Synchronized C1 and C2-axis indexing

Synchronization of the main spindle (C1) and sub-spindle (C2) indexing allows for machining of a variety of complex shapes. All processes from simple turning and milling to multi-axis simultaneous machining can be completed with a single setup.

Sub-spindle oil cooling unit

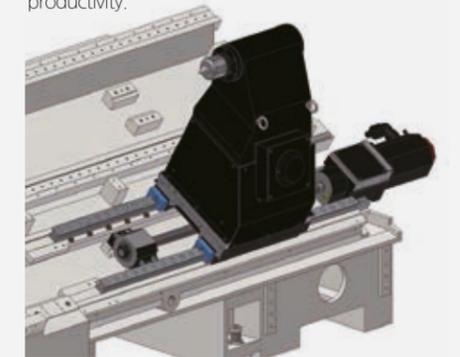

The sub-spindle is wrapped by an oil jacket cooling system to minimize thermal growth and to ensure high speed, high-accuracy machining through various machining conditions.

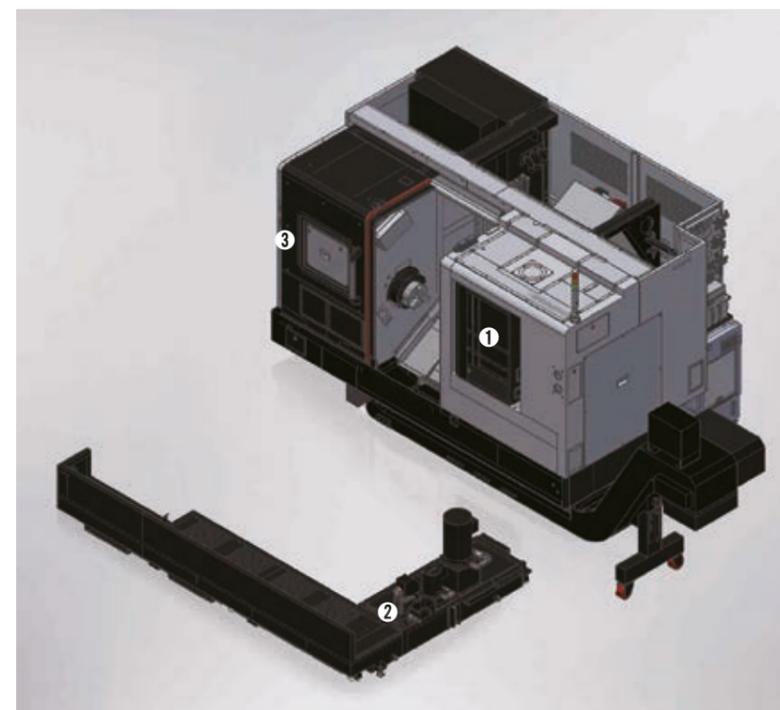

Servo (NC controlled) Tailstock

The servo tailstock supports high-speed, high precision machining where the thrust force is NC controlled.

The quill thrust force may be adjusted in accord with the workpiece's length and diameter, reducing the cycle time and increasing the productivity.

Ease of use

1 User-centric OP Panel

The QWERTY-type keyboard and high visibility buttons and effective button placement enhances ease of use.

2 Easy coolant tank maintenance

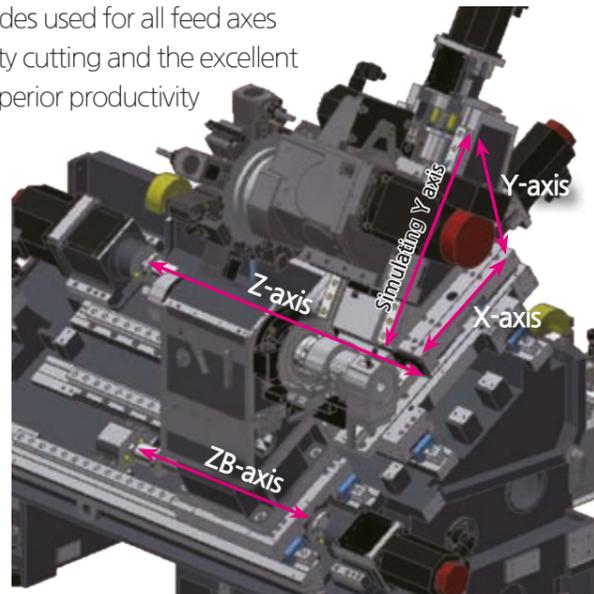

When cleaning the coolant tank, the coolant tank may be removed while leaving the chip conveyor attached to the machine, making it easier to clean and maintain.

3 Easy hydraulic valve adjustment

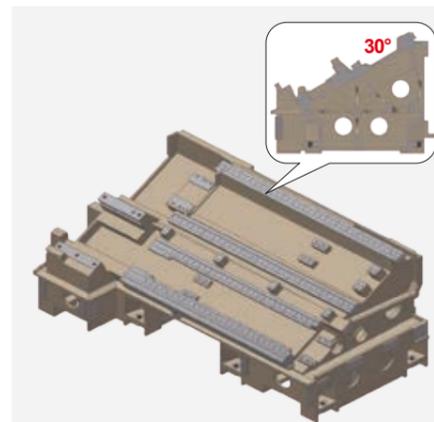

The gauge and hydraulic valves are located at a height that make it easy for the operator to adjust.
