The scientific publications of the United States National Museum consist of two series, the *Proceedings* and the *Bulletins*.

The *Proceedings*, the first volume of which was issued in 1878, are intended primarily as a medium for the publication of original, and usually brief, papers based on the collections of the National Museum, presenting newly acquired facts in zoology, geology, and anthropology, including descriptions of new forms of animals, and revisions of limited groups. One or two volumes are issued annually and distributed to libraries and scientific organizations. A limited number of copies of each paper in pamphlet form, is distributed to specialists and other interested in the different subjects as soon as printed. The date of publication is printed on each paper, and these dates are also recorded in the tables of contents of the volumes.

The *Bulletins*, the first of which was issued in 1875, consist of a series of separate publications comprising chiefly monographs of large zoological groups and other general systematic treatises (occasionally in several volumes), faunal works, reports of expeditions, and catalogues of type specimens, special collections, etc. The majority of the volumes are octavos, but a quarto size has been adopted in a few instances in which large plates were regarded as indispensable.

Since 1902 a series of octavo volumes containing papers relating to the botanical collections of the Museum, and known as the *Contributions from the National Herbarium*, has been published as bulletins.

The present work forms No. 112 of the *Bulletin* series.

## INTRODUCTION.

To the preparation of this summary the author has brought the results of more than 50 years' study of the molluscan fauna of the northwest coast, his personal investigations in the field having begun in 1865, when, under the auspices of the Smithsonian Institution, he visited the shores of the Pacific as a member of the scientific corps of the Western Union Telegraph Expedition.

Since that time a constant inflow of material from that region has enriched the collection of the United States National Museum until it has become unrivaled in this group of animals.

Very few of the species described from the area between the southern boundary of the United States and the Polar Sea on the Pacific coast are absent from the series referred to. In a few cases where the writer has not been able to verify personally the names or the distribution from authentic specimens, the name of the authority upon whom the data rest has been added in parentheses.

The distribution of the Mollusca on the west coast of America may be allotted to three grand divisions: the Arctic or Boreal, the Temperate, and the Tropical faunas.

The first, containing many Circumboreal species, extends from the Arctic or Polar Sea to the southern limit of drift ice in winter in Bering Sea.

The Temperate division extends from this line southward on the west coast of America to Point Conception, California.

The Tropic division extends from this point southward to Point Aguja on the coast of Peru.

Each of these divisions may be subdivided into subordinate and reasonably distinct faunas; the Arctic into Eastern and Western, or

Atlantic and Pacific; the Temperate into Aleutian, Oregonian, and Californian; the Tropic into Gulf of Californian, Panamic, and Ecuadorian. These divisions coincide with differences of temperature of the sea water, generally indicated by the distribution of ocean currents.

Taking the distribution of a single family these distinctions might have their boundaries somewhat modified, but on the average of the whole molluscan fauna they appear to be well established.

The limits of these faunas are not in all cases sharply defined. Some of the less sensitive species will be found to range far beyond the divisional boundaries. In southeastern Alaska, where the in-shore channels of the Alexander Archipelago are kept cold by the drainage from glacier streams, many Arctic forms persist; perhaps relicts from the glacial period; while on the outer fringe of the islands quite a number of the more southern species extend their range northward in the warmer ocean waters.

The student of this list will notice many more species, which from southern California extend their range to Panama or even Peru, than are recorded in any previous publication.

There is a special faunula existing on the shallow plateau of northeastern Bering Sea. It is composed largely of carnivorous gastropods, which do not approach the shores. This has furnished a multitude of Buccinidae to the present summary, and was, before the incursion of the whaling fleet, the summer feeding ground of vast numbers of the Pacific walrus.

Before concluding this introduction it would be improper to omit a few words of gratitude to the numerous private students and collectors whose investigations and contributions to the collection have added a multitude of new forms to the known fauna, and to whom a large part of such completeness as this summary may possess is necessarily due. Detailed acknowledgments must await another occasion, but the evidence of their activities is on permanent record in the collections of the United States National Museum, and will afford to future students an indispensable basis for study.

Acknowledgment must also be made to the Director of the United States Geological Survey for the opportunity afforded me to work upon and publish the present paper.

In indicating a figure illustrative of the species standard works, such as are generally accessible in large libraries, have been chosen when possible. If the figure in the work referred to bears there a different specific designation from the one here adopted, it may be understood that the former name is a synonym of the one used in this summary, or for some other reason is not accepted.

Every effort to keep the classification adopted as up to date as possible has been made; though this is a subject on which differences

of opinion are to be expected. The International rules of nomenclature have been rigidly followed, in the belief that the progress of science depends largely on standardization of names, however painful it is to note the disappearance of familiar but erroneous designations. The accuracy called for by the present state of the science should not be relaxed to satisfy the protests of amateurs in taxonomy.

In compiling this list I have taken advantage of the work of my colleague, Dr. Paul Bartsch, who has with great care and intense microscopical study worked out the species of minute forms, such as the Pyramidellidae, Rissoidae, Synceratidae, and Caecidae, and have adopted his results as published in the Proceedings of the United States National Museum during the last few years, with only such changes as the progress of science since their publication has made advisable. Many forms which on a superficial examination by the older authors were regarded as mere mutations of a single species have proved on microscopic study to possess constant characters fully entitling them to specific rank. In general, whenever the characters seem to justify it, I have preferred to record separately forms which, on the examination of only a few specimens, might have been regarded as mere mutations. By thus separating them, often from examination of a multitude of individuals, attention is called to their characters, and future students will have an opportunity to exercise their judgment on the question of specific distinction when otherwise it might have been entirely overlooked.

Many of the species with a wide geographical range follow the isotherms, and when collected in the north appear to be denizens of moderate depths, but in the southern part of their range are found only at great depths where the temperature of the water is the same as in their more boreal habitat. It becomes difficult therefore to determine which species are really members of the archibenthal fauna. I have in the following discussion regarded only those found exclusively in depths of over 200 fathoms as belonging to that fauna, and therefore the number of species of that group in the table may seem unduly small, for many of the others also reach great depths in part of their range.

A very few exceptional cases occur where species are known from deep water in the northern part of their range yet have been obtained in moderate depths in the south. Transportation and regurgitation by fishes may account for this anomaly which must await more thorough collection of living specimens for explanation.

In certain cases of anomalous distribution reported by collectors, and when I have not examined personally authentic specimens, I have appended the name of the authority for the locality. A former habit of the Spanish women of southern California, of preparing shell work for sale to tourists and of carrying their baskets of shells (often

from Mexican localities) when they went collecting on California beaches, and sometimes spilling a few to be picked up later by other collectors, is responsible for some early records which with better knowledge seem adventitious. The Monterey beaches furnished several records of this kind to Gabb and Cooper, which I have rejected as doubtful. Another source of error arose from the small vessels which used to cruise in the Gulf of California and on the Mexican coast, and which arriving at their home ports in California were beached to scrape off accumulated seaweed, barnacles, etc., containing a certain number of southern mollusks and brachiopods, which, however, never seem to become acclimated. San Diego has furnished some records which may be attributed to this cause. However, eliminating such sources of error, the collections in the United States National Museum upon which this list is primarily based, show a much larger proportion of species ranging from Point Conception to the Gulf of California, Mexico, and Panama than was thought possible by Carpenter and other early students of the West Coast faunas.

In endeavoring to assort according to their respective faunas the species in the following discussion I have met with the difficulty of properly placing a number of species which overlap the limits of one or more faunal districts in their geographic range. In such cases I have tried to assign them to the fauna which seemed to be their natural center of distribution. Probably no two persons would agree exactly with all such decisions, but there seems to be no way to avoid this difficulty.

Excluding the Cephalopoda and Nudibranchiata which I have left for treatment by those more expert in those special groups, and adding a few species which have come to my notice among the bivalves since the publication of my check list of the Pelecypoda, I find the census giving the following results for the region included:

Pelecypoda	496	Gastropoda s. s.	1,424
Scaphopoda	19	Polyplacophora	134
Pteropoda	20	Aplacophora	16
Heteropoda	13		
		Total species	2,122

#### Geographically distributed as follows:

Species introduced with "seed" oysters	6
Pelagic species	28
Exclusively abyssal species	151
Arctic species	148
Species of the Aleutian subfauna	291
Species of the Oregonian fauna	371
Species of the Californian fauna	996
Species of the Panamic fauna	131
Total species	2,122

The latest previous list for the region, that of Carpenter, enumerates 468 species. Of the fauna as now enumerated, 136 forms are common to the Atlantic waters, nearly all belonging to the Arctic seas. There are a few species from the western part of Bering Sea which might more properly be assigned to the Okhotsk or Asiatic fauna, which is generally quite distinct from that of the American shores, but I have thought it best to include them as they may extend to the western Aleutians. The plateau fauna of the shallow part of Bering Sea, which is also in the main distinct from that of the surrounding coasts, has not been segregated from the Aleutian group owing to the fact that thorough collections have not been made, and in the present state of our knowledge it is impossible to be certain how many and which species are exclusively confined to the plateau group, which consists largely of Buccinidae.

The fauna of Kamchatka and the Okhotsk Sea, besides a large number of endemic species, contains many analogues of forms peculiar to the American coast, but specifically distinct from the latter. This is probably due to the chasm of deep water extending from the area between the end of the Aleutian chain and the Russian possessions. This abyss extends northward east of the Commander Islands almost to Bering Strait, heading near the entrance to Plover Bay on the Siberian side. The separation of the two areas has apparently existed long enough for the modification of the American and Okhotsk faunas to specific differences in many originally identical forms.

We find also a certain number of species still persisting in the region of North Japan, the Kuril Islands, and southern Kamchatka, which are also found in the Oregonian and northern California faunas, but not in the Aleutian region between their present habitats. These are probably relics of the time when warmer seas extended to the north and a gradual refrigeration exterminated them in the intervening area. Such a species is *Haliotis kamtschatkana*.

The Tertiary and Pleistocene fossils of the shores of Bering Sea also bear evidence of a communication with Atlantic waters during the prevalence of more genial conditions. Several species now living in Bering Sea are found fossil in the late Pliocene of Sankaty Head, Nantucket, and the Pliocene of Iceland, and conversely the common periwinkle of New England, *Littorina palliata* Say, is one of the species found in the elevated beaches of the Nome district, Alaska, and now extinct on the Pacific side. Evidently the intercommunication must have been tolerably free between the two oceans at the time, though now there are quite pronounced differences between the Greenlandic and the Bering Strait Arctic assemblies of mollusks.

A few Mediterranean forms such as *Gibbula adriatica* and *Cymatium corrugatum* appear in the Californian fauna, but no plausible explanation of their presence occurs to me.

Certain discrepancies between the groups of mollusks both in deep and shallow water on the two sides of America were pointed out by me in the discussion of the data in my reports on the dredgings of the *Blake* and *Albatross*. For instance the profusion of species of the Marginellidae in West Indian waters and their scarcity on the Pacific side. Some genera are found only fossil on the Atlantic shores, such as *Strombina*, *Harpa*, and *Cymia*, but are well represented by living forms in the Pacific. Again note the profusion of *Haliotis* on the shores of the Pacific with only a single depauperate deep water species in the western Atlantic. The great number of Pacific *Tritonalia* and other muricoid species contrasts strongly with their paucity on the opposite shores. The late Dr. Philip Carpenter used to lament the absence on the Atlantic coast of the myriads of minute Gastropods he was accustomed to collect on British hunting grounds. That the difference is real, is proved by the scanty rewards which have fallen to New England collectors. But no such scarcity would have been noted had Doctor Carpenter been a west coast collector.

These singularities of distribution will doubtless find an explanation when the recent and fossil mollusk faunas of the two areas are more thoroughly known. At present, hypotheses must be regarded as premature.

A few remarks on the classification adopted may be in order. Of late years some specialists on particular groups, having small knowledge of any but their own particular field, have naturally exaggerated the importance in a classificatory sense of certain features of the subjects of their studies. Two or three bristles in a particular place have sufficed to establish a dipteran genus. This sort of taxonomy does not appeal to me and I have, except in extremely populous groups where convenience requires more laxity, endeavored to exercise a reasonable conservatism in the adoption of divisional names of higher rank than species. I have preferred to utilize the subgeneric names in groups containing numerous species because it familiarizes the student with the subdivisions which in many cases will doubtless reach generic rank at some future time under more intensive study than is at present practicable. Also because of the greater convenience in handling populous groups. In the case of species and varieties, I have preferred inclusiveness to lumping in all cases where doubt existed, but I have not included names based upon mutational color patterns except when the differences are so marked as to be a possible source of misunderstanding to the inexperienced student. In many groups these differences are due to food, or pe-

cularity of situs, as in *Crepidula*, *Haliotis*, *Acmaea*, and other sessile forms. They are not true species, but further investigation is required to establish the source of their differences. A list of this kind is the basis for improvements, additions, and corrections, and such changes are to be taken as inevitable and welcome. For errors such as are almost impossible to exclude in work depending on such multitudinous and scattered data, those who have undertaken similar work will be most charitable. Naturally the utmost care has been taken to avoid them.

The Pteropods are now known to exist (by the almost miraculous preservation of the characters of the soft parts) in material from the Middle Cambrian collected by Walcott. The absurdity of deriving them from the Opisthobranch forms which first occur in Mesozoic faunas, is so obvious as to require no argument.

That the embryonic form of some Aplacophora possesses temporarily eight dorsal plates, indicates their place as extremely degenerate Chitonoids. It is my opinion that the characters allying the Amphineura to the more evolved forms of Gastropoda have greater taxonomic value than those relied upon to separate the former with the rank of a class, in spite of the different decision arrived at by some much respected authors. I have therefore restricted them to the rank of subclass, assigning ordinal rank to the two groups Polyplacophora and Aplacophora. I am indebted to Prof. Harold Heath's discussion and classification of the west coast Aplacophora for that part of the list.

The material upon which the present list is based is almost exclusively contained in the collection of the United States National Museum and is the result of more than half a century of collecting, beginning with the United States Exploring Expedition material studied by Dr. A. A. Gould. Among the earlier collectors should be named Dr. William Stimpson of the Ringgold and Rodgers exploring expedition; Major William Rich and Colonel Ezekiel Jewett of the Mexican War naturalists; Caleb Kennerly of the Northwestern Boundary Survey; the Rev. Joseph Rowell, an early Californian missionary; William M. Gabb and J. G. Cooper of the Geological Survey of California; Thomas Bridges, William P. Blake, and R. E. C. Stearns. Of those mentioned most of the types of species described by them, or by others from their collections, are preserved in the national collection. Of the collections made on the *Albatross* voyages and by the officers of the United States Revenue Marine and by the United States Bureau of Fisheries, beside my own collections made from 1865 to the end of the nineteenth century while in the service of the Western Union Telegraph Expedition, the United States Coast and Geodetic Survey, and the United States Geological Survey, the types are preserved in the same custody.

The above list refers only to the early collectors who have furnished type specimens to the collection. To the many later private collectors who have wisely and generously contributed material to the United States National Museum I hope to give individual credit in another publication.

There are a few new species on the point of publication which may possibly be delayed until after the issue of this bulletin. I have thought best to include their names, with references to the proposed vehicle of publication, to which the reader may hereafter add the page references when available.

SUMMARY OF SPECIES.

CLASS PELECYPODA.

Order PRIONODESMACEA.

(FOLIOBRANCHIATA)

Superfamily SOLENOMYACEA.

Family SOLEMYACIDAE.

Genus SOLEMYA Lamarck, 1818.

Subgenus ACHARAX Dall, 1908.

**ACHARAX JOHNSONI** Dall, 1891.

Proc. U. S. Nat. Mus., vol. 14, p. 189; vol. 17, p. 712, pl. 25, fig. 1.  
Oregon to Panama. *Ecuador*, 1740 fms.

**ACHARAX AGASSIZII** Dall, 1908.

Bull. Mus. Comp. Zool., vol. 43, p. 365, pl. 16, fig. 10.  
Tillamook, Oregon, to Point Aguja, Peru.

Subgenus PETRASMA Dall, 1908.

**PETRASMA PANAMENSIS** Dall, 1908.

Bull. Mus. Comp. Zool., vol. 43, No. 6, p. 366.  
Santa Barbara, California, to Panama.

**PETRASMA VALVULUS** Carpenter, 1864.

Ann. Mag. Nat. Hist., ser. 3, vol. 13, p. 312.  
San Pedro, California, to Gulf of California.

Superfamily NUCULACEA.

Family NUCULIDAE.

Genus NUCULA Lamarck, 1799.

**NUCULA TENUIS** Montagu, 1808.

Test. Brit. Suppl., p. 56, pl. 29, fig. 1.—HANLEY, Mon. Nuculidae, pl. 4,  
figs. 140, 141.  
Point Barrow to Coronado Islands. Circumboreal.

**NUCULA TENUIS EXPANSA** Reeve, 1855.

Last of the Arctic Voy., App., p. 397, pl. 33, fig. 2.  
Arctic Ocean to Sitka, Alaska; San Diego?

**NUCULA QUIRICA** Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 394.  
Chugachik Bay, Cooks Inlet, Alaska.

**NUCULA PETRIOLA** Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 395.  
Off Santa Rosa Island, California, in 53 fathoms.

**NUCULA CARDARA** Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 394.  
Monterey, California, to Lower California, in deep water.

**NUCULA LINKI** Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 394.  
Queen Charlotte Sound to Guaymas, Mexico.

**NUCULA DARELLA** Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 394.  
Off San Diego, in 822 fathoms.

**NUCULA.**

Bering Sea, 1,401 fathoms.

**NUCULA EXIGUA** Sowerby, 1832.

Proc. Zool. Soc., p. 198.—HANLEY, Mon. Nuculidae, pl. 4, fig. 136.  
Golden Gate to Acapulco. *W. coast Patagonia.*

**NUCULA CARLOTTENSIS** Dall, 1897.

Bull. Nat. Hist. Soc. Brit. Col., No. 2, p. 6, pl. 1, figs. 15, 16.  
Queen Charlotte Islands to Anacapa Island.

Subgenus ACILA H. and A. Adams, 1858.

**ACILA CASTRENSIS** Hinds, 1843.

Proc. Zool. Soc., p. 98.—HANLEY, Mon. Nuculidae, pl. 5, fig. 148.  
Bering Sea to San Diego, California.

## Family LEDIDAE.

### Genus LEDA Schumacher, 1817.

**LEDA TAPHRIA** Dall, 1897.

Bull. Nat. Soc. Hist. Brit. Col., No. 2, p. 7, pl. 2, figs. 6, 8.  
Bodega Bay, California, to Lower California.

**LEDA CELLULITA** Dall, 1896.

Nutilus, vol. 10, No. 1, p. 1; Bull. Nat. Hist. Soc. Brit. Col., No. 2, p. 7,  
pl. 2, figs. 5, 7.  
Puget Sound.

**LEDA ACUTA** Conrad, 1831.

Amer. Mar. Conch., p. 32, pl. 6, fig. 1.  
Nazan Bay, Atka Island, Aleutians, to Gulf of California. *Also Atlantic.*

**LEDA MINUTA**, Fabricius, 1776.

Fauna Grönl., p. 414.—HANLEY, Mon. Nuculidae, pl. 3, figs. 61, 62.  
Arctic Ocean to San Diego, California. Also Atlantic.

**LEDA MINUTA LOMAEÑSIS Dall, 1919.**

Proc. Biol. Soc., Wash., vol. 32, p. 249.  
San Diego, California.

**LEDA NAVISA Dall, 1916.**

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 395.  
Farallones Islands to San Diego, California.

**LEDA AMIATA Dall, 1916.**

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 395.  
Off San Diego, in 488 fathoms.

**LEDA PENDERI Dall, 1910.**

Canada Géol. Surv. Mem. 14 N., No. 1143, p. 9, pl. 1, figs. 3, 4.  
Queen Charlotte Islands, to Santa Barbara Islands. *Forster Id. Willlett.*

**LEDA BUCCATA Steenstrup, 1842.**

MOLLER, Index Moll. Grönl., p. 17.—HANLEY, Mon. Nuculidae, pl. 3, figs. 63, 64.  
Arctic Ocean and Bering Strait. Also Atlantic.

**LEDA HAMATA Carpenter, 1864.**

Suppl. Rep. Brit. Assoc., p. 98; Proc. U. S. Nat. Mus., vol. 24, No. 1264,  
p. 558, pl. 40, fig. 9.  
Puget Sound to Panama Bay.

**LEDA HAMATA LIMATA Dall, 1916.**

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 397.  
Santa Barbara to San Diego, California.

**LEDA OXIA Dall, 1916.**

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 395.  
Santa Rosa Island, California, to Gulf of California.

**LEDA LIOGONA Dall, 1916.**

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 396.  
Bering Sea in 1,401 fathoms.

**LEDA PERNULA Müller, 1779.**

Besch. Ges. Naturf. Freunde zu Berlin, vol. 4, p. 55.—HANLEY, Mon.  
Nuculidae, pl. 3, figs. 56, 58.  
Arctic Ocean to Plover Bay. Also Atlantic.

**LEDA RADIATA Krause, 1885.**

Arch. f. Naturg., vol. 51, Heft 1, p. 23, pl. 3, figs. 2 a-c.  
Arctic Ocean; Plover Bay, Eastern Siberia; Okhotsk and Bering Seas.

**LEDA FOSSA Baird, 1863.**

Proc. Zool. Soc., p. 71; Bull. Nat. Hist. Soc. Brit. Col., No. 2, p. 7, pl. 2,  
figs. 3, 13.  
Kotzebue Sound, Alaska, to Puget Sound.

**LEDA FOSSA SCULPTA Dall, 1916.**

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 396.  
South of Alaska Peninsula, 69 fathoms.

**LEDA FOSSA VAGINATA Dall, 1916.**

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 396.  
Kasañ Bay, Alaska, 50 fathoms.

**LEDA FOSSA CURTULOSA** Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, No. 2183, p. 396.  
Bering Sea and Unalaska.

**LEDA PONTONIA** Dall, 1889.

Proc. U. S. Nat. Mus., vol. 12, p. 257, pl. 13, fig. 5b.  
Santa Barbara Islands, California, to Peru and the Galapagos Islands, in  
deep water.

**LEDA LEONINA** Dall, 1896.

Pribilof Islands, Bering Sea, to Gulf of California.

**DIPLODONTA SUBQUADRATA** Carpenter, 1855.

Proc. Zool. Soc., p. 230.  
Catalina Island, California, to Panama.

Subgenus FELANIELLA Dall, 1899.

**FELANIELLA SERICATA** Reeve, 1850.

Conch. Icon. *Lucina*, pl. 9, fig. 55.  
San Diego, California, to Panama.

Seattle, Wash. Eyerdam.

## Family LUCINIDAE.

## Genus LUCINA Bruguière, 1797.

## LUCINA EDENTULOIDES Verrill, 1870.

Amer. Journ. Sci., vol. 49, No. 6, p. 226.

San Clemente Island, California, to Gulf of California.

## Genus PHACOIDES Gray, 1847.

## Subgenus HERE Gabb, 1866.

## HERE RICHTHOFENI Gabb, 1866.

Pal. Cal., vol. 2, p. 29, pl. 8, fig. 49; Proc. U. S. Nat. Mus., vol. 23, pl. 40,  
figs. 7, 9.

San Pedro, California, to Cape San Lucas.

## Subgenus LUCINISCA Dall, 1901.

## LUCINISCA NUTTALLII Conrad, 1837.

Journ. Acad. Nat. Sci. Phila., vol. 7, p. 255, pl. 20, fig. 2.  
Santa Barbara, California, to Mazatlan, Mexico.

## Subgenus LUCINOMA Dall, 1901.

## LUCINOMA ANNULATA Reeve, 1850.

Conch. Icon. *Lucina*, pl. 4, fig. 17; Proc. U. S. Nat. Mus., vol. 23, pl. 40,  
fig. 10.

Port Althorp, Alaska, to Coronado Islands.

LUCINOMA ANNULATA DENSILINEATA Dall, 1919. = *densilirata*

Proc. Biol. Soc. Wash., vol. 32, p. 249.

Sitka, Alaska, to Esteros Bay, California.

## LUCINOMA AEQUIZONATA Stearns, 1890.

Proc. U. S. Nat. Mus., vol. 13, p. 220, pl. 17, figs. 3, 4.  
Santa Barbara Islands to south latitude 38° (Chile).

## Subgenus CALLUCINA Dall, 1901.

## Section EPILUCINA Dall, 1901.

## CALLUCINA CALIFORNICA Conrad, 1837.

Journ. Acad. Nat. Sci. Phila., vol. 7, p. 255, pl. 20, fig. 1.

Crescent City, California, to San Ignacio Lagoon, Lower California.

## Subgenus PARVILUCINA Dall, 1901.

## PARVILUCINA TENUISULPTA Carpenter, 1865.

Suppl. Rep. Brit. Assoc., p. 642; Proc. U. S. Nat. Mus., vol. 23, p. 828, pl.  
40, fig. 5.

Nunivak Island, Bering Sea, to the Coronado Islands, Lower California.

## PARVILUCINA APPROXIMATA Dall, 1901.

Proc. U. S. Nat. Mus., vol. 23, p. 813, pl. 39, fig. 4.  
Monterey, California, to Panama.

## Genus DIVARICELLA Martens, 1880.

## DIVARICELLA PERPARVULA Dall, 1901.

Proc. U. S. Nat. Mus., vol. 23, p. 815, pl. 39, fig. 8.  
 "Monterey" (Gabb). Cape San Lucas to Ecuador.

## Superfamily LEPTONACEA.

## Family LEPTONIDAE.

## Genus ERYCINA Lamarck, 1806.

## ERYCINA CATALINAE Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, p. 409.  
 Catalina Island, California.

## ERYCINA CORONATA Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, p. 409.  
 Off Coronado Islands, Lower California.

## ERYCINA BAKERI Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, p. 410.  
 Off South Coronado Island, Lower California.

## ERYCINA BALLIANA Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, p. 410.  
 Off South Coronado Island, Lower California.

## ERYCINA CHACEI Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, p. 410.  
 Santa Rosa Island to Coronado Islands.

## ERYCINA SANTAROSAE Dall, 1916.

Proc. U. S. Nat. Mus., vol. 52, p. 410.  
 Santa Rosa Island, California.

## Genus KELLIA Turton, 1822.

## KELLIA LAPEROUSII Deshayes, 1839.

Rev. Zool. Soc. Cuvierienne, p. 357.—GUÉRIN, Mag. de Zool., Moll., pl. 12, 1840.  
 Bering and Pribilof Islands, Bering Sea, and south to San Diego, California.

Zool. Journ., vol. 4, p. 362.

Bering Strait, south to Unalaska and eastward to Kodiak Island, Alaska.

**SILIQUA PATULA NUTTALLII** Conrad, 1837.

Journ. Acad. Nat. Sci. Phila., vol. 7, p. 232, pl. 17, fig. 9.

Lituya Bay, Alaska, and south to Monterey, California.

## Superfamily MACTRACEA.

## Family MACTRIDAE.

## Genus ANATINA Schumacher, 1817.

**ANATINA UNDULATA** Gould, 1851.

Proc. Boston Soc. Nat. Hist., vol. 4, p. 89; Journal, vol. 4, pl. 15, fig. 7.

San Pedro, California, to Panama.

## Genus MACTRA Linnaeus, 1758.

## Subgenus MACTROTOMA Dall, 1894.

**MACTROTOMA DOLABRIFORMIS** Conrad, 1867.

Amer. Journ. Conch., vol. 3, p. 193; Nautilus, vol. 7, No. 12, p. 138, pl. 5,  
fig. 1.

Lobitas, California, to Topolobampo, Mexico. *Panama*, Conrad.

✗ **MACTROTOMA CALIFORNICA** Conrad, 1837.

Journ. Acad. Nat. Sci. Phila., vol. 7, p. 340, pl. 18, fig. 12.

Neah Bay, Washington, to San Diego, California. *Manuel Lagoon. L. Cal., H.H.*

**MACTROTOMA NASUTA** Gould, 1851.

Proc. Boston Soc. Nat. Hist., vol. 4, p. 88.

San Diego, California. (West Colombia?)

## Genus SPISULA Gray, 1838.

## Subgenus HEMIMACTRA Swainson, 1840.

## Section MACTROMERIS Conrad, 1868.

**HEMIMACTRA (POLYNYMA** Stimpson, var.) **ALASKANA** Dall, 1894. *? procera Solanderi*.

Nautilus, vol. 8, No. 4, p. 40; Zool. Beechey's Voy. Moll., p. 154, pl. 44, fig. 8.

Man. Conch., vol. 17, p. 253, pl. 27, figs. 88, 89.

British Columbia to San Quentin Bay, Lower California.

## Class GASTROPODA.

## Subclass ANISOPLEURA.

## Superorder EUTHYNEURA.

## Order PTEROPODA.

## Suborder THECOSOMATA.

## Family SPIRATELLIDAE.

Genus **SPIRATELLA** Blainville, 1817.**SPIRATELLA PACIFICA** Dall, 1871.

Amer. Journ. Conch., vol. 7, p. 138.

Point Barrow, Arctic Ocean, south to Monterey, California.

Subgenus **HETEROFUSUS** Fleming, 1823.**HETEROFUSUS**, species.

Off Oregon coast, in stomach of salmon.

Monterey, Berry. Coronado Ids. Cooke & Baker.

### Family CAVOLINIIDAE.

Genus CAVOLINA Abildgaard, 1791.

**CAVOLINA OCCIDENTALIS** Dall, 1908.

Bull. Mus. Comp. Zool., vol. 43, No. 6, p. 233, pl. 12, fig. 1.  
Northeast Pacific between latitudes 30° and 54° north.

Genus CLIO Linnaeus, 1767.

**CLIO EXACUTA** Gould, 1852.

U. S. Expl. Exp. Shells, p. 488, pl. 51, fig. 605.  
North Pacific Ocean west of Columbia River.

**CLIO OCCIDENTALIS** Dall, 1871.

Amer. Journ. Conch., vol. 7, p. 140.  
Northeast Pacific between latitudes 30° and 50° north.  
Off the Farallon Islands in the stomach of *Orthagoriscus mola*.

Genus STYLIOLA Lesueur, 1826.

**STYLIOLA FALCATA** Gould, 1852.

U. S. Expl. Exp. Shells, p. 490, pl. 51, fig. 608.  
Northeast Pacific, west of Oregon.

Genus CRESEIS Rang, 1828.

**CRESEIS SUBULA** Quoy and Gaimard, 1827.

Ann. Sci. Nat., vol. 13, p. 313, pl. 17, fig. 1.  
Warmer waters of the north Pacific.

### Family CYMBULLIDAE.

Genus COROLLA Dall, 1871.

**COROLLA SPECTABILIS** Dall, 1871.

Amer. Journ. Conch., vol. 7, p. 138; Zool. Jahrb., vol. 20, Heft 1, p. 67,  
pl. 5, 1904.  
North Pacific Ocean from Monterey to latitude 43° north. Japan seas.  
*off Catalina Id.*

## Suborder GYMNOSONOMATA.

### Family CLIONIDAE.

Genus CLIONE Pallas, 1774.

**CLIONE LIMACINA** Phipps, 1773.

Voy. N. Pole, p. 195.—PALLAS, Spic. Zool., pl. 1, figs. 18–19, 1774.  
Circumboreal. Northern Bering Sea south to the Pribilof Islands, rarely  
to the Aleutians.

**CLIONE ELEGANTISSIMA** Dall, 1871.

Amer. Journ. Conch., vol. 7, p. 139.  
South of the Aleutian Islands, in latitude 51° 50', longitude 161° 26' west.

## Family PNEUMODERMATIDAE.

## Genus PNEUMODERMA Péron and Lesueur, 1810.

**PNEUMODERMA PACIFICA** Dall, 1871.

Amer. Journ. Conch., vol. 7, p. 139, *Challenger* Pteropoda, pl. 2, figs. 4, 5.  
Northeast Pacific, off the California coast in latitude 37° and northward to  
latitude 45°

## Family DESMOPTERIDAE.

## Genus DESMOPTERUS Chun, 1889.

**DESMOPTERUS PACIFICUS** Essenberg, 1919.

Univ. of Cal. Pub. Zool., vol. 19, No. 2, p. 85, figs. 1, 2.  
Off Southern California.

## Order OPISTHOBRANCHIATA.

## Suborder TECTIBRANCHIATA.

(CEPHALASPIDEA.)

## Family ACTEONIDAE.

## Genus ACTEON Montfort, 1810.

**ACTEON TRASKI** Stearns, 1898.

Proc. U. S. Nat. Mus., vol. 21, No. 1145, p. 298, fig. 1.  
San Diego, California, to Panama. Also Pleistocene.

Subgenus RICTAXIS Dall, 1871.

(1)

**RICTAXIS PUNCTOCOELATA** Carpenter, 1864.

Suppl. Rep. Brit. Assoc., p. 646; Amer. Journ. Conch., vol. 7, pl. 15, fig. 12.

## EXPLANATION OF PLATES.

### PLATE 1.

	Page.
<b>FIGURE 1.</b> <i>Adula diegensis</i> Dall, lon. 19 mm-----	22
2. <i>Propeamuseum alaskense</i> Dall, alt. 26 mm-----	20
3. <i>Adula diegensis</i> , dorsal view, lon. 19 mm-----	22
4. <i>Pseudamusium vancouverense</i> Whiteaves, alt. 6.5 mm-----	20
5. <i>Pseudamusium vancouverense</i> Whiteaves, alt. 6.5 mm-----	20
6. <i>Vesicomya (Callogonia) stearnsii</i> Dall, lon. 25 mm-----	40
7. <i>Vesicomya (Callogonia) stearnsii</i> Dall, lon. 25 mm-----	40
8. <i>Antiplanes santarosana</i> Dall, alt. 36 mm-----	71
9. <i>Antiplanes thalaea</i> Dall, alt. 40 mm-----	72

Figures 1 and 3 drawn by Miss Evelyn Mitchell, the others by the late Doctor J. C. McConnell.

### PLATE 2.

<b>FIGURE 1.</b> <i>Panomya arctica turgida</i> Dall, lon. 93 mm-----	54
2. <i>Dermatomya leonina</i> Dall, lon. 28 mm-----	28
3. <i>Protocardia richardsonii</i> Whiteaves, lon. 10 mm-----	40
4. <i>Atrina oldroydi</i> Dall, dorsal view, lon. 237 mm-----	17
5. <i>Atrina oldroydi</i> Dall, interior view, lon. 237 mm-----	17
6. <i>Atrina oldroydi</i> Dall, exterior view, lon. 237 mm-----	17

All figures drawn by the late Doctor J. C. McConnell.

### PLATE 3.

<b>FIGURE 1.</b> <i>Rochefortia compressa</i> Dall, lon. 8 mm-----	37
2. <i>Psephidia cymata</i> Dall, lon. 6 mm-----	44
3. <i>Calyptogena elongata</i> Dall, lon. 44 mm-----	32
4. <i>Cuspidaria subglacialis</i> Dall, lon. 39 mm-----	28
5. <i>Acteon (Rictaxis) painei</i> Dall, alt. 8 mm-----	60
6. <i>Musculus impressus</i> Dall, lon. 19 mm-----	23
7. <i>Musculus impressus</i> , dorsal view, lon. 19 mm-----	23
8. <i>Lora grippi</i> Dall, alt. 9 mm-----	74
9. <i>Spisula (Symmorphomactra) planulata</i> Conrad, lon. 35 mm-----	52
10. <i>Dermatomya tenuiconcha</i> Dall, lon. 16 mm-----	27

Figures 5 and 9 drawn by the late Doctor J. C. McConnell, the others by Miss Evelyn Mitchell.

### PLATE 4.

<b>FIGURE 1.</b> Outlines of 28 specimens of <i>Mya intermedia</i> from Chignik Bay, Alaska; natural size-----	52
--	----

### PLATE 5.

<b>FIGURE 1.</b> <i>Eupleura grippi</i> Dall, alt. 21.3 mm-----	109
2. <i>Hemitoma golischae</i> Dall, lon. 20 mm-----	186
3. <i>Cancellaria (Progabbia) cooperi</i> Gabb, alt. 95 mm-----	83
4. <i>Cancellaria (Progabbia) cooperi</i> dorsal view; this is taken from the largest known specimen, now in the Golisch collection, in the Southwest Museum, Los Angeles, California-----	83
5. <i>Algamorda newcombiiana</i> Hemphill, alt. 6 mm-----	153

## PLATE 6.

	Page.
FIGURE 1. <i>Tritonalia painei</i> Dall, alt. 15 mm-----	107
2. <i>Tachyrhynchus lacteolus</i> Carpenter, alt. 10.5 mm-----	152
3. <i>Moniliopsis fancherae</i> Dall, alt. 10.5 mm-----	70
4. <i>Philbertia crystallina</i> Gabb, alt. 7.7 mm-----	79
5. <i>Tritonalia barbarensis</i> Gabb, alt. 17 mm-----	108
6. <i>Neptunea elegantula</i> Dall, alt. 31.5 mm-----	109
7. <i>Neptunea orpheus</i> Gould, from type, alt. 22 mm-----	110
8. <i>Ptychatractus occidentalis</i> Stearns, from type, alt. 14 mm-----	87
9. <i>Amphissa columbiana altior</i> Dall, alt. 29 mm-----	105
10. <i>Alia hypodra</i> Dall, alt. 6.5 mm-----	104
11. <i>Epitonium lowei</i> Dall, alt. 7 mm-----	114
12. <i>Epitonium saviniae</i> Dall, alt. 10.5 mm-----	115

Figures 2 and 6 drawn by Miss Evelyn Mitchell, the others by the late Doctor J. C. McConnell.

## PLATE 7.

FIGURE 1. <i>Pyrulofusus harpa</i> Mörch, alt. 140 mm-----	89
--	----

## PLATE 8.

FIGURE 1. <i>Searlesia dira</i> Reeve, alt. 47 mm-----	98
2. <i>Aulacofusus calathus</i> Dall, alt. 27 mm-----	94
3. <i>Aulacofusus georgianus</i> Dall, alt. 40 mm-----	95
4. <i>Aulacofusus herendeeni</i> Dall, alt. 70 mm-----	94
5. <i>Neptunea peregrina</i> Dall, alt. 21.5 mm-----	110
6. <i>Liomesus nassula</i> Dall, alt. 43 mm-----	91
7. <i>Latisipho halli</i> , Dall, alt. 45 mm-----	96
8. <i>Neptunea avalonensis</i> Dall, alt. 16.5 mm-----	110
9. <i>Volutopsius stejnegeri</i> Dall, alt. 60 mm-----	90
10. <i>Buccinum glaciale parallelum</i> Dall, alt. 70 mm-----	98
11. <i>Volutopsius trophonius</i> Dall, alt. 67 mm-----	90

All these figures drawn by the late Doctor J. C. McConnell.

## PLATE 9.

FIGURE 1. <i>Volutopsius simplex</i> Dall, alt. 101 mm-----	90
2. <i>Volutopsius stefanssoni</i> Dall, 110 mm-----	89
3. <i>Beringius marshalli</i> Dall, alt. 100 mm-----	91
4. <i>Aesopus goforthi</i> Dall, alt. 12.6 mm-----	105
5. <i>Ancistrolepis trochoideus</i> Dall, alt. 18.5 mm. (Japan, extra-limital?).	
6. <i>Chrysodomus variciferus</i> Dall, diam. 118 mm-----	97
7. <i>Chrysodomus variciferus</i> Dall, alt. 186 mm-----	97
8. <i>Chrysodomus onchodes</i> Dall, alt. 103 mm-----	96

All these figures drawn by Miss Evelyn Mitchell.

## PLATE 10.

FIGURE 1. <i>Volutopsius filosus</i> Dall, alt. 64 mm-----	90
2. <i>Buccinum cnismatum</i> Dall, alt. 38 mm-----	99
3. <i>Buccinum diplodetum</i> Dall, alt. 38 mm-----	99
4. <i>Buccinum simulatum</i> Dall, alt. 38 mm-----	100
5. <i>Aulacofusus calamaeus</i> Dall, alt. 57 mm-----	94
6. <i>Neptunea beringi</i> Dall, alt. 40 mm-----	109
7. <i>Neptunea kamchatkana</i> Dall, alt. 24 mm-----	111
8. <i>Aulacofusus esychus</i> Dall, alt. 52 mm-----	94

	Page.
FIGURE 9. <i>Aulacofusus trophius</i> Dall, alt. 32 mm-----	95
10. <i>Mohnia exquisita</i> var., Dall, alt. 31 mm-----	92
11. <i>Mohnia exquisita</i> typical, Dall, alt. 27 mm-----	92
12. <i>Mohnia robusta</i> Dall, alt. 33 mm-----	91

Figures 6, 7, and 9 drawn by the late Doctor J. C. McConnell, the others by Miss Evelyn Mitchell.

#### PLATE 11.

FIGURE 1. <i>Trichotropis kroyeri</i> , Philippi, alt. 30 mm-----	149
2. <i>Trichotropis (Iphinoë) coronata</i> Gould, alt. 24 mm-----	149
3. <i>Volutomitra alaskana</i> Dall, alt. 43 mm-----	87
4. <i>Alectrión (Schizopyga) californiana</i> Conrad, alt. 33 mm-----	102
5. <i>Neptunea pacifica</i> Dall, alt. 24 mm-----	110
6. <i>Turris (Aforia) circinata</i> Dall, alt. 85 mm. Note the anterior sulus in the outer lip-----	68
7. <i>Suavodrillia kennicottii</i> Dall, alt. 21 mm-----	69
8. <i>Tritonalia interfossa</i> Carpenter, typical; alt. 21 mm-----	108
9. <i>Amphissa columbiana</i> Dall, dwarfish northern form, alt. 22.5 mm-----	105
10. <i>Amphissa versicolor incisa</i> Dall, alt. 13 mm-----	105
11. <i>Neptunea tenuisculpta</i> Carpenter, frilled form, alt. 19 mm-----	111
12. <i>Neptunea tenuisculpta</i> Carpenter, typical, alt. 22 mm-----	111

All these figures drawn by the late Doctor J. C. McConnell.

#### PLATE 12.

FIGURE 1. <i>Buccinum oedematum</i> Dall, alt. 56.2 mm-----	99
2. <i>Buccinum eugrammatum</i> Dall, alt. 55.5 mm-----	98
3. <i>Buccinum rondonum</i> Dall, alt. 18 mm-----	99
4. <i>Plicifusus elaeoides</i> Dall, alt. 54 mm. (Japan, extralimital?)-----	68
5. <i>Cryptoconus tremperianus</i> Dall, alt. 64 mm-----	100
6. <i>Buccinum sigmatopleura</i> Dall, alt. 59 mm-----	96
7. <i>Latisiphon jordani</i> Dall, alt. 45 mm-----	99
8. <i>Volutopsius limatus</i> Dall, not quite mature, alt. 52 mm. (Japan)-----	91
9. <i>Buccinum orotundum</i> Dall, alt. 60 mm-----	92
10. <i>Mohnia corbis</i> Dall, alt. 30 mm-----	100
11. <i>Mohnia siphonoidea</i> Dall, alt. 37 mm-----	114
12. <i>Buccinum fucanum</i> Dall, alt. 45 mm-----	107

All these figures drawn by Miss Evelyn Mitchell.

#### PLATE 13.

FIGURE 1. <i>Neptunea multicostata</i> Eschscholtz, alt. 27 mm-----	110
2. <i>Iselica fenestrata</i> Carpenter, alt. 6 mm-----	155
3. <i>Murex (Triremis) santarosana</i> Dall, lat. 28 mm-----	106
4. <i>Murex (Triremis) santarosana</i> Dall, alt. 45 mm-----	106
5. <i>Murex (Pteropurpura) carpenteri</i> Dall, alt. 54 mm-----	106
6. <i>Neptunea scitula</i> Dall, alt. 40 mm-----	109
7. <i>Metzgeria californica</i> Dall, alt. 14 mm-----	88
8. <i>Neptunea smithi</i> Dall, alt. 40 mm-----	111
9. <i>Tritonalia interfossa alpha</i> Carpenter, alt. 25 mm-----	108
10. <i>Acirs borealis</i> Beck, alt. 23 mm-----	114
11. <i>Opalia varicostata</i> Stearns, alt. 60 mm. (fossil)-----	107
12. <i>Tritonalia lurida aspera</i> Carpenter, alt. 18 mm-----	107

Figures 3, 4, and 6 drawn by Miss Evelyn Mitchell, the others by the late Doctor J. C. McConnell.

## ADDITIONS AND EMENDATIONS TO UNITED STATES NATIONAL MUSEUM BULLETIN NO. 112.

---

By WILLIAM H. DALL,

*Honorary Curator of Mollusks, United States National Museum.*

---

With the publication of United States National Museum Bulletin 112 containing a summary of the shell bearing mollusca of the Northwest coast from San Diego northward, with their geographical distribution so far as at that time determined, it was hoped that additional information would be brought out, minor errors corrected, and more light thrown on the whole subject. This has usually been the case when such lists have heretofore been published, and it was expected that the sequel to this one would prove no exception.

This expectation has not been disappointed and a sufficient number of data have accumulated to make desirable a brief supplement to the bulletin in question. Should additional material come in later, a second supplement may be added at some future time. Meanwhile I desire to express my thanks to the correspondents who have kindly furnished information herein presented, and to hope that their useful collaboration may continue indefinitely.

After the entire bulletin was in type and the proof read in November, 1920, and immediate publication expected, a delay was experienced, so that actual publication did not take place until February, 1921. Consequently all names in the bulletin dated "Dall, 1920," should read "Dall, 1921." Other changes follow:

Page 10. *Leda acuta*, add "Also Atlantic."

Page 16. *Barbatia solida*, add "San Pedro, Chace."

Section *Acar*, add: *Barbatia reeveana* Orbigny, Voy. Am. Mér., p. 635, 1846; Conch. Icon., *Area*, pl. 14, fig. 60, 1844; Balboa, Calif., Dr. Tremper; Mazatlan, Lowe; south to Payta, Peru. *Scapharca multi-costata*, add "Balboa, Calif. Dr. Tremper."

Page 17. *Atrina oldroydi*, add "San Onofre, Calif., White."

Page 18. *Ostrea lurida*, for "vol. 12" read "vol. 13."

After *Pectinacea*, insert "Family Pectinidae."

- Page 19. *Chlamys fuciculus*, strike out reference to the *Sulphur* voyage and insert "Arnold, Tert, Pectens, Calif., p. 131, pl. 46, fig. 8, 1906."
- Page 23. It now appears that *Musculus* was used by Martyn binomially in its ancient significance for *Mytilus* eleven years before Bolten, so we happily can return to the familiar generic name *Modiolaria* for the species of this group.
- Page 24. *Crenella decussata*, add "also Atlantic."
- Page 25. *Cyathodonta pedroana*, read "Dall, 1915."
- Page 30. *Astarte globosa*, read Reeve "vol. 2."
- Page 35. *Lucinoma "densilineata,"* read "*densilirata*."
- Page 41. *Pachydesma stultorum*, add "Halfmoon Bay, Weymouth."  
*Amiantis callosa*, add "Santa Monica, Weymouth."
- Page 42. *Saxidomus nuttallii*, add "Humboldt Bay, Weymouth."  
*Chione fluctifraga* and *succincta*, add "Mugu Bay, White."
- Page 49. *Donax gouldii*, add "San Luis Obispo, Weymouth."  
*Donax californica*, add "Mugu Bay, White."
- Page 50. *Sanguinolaria*, add "Mugu Bay, White."
- Page 52. *Hemimactra falcata*, add "Newport, Calif."
- Page 54. *Cyrtodaria kurriana*, read "1861."
- Page 55. Add "*Rocellaria* sp, San Diego, Calif., Orcutt."
- Page 56. Under *Xylophaga* add "*Xylophaga californica* Bartsch, 1921; Proc. Biol. Soc. Washington, vol. 34, p. 32, off Point Pinos, Cal., in 78 to 108 fathoms. Also: *Xylophaga washingtonia* Bartsch, 1921, same reference, Departure Bay, B. C., to coast of Washington. Also: under *Teredo*, "*Teredo beachi* Bartsch, 1921, Proc. Biol. Soc. Wash., vol. 34, p. 29; Bull. U. S. Nat. Mus. 122, p. 18, pl. 20, fig. 1, pl. 32, fig. 4, 1922, San Francisco Bay." Add *Teredo (Lyrodus) townsendi* Bartsch, Bull. U. S. Nat. Mus. 122, p. 26, pl. 22, fig. 2; pl. 33, fig. 2, 1922, Southern San Francisco Bay. Also: to *Teredo (Teredops) diegensis* add "Bull. U. S. Nat. Mus. 122, p. 29, pl. 22, fig. 3; pl. 34, fig. 3, 1922." The true *Teredo navalis* of Europe is not a resident of the Pacific Ocean.
- Page 59. Read *Cymbuliidae*.
- Page 60. *Rictaxis punctocoelata*, add "Departure Bay, B. C."
- Page 61. *Acteocina culcitella*, add "San Diego, Strong."  
*Acteocina infrequens*, fossil at Santa Monica, living Cape San Lucas to Panama.
- Page 62. Above "Genus *Diaphana*" insert "Family Diaphanidae."
- Page 66. *Liriola thersites*, second line, read "Ann. Mag."
- Page 71. *Antiplanes rotula*, add "smithi Arnold, not Forbes."
- Page 76. *Lora woodiana*, for "strait" read "sea."
- Page 86. For "*Merovia*" read "*Cypraeolina* Cerulli-Irelli, 1911."
- Page 90. *Beringius kennicottii*, for "Dall, 1907," read "Dall, 1871."
- Page 96. *Latisipho nalli*, read "*Latisipho halli*."
- Page 103. Under *Columbella*, insert "*Columbella fuscata* Sowerby, 1832, Proc. Zool. Soc., p. 117; Thes. Conch., *Columbella*, p. 114, pl. 36, figs. 21, 25, 1847. La Jolla, Calif. (Orcutt) to Ecuador."
- Page 111. Under *Thais* insert "*Thais biserialis* Blainville, 1832; Nouv. Ann. du Mus. de Paris, p. 50, pl. 11, fig. 11, La Jolla (Orcutt) to Peru."  
*Neptunea tenuisculpta*, add "Bull. Am. Pal. VIII, No. 36, p. 5, pl. 1, fig. 6-9, 1921."
- Page 113. *Pseudomurex costata* read "p. 231."
- Page 114. *Opalia evicta*, vol. 44, read "vol. 64."

- Page 117. For *Janthina exigua*, etc. read "*Janthina bifida* Nuttall, Jay Cat., p. 68, 1839; Conch. Icon., *Janthina*, fig. 25", Dec., 1858."
- Page 121. *Chemnitzia engbergi*, add "p. 570." Under *Strioturbonilla* add, "*Strioturbonilla kincaidi* Bartsch, 1921, Proc. Biol. Soc. Wash., vol. 34, p. 33, Mar. 31, 1921; Dogfish Bay, Puget Sound."
- Page 128. Under *Chrysallida* add, "*Chrysallida cumshewaënsis* Bartsch, 1921; Proc. Biol. Soc. Wash., vol. 34, p. 34; Cumshewa Inlet, B. C."
- Page 136. *Amaura engbergi* and *sanjuanensis*, add "p. 570."
- Page 137. *Amaura washingtonia*, add "p. 571."
- Page 142. For *Triforidae* read "*Triphoridae*," and for *Trifora* read "*Triphora*" throughout. Under *Cerithiopsis* insert "*Cerithiopsis fraseri* Bartsch, 1921; Proc. Biol. Soc. Wash., vol. 34, p. 34. Clayoquot, B. C., to Victoria, B. C." Also: "*Cerithiopsis onealensis* Bartsch, 1921; same reference, p. 35; Oneal Island, Puget Sound."
- Page 144. Above "Incertae sedis" insert "Section *Cerithiopsina* Bartsch, 1911," and add "*Cerithiopsis signa* Bartsch, 1921, Proc. Biol. Soc. Wash., vol. 34, p. 36; Oneal Island, Puget Sound." Also: "*Cerithiopsis willetti* Bartsch, 1921, same reference; Forrester Island (Willett) to Puget Sound."
- Page 145. *Fenella* A. Adams, 1860, not Westwood 1840=*Alabina* Dall, 1902.
- Page 148. For *Trichotropis costellata* substitute "*Trichotropis borealis* Sowerby, 1829, Zool. Journ., vol. 4, p. 375."
- Page 149. *Caecum dalli*, *licalum*, *diegense*, *grippi*, and *Micranellum pedroense*, add "p. 568."
- Page 150. For all species of *Micranellum* add "p. 569." For *Fartulum hempilli*, *occidentale*, and *bakeri*, add "p. 566." For *Elephantulum carpenteri* add "p. 567."
- Page 151. *Petaloconchus montereyensis*. Add "Catalina Island."
- Page 152. *Littorina*, add "Blainville, 1828." For section *Littorina* s. s. read "Neritoides Brown, 1827."
- Page 153. *Littorina sitchana*, read "*Littorina sitkana*," and correct "Litorina to "*Littorina*." For section *Algaroda*, read "*Littorina* s. s."
- Page 156. *Alaba catalinensis*, add "p. 572." *Diala marmorea* may prove to be a *Barleeria*.
- Page 158. Under *Alvania* insert "*Alvania burrardensis* Bartsch, 1921, Proc. Biol. Soc. Wash., vol. 34, p. 38, Burrard Inlet, B. C."
- Page 159. *Alvania sanjuanensis*. Read "Bartsch, 1921, Proc. Biol. Soc. Wash., vol. 34, p. 37."
- Page 160. *Truncatella californica*. After "San Martin Island" read "Lower California."
- Page 163. Under *Crucibulum*, insert "*Crucibulum imbricatum* Sowerby. Genera, *Calyptraea* fig. 5; Broderip, Trans. Zool. Soc. London, vol. 1, p. 193, pl. 27, fig. 7, 1834. La Jolla, Cal. (Oreutt) to Peru."
- Page 174. *Chlorostoma gallina umbilicatum*, add "Catalina Island."
- Page 177. *Cidarina*, read "Dall, 1909." *Cidarina cidaris*, read "Proc. U. S. Nat. Mus., vol. 15, pl. 22, fig. 4." For *Solaricida* read "*Caliotropis Seguenza*, 1903." The former dates from 1919.
- Page 181. Under *Vitrinella* add "*Vitrinella columbiana* Bartsch, 1921; Proc. Biol. Soc. Wash., vol. 34, p. 39. Departure Bay, British Columbia."
- Page 182. *Cyclostremella concordia*, add "p. 572."

- Page 183. *Schismope coronata*, Bartsch regards this as a new species which he calls *S. californica*. He also refers *S. caliana* to *Adeorbis*.
- Page 192. *Ischnochiton serratus* dates from 1864.  
*Ischnochiton berryi*, read "vol. 55."
- Ischnochiton mertensii*, add "San Martin Island, Lower California."
- Page 193. *Pallochiton*, read "1879."
- Page 194. *Callistochiton crassicostatus*. Add "San Martin Island, Lower California."
- Page 196. *Placiphorella velata*. Add "Sooke Harbor, Vancouver Island, Macoun."
- Page 197. *Placiphorella pacifica*, read "Kasaän Bay."  
For *Katherina* read "*Katharina*."  
Genus *Cryptochiton*, for Gray read "Middendorff."
- Page 210. Belcher, Last of the Arctic Voyages, read "vol. 2."
