

Wind Baskets and Custom-Engineered Platforms

FOR REPAIR AND INSPECTION OF
WIND TOWERS AND BLADES

From simple wind baskets for up-tower inspection & repair to sophisticated designs for complex projects, Wind Access Engineering has the right solution!

Equipment

Wind Access Engineering has a complete line of the most state-of-the-art access equipment available in the industry:

- Bisomac 210 electric hoists with built in overload & over speed protection.
- Tractel hoists and accessories
- Altrex modular wind baskets and platforms
- Bee Access accessories
- Skyclimber hoists, platforms and accessories

Rental Programs

Wind Access Engineering will design and deliver platforms to your site, so you can address your tower/blade inspection and service needs.

Our technicians will deliver the platform onsite, custom rig to the turbine type, assemble the platform, and have it ready for deployment when needed.

Our specially designed wind baskets allow for safe and quick set up, and can maneuver close to the blade along the critical areas.

Contact us to learn about the best solution to keep your repair and crane rental costs to a minimum!

Custom-Engineered Platforms

Let Wind Access Engineering design the perfect platform for your specific needs!

No matter if it's a weld inspection and test on a tower or a critical composite repair with climate controlled enclosure, Wind Access can engineer an access solution for your project.

Inspections & Preventative Maintenance

OEMs are quickly realizing the importance of inspecting the wind turbine blades and towers regularly.

With the ability to get up-close viewing and testing of the critical areas of the blade, our wind baskets and platforms allow for quick diagnostics and repair.

Due to the enormous costs associated with renting a crane to perform blade repairs on the ground, many repairs are delayed, causing minor problems to become major problems.

With Wind Access Engineering, you can eliminate crane rentals by performing preventative maintenance and repairs up-tower, before it is too late.

Our engineers and technicians can provide site supervision, initial orientation, ground support, or a complete turn-key training program for your employees.
