### High Country Plastics SFS-JR Slow Feeder Saver Jr

- Our Slow Feeder Saver Jr.
- is designed to give Equine the healthiest and most natural eating experience possible regardless of them being stalled or stabled.
- The small grate holes prevent horses from wasting feed by consuming it to quickly or spreading it out on the ground by forcing them to take small bites.
- This also has the added benefit of keeping them occupied longer reducing boredom, which can lead to cribbing and poor temperament.
- Slow Feeding is proven to improve the digestive process, which leads to better overall Equine health.
- Places the horse in a natural anatomic feeding position producing better conformation and less stress on their joints.
- The solid Poly bottom ensures the animal isn't eating off the ground dramatically reducing the possibility of colic.
- Horses by nature are grazing animals with digestive systems evolved to process food in small portions up to 16 hours per day.
- In today's world many horses are stabled, kept in barns or don't have an adequate pasture to graze upon and natural grazing simply isn't an option.
- Many veterinarian visits such as ulcers, colic, weight issues and COPD are direct results of how horses are fed.
- The Slow Feeder Saver can help eliminate these costly vet visits! With current hay prices the Slow Feeder Saver Jr can pay for itself in less than a year by eliminating feed waste.
