data contained in the **new** EPI Summary Verification Report accurately reflect what has occurred at the facility during the prior month. If the data do not accurately reflect facility activity regarding the national EPI Pathogens, corrections should be undertaken and coordinated by the Office of Director-designated staff; once the corrections are made, it is the responsibility of this designated staff to re-transmit the EPI data to the AAC using the Lab EPI Manual Run (Enhanced) option. Other personnel at the site may have interest in this summary overview of occurrences at the local site and should be permitted to join this mail group—these personnel may include the Infection Control Practitioners, Infectious Diseases physicians, hospital epidemiologists and Quality Managers. Installation of this patch provides opportunity to review this EPI-REPORT mail group and update as needed.

Example: How to verify EPI-REPORT mail group setup entries

```
OUTPUT FROM WHAT FILE: LAB EPI// MAIL GROUP<Enter>
                                         (1441 entries)
Select MAIL GROUP NAME: EPI-REPORT<Enter>
ANOTHER ONE:<Enter>
STANDARD CAPTIONED OUTPUT? Yes//<Enter> (Yes)
Include COMPUTED fields: (N/Y/R/B): NO//<Enter> - No record number (IEN), no
Computed Fields

NAME: EPI-REPORT                               TYPE: public
      ALLOW SELF ENROLLMENT?: NO                REFERENCE COUNT: 8499
      LAST REFERENCED: AUG 15, 2000             RESTRICTIONS: UNRESTRICTED
MEMBER: EPI, USER

DESCRIPTION: This mail group is used to deliver a formatted report taken from the HL7 message that is
created to assist in the verification of data.
```

IRM Step 5: Verify XXX@Q-EPI.MED.VA.GOV Remote Member Entries

Verify designated remote members entries in the MAIL GROUP file (#3.8), MEMBERS - REMOTE field (#12), for the EPI mail group.

Example: How to verify EPI mail groups remote member [XXX@Q-EPI.MED.VA.GOV](#) entries:

```
Select VA FileMan 22.0

Select OPTION: 1<Enter>ENTER OR EDIT FILE ENTRIES

INPUT TO WHAT FILE: MAIL GROUP//<Enter>
EDIT WHICH FIELD: ALL// MEMBERS - REMOTE      (multiple)
                  EDIT WHICH MEMBERS - REMOTE SUB-FIELD: ALL//<Enter>
THEN EDIT FIELD:<Enter>

Select MAIL GROUP NAME: EPI<Enter>
1   EPI
2   EPI-REPORT
CHOOSE 1-2: 1 EPI<Enter>
Select REMOTE MEMBER: S.HL V16 SERVER@DEV// XXX@Q-EPI.MED.VA.GOV<Enter>
Are you adding 'XXX@Q-EPI.MED.VA.GOV' as a new REMOTE MEMBER (the2ND
for this MAIL GROUP)? No// Y<Enter> (Yes)
```

IRM Step 6: Verify Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu assignment to all designated users

NOTE: The **Office of Director (00)**-designated staff for EPI process implementation should be assigned to the EPI mail group and kept current as personnel assume this responsibility. It is highly recommended that the Laboratory Information Manager (LIM), a representative from the Microbiology section (director, supervisor, or technologist) and a Total Quality Improvement/Quality Improvement/Quality Assurance (TQI/QI/QA) staff (or person at the facility with similar function) also be assigned the Lab EPI Primary Menu [LREPI SEARCH EXTRACT MENU]. These will be the individual(s) responsible for initially setting the national Lab EPI parameters descriptions and doing periodic reviews of the parameters descriptions to assure they are current.

Example: Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu

Lab EPI Primary Menu

ENH	Lab EPI Manual Run (Enhanced)
VR	Print Detailed Verification Report
LO	Local Pathogen Menu ...
PI	Pathogen Inquiry
UP	Lab EPI Parameter Setup
	Lab EPI Protocol Edit
LK	Antimicrobial Link Update

Example: Local Pathogen [LREPI LOCAL PATHOGEN MENU] Menu

ENT...	Enter/Edit Local Pathogens
GEN	Lab EPI Generate Local Report/Spreadsheet
PRT	Lab EPI Print Local Report/Spreadsheet
DEL	Delete Local Pathogen
DRS	Delete Local Report or Spreadsheet

NOTE: Assignment of the Local Pathogen [LREPI Local Pathogen Menu] submenu is automatic with assignment of the Lab EPI Primary Menu. However, this submenu may be assigned independent of the primary menu; this independent assignment allows only access to the local pathogen menu functions. This provides one way of limiting access to functionality to only those personnel truly needing access and preventing personnel from inadvertently changing national EPI pathogen parameters.

LIM Implementation Instructions

The following implementation instructions **must** be completed to achieve a successful performance of the EPI Roll up Modification software enhancements:

NOTE: It is highly recommended that the Laboratory Information Manager (LIM), a representative from the Microbiology section (director, supervisor, or technologist) and a Total Quality Improvement/Quality Improvement/Quality Assurance (TQI/QI/QA) staff (or person at the facility with similar function) be assigned the Lab EPI Primary Menu [LREPI SEARCH EXTRACT MENU]. These will be the individual(s) responsible for initially setting the national Lab EPI parameters descriptions and doing periodic reviews of the parameters descriptions to assure they are current.

LIM - Step 1: Review new EPI Descriptions and Input Screens Examples

Review the following 6 **new** emerging pathogens descriptions and input screens examples **prior** to setting up the Lab EPI parameters. Also review the exiting Legionella (Reference #7) pathogen regarding descriptions and input screen examples to capture the Legionella Urinary Antigen) (*i.e., Descriptions and input screens examples are located in the EPI Roll-Up Modifications User Manual ‘Use of the Software’ section of this manual*):

- All *Staphylococcus aureus* (Reference #18)
- Methicillin-Resistant *Staphylococcus aureus* (MRSA) (Reference #19)
- Vancomycin-Resistant *Staphylococcus aureus* (VRSA) (Reference #20)
- Vancomycin-Resistant Coagulase Negative *Staphylococci/Staph epi* (VRSE) (Reference #21)
- All *Streptococcus pneumoniae* (Reference #22)
- All *Enterococci* (Reference #23)

LIM - Step 2: Setup new EPI Parameter Descriptions

Use the Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option to setup the **6 new** emerging pathogens parameter descriptions (i.e., as specified by the VAHQ Infectious Disease Program Office). (*See the EPI Roll Up Modifications User Manual section of this manual for examples on setting up the six new EPI parameters.*)

NOTE: Take this opportunity to perform the expected annual review of the already existing EPI parameter set-ups for the other 17 pathogens to assure that they are up-to-date and correct. Should there be corrections that need to be made, they should be made at this time with the following exception: the 4 hepatitis pathogens (Hepatitis C Antibody Positive, Hepatitis C Antibody Negative, Hepatitis A Antibody Positive and Hepatitis B Positive) are tightly integrated with the Clinical Reminder data stream that the EPI national roll-up accomplishes (see combined products VistA Laboratory EPI Hepatitis Extract Patch LR*5.2*260, PXRM*1.5*1, PSJ*5*48 and Patch PSO*7*45) and changes in the EPI parameters may need to have concomitant changes in the Clinical Reminder data being passed over to the EPI national roll-up—concurrent review (and changes, if necessary), should be undertaken in conjunction with the local Clinical Applications Coordinator for the Clinical Reminder package to assure that appropriate mapping of Health factors to the national pathogens has occurred.

NOTE: LAG DAYS **must** be set at **15** for all EPI-defined pathogens, including the **6 new** EPI.

LIM - Step 3: Link the Logical Observations, Identifiers, Names, and Codes (LOINC)

For instructions on linking LOINC please refer to the following web site to obtain a copy of the VistA NLT Mapping to LOINC Technical, Installation, and User Guide.

<http://www.va.gov/vdl/Clinical.asp?appID=119>

Office of Director (00) Designated Staff Implementation Instructions:

The following implementation instructions **must** be completed to achieve a successful performance of the EPI Roll up Modification software enhancements:

NOTE: It is highly recommended that the Laboratory Information Manager (LIM), a representative from the Microbiology section (director, supervisor, or technologist), and a Total Quality Improvement/Quality Improvement/Quality Assurance (TQI/QI/QA) staff (or person at the facility with similar function) be assigned the Lab EPI Primary Menu [LREPI SEARCH EXTRACT MENU]. These will be the individual(s) responsible for initially setting the national Lab EPI parameters descriptions and doing periodic reviews of the parameters descriptions to assure they are current.

(00) Designated Staff - Step 1: Review new EPI Descriptions and Input Screens Examples

Review the following 6 **new** emerging pathogens descriptions and input screens examples **prior** to setting up the Lab EPI parameters. Also review the exiting Legionella (Reference #7) pathogen regarding descriptions and input screen examples to capture the Legionella Urinary Antigen) (*i.e., Descriptions and input screens examples are located in the EPI Roll Up Modifications User Manual ‘Use of the Software’ section of this manual*):

- All *Staphylococcus aureus* (Reference #18)
- Methicillin-Resistant *Staphylococcus aureus* (MRSA) (Reference #19)
- Vancomycin-Resistant *Staphylococcus aureus* (VRSA) (Reference #20)
- Vancomycin-Resistant Coagulase Negative *Staphylococci/Staph epi* (VRSE) (Reference #21)
- All *Streptococcus pneumoniae* (Reference #22)
- All *Enterococci* (Reference #23)

(00) Designated Staff - Step 2: Setup new EPI Parameter Descriptions

Use the Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option to setup the 6 **new** emerging pathogens parameter descriptions (i.e., as specified by the VAHQ Infectious Disease Program Office). (*See the EPI Roll Up Modifications User Manual section of this manual for examples on setting up the 6 new EPI parameters.*)

NOTE: Take this opportunity to perform the expected annual review of the already existing EPI parameter set-ups for the other 17 pathogens to assure that they are up-to-date and correct. Should there be corrections that need to be made, they should be made at this time with the following exception: the 4 hepatitis pathogens (Hepatitis C Antibody Positive, Hepatitis C Antibody Negative, Hepatitis A Antibody Positive and Hepatitis B Positive) are tightly integrated with the Clinical Reminder data stream that the EPI national roll-up accomplishes (see combined products VistA Laboratory EPI Hepatitis Extract Patch LR*5.2*260, PXRM*1.5*1, PSJ*5*48 and Patch PSO*7*45) and changes in the EPI parameters may need to have concomitant changes in the Clinical Reminder data being passed over to the EPI national roll-up—concurrent review (and changes, if necessary), should be undertaken in conjunction with the local Clinical Applications Coordinator for the Clinical Reminder package to assure that appropriate mapping of Health factors to the national pathogens has occurred.

NOTE: LAG DAYS **must** be set at **15** for all EPI-defined pathogens, including the 6 **new** EPI.

Instructions for Seeding EPI Historical Data:

EPI historical data **must** be gathered from October 1, 2000 through June 14, 2004. Use the Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option to extract and transmit 6 manual runs (consecutive runs) at a time.

WARNING: SITES - DO NOT transmit the EPI historical data reports on June 16 or July 4, 2004 to avoid Austin Automation Center (AAC) capacity limitations.

Batch #1: October 1, 2000 -March 31, 2001
Batch #2: April 1, 2001 - September 30, 2001
Batch #3: October 1, 2001 - March 31, 2002
Batch #4: April 1, 2002 - September 30, 2002
Batch #5: October 1, 2002 - March 31, 2003
Batch #6: April 1, 2003 - September 30, 2003
Batch #7: October 1, 2003 - March 31, 2004
Batch #8: April 1, 2004 - June 14, 2004

Sites will run 8 batches of EPI historical data reports. Each batch should contain 6 separate monthly extracts which are tasked separately by month, (i.e., OCT 2000, NOV 2000, DEC 2000, JAN 2001, FEB 2001, MAR 2001 = 1 batch) and will generate six separate processing reports back to the station and transmit them over a five week period June 10, 2004 – July 12, 2004. You do not have to wait for one monthly extract to run before starting the next in a batch. You do not have to wait for one batch to complete running before queuing the next batch. If you receive any fatal errors and the monthly extract is rejected, you will need to fix the error and retransmit that month.

Austin Automation Center (AAC) Schedule for Transmitting EPI Historical Data:

WARNING: SITES - DO NOT transmit the EPI historical data reports on June 16 or July 4, 2004 to avoid Austin Automation Center (AAC) capacity limitations.

Sites may transmit EPI historical data reports to AAC on evenings and weekends following this schedule:

1. VISNs with odd numbers are asked to transmit batches on Tuesday & Thursday during the PM hours and Saturdays.
2. VISNs with even numbers are asked to transmit on Monday & Friday during the PM hours and Sundays.

Post Installation and Implementation Instructions

VistA LABORATORY EPI ROLLUP MODIFICATIONS USER MANUAL

Use of the Software

VistA Laboratory Emerging Pathogens Initiative (EPI) Rollup Modifications User Manual (Patch LR*5.2*281) section provides all the necessary information, instructions, illustrations, and examples required for the EPI coordinators, Laboratory personnel, and other users to implement and maintain the 23 emerging pathogens parameter descriptions:

NOTE: It is **highly recommended** that the following person(s) jointly participate in the review and parameter descriptions setup process for the 23 EPI descriptions at the time of this installation and at least once annually thereafter:

- Laboratory Information Manager (LIM)
- Total Quality Improvement/Quality Improvement/Quality Assurance (TQI/QI/QA) staff (e.g., or person at the facility with similar function)
- Representative from the Microbiology (i.e., director, supervisor, or technologist)

EPI Review Requirements:

The 23 emerging pathogens will require an ongoing review process (i.e., as specified by the VA Central Office Infectious Disease Program Office). The expected minimum for review is once annually. The person(s) participating in the ongoing review process is(are) responsible for ensuring the following requirements are kept current.

- Periodic reviews of the ICDM-9 codes.
- Periodic reviews of the Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option for the defined EPI parameter description setups.

NOTE: Remember that if the parameter set up needs to be changed for any of the four hepatitis entities, that a concomitant change needs to be made in the corresponding Reminder logic.

- Annual review of the national EPI pathogen descriptions (i.e., as specified by the VA Central Office Infectious Disease Program Office).

NOTE: To request additional LOINC, Workload, and Suffixes codes access the VistA Laboratory website, National Lab Tests (NLT) Documentation Set and LOINC Request Forms link:

<http://vista.med.va.gov/ClinicalSpecialties/lab/>

Six New Emerging Pathogens:

The EPI Roll-Up Modifications software release exports the following 6 **new** Emerging Pathogens Initiative and parameter descriptions:

1. All *Staphylococcus aureus* (Reference #18)
2. Methicillin - resistant *Staphylococcus aureus* (MRSA) (Reference #19)
3. Vancomycin-Resistant *Staphylococcus aureus* (VRSA) (Reference #20)
4. Vancomycin-Resistant Coagulase Negative *Staphylococci/Staph* epi (VRSE) (Reference #21)
5. All *Streptococcus pneumoniae* (Reference #22)
6. All Enterococci (Reference #23)

New Legionella Urinary Antigen Test:

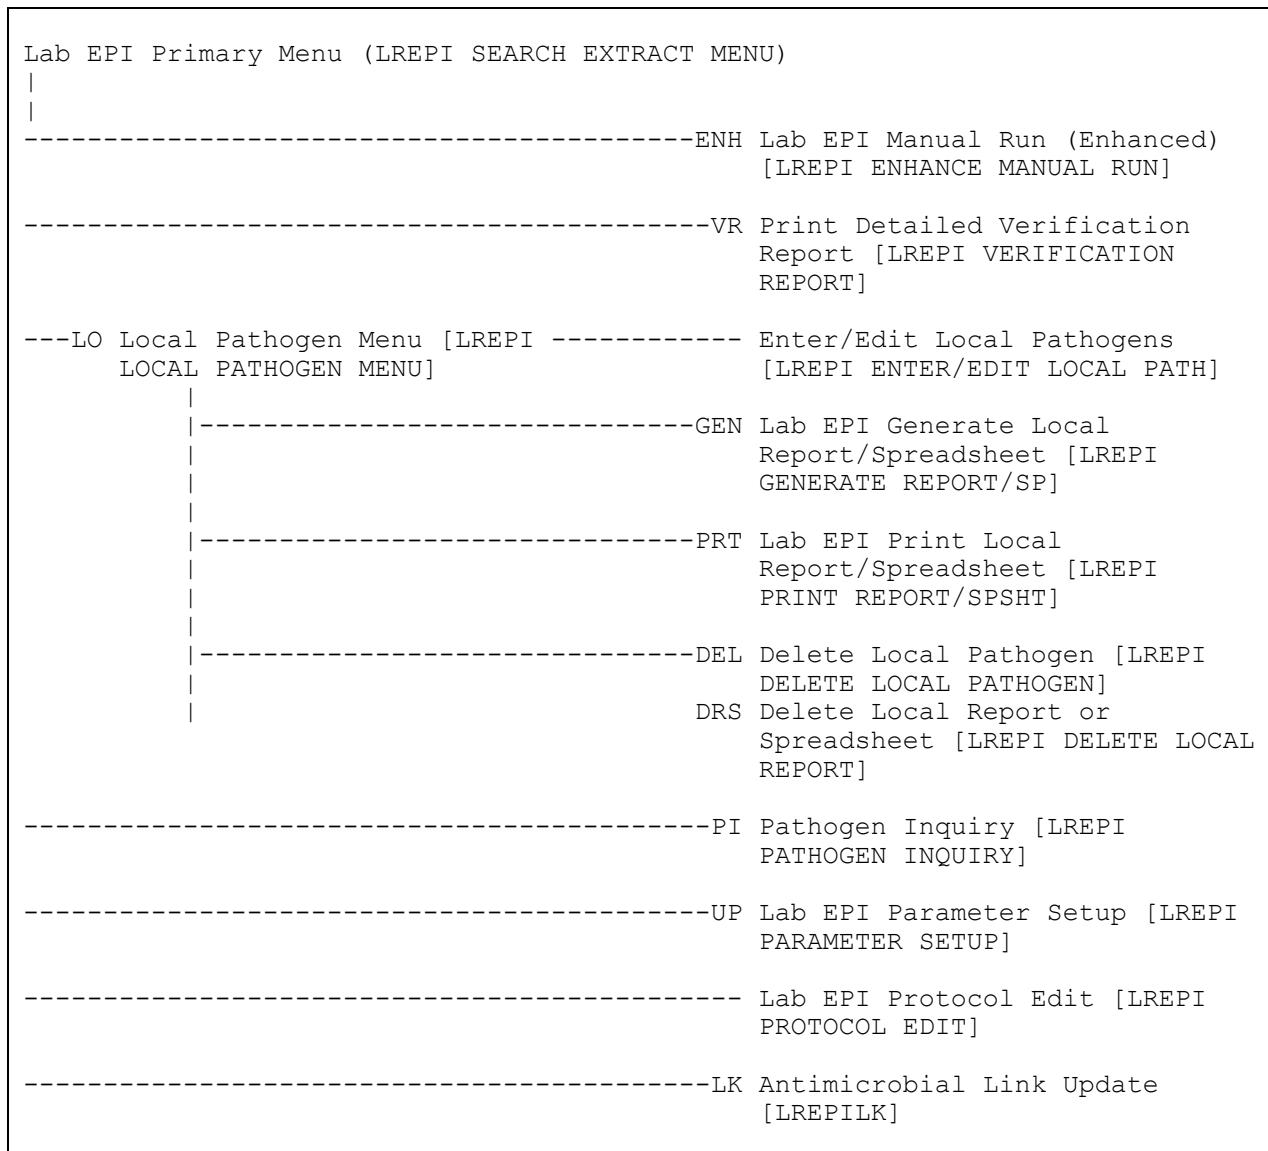

The **new** Food and Drug Administration (FDA)-approved Legionella Urinary Antigen test may be added to the existing Legionella pathogen criteria.

New Local Pathogen [LREPI LOCAL PATHOGEN MENU] Menu

The **new** submenu contains four **new** options use to enter/edit local pathogens, generate and print local EPI reports and spreadsheets, and delete local pathogens

Lab EPI Primary (LREPI SEARCH EXTRACT MENU) Menu Diagram

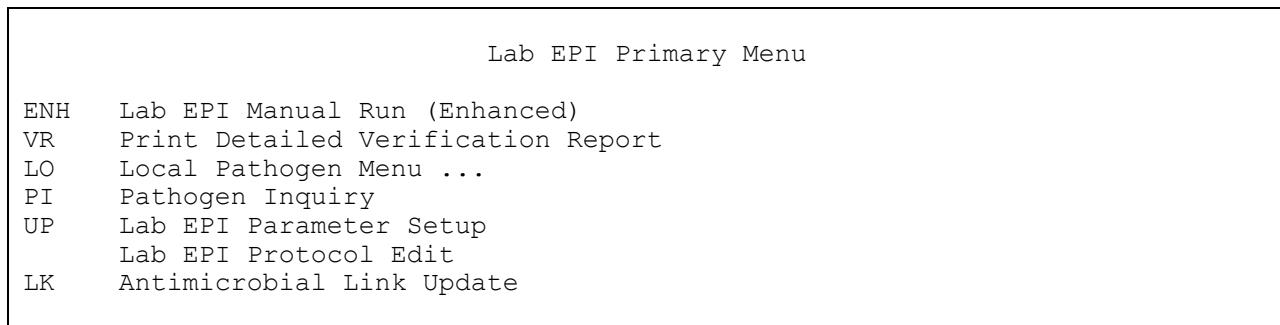

Example: Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu diagram

Lab EPI Primary [LREPI SEARCH EXTRACT MENU] Menu

For consistency of this software release, the Lab Search Extract Primary [LREPI SEARCH EXTRACT MENU] menu is **RENAMED** Lab EPI Primary [LREPI SEARCH EXTRACT MENU] menu. This is the main EPI menu containing four existing options, two **new** options, and one **new** submenu containing four **new** options.

Example: Lab Search Extract Primary [LREPI SEARCH EXTRACT MENU] menu screen

Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option:

This option is used ONLY to manually extract National EPI data, transmit manually extracted data to the Austin Automation Center (AAC), and to generate the **new** EPI Summary Verification Report. The **new** EPI Summary Verification Report is automatically sent to the EPI-Report mail group after being generated. This option has been **enhanced** to generate the **new** Detailed Verification Report which can be printed using the **new** Print Detailed Verification Report [LREPI VERIFICATION REPORT] option.

NOTES:

ONLY national emerging pathogens extract data are transmitted to the AAC, local pathogens extract data will NOT be transmitted.

Lab EPI Transmissions to AAC after 6:00 p.m. are processed the next day.

DO NOT use the Lab EPI Manual Run (Enhanced) [LREPI ENHANCED MANUAL RUN] option to transmit EPI data on Wednesdays of PAY ROLL weeks. These transmissions may cause a delay in processing PAY ROLL data.

Example: How to use the Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option.

NOTES:

In the following Laboratory Search rerun option example 'Override Any Inactive indicators: ? NO//?' prompt requires a YES or NO answer. However, ALL National Emerging Pathogens are automatically set by the EPI software as ACTIVE, so either answer is correct.
THIS PROMPT WILL BE REMOVED IN A FUTURE PATCH.

At the 'Select Search Date' prompt choose the month/date/year that you wish to manually re-submit and press ENTER. At this point you should get a message regarding queuing of the task that will run at the queued time.

Laboratory Search rerun option

```
Select Protocol: LREPI <Enter>    EMERGING PATHOGEN    Emerging Pathogens  
Initiative (EPI)  
Override Any Inactive indicators: ? NO//<Enter>  
Include All Search Parameters? YES// <Enter>  
Select Search Date: 1/15/04 <Enter>  
Requested Start Time: NOW// <Enter> (JAN 27, 2004@12:08:10)
```

The Task has been queued
Task # 54381

Print Detailed Verification Report [LREPI VERIFICATION REPORT] option:

This **new** option is use to print the **new** Detailed Verification Report.

Example: How to use the Print Detailed Verification Report [LREPI VERIFICATION REPORT] option

```

Lab EPI Generate Local Report/Spreadsheet [LREPI GENERATE REPORT/SP] option:

This **new** option is used to generate Lab EPI reports or spreadsheets for national and local emerging pathogens extract data. After selecting national or local emerging pathogens, time period, segments and fields, report or spreadsheet, the job is automatically tasked. The tasked job will take approximately 2-3 hours to generate. An alert is automatically sent to the requester/user after the tasked job has finished generating. The Lab EPI report or spreadsheet can then be viewed on the screen or printed using the **new** Lab EPI Print Local Report/Spreadsheet [LREPI PRINT] option.

NOTE: NO data will be transmitted to AAC when using this option. (*See the EPI Roll Up Modifications User Manual Appendix-A section of this manual for the local Report/Spreadsheet field definitions*).

Example: How to use the **new** Lab EPI Generate Local Report/Spreadsheet [LREPI GENERATE REORT/SP] option to **GENERATE** a local **REPORT**.

NOTE: In the following Lab EPI Generate Local Report/Spreadsheet [LREPI GENERATE REORT/SP] option, the prompt 'Include All Pathogens?' when answered "YES" will generate ALL NATIONAL and LOCAL Pathogens.

Select Lab EPI Primary Menu Option: **1o** Local Pathogen Menu<**ENTER**>

8-Abnormal Flags
9-Verified Date/Time

Enter a list or range of numbers (1-9): **1,3,6,9<ENTER>**

DOCUMENT TITLE: **Sam+Ella 1995 thru 2003<ENTER>**

Requested Start Time: NOW//<ENTER> (MAR 08, 2004@10:39:54)

The Task has been queued
Task # 75028

Example: How to use the **new** Lab EPI Generate Report/Spreadsheet [LREPI GENERATE REORT/SP] option to **GENERATE** a local **SPREADSHEET**.

NOTE: In the following Lab EPI Generate Local Report/Spreadsheet [LREPI GENERATE REORT/SP] option, a 'YES' response at the 'Include All Pathogens? NO//' prompt will include ALL NATIONAL and LOCAL Pathogens.

```
ENT      Enter/Edit Local Pathogens
GEN      Lab EPI Generate Local Report/Spreadsheet
PRT      Lab EPI Print Local Report/Spreadsheet
DEL      Delete Local Pathogen
DRS      Delete Local Report or Spreadsheet
```

Select Local Pathogen Menu Option: **gen** Lab EPI Generate Local Report/Spreadsheet<**ENTER**>

Laboratory Generate Local Report/Spreadsheet option
Include All Pathogens? NO//<**ENTER**>
Include All Local Pathogens? NO//<**ENTER**>

```
Select Pathogens: S<ENTER>
  1  STREPTOCOCCUS GROUP A
  2  Salmonella539
CHOOSE 1-2: 2 Salmonella539<ENTER>
Select Pathogens: <ENTER>
Select Start Date: 1/1/1995<ENTER>
Select End Date: 12/31/2003<ENTER>
```

Select one of the following:<**ENTER**>

```
  1      REPORT
  2      SPREADSHEET
```

Enter response: **2** SPREADSHEET<**ENTER**>

Choose the segments to capture for spreadsheet.
1-PID
2-PV1
3-DG1
4-DSP
5-NTE
6-OBR
7-OBX
Enter a list or range of numbers (1-7): **1,2,6,7**<**ENTER**>

Choose the fields from the PID segment to capture for spreadsheet.

1-Set Id
2-SSN
3-MPI
4-Patient Name
5-Date of Birth
6-Sex
7-Race
8-Homeless
9-State
10-Zip Code
11-County
12-Ethnicity
13-Period of Service

Enter a list or range of numbers (1-13): **1,2,4<ENTER>**

Choose the fields from the PV1 segment to capture for spreadsheet..

1-Set Id
2-Patient Class
3-Hospital Location
4-Discharge Disposition
5-Facility
6-Admit Date/Time
7-Discharge Date/Time

Enter a list or range of numbers (1-7): **1,2,3,5<ENTER>**

Choose the fields from the OBR segment to capture for spreadsheet.

1-Set Id
2-Test Name
3-Accession Date
4-Specimen
5-Accession Number

Enter a list or range of numbers (1-5): **1,2,3,4<ENTER>**

Choose the fields from the OBX segment to capture for spreadsheet.

1-Set Id
2-Value Type
3-Test Name
4-LOINC Code
5-LOINC Name
6-Test Result
7-Units
8-Abnormal Flags
9-Verified Date/Time

Enter a list or range of numbers (1-9): **1,3,6,9<ENTER>**

DOCUMENT TITLE: **Sam+Ella 1995 thru 2003<ENTER>**

Requested Start Time: NOW//<ENTER> (MAR 08, 2004@10:41:29)

The Task has been queued

Task # 75030

Lab EPI Print Local Report/Spreadsheet [LREPI PRINT] option:

This **new** option is used to PRINT a report or spreadsheet which has been generated using the **new** Lab EPI Generate Local Report/Spreadsheet [LREPI GENERATE REPORT/SP] option.

Example: How to use the **new** Lab EPI Print Local Report/Spreadsheet [LREPI PRINT] option to **PRINT** a local **REPORT**.

```
Select Lab EPI Primary Menu Option: lo Local Pathogen Menu<ENTER>
```

ENT	Enter/Edit Local Pathogens
GEN	Lab EPI Generate Local Report/Spreadsheet
PRT	Lab EPI Print Local Report/Spreadsheet
DEL	Delete Local Pathogen
DRS	Delete Local Report or Spreadsheet

```
Select Local Pathogen Menu Option: prt Lab EPI Print Local Report/Spreadsheet<ENTER>
```

Print Local Report/Spreadsheet Option

Select one of the following:

1	REPORT
2	SPREADSHEET

Which one do you wish to print: **1** REPORT<ENTER>

1 JAN 14, 2004@14:50:29	Locl EPI 1-09 thru 12-02
2 JAN 14, 2004@15:02:02	Cipro Res 1995 thru 2002
3 JAN 14, 2004@20:38:46	Histoplasma Jan 90 - Dec 99
4 JAN 14, 2004@20:40:58	CiprResPseud 1-99 - 12-02
5 JAN 14, 2004@20:43:25	Mfortuitum 01-85 - 12-02
6 JAN 24, 2004@15:08:06	TEST REPORT
7 FEB 4, 2004@20:56:48	Gonorrhea report
8 FEB 9, 2004@11:15:52	Influenza A 1995 thru 2003
9 FEB 11, 2004@13:51:27	Flu A 1995 thru 2003
10 FEB 15, 2004@14:33:30	HCV Genotyping
11 FEB 26, 2004@23:52:09	HCV RNA Jan 96 thru Dec 02
12 MAR 8, 2004@10:37:31	Sam+Ella 1995 thru 2003

Choose the number for the report you wish to print: (1-12): **12**<ENTER>

This report will contain Confidential Information.

Do you wish to continue/proceed? NO// **y** YES<ENTER>

DEVICE: HOME//<ENTER> WAN

How to ENTER local SPREADSHEET captures to a TEXT FILE or EXCEL spreadsheet software:

1. Start the KEA Emulator. From the menu bar, click on the “Tools” menu, and select the “Capture Incoming Data” command.

NOTE: Other emulators will have similar menu options that will provide the same functionality.

Example: KEA emulator setup for screen capture.

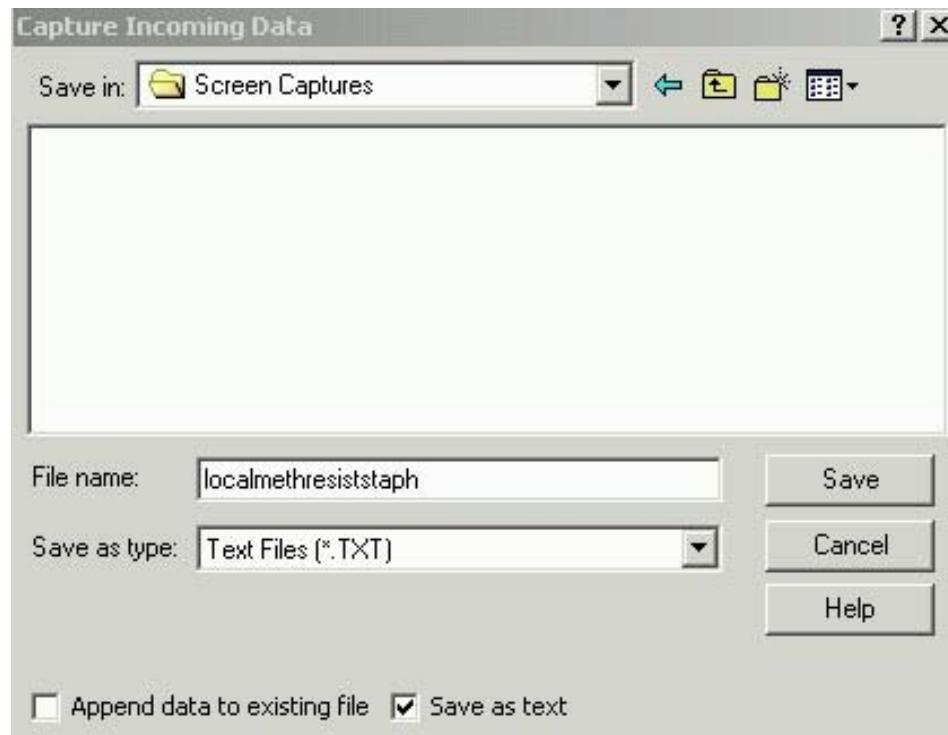

Use of the Software

How to **ENTER** local SPREADSHEET captures to a TEXT FILE or EXCEL spreadsheet software continued.

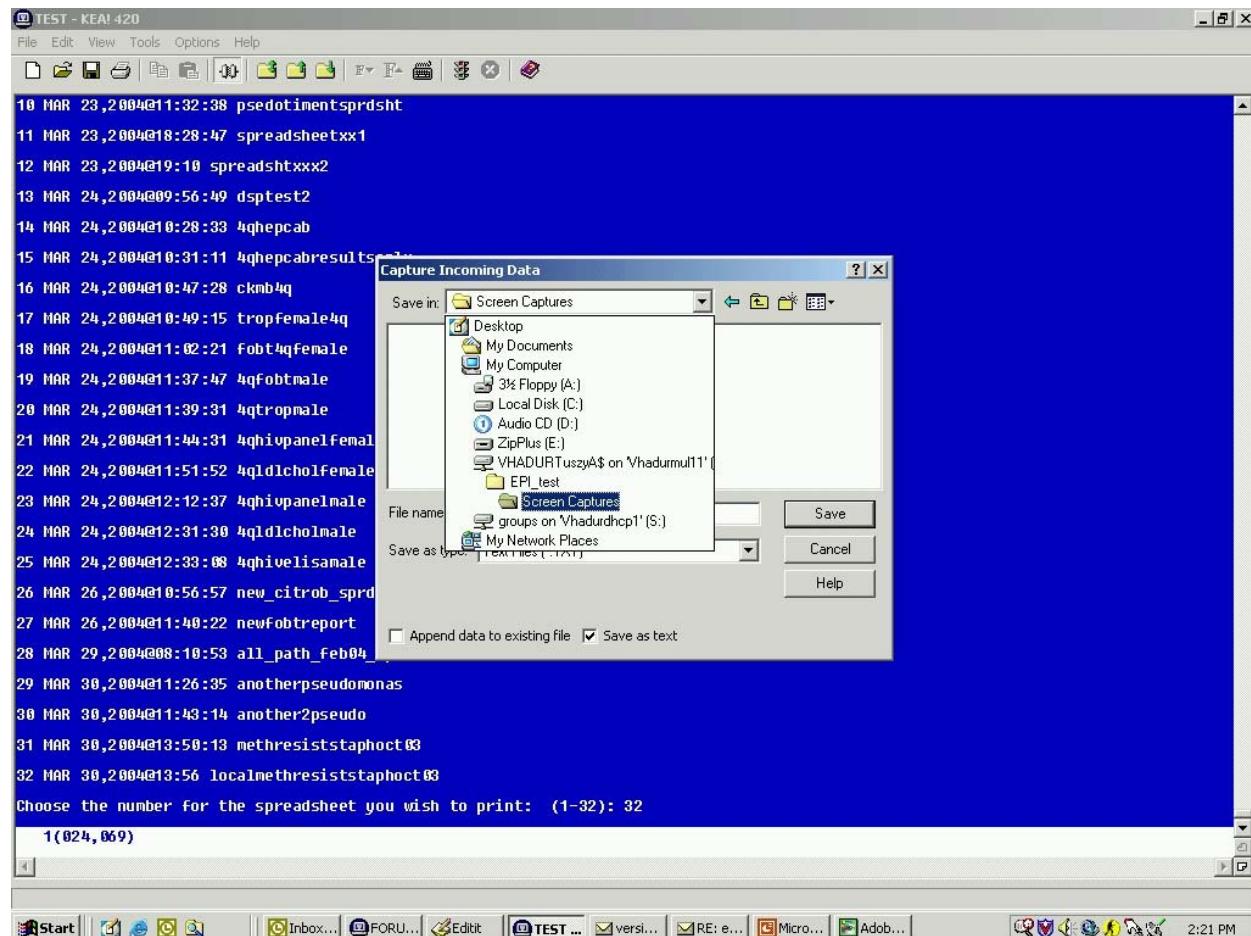

2. After indicating the preferred capture, you **must** define the location you want the capture file to be stored in (important... remember where you indicated). **Note:** It may be a good idea to create a special folder for this purpose and always route the captured data to this particular folder. Name the capture file something that will be meaningful to you later on). From the “Save as type:” command to be a Text Files (*.TXT) AND “checkmark” the “Save as text” box at the bottom, uncheck the “Append data to existing file” if it is checked.

Example: Saving local SPREADSHEET captures as a Text Files (*.TXT).

How to **ENTER** local SPREADSHEET captures to a TEXT FILE or EXCEL spreadsheet software continued:

Example: Captured data folder location. **Note:** It may be helpful to see the full folder location path in order to find it again.

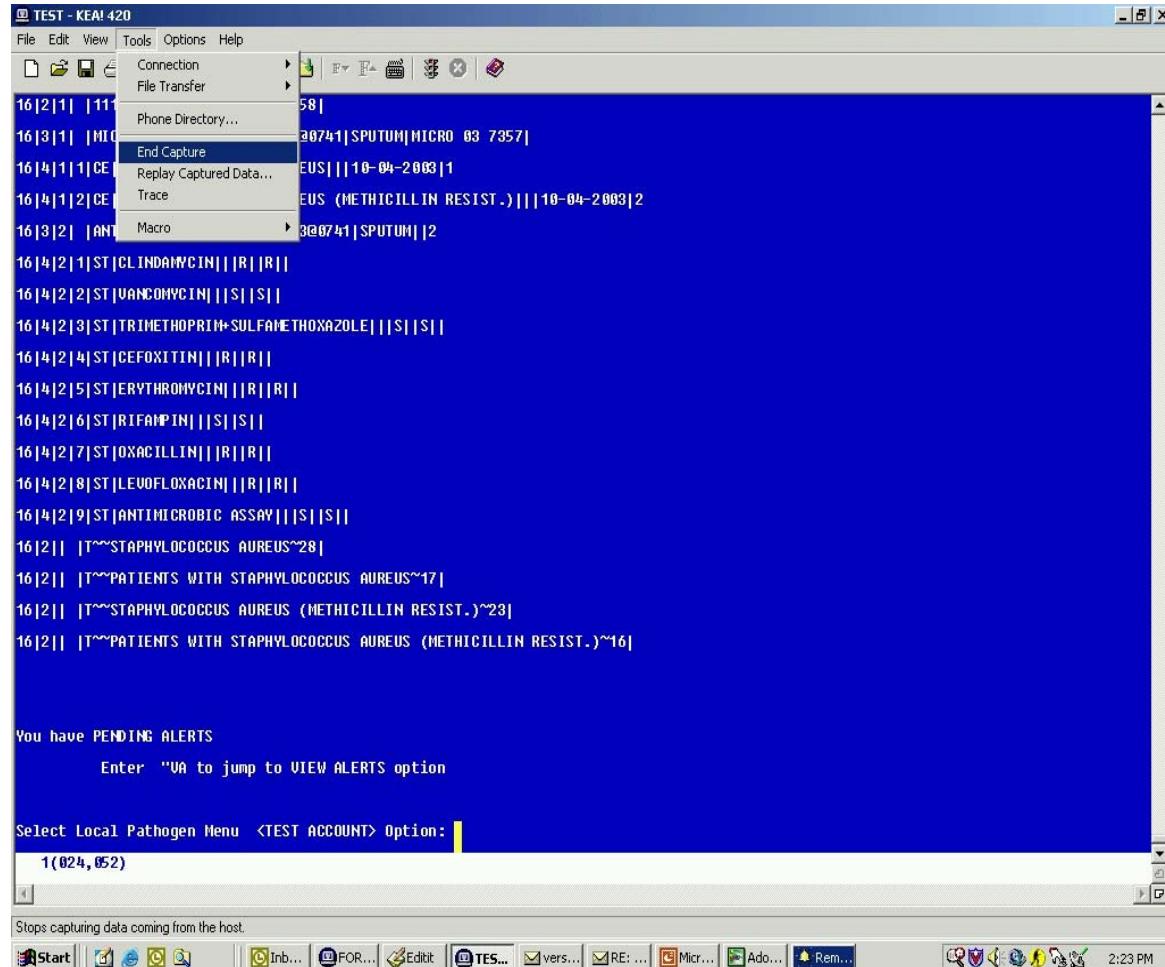

Use of the Software

How to **ENTER** local SPREADSHEET captures to a TEXT FILE or EXCEL spreadsheet software continued:

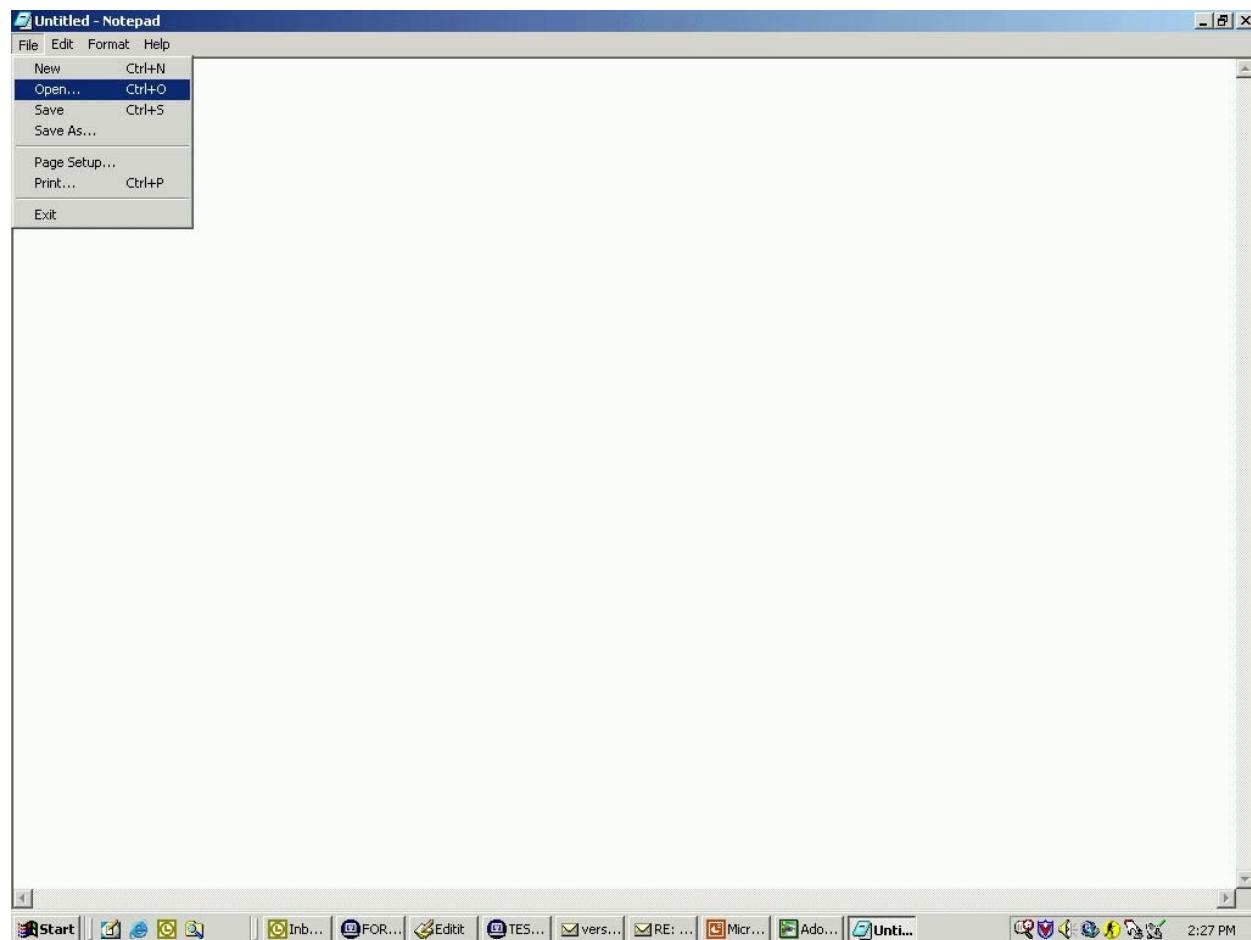

3. After the data capture has finished scrolling to the screen, from the KEA emulator menu bar, click on the “Tools” menu, and select the “End Capture” command to decrease the amount of unwanted text that will appear in the saved file.

NOTE: The data capture will need to be edited prior to opening the TEXT file in your spreadsheet program. Use the wizard to finish importing the data into a spreadsheet format.

How to **ENTER** local SPREADSHEET captures to a TEXT FILE or EXCEL spreadsheet software continued.

4. Select the basic Notepad program to open the saved text file folder (remember the location of the saved text file folder). Navigate to the folder via the Notepad program and then open saved text file. Do any required editing and resave the edited text file under the same file name.

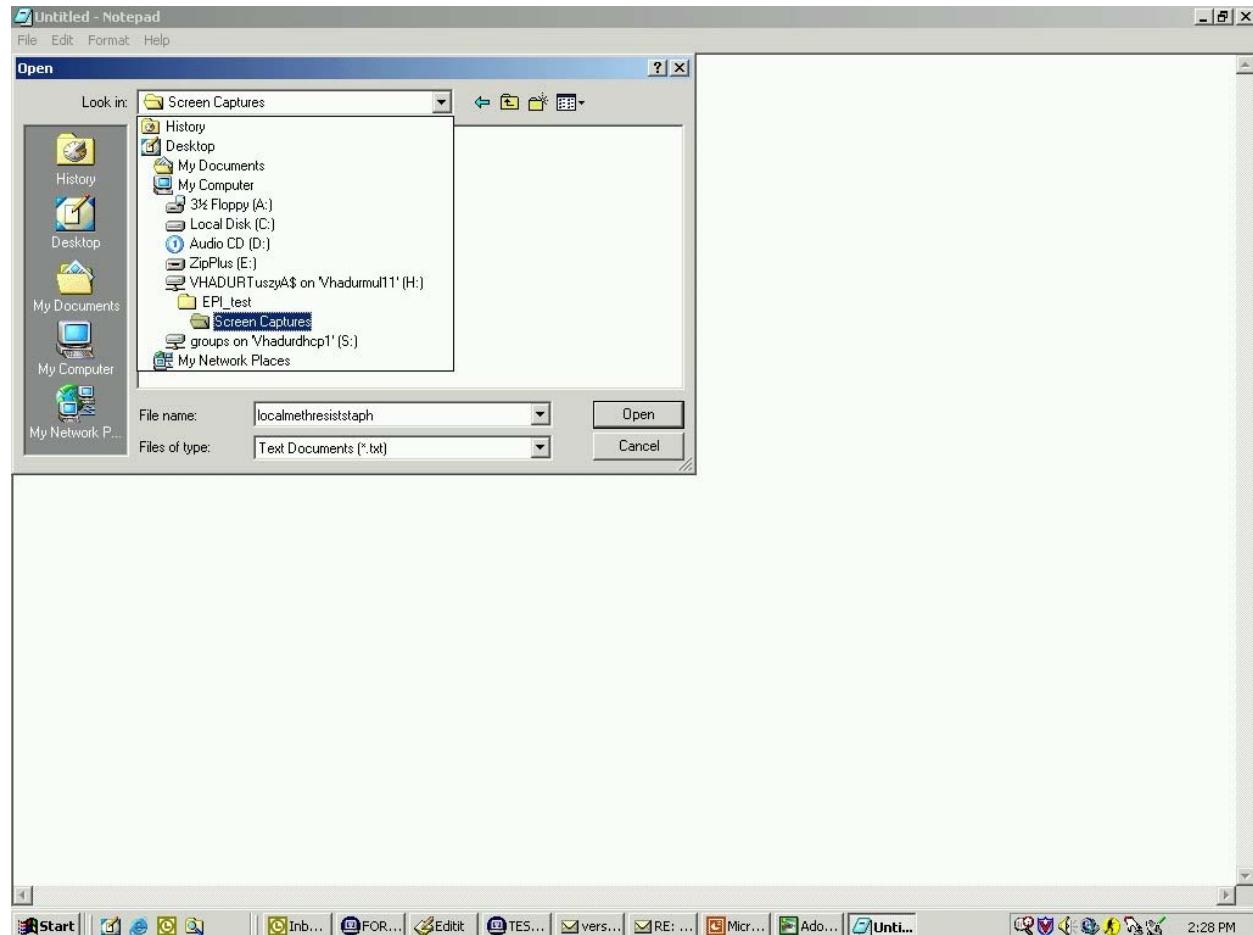

Use of the Software

How to **ENTER** local SPREADSHEET captures to a TEXT FILE or EXCEL spreadsheet software continued.

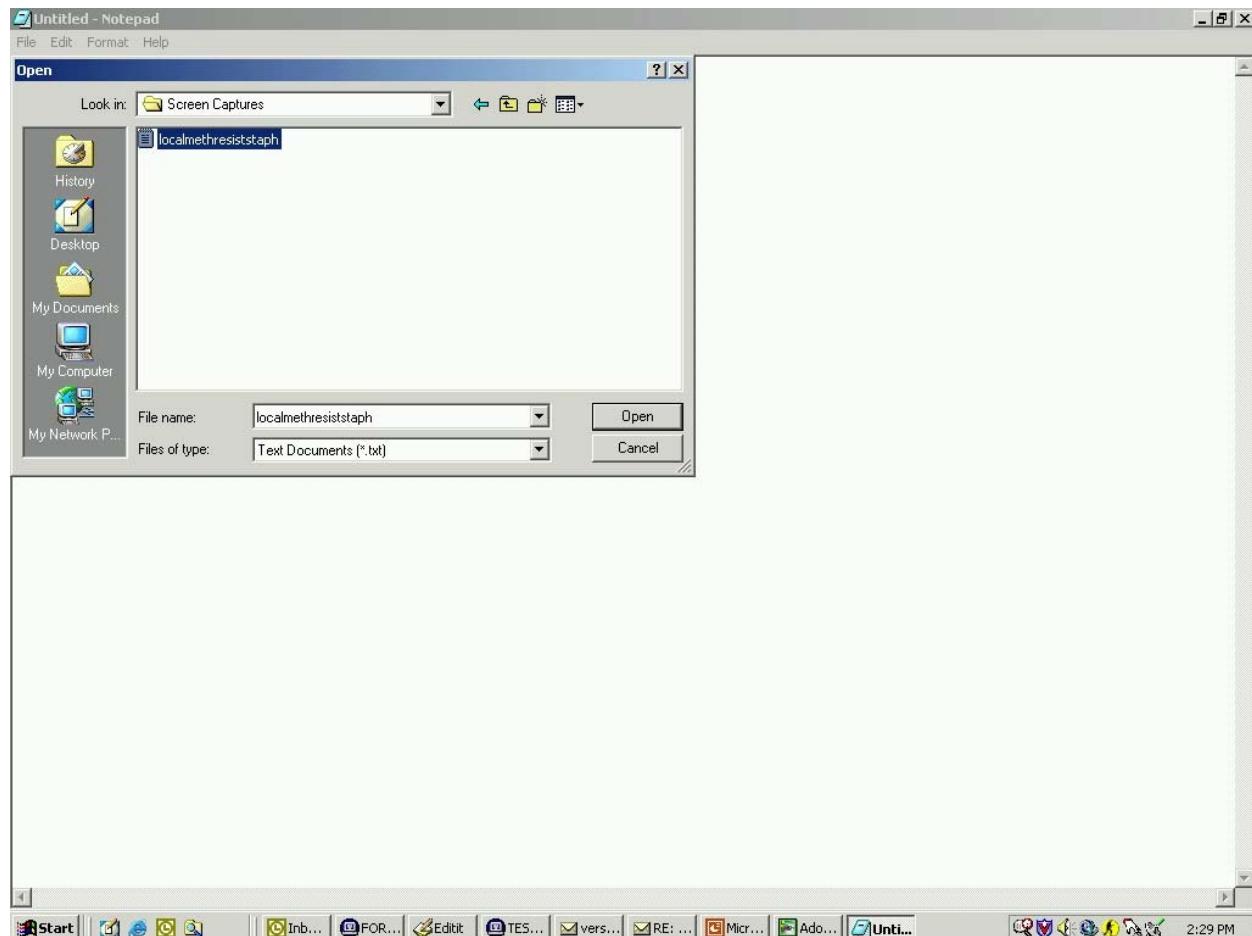

Example: This is an example of the saved text file folder location where the particular screen captures were stored in this example.

NOTE: This will be different on your system; therefore, it is a good idea to establish a known, standard downloading folder where you can easily find your downloaded text files.

How to **ENTER** local SPREADSHEET captures to a TEXT FILE or EXCEL spreadsheet software continued.

Example: A unique file name in a specific download folder

Use of the Software

How to **ENTER** local SPREADSHEET captures to a TEXT FILE or EXCEL spreadsheet software continued.

5. The saved text file may look similar to the following example. Edit the beginning and end of the captured text so that only text with the “bar” delimiters are left.

NOTE: If the text download “wrapped” (lines at 80 columns), edit the lines to “unwrap” the text. Usually this can be done via Notepad by putting the cursor at the end of the first line that is wrapped and press “delete” once or twice to get the next line down that is wrapped. The text **must** appear as one continuous line for the spreadsheet import to work correctly.

Example: Saved Text File Download

```
localmethresiststaph - Notepad
File Edit Format Help
Choose the number for the spreadsheet you wish to print: (1-32): 32
this option will print the selected fields.
You will need to capture this printout in a text document.
Using a text editor, remove any extraneous lines from the beginning
and the end of the file so that only the data to be imported remains.
Save the edited file. Use this file in the import function of
your spreadsheet program.

this report will contain confidential information.

Use of the Software

How to **ENTER** local SPREADSHEET captures to a TEXT FILE or EXCEL spreadsheet software continued.

6. After editing the ASCII text, click on “File”, then select the “Save” command and close the text file. Then start up the spreadsheet program.

Example: Saving the ASCII text file data.

Delete Local Pathogen [LREPI DELETE LOCAL PATHOGEN] option

This **new** option allows deletion of local pathogens entries ONLY.

NOTE: National emerging pathogens entries CANNOT be deleted using the **new** Delete Local Pathogen [LREPI DELETE LOCAL PATHOGEN] option.

Example: How to use the **new** Delete Local Pathogen [LREPI DELETE LOCAL PATHOGEN] option to **DELETE** a local pathogen.

```
ENT   Enter/Edit Local Pathogens
GEN   Lab EPI Generate Local Report/Spreadsheet
PRT   Lab EPI Print Local Report/Spreadsheet
DEL   Delete Local Pathogen
DRS   Delete Local Report or Spreadsheet
```

Select Local Pathogen Menu Option: **DELETE Local Pathogen <ENTER>**

LOCAL PATHOGEN NAME: **HISTOPLASMA428<ENTER>**

Do you really want to delete this pathogen? **YES<ENTER>**

Entry HISTOPLASMA428 deleted.

Delete Local Report or Spreadsheet [LREPI DELETE LOCAL REPORT] option

This option is used to delete local reports or local spreadsheets.

Example: How to use the **new** Delete Local Report or Spreadsheet [LREPI DELETE LOCAL REPORT] option to **DELETE** a local report.

```
Select Lab EPI Primary Menu Option: LO  Local Pathogen Menu<ENTER>
```

ENT	Enter/Edit Local Pathogens
GEN	Lab EPI Generate Local Report/Spreadsheet
PRT	Lab EPI Print Local Report/Spreadsheet
DEL	Delete Local Pathogen
DRS	Delete Local Report or Spreadsheet

```
Select Local Pathogen Menu Option: DRS Delete Local Report or  
Spreadsheet<Enter>
```

```
    Delete a Local Report/Spreadsheet Option
```

```
    Select one of the following: <Enter>
```

1	REPORT
2	SPREADSHEET

```
Which one do you wish to delete: 1 REPORT<Enter>
```

```
1 APR 14,2004@11:02:11 REPORT 1
```

```
Choose the number for the report you wish to delete: (1-1): 1<Enter>  
Report deleted.
```

```
    Select one of the following:
```

1	REPORT
2	SPREADSHEET

```
Which one do you wish to delete: 2 SPREADSHEET<Enter>
```

```
1 APR 14,2004@11:02:11 SPSHT 1
```

```
Choose the number for the spreadsheet you wish to delete: (1-1): 1<Enter>  
Spreadsheet deleted.
```

Pathogen Inquiry [LREPI PATHOGEN INQUIRY] option:

This **new** option is used to inquire into the LAB SEARCH/EXTRACT file (#69.5) parameter description fields (i.e., INACTIVE: NO, LAG DAYS: 15, RUN DATE: OCT 07, 2003, CYCLE: MONTHLY, PROTOCOL: LREPI, FOLLOW PTF: YES, REFERENCE NUMBER: 23, and ETIOLOGIES) for defined emerging pathogen.

Example: How to use the **new** Pathogen Inquiry [LREPI PATHOGEN INQUIRY] option

```
Select Lab EPI Primary Menu Option: PI <Enter> Pathogen Inquiry
Select Pathogen: ALL ENTEROCOCCI <Enter>
NAME: ALL ENTEROCOCCI           INACTIVE: NO
      LAG DAYS: 15               RUN DATE: OCT 07, 2003
      CYCLE: MONTHLY            PROTOCOL: LREPI
      FOLLOW PTF: YES           REFERENCE NUMBER: 23
ETIOLOGY: ENTEROCOCCUS
ETIOLOGY: STREP D ENTEROCOCCUS
ETIOLOGY: ENTEROCOCCUS (STREPT. FAECALIS-GROUP D)
ETIOLOGY: STREPTOCOCCUS FAECALIS
ETIOLOGY: STREPTOCOCCUS FAECIUM
```

Description: The enterococci are a group of bacteria that can cause serious disease in humans, including blood stream infections, urinary tract infections, wound infections, endocarditis and even death. As with many other organisms that cause disease in humans, resistance to antibiotics is emerging in the enterococci. The presence of antibiotic resistance creates a challenge in treatment of infections with this organism. In order to determine the prevalence of antibiotic resistance, a baseline of occurrence of ALL enterococci needs to be obtained. This particular EPI pathogen setting has been created to identify ALL culture positive isolates of enterococci from any specimen site in any patient/client receiving care within the VHA. **Note:** Even specimens that have been obtained from patients (not the environment) as part of an epidemiologic prevalence study or survey should be included if they are present in the VistA laboratory package results from your site. The results from this EPI pathogen setting will be coupled with the results from Reference #1 (Vancomycin-Resistant Enterococci [VRE]) to help determine the percentage of all isolates of enterococci that have vancomycin.

Lab EPI Parameter Setup [LREPI (EPI) PARAMETER SETUP] option:

The Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option is used to define the search criteria associated with the National Emerging Pathogens Initiative (EPI) extract data. This option allows editing of the National EPI ONLY. **Note:** Local pathogens CANNOT be added using this option. This option has been **enhanced** by adding the **new** PREVIOUS CYCLE field. This **new** field is automatically defined as '1' for TB ONLY and CANNOT be edited (as highlighted in the example below). For all other emerging pathogens the **new** PREVIOUS CYCLE field is blank and CANNOT be EDITED. The existing PROTOCOL field has been modified and can NO longer be EDITED. The field displaying ACTIVE "YES" has been modified to display INACTIVE "NO". The following input screen example new functionality changes are highlighted.

Example: Laboratory EPI Parameters Input Screen Page 5 of 5 field changes

LABORATORY EPI PARAMETERS INPUT SCREEN		Page 5 of 5
NAME: TUBERCULOSIS	INACTIVE: NO	
Run Date: <Enter>	Protocol: LREPI<Enter>	
Run Cycle: MONTHLY<Enter>	Lag Days: 15 <Enter>	
Previous Cycle: 1<TAB>		
General Description: <TAB>		
Exit	Save	Refresh
COMMAND: E<Enter>	Press <PF1>H for help Insert	
Save changes before leaving form (Y/N) ? Y <Enter>		

Lab EPI Protocol Edit [LREPI PROTOCOL EDIT] option

This option is use to edit the LAB SEARCH/EXTRACT PROTOCOL file. The option is located on the Lab EPI Primary Menu [LREPI SEARCH EXTRACT MENU].

Example: How to use the Lab EPI Protocol Edit [LREPI PROTOCOL EDIT] option

```
Protocol Parameters Setup Definition

PROTOCOL: LREPI<Enter>

Title: Emerging Pathogens Initiative (EPI)           Message Size: 32000
Report Mail Group: EPI-REPORT
Send Alert: YES
Send Alert To
DOE, Jane
```

Antimicrobial Link Update [LREPILK] option:

This option is use to link the ANTIMICROBIAL SUSCEPIBILITY file (#62.06) with the WKLD CODE file (#64). (*See the EPI Roll Up Modifications User Manual, Appendix-A section of this manual for an example on how to use this option.*)

Emerging Pathogens Names and Reference Numbers

This chart lists the 23 emerging pathogens names and reference numbers:

EMERGING PATHOGENS	EMERGING PATHOGENS
All Enterococci (Reference #23) (NEW)	Hepatitis C Antibody Positive (Reference #2)
All <i>Staphylococcus aureus</i> (Reference #18) (NEW)	Legionella (Reference #7) Note: The new Legionella Urinary Antigen test has been added to the existing Legionella test criteria.
All <i>Streptococcus pneumoniae</i> (Reference #22) (NEW)	Leishmaniasis (Reference #14)
Candida (Reference #8)	Malaria (Reference #11)
Clostridium difficile (Reference #4)	Methicillin - resistant <i>Staphylococcus aureus</i> (MRSA) (Reference #19) (NEW)
Creutzfeldt-Jakob Disease (CJD) (Reference #13)	Penicillin - Resistant Pneumococcus (Reference #3)
Cryptosporidium (Reference #9)	Streptococcus-Group A (Reference #6)
Dengue (Reference #12)	Tuberculosis (Reference #5)
E. coli O157:H7 (Reference #10)	Vancomycin-Resistant Coagulase Negative <i>Staphylococci/Staph epi</i> (VRSE) (Reference #21) (NEW)
Hepatitis A Antibody Positive (Reference #16)	Vancomycin-Resistant Enterococcus (VRE) (Reference #1)
Hepatitis B Positive (Reference #17)	Vancomycin-Resistant <i>Staphylococcus aureus</i> (VRSA) (Reference #20) (NEW)
Not Positive for Hepatitis C Antibody OR Hepatitis C Antibody NEG (Reference #15)	

Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option Input Screen Definitions

LABORATORY EPI PARAMETERS INPUT SCREEN PROMPTS:	LABORATORY EPI PARAMETERS INPUT SCREEN PROMPTS DEFINITIONS:
Name:	<p>The LAB SEARCH/EXTRACT file (#69.5), Name field (#69.5.01) is modified to include the following 6 new emerging pathogens entries.</p> <ul style="list-style-type: none"> • All <i>Staphylococcus aureus</i> (Reference #18) • Methicillin-Resistant <i>Staphylococcus aureus</i> (MRSA) (Reference #19) • Vancomycin-Resistant <i>Staphylococcus aureus</i> (VRSA) (Reference #20) • Vancomycin-Resistant Coagulase Negative <i>Staphylococci/Staph</i> EPI (VRSE) (Reference #21) • All <i>Streptococcus pneumoniae</i> (Reference #22) • All Enterococci (Reference #23) <p>Answer with the EPI name or reference number</p>
Inactive:	This prompt is renamed from ACTIVE to INACTIVE. This prompt is used to define if this entry is active or not. '1' or 'YES' indicates that this is an inactive entry. '0' or 'NO' indicates that this is an active entry.
Laboratory Test (s):	Consider these synonymous with, chemistry, serology, hematology, and "blood/serum" tests. Results anticipated to be found here would have had a test done under the chemistry/hematology accession areas, even if physically performed in microbiology and other areas. Select tests from the LABORATORY TEST file (#60).
Indicator:	<p>Select the code that will determine how to match lab results.</p> <p>'1' FOR Use Reference Ranges '2' FOR Contains '3' FOR Greater Than '4' FOR Less Than '5' FOR Equal To</p> <p>Note: This new INDICATOR field (#69.55,1), located under ANTIMICROBIL SUSCEPTIBILITY sub-field (#69.55) is FOR FUTURE USE ONLY.</p>
Value:	Positive, etc. Answer must be 1-15 characters in length. This is a Free Text field.
ICDM-9:	ICDM-9 standardized code used nationwide in federal and non-federal/private health care facilities. Select from the ICDM-9 DIAGNOSIS file (#80).
ICDM-9 Description:	Title of ICDM-9 diagnosis

Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option Input Screen Definitions (continued)

LABORATORY EPI PARAMETERS INPUT SCREEN PROMPTS:	LABORATORY EPI PARAMETERS INPUT SCREEN PROMPTS DEFINITIONS:
Selected Etiology:	Consider synonymous with organism, final microbial diagnosis/isolate. Select from the ETIOLOGY FIELD file (#61.2).
Selected SNOMED codes:	Answer with SNOMED CODES You may enter a new SNOMED CODE, if you wish. Answer must be 1-15 characters in length.
Antimicrobial Susceptibility:	Enter the Antimicrobial that will be used in screening out sensitive Etiologies (e.g., “Vancomycin” for Vancomycin Resistant Enterococcus). Select from the ANTIMICROBIAL SUSCEPTIBILITY file (#62.6).
NLT Code:	Displays the associated NLT code if linked. If no NLT Code is displayed use the Antimicrobial Link Update option.
NLT Description:	Displays the Description of the linked NLT code.
Topography Selection:	Enter a date to screen out patients born before the date entered. Examples of Valid Dates: JAN 20 1957 or 20 JAN 57 or 1/20/57 or 012057 T (for TODAY), T+1 (for TOMORROW), T+2, T+7, etc. T-1 (for YESTERDAY), T-3W (for 3 WEEKS AGO), etc.
Include:	Selection of Topography screens all others out except the ones selected. For “ALL” leave blank. Not to be used in conjunction with the exclude Topography selection. Select from the TOPOGRAPHY file (#61).
Exclude:	Select the Topography to screen out. Not to be used in conjunction with the Include Topography selection. Select from the TOPOGRAPHY file (#61).
First Encounter:	Limits the output to the first encounter for the patient. Otherwise list all encounters. Choose: ‘1’ FOR YES ‘0’ FOR NO
Follow PTF:	Indicates if the PTF record will be followed until a discharge has been entered. Choose: ‘1’ FOR YES ‘0’ FOR NO
Before Date Of Birth:	Enter a date to screen out patients born before the date entered. Examples of Valid Dates: JAN 20 1957 or 20 JAN 57 or 1/20/57 or 012057 T (for TODAY), T+1 (for TOMORROW), T+2, T+7, etc. T-1 (for YESTERDAY), T-3W (for 3 WEEKS AGO), etc.

Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option Input Screen Definitions (continued)

LABORATORY EPI PARAMETERS INPUT SCREEN PROMPTS:	LABORATORY EPI PARAMETERS INPUT SCREEN PROMPTS DEFINITIONS:
After Date Of Birth:	A birthrate to screen patients (i.e., patients DOB after 1/1/1950).
Select SEX:	FOR FUTURE USE ONLY.
Run Date:	Date that the last Auto EPI processed.
Protocol:	This defines the protocol associated with the parameters. This prompt has been modified to be UNEDITABLE.
Run Cycle:	Enter the date that the last Auto EPI processed.
Previous Cycle:	This new field is displayed on input screen page 5 of 5. By entering a number here the Lab search engine knows to look at a previous cycle for updates to data. How far back it looks is based on the cycle and number entered. For example if the cycle is monthly and the previous cycle is 1, then the search engine will also search 1 month back for data. This new field is UNEDITABLE.
Lag Days:	Defines the Lag Days parameter as 15 for all 23 emerging pathogens. Lag Days for the six new EPIs has been defined as 15 with the release of the new EPI software.
General Description:	To review or edit the General Description prompt use the <Tab> key.

Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option

The following information **must** be adhered to as recommended to ensure a successful implementation and utilization of the software:

NOTE: There may be more etiologies that fit the description/definition than just the ones that load automatically as part of the EPI Roll Up Modification software.

NOTE: It is highly recommended that the Laboratory Information Manager (LIM), a representative from the Microbiology section (director, supervisor, or technologist) and a Total Quality Improvement/Quality Improvement/Quality Assurance (TQI/QI/QA) staff (or person at the facility with similar function) be assigned the Lab EPI Primary Menu [LREPI SEARCH EXTRACT MENU]. These will be the individual(s) responsible for initially setting the Lab EPI parameters descriptions and doing periodic reviews of the parameters descriptions to assure they are current.

The Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option is used to setup local parameters for the national emerging pathogens. Each emerging pathogen descriptions **must** be reviewed **prior** to setting up the Lab EPI parameters.

NOTES:

There are a number of different ways that sites have chosen to enter results into the VistA database. As long as the results are in a retrievable format (straight from the VistA database without additional manual input needed), how it is entered is **not** of significance to the Emerging Pathogen Initiative. However, two preferred methods make it easy to capture the data. Please reference the Helpful Hints section of this guide for the two preferred methods.

Site-specific spelling or alternate spelling for data entries **must** be consistent to guarantee accurate data capture.

The Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option, Lag Day parameter **MUST** be pre-defined as **15** for ALL national emerging pathogens.

NOTE: If a lab test needs to be entered more than once in the parameter set up for a particular lab EPI pathogen name (e.g., because there is more than one test result that may meet the definition), the second and subsequent tests must be placed in quotes (""). Even though the “” marks are used to enter the data, they don't appear in the final product. This process can be done unlimited times for one set-up.

The Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option input screen examples display how to setup EPI parameters (i.e., including the 6 **new** emerging pathogens. Several of the Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option input screen examples display partially pre-populated entries. The ETIOLOGY FIELD file (#61.2) site-specific data entries are used to partially pre-populate the fields in the LAB SEARCH/EXTRACT file (#69.5). However, further data entries are required for site-specific data. Additional data entries can be added or deleted to meet your site-specific needs.

New Legionella Urinary Antigen Test

The **newer** Legionella Urinary Antigen test is available with this release of EPI. The LAB EPI parameter setup for the newer test is POSITIVE FOR LEGIONELLA PNEUMOPHILA. (see helpful hints for *Clostridium difficile* in Appendix B.)

LAB SEARCH/EXTRACT file (#69.5) Entries and Parameter Setup Examples

The following table (first column) contains the **6 new** emerging pathogens added to LAB SEARCH/EXTRACT file (#69.5). The (second column) contains the Lab EPI parameter setup [example](#) entries for the emerging pathogens: **Note:** The LAB EPI parameter setup entries are ONLY examples, as sites may have different names for tests. The table (second column) examples DOES NOT use the indicator mechanism of whether the result CONTAINS the POS or is EQUAL TO the POS, etc.

All Enterococci (Reference #23)

The *enterococci* are a group of bacteria that can cause serious disease in humans, including blood stream infections, urinary tract infections, wound infections, endocarditis and even death. As with many other organisms that cause disease in humans, resistance to antibiotics is emerging in the enterococci. The presence of antibiotic resistance creates a challenge in treatment of infections with this organism. In order to determine the prevalence of antibiotic resistance, a baseline of occurrence of ALL enterococci needs to be obtained. This particular EPI pathogen setting has been created to identify ALL culture positive isolates of enterococci from any specimen site in any patient/client receiving care within the Veterans Health Administration (VHA).

NOTE: Even specimens that have been obtained from patients (not the environment) as part of an epidemiologic prevalence study or survey should be included if they are present in the VistA laboratory package results from your site.

The results from this EPI pathogen setting will be coupled with the results from Reference #1 (Vancomycin-Resistant Enterococci [VRE]) to help determine the percentage of all isolates of enterococci that have vancomycin resistance.

Example: How to add additional etiology/etiologies

NOTE: The following LABORATORY EPI PARAMETERS INPUT SCREEN (i. e., Page 2 of 5) is an example on how to add additional etiology/etiologies (organisms) entries for this emerging pathogen. This functionality causes the added etiology (organism) to appear and the next line will be a blinking cursor. At this point if you have additional etiologies (organisms) to add, just type them in and repeat the process. OR, if you have finished adding etiology/etiologies (organisms) entries, just press the <Enter>key to proceed with the process.

All *Staphylococcus aureus* (Reference #18)

Staphylococcus aureus is a bacterium that causes much disease in humans, including furunculosis, boils, acne, cellulites, pneumonia, toxic shock syndrome, and even death. It has always been a significant pathogen in the community setting, as well as in the healthcare setting where transmission can occur through contact and from the hands of healthcare personnel. The presence of antibiotic resistance creates a challenge in treatment of infections with this organism. In order to determine the prevalence of antibiotic resistance, a baseline of occurrence of ALL *Staphylococcus aureus* needs to be obtained. This particular EPI pathogen setting has been created to identify ALL culture positive isolates of *Staphylococcus aureus* from any specimen site in any patient/client receiving care within the VHA.

NOTE: Even specimens that have been obtained from patients (not the environment) as part of an epidemiologic prevalence study or survey should be included if they are present in the VistA laboratory package results from your site.

The results from this EPI pathogen setting will be coupled with the results from Reference #19 (MRSA) and Reference #20 (VRSA) to help determine the percentage of all isolates of *Staphylococcus aureus* that have methicillin (oxacillin) resistance and vancomycin resistance.

All Streptococcus pneumoniae (Reference #22)

Streptococcus pneumoniae is a bacterium that causes serious disease in humans, including pneumonia, bacteraemia, meningitis and even death. It is an important pathogen to monitor in that many of the more serious sequelae of infection may be ameliorated with preventive vaccination. As with many other organisms that cause disease in humans, resistance to antibiotics is emerging in this *S. pneumoniae*. The presence of antibiotic resistance creates a challenge in treatment of infections with this organism. In order to determine the prevalence of antibiotic resistance, a baseline of occurrence of ALL *Streptococcus pneumoniae* needs to be obtained. This particular EPI pathogen setting has been created to identify ALL culture positive isolates of *Streptococcus pneumoniae* from any specimen site in any patient/client receiving care within the VHA.

NOTE: Even specimens that have been obtained from patients (not the environment) as part of an epidemiologic prevalence study or survey should be included if they are present in the VistA Laboratory Package results from your site.

The results from this EPI pathogen setting will be coupled with the results from Penicillin-Resistant Pneumococcus (Reference #3) to help determine the percentage of all isolates of *Streptococcus pneumoniae* that have penicillin resistance.

Candida (Reference #8)

Fungal infections are rising in significance especially in severely ill patients. The same is true for bloodstream infections acquired in the hospital, especially those associated with intravenous lines. Fungal bloodstream infections are increasing in prevalence.

As a marker of bloodstream infections, the fungus *Candida* (and *Torulopsis*) has been chosen as an initial indicator organism. This organism may **not** be a prevalent or significant entity at your site; however, its presence is more likely to be indicative of serious or true infection than other organisms. The fungus *Candida* (and *Torulopsis*) may commonly be isolated from the blood in association with IV lines. Additionally, this yeast is more likely to be associated with nosocomial acquisition than other organisms (i.e., *Staphylococcus aureus* and coagulase negative *Staphylococcus*), which can cause a number of community acquired syndromes **not** at all related to IV lines.

All episodes of *Candida* (*Torulopsis*, yeast) isolation from blood or a blood source (central line, IV catheter tip, etc.) are being tracked. The VistA Laboratory EPI software has provided a partial pre-populated list of (etiologies/organisms) that fit the description for *Candida* (*Torulopsis*, yeast) to choose. These (etiologies/organisms) should be used, in addition to any site specific (etiologies/organisms) that may also fit the description.

Clostridium difficile (Reference #4)

Disease associated with the presence of *Clostridium difficile* enterotoxin A can cause significant morbidity, as well as mortality. It is of importance, as its predominant acquisition seems to occur nosocomially. Presence of Clostridial toxin (either enterotoxin A or cytotoxin L) by assay (whether it be EIA, latex agglutination, cytotoxicity of cell culture \pm neutralization, or culture of organism with subsequent colony testing) is the best indicator that an inflammatory diarrheal disease is due to presence of *Clostridium difficile*.

Laboratory Services are quite varied as to how they identify the presence of *Clostridium difficile*. Some labs are set up to identify *C. difficile* as the final microbiological (bacterial) etiology of a culture, even if a culture method was not used. Other labs use a final etiology of “see comment” and then enter the results in a free text format. Still others enter the text under a hematology or chemistry format where a reference range and “positive” and “negative” result values can be entered. Wherever the facility lab places the results which are used to demonstrate the presence of toxin-producing *C. difficile*, we need to be able to track them (that means it **must** occur as a retrievable “positive” or “negative” result, or as a “bacterial etiology”). Results in a “Comments” or “Free-text” section are **not** acceptable.

There are a number of different ways that sites have chosen to enter *Clostridium difficile* toxin assay results into the **VISTA** database. As long as the toxin assay results are in a retrievable format (straight from the **VISTA** database without additional manual input needed), how it is entered is **not** of significance to the Emerging Pathogen Initiative. However, there are two preferred methods that make it easy to capture the data. Please reference the Appendix-B section of this guide for the two methods.

Creutzfeldt-Jakob Disease (CJD) (Reference #13)

Creutzfeldt-Jakob Disease (CJD) disease is a rare illness associated with prions. The DVA has chosen to follow this entity because of historic problems with certain blood products used in the private and public health care sectors. The data will be one of a number of ways used to identify changes in trends of incidence of this illness. This task is remarkably complex because of the long incubation period of CJD. There are no specific tests for diagnosis other than central nervous system histology combined with clinical presentation. As such, this entity is followed through ICDM-9 coding.

Cryptosporidium (Reference #9)

The parasite *Cryptosporidium parvum* is a cause of water-borne diarrheal disease. It has gained recent prominence after evaluation of the outbreak in the greater Milwaukee area in 1993 which is estimated to have affected <400,000 persons. In addition to affecting HIV-infected persons and young children, information exists which demonstrates that the chronically ill, elderly are also a higher risk group than the general population. Microbiology laboratory data (parasitology for most laboratories) as well as ICDM-9 coding is used to track this disease, both are narrowly defined parameters.

NOTE: Microsporidiosis is a similar disease; however, the EPI does **not** currently wish to follow this disease process. Microsporidian etiologies should **not** be entered.

NOTE: If a lab test needs to be entered in the parameter set up for a particular lab EPI pathogen name (e.g. because there is more than one test result that may meet the definition), the second and subsequent tests must be placed in quotes (""). Even though the “” marks are used to enter the data, they don't appear in the final product. This process can be done unlimited times for one set-up.

A **new** antigen test for Cryptosporidium is FDA approved. If your laboratory uses this test, but does not report the result as an etiology of just the organism name, please refer to Appendix B Helpful Hints for Clostridium difficile to review ways by which these data may be captured.

Dengue (Reference #12)

The mosquito-borne disease of Dengue Hemorrhagic Fever is a rare but re-emerging infection, especially in the Caribbean. The VA has seen cases of Dengue Hemorrhagic Fever over the last several years. Most of these cases have been in Dengue endemic areas served by the VA. However, as our society becomes more mobile, and the area of Dengue endemicity expands, more cases are likely to occur. Because microbiologic culture is not routinely done and serology can be difficult to track, initially ICDM-9 coded diagnoses are used to track this entity.

E. coli O157:H7 (Reference #10)

Escherichia coli serotype O157 (*E. coli* O157) has gained prominence as a food-borne illness with potentially life threatening complications coming from the associated Hemolytic Uremic Syndrome. Not all sites routinely culture for the presence of *E. coli* O157 in stool specimens submitted for culture. In addition, *E. coli* O157 is not a microbiologic (bacterial) etiology pre-existing in the most recent - national microbiology lab package. In order to nationally track cultures positive for this organism, each site will need to make an etiology specific for *E. coli* O157 (e.g. *Escherichia coli* O157, *E. coli* O157, *E. coli* serotype O157, etc.). Some sites have already done this and will **not** need to generate a new entry.

NOTE: Entering *Escherichia coli* or *E. coli* from the bacterial etiology and then entering “serotype O157” or “O157”, under the “Comments” or “Free Text” section is **not** acceptable, as it will **not** allow the data to be retrieved nationally.

All subsequent positive cultures for this organism **must** then be entered under the new etiology.

Other serotypes of *E. coli* will also cause disease, but we will not currently track these as O157 causes by far, the majority of cases of interest for the national database.

The EPI criterion is dependent on your site. If your site already has an etiology that will select positive cultures for *E. coli* O157, then enter that etiology. However, if your site had to enter a new etiology to accommodate the EPI criteria, be sure to enter this new etiology here.

NOTE: If a lab test needs to be entered in the parameter set up for a particular lab EPI pathogen name (e.g. because there is more than one test result that may meet the definition), the second and subsequent tests must be placed in quotes (“ ”). Even though the “ ” marks are used to enter the data, they don't appear in the final product. This process can be done unlimited times for one set-up.

Hepatitis A Antibody Positive (Reference #16)

One of the goals of the Healthy People 2000 and 2010 initiatives of the Department of Health and Human Services is to decrease certain infectious diseases, especially those that are vaccine preventable. Acute infection with Hepatitis A is one such disease that has specific objectives present in the Healthy People objectives.

The purpose of surveillance for this disease is to record all cases as diagnosed by the laboratory. A positive laboratory test for the presence of Hepatitis A virus is needed. Usually this criterion is met by presence of antibodies to the Hepatitis A virus. In particular, the IgM antibody against hepatitis A is the test most commonly used for determining acute hepatitis A infection. There are other antibody tests available for Hepatitis A. These tests usually indicate past infection with hepatitis A (or in some circumstances may indicate evidence of previous vaccination); usually the IgG antibody against Hepatitis A, OR the Total antibody against Hepatitis A (a test that does not discriminate between IgM or IgG, but can show evidence of exposure) are the tests done for this purpose.

What we are looking for is evidence of presence of ANY antibody to Hepatitis A, whether it is recorded as "weakly positive," "strongly positive," "positive," or "present." If other phrases are used to describe a test result, one should be able to differentiate responses upon entry into the program. As an example, the words "present" and "not present" might be used to designate "positive" vs. "negative", however, they would not allow retrieval of only the positive cases as both phrases contain the word, "present." Also, numerical values of results (e.g. at titer value) are not readily useable. Therefore, parameters for this are to be laboratory based and should include all tests for antibodies against hepatitis A (see examples above).

Also, some institutions will use ICD-9 coding and problem lists as a means to abstract data on this disease. DO NOT use these methods for this particular program. We are only abstracting laboratory confirmed cases of antibodies against Hepatitis A.

NOTE: If a lab test needs to be entered in the parameter set up for a particular lab EPI pathogen name (e.g. because there is more than one test result that may meet the definition), the second and subsequent tests must be placed in quotes (""). Even though the "" marks are used to enter the data, they don't appear in the final product. This process can be done unlimited times for one set-up.

Hepatitis B Positive (Reference #17)

One of the goals of the Healthy People 2000 and 2010 initiatives of the Department of Health and Human Services is to decrease certain infectious diseases, especially those that are vaccine preventable. Acute and chronic infection with Hepatitis B is one such disease that has specific objectives present in the Healthy People objectives.

Both acute and chronic diseases have significant morbidity and can contribute to mortality. Further, infection with hepatitis B can complicate the medical course of persons with other liver ailments. As such, surveillance for both acute and chronic disease is important. In order for the VHA to do surveillance for these diseases, we are looking for laboratory evidence of infection with hepatitis B. This laboratory evidence of infection includes the following standard serological markers:

- Presence of the Hepatitis B surface antigen
- Presence of antibodies against the Hepatitis B core antigen (in particular, the IgM antibody)
- Presence of antibodies against the Hepatitis B surface antigen
- Presence of the hepatitis B e antigen.

These are not all of the tests that can be done for hepatitis B, but they are the ones likely to pick up acute cases (new) or those chronic cases that are likely to be infectious to other persons. Please list only those tests at your facility that is in keeping with what we are looking for—acute cases or those cases likely to be infectious to others.

NOTE: There are advanced PCR based tests that can measure amount of virus in the bloodstream; these are not done at all sites and have not yet been FDA approved. As such, these PCR tests should not be used for case determination.

NOTE: If a lab test needs to be entered in the parameter set up for a particular lab EPI pathogen name (e.g. because there is more than one test result that may meet the definition), the second and subsequent tests must be placed in quotes (""). Even though the “” marks are used to enter the data, they don't appear in the final product. This process can be done unlimited times for one set-up.

Example: Lab EPI Parameter Setup for HEPATITIS B POS

```

Lab EPI Primary Menu

ENH      Lab EPI Manual Run (Enhanced)
VR       Print Detailed Verification Report

Not Positive for Hepatitis C Antibody OR Hepatitis C Antibody Neg (Reference #15)

The first version of the EPI gathered data on persons who were positive for antibody against Hepatitis C. This version will continue to gather such data. However, there are many cases, and it is important to try to find out what differences there are in those persons who are positive for Hepatitis C antibody as opposed to those who do not have Hepatitis C antibody present. Therefore, please review those results that you have designated to be placed into the Hepatitis C Antibody Positive portion of the EPI. Be sure that they truly meet the definition, as noted in Lab EPI Patch LR*5.2*175 Technical and User Guide (distributed August 1998).

All the results of Hepatitis C antibody testing that are not considered “positive” should be reported in this area. Therefore, all of the hepatitis C results that your facility reports should be mapped to either the hepatitis C Antibody Positive file or the Not Positive for Hepatitis C Antibody File. Not positive terms may include “negative,” “indeterminant,” “indeterminate,” “undetectable.” As with the Hepatitis C Antibody Positive component, be sure that phrases that truly differentiate results are used (e.g. the results of “present” and “not present” are not truly differentiated by computer retrieval as both contain the word “present”).

NOTE: There are PCR based tests utilized for Hepatitis C. These tests are not used at all facilities and are not yet FDA approved for identification of hepatitis C disease. As such, they should not be used for reporting purposes with this iteration of EPI.

NOTE: If a lab test needs to be entered in the parameter set up for a particular lab EPI pathogen name (e.g. because there is more than one test result that may meet the definition), the second and subsequent tests must be placed in quotes (“ ”). Even though the “ ” marks are used to enter the data, they don't appear in the final product. This process can be done unlimited times for one set-up.

Hepatitis C Antibody Positive (Reference #2)

Hepatitis C is much more prevalent than originally thought at least in certain key patient sub-populations. As new and more sensitive assays come into use, we seem to find more evidence of this pathogen. We are looking for evidence of exposure to Hepatitis C in patients as demonstrated by Hepatitis C antibody positivity. The need for confirmatory testing or demonstration of active disease is not currently necessary in gathering data for this program. Different facilities may use different assays for this test. What we are looking for is evidence of presence of antibody to Hepatitis C, whether it be recorded as "weakly positive", "strongly positive", "positive", or "present". If other phrases are used to describe a test result, one should be able to differentiate the results upon entry into the program. As an example, the words, "present" and "not present" would not allow retrieval of only positive cases as both phrases contain the word, "present".

NOTE: There are PCR based tests utilized for Hepatitis C. These tests are not used at all facilities and are not yet FDA approved for identification of hepatitis C disease. As such, they should not be used for reporting purposes with this iteration of EPI.

Legionella (Reference #7)

Since the American Legion Convention in Philadelphia in the 1970's, Legionnaires' disease has been an illness of keen interest to the DVA. Because diagnosis is complex, we have chosen to review for presence of *Legionella* in culture and in ICDM-9 DIAGNOSIS file (#80). We will not look at *Legionella* direct fluorescent antibody positivity because of the potential high false positivity of this test. Likewise, serology is not easy to interpret or easily extracted from the VistA database for our purposes and will **not** be included as a marker in this first iteration of the EPI program. Because it is not yet approved, the newer test of *Legionella* urinary antigen will not be used either. The Selected Etiology screen display has been partially pre-populated.

NOTE: The new FDA-Approved Legionella Urinary Antigen test is available; as such the ability to capture the result with this release of EPI is addressed. This newer test **must** be added for LEGIONELLA via the Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option. The preferred method to capture this is to have the Etiology (result) of the accessioned microbiology be POSITIVE FOR LEGIONELLA PNEUMOPHILA (or something similar). This issue is similar to one encountered in with the Clostridium difficile pathogen and samples of how to address this are provided in Appendix B Helpful Hints.

Example: Lab EPI Parameter Setup for LEGIONELLA

```

Leishmaniasis (Reference #14)

Leishmaniasis is a significant tropical disease that can cause serious complications. It is of interest to the Department of Veterans Affairs as Leishmania has caused illness among military personnel for many years. In addition, the Persian Gulf War occurred in an area of the world where the parasite is endemic. Because no simple, straightforward serology exists and no standard culture techniques exist, we have chosen to follow this entity through ICDM-9 diagnosis codes.

Malaria (Reference #11)

The plasmodial parasite is responsible for the blood-borne disease of *malaria*. *Malaria* can cause acute as well as chronic, relapsing disease. Occasionally, U.S. troops are deployed in malaria endemic areas. This placement could potentially put troops at risk for acquiring this disease. For the Emerging Pathogens Initiative program, we are interested in tracking patients with malaria, acute or chronic, relapsing, and in either inpatient or outpatient status. No standardized serologic test allows for easy identification. Since not all sites consistently code and record malarial parasites seen histologically or on blood smears (not all of these interpretations are done through the Pathology and Laboratory Service), we have currently decided to track malaria based on ICDM-9 coding.

Methicillin-Resistant Staphylococcus aureus (MRSA) (Reference #19)

Methicillin (or oxacillin)-resistant *Staphylococcus aureus* (MRSA) is a pathogen of continuing importance for healthcare facilities. It is also an emerging pathogen from community-acquired sources. It is an organism that can be transmitted easily within facilities and in the community. It can produce a spectrum of illness from asymptomatic colonization to severe, life-threatening disease in those patients who acquire it. Whether this organism is causing disease or not, it can contribute to spread within a healthcare facility. The purpose of this pathogen on the EPI list is to capture all cultures that have MRSA present (whether the patient has disease or is just colonized). This should capture all methicillin non-Susceptible isolates of *Staphylococcus aureus*.

NOTE: This includes all positive cultures for MRSA, both clinical cultures and those done as part of epidemiologic prevalence studies or surveys (such as nasal and rectal swabs) at your facility.

Any *Staphylococcus aureus* isolate that is resistant to methicillin (or oxacillin) should be captured for this. Laboratories may use different methods to capture these data. An appropriate National Committee on Clinical Laboratory Standards (NCCLS) testing schema used and captured in VistA should be adequate.

Example: Lab EPI Parameter Setup for METHICILLIN-RESISTANT STAPHYLOCOCCUS AUREUS (MRSA)

Penicillin - Resistant Pneumococcus (Reference #3)

The emergence of antibiotic resistance in microbial agents is of great interest and concern for health care. Penicillin (PCN) was once the mainstay of therapy for Streptococcus pneumoniae infections but resistance to this agent is becoming more prominent. Different therapeutic strategies need to be developed once the prevalence of PCN-resistant S. pneumoniae reaches a critical threshold in a community. In order to monitor this, we are looking for the presence of any resistance in the pneumococci (either “moderate/intermediate” or “frank/high” level resistance). As such, any S. pneumoniae, which is not fully susceptible to PCN on PCN susceptibility testing, should be recorded.

Streptococcus-Group A (Reference #6)

Streptococcus-Group A can be associated with or cause significant disease such as severe fasciitis and streptococcal toxic shock syndrome. We are especially interested to find out how much severe/deep seated disease the VA is experiencing, but other disease entities are of interest also. To this end, we are looking for all episodes of culture positivity for *Streptococcus*-Group A, regardless of site and regardless of inpatient or outpatient status of the person from whom the specimen is obtained. We are aware that some sites may use rapid screenings for *Streptococcus*-Group A, especially from pharyngeal sources. These rapid screens may be difficult to capture, so we are not asking for them on this first iteration of the EPI program. However, if you do capture them in a retrievable format they should be included (see Helpful Hints for *Clostridium difficile* in Appendix B for suggestions on how capture may be possible).

Tuberculosis (TB) (Reference #5)

Mycobacterium tuberculosis infection is an important public health concern. Recent increases in incidence of disease, and occurrence of multiply-drug resistant strains in outbreak situations along with the increased susceptibility of HIV-infected persons for this disease has generated renewed interest in this entity. Since the national data show that 80-85% of all reported active tuberculosis cases are culture positive (with acid fast bacilli smear-only positive cases increasing the reporting by 2-5% more) we have decided to use culture positivity for *Mycobacterium tuberculosis* to track tuberculosis infections in the current iteration of the EPI software application. Information regarding susceptibility will be tracked as well.

For the national EPI program, there will be no need to enter specific antimycobacterial agents to be tracked; it will be done automatically. ICDM-9 coding is complex and confusing for many cases of tuberculosis and therefore will **not** be used.

NOTE: The **new** PREVIOUS CYCLE field displayed on screen Page 1 of 5 is automatically defined as '1' for TB ONLY and CAN NOT be EDIT.

Example: Lab EPI Parameter Setup for Tuberculosis (TB)

Vancomycin-Resistant Coagulase Negative Staphylococci/Staph epi (VRSE) (Reference #21)

Staphylococci are significant contributors to disease in humans. *Staphylococcus aureus* is the most virulent of the staphylococci, but the non-*aureus* staphylococci can also cause disease. As a general group, these non-*aureus* staphylococci are referred to as coagulase negative staphylococci; some refer to this group of organisms as *Staphylococcus epidermidis* because the staphylococcal species *S. epidermidis* is one of the more common members of this group to cause disease. However, to be accurate, the group of organisms called coagulase negative staphylococci includes many different species, even if the generic terminology of *Staphylococcus epidermidis* (a.k.a. *Staph epi*) has been applied.

The coagulase negative staphylococci are important emerging pathogens in that they contribute to many infections acquired while in a healthcare facility. As a general rule, the coagulase negative staphylococci have lesser virulence than *Staphylococcus aureus*, but they can still cause serious, life-threatening disease in certain settings. As with other organisms, antibiotic resistance is occurring among the coagulase negative staphylococci. There is concern in particular for resistance to vancomycin among this group of organisms, as it is currently the only antibiotic that has consistently shown activity against infections caused by this group of organisms; however, decreased susceptibility and even resistance to vancomycin has been identified in rare cases.

The purpose of this EPI pathogen entry is to capture all isolates from all specimens that contain a coagulase negative staphylococcus that is not Susceptible to vancomycin (whether your facility calls it coagulase negative staphylococcus, *Staphylococcus epidermidis*, *Staphylococcus saprophyticus* or the myriad of other staphylococcal species that comprise this group).

Vancomycin-Resistant Enterococcus (VRE) (Reference #1)

Vancomycin-Resistant Enterococcus (VRE) is a pathogen of increasing importance. Not only can it cause significant disease, but also it can be spread within facilities. It is important to capture all positive cultures for VRE (not just disease). As such, all positive cultures for VRE will be reported.

In addition to *Enterococcus sp.* as an etiology, some laboratories may specifically indicate VRE as a separate etiology. If that is the case with your laboratory, please be sure to include that naming convention in your EPI parameter for “Selected Etiology” also.

NOTE: This includes cultures positive for prevalence and surveillance review, including specimens of stool and rectal swabs.

Vancomycin-resistant *Enterococcus faecalis* and *E. faecium* are most common, but we wish to look at all vancomycin resistant enterococci whether speciated or not. Therefore, it is important to be sure to list all the places in the Micro Lab package where *Enterococcus* are found, either as *Enterococcus*, *E. (sp.)*, Group D-*Streptococcus*, *E. faecalis*, *E. faecium*, *E. durans*, *E. gallinarum*, *E. casseliflavus*, etc.

NOTE: Only a partial pre-populated Etiology list is shown in the screen display example at the Selected Etiology prompt. Please be sure to review the entire Etiology list. If you have other etiology results at your site, they can be added to this Etiology list. Again, if alternate spellings are present in your site’s ETIOLOGY FIELD file (#61.2), be certain those spellings assure capture of all data points possible.

**Example: Lab EPI Parameter Setup for Vancomycin-Resistant Enterococcus (VRE)
(Reference #1)**

Vancomycin-Resistant Staphylococcus Aureus (VRSA) (Reference #20)

Vancomycin-resistant *Staphylococcus aureus* (VRSA) is a rare but emerging pathogen for healthcare facilities. It is of concern because the resistance to this antibiotic can be combined with resistance to other antibiotics; it is this multiple resistance that will make infection with this organism difficult to treat. *Staphylococci* can be transmitted easily within facilities; the easy transmission is of concern for this organism should it occur in a patient. The staphylococci can produce a spectrum of illness from asymptomatic colonization to severe, life-threatening disease in those patients who acquire them. Whether this organism is causing disease or not, it can contribute to spread within a healthcare facility. The purpose of this pathogen on the EPI list is to capture all cultures that have VRSA present (whether the patient has disease or is just colonized). This should capture all vancomycin non-Susceptible strains of *Staphylococcus aureus*, whether the susceptibility interpretation is Intermediate or Resistant.

NOTE: This includes all positive cultures for VRSA, both clinical cultures and those done as part of epidemiologic prevalence studies or surveys (such as nasal and rectal swabs) at your facility.

Any *Staphylococcus aureus* isolate that is resistant to vancomycin should be captured for this. Laboratories may use different methods to capture these data. An appropriate National Committee on Clinical Laboratory Standards (NCCLS) testing schema used and captured in VistA should be adequate.

Example: Lab EPI Parameter Setup for Vancomycin-Resistant *Staphylococcus aureus* (VRSA) (Reference #20)

Conclusion

Once you have finished entering the information as directed by the National Infectious Diseases Program Office, these fields should **not** be changed again except for the following conditions:

1. As requested nationally via the Veterans Affairs Central Office (VACO) Infectious Disease Program Office to update, modify, add, or delete data from the existing files used by the Laboratory EPI software or an addition of a new entity to be tracked.
2. The yearly review must ensure that the entry is acceptable and to update the EPI files with any changes in etiology, lab tests or results parameters that may have occurred locally at the site during the previous year.
3. If your laboratory alters its accessioning or results procedures for one or more other parameters for one of the national EPI pathogens. An update should occur to the EPI to reflect these changes as appropriate.

Annually the EPI national program materials should be reviewed by the VAMCs and updated. It is suggested that this review occur in February of each year. If no changes have occurred in lab practices, etiologies, sites, or results parameters leave the information as is until the next review period. If changes did occur, then enter them as appropriate in order to capture the data requested for each EPI national entity (disease/organism) to be tracked.

As entities (diseases/organisms) are no longer to be tracked nationally (“dropped from the list”), or a new entity is to be tracked (“added to the list”), revision will be forwarded to the sites to assist in updating your site files.

NOTE: Remember that if the parameter setup needs to be changed for any of the four hepatitis entities, that a concomitant change needs to be made in the corresponding Clinical Reminder logic.

APPENDIX - A

EDITING/PRINTING FILES, LINKING DATA, and EDITING INPUT SCREENS

Appendix-A

Appendix – A

Editing/Printing Files, Linking Data, and Editing Input Screens

This section contains instructions and examples for editing/adding entries the TOPOGRAPHY file (#61), printing LAB SEARCH/EXTRACT file (#69.5) site definitions, linking the ANTIMICROBIAL SUSCEPTIBILITY file (#62.06) data entries to the WKLD CODE file (#64) data entries, and deleting entries from the Laboratory EPI Parameters Input Screen.

NOTE: To request additional LOINC, Workload, and Suffixes codes access the VistA Laboratory website, National Lab Tests (NLT) Documentation Set and LOINC Request Forms link:

<http://vista.med.va.gov/ClinicalSpecialties/lab/>

Editing/Printing Files, Screens, Linking Data, Request Form

Editing TOPOGRAPHY file (#61):

Specific HL7 codes **must** be added to the TOPOGRAPHY file (#61). The HL7 Code field (#08) in this file is used to add the entries. Specific HL7 codes that **must** be added to TOPOGRAPHY file (#61) is located in the HL7 section of this guide, Table 0070 (Specimen Source Codes). The following is an example of how to add the specific HL7 codes to the TOPOGRAPHY file (#61) using VA FileMan Version 21 - Enter or Edit File Entries option.

Example: How to ADD specific HL7 codes to TOPOGRAPHY file (#61)

```
Select OPTION:      ENTER OR EDIT FILE ENTRIES<Enter>

INPUT TO WHAT FILE: TOPOGRAPHY FIELD// <Enter>
EDIT WHICH FIELD: ALL// .08 HL7 CODE <Enter>
THEN EDIT FIELD: <Enter>

Select TOPOGRAPHY FIELD NAME: ? <Enter>
Answer with TOPOGRAPHY FIELD NAME, or SNOMED CODE, or ABBREVIATION, or
SYNONYM
Do you want the entire 8575-Entry TOPOGRAPHY FIELD List? NO<Enter>
    You may enter a new TOPOGRAPHY FIELD, if you wish
    ANSWER MUST BE 2-80 CHARACTERS IN LENGTH
Select TOPOGRAPHY FIELD NAME:      AMNIOTIC FLUID          8Y300
HL7 CODE: ? <Enter>
    Answer must be 2-4 characters in length.

Enter the two to four character codes from the left column:

ABS      ABCs
AMN      Amniotic fluid
ASP      Aspirate
BPH      Basophils
ABLD     Blood arterial
BBL      Blood bag
BON      Bone
BRTH     Breath
BRO      Bronchial
BRN      Burn
```

Printing LAB SEARCH/EXTRACT file (#69.5) Definitions:

Use the following VA FileMan print option to print your local sites definitions from the LAB SEARCH/EXTRACT file (#69.5).

Examples: How to PRINT LAB SEARCH/EXTRACT file (#69.5) local sites definitions:

```
Select VA FileMan 22.0

Select OPTION: 2  PRINT FILE ENTRIES<Enter>

How to Link Antimicrobial Entries to Workload Codes Entries:

The Laboratory EPI software automatically links as many of the ANTIMICROBIAL SUSCEPTIBILITY file (#62.06) data entries to the WKLD CODE file (#64) data entries that are identified in your site files. However, the ANTIMICROBIAL SUSCEPTIBILITY file (#62.06) data entries that were **not** linked (i.e. no match found) to the WKLD CODE file (#64) will require linking. The Antimicrobial Link Update [LREPILK] option contains three functionalities that can be used to identify and link data entries that were **not** linked by the EPI software installation post-INIT process.

Examples: Antimicrobial Link Update [LREPILK] options

```
Select Lab EPI Primary Menu<Enter>
ENH      Lab EPI Manual Run (Enhanced)
LK       Antimicrobial Link Update
UP       Lab EPI Parameter Setup
          Lab EPI Protocol Edit

Select Lab EPI Primary Menu Option: LK<Enter>Antimicrobial Link Update
This option will allow you to link file '62.06 ANTIMICROBIAL
SUSCEPTIBILITY' file with file '64 WKLD CODE.

Select one of the following:
A          AUTO
M          MANUAL
S          SEMI-AUTO
```

AUTO function

The AUTO function identifies and attempts to link data entries that are **not** currently linked. This option also displays linked and non-linked data entries.

Example: AUTO function

```
Enter response: A<Enter>UTO
AMIKACN           <----Linked----> Amikacin
AMPICLN          <----Linked----> Ampicillin
CLINDAM           <----Linked----> Clindamycin
POLYMYXIN B       <----Not Linked---->No Match Found
RIFAMPIN          <----Linked----> Rifampin
```

MANUAL function

The MANUAL function is used to add or delete linked entries. **Note:** Examples are from entries in the ANTIMICROBIAL SUSCEPTIBILITY file (#62.06).

Example: Deleting an Entry

```
Enter response: MANUAL<Enter>
Select ANTIMICROBIAL SUSCEPTIBILITY NAME: PENICLIN<Enter> PENICILLIN
NATIONAL VA LAB CODE: Substance P// PEN<Enter>
  1  PENFIELD AND CONE STAIN      88010.0000
  2  PENICILLIN Penicillin      81852.0000
  3  PENTAZOCINE Pentazocine    81854.0000
  4  PENTOBARBITAL Pentobarbital 81856.0000
CHOOSE 1-4: 2 Penicillin<Enter>
Select ANTIMICROBIAL SUSCEPTIBILITY NAME: VANCMCN<Enter> VANCOMYCIN
NATIONAL VA LAB CODE: Shell Vial Technique// VANCOMYCIN<Enter> Vancomycin
81485.0000<Enter>
Select ANTIMICROBIAL SUSCEPTIBILITY NAME: Ampicillin/sulbactam<Enter>
Ampicillin/subactam
NATIONAL VA LAB CODE: Ampicillin// @<Enter>
  SURE YOU WANT TO DELETE? Y (Yes)<Enter>
Select ANTIMICROBIAL SUSCEPTIBILITY NAME: <Enter>
```

SEMI-AUTO function

The SEMI-AUTO function looks for entries that are not currently linked and prompts the user to select the corresponding entry in the WKLD CODE file (#64).

Example: SEMI-AUTO function

```
Enter response: SEMI-AUTO<Enter>

AMIKACN          AMIKACIN
NATIONAL VA LAB CODE: AMIK<Enter> ACIN Amikacin      81098.0000
Continue YES/<Enter>

APPENDIX-B

HELPFUL HINTS

Appendix – B Helpful Hints

This section provides helpful hints, methods, and examples for maintaining and validating EPI data.

Preferred Methods for *Clostridium difficile* Data Capture

There are two preferred methods that will make it easy to capture data for *Clostridium difficile* criteria (i.e., as well as several other methods which sites may already employ).

NOTE: As long as the designated parameter results being tracked are in a retrievable field (i.e., **not** a “Free Text” or “Comment” field) the method the site chooses is an individual decision.

Preferred Method #1:

The first preferred method is to have the site define an etiology of “***Clostridium difficile* toxin positive**”. This allows a topography specimen of accession area “**feces/stool**” to be accessioned through the Microbiology accession area. Then, if the stool specimen were indeed positive for *Clostridium difficile* toxin, by any of the known methods of testing, the etiology would be “***Clostridium difficile* toxin positive**.” To accomplish this method would require sites to enter three new local etiologies:

- *Clostridium difficile* toxin positive
- *Clostridium difficile* toxin negative
- *Clostridium difficile* toxin in determinant

These would be different from a culture isolate being positive for *Clostridium difficile*, in that they actually are etiologies/results based on toxin testing. This leaves the etiology of *Clostridium difficile* for actual culture positive specimens for the organism *Clostridium difficile*. The Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option, the site parameter by which the software will capture a patient diagnosed with proven *Clostridium difficile*-associated colitis, will be by placing “***Clostridium difficile* toxin positive**” etiology into the selected etiology entry screen. This has the advantage of being more consistent with other data entry practices in the Microbiology sections of most laboratories.

Preferred Method #2:

The second preferred method is having the data in retrievable form would be to enter/acquisition the specimen for *Clostridium difficile* toxin assay under the chemistry/serology format (regardless of where the test is physically done) with the results being a choice of “positive”, “negative”, or “indeterminate”. This would allow one to enter “*Clostridium difficile* toxin” assay as the test for the EPI software to search in the chemistry/serology format. The result would be retrievable for EPI under a chemistry/serology lab test of “*Clostridium difficile* toxin” with the indicator “contains” and the value of “pos”, as noted in the sample page. If your site does not routinely do *Clostridium difficile* toxin assay testing this way, a different method of accessioning the specimen to get it in chemistry/serology format would be needed.

However, the Chemistry/Serology format would give additional flexibility in placing interpretational guidelines for the test results in the “Comments” field. For the EPI, “positive” or “negative” results **cannot** be located in a “Free Text” or “Comments” field as these are **not** retrievable.

Some VAMCs accession the stool specimen for the *Clostridium difficile* toxin assay under the Microbiology format. An etiology is not given under the final culture result, but written into free text or comments section stating the *Clostridium difficile* toxin assay test result. This is not in a retrievable format and therefore not acceptable for the EPI criteria.

Some VAMCs still use cytotoxin assays of cell culture, which are again entered in a “Free Text” or “Comment” field. This again is not acceptable unless it is accessioned and recorded under the chemistry/serology format as a straightforward lab test result of “positive” or “negative” or “indeterminate”.

Some VAMCs choose to report *Clostridium difficile* toxin assay positivity under the Microbiology application. As an etiology/culture result of *Clostridium difficile* (even though culture, was not actually done) this is not a true measure of what is actually being tested (as most sites do not culture the organism but just run the toxin assay test). However, if your site uses this means to represent *Clostridium difficile* toxin assay positivity and there are no exceptions (such as the site reporting an actual positive culture of (*Clostridium difficile* which is toxin assay negative), then this would be acceptable though less desirable for EPI purposes.

Validating EPI Data Captures

The purpose of validating EPI data captures is **not** to require extra paperwork for QI monitors and long-term document files. The validation should be done at the initial implementation of the Laboratory EPI software to ensure accurate data capture. Thereafter, a review should be done once every 4-6 months to ensure that Lab EPI Parameter Setup [LREPI (EPI) PARAMETER UPDATE] option entries for the EPI criteria remain accurate. Parameter updates may be required when a new lab test/result is to be implemented for one of the Emerging Pathogens Initiative.

Once the predetermined emerging pathogens parameter descriptions are defined using the Lab EPI Parameter Setup [LREPI PARAMETER SETUP] option EPI data captures and monthly EPI HL7 format mailman messages transmissions can take place. EPI data captures are “automatically generated” monthly and sent to AAC on the 15th day of each month. Upon receipt of the EPI HL7 Format mailman messages transmission, AAC sends individual “EPI Confirmation Mailman Message” to the sending VHA sites EPI mail group members notifying them that the EPI mailman messages transmission has ONLY been received and NO EPI data has been processed.

The **new** ‘EPI Summary Verification Report of EPI Extracted Data from Site’ mailman messages **replaced** the original Emerging Pathogens Verification Report mailman messages. The **new** EPI Summary Verification Report mailman messages are “automatically generated” at each site on the 15th day of the month and sent to the EPI-REPORT mail group members (i.e., in a human readable format). The **new** report includes the VHA site’s station number and all predetermined emerging pathogens extracted data occurrences totals for the monthly processing reporting cycle. This **new** report may be used for quick previewing of the EPI data captures entries and totals.

The **new** Detailed Verification Report of EPI Extracted Data from Site’ **replaces** the original Emerging Pathogens Verification Report. The **new** report contains the VHA reporting site’s station number with Notes and Comment Segments (NTE) findings in human readable pages. VHA sites reporting NTE findings (i.e., 1, 2, 3 . . . 23) starts with a new page for each NTE findings.

The Microbiology Laboratory personnel, Laboratory Manager, TQI/QI/QA, or other personnel (i.e., as determined by the sites) may already have data of isolated “organisms of interest”. Several of the nationally defined emerging pathogens may well corresponds. Therefore, a quick comparison can be done using the **new** Verification Detail Report of EPI Extracted Data from Site mailman messages. This comparison also ensures that the Laboratory EPI software is appropriately capturing all EPI cases and numbers.

For tests such as Hepatitis A Antibody NEG, Hepatitis B Antibody NEG, Hepatitis C Antibody POS, and Hepatitis C Antibody NEG most LIMs should be able to generate reports (with patient names) that include “positive” tests results to use for comparison. Additionally, the Health Information Management Section at each site should be able to generate a report of ICDM-9 Diagnoses by date. This ICDM-9 Diagnoses by-date-report helps determine if the VACO Infectious Disease Program Office EPI and emerging pathogens data captures concurs with the defined EPI criterion (i.e., Cryptosporidium-007.8, Legionnaire’s disease--482.80, malaria--084, 084.0, 084.1, 084.2, 084.3, 084.4, 084.5, 084.6, 085.7, 084.8, 084.9, dengue-061, 065.4, Creutzfeldt-Jakob--046.1, and Leishmaniasis--085, 085.0, 085.1, 085.2, 085.3, 085.4, 085.5, 085.9.

Be aware that a number of these pathogens DO NOT occur at a high frequency. VHA sites with previously known cases of emerging pathogens, such as TB, should run the Lab EPI Manual Run [LREPI (EPI) MANUAL RUN] option for the entire month to verify that the TB culture was isolated and to see if it is captured. Additionally, “test patients” known to have these lab results can also be run.

Required EPI Mail Groups and Descriptions

The EPI Roll up Modification software release requires the following mail groups:

- EPI mail group
- EPI-REPORT mail group

NOTES:

It is highly recommended that the **Office of the Director** (00) at each VHA facility initially designate the member(s) responsible for overseeing the EPI mail group, and the EPI-REPORT mail group.. The Office of Director (00)-designated staff for EPI process implementation should be assigned to this mail group and kept current as personnel assume this responsibility. This/these staff member(s) is/are responsible for reviewing processing (error) reports and coordinating EPI data corrections (as necessary) due to the numerous files from which the data is obtained (e.g., PTF, PIMS, Health Information Management, Laboratory, etc.). Once the corrections are made, it is the responsibility of this designated staff to re-transmit the EPI data to the AAC using the Lab EPI Manual Run (Enhanced) option. Other personnel at the site who may be of assistance trouble-shooting errors may also elect to be member of this mail group.

It is highly recommended that a TQI/QI/QA staff, Laboratory Information Manager (LIM), Microbiology director or supervisor, Infection Control Practitioners, or Hospital Epidemiologist), or individual(s) with similar functions be a member(s) of one or more of these mail groups as previously noted.

EPI Mail Group Description

The EPI mail group is used by VHA facilities to transmit EPI HL7 format mailman messages **TO** the Austin Automation Center (AAC). This mail group is also used by AAC to transmit EPI Confirmation mailman messages **BACK** to the sending VHA facilities once the EPI HL7 format mailman messages data transmission has been received by AAC.

EPI-REPORT Mail Group Description

The EPI-Report mail group is use to receive the automatically generated **new** Verification Summary Report on the 15th day of each month. This mail group is also use to receive the **new** Verification Summary Report when manually generated using the Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option.

NOTE: Members of the EPI-Report mail group will assist with the EPI data validation and data correction process.

EPI Data Processing Cycles

Currently, twenty three predetermined emerging pathogens act as triggers for EPI data extraction (i.e., as defined by VACO) within the EPI software application. The software then retrieves relevant, predetermined, and patient-specific data.

EPI software builds a HL7 format mailman message transmission on the 15th day of each month containing specific EPI data extractions. **Note:** A local global build is used to automatically generate the new “Verification Summary Report and Verification Detailed Report of EPI Extracted Data From Site” in a HL7 format mailman message.

EPI HL7 format mailman messages containing the EPI data extractions are transmitted to the Austin Automation Center via the Q-EPI.MED.VA.GOV domain on the 15th day of each month.

Austin Automation Center returns an EPI Confirmation mailman message upon receiving the sending facility EPI HL7 format mailman message. **Note:** The EPI Confirmation mailman message ONLY confirms that the EPI HL7 Format mailman messages have reached the Austin Automation Center queue, NOT necessarily accepted for processing.

On about the 25th day of the month Austin Automation Center processes the EPI data set and sends an EPI Processing (Error)Report mailman messages back to each sending facility via the EPI mail group.

Note: The EPI Processing Report notifies the sending facility that the EPI data set has been processed by the Austin Automation Center, either with NO fatal errors indicating EPI data set acceptance OR that Fatal Error codes occurred constituting rejection of the entire EPI data set.

Once the EPI data set is accepted, the Austin Automation Center analyzes the EPI data set using the Statistical Analysis System (SAS) based statistical software. VACO Reports may then be generated for appropriate use and distribution at the national level.

EPI HL7 Format Mailman Message

The VistA Laboratory EPI software automatically searches, extracts, processes, and transmits EPI data using an HL7 format mailman message on the 15th of each month via the Q-EPI.MED.VA.GOV domain to the AAC for processing. The EPI software is **enhanced** to include LOINC, MIC values, MPI values, race, ethnic Groups, county codes, and assigned patient class for inpatient/outpatient data.

EPI Confirmation Mailman Message

Upon AAC receipt of the VHA facilities EPI HL7 format mailman message monthly transmission (i.e., 15th of each month via the Q-EPI.MED.VA.GOV domain) individual EPI Confirmation mailman messages are sent by AAC to the originating VHA facilities via the EPI mail group. Members of this mail group are being notified that EPI HL7 format mailman message data transmission has been received by AAC for processing.

Examples: EPI Confirmation mailman message sent by AAC

New EPI Summary Verification Report of EPI Extracted Data from Site' HL7 Mailman Message

The **new** EPI Verification Summary Report of EPI Extracted Data from Site HL7 format mailman message **replaced** the original Emerging Pathogens Verification Report HL7 format mailman message. This **new** EPI Summary Verification Report HL7 format mailman message is automatically generated at the VHA site on the 15th the month and sent to the EPI-REPORT mail group members via a HL7 format mailman messages (i.e., in a human readable format). The **new** EPI Verification Summary Report mailman messages contains the VHA site's station number and all predetermined emerging pathogens extracted data occurrences totals for the monthly processing reporting cycle. This **new** report may be used for quick previewing of the EPI data captures entries and totals.

NOTES:

The **new** EPI Summary Verification Report of EPI Extracted Data from Site can also be generated **manually** as often as necessary using the Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option. This option can be **manually** generated as often as necessary. After the report is generated data is automatically sent to EPI-REPORT mail group which may be used for EPI data validation.

Lab EPI extract data transmissions to AAC occur after 6:00 pm and are processed the next day.

DO NOT run the Lab EPI Manual Run (Enhanced) [LREPI ENHANCED MANUAL RUN] option to transmit EPI extract data on Wednesdays of PAY ROLL weeks. These transmissions may cause a delay in processing the PAY ROLL data.

Example: New EPI Summary Verification Report of EPI Extracted Data from Site' mailman message.

NOTE: The new EPI Summary Verification Report of EPI Extracted Data from Sites can be manually generated using the Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option. After the report is generated it is automatically sent to EPI-REPORT mail group which can be used for EPI data validation.

For definitions of case ascertainment for each category, please refer to documentation in Laboratory EPI Patch LR*5.2*281 Technical and User Guide in conjunction with your local parameter set-up of this process.

Subj: EPI Summary Verification Report [#19669319] Page 3

If you feel that these numbers are in error, please verify with the local facility personnel responsible for setting the EPI Laboratory Search/Extract parameters. However, do not change these parameters if they are incorrect without fully reading the documentation; this will be crucial in order to avoid any misalignment with the concomitant Hepatitis C Extract patches (PXRM*1.5*1, VA-National EPI DB Update, LR*5.2*260, PSJ*5*48, Hepatitis C Initiative, and PSO*7*45, Hepatitis C Initiative). In particular, the hepatitis C antibody positive, hepatitis C antibody negative, hepatitis A antibody positive and hepatitis B positive will be especially sensitive to changes, and concomitant changes of all of the patches may need to occur.

1. For Microbiology Lab Package Organism results/isolates (e.g. Enterococcus, or Streptococcus pneumoniae), the number corresponding to the name represents the total number reported from your local microbiology package during the processing month. The number corresponding to the line 'Patients with...<Microbiology Lab Result/isolates> (e.g. Patients with Enterococcus or Patients with Streptococcus pneumoniae) represents the number of individual patients from whom the results were isolated.

Subj: EPI Summary Verification Report [#19669319] Page 7

2. For non-microbiology results (e.g. chemistry/serology results such as Hepatitis C antibody), the number corresponding to the name represents the TOTAL number of <named> tests done at your facility during the processing month. The number corresponding to the line <Patients with...<non-Microbiology test> (e.g. Hepatitis C antibody) represents the number of individuals on whom the test(s) was/were performed. This does not represent the number of persons who had a positive test result.

3. These results have been obtained based on specimen accession date and not results reported dating.

New EPI Summary Verification Report for prior month - TB only

NOTE: This new EPI Summary Verification Report for prior month – TB only represents a second pass at acquiring data for the EPI from the prior month on Mycobacterium tuberculosis due to the extended period of time that may be expected with accessioning, growth, and finally reporting of results. Since this is designed to acquire only the remaining Mycobacterium tuberculosis data from the prior month, most of the numbers present for this report will be zero. The accompanying Summary Verification Report for the current month should contain more complete number counts on the other EPI pathogens and data items for this current month.

NTE~23-All Enterococci	0	0

For definitions of case ascertainment for each category, please refer to documentation in Laboratory EPI Patch LR*5.2*281 Technical and User Guide in conjunction with your local parameter set-up of this process.

If you feel that these numbers are in error, please verify with the local facility personnel responsible for setting the EPI Laboratory Search/Extract parameters. However, do not change these parameters if they are incorrect without fully reading the documentation; this will be crucial in order to avoid any misalignment with the concomitant Hepatitis C Extract patches (PXRM*1.5*1, VA-National EPI DB Update, LR*5.2*260, PSJ*5*48, Hepatitis C Initiative, and PSO*7*45, Hepatitis C Initiative). In particular, the hepatitis C antibody positive, hepatitis C antibody negative, hepatitis A antibody positive and hepatitis B positive will be especially sensitive to changes, and concomitant changes of all of the patches may need to occur.

New Detailed Verification Report of EPI Extracted Data from Site Mailman Message

The **new** Verification Detailed Report of EPI Extracted Data from Site' **replaces** the original Emerging Pathogens Verification Report. The **new** report contains the VHA reporting site's station number with Notes and Comment Segments (NTE) findings in a human readable format. VHA sites reporting NTE findings (i.e., 1, 2, 3 . . . 23) starts with a new page for each NTE findings. The report is automatically generated on the 15th of the month and can also be generated **manually** as often as necessary using the Lab EPI Manual Run (Enhanced) [LREPI ENHANCE MANUAL RUN] option. After the report is generated the data is automatically sent to EPI-REPORT mail group which may be used for EPI data validation. Use the **new** Print Detailed Verification Report [LREPI VERIFICATION REPORT] option to print the **new** Verification Detailed Report.

Example: New Detailed Verification Report of EPI Extracted Data from Site mailman messages.

DETAILED VERIFICATION REPORT OF EPI EXTRACTED DATA		
FROM STATION (Your station number and name is displayed here.)		
PROCESSING PERIOD: 03-01-2003 through 03-31-2003		
NTE~23- All Enterococci		
These data note persons at your facility during the month that had a positive result for all Enterococci. Identifying information, along with specimen and culture results has been provided.

UPDATES			
This section presents patients who had a transmission of information during a month on an EPI defined topic that was incomplete. These patients have information that has been transmitted during the current processing month in order to complete the EPI files. This information usually contains inpatient information about discharge date; ICD-9 coded diagnoses, and occasionally will contain laboratory based testing. This line listing of patient, SSN, and admission date and discharge date is provided to assist with analysis should a processing/error report occur with your monthly automated transmission of this data.			
Name	LAST 4	Admission date	Discharge date
LABPATIENT13~FIVE	0135	12-19-2002@1605	04-05-2003@1213
LABPATIENT13~SIX	0136	01-28-2003@1720	03-06-2003@1614

Detailed Listing of Hepatitis C Risk Assessment

These Health factors/Resolved terms for hepatitis C risk assessment are the national Health factors used for roll-up of risk assessment data. They may not reflect the terms actually utilized (seen) in the Clinical Reminder package at this facility. To determine which local/facility Clinical Reminder health factor(s) correspond(s) to the national term, please contact your facility Clinical Reminder application coordinator. Note that hepatitis C infection is based on a previously ICD-9 coded diagnosis of hepatitis C at your site/facility.

New EPI Processing Error Report Mailman Message sent from Austin

The **new** EPI Processing/Error Report mailman message itemizes all transmissions received by AAC and document the records status as either being accepted or rejected (with the reason and reject code identified). This report is sent to the EPI mail group. (*Examples of “Tables of Rejects and Errors and/or Warning Codes” are located in the Appendix - B section of this manual.*)

Example: New EPI Processing Error Report Mailman Message

```

THIS REPORT REPRESENTS DATA FROM APRIL      2004 FROM YOUR STATION

AS A GENERAL GUIDE FOR INTERPRETATION, THERE ARE 2 TYPES OF ERROR CODES.
ONE TYPE HAS 3 DIGITS (E.G., 240) AND THE OTHER TYPE HAS THE LETTER W
FOLLOWED BY 2 DIGITS (E.G., W05). A LISTING OF MEANINGS FOR THE ERRORS

Enter RETURN to continue or '^' to exit:

```

Example: EPI Processing Error Report Mailman Message *continued*

Subj: EPT/DOY #041381117683754 [#19644680] Page 2

IS PROVIDED BELOW. THE 3-DIGIT ERROR CODE INDICATES THAT A FATAL ERROR OCCURRED FOR THE LISTED PATIENT AND THE ENTIRE EPI MESSAGE FOR THE MONTH OF APRIL 2004 WAS NOT ACCEPTED INTO THE DATA REPOSITORY. YOUR SITE WILL NEED TO CORRECT A 3-DIGIT FATAL ERROR CODE FOR ALL PATIENTS HAVING IT PRESENT, AND THEN RE-TRANSMIT THE APRIL 2004 EPI MESSAGE USING THE MANUAL RUN OPTION--L AB EPI MANUAL RUN (ENHANCED). THIS MANUALLY RE-SUBMITTED MESSAGE WILL BE PROCESSED AT THE AUSTIN AUTOMATION CENTER. KEEP IN MIND THAT IF YOU DO RE-SUBMIT A TRANSMISSION, THE NORMAL EPI PROCESS WILL ALSO GENERATE AND SEND ITS NORMAL MONTHLY DATA AS SCHEDULED; THEREFORE, AT THE TIME OF RECEIPT OF PROESSING MESSAGES, YOU SHOULD RECEIVE REPORTS FOR MORE THAN ONE TRANSMISSION. A WARNING CODE DOES NOT CONSTITUTE A FATAL ERROR. THESE WARNING MESSAGES SHOULD BE CORRECTED IF ABLE, BUT DO NOT NEED FOR THE DATA TO BE RESUBMITTED. YOU SHOULD MONITOR THE WARNING MESSAGES OVER THE NEXT COUPLE OF TRANSMISSIONS TO BE ASSURED THAT THEY DO NOT PERSIST. IF YOUR PROCESSING MESSAGE CONTAINS ONLY WARNING ERROR CODES (I.E., THERE ARE NO FATAL ERROR CODES), MANUAL RE-TRANSMISSION DOES NOT NEED TO BE PERFORMED.

240 Period of Service was invalid.

W07 Specimen Source Code is blank.

Enter RETURN to continue or '^' to exit:

410	Discharge Date	Not required. Must be blank or a valid date. Must be less than or equal to processing date.	Discharge Date is invalid or after date of transmission.
411	Discharge Time	Not required. Time must be blank or a valid time.	Discharge Time is invalid
420	Admit Date/Time	Required. Must be numeric. Must be a valid date. Must be less than or equal to processing date.	Admit Date is invalid or after date of transmission.
421	Admit Date/Time	Required. Time must be numeric. Must be a valid time.	Admit Time is invalid.
500 Series			
<i>DG1 Segment</i>			
500	Diagnosis Code	Required. Must be a valid code. (Refer to table AA010)	Invalid Diagnosis Code (Refer to table 0051)
600 Series			
<i>OBX Segment</i>			
605	Final Result Date	Must be blank or a valid date. Must be numeric. Must be a less than or equal to the processing date.	Final Result Date is invalid or after the date of transmission.

Examples: Tables of Rejects and Errors and/or Warning Codes *continued.*

Tables of Rejects and Errors and/or Warning Codes			
ERROR NUMBER	FIELD NAME	EDIT DESCRIPTION	ERROR MESSAGE
W00 Series			
<i>Warnings</i>			
W03	Patient Date of Birth	Must not be all spaces.	Patient Date of Birth is all spaces. (Also see 205)
W04	Patient Date of Birth	Year must not be all zeros	Patient Date of Birth Year is all zeros. (See also 205)
W05	Patient Date of Birth	Must be a valid date.	Patient Date of Birth is not in a valid date format. (Also see 205)
W07	Specimen Source Code	Blanks in code.	Specimen Source code is blank. (See also 310)
W09	Observation Nat Lab Num	Blanks in code.	Observation Nat Lab Num is blank. (Also see 600)
W10	Date of Prescription	Must not be all spaces.	Date of Prescription is all Spaces.
W11	Date of Prescription	Year must not be all zeros.	Date of Prescription is all Zeros.
W12	Date of Prescription	Must be a valid date.	Date of Prescription is not in a valid date format.
W14	Resolve Term	Must be numeric.	Resolve Term must be numeric.
W15	Days Supply	Must be numeric or blank.	Days Supply not numeric or blank.
W16	Release Date	Must be numeric date. Must be a valid date. Must be less than processing date.	Release Date is invalid date or after the date of transmission.
W17	Fill Date	Must be numeric date. Must be a valid date. Must be less than processing date.	Fill Date is invalid date or after the date of transmission.

Examples: Tables of Rejects and Errors and/or Warning Codes *continued.*

Tables of Rejects and Errors and/or Warning Codes			
ERROR NUMBER	FIELD NAME	EDIT DESCRIPTION	ERROR MESSAGE
W18	Stop Date	Must be numeric date. Must be a valid date. Must be less than processing date.	Stop Date is invalid date or after the date of transmission.
W19	Primary Indicator	One DG1 diagnostic code must be designated as the primary code - valid starting with version 2 of the software.	No diagnostic code designated as primary
W20	Release Date/Fill Date	At least one of the two - release date or fill date - must be present.	Release Date and Fill Date are both blank.
W21	DSP Nomenclature	Must not be all spaces.	DSP Nomenclature is all spaces.
W22	Resolve Term	Must be 1, 2, 3, 4, 5, 6, 7, or 0.	Invalid Resolve Term.
W23	Lab Result	Must be spaces if Resolve Term is 1, 2, 3, 4, or 7.	Lab Result is not insync with Resolve Term.
W24	LOINC Code	Must be a valid code or blank.	LOINC Code is invalid.

National Laboratory Test (NLT) List

The NLT WKLD Code Request Form is accessible via the following web sites:

APPENDIX – C

Health Level Seven (HL7) Protocol

Health Level Seven (HL7) Protocol

The EPI Rollup Modification patch LR*5.2*281, utilizes the *VistA* Laboratory, PIMS, Pharmacy, Clinical Reminders, and Social Work databases for the EPI Rollup Modification criteria. The *VistA* HL7 software is used to transmit EPI Rollup Modification data to the AAC database.

3. General Specifications

3.1 Communication Protocol

The electronic *VistA* Mailman software application is used as the communications protocol for sending the EPI HL7 mailman messages between *VistA* database and AAC database.

3.2 Application Processing Rules

The HL7 protocol itself describes the basic rules for application processing by the sending and receiving systems. The HL7 Version 2.2 protocol is used. The Observational Results Unsolicited (ORU) message is sent using the HL7 batch protocol.

3.3 Message

The following HL7 mail message is used to support the exchange of data:

ORU Observational Results Unsolicited

3.4 Segments

The following HL7 segments are used to support the exchange of data:

HL7 segments	Exchange of Data
DG1	Diagnosis
DSP	Display Data
MSH	Message Header
NTE	Notes and Comments
OBR	Observation Request
OBX	Observation Results
PID	Patient Identification
PV1	Patient Visit
ZXE	Pharmacy Prescription Order

3.5 Fields

The following HL7 fields are used to support the exchange of data for each of the segments listed in the 3.4 Segments:

SEGMENT	FIELD	Data	FIELD ELEMENT NAME	USER/HL7 DEFINED
SEQUENCE NUMBER	Type/Length			
DG1	1	4/SI	Set ID-Diagnosis (Sequence #)	HL7
	3	60/CE	Diagnosis Code (Code(id) ^Text (St.) ^ Name of coding system (st))	HL7
	4	19/TS	Admission Date	HL7
	6	2/IS	Diagnosis Type (PR=DXLS)	HL7
MSH	1	1/ST	Field Separator	HL7
	2	4/ST	Encoding Characters	HL7
	3	180/HD	Sending Application	HL7
	4	180/HD	Sending Facility	HL7
	5	180/HD	Receiving Application	HL7
	6	180/HD	Receiving Facility	HL7
	7	19/TS	Date/Time of Message	HL7
	8	40/SY	Security	HL7
	9	7/CM	Message Type	HL7
	10	20/ST	Message Control ID	HL7
	11	3/PT	Processing ID	HL7
	12	8>ID	Version ID	HL7
OBR	1	4/SI	Set ID-Observation Request (Seq #)	HL7
	4	200/CE	Universal Service ID (identifier ~ text ~ name of coding system ~ alt id ~ alt text ~ alt coding system)	HL7
	7	19/TS	Observation Date/Time	HL7
	15	300/CM	Specimen Source (Specimen source code (CE) ~~ text (TX))	HL7 (Table 0070)
	26	400/CM	Parent Results (OBX observation id of parent ^OBX sub ID)	HL7

3.5 Fields continued

	FIELD	Data		
SEGMENT	SEQUENCE	Type/Length	FIELD ELEMENT NAME	USER/HL7 DEFINED
	NUMBER	HL/7		
NTE	1	4/SI	Set ID (seq. #)	HL7
	3	64K/FT	Comment (five formats exist for this segment, see Note #2)	HL7
OBX	1	4/SI	Set Id-Observational Simple (seq. #)	HL7
	2	2>ID	Value Type	HL7
New LOINC	3	80/CE	Observation Identifier (identifier ~ text ~ name of coding system ~ alt id ~ alt text ^ alt coding system)	HL7
	4	20/ST	Sub Id	HL7
New MIC value	5		Observation Value (Result)	HL7
	6	60/CE	Units (Units)	HL7
	8	10/ID	Abnormal Flags	HL7 (Table 0078)
	14	60/CE	Date/Time of the Observation (Verified Date/Time)	HL7
PID	1	4/SI	Set ID – Patient ID	HL7
	2	16/CK	Patient ID (External ID)	HL7
New MPI	3	20/CM	Patient ID (Internal ID)	HL7
	5	48/PN	Patient Name	HL7
	7	19/TS	Date of Birth	HL7
	8	1/ID	Sex	HL7 (Table 0001)
New Race	10	1/ID	Race	HL7 (Table VA07)
	11	106/AD	Address (Homeless{where applicable}~Zip Code)	HL7
New County Code	12	4/IS	County Code	HL7
	19	16/ST	SSN	HL7

3.5 Fields continued

	FIELD	Data		
SEGMENT	SEQUENCE	Type/Length	FIELD ELEMENT NAME	USER/HL7 DEFINED
	NUMBER	HL/7		
New Ethnic Group	22	80/CE	Ethnic Group	HL7
	27	60/CE	Veteran's Military Status	HL7 (Table Va011)
PV1	1	4/SI	Set ID - Patient Visit	HL7
	36	3>ID	Discharge Disposition (Type of Disposition {Code}~Type of Disposition {Text}~Source ID {VA45=VA File 45})	HL7
Servicing Facility	39	2/SI	Servicing Facility	HL7
	44	19/TS	Admit Date/Time (Event Date/Time)	HL7
	45	19/TS	Discharge Date/Time	HL7
DSP	1	2/ID	Set ID	HL7
	3	80/FT	Date~Text Term~Resolved Term~Result~Sourceid	USER
	5	2/ID	Result ID (linking DSP and ZXE)	HL7
ZXE	1	20/FT	NDC	USER
	2	75/FT	Drug Name~Coding System	USER
	3	4/NM	Days Supply	USER
	4	19/TS	Release Date/Time	USER
	5	19/TS	Fill Date/Time	USER
	6	19/TS	Stop Date/Time	USER
	7	2/ID	Result ID (linking DSP and ZXE)	USER

NOTE: The NTE segment is present in four forms. EPI only items tagged with (EPI).

- a. NTE||manual/automatic indicator (Null for automatic, R for Manual)~REPORTING DATE FROM from date TO to date~message number~~software version number (blank for original system/V2 for new system(epi)~Negative Input Indicator (null if input is present, N if negative)
- b. NTE|sequence number|reference number from field .05 (reference number) in 5 (LAB SEARCH/EXTRACT file (#69)).
- c. NTE||Totals indicator (T if NTE describes totals for run)~National Lab Test Code~Test Name from LAB TEST file (#60) or (ETIOLOGY FIELD file (#61.2)~Total number of tests performed
- d. NTE||Totals indicator (T if NTE describes totals for run)~National Lab Test Code~“PATIENTS WITH”_Test Name from LAB TEST file (#60) or ETIOLOGY FIELD file (#61.2)~Number of unique patients receiving this test

4.0 Transaction Specifications

4.1 General

The VistA software sends an Observational Result Unsolicited (ORU) result type HL7 message whenever one or more of the defined emerging pathogen initiatives are identified.

4.2 Specific Transaction

A. Identified Encounter

When EPI data are identified an EPI Observational Result Unsolicited (ORU) message is sent to the AAC. The EPI ORU message consists of the following segments:

Example: EPI ORU Message

ORU	OBSERVATIONAL RESULT UNSOLICITED
MSH	Message Header
NTE	Notes and Comments
PID	Patient Identification
PV1	Patient Visit
NTE	Notes and Comments
DG1	Diagnosis
DSP	Display Data
ZXE	Pharmacy Prescription
OBR	Observation Report
OBX	Results

Table 0005 – Race:

1ST RACE COMPONENT Identifier comes from table 0005.

2ND COMPONENT Text- comes from table 0005.

IDENTIFIER	TEXT
0000-0-SLF	Declined to answer
9999-4-SLF	Unknown by patient
1002-5-SLF	American Indian or Alaska Native (self identified)
1002-5-PRX	American Indian or Alaska Native (proxy identified)
1002-5-OBS	American Indian or Alaska Native (observer identified)
1002-5-UNK	American Indian or Alaska Native (unknown identifier)
2028-9-xxx	Asian (xxx identified)
2054-5-xxx	Black or African American (xxx identified)
2076-8-xxx	Native Hawaiian or other Pacific Islander (xxx identified)
2106-3-xxx	White (xxx identified)

Table CDC – Race:

3rd RACE COMPONENT Identifier - comes from table CDC.

4th COMPONENT Text - comes from table CDC.

IDENTIFIER	TEXT
null	Unknown by patient or Declined to answer
1002-5	American Indian or Alaska Native
2028-9	Asian
2054-5	Black or African American
2076-8	Native Hawaiian or other Pacific Islander
2106-3	White

Table 0189 - Ethnic Group

1ST ETHNICITY COMPONENT Identifier - comes from table 0189.

2ND COMPONENT Text - comes from table 0189.

IDENTIFIER	TEXT
0000-0-SLF	Declined to answer
9999-4-SLF	Unknown by patient
2135-2-SLF	Hispanic or Latino (self identified)
2135-2-PRX	Hispanic or Latino (proxy identified)
2135-2-OBS	Hispanic or Latino (observer identified)
2135-2-UNK	Hispanic or Latino (unknown identifier)
2186-5-xxx	Not Hispanic or Latino (xxx identified)

Table CDC - Ethnic Group

3rd ETHNICITY COMPONENT Identifier - comes from table CDC.

4th ETHNICITY COMPONENT Text - comes from table CDC.

Value	Description
Null	Unknown by patient or Declined to answer
2135-2	Hispanic or Latino
2186-5	Not Hispanic or Latino

APPENDIX – D

VHA DIRECTIVE 2001-039

JUNE 27, 2001

**IMPLEMENTATION OF LOGICAL
OBSERVATION IDENTIFIERS NAMES
AND CODES (LOINC®) FOR
LABORATORY DATA**

APPENDIX – D

Department of Veterans Affairs	VHA DIRECTIVE 2001-039
Veterans Health Administration	
Washington, DC 20420	June 27, 2001

IMPLEMENTATION OF LOGICAL OBSERVATION IDENTIFIERS NAMES AND CODES (LOINC®) FOR LABORATORY DATA

NOTE: LOINC® is a registered trademark symbol.

1. PURPOSE: This Veterans Health Administration (VHA) Directive defines policies on the need for consistent laboratory test names across the national system within the Veterans Health Information Systems Technology Architecture (VistA) software.

2. BACKGROUND

a. Improving health data is also a high priority that is consistent with VHA's goal of improving the quality and accessibility of medical information for clinicians and veterans. In order to provide optimal clinical care, accurate, comprehensive, accessible, and timely data is necessary. Improvements in the provision and outcomes of VHA health care can only be measured by consistent and valid information.

b. LOINC® is a data system that provides a standard set of universal names and codes for identifying individual laboratory results. Developed as a collaborative effort including VHA's Office of Information (OI) staff, LOINC® codes were first released in April 1996 and have since been formally endorsed by the American Clinical Laboratory Association, the association of large referral laboratories whose membership is responsible for over 60 percent of outpatient laboratory testing in the United States. Numerous private commercial laboratories, health plans and health care provider systems have since adopted this system. LOINC® codes have been incorporated into the National Library of Medicine's Unified Medical Language System and are the basis of the Health Care Financing Administration's (HCFA) proposed International Classification of Diseases, 10th edition (ICD-10), laboratory codes. The codes have been incorporated into HCFA's quality assurance testing pilot programs and adopted by the Centers for Disease Control and Prevention to test reporting of communicable disease information electronically. VHA is represented on the committee responsible for introducing new codes.

c. The primary benefit to the Department of Veterans Affairs (VA) health care is having a system that integrates data across inpatient and outpatient settings and across facilities, allowing easy and timely retrieval of clinically useful information needed to provide efficient, high quality individual patient care. LOINC® allows the aggregation of clinical laboratory data within Veterans Integrated Service Networks (VISNs), and nationally, efforts that are currently encumbered by the high rates of variation in local laboratory test naming. Such mapping provides a way to support multiple, normal ranges based on test, method, specimen, sex, and patient age.

d. Hepatitis C infection, an important public health and medical problem for many veterans, is a high priority for VHA. The Under Secretary for Health has requested the creation of an electronic database to

monitor the clinical outcomes of patients in the VA system with Hepatitis C infection and information needed for the oversight and management of the national hepatitis C program. A prerequisite for the implementation of such a registry is the availability of standardized laboratory test result data across VHA.

THIS VHA DIRECTIVE EXPIRES JUNE 30, 2006

e. Patch LR*5.2*215, to Version 5.2 of the Laboratory software application, was released in April 1999. This patch provides a mapping process for linking VA National Laboratory Test (NLT) codes to LOINC®.

3. POLICY: It is VHA policy that VISN and facility Directors must provide a national system for laboratory test names by ensuring the installation, set-up, and maintenance of each facility's laboratory software mapping to LOINC®.

4. ACTION

a. By June 30, 2001, each facility must install Patch LR*5.2*215 to laboratory software version 5.2.

b. By July 16, 2001, each VISN Director must have designated one lead person, to be known as the VISN LOINC® Coordinator, who will be responsible for ensuring that, at each VistA site, the appropriate mapping of NLT to LOINC® codes will be performed. In addition, the VISN LOINC® Coordinator will serve as a VistA corporate liaison between the VISN and VHA Information Technology team responsible for providing training on the use of the mapping tool. *NOTE: The VISN LOINC® Coordinators will work to ensure complete implementation of LOINC® coding within their respective VISNs.*

(1) The LOINC® Coordinator needs to have a broad-based knowledge of clinical laboratory medicine, an overall understanding of the VistA Laboratory Service software package, experience using general VistA applications (i.e., FileMan, MailMan), and be able to grasp the analytical concepts to properly encode test results in all areas of laboratory (i.e., serology, chemistry, microbiology, blood bank, and immunology).

(2) VISN LOINC® Coordinators will receive training on the lab linking process and orientation to their roles as LOINC® Coordinators through a series of teleconferences for that purpose. Training will be coordinated through the OI National Training and Education Office. Specific information on the LOINC® training is available at: <http://vaww.vistau.med.va.gov/vistau/loinc/loinc.htm>. Training and support through teleconferences and audio question and answer sessions will be made available to the Vista site clinical laboratory VistA liaison (Laboratory Information Manager (LIM) or Automated Data Processing Application Coordinator (ADPAC)). *NOTE: It is requested that facilities do not initiate the mapping process until they have been appropriately trained.*

c. By July 16, 2001, each VISN Director must forward the name and contact information for each VISN LOINC® Coordinator to the National Pathology Enforcement Officer (115), Veterans Health Administration, 810 Vermont Avenue, NW, Washington, DC 20420, or fax to (202) 273-7561.

d. By September 30, 2001, each VISN LOINC® Coordinator must ensure the linking of Hepatitis C-related laboratory tests at each facility and report completion to the VISN Director. *NOTE: The actual mapping will be performed by the LIM or ADPAC at all facilities.*

e. By December 31, 2001, VISN LOINC® Coordinators must have completed the full mapping of LOINC® codes within all facility clinical laboratories and report completion of the task to the VISN Director as well as the Pathology Regional Commissioners. Complete mapping for all laboratory test names is required.

c. National Laboratory Test (NLT) Mapping to Logical Observation Identifier Names and Codes (LOINC®) Patch LR*5.2*215, Technical, Installation and User Guides, Version 5.2, April 1999, Department of Veterans Affairs, Software Service, Clinical Ancillary Product Line. Further information is at <http://vista.med.va.gov/softserv/clin_nar.row/lab/loinc/loinchm.htm>.

6. FOLLOW-UP RESPONSIBILITY: The Chief Consultant for Public Health, Strategic Healthcare Group (SHG), and Chief Consultant, Diagnostic Services SHG, are responsible for the contents of this Directive. Technical support for the preceding actions will be provided by the OI Software Design and Development Group. Content support will be provided by the Chief Consultant, Diagnostic Services SHG.

7. RECISSIONS: None. This VHA Directive expires June 30, 2006.
